| **Payment Rules** | A Group 3 support surface or air fluidized bed is a rental only item and must be billed as a daily rate by reporting total number of days used as units. The rental payment is considered to include the following:  
- All accessories needed to use the equipment.  
- Education on the proper use and care of the equipment.  
- Routine servicing and all necessary repairs or replacements to make the unit functional.  
If use exceeds a 10-month timeframe, report the "MS" modifier after six months of continued maintenance and servicing of the item. |
## 2.43 Surgical Dressings

<table>
<thead>
<tr>
<th>Definition</th>
<th>Surgical dressings include a primary dressing (used as a protective covering applied directly to the wound or lesion) and/or a secondary dressing (used to secure a primary dressing in place). Many of the primary dressings covered by MDHHS are self-adhesive and would not require a secondary dressing to be placed as well. Examples of surgical dressing are adhesive tape, roll gauze, and elastic bandages.</th>
</tr>
</thead>
</table>
| Standards of Coverage | Surgical dressings are covered for one or more of the following:  
- To treat a wound or opening in the skin.  
- To debride a wound or lesion.  
- To treat pressure ulcers.  
Coverage of the quantity or type of dressing is based on:  
- Size, stage, location and current status of the wound/lesions being treated.  
- Number of wounds/lesions.  
- Number of body locations involved.  
- Frequency of dressing change. |
| Documentation | Documentation must be less than 30 days old and include the following:  
- Diagnosis/medical condition related to the need for the items(s).  
- Item to be dispensed.  
- Quantity of item needed per dressing change.  
- Anticipated frequency of dressing change.  
- Size, stage, location, and number of wounds/lesions.  
For dressing requests of quantities over established limits, documentation to substantiate medical need is required. |
| PA Requirements | PA is required for:  
- Collagen dressings or wound fillers.  
- Silicone gel sheets.  
- Composite dressings.  
- Quantities beyond Medicaid’s established limits.  
PA is not required for all other types of surgical dressings unless usage exceeds established quantity limitations. |
| Payment Rules | All items are considered a purchase up to the allowable quantities. Modifiers A1 through A9 must be reported in addition to the HCPCS code to report the appropriate number of wounds being treated. The modifiers are as follows:  
- A1 - Dressing for one wound  
- A2 - Dressing for two wounds  
- A3 - Dressing for three wounds |
2.44 TRACHEOSTOMY CARE SUPPLIES

**Definition**
Tracheostomy care supplies include, but are not limited to, tracheostomy filters, tubes, masks, care kits, cleaning brushes, shower protectors and suction catheters.

**Standards of Coverage**
Tracheostomy care supplies are covered to support the care of a beneficiary with a tracheostomy. A tracheostomy starter kit may be covered for the four weeks following the initial tracheostomy surgery. The kit code includes the following items: Plastic tray, basin, sterile gloves, tube brush, pipe cleaners, a pre-cut tracheostomy dressing, a roll of gauze, drain sponges, cotton tip applicators, tracheostomy tube ties, or twill tape. After the initial four weeks, the established tracheostomy kit may be covered. The kit code includes the following items: Tube brush, pipe cleaners, cotton tip applicators, tracheostomy tube ties or twill tape, and drain sponges.

**Documentation**
Documentation must be less than 90 days old and include the following:
- Diagnosis/medical condition.
- Specific items required.

**PA Requirements**
PA is not required when the Standards of Coverage are met and established quantity limits are not exceeded.

PA is required when:
- Standards of Coverage are not met.
- Quantities requested exceed the established limits.
- Other items not part of one of the kit codes may be considered for separate reimbursement. (Refer to the Medicaid Code and Rate Reference tool for additional information.)

**Payment Rules**
Payment is purchase only. All quantities reported should reflect a 30-day supply.

2.45 TRANSCUTANEOUS ELECTRICAL NERVE STIMULATOR

**Definition**
A Transcutaneous Electrical Nerve Stimulator (TENS) is a device that utilizes electrical current delivered through electrodes placed on the surface of the skin to decrease the beneficiary's perception of pain by inhibiting the transmission of afferent pain nerve impulses and/or stimulating the release of endorphins.
| Standards of Coverage          | A TENS unit is covered for reduction of pain for beneficiaries with either chronic, intractable pain of at least three months duration, or acute post-operative pain limited to 30 days from the date of surgery, or pain related to cancer, when:  
  - The beneficiary is able to use the TENS device.  
  - There is effective control of pain.  
  - Other treatment modalities have been ineffective. |
|--------------------------------|---------------------------------------------------------------------------------------------------------------|
| Documentation                  | Documentation must be less than 30 days old and must include all of the following:  
  - Diagnosis/medical condition related to the need for a TENS (including type and location of pain).  
  - Alternative treatments for pain tried and the results.  
  - Other modalities of treatment still being used (type and duration must be detailed).  
  For coverage beyond 90 days, include documentation addressing continued effective pain control. |
| Continued Use after the initial 90 days | After the initial 90 days - The documentation must be included with the PA request to describe the effectiveness of the treatment received. For continued coverage for chronic intractable pain, the documentation must be within 30 days and include the following:  
  - Medication regimen, before and after use.  
  - Functional level (affected by pain) before and after. |
| PA Requirements                | PA is required for all requests.                                                                                           |
| Payment Rules                  | A TENS unit may be considered as a capped rental. The rental payment is inclusive of the following:  
  - All accessories needed to use the equipment (e.g., electrodes, lead wires, cables, etc.).  
  - Education on the proper use and care of the equipment.  
  - Routine servicing and all necessary repairs or replacements to make the unit functional. |
2.46 WALKERS

<table>
<thead>
<tr>
<th>Definition</th>
<th>Walkers include, but are not limited to, rigid, wheeled, heavy duty, and folding.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standards of Coverage</td>
<td>Walkers may be covered when the beneficiary has impaired ambulation and requires a walker for safe and independent ambulation.</td>
</tr>
</tbody>
</table>
| Documentation | Documentation must be less than six months old and include:  
- Diagnosis/medical condition related to the need for the service.  
- Functional level possible with use of walker.  
- Medical reason for type of attachment or modification, if applicable.  
- Medical reason for heavy-duty walker (e.g., obesity, severe neurological disorder, or restricted use of hands).  
- Duration of need and frequency of use.  
- Identification of other specific economic alternatives ruled out.  
- Identification of make, model, serial number, and warranty information.  
- Statement of medical need for the specific walker requested.  
In addition, for each walker type, the following must be included:  
- **Standard Walkers**  
  - Medical/functional reason a cane would not meet the beneficiary’s ability to perform MRADL  
- **Walker with Trunk Support**  
  - Medical/functional reason a standard walker would not meet the beneficiary’s ability to perform MRADL  
- **Enclosed Walker with Posterior Seat**  
  - Medical/functional reason a standard walker would not meet the beneficiary’s ability to perform MRADL  
- **Heavy-Duty Walker**  
  - Medical/functional reason for a heavy-duty walker (e.g., obesity, severe neurological disorder, restricted use of hands) |
| PA Requirements | PA is not required for walkers if the Standards of Coverage and Documentation are met.  
PA is required for:  
- Replacement within five years.  
- Additional attachments (e.g., arm troughs).  
- Replacement within five years for age 21 and over.  
- Replacement within two years for under age 21. |
| Payment Rules | Walkers may be a capped rental or purchase item. After the first ten months of rental, necessary repairs and/or replacements of accessories are separately reimbursable. |
### 2.47 Wearable Cardioverter-Defibrillators

| Definition | A wearable cardioverter-defibrillator (WCD) is an external device intended to perform the same tasks as an implantable cardioverter-defibrillator (ICD) without requiring an invasive procedure. It is considered a bridge to permanent ICD placement.  
  
The WCD consists of a vest, worn continuously underneath clothing, and contains cardiac monitoring electrodes that deliver a counter shock. The vest is connected to a monitor with a battery pack and alarm module that interprets the cardiac rhythm and determines when a counter shock is necessary. An alarm module alerts the patient to certain conditions by lights or voice messages. |
|---|---|
| Standards of Coverage | The WCD may be considered medically necessary only as an interim treatment for patients at high risk of sudden cardiac arrest who:  
  - Have a left ventricular ejection fraction of 35% or less;  
  - Have a temporary contraindication to receiving an ICD (i.e., a systemic infection) at the current time; and  
  - Have experienced a documented episode of ventricular fibrillation or sustained (lasting 30 seconds or longer) ventricular tachyarrhythmia that was not due to a transient or reversible cause and did not occur during the first 48 hours of an acute myocardial infarction; and  
  - Are tentatively scheduled for an ICD placement procedure based on one of the following:  
    - Received treatment with the goal of an ICD placement and have been scheduled for the ICD placement within three months; or  
    - Had an ICD removed and have been scheduled for placement of another ICD once the contraindication has been treated.  

WCDs will not be covered for investigational procedures or patient preference. |
| Documentation | Documentation must include the following and be made available upon request unless otherwise noted in the Standards of Coverage and PA Requirements sections of this policy:  
  - Diagnosis/medical condition related to the need for the item.  
  - Specific item(s) required.  
  - Medical reason why receiving an ICD is not currently plausible.  
  - Current treatment plan and updated recommendations.  
  - Tentative scheduled date for ICD placement and/or date other ICD removed. |
| PA Requirements | Food and Drug Administration (FDA)-registered WCDs are covered under the Medicaid and CSHCS programs with prior authorization (PA). Requests for PA (form MSA-1653-B) may only be submitted by the beneficiary's managing cardiologist and must include a current treatment plan and updated recommendations.  

PAs are approved for 30 days at a time for a maximum of three months.  

For continued medical need beyond 30 days, a new PA request must be submitted documenting all of the following:  
  - The beneficiary's response to and continued need for the WCD;  
  - The anticipated date of the ICD procedure; and |
• Documentation of the beneficiary’s compliance with wearing the WCD. The compliance report should demonstrate a compliance rate of at least 92% for the previous 30-day period.

Requests for continued PA beyond the maximum of three months will be considered on a case-by-case basis.

Payment Rules

WCDs are rental only items. The rental fee includes the vest, monitoring electrodes, therapy electrodes and batteries. The batteries, garments and electrodes may be replaced due to normal use and wear of the WCD and require PA.

2.48 WHEELCHAIRS, PEDIATRIC MOBILITY AND POSITIONING MEDICAL DEVICES, AND SEATING SYSTEMS

2.48.A. DEFINITIONS

Wheelchair

A wheelchair has special construction consisting of a frame and wheels with many different options and includes, but is not limited to, standard, light-weight, high-strength, powered, etc.

Pediatric Mobility Product

Pediatric mobility products are pediatric-sized mobility and positioning medical devices (as defined by PDAC) that have a special light-weight construction consisting of a frame and wheels/base with many different options. Pediatric mobility devices include pediatric wheelchairs, transport chairs, hi/low chairs with outdoor/indoor bases, and standing systems designed specifically for children with special needs. These products must meet the definition of Durable Medical Equipment (DME) (refer to the Program Overview section of this chapter) and are not available as a commercial product or for which a commercial product can be used as an economic alternative.

Licensed Medical Professional

A licensed medical professional is defined as an occupational or physical therapist or a rehabilitation RN who has at least two years’ experience in rehabilitation seating and is not an employee of the medical supplier.

Medicaid policy requires that assessments must be performed by a licensed medical professional. A physical therapy assistant (PTA) or a licensed occupational therapy assistant (OTA) may not perform any part of the assessment or evaluation and may not complete or sign the MSA-1656.

Pediatric Subspecialist

A pediatric subspecialist is a physician who is board-certified in a pediatric subspecialty (such as a physiatrist, neurologist, or orthopedist). A pediatrician is not considered a pediatric subspecialist relative to this policy.

Institutional Residential Setting

An institutional residential setting refers to a nursing facility, hospital long-term care unit, or county medical care facility.

Community Residential Setting

A community residential setting is defined as a non-institutional setting in the community, i.e., beneficiary’s own home, Adult Foster Care (AFC), Assisted Living or Group Home.
2.48.B. STANDARDS OF COVERAGE

<table>
<thead>
<tr>
<th>Manual Wheelchair in Community Residential Setting</th>
<th>May be covered if all of the following are met:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Has a diagnosis/medical condition that indicates a lack of functional ambulatory status and ambulates less than 150 feet within one minute with or without an assistive medical device.</td>
</tr>
<tr>
<td></td>
<td>• Must be able to regularly use the wheelchair throughout the day.</td>
</tr>
<tr>
<td></td>
<td>• Must be able to be positioned in the chair safely and without aggravating any medical condition or causing injury.</td>
</tr>
<tr>
<td></td>
<td>• Purchase of a wheelchair is required for long-term use (greater than 10 months).</td>
</tr>
<tr>
<td></td>
<td>• Must be able to use the wheelchair in the home environment (e.g., wheelchair must be able to fit through doorways and cross thresholds)</td>
</tr>
<tr>
<td></td>
<td>• Must identify other economic alternatives considered.</td>
</tr>
<tr>
<td></td>
<td>• Must have a method to propel wheelchair, which may include:</td>
</tr>
<tr>
<td></td>
<td>➢ Ability to self-propel for at least 60 feet over hard, smooth, or carpeted surfaces.</td>
</tr>
<tr>
<td></td>
<td>➢ The beneficiary has a willing and able caregiver to push the chair if needed.</td>
</tr>
<tr>
<td></td>
<td>In addition:</td>
</tr>
<tr>
<td></td>
<td>A <strong>standard hemi-wheelchair</strong> may be covered when a lower seat to the floor is required.</td>
</tr>
<tr>
<td></td>
<td>A <strong>standard light-weight wheelchair</strong> may be covered when the beneficiary is unable to propel a standard wheelchair due to decreased upper extremity strength or secondary to a medical condition that affects endurance.</td>
</tr>
<tr>
<td></td>
<td>A <strong>heavy-duty standard wheelchair</strong> may be covered if the beneficiary's weight is more than 250 pounds but does not exceed 300 pounds. (Include patient's weight in the beneficiary's file.)</td>
</tr>
<tr>
<td></td>
<td>An <strong>extra heavy-duty standard wheelchair</strong> is covered if the beneficiary's weight exceeds 300 pounds. (Include patient's weight in the beneficiary's file.)</td>
</tr>
<tr>
<td></td>
<td>A <strong>high-strength light-weight or ultra-light standard wheelchair</strong> may be covered when required for a specific functional need.</td>
</tr>
<tr>
<td></td>
<td>A <strong>back-up or secondary standard manual wheelchair</strong> may be considered when:</td>
</tr>
<tr>
<td></td>
<td>• The beneficiary is primarily a power wheelchair user but needs a manual wheelchair to have access to the community or independent living.</td>
</tr>
<tr>
<td></td>
<td>• The beneficiary's medical condition requires a power wheelchair that cannot accommodate public transportation and, therefore, requires another transport device.</td>
</tr>
</tbody>
</table>

| Manual Wheelchair in Institutional Residential Setting | Coverage and reimbursement for all standard manual wheelchairs for an institutional residential setting is included in the per diem rate. |
### Manual Wheelchair with Custom-Fabricated Seating System in both Community Residential and Institutional Residential Settings

May be covered if all of the following are met, in addition to the Standards of Coverage listed under Manual Wheelchair in Community Residential Setting:

- Medical documentation provides a clinical assessment of the specific functional/clinical need for a custom-fabricated seating system. Documentation must specifically rule out other standard seating systems. The seating system must also meet standards of coverage.
- Must accommodate growth and adjustments for custom-fabricated seating systems a minimum of 3” in depth and 2” in width.
- Is an integral part of the care regimen in the community residential setting or the daily nursing plan of care in an institutional residential setting.

### Power Wheelchair or Power-Operated Vehicle (POV) in Both Community Residential and Institutional Residential Settings

May be covered if the beneficiary meets all of the following:

- Lacks ability to propel a manual wheelchair, or has a medical condition that would be compromised by propelling a manual wheelchair, for at least 60 feet over hard, smooth, or carpeted surfaces with or without rest intervals.
- Requires use of a wheelchair for at least four hours throughout the day.
- Is able to safely operate, control and maneuver the wheelchair in their environmental setting, including through doorways and over thresholds up to 1½”, as appropriate.
- Has a cognitive, functional level that permits safe operation of a power mobility device with or without training.
- Has visual acuity that permits safe operation of a power mobility device.
- For a three-wheeled power mobility device, has sufficient trunk control and balance.

### Pediatric Mobility Devices and Wheelchairs

May be covered if all of the following are met for each type of device. For CSHCS beneficiaries, a medical referral from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a medical referral from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries.

#### For manual pediatric wheelchairs:

- Has a diagnosis/medical condition that indicates a lack of functional ambulatory status with or without an assistive medical device or has a willing and able caregiver to push the chair and the wheelchair is required in a community residential setting.
- Is required for long-term use (greater than 10 months).
- Must accommodate growth and adjustments for seating systems a minimum of 3” in depth and 2” in width.
- Is designed to be transportable.
- Is the most economical alternative available to meet the beneficiary’s mobility needs.

#### For power wheelchairs:

- Lacks ability to propel a manual wheelchair, or has a medical condition that would be compromised by propelling a manual wheelchair, for at least 60 feet over hard, smooth, or carpeted surfaces (this includes the need to rest at intervals).
- Is able to safely control the wheelchair through doorways and over thresholds up to 1½".
- Has a cognitive, functional level that is adequate for power wheelchair mobility.
- Has visual acuity that permits safe operation of a power mobility device.
- Must accommodate growth and adjustments for custom-fabricated seating systems a minimum of 3" in depth and 2" in width.
- For a three-wheeled power mobility device, has sufficient trunk control and balance.

For transport mobility medical devices (e.g., strollers):
- Is over three years of age or has a medical condition that cannot be accommodated by commercial products.
- Will be the primary mobility device due to inability to self-propel a manual wheelchair or operate a power wheelchair.
- Is required as a transport device when the primary wheelchair cannot be designed to be transportable.
- Must accommodate growth and adjustments for seating systems a minimum of 3" in depth and 2" in width.
- Is the most economical alternative available to meet the beneficiary's mobility needs.
- Is required for use in the community residential setting.

For pediatric standing systems with or without wheels:
- Is able to utilize the product without being compromised medically or functionally.
- Has a plan of care that documents how the standing system will be used in the community residential setting.
- Documentation addresses economic alternatives, including dynamic vs. non-dynamic factors.
- Other economic alternatives have been ineffective.
- Must accommodate growth and adjustments for seating systems a minimum of 3" in depth and 2" in width.

For CSHCS beneficiaries, a medical referral from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a medical referral from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries.

For pediatric hi/low chairs:
- Positioning cannot be accommodated by use of other mobility devices or commercial products.
- Is required for independent transfers.
- All mobility products with interchangeable bases and seating systems have been ruled out as economic alternatives.
- Must accommodate growth and adjustments for seating systems a minimum of 3" in depth and 2" in width.
### Standard Seating System in Community Residential Setting

May be covered when required to assure safe mobility and functional positioning when the beneficiary has postural deformities, contractions, tonal abnormalities, functional impairments, muscle weakness, pressure points, and seating balance difficulties.

May be covered if all of the following are met:

- Two or more of the above clinical indications are documented in the medical record and in the mobility assessment.
- Must accommodate growth and adjustments a minimum of 3” in depth and 2” in width.
- Must document the reason for the selection when the system cannot be used in more than one mobility device.
- Is the most economical alternative available to meet the beneficiary’s mobility needs.

For CSHCS pediatric beneficiaries, a written order from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a written order from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries.

### Custom-Fabricated Seating Systems

May be covered when required to assure safe mobility and functional positioning when the beneficiary has postural deformities, contractions, tonal abnormalities, functional impairments, muscle weakness, pressure points, and seating balance difficulties.

May be covered if all of the following are met:

- Two or more of the above clinical indications are documented in the medical record and in the mobility assessment, and the severity of the clinical indications cannot be accommodated by a standard seating system.
- Must accommodate growth and adjustments a minimum of 3” in depth and 2” in width.
- Must document the reason for the selection when the system cannot be used in more than one mobility device.
- Is the most economical alternative available to meet the beneficiary’s mobility needs.

For CSHCS pediatric beneficiaries, a written order from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a written order from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries.

### Manual or Power Recline Feature

May be covered when needed for relief of pressure on the seat and/or back, and one of the following applies:

- History of skin breakdown or current indication of imminent skin breakdown that cannot be controlled (or has not in the past) by less costly modalities (such as pressure relief cushions or manual pressure relief techniques).
- Has ability to tolerate a 90-135 degree range of motion at the hip, needed for reclining without triggering excessive abnormal tone.
- Is unable to tolerate an upright position in a wheelchair for long periods of time due to fatigue, shortness of breath, increased tone, or discomfort related to pressure that cannot be manually relieved.
A low shear recline back is covered when the beneficiary does not have the ability to reposition themselves in the wheelchair following reclining and the shearing would result in skin breakdown.

<table>
<thead>
<tr>
<th>Manual Tilt-in-Space or Recline Function in Community Residential Setting</th>
<th>Manual tilt-in-space function allows the seat and back of the wheelchair to move as a unit, such that the angle of the back to the floor changes from approximately 90 degrees to 45 degrees or less. This change in position does not affect the hip-to-knee angle. The seat may be tilted manually.</th>
</tr>
</thead>
</table>
| | The tilt-in-space function for a wheelchair may be covered if one or more of the following apply:  
  - History of skin breakdown or current indication of imminent skin breakdown that cannot be controlled (or has not in the past) by less costly modalities (such as pressure relief cushions or manual pressure relief techniques).  
  - Excessive extensor or flexor muscle tone that is exacerbated by change in hip angle and makes positioning in any upright chair ineffective. State reason why changing angles of position is medically necessary.  
  - Very low muscle tone that cannot maintain upright positioning against gravity, causing spinal anomalies.  
  - Beneficiary has knee contractures and a custom-molded seating system.  
Coverage of both a manual tilt-in-space and recline function for a wheelchair requires medical need (such as high probability of the development of hip contractures) if only a tilt-in-space without recline is used. Also, there is a medical contraindication to using recline-only without the tilt-in-space function. |
| Power Tilt-in-Space or Recline Function in Both Community Residential and Institutional Residential Settings | Power tilt-in-space or recline function may be covered if all of the following exist:  
  - An existing medical condition results in the inability to reposition self without the use of a power tilt or recline mechanism.  
  - The frequency of repositioning is clinically indicated and is an integral part of the nursing facility plan of care.  
  - Beneficiary requires assistance to use a manual tilt-in-space or recline system, and there are regular periods of time that the beneficiary is without assistance.  
  - Beneficiary requires assistance to use a manual tilt-in-space or recline system, and is able to independently care for himself when provided a power tilt-in-space or recline modification.  
For CSHCS pediatric beneficiaries, a written order from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a written order from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries. |
| Wheelchair Accessories | Reimbursement may be made for separate wheelchair accessories that have designated HCPCS codes. Separate reimbursement may be considered for specific wheelchair accessory codes when provided in conjunction with the purchase of a manual wheelchair, power wheelchair, or an addition to an existing wheelchair if:  
  - It is required to provide safety.  
  - It is required for appropriate positioning.  
  - It is the most economical alternative. |
For additions to an existing wheelchair, the physician or the occupational or physical therapist must address the status/condition of the current wheelchair and include the brand, model, serial number, and age of the current wheelchair. If MDHHS did not purchase the wheelchair being modified, all documentation requirements must be provided as if the request is for a new or initial wheelchair. Refer to the Non-Covered Items section of this chapter for information on accessories that are not covered.

2.48.C. PRIOR AUTHORIZATION FOR PURCHASE, RENTALS, REPAIRS, AND/ OR REPLACEMENT OF MOBILITY DEVICES

**Prior Authorization**
The Medicaid Utilization Analyst (Program Review Division) is the authorized Medicaid representative who determines if the service requested falls within the standards of coverage. A prior authorization request may be returned or denied if the documentation is incomplete and not specific to the beneficiary and device requested.

MDHHS reserves the right to request additional documentation to determine medical necessity. For CSHCS beneficiaries, a medical referral from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a medical referral from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries.

For beneficiaries in the community residential setting, the decision notice is sent to the medical supplier with a copy to the beneficiary.

For beneficiaries in the institutional residential setting, the decision notice is sent to the institutional residence with a copy to the beneficiary.

Prior authorization is required for:

- Power wheelchairs, power-operated vehicles, seating, and accessories.
- New and replacement custom-fabricated seating systems, and the addition of functions for tilt-in-space and/or recline (power or manual).
- Diagnosis/medical conditions that are not listed as approved to bypass prior authorization for pediatric mobility items.
- Replacement of standard wheelchairs beyond established timeframes.

Standard wheelchairs with specified accessories/add-ons do not require prior authorization if the Standards of Coverage and Documentation requirements are met. Consult the Medicaid Code and Rate Reference tool and the Wheelchair/Power-Operated Mobility Accessory Reimbursement document on the MDHHS website for accessories/add-on items that require prior authorization and/or are included in the wheelchair base. (Refer to the Directory Appendix for website information.)

**Clinical Documentation**
The evaluation and clinical documentation (MSA-1656) must be submitted within 90 days of the date the evaluation was completed. Clinical documentation must include how the requested seating or mobility device is the most appropriate to assist in performing MRADL.

For CSHCS beneficiaries, a medical referral from an appropriate board-certified pediatric subspecialist or an Office of Medical Affairs (OMA)-approved physician is required. MDHHS also reserves the right to require a medical referral from an appropriate board-certified pediatric subspecialist for Medicaid beneficiaries.
### Prior Authorization Exceptions

Prior authorization is **not** required for the following if standards of coverage are met:

- Specific accessory codes and/or repair codes.
- Specific pediatric mobility devices that do not include any accessories if the related diagnosis/condition is one of the following:
  - Spinal Muscular Atrophy
  - Motor Neuron Disease
  - Anterior Horn Cell Disease, Unspecified
  - Other Anterior Horn Cell Disease
  - Hemiplegia and Hemiparesis
  - Infantile Cerebral Palsy
  - Myoneural Disorders, Unspecified
  - Other Specified Myoneural Disorders
  - Spina Bifida with Hydrocephalus
  - Spina Bifida without Mention of Hydrocephalus
  - Spina Bifida (Other Congenital Anomalies of Nervous System)
  - Microcephalus
  - Reduction Deformities of Brain
  - Congenital Hydrocephalus
  - Muscular Dystrophies and Other Myopathies

**NOTE:** If prior authorization is required for any component of the mobility device (including accessories), then PA is required for the device as well. For example, if a custom-fabricated seating system is required, then prior authorization for the pediatric mobility device is also required.

### Rentals, Repairs and Replacement

A wheelchair can be considered a **capped rental** or a **purchase** item.

**Repairs** for beneficiary-owned mobility devices are covered only after the manufacturer's warranty has been exhausted. It is the responsibility of the provider to supply loaner equipment while the original item is being serviced. If repair of a wheelchair not purchased by MDHHS is requested, the item must be medically necessary and meet the basic standards of coverage. The repair of a second (older) manual or power wheelchair used as a back-up wheelchair is not covered. Repair of a wheelchair involving the replacement of a component part includes the cost of the part and the labor associated with its removal, replacement, and finishing.

**Replacement** of a mobility device is subject to the manufacturer's warranty and/or cost of repairs. The replacement may also be considered when a significant change in the beneficiary's condition has occurred or the item cannot be restored to a serviceable condition. Replacement of wheelchairs for youth will be evaluated on an individual basis due to the expected growth pattern. Based on these conditions, a wheelchair may be considered for replacement every five years for adults and every two years for children.
Medicaid will not authorize coverage of replacement of any DME item or accessory that is requested solely because new technology is available. Replacement or modifications must be medically necessary and required as a result of a change in the medical condition that makes the covered service unusable or contraindicated.

<table>
<thead>
<tr>
<th>Prior Authorization Process for Beneficiaries in the Community Residential Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>The prior authorization process for beneficiaries in the community residential setting is initiated by the treating physician's written order for a seating/mobility evaluation that includes the reason for the referral. The evaluation must be completed by a licensed medical professional using the Evaluation and Medical Justification for Complex Seating Systems and Mobility Devices form (MSA-1656).</td>
</tr>
<tr>
<td>(Refer to the Prior Authorization Form subsection and the Evaluation and Medical Justification for Complex Seating Systems and Mobility Devices Form subsection of this chapter for additional information.)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Prior Authorization Process for Beneficiaries in the Institutional Residential Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prior authorization is required for Medicaid coverage and separate reimbursement for medically necessary power-operated vehicles and power or manual wheelchairs with custom-fabricated seating systems. The request for a resident assessment must be initiated by the treating physician with the stated medical reason for the referral. Facility clinicians who are responsible for the overall nursing plan of care and treatment of the resident will prepare and submit prior authorization requests and medical documentation directly to the MDHHS Program Review Division.</td>
</tr>
<tr>

### 2.49 Ventilators

**Definition**

A ventilator is a device designed to intermittently or continuously assist or control pulmonary ventilation.

- A negative pressure ventilator exerts negative (subatmospheric) pressure on the exterior chest wall.
- A positive pressure ventilator ventilates the lungs as the result of a positive pressure applied to the airway.

**Standards of Coverage**

Negative and positive pressure ventilators may be covered when there is a respiratory related diagnosis (e.g., neuromuscular disease, thoracic restrictive disease, chronic respiratory failure) and the beneficiary requires ventilator assistance.

**Documentation**

Documentation must be less than 90 days old and include the following:

- Respiratory diagnosis/medical condition related to the need for the ventilator.
- Type of ventilator ordered.
- Ventilator settings.
- Number of hours beneficiary is required to use the ventilator.

**PA Requirements**

PA is required for all ventilators.
| Payment Rules | All ventilators are a **rental only** item and are inclusive of the following:

- All accessories needed to use the unit (e.g., circuits, water feed sets, adaptors, temperature probes, filters, heated or nonheated humidifier, oxygen analyzer, water or saline for humidifier, etc.).
- Education on the proper use and care of the equipment.
- Routine servicing and all necessary repairs or replacements to make the unit functional.

An additional ventilator may only be covered to allow a beneficiary access to the community. When billing more than one vent, the additional vent must be reported using a NOC code. A backup ventilator in case of a power failure is not separately reimbursable. |

SECTION 1 – GENERAL INFORMATION

This chapter applies to Mental Health providers. Information contained in this chapter is to be used in conjunction with other chapters of this manual including the Billing & Reimbursement Chapters and the Practitioner Chapter, as well as the related procedure code databases and fee schedules located on the Michigan Department of Health and Human Services (MDHHS) website. (Refer to the Directory Appendix for website information.)

1.1 MDHHS APPROVAL

Pursuant to Michigan’s Medicaid State Plan and federally approved 1915(b) waiver and 1915(c) Habilitation Supports Waiver (HSW), community-based mental health, substance abuse and developmental disability specialty services and supports are covered by Medicaid when delivered under the auspices of an approved Prepaid Inpatient Health Plan (PIHP). To be an approved Medicaid provider, a PIHP must be certified as a Community Mental Health Services Program (CMHSP) by MDHHS in accordance with Section 232a of the Michigan Mental Health Code. A PIHP may be either a single CMHSP, or the lead agency in an affiliation of CMHSPs approved by the Specialty Services Selection Panel. Service providers may contract with the PIHP or an affiliate of the PIHP. PIHPs must be enrolled with MDHHS as Medicaid providers. (Refer to the General Information for Providers Chapter of this manual for additional information.) The PIHP must offer, either directly or under contract, a comprehensive array of services, as specified in Section 206 of the Michigan Mental Health Code, being Public Act 258 of 1974, as amended, and all of those specialty services/supports included in this manual.

For the Specialty Services and Supports Program, Centers for Medicare & Medicaid Services gave Michigan permission to use Section 1915(b)(3) of the Social Security Act which allows a state to use Medicaid funds to provide services that are in addition to the state plan services. Those services are described in the Additional Mental Health Services (B3s) section of this chapter. Services selected during the person-centered planning process may be a mix of state plan, HSW, and additional/B3 services, or state plan or HSW or additional/B3 services only, depending on what services best meet a beneficiary’s needs and will assist in achieving his goals.

The 1915(c) Children’s Waiver services are delivered under the auspices of a CMHSP that has been enrolled as a Children’s Waiver provider. Children’s Waiver services are reimbursed by MDHHS through a fee-for-service (FFS) payment system. The Children’s Waiver program is described in the Children’s Home and Community-Based Services Waiver Section of this chapter.

1.2 STANDARDS

The PIHP shall comply with the standards for organizational structure, fiscal management, administrative record keeping, and clinical record keeping specified in this section. In order for a state plan or HSW service to be reported as a Medicaid cost, it must meet the criteria in this chapter.

1.3 ADMINISTRATIVE ORGANIZATION

The administrative organization shall assure effective and efficient operation of the various programs and agencies in a manner consistent with all applicable federal and state laws, regulations, and policies. Effective and efficient operation includes value purchasing. As applied to services and supports, value purchasing assures appropriate access, quality, and the efficient and economic provision of supports and
services. Quality is measured by meeting or exceeding the sets of outcome specifications in the beneficiary's individual plan of service, developed through the person-centered planning process or, for substance abuse services, the individualized treatment plan. Efficient and economic is the lowest cost of the available alternatives that has documented capacity to meet or exceed the outcome quality specifications identified in the beneficiary's plan. There shall be clear policy guidelines for decision-making and program operations and provision for monitoring same. The PIHP must offer direct assistance to explore and secure all applicable first- and third-party reimbursements, and assist the beneficiary to make use of other community resources for non-Medicaid services, or Medicaid services administered by other agencies. MDHHS encourages the use of natural supports to assist in meeting an individual's needs to the extent that the family or friends who provide the natural supports are willing and able to provide this assistance. PIHPs may not require a beneficiary's natural support network to provide such assistance as a condition for receiving specialty mental health supports and services. The use of natural supports must be documented in the beneficiary's individual plan of service.

1.4 PROVIDER REGISTRY

The PIHPs must register with MDHHS any Medicaid state plan, HSW, or additional/B3 service they provide directly or through one of their contracted providers, or an affiliate as applicable, as specified in the MDHHS/PIHP contract. The PIHPs should contact the Division of Quality Management and Planning for more information about the provider registry, and the Bureau of Community Based Services for MDHHS approval of special programs. (Refer to the Directory Appendix for contact information.) PIHPs must update the registry whenever changes (address, scope of program, additions, deletions) occur, according to the format and schedule specified by MDHHS.

Children's Waiver providers must be registered by the CMHSPs.

1.5 PROGRAMS REQUIRING SPECIAL APPROVAL

Certain programs and sites require the PIHP to request specific approval by MDHHS prior to service delivery. Programs must be approved by MDHHS prior to service provision in order to be reported as a Medicaid cost. (Refer to the Directory Appendix for contact information.) Programs previously approved by MDHHS and delivered by CMHSPs that are now affiliates do not need to be approved again. Programs requiring specific approval are:

- Assertive Community Treatment Programs
- Clubhouse Psychosocial Rehabilitation Programs
- Crisis Residential Programs
- Day Program Sites
- Drop-in Programs
- Home-Based Services
- Intensive Crisis Stabilization
- Wraparound

The PIHP shall notify MDHHS of changes in providers of these programs or sites, including change of address or discontinuation.

Children's Waiver services remain the responsibility of CMHSPs. CMHSPs must submit requests for approvals and changes to MDHHS, Division of Mental Health Services to Children and Families.
1.6 BENEFICIARY ELIGIBILITY

A Medicaid beneficiary with mental illness, serious emotional disturbance or developmental disability who is enrolled in a Medicaid Health Plan (MHP) is eligible for specialty mental health services and supports when his needs exceed the MHP benefits. (Refer to the Medicaid Health Plans Chapter of this manual for additional information.) Such need must be documented in the individual’s clinical record.

The following table has been developed to assist health plans and PIHPs in making coverage determination decisions related to outpatient care for MHP beneficiaries. Generally, as the beneficiary’s psychiatric signs, symptoms and degree/extent of functional impairment increase in severity, complexity and/or duration, the more likely it becomes that the beneficiary will require specialized services and supports available through the PIHP/CMHSP. For all coverage determination decisions, it is presumed that the beneficiary has a diagnosable mental illness or emotional disorder as defined in the most recent Diagnostic and Statistical Manual of the Mental Disorders published by the American Psychiatric Association.

<table>
<thead>
<tr>
<th>In general, MHPs are responsible for outpatient mental health in the following situations:</th>
<th>In general, PIHPs/CMHSPs are responsible for outpatient mental health in the following situations:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The beneficiary is experiencing or demonstrating mild or moderate psychiatric symptoms or signs of sufficient intensity to cause subjective distress or mildly disordered behavior, with minor or temporary functional limitations or impairments (self-care/daily living skills, social/interpersonal relations, educational/vocational role performance, etc.) and minimal clinical (self/other harm risk) instability.</td>
<td>• The beneficiary is currently or has recently been (within the last 12 months) seriously mentally ill or seriously emotionally disturbed as indicated by diagnosis, intensity of current signs and symptoms, and substantial impairment in ability to perform daily living activities (or for minors, substantial interference in achievement or maintenance of developmentally appropriate social, behavioral, cognitive, communicative or adaptive skills).</td>
</tr>
<tr>
<td>• The beneficiary was formerly significantly or seriously mentally ill at some point in the past. Signs and symptoms of the former serious disorder have substantially moderated or remitted and prominent functional disabilities or impairments related to the condition have largely subsided (there has been no serious exacerbation of the condition within the last 12 months). The beneficiary currently needs ongoing routine medication management without further specialized services and supports.</td>
<td>• The beneficiary does not have a current or recent (within the last 12 months) serious condition but was formerly seriously impaired in the past. Clinically significant residual symptoms and impairments exist and the beneficiary requires specialized services and supports to address residual symptomatology and/or functional impairments, promote recovery and/or prevent relapse.</td>
</tr>
<tr>
<td>• The beneficiary has been treated by the MHP for mild/moderate symptomatology and temporary or limited functional impairments and has exhausted the 20-visit maximum for the calendar year. (Exhausting the 20-visit maximum is not necessary prior to referring complex cases to PIHP/CMHSP.) The MHP’s mental health consultant and the PIHP/CMHSP medical director concur that additional treatment through the PIHP/CMHSP is medically necessary and can reasonably be expected to achieve the intended purpose (i.e., improvement in the beneficiary’s condition) of the additional treatment.</td>
<td></td>
</tr>
</tbody>
</table>
The "mental health conditions" listed in the table above are descriptions and are intended only as a general guide for PIHPs and MHPs in coverage determination decisions. These categories do not constitute unconditional boundaries and hence cannot provide an absolute demarcation between health plan and PIHP responsibilities for each individual beneficiary. Cases will occur which will require collaboration and negotiated understanding between the medical directors from the MHP and the PIHP. The critical clinical decision-making processes should be based on the written local agreement, common sense and the best treatment path for the beneficiary.

Medicaid beneficiaries who are not enrolled in a MHP, and whose needs do not render them eligible for specialty services and supports, receive their outpatient mental health services through the fee-for-service (FFS) Medicaid Program when experiencing or demonstrating mild or moderate psychiatric symptoms or signs of sufficient intensity to cause subjective distress or mildly disordered behavior, with minor or temporary functional limitations or impairments (self-care/daily living skills, social/interpersonal relations, educational/vocational role performance, etc.) and minimal clinical (self/other harm risk) instability. Refer to the Practitioner Chapter of this manual for coverages and limitations of the FFS mental health benefit.

Medicaid beneficiaries are eligible for substance abuse services if they meet the medical eligibility criteria for one or more services listed in the Substance Abuse Services Section of this chapter.

Medicaid-covered services and supports selected jointly by the beneficiary, clinician, and others during the person-centered planning process and identified in the plan of service must meet the medical necessity criteria contained in this chapter, be appropriate to the individual's needs, and meet the standards herein. A person-centered planning process that meets the standards of the Person-centered Planning Practice Guideline attached to the MDHHS/PIHP contract must be used in selecting services and supports with mental health program beneficiaries who have mental illness, serious emotional disturbance, or developmental disabilities.

### 1.7 Definition of Terms

This list of terms is not exhaustive, but rather the most commonly used terms, listed alphabetically:

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Amount</strong></td>
<td>The number of units (e.g., 25 15-minute units of community living supports) of service identified in the individual plan of service or treatment plan to be provided.</td>
</tr>
<tr>
<td><strong>Child Mental Health Professional</strong></td>
<td>A person who is trained and has one year of experience in the examination, evaluation, and treatment of minors and their families and who is either a physician, psychologist, licensed professional counselor or registered professional nurse; or</td>
</tr>
<tr>
<td></td>
<td>A person with at least a bachelor’s degree in a mental health-related field from an accredited school who is trained, and has three years of supervised experience in the examination, evaluation, and treatment of minors and their families; or</td>
</tr>
<tr>
<td></td>
<td>A person with at least a master’s degree in a mental health-related field from an accredited school who is trained, and has one year of experience in the examination, evaluation, and treatment of minors and their families.</td>
</tr>
<tr>
<td><strong>Covered Services or Medicaid Covered Services</strong></td>
<td>For the purposes of this manual, Medicaid State Plan Services and Additional Mental Health Services (B3s).</td>
</tr>
</tbody>
</table>
### Duration
The length of time (e.g., three weeks, six months) it is expected that a service identified in the individual plan of service or treatment plan will be provided.

### Health Care Professional
A physician, registered nurse, physician's assistant, nurse practitioner, or dietitian. Services provided must be relevant to the health care professional's scope of practice. Refer to the Staff Provider Qualifications in the Program Requirements Section of this chapter.

### Individual Plan of Services (also referred to as the "plan" or "plan of services and supports" or "treatment plan" for beneficiaries receiving substance abuse treatment)
The document that identifies the needs and goals of the individual beneficiary and the medical necessity, amount, duration, and scope of the services and supports to be provided. For beneficiaries receiving mental health or developmental disabilities services, the individual plan of services must be developed through a person-centered planning process. In the case of minors with developmental disabilities, serious emotional disturbance or mental illness, the child and his family are the focus of service planning, and family members are an integral part of the planning process.

### Medical Necessity
Determination that a specific service is medically (clinically) appropriate, necessary to meet needs, consistent with the person's diagnosis, symptomatology and functional impairments, is the most cost-effective option in the least restrictive environment, and is consistent with clinical standards of care. Medical necessity of a service shall be documented in the individual plan of services.

### Mental Health Professional
A physician, psychologist, licensed master's social worker, licensed professional counselor, licensed marriage and family therapist, or registered nurse. (Refer to Staff Provider Qualifications in the Program Requirements Section of this chapter.)

### Prescription
A written order for a service or item by a physician or other licensed practitioner of the healing arts within the scope of his or her practice under Michigan law that contains all of the following:
- Beneficiary's name;
- Prescribing practitioner's name, address and telephone number;
- Prescribing practitioner's signature (a stamped signature is not acceptable);
- The date the prescription was written;
- The specific service or item being prescribed;
- The expected start date of the order (if different from the prescription date); and
- The amount and length of time that the service or item is needed.

A verbal order from a physician or other licensed practitioner of the healing arts within their scope of practice may be used to initiate occupational therapy (OT), physical therapy (PT), or Speech, Hearing and Language services or to dispense medically necessary equipment or supplies when a delay would be medically contraindicated. The written prescription must be obtained within 14 days of the verbal order. The qualified therapist (OT, PT or Speech) responsible for furnishing or supervising the ordered service, or supports coordinator or case manager must receive and document the date of the verbal order in the individual plan of service. Upon receipt of the signed prescription, it shall be verified with the verbal order and entered into the individual plan of service.
**Qualified Mental Health Professional (QMHP)**

An individual who has specialized training or one year of experience in treating or working with a person who has mental illness; and is a psychologist, physician, educator with a degree in education from an accredited program, licensed or limited licensed master's or bachelor's social worker, physical therapist, occupational therapist, speech pathologist or audiologist, registered nurse, therapeutic recreation specialist, rehabilitation counselor, licensed or limited licensed professional counselor or individual with a human services degree hired and performing in the role of QMHP prior to January 1, 2008. (Refer to Staff Provider Qualifications in the Program Requirements Section of this chapter for specific requirements of the professionals.)

NOTE: If an individual was hired and performed the role of a QMHP prior to January 1, 2008 and later transfers to a new agency, his/her QMHP status will be grandfathered into the new agency.

**Qualified Intellectual Disability Professional (QIDP)**

An individual who meets the qualifications under 42 CFR 483.430. A QIDP is a person who has specialized training or one year of experience in treating or working with a person who has an intellectual disability; and is a psychologist, physician, educator with a degree in education from an accredited program, licensed or limited licensed master's or bachelor's social worker, physical therapist, occupational therapist, speech pathologist or audiologist, registered nurse, therapeutic recreation specialist, rehabilitation counselor, licensed or limited licensed professional counselor or individual with a human services degree hired and performing in the role of QIDP prior to January 1, 2008. (Refer to Staff Provider Qualifications in the Program Requirements Section of this chapter for specific requirements of the professionals.)

NOTE: If an individual was hired and performed the role of a QIDP prior to January 1, 2008 and later transfers to a new agency, his/her QIDP status will be grandfathered into the new agency.

**Scope of Service**

The parameters within which the service will be provided, including:

- Who (e.g., professional, paraprofessional, aide supervised by a professional);
- How (e.g., face-to-face, telephone, taxi or bus, group or individual); and
- Where (e.g., community setting, office, beneficiary's home).

**Substance Abuse Treatment Specialist**

- An individual who has licensure in one of the following areas, and is working within their scope of practice:
  - Licensed Bachelor's Social Worker (LBSW)
  - Licensed Marriage and Family Therapist
  - Licensed Master's Social Worker (LMSW)
  - Licensed Practical Nurse (LPN)
  - Licensed Professional Counselor (LPC)
  - Licensed Psychologist (LP)
  - Limited Licensed Bachelor's Social Worker (LLBSW)
  - Limited Licensed Marriage and Family Therapist
  - Limited Licensed Master's Social Worker (LLMSW)
  - Limited Licensed Professional Counselor (LLPC)
  - Limited Licensed Psychologist (LLP)
- Nurse Practitioner (NP)
- Physician (MD, DO)
- Physician Assistant (PA)
- Registered Nurse (RN)
- Temporary Limited Licensed Psychologist (TLLP)

and who has a registered development plan leading to certification and is timely in its implementation (Development Plan – Counselor (DP-C) – approved development plan in place); or who is functioning under a time-limited exception plan approved by the substance abuse coordinating agency; or

- An individual who has one of the following Michigan Certification Board of Addiction Professionals (MCBAP) or International Certification and Reciprocity Consortium (IC & RC) credentials:
  - Certified Advanced Alcohol and Drug Counselor – IC & RC (CAADC)
  - Certified Alcohol and Drug Counselor – IC & RC (CADC)
  - Certified Alcohol and Drug Counselor – Michigan (CADC-M)
  - Certified Co-Occurring Disorders Professional – IC & RC (CCDP)
  - Certified Co-Occurring Disorders Professional Diplomat – IC & RC (CCDP-D)
  - Certified Criminal Justice Professional – IC & RC - Reciprocal (CCJP-R); or
  - An individual who has one of the following approved alternative certifications:
    - for medical doctors: American Society of Addiction Medicine (ASAM)
    - for psychologists: American Psychological Association (APA) specialty in addiction and has certification through the Upper Midwest Indian Council on Addiction Disorders (UMICAD).

A physician (MD, DO), physician assistant, nurse practitioner, registered nurse or licensed practical nurse who provides substance use disorder treatment services within the scope of their practice is considered to be specifically-focused treatment staff and is not required to obtain MCBAP credentials. If one of these professionals provides substance use disorder treatment services outside their scope of practice, the appropriate MCBAP/IC & RC credential applies.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>An individual who has a registered MCBAP certification development plan (Development Plan – Counselor (DP-C) – approved development plan in place), is timely in its implementation, and is supervised by a Certified Clinical Supervisor – Michigan (CCS-M) or Certified Clinical Supervisor – IC &amp; RC (CCS); or who has a registered development plan to obtain the supervisory credential (Development Plan – Supervisor (DP-S) – approved development plan in place) while completing the requirements of the plan (6000 hours).</td>
</tr>
</tbody>
</table>
SECTION 2 – PROGRAM REQUIREMENTS

2.1 MENTAL HEALTH AND DEVELOPMENTAL DISABILITIES SERVICES

Mental health and developmental disabilities services (state plan, HSW, and additional/B3) must be:

- Provided under the supervision of a physician, or other licensed health professional whose profession is relevant to the services being provided. This includes professionals who are licensed or certified in Michigan in a human services field typically associated with mental health or developmental disabilities services. (Refer to Staff Provider Qualifications later in this section.)

- Provided to the beneficiary as part of a comprehensive array of specialized mental health or developmental disabilities services.

- Coordinated with other community agencies (including, but not limited to, Medicaid Health Plans [MHPs], family courts, local health departments [LHDs], MiChoice waiver providers, school-based services providers, and local MDHHS offices).

- Provided according to an individual written plan of service that has been developed using a person-centered planning process and that meets the requirements of Section 712 of the Michigan Mental Health Code. A preliminary plan must be developed within seven days of the commencement of services or, if a beneficiary is hospitalized, before discharge or release. Pursuant to state law and in conjunction with the Balanced Budget Act of 1997, Section 438.10 (f)(6)(v), each beneficiary must be made aware of the amount, duration, and scope of the services to which he is entitled. Therefore, each plan of service must contain the expected date any authorized service is to commence, and the specified amount, scope, and duration of each authorized service. The beneficiary must receive a copy of his plan of services within 15 business days of completion of the plan.

- The individual plan of service shall be kept current and modified when needed (reflecting changes in the intensity of the beneficiary’s health and welfare needs or changes in the beneficiary’s preferences for support). A beneficiary or his/her guardian or authorized representative may request and review the plan at any time. A formal review of the plan with the beneficiary and his/her guardian or authorized representative shall occur not less than annually to review progress toward goals and objectives and to assess beneficiary satisfaction. The review may occur during person-centered planning.

- Provided without the use of aversive, intrusive, or restrictive techniques unless identified in the individual plan of service and individually approved and monitored by a behavior treatment plan review committee.
2.2 SUBSTANCE ABUSE SERVICES

Substance abuse services must be furnished by service providers licensed by the State of Michigan to provide each type of substance abuse services for which they contract. Substance abuse service providers also must be accredited as an alcohol and/or drug abuse program by one of the following national accreditation bodies:

- The Joint Commission;
- Commission on Accreditation of Rehabilitation Facilities (CARF);
- American Osteopathic Association (AOA);
- Council on Accreditation of Services for Families and Children (COA);
- National Committee on Quality Assurance (NCQA); or
- Accreditation Association for Ambulatory Health Care (AAAHC).

Substance abuse services must be coordinated with other community services as appropriate to an individual’s needs and circumstances. Services must also be provided according to an individualized treatment plan. All standard requirements of the Michigan Public Health Code, Article 6 - Substance Abuse apply.

2.3 LOCATION OF SERVICE

Services may be provided at or through PIHP service sites or contractual provider locations. Unless otherwise noted in this manual, PIHPs are encouraged to provide mental health and developmental disabilities services in integrated locations in the community, including the beneficiary’s home, according to individual need and clinical appropriateness. For office or site-based services, the location of primary service providers must be within 60 minutes/60 miles in rural areas, and 30 minutes/30 miles in urban areas, from the beneficiary’s residence.

Substance abuse covered services must generally be provided at state licensed sites. Licensed providers may provide some activities, including outreach, in community (off-site) settings. Mental health case management may be provided off-site, as necessary, to meet individual needs when case management is purchased as a component of a licensed service. For office or site-based services, the location of primary service providers must be within 60 minutes/60 miles in rural areas, and 30 minutes/30 miles in urban areas, from the beneficiary’s home.

For beneficiaries residing in nursing facilities, only the following clinic services may be provided:

- Nursing facility mental health monitoring;
- Psychiatric evaluation;
- Psychological testing, and other assessments;
- Treatment planning;
- Individual therapy, including behavioral services;
- Crisis intervention; and
- Services provided at enrolled day program sites.
Refer to the Nursing Facility Chapter of this manual for PASARR information as well as mental health services provided by Nursing Facilities.

Medicaid does not cover services delivered in Institutions of Mental Disease (IMD) for individuals between ages 22 and 64, as specified in §1905(a)(B) of the Social Security Act. Medicaid does not cover services provided to children with serious emotional disturbance in Child Caring Institutions (CCI) unless it is licensed as a “children’s therapeutic group home” as defined in Section 722.111 Sec.1(f) under Act No. 116 of the Public Acts of 1973, as amended, or it is for the purpose of transitioning a child out of an institutional setting (CCI). Medicaid may also be used for the purpose of transitioning a child out of Hawthorn Center. For both the CCI and Hawthorn Center, the following mental health services initiated by the PIHP (the case needs to be open to the CMHSP/PIHP) may be provided within the designated timeframes:

- Assessment of a child's needs for the purpose of determining the community based services necessary to transition the child out of a CCI or Hawthorn Center. This should occur up to 60 days prior to the anticipated discharge from a CCI or Hawthorn Center.
- Wraparound planning or case management. This should occur up to 60 days prior to discharge from a CCI or Hawthorn Center.

Medicaid does cover services provided to children with developmental disabilities in a CCI that exclusively serves children with developmental disabilities, and has an enforced policy of prohibiting staff use of seclusion and restraint. Medicaid does not cover services provided to persons/children involuntarily residing in non-medical public facilities (such as jails, prisons or juvenile detention facilities).

### 2.3.A. DAY PROGRAM SITES

The PIHP may organize a set of state plan, HSW or additional/B3 services at a day program site, but the site and the set of services must be approved by MDHHS. Some services (e.g., inpatient or respite) may not be provided at a day program site. (Refer to individual program descriptions in this chapter for more information on those limitations.)

Mental health and developmental disabilities day program sites are defined as places other than the beneficiary's/family's home, nursing facility, or a specialized residential setting where an array of mental health or developmental disability services and supports are provided:

- To assist the beneficiary in achieving goals of independence, integrated employment and/or community inclusion, as specified in his individual plan of services.
- Through a predetermined schedule, typically in-group modalities.
- By staff under the immediate and on-site supervision of a professional possessing at least a bachelor’s degree in a human service field, and at least two years work experience providing services to beneficiaries with serious mental illness and developmental disabilities.

Medicaid providers wishing to provide mental health and/or developmental disability services and supports at a day program site must obtain approval of the day program site by MDHHS. (Refer to the Directory Appendix for contact information.) MDHHS approval will be based upon adherence to the following requirements:
• Existence of a program schedule of services and supports.
• Existence of an individual beneficiary schedule of state plan, HSW, and additional/B3 services and supports with amount, duration and scope identified.
• The beneficiary’s services and supports must be based upon the desired outcomes and/or goals of the individual defined through a person-centered planning process.
• Direct therapy services must be delivered by professional staff, or aides under the supervision of professional staff, who are licensed, certified, or registered to provide health-related services within the scope of practice for the discipline.
• If an aide under professional supervision delivers direct therapy services, that supervision must be documented in the beneficiary’s clinical record.

Approval of new program sites will be contingent upon submission of acceptable enrollment information to MDHHS by the PIHP, and upon a site visit by MDHHS.

2.4 STAFF PROVIDER QUALIFICATIONS

Providers of specialty services and supports (including state plan, HSW, and additional/B3) are chosen by the beneficiary and others assisting him/her during the person-centered planning process, and must meet the staffing qualifications contained in program sections in this chapter. In addition, qualifications are noted below for provider staff mentioned throughout this chapter, including the Children’s Waiver. The planning team should also identify other competencies that will assure the best possible outcomes for the beneficiary. Credentialing and re-credentialing standards located in the Quality Assessment and Performance Improvement Program in the MDHHS/PIHP contract must be followed. Michigan laws regarding licensing and registration of professionals are found in the Public Health Code, the Mental Health Code and the Michigan Administrative Rules. These regulations define the scope of practice for each professional as well as requirements for supervision.

All providers must be:

• At least 18 years of age.
• Able to prevent transmission of any communicable disease from self to others in the environment in which they are providing supports.
• Able to communicate expressively and receptively in order to follow individual plan requirements and beneficiary-specific emergency procedures, and report on activities performed.
• In good standing with the law according to the MDHHS/PIHP contract.

<table>
<thead>
<tr>
<th>Aides</th>
<th>Must be able to perform basic first aid procedures. Children’s Waiver aides must also successfully complete training in recipient rights and implementation of the child’s individual plan of services.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Audiologist</td>
<td>A licensed individual; has the equivalent educational requirements and work experience necessary for the license; or has completed the academic program and is acquiring supervised work experience to qualify for the license.</td>
</tr>
<tr>
<td>Dietitian</td>
<td>An individual who is a Registered Dietitian or an individual who meets the qualification of Registered Dietitian established by the American Dietetic Association.</td>
</tr>
<tr>
<td>Profession</td>
<td>Definition</td>
</tr>
<tr>
<td>------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Licensed Practical Nurse (LPN)</td>
<td>An individual who is licensed by the State of Michigan to practice as a licensed practical nurse under the supervision of a registered nurse, physician, or dentist. LPNs include licensed psychiatric attendant nurses per MCL§ 333.17209.</td>
</tr>
<tr>
<td>Nurse Practitioner (NP)</td>
<td>An individual licensed to practice as a registered nurse and certified in a nursing specialty by the State of Michigan.</td>
</tr>
<tr>

Limited licensed social workers must be supervised by a licensed MSW (MCL 333.18501 - 507).</td>
</tr>
<tr>
<td>Speech Pathologist (SLP)</td>
<td>An individual engaged in the practice of Speech-Language Pathology and is licensed by the State of Michigan to provide such services.</td>
</tr>
</tbody>
</table>

Refer to the Provider Qualifications on the MDHHS website for specific provider qualifications for each covered service. (Refer to the Directory Appendix for website information.)
2.5 **MEDICAL NECESSITY CRITERIA**

The following medical necessity criteria apply to Medicaid mental health, developmental disabilities, and substance abuse supports and services.

2.5.A. **MEDICAL NECESSITY CRITERIA**

Mental health, developmental disabilities, and substance abuse services are supports, services, and treatment:

- Necessary for screening and assessing the presence of a mental illness, developmental disability or substance use disorder; and/or
- Required to identify and evaluate a mental illness, developmental disability or substance use disorder; and/or
- Intended to treat, ameliorate, diminish or stabilize the symptoms of mental illness, developmental disability or substance use disorder; and/or
- Expected to arrest or delay the progression of a mental illness, developmental disability, or substance use disorder; and/or
- Designed to assist the beneficiary to attain or maintain a sufficient level of functioning in order to achieve his goals of community inclusion and participation, independence, recovery, or productivity.

2.5.B. **DETERMINATION CRITERIA**

The determination of a medically necessary support, service or treatment must be:

- Based on information provided by the beneficiary, beneficiary's family, and/or other individuals (e.g., friends, personal assistants/aides) who know the beneficiary;
- Based on clinical information from the beneficiary's primary care physician or health care professionals with relevant qualifications who have evaluated the beneficiary;
- For beneficiaries with mental illness or developmental disabilities, based on person-centered planning, and for beneficiaries with substance use disorders, individualized treatment planning;
- Made by appropriately trained mental health, developmental disabilities, or substance abuse professionals with sufficient clinical experience;
- Made within federal and state standards for timeliness;
- Sufficient in amount, scope and duration of the service(s) to reasonably achieve its/their purpose; and
- Documented in the individual plan of service.
2.5.C. SUPPORTS, SERVICES AND TREATMENT AUTHORIZED BY THE PIHP

Supports, services, and treatment authorized by the PIHP must be:

- Delivered in accordance with federal and state standards for timeliness in a location that is accessible to the beneficiary;
- Responsive to particular needs of multi-cultural populations and furnished in a culturally relevant manner;
- Responsive to the particular needs of beneficiaries with sensory or mobility impairments and provided with the necessary accommodations;
- Provided in the least restrictive, most integrated setting. Inpatient, licensed residential or other segregated settings shall be used only when less restrictive levels of treatment, service or support have been, for that beneficiary, unsuccessful or cannot be safely provided; and
- Delivered consistent with, where they exist, available research findings, health care practice guidelines, best practices and standards of practice issued by professionally recognized organizations or government agencies.

2.5.D. PIHP DECISIONS

Using criteria for medical necessity, a PIHP may:

- Deny services:
  - that are deemed ineffective for a given condition based upon professionally and scientifically recognized and accepted standards of care;
  - that are experimental or investigational in nature; or
  - for which there exists another appropriate, efficacious, less-restrictive and cost-effective service, setting or support that otherwise satisfies the standards for medically-necessary services; and/or
- Employ various methods to determine amount, scope and duration of services, including prior authorization for certain services, concurrent utilization reviews, centralized assessment and referral, gate-keeping arrangements, protocols, and guidelines.

A PIHP may not deny services based solely on preset limits of the cost, amount, scope, and duration of services. Instead, determination of the need for services shall be conducted on an individualized basis.
**SECTION 3 – COVERED SERVICES**

The Mental Health Specialty Services and Supports program is limited to the state plan services listed in this section, the services described in the Habilitation Supports Waiver for Persons with Developmental Disabilities Section of this chapter, and the additional/B3 services described in the Additional Mental Health Services (B3s) section of this chapter. The PIHP is not responsible for providing state plan covered services that MDHHS has designated another agency to provide (refer to other chapters in this manual for additional information, including the Chapters on Medicaid Health Plans, Home Health, Hospice, Pharmacy and Ambulance), nor is the PIHP responsible for providing the Children’s Waiver Services or Serious Emotional Disturbance Waiver Services described in this chapter. However, it is expected that the PIHP will assist beneficiaries in accessing these other Medicaid services. (Refer to the Substance Abuse Section of this chapter for the specific program requirements for substance abuse services.) It is expected that PIHPs will offer evidence based and promising practices as part of the Medicaid covered specialty services where applicable. PIHPs shall assure that these practices are provided by staff who have been appropriately trained in the model(s) and are provided to the population for which the model was intended. NOTE: Certain services are State Plan EPSDT services when delivered to children birth-21 years as noted specifically under those services listed in the Additional Mental Health Services (B3s) section of this chapter. Each affected service is appropriately identified within the subsections.

### 3.1 APPLIED BEHAVIOR ANALYSIS

Refer to the Applied Behavior Analysis Section of this chapter for specific program requirements.

### 3.2 ASSERTIVE COMMUNITY TREATMENT

Refer to the Assertive Community Treatment Program (ACT) Section of this chapter for specific program requirements.

### 3.3 ASSESSMENTS

<table>
<thead>
<tr>
<th>Health Assessment</th>
<th>Health assessment includes activities provided by a registered nurse, physician assistant, nurse practitioner, or dietitian to determine the beneficiary's need for medical services and to recommend a course of treatment within the scope of practice of the nurse or dietician.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Psychiatric Evaluation</td>
<td>A comprehensive evaluation, performed face-to-face by a psychiatrist or psychiatric mental health nurse practitioner, that investigates a beneficiary's clinical status, including the presenting problem; the history of the present illness; previous psychiatric, physical, and medication history; relevant personal and family history; personal strengths and assets; and a mental status examination. This examination concludes with a written summary based on a recovery model of positive findings, a biopsychosocial formulation and diagnostic statement, an estimate of risk factors, initial treatment recommendations, estimate of length of stay when indicated, and criteria for discharge.</td>
</tr>
</tbody>
</table>
### Psychological Testing

Standardized psychological tests and measures rendered by full, limited-licensed, or temporary-limited-licensed psychologists. The beneficiary's clinical record must indicate the name of the person who administered the tests, the results of the tests, the actual tests administered, and any recommendations. The protocols for testing must be available for review.

### All Other Assessments and Testing

Generally accepted professional assessments or tests, other than psychological tests, that are conducted by a mental health care professional within their scope of practice for the purposes of determining eligibility for specialty services and supports, and the treatment needs of the beneficiary. The Child and Adolescent Functional Assessment Scale (CAFAS) used must be for the assessment of children with suspected serious emotional disturbance, and must be performed by staff who have been trained in the implementation of CAFAS.

#### 3.4 Behavior Treatment Review

The 1997 federal Balanced Budget Act requires states to assure that enrollees in their PIHPs will "be free from any form of restraint or seclusion used as a means of coercion, discipline, convenience, or retaliation, as specified in other Federal regulations on the use of restraints or seclusion" [42 CFR 438.100 (b)(2)(v)].

A behavior treatment plan, where needed, is developed through the person-centered planning process that involves the beneficiary. The person-centered planning process should determine whether a comprehensive assessment should be done in order to rule out any physical or environmental cause for the behavior. Any behavior treatment plan that proposes aversive, restrictive or intrusive techniques, or psycho-active medications for behavior control purposes and where the target behavior is not due to an active substantiated psychotic process, must be reviewed and approved by a specially constituted body comprised of at least three individuals, one of whom shall be a fully- or limited-licensed psychologist and one of whom shall be a licensed physician/psychiatrist. The psychologist or physician must be present during the review and approval process. At least one of the committee members shall not be the developer or implementer of the behavior treatment plan. The approved behavioral plan shall be based on a comprehensive assessment of the behavioral needs of the beneficiary. Review and approval (or disapproval) of such treatment plans shall be done in light of current research and prevailing standards of practice as found in current peer-reviewed psychological/psychiatric literature. Any proposed aversive, intrusive or restrictive technique not supported in current peer-reviewed psychological/psychiatric literature must be reviewed and approved by MDHHS prior to implementing. Acceptable behavioral treatment plans are designed to reduce maladaptive behaviors, to maximize behavioral self-control, or to restore normalized psychological functioning, reality orientation, and emotional adjustment, thus enabling the beneficiary to function more appropriately in interpersonal and social relationships. Such reviews shall be completed prior to the beneficiary's signing and implementation of the plan and as expeditiously as possible. Staff implementing the individual's behavior treatment plan must be trained in how to implement the plan. This coverage includes the monitoring of the behavior treatment plan by the committee or a designee of the committee which shall occur as indicated in the individual plan of service.

#### 3.5 Child Therapy

Treatment activity designed to prevent deterioration, reduce maladaptive behaviors, maximize skills in behavioral self-control, or restore or maintain normalized psychological functioning, reality orientation and emotional adjustment, thus enabling the child to function more appropriately in interpersonal and
social relationships. A child mental health professional may provide child therapy on an individual or group basis.

3.6 **Clubhouse Psychosocial Rehabilitation Programs**

Refer to the Clubhouse Psychosocial Rehabilitation Programs Section of this chapter for specific program requirements.

3.7 **Crisis Interventions**

Unscheduled activities conducted for the purpose of resolving a crisis situation requiring immediate attention. Activities include crisis response, crisis line, assessment, referral, and direct therapy.

The standard for whether or not a crisis exists is a “prudent layperson” standard. That means that a prudent layperson would be able to determine from the beneficiary’s symptoms that crisis services are necessary. Crisis situation means a situation in which an individual is experiencing a serious mental illness or a developmental disability, or a child is experiencing a serious emotional disturbance, and one of the following applies:

- The individual can reasonably be expected within the near future to physically injure himself, or another individual, either intentionally or unintentionally.
- The individual is unable to provide himself food, clothing, or shelter, or to attend to basic physical activities such as eating, toileting, bathing, grooming, dressing, or ambulating, and this inability may lead in the near future to harm to the individual or to another individual.
- The individual’s judgment is so impaired that he is unable to understand the need for treatment and, in the opinion of the mental health professional, his continued behavior as a result of the mental illness, developmental disability, or emotional disturbance can reasonably be expected in the near future to result in physical harm to the individual or to another individual.

If the beneficiary developed a crisis plan, the plan is followed with permission from the beneficiary.

3.8 **Crisis Residential Services**

Refer to the Crisis Residential Services Section of this chapter for specific program requirements.

3.9 **Family Therapy**

Family Therapy is therapy for a beneficiary and family member(s), or other person(s) significant to the beneficiary, for the purpose of improving the beneficiary/family function. Family therapy does not include individual psychotherapy or family planning (e.g., birth control) counseling. Family therapy is provided by a mental health professional or limited licensed master’s social worker supervised by a fully licensed master’s social worker.

3.10 **Health Services**

Health Services are provided for purposes of improving the beneficiary’s overall health and ability to care for health-related needs. This includes nursing services (on a per-visit basis, not on-going hourly care), dietary/nutritional services, maintenance of health and hygiene, teaching self-administration of
medication, care of minor injuries or first aid, recognizing early symptoms of illness and teaching the benefit¬iciary to seek assistance in case of emergencies. Health assessments are covered under Assessments subsection above. A registered nurse, nurse practitioner, physician’s assistant, or dietician must provide these services, according to their scope of practice. Health services must be carefully coordinated with the beneficiary’s health care plan so that the PIHP does not provide services that are the responsibility of the MHP.

3.11 HOME-BASED SERVICES

Refer to the Home-Based Services Section of this chapter for specific program requirements.

3.12 INDIVIDUAL/ GROUP THERAPY

Treatment activity designed to reduce maladaptive behaviors, maximize behavioral self-control, or restore normalized psychological functioning, reality orientation, remotivation, and emotional adjustment, thus enabling improved functioning and more appropriate interpersonal and social relationships. Evidence-based practices such as integrated dual disorder treatment for co-occurring disorders (IDDT/COD) and dialectical behavior therapy (DBT) are included in this coverage. Individual/group therapy is performed by a mental health professional within their scope of practice or a limited licensed master’s social worker supervised by a full licensed master’s social worker.

3.13 INPATIENT PSYCHIATRIC HOSPITAL ADMISSIONS

Refer to the Inpatient Psychiatric Hospital Admissions Section of this chapter for specific program requirements.

3.14 INTENSIVE CRISIS STABILIZATION SERVICES

Refer to the Intensive Crisis Stabilization Services Section of this chapter for specific program requirements.

3.15 INTERMEDIATE CARE FACILITY FOR INDIVIDUALS WITH INTELLECTUAL DISABILITIES (ICF/ IID) SERVICES

Health and rehabilitative services provided in a state-licensed facility of 16 beds or less that is certified to meet ICF/IID standards that are specified in 42 CFR 483.400 and 42 CFR 442 Subpart C. Beneficiaries must meet ICF/IID level of care criteria and require a continuous active treatment program that is defined in their individual plan of services and coordinated and monitored by a qualified intellectual disability professional (QIDP). The active treatment program includes specialized and generic training, treatment, health and related services that are directed toward acquisition of behaviors necessary for the beneficiary to function with as much self-determination and independence as possible, and the prevention or deceleration of regression or loss of current optimal functional status (42 CFR 483.440 (a)(1)(i & ii)). Treatment services are provided by qualified professionals within their scope of practice. Direct care staff must meet aide level qualifications.
3.16 Medication Administration

Medication Administration is the process of giving a physician-prescribed oral medication, injection, intravenous (IV) or topical medication treatment to a beneficiary. This should not be used as a separate coverage when other health services are utilized, such as Private Duty Nursing or Health Services, which already include these activities. A physician, physician's assistant, nurse practitioner, or registered nurse may perform medication administration under the direction of the physician. A licensed practical nurse who is assisting a physician may perform medication administration as long as the physician is on-site.

For injections administered through the CMHSP clinic, refer to the Injectable Drugs and Biologicals subsection of the Practitioner Chapter of this manual.

3.17 Medication Review

Medication Review is evaluating and monitoring medications, their effects, and the need for continuing or changing the medication regimen. A physician, physician assistant, nurse practitioner, registered nurse, licensed pharmacist, or a licensed practical nurse assisting the physician may perform medication reviews. Medication review includes the administration of screening tools for the presence of extra pyramidal symptoms and tardive dyskinesia secondary to untoward effects of neuroactive medications.

3.18 Nursing Facility Mental Health Monitoring

This service is the review of the beneficiary's response to mental health treatment, including direct beneficiary contact and, as appropriate, consultation with nursing facility staff to determine whether recommendations from mental health assessments are carried out by the nursing facility. Nursing facility mental health monitoring is intended to allow follow-up for treatment furnished in response to emerging problems or needs of a nursing facility resident. It is not intended to provide ongoing case management, nor is it for monitoring of services unrelated to the mental health needs of the beneficiary. Nursing facility mental health monitoring can be provided by a physician, physician assistant, or nurse practitioner. If nursing facility mental health monitoring is provided by a limited licensed master's social worker or limited licensed bachelor's social worker, they must be supervised by a licensed master's social worker. If monitoring is provided by a licensed bachelor's social worker or a registered nurse, they need to be supervised by a professional. A "professional" is a physician, physician assistant, nurse practitioner, licensed master's social worker, professional counselor, QIDP or QMHP.

3.19 Occupational Therapy

<table>
<thead>
<tr>
<th>Evaluation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physician/licensed physician assistant/family nurse practitioner - prescribed activities provided by an occupational therapist licensed by the State of Michigan to determine the beneficiary's need for services and to recommend a course of treatment. An occupational therapy assistant may not complete evaluations.</td>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Therapy</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is anticipated that therapy will result in a functional improvement that is significant to the beneficiary's ability to perform daily living tasks appropriate to his chronological developmental or functional status. These functional improvements should be able to be achieved in a reasonable amount of time and should be durable (i.e., maintainable). Therapy to make changes in components of function that do not have an impact on the beneficiary's ability to perform age-appropriate tasks is not covered.</td>
</tr>
</tbody>
</table>
### Evaluation

Therapy must be skilled (requiring the skills, knowledge, and education of a licensed occupational therapist). Interventions that could be expected to be provided by another entity (e.g., teacher, registered nurse, licensed physical therapist, family member, or caregiver) would not be considered as a Medicaid cost under this coverage.

Services must be prescribed by a physician/licensed physician’s assistant/family nurse practitioner and may be provided on an individual or group basis by an occupational therapist or occupational therapy assistant, licensed by the State of Michigan or by an occupational therapy aide who has received on-the-job training. The occupational therapist must supervise and monitor the assistant’s performance with continuous assessment of the beneficiary’s progress, but on-site supervision of an assistant is not required. An aide performing an occupational therapy service must be directly supervised by a qualified occupational therapist who is on site. All documentation by an occupational therapy assistant or aide must be reviewed and signed by the appropriately credentialed supervising occupational therapist.

Therapy to make changes in components of function that do not have an impact on the beneficiary’s ability to perform age-appropriate tasks is not covered.</td>
</tr>
</tbody>
</table>
### Evaluation

*Physical therapy must be skilled (it requires the skills, knowledge, and education of a licensed physical therapist). Interventions that could be expected to be provided by another entity (e.g., teacher, registered nurse, licensed occupational therapist, family member or caregiver) would not be considered as a Medicaid cost under this coverage.*

*Services must be prescribed by a physician/licensed physician's assistant and may be provided on an individual or group basis by a physical therapist or a physical therapy assistant currently licensed by the State of Michigan, or a physical therapy aide who is receiving on-the-job training. The physical therapist must supervise and monitor the assistant's performance with continuous assessment of the beneficiary's progress. On-site supervision of an assistant is not required. An aide performing a physical therapy service must be directly supervised by a physical therapist that is on-site. All documentation by a physical therapy assistant or aide must be reviewed and signed by the appropriately credentialed supervising physical therapist.*

### 3.23 SPEECH, HEARING, AND LANGUAGE

#### Evaluation

*Activities provided by a licensed speech-language pathologist or licensed audiologist to determine the beneficiary's need for services and to recommend a course of treatment. A speech-language pathology assistant may not complete evaluations.*

#### Therapy

*Diagnostic, screening, preventive, or corrective services provided on an individual or group basis, as appropriate, when referred by a physician (MD, DO).*

*Therapy must be reasonable, medically necessary and anticipated to result in an improvement and/or elimination of the stated problem within a reasonable amount of time. An example of medically necessary therapy is when the treatment is required due to a recent change in the beneficiary's medical or functional status affecting speech, and the beneficiary would experience a reduction in medical or functional status were the therapy not provided.*

*Speech therapy must be skilled (i.e., requires the skills, knowledge, and education of a licensed speech-language pathologist) to assess the beneficiary's speech/language function, develop a treatment program, and provide therapy. Interventions that could be expected to be provided by another entity (e.g., teacher, registered nurse, licensed physical therapist, licensed occupational therapist, family member, or caregiver) would not be considered as a Medicaid cost under this coverage.*
<table>

3.24 SUBSTANCE ABUSE

Refer to the Substance Abuse Services Section of this chapter for specific program requirements relating to substance abuse services.

3.25 Targeted Case Management

Refer to the Targeted Case Management Section of this chapter for specific program requirements.

3.26 Telemedicine

A CMH/PIHP can be either an originating or distant site for telemedicine services. Practitioners must meet the provider qualifications for the covered service provided via telemedicine. No additional reimbursement will be made for the site facility fee.

Refer to the Telemedicine Section of the Practitioner Chapter for additional information regarding telemedicine services.

Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

3.27 Transportation

PIHPs are responsible for transportation to and from the beneficiary’s place of residence when provided so a beneficiary may participate in a state plan, HSW or additional/B3 service at an approved day program site or in a clubhouse psychosocial rehabilitation program. MHPs are responsible for assuring their enrollees’ transportation to the primary health care services provided by the MHPs, and to (non-mental health) specialists and out-of-state medical providers. MDHHS is responsible for assuring transportation to medical appointments for Medicaid beneficiaries not enrolled in MHPs; and to dental, substance abuse, and mental health services (except those noted above and in the HSW program described in the Habilitation Supports Waiver for Persons with Developmental Disabilities Section of this chapter) for all Medicaid beneficiaries. (Refer to the local MDHHS office or MHP for additional information, and to the Ambulance Chapter of this manual for information on medical emergency transportation.)

PIHP’s payment for transportation should be authorized only after it is determined that it is not otherwise available (e.g., MDHHS, MHP, volunteer, family member), and for the least expensive available means suitable to the beneficiary’s need.
3.28 TREATMENT PLANNING

Activities associated with the development and periodic review of the plan of service, including all aspects of the person-centered planning process, such as pre-meeting activities, and external facilitation of person-centered planning. This includes writing goals, objectives, and outcomes; designing strategies to achieve outcomes (identifying amount, scope, and duration) and ways to measure achievement relative to the outcome methodologies; attending person-centered planning meetings per invitation; and documentation. Monitoring of the individual plan of service including specific services, when not performed by the case manager or supports coordinator, is included in this coverage.

Case managers and supports coordinators perform these functions as part of the case management and supports coordination services; therefore, they should not report this activity as "Treatment Planning." Other mental health and health professionals who attend the beneficiary's person-centered planning should report the activity as "Treatment Planning."

For the Children's Waiver, the attendance of all clinicians and case managers during treatment planning is included in the monthly case management coverage.

3.29 WRAPAROUND SERVICES FOR CHILDREN AND ADOLESCENTS

Wraparound services for children and adolescents is a highly individualized planning process facilitated by specialized supports coordinators.

Wraparound utilizes a Child and Family Team, with team members determined by the family often representing multiple agencies and informal supports. The Child and Family Team creates a highly individualized Wraparound plan with the child/youth and family that consists of mental health specialty treatment, services and supports covered by the Medicaid mental health state plan, waiver, B3 services and other community services and supports.

The Wraparound plan may also consist of other non-mental health services that are secured from, and funded by, other agencies in the community. The Wraparound plan is the result of a collaborative team planning process that focuses on the unique strengths, values and preferences of the child/youth and family, and is developed in partnership with other community agencies. This planning process tends to work most effectively with children/youth and their families who, due to safety and other risk factors, require services from multiple systems and informal supports. The Community Team, which consists of parents/guardians/legal representatives, agency representatives, and other relevant community members, oversees Wraparound.

Children/youth and families served in Wraparound shall meet two or more of the following criteria:

- Children/youth who are involved in multiple child/youth serving systems.
- Children/youth who are at risk of out-of-home placements or are currently in out-of-home placement.
- Children/youth who have been served through other mental health services with minimal improvement in functioning.
• The risk factors exceed capacity for traditional community-based options.
• Numerous providers are serving multiple children/youth in a family and the identified outcomes are not being met.

Children/youth receiving Wraparound would not also receive, at the same time, the Supports Coordination coverage or the state plan coverage Targeted Case Management. In addition, PIHPs shall not pay for the case management function provided through home-based services and Wraparound at the same time.

Medicaid providers delivering Wraparound services (provided either as a 1915(b) Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) service or an SEDW service) must request approval to provide Wraparound from MDHHS through an enrollment process defined by MDHHS, and re-enrollment must occur every three years. Programs are to be re-enrolled to ensure policy and Wraparound model fidelity adherence.

3.29.A. ORGANIZATIONAL STRUCTURE

The required organizational structure of Wraparound programs must include a Wraparound facilitator, supervisor, and Community Team; define the roles and responsibilities of those staff and the Community Team; and delineate expectations regarding caseload sizes.

• Wraparound facilitators may not have more than one provider role with any one family (i.e., may not be both the home-based therapist and Wraparound facilitator for the same child/youth and family).
• The responsibility for directing, coordinating, and supervising the staff/program shall be assigned to a specific staff position who meets the requirements of a Child Mental Health Professional (CMHP).
• Services and supports identified in the Wraparound planning process shall be available to the child/youth and family and provided as outlined in the Wraparound plan.
• The caseload ratio shall be reflective of the needs of individual children/youth and families being served and shall not exceed a ratio of one facilitator to 10 child/youth and family teams. Caseloads may increase to a maximum of 12 when two child/youth and family teams are transitioning from Wraparound.
• If facilitators are assigned to other programs as well as Wraparound, the number of Wraparound child/youth and family teams they facilitate shall correlate to the percentage of their position dedicated to providing Wraparound facilitation. For example, if a worker is a .50 FTE Wraparound facilitator, the number of teams assigned to that Wraparound facilitator shall not exceed six when one team is in transition. In addition, mixed caseloads shall not exceed 15 total cases.

3.29.B. QUALIFIED STAFF

Wraparound facilitators shall:

• Complete the MDHHS three-day new facilitator training within 90 days of hire.
Complete a minimum of two MDHHS Wraparound trainings per calendar year.
Demonstrate proficiency in facilitating the Wraparound process, as monitored by their supervisor and Community Team.
Participate in and complete MDHHS-required evaluation and fidelity tools.

Wraparound supervisors shall:

- Complete the MDHHS three-day Wraparound new facilitator training and one additional MDHHS supervisory training in their first year of supervision.
- Attend two MDHHS Wraparound trainings annually, one of which shall be a Wraparound supervisor training.
- Participate on the Community Team.
- Provide individualized clinical supervision and coaching to the Wraparound staff weekly based on their individual needs and experience, and maintain a supervision log. Supervision logs will be available at site reviews and re-enrollment.
- Ensure documentation of attendance at required trainings is maintained for all Wraparound staff and available for review upon request.

The Community Team shall:

- Provide a gate-keeping role that includes determination of eligibility, review of referrals, review and authorization of Wraparound Plans of Service, and Wraparound budgets.
- Provide oversight of model fidelity through the review of Wraparound Plans.
- Provide support to Wraparound staff, supervisors, and child/youth and family teams and problem-solve barriers/needs to improve outcomes for children/youth and families.
- Maintain evidence of the review and approval of Wraparound plans, budget, crisis and safety support plans, and outcomes.
- Provide guidance and oversight to Wraparound staff regarding model fidelity and safety assurance.

3.29.C. PLANS OF SERVICE

The Wraparound plan shall reflect a family-driven/youth-guided approach, and shall include the following:

- Evidence that the child/youth and family team completed each step/phase of the Wraparound process, including completion of the strengths/culture discoveries, needs assessments, crisis/safety support plans, Wraparound plans, outcomes, and the development of the family mission statement.
- Individualized child/youth and family outcomes that are developed and measured by each child/youth and family team.
- A strength-based, needs-driven, and culturally-relevant Wraparound plan that is stated in the language of the child/youth and family.
Evidence of regular updates as the needs of the child/youth and family change (annual updates alone are not sufficient).

Any services, supports, and interventions that are provided to the family.

A mixture of formal and informal support and services.

An individualized crisis/safety support plan that reflects the child's/youth's and family's strengths and culture, and seeks to build skills/competencies that reduce risk.

Measurement of outcomes identifying when transition plans should be developed. Transition plans will address any barriers to graduation, and identify how services and supports will be maintained after Wraparound has ended.

Evidence that the child/youth and family team review and measure outcomes at least monthly and present outcomes and measurement to the Community Team for their review at least quarterly.

3.29.D. AMOUNT AND SCOPE OF SERVICE

All Wraparound team meetings shall be documented in the form of minutes.

All collateral contacts shall be documented in the form of contact/progress notes.

Meeting frequency is guided by the family's needs and level of risk. Child/youth and family teams shall meet weekly until the Wraparound plan has been developed and is being implemented.

Exceptions to Wraparound model expectations regarding the frequency of meetings can occur to fit the family's need and availability, and must be documented in the case file.

When the Wraparound plan is successfully implemented and the child/youth and family have stabilized, meeting frequency may decrease to twice monthly.

Wraparound child/youth and family teams begin to transition from the formal process when the outcomes identified by child/youth and family teams are met and shall not exceed three months in duration. Monthly meetings may occur during the transition phase.

When the transition phase is successfully completed, the child/youth and family will graduate from the process.

Upon graduation, documentation will be developed that will include the strengths and needs identified by the child/youth and family team, progress toward outcomes, continuing services and supports, and who will provide them. The family will receive a copy of this document.

3.29.E. EVALUATION AND OUTCOMES MEASUREMENT

The enrolled provider will comply with the State of Michigan Wraparound evaluation requirements. Current evaluation requirements are:

Completion of the Family Status Report form at intake and every three months until the family graduates from Wraparound. Upon graduation, the facilitator will complete the post-graduation/follow-up Family Status Report.
• Additional evaluation tools will be completed as identified and requested by MDHHS.

• Ensure completion of the Child and Adolescent Functional Assessment Scale (CAFAS) or the Preschool and Early Childhood Functional Assessment Scale (PECFAS) at intake, quarterly, and at graduation.

• Adherence to Wraparound model fidelity may be reviewed at enrollment, re-enrollment, and at site reviews through case file review, family interviews, and evaluation and fidelity tools.
SECTION 4 - ASSERTIVE COMMUNITY TREATMENT PROGRAM

Assertive Community Treatment (ACT) is a therapeutic set of intensive clinical, medical and psychosocial services provided by a mobile multi-disciplinary treatment team that includes case/care management, psychiatric services, counseling/psychotherapy, housing support, Substance Use Disorders treatment, and employment and rehabilitative services provided in the beneficiary's home or community.

ACT provides basic services and supports essential to maintaining the beneficiary's ability to function in community settings, including assistance with accessing basic needs through available community resources (such as food, housing, medical care and supports) to allow beneficiaries to function in social, educational, and vocational settings.

ACT is an individually tailored combination of services and supports that may vary in intensity over time and is based on individual need. ACT includes availability of multiple daily contacts and 24-hour, 7-days-per-week crisis availability provided by the multi-disciplinary ACT team which includes psychiatric and skilled medical staff. ACT services are based on the principles of recovery and person-centered practice and are individually tailored to meet the needs of each beneficiary. Services are provided in the beneficiary’s residence or other community locations by all members of the ACT team staff.

The Prepaid Inpatient Health Plans (PIHPs) and the Community Behavioral Health Services Programs (CMHSPs) offer a continuum of adult services including case/care management, outpatient therapy, and psychiatric services that can be used in varying intensities and combinations to assist beneficiaries in a recovery-oriented system of care. The beneficiary’s level of need and preferences must be considered in the admission process. ACT is the most intensive non-residential service in the continuum of care within the service array of the public behavioral health system.

4.1 TEAM APPROVAL

Medicaid providers wishing to become providers of ACT services must obtain approval from MDHHS and meet the program components outlined below. Provider programs with more than one ACT team must have individually approved and registered ACT teams. All ACT teams are subject to MDHHS re-approval every three years.

4.2 TARGET POPULATION

The intensity of ACT services is intended for the beneficiary with a primary diagnosis of serious mental illness and who, without ACT, would require more restrictive services and/or settings. ACT is not an appropriate service for a beneficiary with a primary diagnosis of a personality disorder, a primary diagnosis of a Substance Use Disorder, or a primary diagnosis of intellectual disability. A beneficiary with a primary diagnosis of a serious mental illness may also be diagnosed with a personality disorder or co-occurring Substance Use Disorder and benefit from ACT services.

ACT services are targeted to beneficiaries demonstrating acute or severe psychiatric symptoms that are seriously impairing the beneficiary's ability to function independently, and whose symptoms impede the return of normal functioning as a result of the diagnosis of a serious mental illness. Areas of impairment are significant, and are considered individually for each beneficiary.
These areas of difficulty may include:

- Maintaining or having interpersonal relationships with family and friends;
- Accessing needed mental health and physical health care;
- Addressing issues relating to aging, especially where symptoms of serious mental illness may be exacerbated or confused by complex medical conditions or complex medication regimens;
- Performing activities of daily living or other life skills;
- Managing medications without ongoing support;
- Maintaining housing;
- Avoiding arrest and incarceration, navigating the legal system, and transitioning back to the community from jail or prison;
- Coping with relapses or return of symptoms given an increase in psychosocial stressors or changes in the environment resulting in frequent use of hospital services, emergency departments, crisis services, crisis residential programs or homeless shelters;
- Maintaining recovery to meet the challenges of a co-occurring Substance Use Disorder;
- Encountering difficulty in past or present progress toward recovery despite participation in long-term and/or intensive services.
4.3 ESSENTIAL ELEMENTS

<table>
<thead>
<tr>
<th>Team-Based Service Delivery</th>
</tr>
</thead>
</table>
| ACT is a team-based behavioral health service that includes shared service delivery responsibility that provides consistent continuity of care. Case/care management, psychiatric services, counseling/psychotherapy, peer support services, housing support, substance use disorder treatment, employment and rehabilitative services are interwoven with treatment and rehabilitative services, and services are provided by all members of the ACT team in the beneficiary's home or community. All ACT staff must obtain a basic knowledge of ACT programs and principles acquired through participation in MDHHS-approved ACT-specific initial training, and subsequent participation in at least one MDHHS-approved ACT-specific training annually thereafter. All initial training of ACT staff must occur within six months of hire for work in ACT. Physicians/Nurse Practitioners must participate in the MDHHS-approved Physicians/Nurse Practitioners training one time, with additional ACT training/participation for Physicians/Nurse Practitioners encouraged, but not mandatory.

Team meetings occur Monday through Friday on business days and are attended by all ACT staff members on duty. Physicians and/or Nurse Practitioners are expected to participate in ACT team meetings at least weekly. Agendas for daily team meetings include the status of all beneficiaries, updates from on-call, clinical and case/care management needs, crisis management, schedule organization, and finalized plans for ACT staff deployment into the community.

A minimum of 80% of ACT contacts provided by the team are in the beneficiary's home or other agreed upon community location. Treatment groups identified in the Individual Plan of Service (IPhOS), such as Family Psychoeducation, Alcoholics Anonymous, etc., are excluded from the 80% community visit standard regardless of where the group is held.

The average number of visits per day/week/month/etc. provided by the whole team, not individual ACT team members, to an individual consumer will comprise 80% of home or community contacts.

<table>
<thead>
<tr>
<th>Team Composition and Size</th>
</tr>
</thead>
</table>
| The ACT team requires a sufficient number of qualified staff to assure the provision of an intensive array of services on a 24-hour basis. Teams must have at least three staff members, but generally are comprised of 4-9 staff members, with the expected team average of 6-7. The minimum ACT staffing requirements are below. ACT teams that need to operate with as few as 3 members or more than 9 members must have MDHHS approval. The scope of services for individual ACT staff members requires that some staff will work in the community more often than others.

- A full-time team leader with a minimum of a Master's degree in a relevant discipline and with appropriate licensure or certification to provide clinical supervision to the ACT team staff, plus a minimum of two years post-degree clinical experience with adults who have serious mental illness is required. The ACT team leader is a Qualified Mental Health Professional (QMHP) or Mental Health Professional (MHP). The ACT team leader also provides direct services to beneficiaries in the community within their scope of practice.

- A full-time registered nurse (RN) is required on the ACT team. The RN provides integrated behavioral and physical healthcare, including managing medication, assessing and coordinating physical/medical care, and providing direct services to the beneficiary in the community.
A physician who provides psychiatric coverage for all beneficiaries served by the ACT team is required. The physician is considered a part of the ACT team, but is not counted in the staff-to-beneficiary ratio. The physician participates in the team meeting at least weekly and is assigned to the ACT team at least 15 minutes per beneficiary per week in a capacity that allows for immediate access to the physician so that emergency, urgent or emergent situations may be addressed. The expectation is that some beneficiaries will need more physician time and some beneficiaries will need less time during any given week. The physician may delegate psychiatric activities to a nurse practitioner, but the nurse practitioner must be supervised by that physician. Typically, although not exclusively, physician activities may include team meetings, beneficiary appointments during regular office hours, psychiatric evaluations, psychiatric meetings/consultations, medication reviews, home visits, telephone consultations and telemedicine. The physician (MD or DO) must possess a valid license to practice medicine in Michigan, a Michigan Controlled Substance License, and a Drug Enforcement Administration (DEA) registration.

A nurse practitioner may perform clinical tasks delegated by and under the supervision of the physician. The nurse practitioner must hold a specialty certification as a nurse practitioner in Michigan, a current license to practice nursing in Michigan, and a master’s degree in psychiatric mental health nursing. If the ACT team includes a nurse practitioner, he/she may substitute for a portion of the physician time, but may not substitute for the ACT RN. The nurse practitioner is not counted in the staff-to-beneficiary ratio. Typically, although not exclusively, nurse practitioner activities may include team meetings, beneficiary appointments during regular office hours, evaluations, psychiatric meetings/consultations, medication reviews, home visits, telephone consultations and telemedicine.

A case or care manager with a minimum of a Bachelor’s degree in a human services discipline with appropriate licensure to provide the core elements of case or care management, with at least one year of experience providing services to adults with a mental illness, is required. This individual shall be a Qualified Mental Health Professional (QMHP).

If the case or care manager has a Bachelor’s degree, but is without the specialized training or experience, the case or care manager must be supervised by a QMHP who does possess the training or experience.

A Qualified Mental Health Professional (QMHP) with a clinically prepared Master’s Degree shall provide individual/family counseling.

Up to one Full Time Equivalent (FTE) Peer Support Specialist (PSS) may substitute for one QMHP to achieve the 1:10 required staff-to-beneficiary ratio. Under the supervision of the ACT team leader, a PSS may provide documentation in beneficiary records. This supervision is documented in the beneficiary record.

Paraprofessional staff hired before July 1, 2008 to work with ACT teams may be counted in the staff-to-beneficiary ratio.

If the ACT team provides substance use disorder services, there must be a designated Substance Abuse Treatment Specialist who has one or more credentials through the Michigan Certification Board of Addiction Professionals (MCBAP). If the ACT team provides co-occurring treatment or substance use disorder treatment, the Organization must have a substance use disorder treatment license issued by the State of Michigan.
- Additional staff positions reflect the needs of the population, such as the ability to obtain housing, employment services and rehabilitative services for beneficiaries who request them, and shall minimally be a QMHP.

### Staff-to-Beneficiary Ratio
- The staff-to-beneficiary ratio shall be no less than 1:10, i.e., a maximum of 10 beneficiaries to each ACT staff. With the exceptions of the limitations on paraprofessionals and peer support specialists described above, the ratio includes all ACT team members, excluding the clerical support staff and physicians or nurse practitioners.

### Fixed Point of Responsibility
- The ACT team is the fixed point of responsibility for the development of the individual plan of service (IPOS) using the person-centered planning process and for supporting beneficiaries in all aspects of community living. The process addresses all services and supports to be provided to or obtained for the beneficiary by the team, including consultation with other disciplines and/or coordination of other supportive services as appropriate.

### Availability of Services
- Availability of ACT services must include:
  - 24-hour/7-day crisis response coverage (including psychiatric availability) that is handled directly by members of the ACT team. For 3-member teams, ‘on call’ services may be a part of the larger organization’s on-call system if approved by MDHHS.
  - The capacity to provide a rapid response to early signs of relapse, including the capability to provide multiple contacts daily with beneficiaries in acute need or with emergent conditions.
  - The ACT team has the ability to provide needed services to the beneficiary 7 days a week as per the IPOS.

### Individual Plan of Service (IPOS)
- ACT services and interventions must be consistent and balanced through medical necessity and the preferences of the beneficiary while embracing person-centered principles, wellness and behavioral health recovery with a goal of maximizing independence and a progression into less intensive services.

  Beneficiaries with co-occurring substance use disorders must have both behavioral health and substance use disorders addressed in the IPOS.

  Beneficiaries who need a less intensive service than ACT, such as case/care management, have documentation in the IPOS detailing the transition plan to the new service and a plan to return to ACT should the need occur.

### In Vivo Settings
- ACT teams provide a wide array of clinical, medical and rehabilitative services during face-to-face interactions designed to promote the beneficiary's growth in recovery. ACT services and supports are focused on acquiring needed behavioral health services, substance misuse services, physical health care, performing activities of daily living, obtaining and/or maintaining employment, developing leisure activities, developing and maintaining meaningful relationships, maintaining housing, avoiding arrest and incarceration, navigating the legal system, transitioning successfully into the community from jail or prison, and relapse prevention.

  Services for ACT beneficiaries may include those defined elsewhere in this chapter, as well as others that are consistent with individual preferences, professionally accepted standards of care, and that are medically necessary.

  ACT services may be used as an alternative to hospitalization as long as beneficiary health and safety issues can be reasonably well-managed with ACT supports that do not require 24-hour-per-day supervision.
4.4 Eligibility Criteria

Utilization of ACT in high acuity conditions and situations allows beneficiaries to remain in their community of residence and may prevent the use of more restrictive alternatives which may be detrimental to a beneficiary’s existing natural supports and occupational roles. This level of care is appropriate for beneficiaries with a history of serious mental illness who may be at risk for inpatient hospitalization or intensive crisis residential or partial hospitalization services, but can remain safely in their communities with the considerable support and intensive interventions of ACT. In addition to meeting the following criteria, these beneficiaries may also be likely to require or benefit from continuing psychiatric rehabilitation.

The ACT acute service selection guideline covers criteria in the following domains:

<table>
<thead>
<tr>
<th>Domain</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnosis</td>
<td>The beneficiary must have a serious mental illness, as reflected in a primary, validated, current version of Diagnostic and Statistical Manual of Mental Disorders (DSM) or International Classification of Diseases (ICD) diagnosis (not including ICD-9 V-codes and ICD-10 Z-codes).</td>
</tr>
<tr>
<td>Severity of Illness</td>
<td>Psychiatric Status&lt;br&gt;• Prominent disturbance of thought processes, perception, affect, memory, consciousness, somatic functioning (due to a mental illness) which may manifest as intermittent hallucinations, transient delusions, panic reactions, agitation, obsessions, ruminations, severe phobias, depression, etc., and is serious enough to cause disordered or aberrant conduct, impulse control problems, questionable judgment, psychomotor acceleration or retardation, withdrawal or avoidance, compulsions, rituals, impaired reality testing and/or impairments in functioning and role performance.</td>
</tr>
<tr>
<td>Self-Care/Independent Functioning</td>
<td>• Disruptions of self-care, limited ability to attend to basic physical needs (nutrition, shelter, etc.), seriously impaired interpersonal functioning, and/or significantly diminished capacity to meet educational/occupational/parental role performance expectations.</td>
</tr>
<tr>
<td>Drug/Medication Conditions</td>
<td>• Drug/medication adherence and/or a co-existing general medical condition which needs to be simultaneously addressed along with the psychiatric illness and which cannot be carried out at a less intensive level of care. Medication use requires monitoring or evaluation for adherence to achieve stabilization, to identify atypical side effects or concurrent physical symptoms and medical conditions.</td>
</tr>
<tr>
<td>Risk to Self or Others</td>
<td>• Risk to Self or Others - Symptom acuity does not pose an immediate risk of substantial harm to the beneficiary or others, or if a risk of substantial harm exists, protective care (with appropriate medical/psychiatric supervision) has been arranged. Harm or danger to self, self-mutilation and/or reckless endangerment or other self-injurious activity is an imminent risk.</td>
</tr>
</tbody>
</table>
### Intensity of Service

ACT team services are medically necessary to provide treatment in the least restrictive setting, to allow beneficiaries to remain in the community, to improve the beneficiary’s condition and/or allow the beneficiary to function without more restrictive care, and the beneficiary requires at least one of the following:

- An intensive team-based service is needed to prevent elevation of symptom acuity, to recover functional living skills and maintain or preserve adult role functions, and to strengthen internal coping resources; ongoing monitoring of psychotropic regimen and stabilization necessary for recovery.

- The beneficiary’s acute psychiatric crisis requires intensive, coordinated and sustained treatment services and supports to maintain functioning, arrest regression and forestall the need for inpatient care in a 24-hour protective environment.

- The beneficiary has reached a level of clinical stability (diminished risk) obviating the need for continued care in a 24-hour protective environment but requires intensive coordinated services and supports.

- Consistent observation and supervision of behavior are needed to compensate for impaired reality testing, temporarily deficient internal controls, and/or faulty self-preservation inclinations.

- Frequent monitoring of medication regimen and response is necessary and adherence is doubtful without ongoing monitoring and support.

- Routine medical observation and monitoring are required to affect significant regulation of psychotropic medications and/or to minimize serious side effects.
Discharge

For beneficiaries who have progressed forward on their journey toward recovery and are ready for a less intensive service, the IPOS should document the transition from ACT to a less intensive service, such as case/care management.

Cessation or control of symptoms is not sufficient for discharge from ACT. For beneficiaries who have progressed forward on their journey toward recovery and are ready for a less intensive service, the IPOS should document the transition from ACT to a less intensive service, such as case/care management. Recovery must be sufficient to maintain functioning without the support of ACT as identified through the person-centered planning process as described below:

- The beneficiary no longer meets severity-of-illness criteria and has demonstrated the ability to meet all major role functions for a period of time sufficient to show clinical stability.

Beneficiaries who meet medical-necessity criteria for ACT services usually require and benefit from long-term participation in ACT. ACT is not a service that is appropriate for short-term stabilization and then transition into another program.

If a beneficiary requests transition to other service(s) because he/she believes maximum benefit has been reached in ACT, consideration for transition into less intensive services must be reviewed during the person-centered planning process. If clinical evidence supports the beneficiary's desire to transition, this evidence and the transition plan must be detailed in a revised IPOS developed through the person-centered planning process. The plan must identify what supports and services will be made available, and contain a provision for re-enrollment into ACT services, if needed.

- Engagement of the beneficiary in ACT is not possible as deliberate, persistent and frequent assertive team outreach, including face-to-face engagement attempts and legal mechanisms when necessary, have been consistent, unsuccessful, and documented over many months, and an appropriate alternative plan has been established with the beneficiary.

- Beneficiary has moved outside of the geographic service area. Contact continues until service has been established in the new location.
SECTION 5 – CLUBHOUSE PSYCHOSOCIAL REHABILITATION PROGRAMS

A clubhouse program is a community-based psychosocial rehabilitation program in which the beneficiary (also called clubhouse “members”), with staff assistance, is engaged in operating all aspects of the clubhouse, including food service, clerical, reception, janitorial and other member supports and services such as employment, housing and education. In addition, members, with staff assistance, participate in the day-to-day decision-making and governance of the program and plan community projects and social activities to engage members in the community. Through the activities of the ordered day, clubhouse decision-making opportunities and social activities, individual members achieve or regain the confidence and skills necessary to lead vocationally productive and socially satisfying lives.

5.1 PROGRAM APPROVAL

PIHPs must seek approval for providers of psychosocial rehabilitation clubhouse services from MDHHS. (Refer to the Directory Appendix for contact information.) MDHHS approval will be based on adherence to the requirements outlined below.

5.2 TARGET POPULATION

Clubhouse programs are appropriate for adults with a serious mental illness who wish to participate in a structured program with staff and peers and have identified psychosocial rehabilitative goals that can be achieved in a supportive and structured environment. The beneficiary must be able to participate in, and benefit from, the activities necessary to support the program and its members, and must not have behavioral/safety or health issues that cannot adequately be addressed in a program with a low staff-to-member ratio.

5.3 ESSENTIAL ELEMENTS

<table>
<thead>
<tr>
<th>Member Choice/Involvement</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ All members have access to the services/supports and resources with no differentiation based on diagnosis or level of functioning.</td>
</tr>
<tr>
<td>▪ Members establish their own schedule of attendance and choose a unit that they will regularly participate in during the ordered day.</td>
</tr>
<tr>
<td>▪ Members are actively engaged and supported on a regular basis by clubhouse staff in the activities and tasks that they have chosen.</td>
</tr>
<tr>
<td>▪ Membership in the program and access to supportive services reflects the beneficiary's preferences and needs building on the person-centered planning process.</td>
</tr>
<tr>
<td>▪ Both formal and informal decision-making opportunities are part of the clubhouse units and program structures so that members can influence and shape program operations.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Informal Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ Staff and members work side-by-side to generate and accomplish individual/team tasks and activities necessary for the development, support, and maintenance of the program.</td>
</tr>
<tr>
<td>▪ Members have access to the clubhouse during times other than the ordered day, including evenings, weekends, and all holidays (including New Year’s Day, Memorial Day, Independence Day, Thanksgiving Day, and Christmas Day).</td>
</tr>
</tbody>
</table>
**Program Structure and Services**

The program’s structure and schedule identifies when the various program components occur, e.g., ordered-day, vocational/educational. Other activities, such as self-help groups and social activities shall be scheduled before and after the ordered day.

**Ordered Day**

The ordered day is a primary component of the program and provides an opportunity for members to regain self-worth, purpose, and confidence. It is made up of those tasks and activities necessary for the operation of the clubhouse and typically occurs during normal work hours. The ordered day is carried out in organizational units defined by the clubhouse that accomplish the work necessary to operate the clubhouse and meet the community living needs of the members, such as housing and transportation. Although participation in the ordered day provides opportunities to develop a variety of interpersonal and vocationally related skills, it is not intended to be job-specific training. Member participation in the ordered day provides experiences that will support members’ recovery, and is designed to assist members to acquire personal, community and social competencies and to establish and navigate environmental support systems.

**Employment Services and Educational Supports**

Services directly related to employment, including transitional employment, supported employment, on-the-job training, community volunteer opportunities, and supports for the completion or initiation of education or training and other vocational assistance must be available.

**Member Supports**

Opportunities for clubhouse members to provide and receive support in the community in areas of outreach, warm line, self-help groups, housing supports, entitlements, food, clothing and other basic necessities or assistance in locating community resources must be available.

**Social Supports**

Opportunities for members to develop a sense of a community through planning and organizing clubhouse social activities. This may also include opportunities to explore recreational resources and activities in the community. The interests and desires of the membership determine both spontaneous and planned activities.

### 5.4 Psychosocial Rehabilitation Components

Following are some of the broad domains of psychosocial rehabilitative goals and objectives. Based on the member’s individual plan of service developed through the person-centered planning process, these are carried out during the member’s participation in the ordered day and through interactions with other staff and members. Staff may also work informally with members on individual goals while working side-by-side in the clubhouse.

**Symptom Identification and Care**

- Identification and management of situations and prodromal symptoms to reduce the frequency, duration, and severity of psychological relapses.
- Gaining competence regarding how to respond to a psychiatric crisis.
- Gaining competence in understanding the role psychotropic medication plays in the stabilization of the members’ wellbeing.
- Working in partnership with members who express a desire to develop a crisis plan.
Competency Building

- Community living competencies (e.g., self-care, cooking, money management, personal grooming, maintenance of living environment).
- Social and interpersonal abilities (e.g., conversational competency, developing and/or maintaining a positive self-image, regaining the ability to evaluate the motivation and feelings of others to establish and maintain positive relationships).
- Personal adjustment abilities (e.g., developing and enhancing personal abilities in handling every day experiences and crisis, such as stress management, leisure time management, coping with symptoms of mental illness). The goal of this is to reduce dependency on professional caregivers and to enhance independence.
- Cognitive and adult role competency (e.g., task-oriented activities to develop and maintain cognitive abilities, to maximize adult role functioning such as increased attention, improved concentration, better memory, enhancing the ability to learn and establishing the ability to develop empathy).

Environmental Support

- Identification of existing natural supports for addressing personal needs (e.g., families, employers, and friends).
- Identification and development of organizational support, including such areas as sustaining personal entitlements, locating and using community resources or other supportive programs.

5.5 STAFF CAPACITY

The number of staff from the PIHP should be sufficient to effectively administer the program, but also allow the members sufficient leeway to participate meaningfully in the program. Clubhouse staff shall include:

- One full-time on-site clubhouse manager who has a minimum of a bachelor's degree in a health or human services field and two years' experience with the target population, or who is a licensed master's social worker with one year experience with the target population and is licensed, certified, or registered by the State of Michigan or a national organization to provide health care services. The clubhouse manager is responsible for all aspects of clubhouse operations, staff supervision and the coordination of clubhouse services with case management and ACT.
- Other experienced professional staff licensed, certified, or registered by the State of Michigan or a national organization to provide health care services.

Other staff who are not licensed, certified, or registered by the State of Michigan to provide health care services may be part of the program, but shall operate under the supervision of a qualified professional. This supervision must be documented.
SECTION 6 - CRISIS RESIDENTIAL SERVICES

Crisis residential services are intended to provide a short-term alternative to inpatient psychiatric services for beneficiaries experiencing an acute psychiatric crisis when clinically indicated. Services may only be used to avert an inpatient psychiatric admission, or to shorten the length of an inpatient stay.

6.1 POPULATION

Services are designed for a subset of beneficiaries who meet psychiatric inpatient admission criteria or are at risk of admission, but who can be appropriately served in settings less intensive than a hospital. The goal of crisis residential services is to facilitate reduction in the intensity of those factors that lead to crisis residential admission through a person-centered and recovery/resiliency-oriented approach.

6.2 COVERED SERVICES

Services must be designed to resolve the immediate crisis and improve the functioning level of the beneficiaries to allow them to return to less intensive community living as soon as possible.

The covered crisis residential services include:

- Psychiatric supervision;
- Therapeutic support services;
- Medication management/stabilization and education;
- Behavioral services;
- Milieu therapy; and
- Nursing services.

Individuals who are admitted to the crisis residential services must be offered the opportunity to explore and learn more about crises, substance abuse, identity, values, choices and choice-making, recovery and recovery planning. Recovery and recovery planning is inclusive of all aspects of life including relationships, where to live, training, employment, daily activities, and physical well-being.

6.2.A. CHILD CRISIS RESIDENTIAL SERVICES

Child Crisis Residential Services may not be provided to children with serious emotional disturbances in a Child Caring Institution (CCI) unless it is licensed as a "children's therapeutic group home" as defined in Section 722.111 Sec. 1(f) under Act No. 116 of the Public Acts of 1973, as amended. The program must include on-site nursing services (RN or LPN under appropriate supervision). On-site nursing must be provided at least one hour per day, per resident, seven days per week, with 24-hour availability on-call.
6.2.B. ADULT CRISIS RESIDENTIAL SERVICES

The program must include on-site nursing services (RN or LPN under appropriate supervision).

- For settings of six beds or fewer: on-site nursing must be provided at least one hour per day, per resident, seven days per week, with 24-hour availability on-call.
- For 7-16 beds: on-site nursing must be provided eight hours per day, seven days per week, with 24-hour availability on-call.

6.3 PROVIDER CRITERIA

The PIHP must seek and maintain MDHHS approval for the crisis residential program in order to use Medicaid funds for program services.

6.4 QUALIFIED STAFF

Treatment services must be clinically-supervised by a psychiatrist. A psychiatrist need not be present when services are delivered, but must be available by telephone at all times. The psychiatrist must provide psychiatric evaluation or assessments at the crisis residential home. Medication reviews performed at the crisis residential home must be performed by a physician, physician's assistant or a nurse practitioner under the clinical supervision of the psychiatrist. The covered crisis residential services (refer to Covered Services subsection) must be supervised on-site eight hours a day, Monday through Friday (and on call at all other times), by a mental health professional possessing at least a master's degree in human services and one year of experience providing services to beneficiaries with serious mental illness, or a bachelor’s degree in human services and at least two years of experience providing services to beneficiaries with serious mental illness.

Treatment activities may be carried out by paraprofessional staff who have at least one year of satisfactory work experience providing services to beneficiaries with mental illness, or who have successfully completed a PIHP/MDHHS-approved training program for working with beneficiaries with mental illness.

Peer support specialists may be part of the multidisciplinary team and can facilitate some of the activities based on their scope of practice, such as facilitating peer support groups, assisting in transitioning individuals to less intensive services, and by mentoring towards recovery.

6.5 LOCATION OF SERVICES

Services must be provided to beneficiaries in licensed crisis residential foster care or group home settings not exceeding 16 beds in size. Homes/settings must have appropriate licensure from the state and must be approved by MDHHS to provide specialized crisis residential services. Services must not be provided in a hospital or other institutional setting.

6.6 ADMISSION CRITERIA

Crisis residential services may be provided to adults or children who are assessed by, and admitted through, the authority of the local PIHP. Beneficiaries must meet psychiatric inpatient admission criteria but have symptoms and risk levels that permit them to be treated in such alternative settings.
are designed for beneficiaries with mental illness or beneficiaries with mental illness and another concomitant disorder, such as substance abuse or developmental disabilities. For beneficiaries with a concomitant disorder, the primary reason for service must be mental illness.

### 6.7 Duration of Services

Services may be provided for a period up to 14 calendar days per crisis residential episode. Services may be extended and regularly monitored, if justified by clinical need, as determined by the interdisciplinary team.

### 6.8 Individual Plan of Service

Services must be delivered according to an individual plan based on an assessment of immediate need. The plan must be developed within 48 hours of admission and signed by the beneficiary (if possible), the parent or guardian, the psychiatrist, and any other professionals involved in treatment planning, as determined by the needs of the beneficiary. If the beneficiary has an assigned case manager, the case manager must be involved in the treatment as soon as possible, and must also be involved in follow-up services.

The plan must contain:

- Clearly stated goals and measurable objectives, derived from the assessment of immediate need, stated in terms of specific observable changes in behavior, skills, attitudes, or circumstances, structured to resolve the crisis.
- Identification of the activities designed to assist the beneficiary to attain his/her goals and objectives.
- Discharge plans, the need for aftercare/follow-up services, and the role of, and identification of, the case manager.

If the length of stay in the crisis residential program exceeds 14 days, an interdisciplinary team must develop a subsequent plan based on comprehensive assessments. The team is comprised of the beneficiary, the parent or guardian, the psychiatrist, the case manager and other professionals whose disciplines are relevant to the needs of the beneficiary, including the individual ACT team, outpatient services provider or home-based services staff, when applicable. If the beneficiary did not have a case manager prior to initiation of the intensive/crisis residential service, and the crisis episode exceeds 14 days, a case manager must be assigned and involved in treatment and follow-up care. (The case manager may be assigned prior to the 14 days, according to need.)

For children's intensive/crisis residential services, the plan must also address the child's needs in context with the family's needs. Educational services must also be considered and the plan must be developed in consultation with the child's school district staff.
SECTION 7 – HOME-BASED SERVICES

Mental health home-based services programs are designed to provide intensive services to children and their families with multiple service needs who require access to an array of mental health services. The primary goals of these programs are to support families in meeting their child’s developmental needs, to support and preserve families, to reunite families who have been separated, and to provide effective treatment and community supports to address risks that may increase the likelihood of a child being placed outside the home. Treatment is based on the child's needs, with the focus on the family unit. The service style must support a family-driven and youth-guided approach, emphasizing strength-based, culturally relevant interventions, parent/youth and professional teamwork, and connection with community resources and supports.

7.1 PROGRAM APPROVAL

Applications for enrollment must identify home-based providers, either internal or contractual, who will serve children ages 0-17. Home-based services can be provided by one or more providers who serve one or more age groups. Once enrolled, a program must re-enroll every three years. (Refer to the Directory Appendix for contact information.) MDHHS approval will be based on adherence to the requirements outlined below.

Applications for enrollment must identify the target population to be served by the program. Providers must assure that staff providing home-based services meet the required qualifications. Information submitted to MDHHS must include basic program information submitted in a format prescribed by MDHHS. If necessary during an initial period, the provider may receive provisional approval that will allow them to provide services. However, any necessary additional actions must be completed within the timeframe specified by MDHHS or provisional approval will be withdrawn.

<table>
<thead>
<tr>
<th>Organizational Structure</th>
<th>The organizational structure through which the mental health home-based services program shall be delivered must be specified. The following requirements must be met:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>▪ Enrolled home-based services providers are available and sufficient to ensure that home-based services are provided to children ages 0-17 and meet the need across the entire catchment area.</td>
</tr>
<tr>
<td></td>
<td>▪ Responsibility for directing, coordinating, and supervising the staff/program must be assigned to a specific staff position. The supervisor of the staff/program must meet the qualifications of a Qualified Mental Health Professional and be a child mental health professional with three years of clinical experience.</td>
</tr>
<tr>
<td></td>
<td>▪ One staff member or a team of staff may provide these services. Home-based services programs are designed to provide intensive services to children and families in their home and community. The degree of intensity will vary to meet the needs of families.</td>
</tr>
<tr>
<td></td>
<td>▪ The maximum full-time home-based services worker-to-family ratio is 1:12. This can be adjusted to accommodate families transitioning out of home-based services. The maximum worker-to-family ratio in those circumstances is 1:15 (12 active/3 transitioning).</td>
</tr>
</tbody>
</table>
If providers wish to utilize clinicians who serve mixed caseloads (home-based services plus other services, e.g., outpatient, case management, etc.), the percentage of each position dedicated to home-based services must be specified. The number of home-based services cases assigned to each partial position cannot exceed the same percentage of the maximum active home-based services caseload. For example, a 50% home-based position could serve no more than 6 home-based cases. The total maximum caseload, including home-based and other services cases, for a full-time clinician serving a mixed caseload is 20 cases.

To determine the appropriate caseload size for any home-based services worker, the intensity of service need presented by each family should be considered. The worker-to-family ratio can always be lower than the maximum to accommodate families with very high service needs.

Home-based services staff must receive weekly clinical supervision (one-on-one and/or group) to help them navigate the intense needs of the families receiving home-based services. Evidence of the provision of this clinical supervision must be recorded via supervision logs, sign-in sheets, or other methods of documentation.

The organization must have a policy or policies in place that support providing a comprehensive crisis/safety training curriculum that is required for all home-based services staff that includes de-escalation skills among other relevant trainings.

There must be an internal mechanism for coordinating and integrating the home-based services with other mental health services, as well as general community services relevant to the needs of the child and family.

**Qualified Staff**

Properly credentialed staff must deliver home-based services. Home-based services professional staff must meet the qualifications of a child mental health professional. The initial training curriculum and 24 hours of annual child-specific training for home-based services staff should be relevant to the age groups served and the needs of the children and families receiving home-based services. For home-based services programs serving infants/toddlers (birth through age three) and their families, staff must be trained in infant mental health interventions and, effective October 1, 2009, must minimally have Endorsement Level 2 by the Michigan Association of Infant Mental Health; Level 3 is preferred. For home-based services programs serving children with developmental disabilities, the child mental health professional must meet the qualifications, as defined above, and also be a Qualified Intellectual Disability Professional (QIDP).

Trained paraprofessional assistants may assist home-based services professional staff with implementation of treatment plan behavioral goals related to positive skill development and development of age-appropriate social behaviors. Services to be provided by the home-based services assistant must be identified in the family plan of service, must relate to identified treatment goals, and must be under the supervision of relevant professionals. Home-based services assistants must be trained regarding the beneficiary's treatment plan and goals, including appropriate intervention and implementation strategies, prior to beginning work with the beneficiary and family. Activities of home-based services assistants do not count as part of the minimum four hours of face-to-face home-based services provided by the primary home-based services worker per month. The home-based services assistant's face-to-face time would be in addition to hours provided by the primary home-based services worker.
### Plan of Service

Home-based services must be provided in accordance with a plan of service that focuses on the child and his family. The plan of service is a comprehensive plan that identifies child and family strengths and individual needs, determines appropriate interventions, and identifies supports and resources. It is developed in partnership with family members and other agencies through a person-centered, family-driven and youth-guided planning process. The plan of service should include evidence of a blending of perspectives and information from the child/youth, family, home-based services worker, assessment tools, and other relevant parties. Goals should be based on family needs and priorities and reflect the family culture and voice. Refer to the Family-Driven and Youth-Guided Policy and Practice Guideline (attached to the MDHHS/PIHP contract) for more explicit information on this topic.

The plan of service for youth receiving home-based services must also include individualized crisis and safety plans that explicitly outline responses to family-specific crisis situations and safety risks and delineate who, including the family and others, is accountable for the various responses identified.

### Amount and Scope of Service

Home-based services programs combine services to restore or enhance social, psychological, or biophysical functioning of individuals, couples, or families and/or individual therapy, family therapy, group therapy, crisis intervention, case management, and collateral contacts. The family is defined as immediate or extended family or individual(s) acting in the role of family.

Services provided in a home-based services program range from assisting beneficiaries to link to other resources that might provide food, housing, and medical care, as well as providing more therapeutic interventions such as family therapy or individual therapy, or services to restore or enhance functioning for individuals, couples, or families.

A minimum of four hours of individual and/or family face-to-face home-based services per month will be provided by the primary home-based services worker or, if appropriate, the evidence-based practice therapist. In addition, it is expected that adequate collateral contacts, including non-face-to-face collateral contacts, with school, caregivers, child welfare, court, psychiatrist, etc., will be provided to implement the plan of service.

The amount and scope of home-based services to families as they transition out of home-based services into a less intensive service or to case closure can be determined by family-driven and youth-guided decision making to maintain continuity of treatment and ensure stability. Variation from the required intensity of services for families transitioning out of home-based services must be documented in the plan of service. This transition period is not to exceed three months.

Crisis intervention services must be available 24 hours a day, 7 days a week, via availability of home-based services staff or agency on-call staff. If after-hours crisis intervention services are provided to a family by staff other than the primary home-based services worker, procedures must be in place which provide the on-call staff access to information about any impending crisis situations and the family’s crisis and safety plans.

### Location of Service

Services are provided in the family home or community. Any contacts that occur other than in the home or community must be clearly explained in case record documentation as to the reason, the expected duration, and the plan to address issues that are preventing the services from being provided in the home or community.
7.2 Eligibility Criteria

The criteria for home-based services are described below for children birth through age three, children age four through age six, and children age seven through age seventeen. These criteria do not preclude the provision of home-based services to an adult beneficiary who is a parent for whom it is determined home-based services would be the treatment modality that would best meet the needs of the adult beneficiary and the child. This would include a parent who has a diagnosis within the current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM) or International Classification of Diseases (ICD) that results in a care-giving environment that places the child at-risk for serious emotional disturbance. These criteria do not preclude the provision of home-based services when it is determined through a person-centered, family-driven and youth-guided planning process that these services are necessary to meet the needs of the child and family. For continuing eligibility reviews during the transition to less intensive services, the child and family may be maintained in home-based services, even if they do not meet these criteria. Variation from the required criteria for families transitioning out of home-based services must be documented in the plan of service. This transition period is not to exceed three months.

7.2.A. Birth Through Age Three

Unique criteria must be applied to define serious emotional disturbance for the birth to age three population, given:

- The magnitude and speed of developmental changes through pregnancy and infancy;
- The limited capacity of the very young to symptomatically present underlying disturbances;
- The extreme dependence of infants and toddlers upon caregivers for their survival and well-being; and
- The exceptional vulnerability of the very young to other relationship and environmental factors.

Operationally, the above parameters dictate that the mental health professional must be cognizant of the primary indicators of emotional disorder in very young children, and of the importance of assessing the constitutional/physiological and/or care-giving/environmental factors which reinforce the severity and intractability of the child’s disorder. Furthermore, the rapid development of very young children results in transitory disorders and/or symptoms, requiring the professional to regularly re-assess children in the appropriate developmental context.

The following is the recommended procedure for determining when a beneficiary is considered seriously emotionally disturbed or at high risk for serious emotional disturbance, qualifying for Mental Health Home-Based Services. All of the dimensions must be considered when determining if a child is eligible for home-based services.
**Diagnosis**
A child has an intellectual, behavioral, or emotional disorder sufficient to meet diagnostic criteria (specified within the current version of the DSM or ICD consistent with the Diagnostic Classification of Mental Health and Developmental Disorders of Infancy and Early Childhood; Revised Edition) not solely the result of an intellectual disability or other developmental disability, drug abuse/alcoholism or those with an ICD-9 V-code or ICD 10 Z-code diagnosis, and the beneficiary meets the criteria listed below for degree of disability/functional impairment and duration/service history.

**Functional Impairment**
Substantial interference with, or limitation of, the child’s proficiency in performing age-appropriate skills as demonstrated by at least one indicator drawn from one of the following areas:

- General and/or specific patterns of reoccurring behaviors or expressiveness indicating affect/modulation problems, e.g., uncontrollable crying or screaming, sleeping and eating disturbances, and recklessness; the absence of developmentally expectable affect, such as pleasure, displeasure, joy, anger, fear, curiosity; apathy toward environment and caregiver.

- Distinct behavioral patterns coupled with sensory, sensory motor, or organizational processing difficulty (homeostasis concerns) that inhibits the child’s daily adaptation and interaction/relationships. For example, a restricted range of exploration and assertiveness, dislike for changes in routine, and/or a tendency to be frightened and clinging in new situations, coupled with over-reactivity to loud noises or bright lights, inadequate visual-spatial processing ability, etc.

- Incapacity to obtain critical nurturing (often in the context of attachment-separation concerns), as determined through the assessment of child, caregiver and environmental characteristics. For example, the infant shows a lack of motor skills and/or language expressiveness; appears diffuse, unfocused and undifferentiated; expresses anger/obstinacy and whines, in the presence of a caregiver who often interferes with the infant’s goals and desires, dominates the infant through over-control, does not reciprocate to the child’s gestures, and/or whose anger, depression or anxiety results in inconsistent care giving.

An assessment tool specifically targeting social-emotional functioning which can assist in determining functional impairment is the Devereux Early Childhood Assessment, Infant/Toddler or Preschool Version.

Observational tools to assist in the assessment of infants, toddlers and their caregiver include the Massie Campbell Attachment During Stress (birth to 18 months of age) and Parenting Interactions with Children: Checklist of Observations Linked to Outcomes (PICCOLO) (for young children from 12 to 36 months).

Other assessment tools may be utilized by the practitioner based on the needs of the infant/toddler or parent(s).

**Duration/ History**
The very young age and rapid transition of infants and toddlers through developmental stages makes consistent symptomatology over time unlikely. However, indicators that a disorder is not transitory and will endure without intervention include:

- The infant/toddler disorder(s) is affected by persistent multiple barriers to normal development (regulatory disorders, inconsistent care giving, chaotic environment, etc.); or
- Infant/toddler did not respond to less intensive, less restrictive intervention.
7.2.B. AGE FOUR THROUGH SIX

Decisions regarding whether a child age four through six is seriously emotionally disturbed and in need of home-based services and supports utilize similar dimensions to older children. The dimensions include a diagnosable behavioral or emotional disorder, substantial functional impairment/limitation of major life activities, and duration of condition. However, as with younger children birth through age three, assessment must be sensitive to the critical indicators of development and functional impairment for the age group. Significant impairments in functioning are revealed across life domains in the child’s expression of affect/self-regulation, social development (generalization of attachment beyond parents, capacity for peer relationships and play, etc.), physical and cognitive development, and the emergence of a sense of self. All of the dimensions must be considered when determining if a child is eligible for home-based services.

### Diagnosis

A child has an intellectual, behavioral or emotional disorder sufficient to meet diagnostic criteria specified within the current version of the DSM or ICD not solely the result of an intellectual disability or other developmental disability, drug abuse/alcoholism or those with an ICD-9 V-code or ICD-10 Z-code diagnosis, and the beneficiary meets the criteria listed below for degree of disability/functional impairment and duration/service history.

### Functional Impairment

Substantial interference with, or limitation of, the child’s proficiency in performing age-appropriate skills across domains and/or consistently within specific domains as demonstrated by at least one indicator drawn from at least two of the following areas:

- Impaired physical development, sensory, sensory motor or organizational processing difficulty, failure to control bodily functions (e.g., bed wetting).
- Limited cognitive development, as indicated by restricted vocabulary, memory, cause and effect thinking, ability to distinguish between real and pretend, transitioning from self-centered to more reality-based thinking, etc.
- Limited capacity for self-regulation, inability to control impulses and modulate anxieties as indicated by frequent tantrums or aggressiveness toward others, prolonged listlessness or depression, inability to cope with separation from primary caregiver, inflexibility and low frustration tolerance, etc.
- Impaired or delayed social development, as indicated by an inability to engage in interactive play with peers, inability to maintain placements in day care or other organized groups, failure to display social values or empathy toward others, absence of imaginative play or verbalizations commonly used by preschoolers to reduce anxiety or assert order/control on their environment, etc.
- Care-giving factors which reinforce the severity or intractability of the childhood disorder and the need for multifaceted intervention strategies (e.g., home-based services) such as a chaotic household/constantly changing care-giving environments, inappropriate caregiver expectations, abusive/neglectful or inconsistent care-giving, occurrence of traumatic events, subjection to others’ violent or otherwise harmful behavior.

The standardized assessment tool specifically targeting social-emotional functioning for children 4 through 6 years of age recommended for use in determining degree of functional impairment is the Pre-School and Early Childhood Functional Assessment Scale (PECFAS).
Additional assessment tools may be utilized based on the needs of the child and/or parent(s).

<table>
<thead>
<tr>
<th>Duration/History</th>
<th>The following specify length of time criteria for determining when the child's functional disabilities justify his referral for enhanced support services:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Evidence of three continuous months of illness;</td>
</tr>
<tr>
<td></td>
<td>• Three cumulative months of symptomatology/dysfunction in a six-month period; or</td>
</tr>
<tr>
<td></td>
<td>• Conditions that are persistent in their expression and are not likely to change without intervention.</td>
</tr>
</tbody>
</table>

### 7.2.C. AGE SEVEN THROUGH SEVENTEEN

Decisions regarding whether a child or adolescent has a serious emotional disturbance and is in need of home-based services is determined by using the following dimensions: the child has a diagnosable behavioral or emotional disorder, substantial functional impairment/limitation of major life activities, and duration of the condition. For children age seven to seventeen, the Child and Adolescent Functional Assessment Scale (CAFAS) is used to make discriminations within the functional impairment dimension. All of the dimensions, as well as family voice and choice, must be considered when determining if a child is eligible for home-based services.

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>The child/adolescent currently has, or had at any time in the past, a diagnosable behavioral or emotional disorder of sufficient duration to meet diagnostic criteria specified within the current version of the DSM or ICD, excluding those with a diagnosis other than, or in addition to, alcohol or drug disorders, a developmental disorder, or social conditions (ICD-9 V-codes and ICD-10 Z-codes).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Functional Impairment</td>
<td>For purposes of qualification for home-based services, children/adolescents may be considered markedly or severely functionally impaired if the minor has:</td>
</tr>
<tr>
<td></td>
<td>• An elevated subscale score (20 or greater) on at least two elements of the Child/Adolescent Section of the CAFAS; or</td>
</tr>
<tr>
<td></td>
<td>• An elevated subscale score (20 or greater) on one element of the CAFAS Child/Adolescent Section, combined with an elevated subscale score (20 or greater) on at least one CAFAS element involving Caregiver/Care-giving Resources; or</td>
</tr>
<tr>
<td></td>
<td>• A total impairment score of 80 or more on the CAFAS Child/Adolescent Section.</td>
</tr>
<tr>
<td>Duration/History</td>
<td>The following specify the length of time the youth's functional disability has interfered with his daily living and led to his referral for home-based services:</td>
</tr>
<tr>
<td></td>
<td>• Evidence of six continuous months of illness, symptomatology, or dysfunction;</td>
</tr>
<tr>
<td></td>
<td>• Six cumulative months of symptomatology/dysfunction in a 12-month period; or</td>
</tr>
<tr>
<td></td>
<td>• On the basis of a specific diagnosis (e.g., schizophrenia), disability is likely to continue for more than one year.</td>
</tr>
</tbody>
</table>
SECTION 8 – INPATIENT PSYCHIATRIC HOSPITAL ADMISSIONS

The PIHP is responsible to manage and pay for Medicaid mental health services in community-based psychiatric inpatient units for all Medicaid beneficiaries who reside within the service area covered by the PIHP. This means that the PIHP is responsible for timely screening and authorization/certification of requests for admission, notice and provision of several opinions, and continuing stay for inpatient services, defined as follows:

- **Screening** means the PIHP has been notified of the beneficiary and has been provided enough information to make a determination of the most appropriate services. The screening may be provided on-site, face-to-face by PIHP personnel, or over the telephone.
- **Authorization/certification** means that the PIHP has screened the beneficiary and has approved the services requested. Telephone screening must be followed-up by the written certification.

PIHP responsibilities include:

- Pre-admission screening to determine whether alternative services are appropriate and available. Severity of Illness and Intensity of Service clinical criteria will be used for such pre-screening. Inpatient pre-screening services must be available 24-hours-a-day, seven-days-a-week.
- Provision of notice regarding rights to a second opinion in the case of denials.
- Coordination with substance abuse treatment providers, when appropriate.
- Provision of, or referral to and linkage with, alternative services, when appropriate.
- Communication with the treating and/or referring provider.
- Communication with the primary care physician or health plan.
- Planning in conjunction with hospital personnel for the beneficiary's after-care services.

In most instances, the beneficiary will receive services in a community-based psychiatric unit in the PIHP service area where he resides. There may be instances when a PIHP is responsible for a resident that they have placed into a community program in another county or state. In these cases, the responsible PIHP, i.e., the one managing the case, is responsible for authorizing admission and/or continuing stay.

If a beneficiary experiences psychiatric crisis in another county, the PIHP in that county should provide crisis intervention/services as needed and contact the PIHP for the county of the beneficiary's residence for disposition.

**8.1 Admissions**

The PIHPs will make authorization and approval decisions for these services according to Level of Care guidelines established by MDHHS and appearing in this section. All admission and continuing stay responsibilities and procedures must be conducted in accordance with the terms of the contract between the hospital and the PIHP.
Emergency Room Services

When necessary, the beneficiary may seek services through the emergency room. Disposition of the psychiatric emergency will be the responsibility of the PIHP and may result in:

- Inpatient admission;
- Referral to an alternative service when appropriate and available; or
- Disposition of the crisis through provision of immediate services/interventions, with follow-up as necessary.

The PIHP is involved in the psychiatric aspect of the emergency situation. Any medical treatment needed by the beneficiary is beyond the general purview of the PIHP.

Admissions to In-State Out-of-Area Hospitals

Medicaid beneficiaries may seek inpatient psychiatric services from hospitals located outside their county of residence/PIHP catchment area. If the out-of-area hospital has a contract with the beneficiary’s county/catchment area PIHP, the hospital should contact that PIHP to obtain the required pre-admission authorization/approval for the beneficiary. If the out-of-area hospital does not have a contract with the beneficiary’s designated county/catchment area PIHP, the hospital must contact the PIHP that serves the county in which the hospital is located to obtain pre-admission approval/authorization. The hospital-area PIHP will conduct the pre-admission review and will consult with the designated county/catchment area PIHP to determine the appropriate disposition of the request for admission authorization/approval. Payment responsibility for authorized days of care will rest with the PIHP that authorized the services.

Admission to Out-of-State Non-Borderland Inpatient Psychiatric Hospitals

The PIHP for the beneficiary’s county of residency must prior authorize the admission for psychiatric inpatient care as medically necessary, as with in-state hospitals. The PIHP is responsible for continued stay reviews and payment to these hospitals.

8.2 APPEALS

PIHPs will make authorization and approval decisions for services according to Level of Care guidelines. If the hospital disagrees with the decision of the PIHP, regarding either admission authorization/approval or the number of authorized days of care, the hospital may appeal to the PIHP according to the terms of its contract with the PIHP. If the hospital does not have a contract or agreement with the PIHP, any appeals by the hospital will be conducted through the usual and customary procedures that the PIHP employs in its contracts with other enrolled hospital providers.

If a beneficiary or his legal representative disagrees with a PIHP decision related to admission authorization/approval or approved days of care, he may request a reconsideration and second opinion from the PIHP. If the PIHP's initial decision is upheld, the beneficiary has further redress through the Medicaid fair hearing process. Medicaid beneficiaries can request the Medicaid fair hearing without going through local review processes.

8.3 BENEFICIARIES WHO DO NOT HAVE MEDICAID ELIGIBILITY UPON ADMISSION

For beneficiaries whose enrollment in Medicaid is determined after the end of an episode of inpatient psychiatric or partial hospitalization care (eligibility extends back and encompasses the dates of the episode of care), the PIHP will conduct a retrospective review of the episode of care to determine if services were medically necessary and appropriate for Medicaid reimbursement, unless the PIHP has previously reviewed and certified the admission and authorized days of care under other contractual and
payment arrangements with the hospital. If the PIHP has conducted the pre-admission authorization and continuing stay reviews for these beneficiaries during the episode of care, this will be considered as a certification that authorized services are eligible for reimbursement by the PIHP under the Medicaid program once the beneficiary’s retroactive Medicaid eligibility has been established.

As noted above, the purpose of a retrospective review is to determine if services rendered were medically necessary and hence qualify for Medicaid reimbursement. Since the hospital will not receive reimbursement for any care rendered which does not meet the test of medical necessity, it is advantageous for hospitals to involve PIHPs during the episode of care for any beneficiary that the facility believes may be eligible for Medicaid.

8.4 MEDICARE

For Medicare-covered services, the PIHP may only pay up to a Medicare-enrolled beneficiary's obligation to pay (i.e., coinsurance and deductibles). This limitation also applies if the beneficiary is eligible for, but not enrolled in, Medicare. (Refer to the Coordination of Benefits Chapter in this manual for more information.)

8.5 ELIGIBILITY CRITERIA

8.5.A. INPATIENT PSYCHIATRIC AND PARTIAL HOSPITALIZATION SERVICES

Medicaid requires that hospitals providing inpatient psychiatric services or partial hospitalization services obtain authorization and certification of the need for admission and continuing stay from PIHPs. A PIHP reviewer determines authorization and certification by applying criteria outlined in this document. The hospital or attending physician may request a reconsideration of adverse authorization/certification determinations made by the initial PIHP reviewer.

The criteria described below employ the concepts of Severity of Illness (SI) and Intensity of Service (IS) to assist reviewers in determinations regarding whether a particular care setting or service intensity is appropriately matched to the beneficiary's current condition.

- Severity of Illness (SI) refers to the nature and severity of the signs, symptoms, functional impairments and risk potential related to the beneficiary's psychiatric disorder.

- Intensity of Service (IS) refers to the setting of care, to the types and frequency of needed services and supports, and to the degree of restrictiveness necessary to safely and effectively treat the beneficiary.

Medicaid coverage for inpatient psychiatric services is limited to beneficiaries with a current primary psychiatric diagnosis, as described in the criteria below. It is recognized that some beneficiaries will have other conditions or disorders (e.g., developmental disabilities or substance abuse) that coexist with a psychiatric disturbance. In regard to developmental disabilities, if a person with developmental disabilities presents with signs or symptoms of a significant, serious, concomitant mental illness, the mental illness will take precedence for purposes of care and placement decisions, and the beneficiary may be authorized/certified for inpatient psychiatric care under these guidelines.
For beneficiaries who present with psychiatric symptoms associated with current active substance abuse, it may be difficult to determine whether symptoms exhibited are due to a primary mental illness or represent a substance-induced disorder, and to make an informed level of care placement decision. A beneficiary exhibiting a psychiatric disturbance in the context of current active substance use or intoxication may require acute detoxification services before an accurate assessment of the need for psychiatric inpatient services can be made. In these situations, the hospital and the PIHP must confer to determine the appropriate location (acute medical setting or psychiatric unit) for the detoxification services.

The crucial consideration in initial placement decisions for a beneficiary with psychiatric symptoms associated with current active substance abuse is whether the beneficiary’s immediate treatment needs are primarily medical or psychiatric. If the beneficiary’s primary need is medical (e.g., life-threatening substance-induced toxic conditions requiring acute medical care and detoxification), then detoxification in an acute medical setting (presuming the beneficiary’s condition meets previously published acute care detoxification criteria) is indicated. If the beneficiary’s primary need is psychiatric care (the person meets the SI/IS criteria for inpatient psychiatric care), they should be admitted to the psychiatric unit and acute medical detoxification provided in that setting.

Hospitals are reminded that they must obtain PIHP admission authorization and certification for all admissions to a distinct part psychiatric unit or freestanding psychiatric hospital.

8.5.B. INPATIENT ADMISSION CRITERIA: ADULTS

Inpatient psychiatric care may be used to treat a person with mental illness who requires care in a 24-hour medically structured and supervised facility. The SI/IS criteria for admission are based upon the assumption that the beneficiary is displaying signs and symptoms of a serious psychiatric disorder, demonstrating functional impairments, and manifesting a level of clinical instability (risk) that, either individually or collectively, are of such severity that treatment in an alternative setting would be unsafe or ineffective.

Medicaid coverage is dependent upon active treatment being provided at the medically necessary level of care.

The individual must meet all three criteria outlined in the following table:

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>The beneficiary must be suffering from a mental illness reflected in a primary, validated, current version of DSM or ICD diagnosis (not including ICD-9 V-codes and ICD-10 Z-codes).</th>
</tr>
</thead>
</table>
### Severity of Illness
(signs, symptoms, functional impairments and risk potential)

<table>
<thead>
<tr>
<th>At least one of the following manifestations is present:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- <strong>Severe Psychiatric Signs and Symptoms</strong></td>
</tr>
<tr>
<td>- Psychiatric symptoms - features of intense cognitive/perceptual/affective disturbance (hallucinations, delusions, extreme agitation, profound depression) severe enough to cause seriously disordered and/or bizarre behavior (e.g., catatonia, mania, incoherence) or prominent psychomotor retardation, resulting in extensive interference with activities of daily living, so that the person cannot function at a lower level of care.</td>
</tr>
<tr>
<td>- Disorientation, seriously impaired reality testing, defective judgment, impulse control problems and/or memory impairment severe enough to endanger the welfare of the person and/or others.</td>
</tr>
<tr>
<td>- A severe, life-threatening psychiatric syndrome or an atypical or unusually complex psychiatric condition exists that has failed, or is deemed unlikely, to respond to less intensive levels of care, and has resulted in substantial current dysfunction.</td>
</tr>
<tr>
<td>- <strong>Disruptions of Self-Care and Independent Functioning</strong></td>
</tr>
<tr>
<td>- The person is unable to attend to basic self-care tasks and/or to maintain adequate nutrition, shelter, or other essentials of daily living due to psychiatric disorder.</td>
</tr>
<tr>
<td>- There is evidence of serious disabling impairment in interpersonal functioning (e.g., withdrawal from relationships; repeated conflictual interactions with family, employer, co-workers, neighbors) and/or extreme deterioration in the person’s ability to meet current educational/occupational role performance expectations.</td>
</tr>
<tr>
<td>- <strong>Harm to Self</strong></td>
</tr>
<tr>
<td>- Suicide: Attempt or ideation is considered serious by the intention, degree of lethality, extent of hopelessness, degree of impulsivity, level of impairment (current intoxication, judgment, psychological symptoms), history of prior attempts, and/or existence of a workable plan.</td>
</tr>
<tr>
<td>- Self-Mutilation and/or Reckless Endangerment: There is evidence of current behavior, or recent history. There is a verbalized threat of a need or willingness to self-mutilate, or to become involved in other high-risk behaviors; and intent, impulsivity, plan and judgment would suggest an inability to maintain control over these ideations.</td>
</tr>
<tr>
<td>- Other Self-Injurious Activity: The person has a recent history of drug ingestion with a strong suspicion of overdose. The person may not need detoxification but could require treatment of a substance-induced psychiatric disorder.</td>
</tr>
<tr>
<td>- <strong>Harm to Others</strong></td>
</tr>
<tr>
<td>- Serious assaultive behavior has occurred, and there is a risk of escalation or repetition of this behavior in the near future.</td>
</tr>
<tr>
<td>- There is expressed intention to harm others and a plan and/or means to carry it out, and the level of impulse control is non-existent or impaired (due to psychotic symptoms, especially command or verbal hallucinations, intoxication, judgment, or psychological symptoms, such as persecutory delusions and paranoid ideation).</td>
</tr>
</tbody>
</table>
8.5.C. INPATIENT ADMISSION CRITERIA: CHILDREN THROUGH AGE 21

Inpatient psychiatric care may be used to treat a child or adolescent with mental illness or serious emotional disturbance who requires care in a 24-hour medically structured and supervised facility. The SI/IS criteria for admission are based on the assumption that the beneficiary is displaying signs and symptoms of a serious psychiatric disorder, demonstrating functional impairments and manifesting a level of clinical instability (risk) that are, either individually or collectively, of such severity that treatment in an alternative setting would be unsafe or ineffective.

Medicaid coverage is dependent upon active treatment being provided at the medically necessary level of care.

• Drug/Medication Complications or Coexisting General Medical Condition Requiring Care
  ▶ There has been significant destructive behavior toward property that endangers others.
  ▶ The person has experienced severe side effects from using therapeutic psychotropic medications.
  ▶ The person has a known history of psychiatric disorder that requires psychotropic medication for stabilization of the condition, and the administration, adjustment or reinitiation of medications requires close and continuous observation and monitoring, and this cannot be accomplished at a lower level of care due to the beneficiary's condition or to the nature of the procedures involved.
  ▶ There are concurrent significant physical symptoms or medical disorders which necessitate evaluation, intensive monitoring and/or treatment during medically necessary psychiatric hospitalization, and the coexisting general medical condition would complicate or interfere with treatment of the psychiatric disorder at a less intensive level of care.

Special Consideration: Concomitant Substance Abuse - The underlying or existing psychiatric diagnosis must be the primary cause of the beneficiary's current symptoms or represent the primary reason observation and treatment is necessary in the psychiatric unit or hospital setting.

Intensity of Service

The person meets the intensity of service requirements if inpatient services are considered medically necessary for the beneficiary's treatment/diagnosis, and if the person requires at least one of the following:

- Close and continuous skilled medical observation and supervision are necessary to make significant changes in psychotropic medications.
- Close and continuous skilled medical observation is necessary due to otherwise unmanageable side effects of psychotropic medications.
- Continuous observation and control of behavior (e.g., isolation, restraint, closed unit, suicidal/homicidal precautions) is needed to protect the beneficiary, others, and/or property, or to contain the beneficiary so that treatment may occur.
- A comprehensive multi-modal therapy plan is needed, requiring close medical supervision and coordination, due to its complexity and/or the severity of the beneficiary's signs and symptoms.
The individual must meet all three criteria outlined in the table below:

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>The beneficiary must be suffering from a mental illness reflected in a primary, validated, current version of DSM or ICD diagnosis (not including ICD-9 V-codes and ICD-10 Z-codes).</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Severity of Illness</strong>&lt;br&gt;(signs, symptoms, functional impairments and risk potential)</td>
<td>At least one of the following manifestations is present:</td>
</tr>
<tr>
<td></td>
<td><strong>Severe Psychiatric Signs and Symptoms</strong></td>
</tr>
<tr>
<td></td>
<td>➢ Psychiatric symptoms - features of intense cognitive/perceptual/affective disturbance (hallucinations, delusions, extreme agitation, profound depression) - severe enough to cause disordered and/or bizarre behavior (e.g., catatonia, mania, incoherence) or prominent psychomotor retardation, resulting in extensive interference with activities of daily living, so that the person cannot function at a lower level of care.</td>
</tr>
<tr>
<td></td>
<td>➢ Disorientation, impaired reality testing, defective judgment, impulse control problems and/or memory impairment severe enough to endanger the welfare of the person and/or others.</td>
</tr>
<tr>
<td></td>
<td>➢ Severe anxiety, phobic symptoms or agitation, or ruminative/obsessive behavior that has failed, or is deemed unlikely, to respond to less intensive levels of care and has resulted in substantial current dysfunction.</td>
</tr>
<tr>
<td></td>
<td><strong>Disruptions of Self-Care and Independent Functioning</strong></td>
</tr>
<tr>
<td></td>
<td>➢ Beneficiary is unable to maintain adequate nutrition or self care due to a severe psychiatric disorder.</td>
</tr>
<tr>
<td></td>
<td>➢ The beneficiary exhibits significant inability to attend to age-appropriate responsibilities, and there has been a serious deterioration/impairment of interpersonal, familial, and/or educational functioning due to an acute psychiatric disorder or severe developmental disturbance.</td>
</tr>
<tr>
<td></td>
<td><strong>Harm to Self</strong></td>
</tr>
<tr>
<td></td>
<td>➢ A suicide attempt has been made which is serious by degree of lethal intent, hopelessness, or impulsivity.</td>
</tr>
<tr>
<td></td>
<td>➢ There is a specific plan to harm self with clear intent and/or lethal potential.</td>
</tr>
<tr>
<td></td>
<td>➢ There is self-harm ideation or threats without a plan, which are considered serious due to impulsivity, current impairment or a history of prior attempts.</td>
</tr>
<tr>
<td></td>
<td>➢ There is current behavior or recent history of self-mutilation, severe impulsivity, significant risk-taking or other self-endangering behavior.</td>
</tr>
<tr>
<td></td>
<td>➢ There is a verbalized threat of a need or willingness to self-mutilate, or to become involved in other high-risk behaviors; and intent, impulsivity, plan and judgment would suggest an inability to maintain control over these ideations.</td>
</tr>
<tr>
<td></td>
<td>➢ There is a recent history of drug ingestion with a strong suspicion of intentional overdose. The person may not need detoxification but could require treatment of a substance-induced psychiatric disorder.</td>
</tr>
<tr>
<td></td>
<td><strong>Harm to Others</strong></td>
</tr>
<tr>
<td></td>
<td>➢ Serious assaultive behavior has occurred and there is a clear risk of escalation or repetition of this behavior in the near future.</td>
</tr>
</tbody>
</table>
There is expressed intention to harm others and a plan and means to carry it out; the level of impulse control is non-existent or impaired.

There has been significant destructive behavior toward property that endangers others, such as setting fires.

The person has experienced severe side effects from using therapeutic psychotropic medications.

**Drug/Medication Complications or Coexisting General Medical Condition Requiring Care**

The person has a known history of psychiatric disorder that requires psychotropic medication for stabilization of the condition, and the administration, adjustment or reinitiation of medications requires close and continuous observation and monitoring, and this cannot be accomplished at a lower level of care due to the beneficiary's condition or to the nature of the procedures involved.

There are concurrent significant physical symptoms or medical disorders which necessitate evaluation, intensive monitoring and/or treatment during medically necessary psychiatric hospitalization, and the coexisting general medical condition would complicate or interfere with treatment of the psychiatric disorder at a less intensive level of care.

**Special Consideration: Concomitant Substance Abuse** - The underlying psychiatric diagnosis must be the primary cause of the beneficiary's current symptoms or represents the primary reason observation and treatment are necessary in the hospital setting.

The person meets the intensity of service requirements if inpatient services are considered medically necessary and if the person requires at least one of the following:

- Close and continuous skilled medical observation and supervision are necessary to make significant changes in psychotropic medications.
- Close and continuous skilled medical observation is needed due to otherwise unmanageable side effects of psychotropic medications.
- Continuous observation and control of behavior (e.g., isolation, restraint, closed unit, suicidal/homicidal precautions) to protect the beneficiary, others, and/or property, or to contain the beneficiary so that treatment may occur.
- A comprehensive multi-modal therapy plan is needed, requiring close medical supervision and coordination, due to its complexity and/or the severity of the beneficiary's signs and symptoms.

**8.5.D. INPATIENT PSYCHIATRIC CARE – CONTINUING STAY CRITERIA: ADULTS, ADOLESCENTS AND CHILDREN**

After a beneficiary has been certified for admission to an inpatient psychiatric setting, services must be reviewed at regular intervals to assess the current status of the treatment process and to determine the continued necessity for care in an inpatient setting. Treatment within an inpatient psychiatric setting is directed at stabilization of incapacitating signs or symptoms, amelioration of severely disabling functional impairments, arrestment of potentially life-threatening self/other harm inclinations, management of adverse biologic reactions to treatment and/or regulation of complicated...
medication situations. The continuing stay recertification process is designed to assess the efficacy of the treatment regime in addressing these concerns, and to determine whether the inpatient setting remains the most appropriate, least restrictive, level of care for treatment of the beneficiary's problems and dysfunctions.

Continuing treatment in an inpatient setting may be certified when signs, symptoms, behaviors, impairments, harm inclinations or biologic/medication complications, similar to those which justified the beneficiary's admission certification, remain present, and continue to be of such a nature and severity that inpatient psychiatric treatment is still medically necessary. It is anticipated that in those reviews which fall near the end of an episode of care, these problems and dysfunctions will have stabilized or diminished.

Discharge planning must begin at the onset of treatment in the inpatient unit. Payment cannot be authorized for continued stays that are due solely to placement problems or the unavailability of aftercare services.

The individual must meet all three criteria outlined in the following table:

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>The beneficiary has a validated current version of DSM or ICD mental disorder (excluding ICD-9 V-codes and ICD-10 Z-codes) that remains the principal diagnosis for purposes of care during the period under review.</th>
</tr>
</thead>
</table>
| Severity of Illness (signs, symptoms, functional impairments and risk potential) | - Persistence/intensification of signs/symptoms, impairments, harm inclinations or biologic/medication complications which necessitated admission to this level of care, and which cannot currently be addressed at a lower level of care.  
- Continued severe disturbance of cognition, perception, affect, memory, behavior or judgment.  
- Continued gravely disabling or incapacitating functional impairments or severely and pervasively impaired personal adjustment.  
- Continued significant self/other harm risk.  
- Use of psychotropic medication at dosage levels necessitating medical supervision, dosage titration of medications requiring skilled observation, or adverse biologic reactions requiring close and continuous observation and monitoring.  
- Emergence of new signs/symptoms, impairments, harm inclinations or medication complications meeting admission criteria. |
| Intensity of Service | - The beneficiary requires close observation and medical supervision due to the severity of signs and symptoms, to control risk behaviors or inclinations, to assure basic needs are met or to manage biologic/medication complications.  
- The beneficiary is receiving active, timely, treatment delivered according to an individualized plan of care.  
- Active treatment is directed toward stabilizing or diminishing those symptoms, impairments, harm inclinations or biologic/medication complications that necessitated admission to inpatient care. |
The beneficiary is making progress toward treatment goals as evidenced by a measurable reduction in signs/symptoms, impairments, harm inclinations or biologic/medication complications or, if no progress has been made, there has been a modification of the treatment plan and therapeutic program, and there is a reasonable expectation of a positive response to treatment.

Discharge criteria and aftercare planning are documented in the beneficiary's record.
SECTION 9 – INTENSIVE CRISIS STABILIZATION SERVICES

Intensive/crisis stabilization services are structured treatment and support activities provided by a multidisciplinary team and designed to provide a short-term alternative to inpatient psychiatric services. Services may be used to avert a psychiatric admission or to shorten the length of an inpatient stay when clinically indicated.

A crisis situation means a situation in which an individual is experiencing a serious mental illness or a developmental disability, or a child is experiencing a serious emotional disturbance, and one of the following applies:

- The individual can reasonably be expected within the near future to physically injure himself or another individual, either intentionally or unintentionally.
- The individual is unable to provide himself clothing, or shelter, or to attend to basic physical activities such as eating, toileting, bathing, grooming, dressing, or ambulating, and this inability may lead in the near future to harm to the individual or to another individual.
- The individual’s judgment is so impaired that he is unable to understand the need for treatment and, in the opinion of the mental health professional, his continued behavior, as a result of the mental illness, developmental disability, or emotional disturbance, can reasonably be expected in the near future to result in physical harm to the individual or to another individual.

9.1 APPROVAL

The PIHP must seek and maintain MDHHS approval for the intensive crisis stabilization services in order to use Medicaid funds for program services.

9.2 POPULATION

These services are for beneficiaries who have been assessed to meet criteria for psychiatric hospital admissions but who, with intense interventions, can be stabilized and served in their usual community environments. These services may also be provided to beneficiaries leaving inpatient psychiatric services if such services will result in a shortened inpatient stay.

Beneficiaries must have a diagnosis of mental illness or mental illness with a co-occurring substance use disorder or developmental disability.

9.3 SERVICES

Intensive/crisis services are intensive treatment interventions delivered by an intensive/crisis stabilization treatment team under the supervision of a psychiatrist. Component services include:

- Intensive individual counseling/psychotherapy;
- Assessments (rendered by the treatment team);
- Family therapy;
Psychiatric supervision; and
Therapeutic support services by trained paraprofessionals.

### 9.4 Qualified Staff

Intensive/crisis services must be provided by a treatment team of mental health professionals under the supervision of a psychiatrist. The psychiatrist need not provide on-site supervision at all times, but must be available by telephone at all times. The treatment team providing intensive/crisis stabilization services must be mental health professionals. Nursing services/consultation must be available.

The treatment team may be assisted by trained paraprofessionals under appropriate supervision. The trained paraprofessionals must have at least one year of satisfactory work experience providing services to beneficiaries with serious mental illness. Activities of the trained paraprofessionals include assistance with therapeutic support services. In addition, the team may include one or more peer support specialists.

### 9.5 Location of Services

Intensive/crisis stabilization services may be provided where necessary to alleviate the crisis situation, and to permit the beneficiary to remain in, or return more quickly to, his usual community environment. Intensive crisis stabilization services must not be provided exclusively or predominantly at residential programs.

Exceptions: Intensive/crisis stabilization services may not be provided in:

- Inpatient settings;
- Jails or other settings where the beneficiary has been adjudicated; or
- Crisis residential settings.

### 9.6 Individual Plan of Service

Intensive/crisis stabilization services may be provided initially to alleviate an immediate or serious psychiatric crisis. However, following resolution of the immediate situation (and within no more than 48 hours), an intensive/crisis stabilization services treatment plan must be developed. The intensive/crisis stabilization treatment plan must be developed through a person-centered planning process in consultation with the psychiatrist. Other professionals may also be involved if required by the needs of the beneficiary. The case manager (if the beneficiary receives case management services) must be involved in the treatment and follow-up services.

The individual plan of service must contain:

- Clearly stated goals and measurable objectives, derived from the assessment of immediate need, and stated in terms of specific observable changes in behavior, skills, attitudes, or circumstances, structured toresolve the crisis.
- Identification of the services and activities designed to resolve the crisis and attain his goals and objectives.
- Plans for follow-up services (including other mental health services where indicated) after the crisis has been resolved. The role of the case manager must be identified, where applicable.

For children’s intensive/crisis stabilization services, the treatment plan must address the child’s needs in context with the family needs. Educational services must also be considered and the treatment plan must be developed in consultation with the child’s school district staff.
SECTION 10 – OUTPATIENT PARTIAL HOSPITALIZATION SERVICES

The PIHP is responsible for authorizing and paying for Medicaid admissions and continued stays in partial hospitalization programs by Medicaid beneficiaries.

- Admissions - beneficiaries may be referred to a partial hospitalization program from psychiatric inpatient hospitals or psychiatric units, referring providers, or PIHPs, or they may present themselves at the outpatient hospital without a referral.
- Continued stays must be authorized by the PIHP.

Authorization for the partial hospitalization admission and continued stay includes authorization for all services related to that admission/stay, including laboratory, pharmacy, and radiology services. The outpatient partial hospitalization program must bill the PIHP for authorized services according to procedures and rates established between the facility and the PIHP.

10.1 PARTIAL HOSPITALIZATION ADMISSION CRITERIA: ADULT

Partial hospitalization services may be used to treat a person with mental illness who requires intensive, highly coordinated, multi-modal ambulatory care with active psychiatric supervision. Treatment, services and supports are provided for six or more hours per day, five days a week, in a licensed setting. The use of partial hospitalization as a setting of care presumes that the beneficiary does not currently need treatment in a 24-hour protective environment. Conversely, the use of partial hospitalization implies that routine outpatient treatment is of insufficient intensity to meet the beneficiary’s present treatment needs. The SI/IS criteria for admission assume that the beneficiary is displaying signs and symptoms of a serious psychiatric disorder, demonstrating significant functional impairments in self-care, daily living skills, interpersonal/social and/or educational/vocational domains, and is exhibiting some evidence of clinical instability. However, the level of symptom acuity, extent of functional impairments and/or the estimation of risk (clinical instability) do not justify or necessitate treatment at a more restrictive level of care.

Medicaid coverage is dependent upon active treatment being provided at the medically necessary level of care.

The individual must meet all three criteria outlined in the table below:

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>The beneficiary must be suffering from a mental illness, reflected in a primary, validated, current version of DSM or ICD Diagnosis (not including ICD-9 V-codes and ICD-10 Z-codes).</th>
</tr>
</thead>
</table>
Severity of Illness
(signs, symptoms, functional impairments and risk potential)

<table>
<thead>
<tr>
<th>At least two of the following manifestations are present:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Psychiatric Signs and Symptoms</td>
</tr>
<tr>
<td>➢ Some prominent disturbance of thought processes, perception, affect, memory, consciousness, somatic functioning (due to a mental illness) or behavior exists (intermittent hallucinations, transient delusions, panic reactions, agitation, obsessions/ruminations, severe phobias, depression, etc.) and is serious enough to cause disordered or aberrant conduct, impulse control problems, questionable judgment, psychomotor acceleration or retardation, withdrawal or avoidance, compulsions/rituals, impaired reality testing and/or impairments in functioning and role performance. The disordered or aberrant conduct or activity and/or the level of agitation are not so severe, extreme or unstable so as to require frequent restraints or to pose a danger to others.</td>
</tr>
<tr>
<td>• Disruptions of Self-Care and Independent Functioning</td>
</tr>
<tr>
<td>➢ The person seriously neglects self-care tasks (hygiene, grooming, etc.) and/or does not sufficiently attend to essential aspects of daily living (does not shop, prepare meals, maintain adequate nutrition, pay bills, complete housekeeping chores, etc.) due to a mental disorder.</td>
</tr>
<tr>
<td>➢ Beneficiary is able to maintain adequate nutrition, shelter or other essentials of daily living only with structure and supervision for a significant portion of the day, and with family/community support when away from the partial hospitalization program.</td>
</tr>
<tr>
<td>➢ The person's interpersonal functioning is significantly impaired (seriously dysfunctional communication, extreme social withdrawal, etc.).</td>
</tr>
<tr>
<td>➢ There has been notable recent deterioration in meeting educational/occupational responsibilities and role performance expectations.</td>
</tr>
<tr>
<td>• Danger to Self</td>
</tr>
<tr>
<td>➢ There is modest danger to self, reflected in: intermittent self-harm ideation, expressed ambivalent inclinations without a plan, non-intentional threats, mild and infrequent self-harm gestures (low lethality/intent) or self-mutilation, passive death wishes, or slightly self-endangering activities.</td>
</tr>
<tr>
<td>➢ The beneficiary has not made any recent significant (by intent or lethality) suicide attempts, nor is there any well-defined plan for such activity or, if there have been recent significant actions, these inclinations/behaviors are now clearly under control and the person no longer needs/requires 24-hour supervision to contain self-harm risk.</td>
</tr>
<tr>
<td>• Danger to Others</td>
</tr>
<tr>
<td>➢ Where assaultive tendencies exist, there have been no overt actions and there is reasonable expectation, based upon history and recent behavior, that the beneficiary will be able to curb these inclinations.</td>
</tr>
<tr>
<td>➢ There have been destructive fantasies described and mild threats verbalized, but the beneficiary appears to have impulse control, judgment, and reality orientation sufficient to suppress urges to act on these imaginings or expressions.</td>
</tr>
<tr>
<td>➢ There has been minor destructive behavior toward property without endangerment of others.</td>
</tr>
</tbody>
</table>
### Intensity of Service

The person meets the intensity of service requirements if partial hospitalization services are considered medically necessary and the person requires at least one of the following:

- The person requires intensive, structured, coordinated, multi-modal treatment and supports with active psychiatric supervision to arrest regression and forestall the need for inpatient care.
- The beneficiary has reached a level of clinical stability (diminished risk) obviating the need for continued care in a 24-hour protective environment but continues to require active, intensive treatment and support to relieve/reverse disabling psychiatric symptomatology and/or residual functional impairments.
- Routine medical observation and supervision is required to effect significant regulation of psychotropic medications and/or to minimize serious side effects.

### 10.2 PARTIAL HOSPITALIZATION ADMISSION CRITERIA: CHILDREN AND ADOLESCENTS

Partial hospitalization services may be used to treat a child or adolescent with mental illness or serious emotional disturbance who requires intensive, highly coordinated, multi-modal ambulatory care with active psychiatric supervision. Treatment, services and supports are provided for six or more hours per day, five days a week, in a licensed setting. The use of partial hospitalization as a setting of care presumes that the beneficiary does not currently need treatment in a 24-hour protective environment. Conversely, the use of partial hospitalization implies that routine outpatient treatment is of insufficient intensity to meet the beneficiary’s present treatment needs. The SI/IS criteria for admission assume that the beneficiary is displaying signs and symptoms of a serious psychiatric disorder, demonstrating significant functional impairments in self-care, daily living skill, interpersonal/social and/or educational/vocational domains, and is exhibiting some evidence of clinical instability. However, the level of symptom acuity, extent of functional impairments and/or the estimation of risk (clinical instability) does not justify or necessitate treatment at a more restrictive level of care.

Medicaid coverage is dependent upon active treatment being provided at the medically necessary level of care.

The individual must meet all three criteria outlined in the following table:

| Diagnosis | The beneficiary must be suffering from a mental illness, reflected in a primary, validated, current version of DSM or ICD diagnosis (not including ICD-9 V-codes and ICD-10 Z-codes). |
Severity of Illness  
(signs, symptoms, functional impairments and risk potential)  

<table>
<thead>
<tr>
<th>At least two of the following manifestations are present:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Psychiatric Signs and Symptoms</strong></td>
</tr>
<tr>
<td>➢ Some prominent disturbance of thought processes, perception, affect, memory, consciousness, somatic functioning (due to a mental illness) or behavior exists (intermittent hallucinations, transient delusions, panic reactions, agitation, obsessions/ruminations, severe phobias, depression, etc.) and is serious enough to cause disordered or aberrant conduct, impulse control problems, questionable judgment, psychomotor acceleration or retardation, withdrawal or avoidance, compulsions/rituals, impaired reality testing and/or impairments in functioning and role performance. The disordered or aberrant conduct or activity and/or the level of agitation is not so severe, extreme or unstable so as to require frequent restraints or to pose a danger to others.</td>
</tr>
<tr>
<td><strong>Disruptions of Self-Care and Independent Functioning</strong></td>
</tr>
<tr>
<td>➢ The child/adolescent exhibits significant impairments in self-care skills (feeding, dressing, toileting, hygiene/bathing/grooming, etc.), in the ability to attend to age-appropriate responsibilities, or in self-regulation capabilities, due to a mental disorder or emotional illness.</td>
</tr>
<tr>
<td>➢ The child/adolescent is able to maintain adequate self-care and self-regulation only with structure and supervision for a significant portion of the day, and with family/community support when away from the partial hospitalization program.</td>
</tr>
<tr>
<td>➢ There is recent evidence of serious impairment/incapacitation in the child's/adolescent's interpersonal and social functioning (seriously dysfunctional communication, significant social withdrawal and isolation, repeated disruptive, inappropriate or bizarre behavior in social settings, etc.).</td>
</tr>
<tr>
<td>➢ There is recent evidence of considerable deterioration in functioning within the family and/or significant decline in occupational/educational role performance due to a mental disorder or emotional illness.</td>
</tr>
<tr>
<td><strong>Danger to Self</strong></td>
</tr>
<tr>
<td>➢ There is modest danger to self, reflected in: non-accidental self-harm gestures or self-mutilation actions which are not life-threatening in either intent or lethal potential, intermittent self-harm ideation, expressed ambivalent inclinations without a plan, non-intentional threats, passive death wishes, or slightly self-endangering activities.</td>
</tr>
<tr>
<td>➢ The beneficiary has not made any recent significant (by intent or lethality) suicide attempts, nor is there any well-defined plan for such activity or, if there have been recent significant actions, these inclinations/behaviors are now clearly under control and the person no longer needs/requires 24-hour supervision to contain self-harm risk.</td>
</tr>
</tbody>
</table>
Danger to Others

- Assaultive tendencies exist, and some assaultive behavior may have occurred, but any overt actions have been without any serious or significant injury to others, and there is reasonable expectation, based upon history and recent behavior, that the beneficiary will be able to curb any serious expression of these inclinations.
- There have been destructive fantasies described and mild threats verbalized, but the beneficiary appears to have adequate impulse control, judgment, and reality orientation sufficient to suppress urges to act on these imaginings or expressions.
- There has been minor destructive behavior toward property without endangerment of others.

Drug/Medication Complications

- The beneficiary has experienced side effects of atypical complexity resulting from psychotropic drugs and regulation/correction/monitoring of these circumstances cannot be accomplished at a lower level of care due to the beneficiary's condition or to the nature of the procedures involved.
- The beneficiary needs evaluation and monitoring due to significant changes in medication or because of problems with medication regimen compliance.

Intensity of Service

The person meets the intensity of service requirements if partial hospitalization services are considered medically necessary and the person requires at least one of the following:

- The person requires intensive, structured, coordinated, multi-modal treatment and supports with active psychiatric supervision to arrest regression and forestall the need for inpatient care.
- The beneficiary has reached a level of clinical stability (diminished risk) obviating the need for continued care in a 24-hour protective environment but continues to require active, intensive, treatment and support to relieve/reverse disabling psychiatric symptomatology and/or residual functional impairments.
- Routine medical observation and supervision is required to effect significant regulation of psychotropic medications and/or to minimize serious side effects.

10.3 Partial Hospitalization Continuing Stay Criteria for Adults, Adolescents and Children

After a beneficiary has been certified for admission to a partial hospitalization program, services will be reviewed at regular intervals to assess the current status of the treatment process and to determine the continued necessity for care in a partial hospitalization setting. Treatment within a partial hospitalization program is directed at resolution or stabilization of acute symptoms, elimination or amelioration of disabling functional impairments, maintenance of self/other safety and/or regulation of precarious or complicated medication situations. The continuing stay recertification process is designed to assess the efficacy of the treatment regime in addressing these concerns, and to determine whether the partial program remains the most appropriate, least restrictive, level of care for treatment of the beneficiary's problems and dysfunctions.

Continuing treatment in the partial program may be certified when symptoms, impairments, harm inclinations or medication complications, similar to those which justified the beneficiary's admission
certification, remain present, and continue to be of such a nature and severity that partial hospitalization treatment is still medically necessary. It is anticipated that in those reviews which fall near the end of an episode of care, these problems and dysfunctions will have stabilized or diminished.

Discharge planning must begin at the onset of treatment in the program. Payment cannot be authorized for continued stays that are due solely to placement problems or the unavailability of aftercare services.

The individual must meet all three criteria outlined in the following table:

<table>
<thead>
<tr>
<th>Diagnosis</th>
<th>The beneficiary has a validated current version of DSM or ICD mental disorder (excluding ICD-9 V-codes and ICD-10 Z-codes), which remains the principal diagnosis for purposes of care during the period under review.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Severity of Illness</strong></td>
<td>▪ Persistence of symptoms, impairments, harm inclinations or medication complications which necessitated admission to this level of care, and which cannot currently be addressed at a lower level of care.</td>
</tr>
<tr>
<td>(signs, symptoms, functional impairments and risk potential)</td>
<td>▪ Emergence of new symptoms, impairments, harm inclinations or medication complications meeting admission criteria.</td>
</tr>
<tr>
<td></td>
<td>▪ Progress has been made in ameliorating admission symptoms or impairments, but the treatment goals have not yet been fully achieved and cannot currently be addressed at a lower level of care.</td>
</tr>
<tr>
<td><strong>Intensity of Service</strong></td>
<td>▪ The beneficiary is receiving active, timely, intensive, structured multi-modal treatment delivered according to an individualized plan of care.</td>
</tr>
<tr>
<td></td>
<td>▪ Active treatment is directed toward stabilizing or diminishing those symptoms, impairments, harm inclinations or medication complications that necessitated admission to the program.</td>
</tr>
<tr>
<td></td>
<td>▪ The beneficiary is making progress toward treatment goals or, if no progress has been made, the treatment plan and therapeutic program have been revised accordingly and there is a reasonable expectation of a positive response to treatment.</td>
</tr>
</tbody>
</table>

Discharge criteria and aftercare planning are documented in the beneficiary’s record.
SECTION 11 – PERSONAL CARE IN LICENSED SPECIALIZED RESIDENTIAL SETTINGS

Personal care services are those services provided in accordance with an individual plan of service to assist a beneficiary in performing his own personal daily activities. Services may be provided only in a licensed foster care setting with a specialized residential program certified by the state. These personal care services are distinctly different from the state plan Home Help program administered by MDHHS.

Personal care services are covered when authorized by a physician or other health care professional in accordance with an individual plan of services, and rendered by a qualified person. Supervision of personal care services must be provided by a health care professional who meets the qualifications contained in this chapter.

11.1 SERVICES

Personal care services include assisting the beneficiary to perform the following:

- Assistance with food preparation, clothing and laundry, and housekeeping beyond the level required by facility licensure, (e.g., a beneficiary requires special dietary needs such as pureed food);
- Eating/feeding;
- Toileting;
- Bathing;
- Grooming;
- Dressing;
- Transferring (between bed, chair, wheelchair, and/or stretcher);
- Ambulation; and
- Assistance with self-administered medications.

"Assisting" means staff performs the personal care tasks for the individual; or performs the tasks along with the individual (i.e., some hands-on); or otherwise assists the individual to perform the tasks himself/herself by prompting, reminding, or by being in attendance while the beneficiary performs the task(s).

11.2 PROVIDER QUALIFICATIONS

Personal care may be rendered to a Medicaid beneficiary in an Adult Foster Care setting licensed and certified by the state under the 1987 Department of Mental Health Administrative Rule R330.1801-09 (as amended in 1995).
11.3 DOCUMENTATION

The following documentation is required in the beneficiary's file in order for reimbursement to be made:

- An assessment of the beneficiary's need for personal care.
- An individual plan of services that includes the specific personal care services and activities, including the amount, scope and duration to be delivered that is reviewed and approved at least once per year during person-centered planning.
- Documentation of the specific days on which personal care services were delivered consistent with the beneficiary's individual plan of service.
SECTION 12 - SUBSTANCE ABUSE SERVICES

12.1 COVERED SERVICES - OUTPATIENT CARE

Medicaid-covered services and supports must be provided, based on medical necessity, to eligible beneficiaries who reside in the specified region and request services.

Outpatient treatment is a non-residential treatment service that can take place in an office-based location with clinicians educated/trained in providing professionally directed alcohol and other drug (AOD) treatment or a community-based location with appropriately educated/trained staff. The treatment occurs in regularly scheduled sessions, usually totaling fewer than nine contact hours per week but, when medically necessary, can total over 20 hours in a week. Individual, family or group treatment services may be provided individually or in combination.

Treatment must be individualized based on a bio-psycho-social assessment, diagnostic impression and beneficiary characteristics, including age, gender, culture, and development. Authorized decisions on length of stay, including continued stay, change in level of care, and discharge, must be based on the American Society of Addiction Medicine (ASAM) Criteria. Beneficiary participation in referral and continuing care planning must occur prior to discharge and should be based on the needs of the beneficiary in order to support sustained recovery.

12.1.A. ELIGIBILITY

Outpatient care may be provided only when:

- The service meets medical necessity criteria.
- The current edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM) is used to determine an initial diagnostic impression (also known as provisional diagnosis). The diagnostic impression must include all five axes.
- The service is based on individualized determination of need.
- The service is cost effective.
- The American Society of Addiction Medicine (ASAM) Criteria are used to determine substance abuse treatment placement/admission and/or continued stay needs.
- The service is based on a level of care determination using the six assessment dimensions of the current ASAM Criteria:
  - Withdrawal potential
  - Medical conditions and complications
  - Emotional, behavioral or cognitive conditions and complications
  - Readiness to change
  - Relapse, continued use or continued problem potential
  - Recovery/living environment.
This service is limited to those beneficiaries who will benefit from treatment and have been determined to have:

- an acceptable readiness to change level;
- minimal or manageable medical conditions;
- minimal or manageable withdrawal risks;
- emotional, behavioral and cognitive conditions that will not prevent the beneficiary benefiting from this level of care;
- minimal or manageable relapse potential; and
- a minimally to fully supportive recovery environment.

### 12.1.B. COVERED SERVICES

Once the above criteria have been satisfied and the beneficiary has demonstrated a willingness to participate in treatment, the following services can be provided in the outpatient setting:

<table>
<thead>
<tr>
<th>Service</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Individual Assessment</td>
<td>A face-to-face service for the purpose of identifying functional, treatment, and recovery needs and a basis for formulating the Individualized Treatment Plan.</td>
</tr>
<tr>
<td>Individual Treatment Planning</td>
<td>The beneficiary must be directly involved with developing the plan that must include Recovery Support Preparation/Relapse Prevention Activities.</td>
</tr>
<tr>
<td>Individual Therapy</td>
<td>Face-to-face counseling services with the beneficiary.</td>
</tr>
<tr>
<td>Group Therapy</td>
<td>Face-to-face counseling with three or more beneficiaries, and can include didactic lectures, therapeutic interventions/counseling, and other group related activities.</td>
</tr>
<tr>
<td>Family Therapy</td>
<td>Face-to-face counseling with the beneficiary and the significant other and/or traditional or non-traditional family members.</td>
</tr>
<tr>
<td>Crisis Intervention</td>
<td>A service for the purpose of addressing problems/issues that may arise during treatment and could result in the beneficiary requiring a higher level of care if intervention is not provided.</td>
</tr>
<tr>
<td>Referral/Linking/Coordinating/Management of Services</td>
<td>For the purpose of ensuring follow-through with identified providers, providing additional support in the community if primary services are to be provided in an office setting, addressing other needs identified as part of the assessment and/or establishing the beneficiary with another provider and/or level of care. This service may be provided individually or in conjunction with other services based on the needs of the beneficiary (frequently referred to as substance use disorder case management).</td>
</tr>
<tr>
<td>Peer Recovery and Recovery Support</td>
<td>To support and promote recovery and prevent relapse through supportive services that result in the knowledge and skills necessary for an individual’s recovery. Peer recovery programs are designed and delivered primarily by individuals in recovery (Recovery Coach) and offer social, emotional, and/or educational supportive services to help prevent relapse and promote recovery.</td>
</tr>
<tr>
<td>Compliance Monitoring</td>
<td>For the purpose of identifying abstinence or relapse when it is a part of the treatment plan or an identified part of the treatment program (excludes laboratory drug testing).</td>
</tr>
</tbody>
</table>
**Early Intervention**

Includes stage-based interventions for individuals with substance use disorders and individuals who may not meet the threshold of abuse or dependence but are experiencing functional/social impairment as a result of use.

**Detoxification/ Withdrawal Monitoring**

For the purpose of preventing/alleviating medical complications as they relate to no longer using a substance.

**Division of Pharmacologic Therapies/ Center for Substance Abuse Treatment (DPT/CSAT) Approved Pharmacological Supports**

Refer to the Treatment (DPT/CSAT) Approved Pharmacological Supports subsection.

**Substance Abuse Treatment Services**

Services that are required to include assessment, treatment planning, stage-based interventions, referral linking and monitoring, recovery support preparation, recovery support services, and treatment based on medical necessity. They may include individual, group and family treatment. These services are provided under the supervision of a SATS or SATP.

### 12.1.C. Admission Criteria

Outpatient services should be authorized based on the number of hours and/or types of services that are medically necessary. Reauthorization or continued treatment should take place when it has been demonstrated that the beneficiary is benefiting from treatment but additional covered services are needed for the beneficiary to be able to sustain recovery independently.

Reauthorization of services can be denied in situations where the beneficiary has:

- not been actively involved in their treatment, as evidenced by repeatedly missing appointments;
- not been participating/refusing to participate in treatment activities;
- continued use of substances and other behavior that is deemed to violate the rules and regulations of the program providing the services.

Beneficiaries may also be terminated from treatment services based on these violations.

### 12.1.D. Service Intensity

The medically necessary outpatient services correspond to the frequency and duration of services established by the ASAM levels of care and are referred to as follows:

- Level 0.5 – Early Intervention
- Level 1.0 – Outpatient
Outpatient services can include any variety of the covered services and are dependent on the individual needs of the beneficiary. The assessment, treatment plan and recovery support preparations are the only components that are consistent throughout the outpatient levels of care as each beneficiary must have these as part of the authorized treatment services. As a beneficiary’s needs increase, more services and/or frequency/duration of services may be utilized if these are medically necessary. The ASAM levels correspond with established hours of services that take place during a week.

<table>
<thead>
<tr>
<th>ASAM Level 0.5</th>
<th>Services are not subdivided by the number of hours received during a week. The amount and type of services provided are based on individual needs based on the beneficiary’s motivation to change and other risk factors that may be present.</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASAM Level 1.0</td>
<td>Services from one hour to eight hours during a week.</td>
</tr>
<tr>
<td>ASAM Level 2.1</td>
<td>Services from nine to 19 hours in a week. The services are offered at least three days a week to fulfill the minimum nine-hour commitment.</td>
</tr>
<tr>
<td>ASAM Level 2.5</td>
<td>Services that are offered 20 or more hours in a week.</td>
</tr>
</tbody>
</table>

12.2 Treatment (DPT/CSAT) Approved Pharmacological Supports

12.2.A. Provision of Services

Opiate-dependent beneficiaries may be provided chemotherapy using methadone as an adjunct to a treatment service. Provision of such services must meet the following criteria:

- Services must be provided under the supervision of a physician licensed to practice medicine in Michigan.
- The physician must be licensed to prescribe controlled substances, as well as licensed to work at a methadone program.
- The methadone component of the substance abuse treatment program must be:
  - licensed as such by the state;
  - certified by the Division of Pharmacologic Therapies/Center for Substance Abuse Treatment (DPT/CSAT);
  - licensed by the Drug Enforcement Administration (DEA); and
  - accredited by a DPT/CSAT and state-approved accrediting organization (The Joint Commission (TJC) and the Commission on Accreditation of Rehabilitation Facilities (CARF)).
- Methadone must be administered by an appropriately-licensed MD/DO, physician's assistant, nurse practitioner, registered nurse, licensed practical nurse, or pharmacist.
12.2.B. COVERED SERVICES

Covered services for Methadone and pharmacological supports and laboratory services, as required by DPT/CSAT regulations and the Administrative Rules for Substance Use Disorder Service Programs in Michigan, include:

- Methadone medication
- Nursing services
- Physical examination
- Physician encounters (monthly)
- Laboratory tests (including health screening tests as part of the initial physical exam, pregnancy test at admission, and required toxicology tests)
- TB skin test (as ordered by physician)

12.2.C. ELIGIBILITY CRITERIA

Medical necessity requirements shall be used to determine the need for methadone as an adjunct treatment and recovery service.

All six dimensions of the American Society of Addiction Medicine (ASAM) Criteria must be addressed:

- Acute intoxication and/or withdrawal potential
- Biomedical conditions and complications.
- Emotional/behavioral conditions and complications (e.g., psychiatric conditions, psychological or emotional/behavioral complications of known or unknown origin, poor impulse control, changes in mental status, or transient neuropsychiatric complications)
- Treatment acceptance/resistance
- Relapse/continued use potential
- Recovery/living environment

12.2.D. ADMISSION CRITERIA

Decisions to admit an individual for methadone maintenance must be based on medical necessity criteria, satisfy the LOC determination using the six dimensions of the ASAM Criteria, and have an initial diagnostic impression of opioid dependency for at least one year based on current DSM criteria.

Admission procedures require a physical examination. This examination must include a medical assessment to confirm the current DSM diagnosis of opioid dependency of at least one year, as was identified during the screening process. The physician may refer the individual for further medical assessment as indicated.
Consistent with the LOC determination, individuals requesting methadone must be presented with all appropriate options for substance use disorder treatment, such as:

- Medical Detoxification
- Sub-acute Detoxification
- Residential Care
- Buprenorphine/Naloxone
- Non-Medication Assisted Outpatient Treatment

### 12.2.D.1. SPECIAL CIRCUMSTANCES FOR ADMISSIONS

There are special circumstances for the admission of pregnant women, pregnant adolescents, and adolescents.

<table>
<thead>
<tr>
<th>Pregnant Women</th>
<th>Pregnant women requesting treatment are considered a priority for admission and must be screened and referred for services within 24 hours.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Pregnant individuals who have a documented history of opioid addiction, regardless of age or length of opioid dependency, may be admitted to an Opioid Treatment Program (OTP) provided the pregnancy is certified by the OTP physician and treatment is found to be justified.</td>
</tr>
<tr>
<td></td>
<td>For pregnant individuals, evidence of current physiological dependence is not necessary.</td>
</tr>
<tr>
<td></td>
<td>Pregnant opioid-dependent individuals must be referred for prenatal care and other pregnancy-related services and supports, as necessary.</td>
</tr>
<tr>
<td></td>
<td>OTPs must obtain informed consent from pregnant women, and all women admitted to methadone treatment who may become pregnant, stating that they will not knowingly put themselves and their fetus in jeopardy by leaving the OTP against medical advice.</td>
</tr>
<tr>
<td></td>
<td>Because methadone and opiate withdrawal are not recommended during pregnancy due to the increased risk to the fetus, the OTP shall not discharge pregnant women without making documented attempts to facilitate a referral for continued treatment with another provider.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Pregnant Adolescents</th>
<th>For an individual under 18 years of age, a parent, legal guardian, or responsible adult designated by the relevant state authority, must provide consent for treatment in writing. (In Michigan, the relevant state authority is Children's Protective Services.)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>➢ A copy of this signed informed consent statement must be placed in the individual's medical record.</td>
</tr>
<tr>
<td></td>
<td>➢ This signed consent is in addition to the general consent that is signed by all individuals receiving methadone, and must be filed in the medical record.</td>
</tr>
</tbody>
</table>

| Non-Pregnant Adolescents | An individual under 18 years of age is required to have had at least two documented unsuccessful attempts at short-term detoxification and/or drug-free treatment within a 12-month period to be eligible for maintenance treatment. |
12.2.E. MEDICAL MAINTENANCE PHASE

When the maximum therapeutic benefit of counseling has been achieved, it may be appropriate for the individual to enter the medical maintenance (methadone only) phase of treatment and recovery; that is if it has been determined that ongoing use of the medication is medically necessary and appropriate for the individual. The following criteria are to be considered when making the decision to move to medical maintenance:

- Two years of continuous treatment.
- Abstinence from illicit drugs and from abuse of prescription drugs for the period indicated by federal and state regulations (at least two years for a full 30-day maintenance dosage).
- No alcohol use problem.
- Stable living conditions in an environment free of substance use.
- Stable and legal source of income.
- Involvement in productive activities (e.g., employment, school, volunteer work).
- No criminal or legal involvement for at least three years and no current parole or probation status.
- Adequate social support system and absence of significant non-stabilized co-occurring disorders.

12.2.F. DISCONTINUATION/TERMINATION CRITERIA

Discontinuation/termination from methadone treatment refers to the following situations:

- Beneficiaries must discontinue treatment with methadone when treatment is completed with respect to both the medical necessity for the medication and for counseling services.
- Beneficiaries may be terminated from services if there is clinical and/or behavioral non-compliance.
If a beneficiary is terminated:

- The OTP must attempt to make a referral for another LOC assessment or for placing the beneficiary at another OTP.
- The OTP must make an effort to ensure that the beneficiary follows through with the referral.
- These efforts must be documented in the medical record.
- The OTP must follow the procedures of the funding authority in coordinating these referrals.

Any action to terminate treatment of a Medicaid beneficiary requires a "notice of action" be given to the beneficiary and the parent, legal guardian, or responsible adult (designated by the relevant state authority/CPS). The beneficiary and the parent, legal guardian, or responsible adult (designated by the relevant state authority/CPS) has a right to appeal this decision. Services must continue and dosage levels maintained while the appeal is in process, unless the action is being carried out due to administrative discontinuation criteria outlined in the subsection titled Administrative Discontinuation.

Services are discontinued/terminated, either by Completion of Treatment or through Administrative Discontinuation. Refer to the following subsections for additional information.

### 12.2.F.1. COMPLETION OF TREATMENT

The decision to discharge a beneficiary must be made by the OTP’s physician, with input from clinical staff, the beneficiary, and the parent, legal guardian, or responsible adult (designated by the relevant state authority/CPS). Completion of treatment is determined when the beneficiary has fully or substantially achieved the goals listed in their individualized treatment and recovery plan and no longer needs methadone as a medication. As part of this process, a reduction of the dosage to a medication-free state (tapering) should be implemented within safe and appropriate medical standards.

### 12.2.F.2. ADMINISTRATIVE DISCONTINUATION

Administrative discontinuation relates to non-compliance with treatment and recovery recommendations, and/or engaging in activities or behaviors that impact the safety of the OTP environment or other individuals who are receiving treatment. The OTP must work with the beneficiary and the parent, legal guardian, or responsible adult (designated by the relevant state authority/CPS) to explore and implement methods to facilitate compliance.

Non-compliance is defined as actions exhibited by the beneficiary which include, but are not limited to:

- The repeated or continued use of illicit opioids and non-opioid drugs (including alcohol).
- Toxicology results that do not indicate the presence of methadone metabolites. (The same actions are taken as if illicit drugs, including non-prescribed medication, were detected.)
In both of the aforementioned circumstances, OTPs must perform toxicology tests for methadone metabolites, opioids, cannabinoids, benzodiazepines, cocaine, amphetamines, and barbiturates (Administrative Rules for Substance Use Disorder Service Programs in Michigan, R 325.14406).

OTPs must test the beneficiary for alcohol if use is prohibited under their individualized treatment and recovery plan or the beneficiary appears to be using alcohol to a degree that would make dosing unsafe.

- Repeated failure to submit to toxicology sampling as requested.
- Repeated failure to attend scheduled individual and/or group counseling sessions, or other clinical activities such as psychiatric or psychological appointments.
- Failure to manage medical concerns/conditions, including adherence to physician treatment and recovery services and use of prescription medications that may interfere with the effectiveness of methadone and may present a physical risk to the individual.
- Repeated failure to follow through on other treatment and recovery plan related referrals. (Repeated failure should be considered on an individual basis and only after the OTP has taken steps to assist beneficiaries to comply with activities.)

The commission of acts by the beneficiary that jeopardize the safety and well-being of staff and/or other individuals, or negatively impact the therapeutic environment, is not acceptable and can result in immediate discharge. Such acts include, but are not limited to, the following:

- Possession of a weapon on OTP property
- Assaulitve behavior against staff and/or other individuals
- Threats (verbal or physical) against staff and/or other individuals
- Diversion of controlled substances, including methadone
- Diversion and/or adulteration of toxicology samples
- Possession of a controlled substance with intent to use and/or sell on agency property or within a one-block radius of the clinic
- Sexual harassment of staff and/or other individuals
- Loitering on the clinic property or within a one-block radius of the clinic

Administrative discontinuation of services can be carried out by two methods:

- **Immediate Termination** - This involves the discontinuation of services at the time of one of the above safety-related incidents or at the time an incident is brought to the attention of the OTP.
- **Enhanced Tapering Discontinuation** - This involves an accelerated decrease of the methadone dose (usually by 10 mg or 10 percent a day). The manner in which methadone is discontinued is at the discretion of the OTP physician to ensure the safety and well-being of the beneficiary.
It may be necessary for the OTP to refer beneficiaries who are being administratively discharged to the local access management system for evaluation for another level of care. Justification for non-compliance termination must be documented in the beneficiary's chart.

12.3 **SUB-ACUTE DETOXIFICATION**

Sub-acute detoxification is defined as supervised care for the purpose of managing the effects of withdrawal from alcohol and/or other drugs as part of a planned sequence of addiction treatment. Detoxification is limited to the stabilization of the medical effects of the withdrawal and to the referral to necessary ongoing treatment and/or support services. Licensure as a sub-acute detoxification program is required.

Sub-acute detoxification is part of a continuum of care for substance use disorders and does not constitute the end goal in the treatment process. The detoxification process consists of three essential components: evaluation, stabilization, and fostering client readiness for, and entry into, treatment. A detoxification process that does not incorporate all three components is considered incomplete and inadequate.

Detoxification can take place in both residential and outpatient settings, and at various levels of intensity within these settings. Client placement to setting and to level of intensity must be based on ASAM Criteria and individualized determination of client need.

The following combinations of sub-acute detoxification settings and levels of intensity correspond to the LOC determination based on the ASAM Criteria.

- **Outpatient Setting**
  - Ambulatory Detoxification without extended on-site monitoring corresponding to ASAM Level 1-WM, or ambulatory detoxification with extended on-site monitoring (ASAM Level 2-WM).
  - Outpatient setting sub-acute detoxification must be provided under the supervision of a Substance Abuse Treatment Specialist. Services must have arrangements for access to licensed medical personnel as needed. ASAM Level 2-WM ambulatory detoxification services must be monitored by appropriately credentialed and licensed nurses.

- **Residential Setting**
  - Clinically Managed Residential Detoxification - Non-Medical or Social Detoxification Setting: Emphasizes peer and social support for persons who warrant 24-hour support (ASAM Level 3.2-WM). These services must be provided under the supervision of a Substance Abuse Treatment Specialist. Services must have arrangements for access to licensed medical personnel as needed.
  - Medically Managed Residential Detoxification - Freestanding Detoxification Center: These services must be staffed 24-hours-per-day, seven-days-per-week by a licensed physician or by the designated representative of a licensed physician (ASAM Level 3.7-WM).
This service is limited to stabilization of the medical effects of the withdrawal, and referral to necessary ongoing treatment and/or support services. This service, when clinically indicated, is an alternative to acute medical care provided by licensed health care professionals in a hospital setting.

Authorization requirements:

- Symptom alleviation is not sufficient for purposes of admission. There must be documentation of current beneficiary status that provides evidence the admission is likely to directly assist the beneficiary in the adoption and pursuit of a plan for further appropriate treatment and recovery.
- Admission to sub-acute detoxification must be made based on:
  - Medical necessity criteria
  - LOC determination based on an evaluation of the six assessment dimensions of the current ASAM Criteria.
- Initial length-of-stay authorizations may be for up to three days, with additional days authorized if there is clinical evidence that detoxification is not successful or complete and authorization requirements continue to be met.

12.4 RESIDENTIAL TREATMENT

Residential Treatment is defined as intensive therapeutic service which includes overnight stay and planned therapeutic, rehabilitative or didactic counseling to address cognitive and behavioral impairments for the purpose of enabling the beneficiary to participate and benefit from less intensive treatment. A program director is responsible for the overall management of the clinical program, and treatment is provided by appropriate credentialed professional staff, including substance abuse specialists. Residential treatment must be staffed 24-hours-per-day. The clinical program must be provided under the supervision of a Substance Abuse Treatment Specialist with either full licensure or limited licensure as a psychologist, master’s social worker, professional counselor, marriage and family therapist or physician. Services may be provided by a Substance Abuse Treatment Specialist or a non-degreed staff.

This intensive therapeutic service is limited to those beneficiaries who, because of specific cognitive and behavioral impairments, need a safe and stable environment in order to benefit from treatment.

Authorization requirements:

- The effects of the substance use disorder must be so significant and the resulting impairment so great that outpatient and intensive outpatient treatments have not been effective or cannot be safely provided, and when the beneficiary provides evidence of willingness to participate in treatment.
- Admissions to Residential Treatment must be based on:
  - Medical necessity criteria
  - LOC determination based on an evaluation of the six assessment dimensions of the current ASAM Criteria
- The PIHP may authorize up to 22 days of treatment.
- Additional days may be authorized when authorization requirements continue to be met, if there is evidence of progress in achieving treatment plan goals, and reauthorization is necessary to
resolve cognitive and behavioral impairments which prevent the beneficiary from benefiting from less intensive treatment.

12.5 EXCLUDED SERVICES

- Room and board;
- All other services not addressed within Covered or Allowable Services; and
- Medicaid Substance Abuse Services funded Outside the PIHP Plan.

Some Medicaid-covered services are available to substance abuse beneficiaries, but are provided outside of the PIHP Plan. The PIHPs are not responsible to pay for the following:

- Acute detoxification;
- Laboratory services related to substance abuse (with the exception of lab services required for Methadone);
- Medications used in the treatment/management of addictive disorders;
- Emergency medical care;
- Emergency transportation;
- Substance abuse prevention and treatment that occurs routinely in the context of providing primary health care; and
- Routine transportation to substance abuse treatment services which is the responsibility of the local MDHHS office.
SECTION 13 – TARGETED CASE MANAGEMENT

Targeted case management is a covered service that assists beneficiaries to design and implement strategies for obtaining services and supports that are goal-oriented and individualized. Services include assessment, planning, linkage, advocacy, coordination and monitoring to assist beneficiaries in gaining access to needed health and dental services, financial assistance, housing, employment, education, social services, and other services and natural supports developed through the person-centered planning process. Targeted case management is provided in a responsive, coordinated, effective and efficient manner focusing on process and outcomes.

Targeted case management services must be available for all children with serious emotional disturbance, adults with serious mental illness, persons with a developmental disability, and those with co-occurring substance use disorders who have multiple service needs, have a high level of vulnerability, require access to a continuum of mental health services from the PIHP, and/or are unable to independently access and sustain involvement with needed services.

Beneficiaries must be provided choice of available, qualified case management staff upon initial assignment and on an ongoing basis.

13.1 PROVIDER QUALIFICATIONS

Providers must demonstrate the capacity to provide all core requirements specified below and have a sufficient number of staff to meet the needs of the target population.

Providers must document initial and ongoing training for case managers related to the core requirements and applicable to the target population served.

Caseload size and composition must be realistic for the case manager to complete the core requirements as identified in the individual plan of service developed through the person-centered planning process.

13.2 DETERMINATION OF NEED

The determination of the need for case management must occur at the completion of the intake process and through the person-centered planning process for beneficiaries receiving services and supports. Justification as to whether case management is needed or not must be documented in the beneficiary's record.

13.3 CORE REQUIREMENTS

- Assuring that the person-centered planning process takes place and that it results in the individual plan of service.
- Assuring that the plan of service identifies what services and supports will be provided, who will provide them, and how the case manager will monitor (i.e., interval of face-to-face contacts) the services and supports identified under each goal and objective.
- Overseeing implementation of the individual plan of service, including supporting the beneficiary's dreams, goals, and desires for optimizing independence; promoting recovery; and assisting in the development and maintenance of natural supports.
- Assuring the participation of the beneficiary on an ongoing basis in discussions of his plans, goals, and status.
- Identifying and addressing gaps in service provision.
- Coordinating the beneficiary’s services and supports with all providers, making referrals, and advocating for the beneficiary.
- Assisting the beneficiary to access programs that provide financial, medical, and other assistance such as Home Help and Transportation services.
- Assuring coordination with the beneficiary’s primary and other health care providers to assure continuity of care.
- Coordinating and assisting the beneficiary in crisis intervention and discharge planning, including community supports after hospitalization.
- Facilitating the transition (e.g., from inpatient to community services, school to work, dependent to independent living) process, including arrangements for follow-up services.
- Assisting beneficiaries with crisis planning.
- Identifying the process for after-hours contact.

**Assessment**

The provider must have the capacity to perform an initial written comprehensive assessment addressing the beneficiary’s needs/wants, barriers to needs/wants, supports to address barriers, and health and welfare issues. Assessments must be updated when there is significant change in the condition or circumstances of the beneficiary. The individual plan of services must also reflect such changes.

**Documentation**

The beneficiary’s record must contain sufficient information to document the provision of case management, including the nature of the service, the date, and the location of contacts between the case manager and the beneficiary, including whether the contacts were face-to-face. The frequency of face-to-face contacts must be dependent on the intensity of the beneficiary’s needs.

The case manager must review services at intervals defined in the individual plan of service. The plan shall be kept current and modified when indicated (reflecting the intensity of the beneficiary's health and welfare needs). A beneficiary or his/her guardian or authorized representative may request and review the plan at any time. A formal review of the plan shall not occur less often than annually to review progress toward goals and objectives and to assess beneficiary satisfaction.

**Monitoring**

The case manager must determine, on an ongoing basis, if the services and supports have been delivered, and if they are adequate to meet the needs/wants of the beneficiary. Frequency and scope (face-to-face and telephone) of case management monitoring activities must reflect the intensity of the beneficiary’s health and welfare needs identified in the individual plan of services.

Targeted case management shall not include direct delivery of ongoing day-to-day supports and/or training, or provision of other Medicaid services. Targeted case managers are prohibited from exercising the agency’s authority to authorize or deny the provision of services. Targeted case management shall not duplicate services that are the responsibility of another program.
13.4 STAFF QUALIFICATIONS

A primary case manager must be a qualified mental health or intellectual disability professional (QMHP or QIDP) or, if the case manager has only a bachelor's degree but without the specialized training or experience, they must be supervised by a QMHP or QIDP who does possess the training or experience. Services to a child with serious emotional disturbance must be provided by a QMHP who is also a child mental health professional. Services to children with developmental disabilities must be provided by a QIDP.
SECTION 14 – CHILDREN’S HOME AND COMMUNITY-BASED SERVICES WAIVER (CWP)

The Children’s Home and Community Based Services Waiver Program (CWP) provides services that are enhancements or additions to regular Medicaid coverage to children up to age 18 who are enrolled in the CWP.

The Children’s Waiver is a fee-for-service program administered by the CMHSP. The CMHSP will be held financially responsible for any costs incurred on behalf of the CWP beneficiary that were authorized by the CMHSP and exceed the Medicaid fee screens or amount, duration and scope parameters.

Services, equipment and Environmental Accessibility Adaptations (EAAs) that require prior authorization from MDHHS must be submitted to the CWP Clinical Review Team at MDHHS. The team is comprised of a physician, registered nurse, psychologist, and licensed master’s social worker with consultation by a building specialist and an occupational therapist.

14.1 KEY PROVISIONS

The CWP enables Medicaid to fund necessary home- and community-based services for children with developmental disabilities who reside with their birth or legally adoptive parent(s) or with a relative who has been named legal guardian under the laws of the State of Michigan, regardless of their parent’s income.

The CMHSP is responsible for assessment of potential waiver candidates. The CMHSP is also responsible for referring potential waiver candidates by completing the CWP "pre-screen" form and sending it to the MDHHS to determine priority rating.

Application for the CWP is made through the CMHSP. The CMHSP is responsible for the coordination of the child’s waiver services. The case manager, the child and his family, friends, and other professional members of the planning team work cooperatively to identify the child’s needs and to secure the necessary services. All services and supports must be included in the Individual Plan of Services (IPOS). The IPOS must be reviewed, approved and signed by the physician.

A CWP beneficiary must receive at least one children’s waiver service per month in order to retain eligibility.

14.2 ELIGIBILITY

The following eligibility requirements must be met:

- The child must have a developmental disability (as defined in Michigan state law), be less than 18 years of age and in need of habilitation services.
- The child must have a score on the Global Assessment of Functioning (GAF) Scale of 50 or below.
- The child must reside with his birth or legally adoptive parent(s) or with a relative who has been named the legal guardian for that child under the laws of the State of Michigan, provided that the relative is not paid to provide foster care for that child.
- The child is at risk of being placed into an ICF/IID facility because of the intensity of the child’s care and the lack of needed support, or the child currently resides in an ICF/IID facility but, with appropriate community support, could return home.

- The child must meet, or be below, Medicaid income and asset limits when viewed as a family of one (the parent’s income is waived).

- The child’s intellectual or functional limitations indicate that he would be eligible for health, habilitative and active treatment services provided at the ICF/IID level of care. Habilitative services are designed to assist individuals in acquiring, retaining and improving the self-help, socialization and adaptive skills necessary to reside successfully in home and community-based settings. Active treatment includes aggressive, consistent implementation of a program of specialized and generic training, treatment, health services and related services. Active treatment is directed toward the acquisition of the behaviors necessary for the beneficiary to function with as much self-determination and independence as possible, and the prevention or deceleration of regression or loss of current optimal functional status.

**14.3 COVERED WAIVER SERVICES**

Covered Medicaid services that continue to be available to CWP beneficiaries are listed in the Covered Services Section of this chapter. Refer to the Children’s Waiver Community Living Support Services Appendix of this chapter for criteria for determining number of hours. Services covered under CWP include:

| Community Living Supports | Community Living Supports (CLS) provides assistance to a family in the care of their child while facilitating the child’s independence and integration into the community. This service provides skill development related to activities of daily living, such as bathing, eating, dressing, personal hygiene, household chores and safety skills; skill development to achieve or maintain mobility, sensory-motor, communication, socialization and relationship-building skills, and participation in leisure and community activities. These supports must be provided directly to, or on behalf of, the child. The supports, as identified in the individual plan of services, are provided in the child’s home and may be provided in community settings when integration into the community is an identified goal. These supports may serve to reinforce skills or lessons taught in school, therapy or other settings, but are not intended to supplant services provided in school or other settings.

Individuals who are identified in the individual plan of services to provide CLS to the child and family must meet provider qualifications.

The CMHSP must maintain the following documentation:

- A log of the CLS must be maintained in the child’s record, documenting the provision of activities outlined in the plan.
- Provider qualifications and standards must be maintained for all staff providing services and supports to the child and family.

All service costs must be maintained in the child’s file for audit purposes.
### Enhanced Transportation

Transportation costs may be reimbursed when separately specified in the individual plan of services and provided by people other than staff performing CLS, in order to enable a child served by the CWP to gain access to waiver and other community services, activities and resources. Transportation is limited to local distances, where local is defined as within the child's county or a bordering county. This service is an enhancement of transportation services covered under Medicaid. Family, neighbors, friends, or community agencies that can provide this service without charge must be utilized before seeking funding through the CWP. The availability and use of natural supports should be documented in the record.

Parents of children served by the waiver are not entitled to enhanced transportation reimbursement.

### Environmental Accessibility Adaptations (EAAs)

Environmental Accessibility Adaptations (EAAs) include those physical adaptations to the home, specified in the individual plan of services, which are necessary to ensure the health, welfare and safety of the child, or enable him to function with greater independence in the home and without which the child would require institutionalization. Home adaptations may include the installation of ramps, widening of doorways, modification of bathroom facilities, or installation of specialized electric and plumbing systems that are essential to support the child's medical equipment. Requests for EAAs must be prior authorized by the CWP Clinical Review Team following denial by all applicable insurance sources, e.g., private insurance, Children's Special Health Care Services (CSHCS), Medicaid. All services shall be provided in accordance with applicable state or local building codes. A prescription is required and is valid for one year from the date of signature.

Standards of value purchasing must be followed. The EAA must be the most reasonable alternative, based on the results of a review of all options, including a change in the use of rooms within the home or alternative housing. The existing structure must have the capability to accept and support the proposed changes. The infrastructure of the home involved in the funded EAA (e.g., electrical system, plumbing, well/septic, foundation, heating/cooling, smoke detector systems, roof) must be in compliance with any applicable local codes. EAAs shall exclude costs for improvements exclusively required to meet local building codes.

The EAA must incorporate reasonable and necessary construction standards, excluding cosmetic improvements. The adaptation cannot result in valuation of the structure significantly above comparable neighborhood real estate values.

The EAA must demonstrate cost-effectiveness. The family must apply, with the assistance of the case manager if needed, to all applicable funding sources, such as housing commission grants, MSHDA, and community development block grants, for assistance. Acceptances or denials by these funding sources must be documented in the child's records. The CWP is a funding source of last resort.

Excluded are those adaptations or improvements to the home that are of general utility, are considered to be standard housing obligations of parents, and are not of direct medical or remedial benefit to the child. EAAs that are required to support proper functioning of medical equipment, such as electrical upgrades, are limited to the requirements for safe operation of the specified equipment and are not intended to correct existing code violations in a child's home.
All work must be completed while the child is enrolled in the CWP.

Adaptations may be made to rental properties when the landowner agrees to the adaptation in writing. A written agreement between the landowner and the child's family must specify any requirements for restoration of the property to its original condition if the occupants move and must indicate that the CWP and MDHHS are not obligated for any restoration costs.

If a family purchases a home, or builds a home or addition while the child is receiving waiver services, it is the family's responsibility to assure that the home will meet the child's basic needs, such as having a ground floor bath/bedroom if the child has mobility limitations. The CWP does not cover construction costs in a new home or addition, or a home purchased after the beneficiary is enrolled in the waiver. The CWP funds may be authorized to assist with the adaptation noted above (e.g., ramps, grab bars, widening doorways) for a home recently purchased.

Additional square footage may be prior authorized following a MDHHS specialized housing consultation if it is determined that adding square footage is the only alternative available to make the home accessible and the most cost-effective alternative for housing. Additional square footage is limited to the space necessary to make the home wheelchair-accessible for a child with mobility impairments to prevent institutionalization; the amount will be determined by the direct medical or remedial need of the beneficiary. The family must exhaust all applicable funding options, such as the family's ability to pay, housing commission grants, MSHDA and community development block grants. Acceptances or denials by these funding sources must be documented in the child's records.

---

**Family Training (previously called Didactic Services)**

This provides for training and counseling services for the families of children served on the CWP. For purposes of this service, “family” is defined as the people who live with or provide care to a child served on the CWP, and may include a parent or siblings. Family does not include individuals who are employed to care for the child. Training includes instruction about treatment regimens and use of equipment specified in the plan of services, and must include updates as necessary to safely maintain the child at home.

Family training is also a counseling service directed to the family and designed to improve and develop the family’s skills in dealing with the life circumstances of parenting a child with special needs. All family training must be included in the child's individual plan of services and must be provided on a face-to-face basis.

**Non-Family Training (previously called Psychological/Behavioral Treatment)**

This service provides coaching, supervision and monitoring of CLS staff by professional staff (LLP, MSW, or QIDP). The professional staff will work with parents and CLS staff to implement the plan that addresses services designed to improve the child's social interactions and self-control by instilling positive behaviors in the place of behaviors that are socially disruptive, injurious to the child or others, or that cause property damage.

**Fencing**

Fencing may be approved with documentation that it is essential to achieve the outcomes specified in the child's individual plan of services and necessary to meet a child's health and safety needs. Authorization for fencing is for a maximum of 200 feet of standard chain link fence and one gate. If it is determined that chain link fencing will not meet the child's health and safety needs, a standard stockade fence may be considered.
Financial Management Services/Fiscal Intermediary Services

- Healthcare Common Procedure Coding System (HCPCS) code "T2025" should be used to bill for this service. This is a "per month" service with a maximum unit of one per month.

- Financial Management Services/Fiscal Intermediary Services include, but are not limited to:
  - Facilitation of the employment of service workers by the child's parent or guardian acting as the consumer's representative, including federal, state and local tax withholding/payments, unemployment compensation fees, wage settlements, and fiscal accounting;
  - Assuring adherence to federal and state laws and regulations; and
  - Ensuring compliance with documentation requirements related to management of public funds.

- The fiscal intermediary may also perform other supportive functions that enable the consumer - through his/her parent or guardian - to self-direct needed services. These functions may include helping the consumer's representative recruit staff (e.g., developing job descriptions, placing ads, assisting with interviewing); contracting with or employing providers of services; verification of provider qualifications (including reference and background checks); and assisting the consumer and his/her representative to understand billing and documentation requirements.

- This is a service that handles the financial flow-through of Medicaid dollars for children enrolled in the CWP who are using Choice Voucher arrangements. This CWP waiver service is available only to CWP consumers whose parent or guardian, serving as the consumer's representative, chooses to self-direct selected services through Choice Voucher arrangements. A CMHSP may terminate self-direction of services (and therefore Financial Management Services) when the health and welfare of the consumer is in jeopardy due to the failure of the consumer's representative to direct services and supports or when the consumer's representative consistently fails to comply with contractual requirements.

- A fiscal intermediary is an independent legal entity – organization or individual - that acts as the fiscal agent of the CMHSP for the purpose of assuring fiduciary accountability for the funds authorized to purchase specific services identified in the consumer's individual plan of service (IPOS). The fiscal intermediary receives funds from the CMHSP and makes payments authorized by the consumer's parent or guardian, as the consumer's representative. The fiscal intermediary acts as an employer agent when the consumer's representative directly employs staff or other service providers.

- The fiscal intermediary can be an agency or organization (e.g., financial management services agency, accounting firm, local ARC or other advocacy organization) or individual (e.g., accountant, financial advisor/manager, attorney). The fiscal intermediary must meet requirements as identified in the MDHHS/CMHSP Managed Mental Health Supports and Services Contract – Attachment C3 4.4 Medicaid Managed Specialty Supports and Services Concurrent 1915(b)(c) Waiver Program FY12 (and subsequent years) – Attachment P3 4.4.
### Respite Care

Respite care services are provided to the child on an intermittent or short-term basis because of the absence or need for relief of the parent. Respite is intended to support the parent who is the primary caregiver. This service can be provided by a qualified provider under contract with the CMHSP in the child's home, foster home, group home, licensed respite care facility, licensed camp, or the home of a friend or relative. A parent or guardian may not be considered a provider, nor be reimbursed for this service. All respite services are billed under HCPCS code T1005 – Respite Care Service 15 Min. – with modifiers as appropriate. The maximum respite allocation is 4,608 units (1,152 hours) per fiscal year.

The cost of room and board cannot be included as part of respite care, unless provided as part of the respite care in a facility that is not a private residence. Respite provided in an institution (i.e., ICF/IID, nursing facility, or hospital) is not covered by the CWP. When a child requires skilled nursing interventions for 24 hours, the maximum daily amount that one nurse can provide is 16 hours. When the family is not available to provide the additional eight hours of care, a second nurse will be required to provide services for the remainder of the 24-hour period. If a nurse provides respite to more than one child at the same time, the nurse can only provide skilled nursing interventions to one child at a time. Therefore, service for that child would be covered as RN or LPN respite, and services to the other child(ren) would be covered as aide-level respite.

### Specialized Medical Equipment and Supplies

Specialized medical equipment and supplies includes durable medical equipment, environmental safety and control devices, adaptive toys, activities of daily living (ADL) aids, and allergy control supplies that are specified in the child's individual plan of services. This service is intended to enable the child to increase his abilities to perform ADLs or to perceive, control, or communicate with the environment in which the child lives. Generators may be covered for a beneficiary who is ventilator-dependent or requires daily use of oxygen via a concentrator. The size of a generator will be limited to the wattage required to provide power to essential life-sustaining equipment. This service also includes vehicle modifications, van lifts and wheelchair tie-downs. Specialized medical equipment and supplies includes items necessary for life support, ancillary supplies and equipment necessary for the proper functioning of such items, and durable and non-durable medical equipment not covered by Medicaid or through other insurance. (Refer to the Medical Supplier Chapter for information regarding Medicaid-covered equipment and supplies.)

Equipment and supplies must be of direct medical or remedial benefit to the child. "Direct medical or remedial benefit" is a prescribed specialized treatment and its associated equipment or environmental accessibility adaptation that is essential to the implementation of the child's individual plan of services. The plan must include documentation that, as a result of the treatment and its associated equipment or adaptation, institutionalization of the child will be prevented.

A prescription is required and is valid for one year from the date of signature. All items must be determined to be essential to the health, safety, welfare, and independent functioning of the child as specified in the individual plan of services. There must be documented evidence that the item is the most cost-effective alternative to meet the child's need following value purchasing standards. All items must meet applicable standards of manufacture, design and installation. The CMHSP, or its contract agency, must maintain documentation to support that the best value in warranty coverage (e.g., the most coverage for the least cost, per industry standards) was obtained for the item at the time of purchase.
### The following are examples of items not covered under this service:

- Items that are not of direct medical or remedial benefit or that are considered to be experimental. “Experimental” means that the validity of use of the item has not been supported in one or more studies in a preferred professional journal.

- Furniture, appliances, bedding, storage cabinets, whirlpool tubs, and other non-custom items that may routinely be found in a home.

- Items that would normally be available to any child and would ordinarily be provided by the family.

- Items that are considered family recreational choices (outdoor play equipment, swimming pools, pool decks and hot tubs).

- The purchase or lease of vehicles and any repairs or routine maintenance to the vehicle.

- Educational supplies and equipment expected to be provided by the school.

### 1. Local Authorization of Specialized Medical Equipment and Supplies

As defined below under the various Healthcare Common Procedure Coding System (HCPCS) codes, the CMHSP may locally authorize selected medical equipment and supplies covered under this service category. Medicaid payment will not be made for items that exceed quantity/frequency limits or established Medicaid fee screens as published in the MDHHS CMHSP Children’s Waiver Database in effect at the time the equipment or supply is authorized.

- **Miscellaneous therapeutic items and supplies, retail purchases, not otherwise classified; identify product in "Remarks" (HCPCS T1999)**

  This code is used to bill Medicaid for age-appropriate adaptive toys identified in the child’s individual plan of services to address the adaptive or therapeutic need for the item and the specific habilitative outcome.

  Items that are typically available in a home and ordinarily provided by families, schools, etc. (e.g., crayons, coloring books, regular board games, educational or non-adaptive toys/software, CD/DVD players, camera, film, computers) are not covered.

- **Personal care item, not otherwise specified, each; identify product in "Remarks" (HCPCS S5199)**

  This code is used to bill Medicaid for ADL aids that enable the child to be as independent as possible in areas of self-care. The child’s individual plan of services must describe the purpose and use of the ADL aid and any training that the child requires for its use. ADL aids must not be similar in function to items previously billed to Medicaid.

- **Specialized supply, not otherwise specified, waiver; identify product in "Remarks" (HCPCS T2028)**

  This code is used to bill Medicaid for allergy control supplies used for the on-going management of a diagnosed severe reaction to airborne irritants and must be specified in the child’s individual plan of services. Household items routinely found in a home are not covered (e.g., bed linens, mattress, pillow, vacuum cleaner).
2. State-Level Prior Authorization of Specialized Medical Equipment and Supplies

All other items and services covered under this category must be prior authorized by the MDHHS CWP Clinical Review Team following denial by all applicable insurance sources, e.g., private insurance, CSHCS, Medicaid. (Refer to the Children's Waiver Program [CWP] Prior Authorization subsection for details regarding the prior authorization process.) Prior authorization will not be given for items and services that exceed quantity/frequency limits as published in the MDHHS CMHSP Children's Waiver Database in effect at the time the service is authorized. Pursuant to prior authorization by the MDHHS CWP Clinical Review Team and provision of the items or service, Medicaid payment will be at the rate prior authorized.

- **Specialized medical equipment, not otherwise specified, waiver (HCPCS T2029)**

  This code is used to bill Medicaid for environmental safety and control devices that enable the child to be as independent as possible. These devices may assist in controlling the environment or assuring safety in conjunction with programs designed to teach safety awareness or skills. The child's individual plan of services must address the use of the device and include any training that the child requires for its use. Environmental safety and control devices do not include items of general utility such as standard smoke detectors, fire extinguishers, home security systems, and storage cabinets.

  This service is limited to five environmental safety and control devices or sets of devices per quarter. A set is considered a group of like items that must be purchased in a quantity to meet the child's needs, e.g., outlet plug covers.

- **Repair or non-routine service for durable medical equipment other than oxygen requiring the skill of a technician, labor component, per 15 minutes (HCPCS K0739)**

  This code is used to bill Medicaid for repairs to specialized medical equipment that are not covered benefits through other insurances. There must be documentation in the child's individual plan of services that the specialized medical equipment continues to be of direct medical or remedial benefit to the child. All applicable warranty and insurance coverage must be sought and denied before requesting funding for repairs through the CWP. The CMHSP must document that the repair is the most cost-effective solution when compared with replacement or purchase of a new item. If the equipment requires repairs due to misuse or abuse, the CMHSP must provide evidence of training in the use of the equipment to prevent future incidents.

- **Vehicle modifications, waiver; per service (HCPCS T2039)**

  This code is used to bill Medicaid for modifications to full-size vans, van lifts and wheelchair tie-down systems. Modifications to the family-owned van must be necessary to ensure the accessibility of the child with mobility impairments, and the vehicle must be the child's primary means of transportation. The individual plan of services must specify the child's accessibility needs that will be addressed by these modifications.
Prior authorization for a van lift will be considered no more frequently than once every five years, which is the minimum life expectancy of a lift.

When purchasing new vehicles, many automobile manufacturers offer a rebate of up to $1,000 to reimburse documented expenditures for modification of a vehicle for accessibility. The CMHSP must request that the family purchasing the vehicle obtain information regarding any rebate programs and apply the rebate toward the cost of the modifications.

Other modifications to a full-size van, such as raised doors, which are necessary to meet the child’s accessibility needs will be considered. It is expected that the CMHSP will use prudence in considering and processing beneficiary requests for modifications to newly purchased vehicles (e.g., providing evidence that the child’s needs were considered in purchasing a full-size van; purchasing a vehicle that has a raised roof). Conversions to mini-vans are limited to the same modification and would not include additional costs required to modify the frame (e.g., lower the floor) to accommodate a lift. Excluded are items such as automatic door openers, remote car starters, custom interiors, etc. The purchase of a vehicle or maintenance to the vehicle is the family’s responsibility.

If the vehicle is stolen or damaged beyond repair within five years of the purchase, replacement would only be considered with documentation that the existing lift cannot be transferred to a new van and that no other funding source (e.g., automobile insurance, homeowner’s insurance, personal liability, judgment settlement, etc.) is available to cover the replacement.

• Durable medical equipment, miscellaneous (HCPCS E1399)

This code is used to bill Medicaid for durable medical equipment as described below:

 Window air-conditioning unit for the room where the child spends the majority of his time (e.g., sleeping area). The child must have a documented medical diagnosis of one of the following specific medical diagnoses or conditions:
  ♦ temperature regulation dysfunction due to brain injury or other medical diagnosis;
  ♦ severe respiratory distress secondary to asthma, permanent lung damage, or other medical conditions which are exacerbated by heat and humidity;
  ♦ severe dehydration resulting from a medical diagnosis (e.g., diabetes insipidus) which may result in hospitalization; or
  ♦ severe cardiac problems which may result in hospitalization unless the environmental temperature is carefully controlled.
Generator for a child who is ventilator-dependent or requires daily use of oxygen via a concentrator. The size of a generator will be limited to the wattage required to provide power to essential life-sustaining equipment (typically 5,000 watts) and is not intended to provide power for the entire home. The request for prior approval of a generator must include a documented history of power outages, including frequency and duration. The local power company must be notified in writing of the need to restore power on a priority basis due to the child’s needs.

Therapeutic items, assistive technology, and other durable medical equipment for a child who has sensory, communication, or mobility needs when the item is reasonably expected to enable the child to perceive, control or communicate with the environment in which the child lives, to have a greater degree of independence than would be possible without the item or device, or to benefit maximally from a program designed to meet physical or behavioral needs.

**Specialty Services**

Specialty Services include:
- Music Therapies;
- Recreation Therapies;
- Art Therapies; and
- Massage Therapies.

Specialty Services may include the following activities: Child and family training; coaching and supervision of staff; monitoring of progress related to goals and objectives; and recommending changes in the plan. This may be used in addition to the traditional professional therapy model included in Medicaid.

Services must be directly related to an identified goal in the individual plan of service and approved by the physician. Service providers must meet the CMHSP provider qualifications, including appropriate licensure/certification. Services are limited to four sessions per therapy per month.

The CMHSP must maintain a record of all Specialty Service costs for audit purposes. Hourly care services are not covered under Specialty Services.

### 14.4 Children’s Waiver Program (CWP) Prior Authorization

To determine if a specific service requires MDHHS CWP prior authorization, refer to the Covered Waiver Services subsection above. The CMHSP must complete and submit to the MDHHS CWP an original Prior Review and Approval Request (PRAR) form and the following documentation for each prior authorization request:

- Original current (within 365 days) prescription signed by a physician.
- Narrative justification of need completed by an appropriate professional.
- Documentation that the requested item, device, or modification is essential to the implementation of the child’s individual plan of services and is of direct medical or remedial benefit to the child.
- A copy of the habilitation program (i.e., goals, objectives and methodologies) as related to the request and identified in the individual plan of services.
14.5 PROVIDER QUALIFICATIONS

14.5.A. INDIVIDUALS WHO PROVIDE RESPITE AND CLS

Individuals who provide respite and CLS must:

- Be at least 18 years of age.
- Be able to practice prevention techniques to reduce transmission of any communicable diseases from themselves to others in the environment where they are providing support.
- Have a documented understanding and skill in implementing the individual plan of services and report on activities performed.
- Be in good standing with the law (i.e., not a fugitive from justice, a convicted felon, or an illegal alien).
- Be able to perform basic first aid and emergency procedures.
- Be trained in recipient rights.
- Be an employee of the CMHSP or its contract agency, or an employee of the parent who is paid through a Choice Voucher arrangement. The Choice Voucher System is the designation or set of arrangements that facilitate and support accomplishing self-determination through the use of an individual budget, a fiscal intermediary and direct consumer-provider contracting.

14.5.B. INDIVIDUALS PERFORMING CASE MANAGEMENT FUNCTIONS

Individuals performing case management functions must meet the requirements for a Qualified Intellectual Disability Professional (QIDP) and have:

- A minimum of a Bachelor’s degree in a human services field.
- One year of experience working with people with developmental disabilities.
SECTION 15 – HABILITATION SUPPORTS WAIVER FOR PERSONS WITH DEVELOPMENTAL DISABILITIES

Beneficiaries with developmental disabilities may be enrolled in Michigan’s Habilitation Supports Waiver (HSW) and receive the supports and services as defined in this section. HSW beneficiaries may also receive other Medicaid state plan or additional/B3 services. A HSW beneficiary must receive at least one HSW service per month in order to retain eligibility. Medical necessity criteria should be used in determining the amount, duration, and scope of services and supports to be used. The beneficiary's services and supports that are to be provided under the auspices of the PIHP must be specified in his individual plan of services developed through the person-centered planning process.

HSW beneficiaries must be enrolled through the MDHHS enrollment process completed by the PIHP. The enrollment process must include annual verification that the beneficiary:

- Has a developmental disability (as defined by Michigan law);
- Is Medicaid-eligible;
- Is residing in a community setting;
- If not for HSW services, would require ICF/IID level of care services; and
- Chooses to participate in the HSW in lieu of ICF/IID services.

The enrollment process also includes confirmation of changes in the beneficiary's enrollment status, including termination from the waiver, changes of residence requiring transfer of the waiver to another PIHP, and death. Termination from the HSW may occur when the beneficiary no longer meets one or more of the eligibility criteria specified above as determined by the PIHP, or does not receive at least one HSW service per month, or withdraws from the program voluntarily, or dies. Instructions for beneficiary enrollments and annual re-certification may be obtained from the MDHHS Bureau of Community Based Services. (Refer to the Directory Appendix for contact information.)

The PIHP shall use value purchasing for HSW services and supports. The PIHP shall assist beneficiaries to examine their first- and third-party resources to pursue all reimbursements to which they may be entitled, and to make use of other community resources for non-PIHP covered activities, supports or services.

Reimbursement for services rendered under the HSW is included in the PIHP capitation rate.

Beneficiaries enrolled in the HSW may not be enrolled simultaneously in any other §1915(c) waiver.

Habilitation services under the HSW are not otherwise available to the beneficiary through a local educational agency under the Individuals with Disabilities Education Act (IDEA) or the Rehabilitation Act of 1973.
### 15.1 Waiver Supports and Services

<table>
<thead>
<tr>
<th>Community Living Supports (CLS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Community Living Supports (CLS) facilitate an individual’s independence, productivity, and promote inclusion and participation. The supports can be provided in the beneficiary’s residence (licensed facility, family home, own home or apartment) and in community settings (including, but not limited to, libraries, city pools, camps, etc.), and may not supplant other waiver or state plan covered services (e.g., out-of-home non-vocational habilitation, Home Help Program, personal care in specialized residential, respite). The supports are:</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>- Assisting (that exceeds state plan for adults), prompting, reminding, cueing, observing, guiding and/or training the beneficiary with:</td>
</tr>
<tr>
<td>- Meal preparation;</td>
</tr>
<tr>
<td>- Laundry;</td>
</tr>
<tr>
<td>- Routine, seasonal, and heavy household care and maintenance (where no other party, such as a landlord or licensee, has responsibility for provision of these services);</td>
</tr>
<tr>
<td>- Activities of daily living, such as bathing, eating, dressing, personal hygiene; and</td>
</tr>
<tr>
<td>- Shopping for food and other necessities of daily living.</td>
</tr>
<tr>
<td>- Assistance, support and/or training the beneficiary with:</td>
</tr>
<tr>
<td>- Money management;</td>
</tr>
<tr>
<td>- Non-medical care (not requiring nurse or physician intervention);</td>
</tr>
<tr>
<td>- Socialization and relationship building;</td>
</tr>
<tr>
<td>- Transportation (excluding to and from medical appointments that are the responsibility of Medicaid through MDHHS or health plan) from the beneficiary’s residence to community activities, among community activities, and from the community activities back to the beneficiary’s residence);</td>
</tr>
<tr>
<td>- Leisure choice and participation in regular community activities;</td>

The CLS do not include the costs associated with room and board. Payments for CLS may not be made, directly or indirectly, to responsible relatives (i.e., spouses or parents of minor children) or the legal guardian.

For beneficiaries living in unlicensed homes, CLS assistance with meal preparation, laundry, routine household care and maintenance, ADLs, and/or shopping may be used to complement Home Help or Expanded Home Help services when the individual’s needs for this assistance have been officially determined to exceed DHS’s allowable parameters. Reminding, observing, guiding, and/or training of these activities are CLS coverages that do not supplant Home Help or Expanded Home Help. CLS may be provided in a licensed specialized residential setting as a complement to, and in conjunction with, State Plan coverage of Personal Care in Specialized Residential Settings.
If beneficiaries living in unlicensed homes need assistance with meal preparation, laundry, routine household care and maintenance, ADLs, and/or shopping, the beneficiary must request Home Help and, if necessary, Expanded Home Help from MDHHS. CLS may be used for those activities while the beneficiary awaits determination by MDHHS of the amount, scope and duration of Home Help or Expanded Home Help. If the beneficiary requests it, the PIHP must assist with applying for Home Help or submitting a request for a Fair Hearing when the beneficiary believes that the MDHHS authorization of amount, scope and duration of Home Help does not accurately reflect his or her needs. CLS may also be used for those activities while the beneficiary awaits the decision from a Fair Hearing of the appeal of a MDHHS decision.

Community Living Supports (CLS) provides support to a beneficiary younger than 18, and the family in the care of their child, while facilitating the child’s independence and integration into the community. This service provides skill development related to activities of daily living, such as bathing, eating, dressing, personal hygiene, household chores and safety skills; and skill development to achieve or maintain mobility, sensory-motor, communication, socialization and relationship-building skills, and participation in leisure and community activities. These supports must be provided directly to, or on behalf of, the child. These supports may serve to reinforce skills or lessons taught in school, therapy, or other settings. For children and adults up to age 26 who are enrolled in school, CLS services are not intended to supplant services provided in school or other settings or to be provided during the times when the child or adult would typically be in school but for the parent’s choice to home-school.

### Enhanced Medical Equipment and Supplies

Enhanced medical equipment and supplies include devices, supplies, controls, or appliances that are not available under regular Medicaid coverage or through other insurances. (Refer to the Medical Supplier Chapter of this manual for more information about Medicaid-covered equipment and supplies.) All enhanced medical equipment and supplies must be specified in the plan of service, and must enable the beneficiary to increase his abilities to perform activities of daily living; or to perceive, control, or communicate with the environment.

Items that are not of direct medical or remedial benefit, or that are considered to be experimental to the beneficiary, are excluded from coverage.

- "Direct medical or remedial" benefit is a prescribed specialized treatment and its associated equipment or environmental accessibility adaptation that are essential to the implementation of the individual plan of service.
- "Experimental" means that the validity of the use of the item has not been supported in one or more studies in a refereed professional journal.

The plan must document that, as a result of the treatment and its associated equipment or adaptation, institutionalization of the beneficiary will be prevented. There must be documented evidence that the item is the most cost-effective alternative to meet the beneficiary’s need. All items must be ordered on a prescription as defined in the General Information Section of this chapter. An order is valid one year from the date it was signed. This coverage includes:

- Adaptations to vehicles;
- Items necessary for life support;
- Ancillary supplies and equipment necessary for proper functioning of such items; and
- Durable and non-durable medical equipment not available under the Medicaid state plan.

Generators may be covered for an individual who is ventilator dependent or requires daily use of an oxygen concentrator. The size of a generator will be limited to the wattage required to provide power to essential life-sustaining equipment.

Assessments and specialized training needed in conjunction with the use of such equipment, as well as warranted upkeep and repair, shall be considered as part of the cost of the services.

Furnishings (e.g., furniture, appliances, bedding) and other non-custom items (e.g., wall and floor coverings, and decorative items) that are routinely found in a home are not included.

Items that are considered family recreational choices are not covered. The purchase or lease of a vehicle, as well as any repairs or routine maintenance to the vehicle, is not covered. Educational equipment and supplies are expected to be provided by the school as specified in the Individual Education Plan and are not covered. Eyeglasses, hearing aids, and dentures are not covered.

Covered items must meet applicable standards of manufacture, design, and installation. There must be documentation that the best value in warranty coverage was obtained for the item at the time of purchase. The PIHP should have a process in place that gives notice to a medical equipment supplier that purchase of the equipment or supply has been authorized.

Repairs to enhanced medical equipment that are not covered benefits through other insurances may be covered. There must be documentation in the individual plan of services that the enhanced medical equipment continues to be of direct medical or remedial benefit. All applicable warranty and insurance coverage must be sought and denied before paying for repairs. The PIHP must document the repair is the most cost-effective solution when compared with replacement or purchase of a new item. If the equipment requires repairs due to misuse or abuse, the PIHP must provide evidence of training in the use of the equipment to prevent future incidents.

The PIHP must assure that all applicable private insurance, Medicare and/or Medicaid requirements for the procurement of durable medical equipment and supplies have been met. The PIHP may not use the waiver service to purchase equipment or supplies that would have been covered by another program if the program's rules were followed, including using providers who participate with that program.

<th>Enhanced Pharmacy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physician-ordered, nonprescription &quot;medicine chest&quot; items as specified in the beneficiary's support plan. Items that are not of direct medical or remedial benefit to the beneficiary are not allowed. Only the following items are allowable:</td>
</tr>
<tr>
<td>- Cough, cold, pain, headache, allergy, and/or gastrointestinal distress remedies;</td>
</tr>
<tr>
<td>- Vitamins and minerals;</td>
</tr>
<tr>
<td>- Special dietary juices and foods that augment, but do not replace, a regular diet;</td>
</tr>
</tbody>
</table>
Thickening agents for safe swallowing when the beneficiary has a diagnosis of dysphagia and either:
- A history of aspiration pneumonia, or
- Documentation that the beneficiary is at risk of insertion of a feeding tube without thickening agents for safe swallowing;

First aid supplies (e.g., band-aids, iodine, rubbing alcohol, cotton swabs, gauze, antiseptic cleansing pads);

Special oral care products to treat specific oral conditions beyond routine mouth care (e.g., special toothpaste, toothbrushes, anti-plaque rinses, antiseptic mouthwashes); and

Special items (i.e., accommodating common disabilities -- longer, wider handles), tweezers and nail clippers.

Routine cosmetic products (e.g., make-up base, aftershave, mascara, and similar products) are not included. However, products necessary to ameliorate negative visual impact of serious facial disfigurements (e.g., massive scarring) and/or skin conditions (including exposed area eczema, psoriasis, and/or acne) will be covered. Refer to the Pharmacy Chapter in this manual for information about Medicaid-covered prescriptions.

HSW funds cannot be used to pay for copays for other prescription plans the beneficiary may have.

Environmental Modifications
Physical adaptations to the home and/or workplace required by the beneficiary's support plan that are necessary to ensure the health, safety, and welfare of the beneficiary, or enable him to function with greater independence within the environment(s) and without which the beneficiary would require institutionalization.

Adaptations may include:
- The installation of ramps and grab bars;
- Widening of doorways;
- Modification of bathroom facilities;
- Installation of specialized electric and plumbing systems that are necessary to accommodate the medical equipment and supplies necessary for the welfare of the beneficiary; and
- Environmental control devices that replace the need for paid staff and increase the beneficiary's ability to live independently, such as automatic door openers.

Excluded are those adaptations or improvements to the home that are of general utility, are considered to be standard housing obligations of the beneficiary, and are not of direct medical or remedial benefit. Examples of exclusions include, but are not limited to, carpeting, roof repair, sidewalks, driveways, heating, central air conditioning (except under exceptions noted in the service definition), garages, raised garage doors, storage and organizers, hot tubs, whirlpool tubs, swimming pools, landscaping and general home repairs. The HSW does not cover construction costs in a new home or additions to a home purchased after the beneficiary is enrolled in the waiver.
"Direct medical or remedial" benefit is a prescribed specialized treatment and its associated equipment or environmental accessibility adaptation that are essential to the implementation of the individual plan of service. The plan must document that, as a result of the treatment and its associated equipment or adaptation, institutionalization of the beneficiary will be prevented. There must be documented evidence that the item is the most cost-effective alternative to meet the beneficiary's need. An example of a reasonable alternative, based on the results of a review of all options, may include changing the purpose, use, or function of a room within the home or finding alternative housing. Assessments and specialized training needed in conjunction with the use of such environmental modifications are included as a part of the cost of the service. All items must be ordered on a prescription as defined in the General Information Section of this chapter. An order is valid for one year from the date it was signed.

Central air-conditioning is included only when prescribed by a physician and specified with extensive documentation in the plan as to how it is essential in the treatment of the beneficiary's illness or condition. This supporting documentation must demonstrate the cost-effectiveness of central air compared to the cost of window units in all rooms that the beneficiary must use. Environmental modifications that are required to support proper functioning of medical equipment, such as electrical upgrades, are limited to the requirements for safe operation of the specified equipment and are not intended to correct existing code violations in a beneficiary's home.

The PIHP must assure there is a signed contract or bid proposal with the builder prior to the start of an environmental modification. It is the responsibility of the PIHP to work with the beneficiary and builder to ensure that the work is completed as outlined in the contract or bid proposal.

Adaptations may be made to rental properties when the landowner agrees to the adaptation in writing. A written agreement between the landowner, the beneficiary, and the PIHP must specify any requirements for restoration of the property to its original condition if the occupant moves. If a beneficiary or his family purchases or builds a home while receiving waiver services, it is the beneficiary's or family's responsibility to assure that the home will meet basic needs, such as having a ground floor bath/bedroom if the beneficiary has mobility limitations. HSW funds may be authorized to assist with the adaptations noted above (e.g., ramps, grab bars, widening doorways, etc.) for a home recently purchased. If modifications are needed to a home under construction that require special adaptation to the plan (e.g., roll-in shower), the HSW may be used to fund the difference between the standard fixture and the modification required to accommodate the beneficiary's need.

Environmental modifications for licensed settings includes only the remaining balance of previous environmental modification costs that accommodate the specific needs of current waiver beneficiaries, and will be limited to the documented portion being amortized in the mortgage, or the lease cost per bed. Environmental modifications exclude the cost of modifications required for basic foster care licensure or to meet local building codes.

The existing structure must have the capability to accept and support the proposed changes. The infrastructure of the home involved in the funded modifications (e.g., electrical system, plumbing, well/septic, foundation, heating/cooling, smoke detector systems, roof) must be in compliance with any applicable local codes. Environmental modifications shall exclude costs for improvements exclusively required to meet local building codes.
The environmental modification must incorporate reasonable and necessary construction standards, excluding cosmetic improvements. The adaptation cannot result in valuation of the structure significantly above comparable neighborhood real estate values.

The beneficiary, with the direct assistance by the PIHP supports coordinator when necessary, must make a reasonable effort to access all available funding sources, such as housing commission grants, Michigan State Housing Development Authority (MSHDA), and community development block grants, for assistance. A record of efforts to apply for alternative funding sources must be documented in the beneficiary’s records, as well as acceptances or denials by these funding sources. The HSW is a funding source of last resort.

Adaptations to the work environment are limited to those necessary to accommodate the person’s individualized needs, and cannot be used to supplant the requirements of Section 504 of the Rehabilitation Act or the Americans with Disabilities Act (ADA), or covered by the Michigan Rehabilitation Services.

All services must be provided in accordance with applicable state or local building codes.

<thead>
<tr>
<th>Family Training</th>
</tr>
</thead>
<tbody>
<tr>
<td>Training and counseling services for the families of beneficiaries served on the waiver. For purposes of this service, “family” is defined as the family members who live with or provide care to the beneficiary in the HSW, and may include parent, spouse, children, relatives, foster family, unpaid caregivers, or in-laws. Training includes instructions about treatment regimens and use of equipment specified in the individual plan of services, and includes updates as needed to safely maintain the person at home. Family training goals, and the content, frequency, and duration of the training and/or counseling, should be identified in the beneficiary's individual plan of services. Not included are individuals who are employed to provide waiver services for the beneficiary.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Goods and Services</th>
</tr>
</thead>
<tbody>
<tr>
<td>The purpose of Goods and Services is to promote individual control over, and flexible use of, the individual budget by the HSW beneficiary using arrangements that support self-determination and facilitate creative use of funds to accomplish the goals identified in the individual plan of services (IPOS) through achieving better value or an improved outcome. Goods and services must increase independence, facilitate productivity, or promote community inclusion and substitute for human assistance (such as personal care in the Medicaid State Plan and community living supports and other one-to-one support as described in the HSW or §1915(b)(3) Additional Service definitions) to the extent that individual budget expenditures would otherwise be made for the human assistance. A Goods and Services item must be identified using a person-centered planning process, meet medical necessity criteria, and be documented in the IPOS. Purchase of a warranty may be included when it is available for the item and is financially reasonable. Goods and Services are available only to individuals participating in arrangements of self-determination whose individual budget is lodged with a fiscal intermediary. This coverage may not be used to acquire goods or services that are prohibited by federal or state laws or regulations, e.g., purchase or lease or routine maintenance of a vehicle.</td>
</tr>
</tbody>
</table>
### Out-of-Home Nonvocational Habilitation

Assistance with acquisition, retention, or improvement in self-help, socialization, and adaptive skills; and the supports services, including transportation to and from, incidental to the provision of that assistance that takes place in a non-residential setting, separate from the home or facility in which the beneficiary resides.

Examples of incidental support include:

- Aides helping the beneficiary with his mobility, transferring, and personal hygiene functions at the various sites where habilitation is provided in the community.
- When necessary, helping the person to engage in the habilitation activities (e.g., interpreting).

Services must be furnished four or more hours per day on a regularly scheduled basis for one or more days per week unless provided as an adjunct to other day activities included in the beneficiary's plan of service.

These supports focus on enabling the person to attain or maintain his maximum functioning level, and should be coordinated with any physical, occupational, or speech therapies listed in the plan of services. Services may serve to reinforce skills or lessons taught in school, therapy, or other settings.

### Personal Emergency Response Systems (PERS)

Electronic devices that enable beneficiaries to secure help in the event of an emergency. The beneficiary may also wear a portable "help" button to allow for mobility. The system is connected to the person's phone and programmed to signal a response center once the button is activated. The response center is staffed by trained professionals. This service includes a one-time installation and up to twelve monthly monitoring services per year.

PERS coverage should be limited to beneficiaries living alone (or living with a roommate who does not provide supports), or who are alone for significant parts of the day; who have no regular support or service provider for those parts of the day; and who would otherwise require extensive routine support and guidance.

### Prevocational Services

Prevocational services involve the provision of learning and work experiences where a beneficiary can develop general, non-job-task-specific strengths and skills that contribute to employability in paid employment in integrated, community settings. Services are expected to occur over a defined period of time and provided in sufficient amount and scope to achieve the outcome, as determined by the beneficiary and his/her care planning team in the ongoing person-centered planning process. Services are expected to specifically involve strategies that enhance a beneficiary's employability in integrated, community settings. Competitive employment and supported employment are considered successful outcomes of prevocational services. However, participation in prevocational services is not a required prerequisite for competitive employment or receiving supported employment services.
Prevocational services should enable each beneficiary to attain the highest possible wage and work which is in the most integrated setting and matched to the beneficiary’s interests, strengths, priorities, abilities, and capabilities. Services are intended to develop and teach general skills that lead to employment including, but not limited to:

- ability to communicate effectively with supervisors, co-workers and customers;
- generally accepted community workplace conduct and dress;
- ability to follow directions;
- ability to attend to tasks;
- workplace problem solving skills and strategies;
- general workplace safety; and
- mobility training.

Support of employment outcomes is a part of the person-centered planning process and emphasizes informed consumer choice. This process specifies the beneficiary’s personal outcomes toward a goal of productivity, identifies the services and items, including prevocational services and other employment-related services that advance achievement of the beneficiary’s outcomes, and addresses the alternatives that are effective in supporting his or her outcomes. From the alternatives, the beneficiary selects the most cost-effective approach that will help him or her achieve the outcome.

Beneficiaries who receive prevocational services during some days or parts of days may also receive other waiver services, such as supported employment, out-of-home non-vocational habilitation, or community living supports, at other times. Beneficiaries who are still attending school may receive prevocational training and other work-related transition services through the school system and may also participate in prevocational services designed to complement and reinforce the skills being learned in the school program during portions of their day that are not the educational system’s responsibility, e.g., after school or on weekends and school vacations. Prevocational services may be provided in a variety of community locations.

Beneficiaries participating in prevocational services may be compensated in accordance with applicable Federal laws and regulations, but the provision of prevocational services is intended to lead to a permanent integrated employment situation.

Documentation must be maintained by the PIHP that the beneficiary is not currently eligible for work activity or supported employment services provided by Michigan Rehabilitation Services (MRS). Information must be updated when MRS eligibility conditions change.
Prevocational services may be provided to supplement, but may not duplicate, services provided under supported employment or out-of-home non-vocational habilitation services. Coordination with the beneficiary’s school is necessary to assure that prevocational services provided in the waiver do not duplicate or supplant transition services that are the responsibility of the educational program. Transportation provided between the beneficiary’s place of residence and the site of the prevocational services, or between habilitation sites, is included as part of the prevocational and/or habilitation services.

Assistance with personal care or other activities of daily living that are provided to a beneficiary during the receipt of prevocational services may be included as part of prevocational services or may be provided as a separate State Plan Home Help service or community living supports service under the waiver, but the same activity cannot be reported as being provided to more than one service.

Only activities that contribute to the beneficiary's work experience, work skills, or work-related knowledge can be included in prevocational services.

Private Duty Nursing (PDN)

Private Duty Nursing (PDN) services are skilled nursing interventions provided to individuals age 21 and older, up to a maximum of 16 hours per day, to meet an individual’s health needs that are directly related to his developmental disability. PDN includes the provision of nursing assessment, treatment and observation provided by licensed nurses within the scope of the State’s Nurse Practice Act, consistent with physician’s orders and in accordance with the written health care plan which is part of the beneficiary’s individual plan of services (IPOS). PDN services are for beneficiaries who require more individual and continuous care than periodic or intermittent nursing available through state plan services, e.g., Home Health. The individual receiving PDN must also require at least one of the following habilitative services, whether being provided by natural supports or through the waiver.

- Community living supports
- Out-of-home non-vocational habilitation
- Prevocational or supported employment

To be determined eligible for PDN services, the PIHP must find that the beneficiary meets Medical Criteria I as well as Medical Criteria III, or meets Medical Criteria II as well as Medical Criteria III. Regardless of whether the beneficiary meets Medical Criteria I or II, the beneficiary must also meet Medical Criteria III.

Medical Criteria I - The beneficiary is dependent daily on technology-based medical equipment to sustain life. "Dependent daily on technology-based medical equipment" means:

- Mechanical rate-dependent ventilation (four or more hours per day), or assisted rate-dependent respiration (e.g., some models of Bi-PAP); or
- Deep oral (past the tonsils) or tracheostomy suctioning eight or more times in a 24-hour period; or
- Nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, associated with complex medical problems or medical fragility; or
For beneficiaries described in II above, the requirement for frequent episodes of medical instability is applicable only to the initial determination for private duty nursing. A determination of need for continued private duty nursing services is based on the continuous skilled nursing care.

### Medical Criteria II

- Frequent episodes of medical instability within the past three to six months, requiring skilled nursing assessments, judgments or interventions (as described in III below) due to a substantiated medical condition directly related to the developmental disability.

#### Definitions:

- **“Frequent”** means at least 12 episodes of medical instability related to the progressively debilitating physical disorder within the past six months, or at least six episodes of medical instability related to the progressively debilitating physical disorder within the past three months. "Medical instability" means emergency medical treatment in a hospital emergency room or inpatient hospitalization related to the underlying progressively debilitating physical disorder.

- **“Emergency medical treatment”** means covered inpatient and outpatient services that are furnished by a provider that is qualified to furnish such services and are needed to evaluate or stabilize an emergency medical condition. "Emergency medical condition" means a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention would result in placing the health of the individual in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part.
"Directly related to the developmental disability" means an illness, diagnosis, or syndrome occurred during the developmental period prior to age 22, is likely to continue indefinitely, and results in significant functional limitations in 3 or more areas of life activity. Illnesses or disability acquired after the developmental period, such as stroke or heart conditions, would not be considered directly related to the developmental disability.

- "Substantiated" means documented in the clinical/medical record, including the nursing notes.

**Medical Criteria III** – The beneficiary requires continuous skilled nursing care on a daily basis during the time when a licensed nurse is paid to provide services.

**Definitions:**

- "Continuous" means at least once every 3 hours throughout a 24-hour period, and/or when delayed interventions may result in further deterioration of health status, in loss of function or death, in acceleration of the chronic condition, or in a preventable acute episode.
- Equipment needs alone do not create the need for skilled nursing services.
- "Skilled nursing" means assessments, judgments, interventions, and evaluations of interventions requiring the education, training, and experience of a licensed nurse. Skilled nursing care includes, but is not limited to:
  - performing assessments to determine the basis for acting or a need for action, and documentation to support the frequency and scope of those decisions or actions;
  - managing mechanical rate-dependent ventilation or assisted rate-dependent respiration (e.g., some models of Bi-PAP) that is required by the beneficiary four or more hours per day;
  - deep oral (past the tonsils) or tracheostomy suctioning;
  - injections when there is a regular or predicted schedule, or prn injections that are required at least once per month (insulin administration is not considered a skilled nursing intervention);
  - nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, associated with complex medical problems or medical fragility;
  - total parenteral nutrition delivered via a central line and care of the central line;
  - continuous oxygen administration (eight or more hours per day), in combination with a pulse oximeter, and a documented need for adjustments in the rate of oxygen administration requiring skilled nursing assessments, judgments and interventions. This would not be met if oxygen adjustment is done only according to a written protocol with no skilled assessment, judgment or intervention required. Continuous use of oxygen therapy is a covered Medicaid benefit for beneficiaries age 21 and older when tested at rest while breathing room air and the oxygen saturation rate is 88 percent or below, or the PO2 level is 55 mm Hg or below;
monitoring fluid and electrolyte balances where imbalances may occur rapidly due to complex medical problems or medical fragility. Monitoring by a skilled nurse would include maintaining strict intake and output, monitoring skin for edema or dehydration, and watching for cardiac and respiratory signs and symptoms. Taking routine blood pressure and pulse once per shift that does not require any skilled assessment, judgment or intervention at least once every three hours during a 24-hour period, as documented in the nursing notes, would not be considered skilled nursing.

Once the Medical Criteria eligibility for PDN has been established, and as part of determining the amount of PDN a beneficiary is eligible for, the Intensity of Care category must be determined. This is a clinical judgment based on the following factors:

- The beneficiary's medical condition;
- The type and frequency of needed nursing assessments, judgments and interventions; and
- The impact of delayed nursing interventions.

Equipment needs alone do not determine intensity of care. Other aspects of care (e.g., administering medications) are important when developing a plan for meeting the overall needs of the beneficiary but do not determine the amount of hours of nursing for which the beneficiary is eligible.

<table>
<thead>
<tr>
<th>High Category</th>
<th>Medium Category</th>
<th>Low Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beneficiaries requiring nursing assessments, judgments and interventions by a licensed nurse (RN/LPN) at least one time each hour throughout a 24-hour period when delayed nursing interventions could result in further deterioration of health status, in loss of function, death, or in acceleration of the chronic condition.</td>
<td>Beneficiaries requiring nursing assessments, judgments and interventions by a licensed nurse (RN/LPN) at least one time every three hours throughout a 24-hour period, or at least one time each hour for at least 12 hours per day, when delayed nursing interventions could result in further deterioration of health status, in loss of function, death, or in acceleration of the chronic condition. This category also includes beneficiaries with a higher need for nursing assessments and judgments due to an inability to communicate and direct their own care.</td>
<td>Beneficiaries requiring nursing assessments, judgments and interventions by a licensed nurse (RN/LPN) at least one time every three hours for at least 12 hours per day, as well as those beneficiaries who can participate in and direct their own care.</td>
</tr>
</tbody>
</table>

The amount of PDN hours authorized represents a monthly total determined by calculating an average amount of PDN per day multiplied by the number of days in the month. The beneficiary has the flexibility to use the hours as needed during the month, not to exceed the total monthly authorized amount.
The amount of PDN (i.e., the number of hours that can be authorized for a beneficiary) is determined through the person-centered planning process to address the individual's unique needs and circumstances. Factors to be considered should include the beneficiary's care needs which establish medical necessity for PDN; the beneficiary's and family's circumstances (e.g., the availability of natural supports); and other resources for daily care (e.g., private health insurance, trusts, bequests). Although the person-centered planning process is used to determine the exact amount of PDN specified in the IPOS, in general, a beneficiary who has Low Category PDN needs would require eight or fewer hours per day, a beneficiary who has Medium Category PDN needs would require 12 or fewer hours per day, and a beneficiary who has High Category PDN needs would require 16 or fewer hours per day.

The nurse may provide personal care only when incidental to the delivery of PDN, e.g., diaper changes, but may not provide routine personal care. The provision of personal care in unlicensed homes is through Home Help, a state plan service. If the beneficiary receiving PDN services demonstrates the need for Home Help services, the IPOS must document coordination of Home Help and PDN to assure no duplication of services.

Licensed nurses provide the nursing treatments, observation, and/or teaching as ordered by a physician, and that are consistent with the written individual plan of services.

These services should be provided to a beneficiary at home or in the community. A physician's prescription is required.

The PIHP must assess and document the availability of all private health care coverage (e.g., private or commercial health insurance, Medicare, health maintenance organization, preferred provider organization, Champus, Worker's Compensation, an indemnity policy, automobile insurance) for private duty nursing and will assist the beneficiary in selecting a private duty nursing provider in accordance with available third-party coverage. This includes private health coverage held by, or on behalf of, a beneficiary.

If a beneficiary is attending school and the Individualized Educational Plan (IEP) identifies the need for PDN during transportation to and from school and/or in the classroom, the school is responsible for providing PDN during school hours. For adults up to age 26 who are enrolled in school, PDN services are not intended to supplant services provided in school or other settings or to be provided during the times when the beneficiary would typically be in school but for the parent’s choice to home-school.

An exception process to ensure the beneficiary's health, safety and welfare is available if the beneficiary's needs exceed the 16-hours-per-day maximum for a time-limited period not to exceed six months. Factors underlying the need for additional PDN must be identified in the beneficiary's plan, including strategies directed toward resolving the factors necessitating the exception, if applicable. Documentation must substantiate all of the following:

- Current medical necessity for the exception; and
- Additional PDN services are essential to the successful implementation of the beneficiary's written plan of care, and are essential to maintain the beneficiary within the least restrictive, safe, and humane environment suitable to his condition.
Exceptions must be based on the increased identified medical needs of the beneficiary or the impact on the beneficiary's needs due to the unavailability of the primary unpaid caregiver. Consideration for an exception is limited to situations outside the beneficiary's or family's control that place the beneficiary in jeopardy of serious injury or significant deterioration of health status. Exceptions may be considered for either of the following general situations:

- A temporary alteration in the beneficiary’s care needs, resulting in one or both of the following:
  - A temporary increase in the intensity of required assessments, judgments, and interventions.
  - A temporary need for additional training to enable the primary caregiver(s) to identify and meet the beneficiary's care needs.

The total number of additional PDN hours per day will be based on the physician's documentation of the extent and duration of the beneficiary's increased medical needs for a maximum of six months.

- The temporary inability of the primary unpaid caregiver(s) to provide the required care, as the result of one of the following:
  - In the event the caregiver is hospitalized, a maximum of 24 hours per day can be authorized for each day the caregiver is hospitalized. Upon discharge from the hospital, or in the event of an acute illness or injury of the caregiver, the total number of additional PDN hours per day will be based on the physician's documentation of the extent and duration of the caregiver's limitations and the needs of the beneficiary as it relates to those limitations, not to exceed six months.
  - The death of the primary caregiver. The initial amount of hours allowable under this exception is 24 hours per day for 14 days. Subsequent exceptions can be approved up to an additional 60 days, with monthly reviews thereafter by the PIHP/CMHSP.
  - The death of an immediate family member. "Immediate family member" is defined as the caregiver’s spouse, partner, parent, sibling, or child. The maximum number of hours allowable under this exception criterion is 24 hours per day for a maximum of seven days.

"Inability" is defined as the caregiver is either unable to provide care, or is prevented from providing care.

"Primary caregiver" is defined as the caregiver who provides the majority of unpaid care.

"Unpaid care" is defined as care provided by a caregiver where no reimbursement is received for those services, e.g., is not being paid as a Home Help provider or Community Living Supports staff.

This exception is not available if the beneficiary resides in a licensed setting or in a home where all care is provided by paid caregivers.
In the event that a transition plan has been developed wherein PDN services are to be reduced or eliminated based on a determination of medical necessity, the PIHP may provide PDN for a period of time (not to exceed three months) for the purpose of training the CLS or respite aides or family and assuring a smooth transition. In those cases, the transition plan, including amount, scope, frequency and duration of the training by nurses to aides, must be documented in the IPOS. A transition process is not intended to provide two-to-one (nurse and aide) staffing for any purpose other than for training (with limitations on duration and frequency noted in the IPOS) while the aide or family member becomes familiar with the beneficiary's care needs. This transition period is only permitted when it has been determined that PDN is not medically necessary and the beneficiary's care needs can be met by a trained CLS or respite aide.

Respite Care

Respite care services are provided to a waiver eligible beneficiary on a short-term, intermittent basis to relieve the beneficiary's family or other primary caregiver(s) from daily stress and care demands during times when they are providing unpaid care. Relief needs of hourly or shift staff workers should be accommodated by staffing substitutions, plan adjustments, or location changes and not by respite care.

- "Short-term" means the respite service is provided during a limited period of time (e.g., a few hours, a few days, weekends, or for vacations).
- "Intermittent" means the respite service does not occur regularly or continuously. The service stops and starts repeatedly or with periods in between.
- "Primary" caregivers are typically the same people who provide at least some unpaid supports daily.
- "Unpaid" means that respite may only be provided during those portions of the day when no one is being paid to provide the care, i.e., not a time when the beneficiary is receiving a paid State Plan (e.g., home help) or waiver service (e.g., community living supports) or service through other programs (e.g., school).

Since adult beneficiaries living at home typically receive home help services and hire their family members, respite is not available when the family member is being paid to provide the home help service, but may be available at other times throughout the day when the caregiver is not paid.
Respite is not intended to be provided on a continuous, long-term basis where it is a part of daily services that would enable an unpaid caregiver to work full-time. In those cases, community living supports or other services of paid support or training staff should be used. The beneficiary’s record must clearly differentiate respite hours from community living support services. Decisions about the methods and amounts of respite are decided during the person-centered planning process. Respite care may not be provided by a parent of a minor beneficiary receiving the service, the spouse of the beneficiary, the beneficiary’s legal guardian, or the primary unpaid caregiver.

Respite services may be provided in the following settings:

- Waiver beneficiary’s home or place of residence.
- Licensed foster care home.
- Facility approved by the State that is not a private residence, such as:
  - Group home; or
  - Licensed respite care facility.
- Home of a friend or relative (not the parent of a minor beneficiary or the spouse of the beneficiary served or the legal guardian) chosen by the beneficiary; licensed camp; in community settings with a respite worker training, if needed, by the beneficiary or family. These sites are approved by the beneficiary and identified in the IPOS.

Cost of room and board must not be included as part of the respite care unless provided as part of the respite care in a facility that is not a private residence. Respite provided in an institution (i.e., ICF/IID, nursing facility, or hospital) or MDHHS approved day program site is not covered by the HSW. The beneficiary’s record must clearly differentiate respite hours from community living support services.

<table>
<thead>
<tr>
<th>Supports Coordination</th>
</tr>
</thead>
</table>
| Supports coordination works with the waiver beneficiary to assure all necessary supports and services are provided to enable the beneficiary to achieve community inclusion and participation, productivity, and independence in home- and community-based settings. Without the supports and services, the beneficiary would otherwise require the level of care services provided in an ICF/IID. Supports coordination involves the waiver beneficiary and others identified by the beneficiary (i.e., family member(s)) in developing a written individual plan of services (IPOS) through the person-centered planning process. The waiver beneficiary may choose to work with a supports coordinator through the provider agency, an independent supports coordinator, a supports coordinator assistant, or a services and supports broker. Functions performed by a supports coordinator, supports coordinator assistant, or services and supports broker include an assurance of the following:
| Assistance with access to entitlements and/or legal representation.
| Brokering of providers of services/supports
| Developing an IPOS using the person-centered planning process, including revisions to the IPOS at the beneficiary’s request or as the beneficiary’s changing circumstances may warrant.
| Linking to, coordinating with, follow-up of, and advocacy with all supports and services, including the Medicaid Health Plan, Medicaid fee-for-service, or other health care providers. |
• Monitoring of Habilitation Supports Waiver and other mental health services.
• Planning and/or facilitating planning using person-centered principles. This function may be delegated to an independent facilitator chosen by the beneficiary.

The role of the supports coordinator assistant is to perform the functions listed above, as they are needed, when the beneficiary selects an assistant in lieu of a supports coordinator. When a supports coordinator assistant is used, a qualified supports coordinator must supervise the assistant.

The beneficiary may select a services and supports broker to perform supports coordination functions. However, parents of a minor-aged beneficiary, spouse or legal guardian of an adult beneficiary may not provide services and supports broker services to the beneficiary. The primary roles are to assist the beneficiary in making informed decisions about what will work best for him, are consistent with his needs and reflect the beneficiary’s circumstances. The services and supports broker helps the beneficiary explore the availability of community services and supports, housing, and employment and then makes the necessary arrangements to link the beneficiary with those supports. Services and supports brokerage services offer practical skills training to enable beneficiaries to remain independent, including the provision of information on recruiting/hiring/managing workers, effective communication and problem solving.

Whenever services and supports brokers perform any of the supports coordination functions, it is expected that the beneficiary will also have a supports coordinator or supports coordinator assistant employed by the PIHP or its provider network that assures the other functions above are in place, and that the functions assigned to the services and supports broker are being performed. The IPOS must clearly identify which functions are the responsibility of the supports coordinator, the supports coordinator assistant and the services and supports broker. The services and supports broker must work under the supervision of a qualified supports coordinator.

Many beneficiaries choose a services and supports broker rather than traditional case management services or supports coordination provided directly by a supports coordinator. If a beneficiary does not want case management or supports coordination services, the PIHP will assist the beneficiary to identify who will assist him in performing each of the functions, including the use of natural supports or other qualified providers, to assure the supports coordination functions are provided. The IPOS must reflect the beneficiary’s choices, the responsible person(s) for each of the functions listed in this section, and the frequency at which each will occur.

When the beneficiary chooses a supports coordinator assistant, a services and supports broker, or a natural support to perform any of the functions, the IPOS must clearly identify which functions are the responsibility of the supports coordinator, the supports coordinator assistant, the services and supports broker or the natural support. The PIHP must assure that it is not paying for the supports coordinator or supports coordinator assistant and the services and supports broker to perform the same function. Likewise, when a supports coordinator or supports coordinator assistant facilitates a person-centered planning meeting, it is expected that the PIHP would not "double count" the time of any services and supports broker who also attends. During its on-site visits, MDHHS will review the IPOS to verify that there is no duplication of service provision when both a supports coordinator or supports coordinator assistant and a services and supports broker are assigned supports coordination responsibilities in a beneficiary’s plan of service.
Supports strategies will incorporate the principles of empowerment, community inclusion, health and safety assurances, and the use of natural supports. Support coordinators, supports coordinator assistants, or services and supports brokers will work closely with the beneficiary to assure his ongoing satisfaction with the process and outcomes of the supports, services, and available resources.

Supports Coordination is reported only when there is face-to-face contact with the beneficiary. Related activities, such as telephone calls to schedule appointments or arrange supports, are functions that are performed by a supports coordinator but not reported separately. Supports coordination functions must assure:

- Activities are documented.
- Appointments and meetings are scheduled.
- Housing and employment issues are addressed.
- Income/benefits are maximized.
- Information is provided to assure the beneficiary (and his representative(s), if applicable) is informed about self-determination.
- Monitoring of individual budgets (when applicable) for over- or under-utilization of funds is provided.
- Natural and community supports are used.
- Person-centered planning is provided and independent facilitation of person-centered planning is made available.
- Persons chosen by the beneficiary are involved in the planning process.
- Plans of supports/services are reviewed at such intervals as are indicated during planning.
- Social networks are developed.
- The desires and needs of the beneficiary are determined.
- The quality of the supports and services, as well as the health and safety of the beneficiary, is monitored.
- The supports and services desired and needed by the beneficiary are identified and implemented.

Additionally, the supports coordinator, supports coordinator assistant, or services and supports broker coordinates with, and provides information as needed to, the qualified intellectual disability professional (QIDP) on the process of evaluation and reevaluation of beneficiary level of care (e.g., supply status and update information, summarize input from supports providers, planning committee members, etc.).
While supports coordination as part of the overall plan implementation and/or facilitation may include initiation of other coverages and/or short-term provision of supports, it shall not include direct delivery of ongoing day-to-day supports and/or training, or provision of other Medicaid services. Supports coordination does not include any activities defined as Out-of-Home Non-Vocational Habilitation, Prevocational Services, Supported Employment, or CLS. Supports coordinators, supports coordinator assistants, and services and supports brokers are prohibited from exercising the agency’s authority to authorize or deny the provision of services. Supports coordination may not duplicate services that are the responsibility of another program.

The supports coordination functions to be performed and the frequency of face-to-face and other contacts are specified in the beneficiary’s plan. The beneficiary’s record must contain sufficient information to document the provision of supports coordination, including the nature of the service, the date, and the location of contacts, including whether the contacts were face-to-face. The frequency and scope of supports coordination contacts must take into consideration health and safety needs of the beneficiary.

<table>
<thead>
<tr>
<th>Supported Employment</th>
<th>Supported employment is the combination of ongoing support services and paid employment that enables the beneficiary to work in the community. For purposes of this waiver, the definition of &quot;supported employment&quot; is:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Community-based, taking place in integrated work settings where workers with disabilities work alongside people who do not have disabilities.</td>
</tr>
<tr>
<td></td>
<td>• For beneficiaries with severe disabilities who require ongoing intensive supports such as job coach, employment specialist, or personal assistant.</td>
</tr>
<tr>
<td></td>
<td>• For beneficiaries who require intermittent or diminishing amounts of supports from a job coach, employment specialist or personal assistant.</td>
</tr>
<tr>
<td></td>
<td>Supported employment includes activities needed to sustain paid work by individuals receiving waiver services, including supervision and training, job coach, employment specialist services, personal assistance and consumer-run businesses. Supported employment services cannot be used for capital investment in a consumer-run business. When supported employment services are provided at a work site in which persons without disabilities are employed, payment will be made only for the adaptations, supervision and training required by individuals receiving waiver services as a result of their disabilities, and will not include payment for the supervisory activities rendered as a normal part of the business setting or for any services that are the responsibility of another agency, such as Michigan Rehabilitation Services.</td>
</tr>
<tr>
<td></td>
<td>FFP may not be claimed for incentive payments, subsidies, or unrelated vocational training expenses such as:</td>
</tr>
<tr>
<td></td>
<td>• Incentive payments made to an employer to encourage or subsidize the employer’s participation in a supported employment program;</td>
</tr>
<tr>
<td></td>
<td>• Payments that are passed through to users of supported employment programs; or</td>
</tr>
<tr>
<td></td>
<td>• Payments for vocational training that is not directly related to an individual’s supported employment program.</td>
</tr>
</tbody>
</table>
Transportation provided between the beneficiary's place of residence and the site of the supported employment service, or between habilitation sites (in cases where the beneficiary receives habilitation services in more than one place), is included as part of the supported employment and/or habilitation service. Documentation must be maintained by the PIHP that the beneficiary is not currently eligible for work activity or supported employment services provided by Michigan Rehabilitation Services (MRS). Information must be updated when MRS eligibility conditions change.

### 15.2 SUPPORTS AND SERVICE PROVIDER QUALIFICATIONS

Providers of Habilitation Supports Waiver supports and services are chosen by the beneficiary and others assisting him during the person-centered planning process, and must meet the staffing qualifications contained in Michigan's 1915(c) Waiver.

#### 15.2.A. SUPPORTS COORDINATOR QUALIFICATIONS

The Supports Coordinator must be:

- a QIDP;
- Selected by the beneficiary.

#### 15.2.B. TRAINED SUPPORTS COORDINATOR ASSISTANT QUALIFICATIONS

- Minimum of equivalent experience (i.e., provides knowledge, skills and abilities similar to supports coordinator qualifications).
- Functions under the supervision of a supports coordinator.
- Selected by the beneficiary.
- At least 18 years of age.

#### 15.2.C. AIDE QUALIFICATIONS

Minimum qualifications are noted below for aide level work (chore, respite, CLS, and out-of-home habilitation). The planning team should also identify other competencies that will assure the best possible outcomes for the beneficiary. Aide level staff who provide services and supports must be:

- At least 18 years of age.
- Able to prevent transmission of any communicable disease from self to others in the environment in which they are providing supports.
- Able to communicate expressively and receptively in order to follow individual plan requirements and beneficiary-specific emergency procedures, and report on activities performed.
• In good standing with the law (i.e., not a fugitive from justice, not a convicted felon who is either still under jurisdiction or one whose felony relates to the kind of duty he/she would be performing, not an illegal alien).

• Able to perform basic first aid procedures, as evidenced by completion of a first aid training course, self-test, or other method determined by the PIHP to demonstrate competence in basic first aid procedures.

• Has received training in the beneficiary’s IPOS.

15.2.D. SERVICES AND SUPPORTS BROKER QUALIFICATIONS

• Selected by the beneficiary.

• Demonstrates competence in areas of job responsibilities for services and supports broker.

• Functions under the supervision of a supports coordinator.

• At least 18 years of age.
SECTION 16 - MENTAL HEALTH AND SCHOOL BASED SERVICES

This section is applicable to all PIHP programs/provider requirements and pertains to beneficiaries with mental illness and/or developmental disabilities.

The School-Based Services (SBS) policy requires cooperative agreements between the PIHP and the SBS provider. These agreements are not changed by the policies in this chapter. Any required releases of information are part of the existing requirements of the SBS provider.

The quality assurance standards for SBS also requires the coordination of care with other human service agencies where appropriate, including local public health departments, community mental health agencies and the beneficiary's physician or managed care providers. In addition, enrolled SBS providers are required to cooperate with other human service agencies operating within the same service area and are not expected to replace or substitute services already provided by other agencies.

When a beneficiary receives active treatment from a SBS provider, the services must be coordinated with the PIHP. If the PIHP provides mental health services for a special education student with serious emotional disturbance or a developmental disability, PIHP must coordinate such services and information with special education and other human services agencies serving the student.

(Refer to the School Based Services Chapter of this manual for additional information.)
SECTION 17 – ADDITIONAL MENTAL HEALTH SERVICES (B3s)

PHPs must make certain Medicaid-funded mental health supports and services available, in addition to the Medicaid State Plan Specialty Supports and Services or Habilitation Waiver Services, through the authority of 1915(b)(3) of the Social Security Act (hereafter referred to as B3s). The intent of B3 supports and services is to fund medically necessary supports and services that promote community inclusion and participation, independence, and/or productivity when identified in the individual plan of service as one or more goals developed during person-centered planning. NOTE: Certain services found in this section are State Plan EPSDT services when delivered to children birth-21 years, which include community living supports, family support and training (Parent-to-Parent/Parent Support Partner) peer-delivered services, prevention/direct models of parent education and services for children of adults with mental illness, skill building, supports coordination, and supported employment.

17.1 DEFINITIONS OF GOALS THAT MEET THE INTENTS AND PURPOSE OF B3 SUPPORTS AND SERVICES

The goals (listed below) and their operational definitions will vary according to the individual's needs and desires. However, goals that are inconsistent with least restrictive environment (i.e., most integrated home, work, community that meet the individual's needs and desires) and individual choice and control cannot be supported by B3 supports and services unless there is documentation that health and safety would otherwise be jeopardized; or that such least restrictive arrangements or choice and control opportunities have been demonstrated to be unsuccessful for that individual. Care should be taken to insure that these goals are those of the individual first, not those of a parent, guardian, provider, therapist, or case manager, no matter how well intentioned. The services in the plan, whether B3 supports and services alone, or in combination with state plan or Habilitation Supports Waiver services, must reasonably be expected to achieve the goals and intended outcomes identified. The configuration of supports and services should assist the individual to attain outcomes that are typical in his community; and without such services and supports, would be impossible to attain.

| Community Inclusion and Participation | The individual uses community services and participates in community activities in the same manner as the typical community citizen. Examples are recreation (parks, movies, concerts, sporting events, arts classes, etc.), shopping, socialization (visiting friends, attending club meetings, dining out) and civic (volunteering, voting, attending governmental meetings, etc.) activities. A beneficiary's use of, and participation in, community activities are expected to be integrated with that of the typical citizen's (e.g., the beneficiary would attend an "integrated" yoga class at the community center rather than a special yoga class for persons with intellectual disability). |
| Independence | “Freedom from another's influence, control and determination.” (Webster's New World College Dictionary, 1996). Independence in the B3 context means how the individual defines the extent of such freedom for him/herself during person-centered planning. For example, to some beneficiaries, "freedom" could be living on their own, controlling their own budget, choosing an apartment as well as the persons who will live there with them, or getting around the community on their own. To others, "freedom" could be control over what and when to eat, what and when to watch television, when and how to bathe, or when to go to bed and arise. For children under 18 years old, independence may mean the support given by parents and others to help children achieve the skills they need to be successful in school, enter adulthood and live independently. |
17.2 CRITERIA FOR AUTHORIZING B3 SUPPORTS AND SERVICES

The authorization and use of Medicaid funds for any of the B3 supports and services, as well as their amount, scope and duration, are dependent upon:

- The Medicaid beneficiary's eligibility for specialty services and supports as defined in this Chapter;
- The service(s) having been identified during person-centered planning;
- The service(s) being medically necessary as defined in the Medical Necessity Criteria subsection of this chapter;
- The service(s) being expected to achieve one or more of the above-listed goals as identified in the beneficiary's plan of service; and
- Additional criteria indicated in certain B3 service definitions, as applicable.

Decisions regarding the authorization of a B3 service (including the amount, scope and duration) must take into account the PIHP's documented capacity to reasonably and equitably serve other Medicaid beneficiaries who also have needs for these services. The B3 supports and services are not intended to meet all the individual's needs and preferences, as some needs may be better met by community and other natural supports. Natural supports mean unpaid assistance provided to the beneficiary by people in his/her network (family, friends, neighbors, community volunteers) who are willing and able to provide such assistance. It is reasonable to expect that parents of minor children with disabilities will provide the same level of care they would provide to their children without disabilities. MDHHS encourages the use of natural supports to assist in meeting an individual's needs to the extent that the family or friends who provide the natural supports are willing and able to provide this assistance. PIHPs may not require a beneficiary's natural support network to provide such assistance as a condition for receiving specialty mental health supports and services. The use of natural supports must be documented in the beneficiary's individual plan of service.

Provider qualifications and service locations that are not otherwise identified in this section must meet the requirements identified in the General Information and Program Requirement sections of this chapter.

17.3 B3 SUPPORTS AND SERVICES

The B3 supports and services defined below are the supports and services that PIHPs are to provide from their Medicaid capitation.
17.3.A. ASSISTIVE TECHNOLOGY

Assistive technology is an item or set of items that enable the individual to increase his ability to perform activities of daily living with a greater degree of independence than without them; to perceive, control, or communicate with the environment in which he lives. These are items that are not available through other Medicaid coverage or through other insurances. These items must be specified in the individual plan of service. All items must be ordered by a physician on a prescription as defined in the General Information section of this chapter. An order is valid for one year from the date it was signed.

Coverage includes:

- Adaptations to vehicles
- Items necessary for independent living (e.g., Lifeline, sensory integration equipment)
- Communication devices
- Special personal care items that accommodate the person's disability (e.g., reachers, full-spectrum lamp)
- Prostheses necessary to ameliorate negative visual impact of serious facial disfigurements and/or skin conditions
- Ancillary supplies and equipment necessary for proper functioning of assistive technology items
- Repairs to covered assistive technology that are not covered benefits through other insurances

Assessments by an appropriate health care professional, specialized training needed in conjunction with the use of the equipment, and warranted upkeep will be considered as part of the cost of the services.

Coverage excludes:

- Furnishings (e.g., furniture, appliances, bedding) and other non-custom items (e.g., wall and floor coverings, decorative items) that are routinely found in a home.
- Items that are considered family recreational choices.
- The purchase or lease of a vehicle, and any repairs or routine maintenance to the vehicle.
- Educational supplies required to be provided by the school as specified in the child's Individualized Education Plan.

Covered items must meet applicable standards of manufacture, design, and installation. There must be documentation that the best value in warranty coverage was obtained for the item at the time of purchase.

In order to cover repairs of assistive technology items, there must be documentation in the individual plan of services that the assistive technology continues to meet the criteria
for B3 supports and services as well as those in this subsection. All applicable warranty and insurance coverages must be sought and denied before paying for repairs. The PIHP must document that the repair is the most cost-effective solution when compared with replacement or purchase of a new item. If the equipment requires repairs due to misuse or abuse, the PIHP must provide evidence of training in the use of the equipment to prevent future incidents.

17.3.B. COMMUNITY LIVING SUPPORTS

NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.

Community Living Supports are used to increase or maintain personal self-sufficiency, facilitating an individual’s achievement of his goals of community inclusion and participation, independence or productivity. The supports may be provided in the participant’s residence or in community settings (including, but not limited to, libraries, city pools, camps, etc.).

Coverage includes:

- Assisting (that exceeds state plan for adults), prompting, reminding, cueing, observing, guiding and/or training in the following activities:
  - meal preparation
  - laundry
  - routine, seasonal, and heavy household care and maintenance
  - activities of daily living (e.g., bathing, eating, dressing, personal hygiene)
  - shopping for food and other necessities of daily living

CLS services may not supplant services otherwise available to the beneficiary through a local educational agency under the Individuals with Disabilities Education Act (IDEA) or the Rehabilitation Act of 1973 or state plan services, e.g., Personal Care (assistance with ADLs in a certified specialized residential setting) and Home Help or Expanded Home Help (assistance in the individual’s own, unlicensed home with meal preparation, laundry, routine household care and maintenance, activities of daily living and shopping). If such assistance appears to be needed, the beneficiary must request Home Help and, if necessary, Expanded Home Help from MDHHS. CLS may be used for those activities while the beneficiary awaits determination by MDHHS of the amount, scope and duration of Home Help or Expanded Home Help. If the beneficiary requests it, the PIHP case manager or supports coordinator must assist him/her in requesting Home Help or in filling out and sending a request for Fair Hearing when the beneficiary believes that the MDHHS authorization of amount, scope and duration of Home Help does not appear to reflect the beneficiary’s needs based on the findings of the MDHHS assessment.

- Staff assistance, support and/or training with activities such as:
  - money management
  - non-medical care (not requiring nurse or physician intervention)
- socialization and relationship building
- transportation from the beneficiary’s residence to community activities, among community activities, and from the community activities back to the beneficiary’s residence (transportation to and from medical appointments is excluded)
- participation in regular community activities and recreation opportunities (e.g., attending classes, movies, concerts and events in a park; volunteering; voting)
- attendance at medical appointments
- acquiring or procuring goods, other than those listed under shopping, and non-medical services
  - Reminding, observing and/or monitoring of medication administration
  - Staff assistance with preserving the health and safety of the individual in order that he/she may reside or be supported in the most integrated, independent community setting.

CLS may be provided in a licensed specialized residential setting as a complement to, and in conjunction with, state plan coverage Personal Care in Specialized Residential Settings. Transportation to medical appointments is covered by Medicaid through MDHHS or the Medicaid Health Plan. Payment for CLS services may not be made, directly or indirectly, to responsible relatives (i.e., spouses, or parents of minor children), or guardian of the beneficiary receiving community living supports.

CLS assistance with meal preparation, laundry, routine household care and maintenance, activities of daily living and/or shopping may be used to complement Home Help or Expanded Home Help services when the individual’s needs for this assistance have been officially determined to exceed the DHS’s allowable parameters. CLS may also be used for those activities while the beneficiary awaits the decision from a Fair Hearing of the appeal of a MDHHS decision. Reminding, observing, guiding, and/or training of these activities are CLS coverages that do not supplant Home Help or Expanded Home Help.

Community Living Supports (CLS) provides support to a beneficiary younger than 18, and the family in the care of their child, while facilitating the child’s independence and integration into the community. This service provides skill development related to activities of daily living, such as bathing, eating, dressing, personal hygiene, household chores and safety skills; and skill development to achieve or maintain mobility, sensory-motor, communication, socialization and relationship-building skills, and participation in leisure and community activities. These supports must be provided directly to, or on behalf of, the child. These supports may serve to reinforce skills or lessons taught in school, therapy, or other settings. For children and adults up to age 26 who are enrolled in school, CLS services are not intended to supplant services provided in school or other settings or to be provided during the times when the child or adult would typically be in school but for the parent’s choice to home-school.

17.3.C. ENHANCED PHARMACY

Enhanced pharmacy items are physician-ordered, nonprescription "medicine chest" items as specified in the individual’s plan of service. There must be documented evidence that
the item is not available through Medicaid or other insurances, and is the most cost-effective alternative to meet the beneficiary's need.

The following items are covered only for adult beneficiaries living in independent settings (i.e., own home, apartment where deed or lease is signed by the beneficiary):

- Cough, cold, pain, headache, allergy, and/or gastrointestinal distress remedies
- First aid supplies (e.g., band-aids, iodine, rubbing alcohol, cotton swabs, gauze, antiseptic cleansing pads)

The following items are covered for beneficiaries living in independent settings, with family, or in licensed dependent care settings:

- Special oral care products to treat specific oral conditions beyond routine mouth care (e.g., special toothpaste, tooth brushes, anti-plaque rinses, antiseptic mouthwashes)
- Vitamins and minerals
- Special dietary juices and foods that augment, but do not replace, a regular diet
- Thickening agents for safe swallowing when the beneficiary has a diagnosis of dysphagia and either:
  - A history of aspiration pneumonia, or
  - Documentation that the beneficiary is at risk of insertion of a feeding tube without the thickening agents for safe swallowing.

Coverage excludes:

- Routine cosmetic products (e.g., make-up base, aftershave, mascara, and similar products)

### 17.3.D. ENVIRONMENTAL MODIFICATIONS

Physical adaptations to the beneficiary's own home or apartment and/or work place. There must be documented evidence that the modification is the most cost-effective alternative to meet the beneficiary's need/goal based on the results of a review of all options, including a change in the use of rooms within the home or alternative housing, or in the case of vehicle modification, alternative transportation. All modifications must be prescribed by a physician. Prior to the environmental modification being authorized, PIHP may require that the beneficiary apply to all applicable funding sources (e.g., housing commission grants, MSHDA, and community development block grants), for assistance. It is expected that the PIHP case manager/supports coordinator will assist the beneficiary in his pursuit of these resources. Acceptances or denials by these funding sources must be documented in the beneficiary's records. Medicaid is a funding source of last resort.

Coverage includes:

- The installation of ramps and grab-bars.
Widening of doorways.

Modification of bathroom facilities.

Special floor, wall or window covering that will enable the beneficiary more independence or control over his environment, and/or ensure health and safety.

Installation of specialized electrical and plumbing systems that are necessary to accommodate the medical equipment and supplies necessary for the welfare of the beneficiary.

Assessments by an appropriate health care professional and specialized training needed in conjunction with the use of such environmental modifications.

Central air conditioning when prescribed by a physician and specified as to how it is essential in the treatment of the beneficiary’s illness or condition. This supporting documentation must demonstrate the cost-effectiveness of central air compared to the cost of window units in all rooms that the beneficiary must use.

Environmental modifications that are required to support proper functioning of medical equipment, such as electrical upgrades, limited to the requirements for safe operation of the specified equipment.

Adaptations to the work environment limited to those necessary to accommodate the beneficiary’s individualized needs.

Coverage excludes:

Adaptations or improvements to the home that are not of direct medical or remedial benefit to the beneficiary, or do not support the identified goals of community inclusion and participation, independence or productivity.

Adaptations or improvements to the home that are of general utility or cosmetic value and are considered to be standard housing obligations of the beneficiary. Examples of exclusions include, but are not limited to, carpeting (see exception above), roof repair, sidewalks, driveways, heating, central air conditioning, garages, raised garage doors, storage and organizers, landscaping and general home repairs.

Cost for construction of a new home or new construction (e.g., additions) in an existing home.

Environmental modifications costs for improvements exclusively required to meet local building codes.

Adaptations to the work environment that are the requirements of Section 504 of the Rehabilitation Act, the Americans with Disabilities Act, or are the responsibilities of Michigan Rehabilitation Services.

The PIHP must assure there is a signed contract with the builder for an environmental modification and the homeowner. It is the responsibility of the PIHP to work with the beneficiary and the builder to ensure that the work is completed as outlined in the contract and that issues are resolved among all parties. In the event that the contract is terminated prior to the completion of the work, Medicaid capitation payments may not be used to pay for any additional costs resulting from the termination of the contract.
The existing structure must have the capability to accept and support the proposed changes. The "infrastructure" of the home (e.g., electrical system, plumbing, well/septic, foundation, heating/cooling, smoke detector systems, roof) must be in compliance with all local codes. If the home is not code compliant, other funding sources must be secured to bring the home into compliance.

The environmental modification must incorporate reasonable and necessary construction standards and comply with applicable state or local building codes. The adaptation cannot result in valuation of the structure significantly above comparable neighborhood real estate values.

Adaptations may be made to rental properties when the landowner agrees to the adaptation in writing. A written agreement between the landowner and the beneficiary must specify any requirements for restoration of the property to its original condition if the occupant moves, and must indicate that Medicaid is not obligated for any restoration costs.

If a beneficiary purchases an existing home while receiving Medicaid services, it is the beneficiary's responsibility to assure that the home will meet basic needs, such as having a ground floor bath/bedroom if the beneficiary has mobility limitations. Medicaid funds may be authorized to assist with the adaptations noted above (e.g., ramps, grab bars, widening doorways) for a recently purchased existing home.

17.3.E. FAMILY SUPPORT AND TRAINING

NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.

Family-focused services provided to family (natural or adoptive parents, spouse, children, siblings, relatives, foster family, in-laws, and other unpaid caregivers) of persons with serious mental illness, serious emotional disturbance or developmental disability for the purpose of assisting the family in relating to and caring for a relative with one of these disabilities. The services target the family members who are caring for and/or living with an individual receiving mental health services. The service is to be used in cases where the beneficiary is hindered or at risk of being hindered in his ability to achieve goals of:

- performing activities of daily living;
- perceiving, controlling, or communicating with the environment in which he lives; or
- improving his inclusion and participation in the community or productive activity, or opportunities for independent living.

The training and counseling goals, content, frequency and duration of the training must be identified in the beneficiary’s individual plan of service, along with the beneficiary’s goal(s) that are being facilitated by this service.
Coverage includes:

- Education and training, including instructions about treatment regimens, and use of assistive technology and/or medical equipment needed to safely maintain the person at home as specified in the individual plan of service.
- Counseling and peer support provided by a trained counselor or peer one-on-one or in group for assistance with identifying coping strategies for successfully caring for or living with a person with disabilities.
- Family Psycho-Education (SAMHSA model -- specific information is found in the GUIDE TO FAMILY PSYCHOEDUCATION, Requirements for Certification, Sustainability, and Fidelity) for individuals with serious mental illness and their families. This evidence-based practice includes family educational groups, skills workshops, and joining.
- Parent-to-Parent Support is designed to support parents/family of children with serious emotional disturbance or developmental disabilities as part of the treatment process to be empowered, confident and have skills that will enable them to assist their child to improve in functioning. The trained parent support partner, who has or had a child with special mental health needs, provides education, training, and support and augments the assessment and mental health treatment process. The parent support partner provides these services to the parents and their family. These activities are provided in the home and in the community. The parent support partner is to be provided regular supervision and team consultation by the treating professionals.

17.3.F. HOUSING ASSISTANCE

Housing assistance is assistance with short-term, interim, or one-time-only expenses for beneficiaries transitioning from restrictive settings and homelessness into more independent, integrated living arrangements while in the process of securing other benefits (e.g., SSI) or public programs (e.g., governmental rental assistance and/or home ownership programs) that will become available to assume these obligations and provide needed assistance.

Additional criteria for housing assistance:

- The beneficiary must have in his individual plan of services a goal of independent living, and either live in a home/apartment that he/she owns, rents, or leases; or be in the process of transitioning to such a setting; and
- Documentation of the beneficiary's control (i.e., beneficiary-signed lease, rental agreement, deed) of his living arrangement in the individual plan of service; and
- Documentation of efforts (e.g., the person is on a waiting list) under way to secure other benefits, such as SSI or public programs (e.g., governmental rental assistance, community housing initiatives and/or home ownership programs) so when these become available they will assume these obligations and provide the needed assistance.

Coverage includes:

- Assistance with utilities, insurance, and moving expenses where such expenses would pose a barrier to a successful transition to owning or leasing/renting a dwelling.
• Limited term or temporary assistance with living expenses for beneficiaries transitioning from restrictive settings and homelessness.
• Interim assistance with utilities, insurance or living expenses when the beneficiary already living in an independent setting experiences a temporary reduction or termination of his own or other community resources.
• Home maintenance when, without a repair to the home or replacement of a necessary appliance, the individual would be unable to move there, or if already living there, would be forced to leave for health and safety reasons.

Coverage excludes:

• Funding for on-going housing costs.
• Costs for room and board that are not directly associated with transition arrangements while securing other benefits.
• Home maintenance that is of general utility or cosmetic value and is considered to be a standard housing obligation of the beneficiary.

Replacement or repair of appliances should follow the general rules under assistive technology. Repairs to the home must be in compliance with all local codes and be performed by the appropriate contractor (refer to the general rules of the Environmental Modifications subsection of this chapter). Replacement or repair of appliances, and repairs to the home or apartment do not need a prescription or order from a physician.

17.3.G. PEER-DELIVERED OR -OPERATED SUPPORT SERVICES

NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.

Peer-delivered or peer-operated support services are programs and services that provide individuals with opportunities to learn and share coping skills and strategies, move into more active assistance and away from passive roles, and to build and/or enhance self-esteem and self-confidence.

17.3.G.1. PEER SPECIALIST SERVICES

Peer specialist services provide individuals with opportunities to support, mentor and assist beneficiaries to achieve community inclusion, participation, independence, recovery, resiliency and/or productivity. Peers are individuals who have a unique background and skill level from their experience in utilizing services and supports to achieve their personal goals of community membership, independence and productivity. Peers have a special ability to gain trust and respect of other beneficiaries based on shared experience and perspectives with disabilities, and with planning and negotiating human services systems.

• Vocational assistance provides support for beneficiaries seeking education and/or training opportunities, finding a job, achieving successful employment activities, and developing self-employment opportunities (reported as skill-building or supported employment).
Housing assistance provides support locating and acquiring appropriate housing for achieving independent living; finding and choosing roommates; utilizing short-term, interim, or one-time-only financial assistance in order to transition from restrictive settings into independent integrated living arrangements; making applications for Section 8 Housing vouchers; managing costs or room and board utilizing an individual budget; purchasing a home; etc. (reported as supports coordination).

Services and supports planning and utilization assistance provides assistance and partnership in:

- The person-centered planning process (reported as either treatment planning or supports coordination);
- Developing and applying arrangements that support self-determination;
- Directly selecting, employing or directing support staff;
- Sharing stories of recovery and/or advocacy involvement and initiative for the purpose of assisting recovery and self-advocacy;
- Accessing entitlements;
- Developing health and wellness plans;
- Developing advance directives;
- Learning about and pursuing alternatives to guardianship;
- Providing supportive services during crises;
- Developing, implementing and providing ongoing guidance for advocacy and support groups;
- Integration of physical and mental health care;
- Developing, implementing and providing health and wellness classes to address preventable risk factors for medical conditions.

Activities provided by peers are completed in partnership with beneficiaries for the specific purpose of achieving increased beneficiary community inclusion and participation, independence and productivity.

Individuals providing Peer Support Services must be able to demonstrate their experience in relationship to the types of guidance, support and mentoring activities they will provide. Individuals providing these services should be those generally recognized and accepted to be peers. Beneficiaries utilizing Peer Support Services must freely choose the individual who is providing Peer Support Services. Individuals who are functioning as Peer Support Specialists serving beneficiaries with mental illness must:

- have a serious mental illness;
- have received public mental health services currently or in the past;
- provide at least 10 hours per week of services described above with supported documentation written in the IPOS; and
meet the MDHHS application approval process for specialized training and certification requirements.

17.3.G.2. DROP-IN CENTERS

Peer-Run Drop-In Centers provide an informal, supportive environment to assist beneficiaries with mental illness in the recovery process. If a beneficiary chooses to participate in Peer-Run Drop-In Center services, such services may be included in an IPOS if medically necessary for the beneficiary. Peer-Run Drop-In Centers provide opportunities to learn and share coping skills and strategies, to move into more active assistance and away from passive beneficiary roles and identities, and to build and/or enhance self-esteem and self-confidence. Under no circumstances may Peer-Run Drop-In Centers be used as respite for caregivers (paid or non-paid) or residential providers of individuals.

PIHPs must seek approval from MDHHS prior to establishing new drop-in programs. Proposed drop-in centers will be reviewed against the following criteria:

- Staff and board of directors of the center are 100% primary consumers;
- PIHP actively supports consumers’ autonomy and independence in making day-to-day decisions about the program;
- PIHP facilitates consumers’ ability to handle the finances of the program;
- The drop-in center is at a non-CMH site;
- The drop-in center has applied for 501(c)(3) non-profit status;
- There is a contract between the drop-in center and the PIHP, or its subcontractor, identifying the roles and responsibilities of each party; and
- There is a liaison appointed by the PIHP to work with the program.

Some beneficiaries use drop-in centers anonymously and do not have a drop-in center listed as a service in their IPOS. For those beneficiaries who do have drop-in specified in their IPOS, it must be documented to be medically necessary and identify:

- Goals and how the program supports those goals; and
- The amount, scope and duration of the services to be delivered.

The individual clinical record provides evidence that the services were delivered consistent with the plan.

17.3.G.3. YOUTH PEER SUPPORT SERVICES

Youth Peer Support is designed to support youth with a serious emotional disturbance through shared activities and interventions. The goals of Youth Peer Support include supporting youth empowerment, assisting youth in developing skills to improve their overall functioning and quality of life, and working collaboratively with others involved in delivering the youth’s care. Youth Peer Support services can be in the form of direct support, information sharing and skill building.
Youth Peer Support Services are provided by trained youth peer support specialists, one-on-one or in a group, for youth with serious emotional disturbance who are resolving conflicts, enhancing skills to improve their overall functioning, integrating with community, school and family and/or transitioning into adulthood. Services provide support and assistance for youth in accordance with the goals in their plan of service to assist the youth with community integration, improving family relationships and resolving conflicts, and making a transition to adulthood, including achieving successful independent living options, obtaining employment, and navigating the public human services system.

Youth Peer Support Specialists must have lived experience navigating behavioral health systems and must participate in and complete the approved MDHHS training curriculum. Youth Peer Support activities are identified as part of the assessment and the person-centered/family-driven, youth-guided planning process. The goals of Youth Peer Support services shall be included in the individualized plan of service where interventions are provided in the home and community. These goals will be mutually identified in active collaboration with the youth receiving services and must be delivered by a Youth Peer Support Specialist with lived experience. The Youth Peer Support Specialist shall receive regular supervision by a child mental health professional and shall participate as an active member of the treatment team.

Qualifications for the Youth Peer Support Specialist include:

- Young adult, ages 18 through 26, with lived experience who received mental health services as a youth.
- Willing and able to self-identify as a person who has or is receiving behavioral health services and is prepared to use that experience in helping others.
- Experience receiving services as a youth in complex, child serving systems preferred (behavioral health, child welfare, juvenile justice, special education, etc.).
- Employed by PIHP/CMHSP or its contract providers.
- Trained in the MDHHS approved curriculum and ongoing training model.

17.3.H. PREVENTION-DIRECT SERVICE MODELS

Prevention-direct service models are programs using individual, family and group interventions designed to reduce the incidence of behavioral, emotional or cognitive dysfunction, thus reducing the need for individuals to seek treatment through the public mental health system. One or more of the following direct prevention models must be made available by the PIHP or its provider network:

- Child Care Expulsion Prevention
- School Success Programs
- Children of Adults with Mental Illness/Integrated Services (NOTE: This service is a State Plan EPSDT service when delivered to children birth–21 years.)
- Infant Mental Health when not enrolled as a Home-Based program
- Parent Education (NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.)

Coverage includes:

| Child Care Expulsion Prevention (CCEP) | CCEP provides consultation to child care providers and parents who care for children under the age of six who are experiencing behavioral and emotional challenges in their child care settings. Sometimes these challenges may put children at risk of expulsion from the child care setting. CCEP aims to reduce expulsion and increase the number of families and child care providers who successfully nurture the social and emotional development of children 0-5 in licensed child care programs.

CCEP programs provide short-term child/family-centered mental health consultation for children with challenging behaviors which includes:

- Observation and functional assessment at home and at child care
- Individualized plan of service developed by team
- Intervention (e.g., coaching and support for parents and providers to learn new ways to interact with child, providing educational resources for parents and providers, modifying the physical environment, connecting family to community resources, providing counseling for families in crisis)

Provider qualifications:

- Master's prepared early childhood mental health professional plus specific training. Effective October 1, 2009, training requirement must minimally have Endorsement Level 2 by the Michigan Association of Infant Mental Health; Level 3 preferred.

| School Success Program | Works with parents so that they can be more involved in their child’s life, monitor and supervise their child’s behaviors; works with youth to develop pro-social behaviors, coping mechanisms, and problem solving skills; and consults with teachers in order to assist them in developing relationships with these students. Mental Health staff also act as a liaison between home and school.

Provider qualifications:

- Child Mental Health Professional

| Children of Adults with Mental Illness/Integrated Services | Designed to prevent emotional and behavioral disorders among children whose parents are receiving services from the public mental health system and to improve outcomes for adult beneficiaries who are parents. The Integrated Services approach includes assessment and service planning for the adult beneficiaries related to their parenting role and their children's needs. Treatment objectives, services, and supports are incorporated into the service plan through a person-centered planning process for the adult beneficiary who is a parent. Linking the adult beneficiary and child to available community services, respite care and providing for crisis planning are essential components.

Provider qualifications:

- Mental Health Professional |
**Infant Mental Health**

Provides home-based parent-infant support and intervention services to families where the parent’s condition and life circumstances, or the characteristics of the infant, threaten the parent-infant attachment and the consequent social, emotional, behavioral and cognitive development of the infant. Services reduce the incidence and prevalence of abuse, neglect, developmental delay, behavioral and emotional disorder. PIHPs or their provider networks may provide infant mental health services as a specific service when it is not part of a Department certified home-based program.

Provider qualifications:
- Masters-prepared early childhood mental health professional plus specific training. Effective October 1, 2009, training requirement must minimally have Endorsement Level 2 by the Michigan Association of Infant Mental Health; Level 3 preferred.

**Parent Education**

Provided to parents using evaluated models that promote nurturing parenting attitudes and skills, teach developmental stages of childhood (including social-emotional developmental stages), teach positive approaches to child behavior/discipline and interventions the parent may utilize to support healthy social and emotional development, and to remediate problem behaviors.

Provider qualifications:
- Child Mental Health Professional who is trained in the model

---

### 17.3.1. Respite Care Services

Respite care services are intended to assist in maintaining a goal of living in a natural community home and are provided on a short-term, intermittent basis to relieve the beneficiary’s family or other primary caregiver(s) from daily stress and care demands during times when they are providing unpaid care. Respite is not intended to be provided on a continuous, long-term basis where it is a part of daily services that would enable an unpaid caregiver to work elsewhere full time. In those cases, community living supports, or other services of paid support or training staff, should be used.

Decisions about the methods and amounts of respite should be decided during person-centered planning. PIHPs may not require active clinical treatment as a prerequisite for receiving respite care. These services do not supplant or substitute for community living support or other services of paid support/training staff.

- "Short-term" means the respite service is provided during a limited period of time (e.g., a few hours, a few days, weekends, or for vacations).
- "Intermittent" means the respite service does not occur regularly or continuously. The service stops and starts repeatedly or with a time period in between.
- "Primary" caregivers are typically the same people who provide at least some unpaid supports daily.
- "Unpaid" means that respite may only be provided during those portions of the day when no one is being paid to provide the care, i.e., not a time when the beneficiary is receiving a paid State Plan (e.g., home help) or waiver service (e.g., community living supports) or service through other programs (e.g., school).
- Children who are living in a family foster care home may receive respite services. The only exclusion of receiving respite services in a family foster care home is when the child is receiving Therapeutic Foster Care as a Medicaid SED waiver service because that is
considered in the bundled rate. (Refer to the Child Therapeutic Foster Care subsection in the Children’s Serious Emotional Disturbance Home and Community-Based Services Waiver Appendix for additional information.)

Since adult beneficiaries living at home typically receive home help services and hire their family members, respite is not available when the family member is being paid to provide the home help service, but may be available at other times throughout the day when the caregiver is not paid.

Respite care may be provided in the following settings:

- Beneficiary’s home or place of residence
- Licensed family foster care home
- Facility approved by the State that is not a private residence, (e.g., group home or licensed respite care facility)
- Home of a friend or relative chosen by the beneficiary and members of the planning team
- Licensed camp
- In community (social/recreational) settings with a respite worker trained, if needed, by the family
- Licensed family child care home

Respite care may not be provided in:

- day program settings
- ICF/IID, nursing homes, or hospitals

Respite care may not be provided by:

- parent of a minor beneficiary receiving the service
- spouse of the beneficiary served
- beneficiary’s guardian
- unpaid primary care giver

Cost of room and board must not be included as part of the respite care unless provided as part of the respite care in a facility that is not a private residence.

17.3.J. Skill-Building Assistance

NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.

Skill-building assistance consists of activities identified in the individual plan of services and designed by a professional within his/her scope of practice that assist a beneficiary to increase his economic self-sufficiency and/or to engage in meaningful activities such
as school, work, and/or volunteering. The services provide knowledge and specialized skill development and/or support. Skill-building assistance may be provided in the beneficiary’s residence or in community settings.

Documentation must be maintained by the PIHP that the beneficiary is not currently eligible for sheltered work services provided by Michigan Rehabilitation Services (MRS). Information must be updated when the beneficiary’s MRS eligibility conditions change.

Coverage includes:

- Out-of-home adaptive skills training: Assistance with acquisition, retention, or improvement in self-help, socialization, and adaptive skills; and supports services incidental to the provision of that assistance, including:
  - Aides helping the beneficiary with his mobility, transferring, and personal hygiene functions at the various sites where adaptive skills training is provided in the community.
  - When necessary, helping the person to engage in the adaptive skills training activities (e.g., interpreting).

Services must be furnished on a regularly scheduled basis (several hours a day, one or more days a week) as determined in the individual plan of services and should be coordinated with any physical, occupational, or speech therapies listed in the plan of supports and services. Services may serve to reinforce skills or lessons taught in school, therapy, or other settings.

- Work preparatory services are aimed at preparing a beneficiary for paid or unpaid employment, but are not job task-oriented. They include teaching such concepts as attendance, task completion, problem solving, and safety. Work preparatory services are provided to people not able to join the general workforce, or are unable to participate in a transitional sheltered workshop within one year (excluding supported employment programs).

Activities included in these services are directed primarily at reaching habilitative goals (e.g., improving attention span and motor skills), not at teaching specific job skills. These services must be reflected in the beneficiary’s person-centered plan and directed to habilitative or rehabilitative objectives rather than employment objectives.

- Transportation from the beneficiary’s place of residence to the skill building assistance training, between skills training sites if applicable, and back to the beneficiary’s place of residence.

Coverage excludes:

- Services that would otherwise be available to the beneficiary.

### 17.3.K. SUPPORT AND SERVICE COORDINATION

NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.
Functions performed by a supports coordinator, supports coordinator assistant, services and supports broker, or otherwise designated representative of the PIHP that include assessing the need for support and service coordination, and assurance of the following:

- Planning and/or facilitating planning using person-centered principles
- Developing an individual plan of service using the person-centered planning process
- Linking to, coordinating with, follow-up of, advocacy with, and/or monitoring of Specialty Services and Supports and other community services/supports.
- Brokering of providers of services/supports
- Assistance with access to entitlements and/or legal representation
- Coordination with the Medicaid Health Plan, Medicaid fee-for-service, or other health care providers

The role of the supports coordinator assistant is to perform the functions listed above, as they are needed, in lieu of a supports coordinator or case manager. A beneficiary would have only one of the three possible options: targeted case manager, supports coordinator, or supports coordinator assistant. When a supports coordinator assistant is used, a qualified supports coordinator or targeted case manager must supervise the assistant. The role and qualifications of the targeted case manager are described in the Targeted Case Management section of this chapter.

A services and supports broker is used to explore the availability of community services and supports, housing, and employment and then to make the necessary arrangement to link the beneficiary with those supports. The role of the supports coordinator or supports coordinator assistant when a services and supports broker is used is to perform the remainder of the functions listed above as they are needed, and to assure that brokering of providers of services and supports is performed.

Whenever services and supports brokers provide any of the supports coordination functions, it is expected that the beneficiary will also have a supports coordinator or case manager, or their assistant, employed by the PIHP or its provider network who assures that the other functions above are in place.

If a beneficiary has both a supports coordinator or supports coordinator assistant AND a services and supports broker, the individual plan of service must clearly identify the staff who is responsible for each function. The PIHP must assure that it is not paying for the supports coordinator (or supports coordinator assistant) and the services and supports broker to perform service brokering. Likewise, when a supports coordinator (or supports coordinator assistant) facilitates a person-centered planning meeting, it is expected that the PIHP would not “double count” the time of any services and supports broker who also attends. During its annual on-site visits, the MDHHS will review individual plans of service to verify that there is no duplication of service provision when both a supports coordinator assistant and a services and supports broker are assigned supports coordination responsibilities in a beneficiary’s plan of service.

Supports strategies will incorporate the principles of empowerment, community inclusion, health and safety assurances, and the use of natural supports. Supports coordinators
will work closely with the beneficiary to assure his ongoing satisfaction with the process and outcomes of the supports, services, and available resources.

Supports Coordination is reported only when there is face-to-face contact with the beneficiary. Related activities, such as telephone calls to schedule appointments or arrange supports, are functions that are performed by a supports coordinator but not reported separately. Supports coordination functions must assure:

- The desires and needs of the beneficiary are determined
- The supports and services desired and needed by the beneficiary are identified and implemented
- Housing and employment issues are addressed
- Social networks are developed
- Appointments and meetings are scheduled
- Person-centered planning is provided, and independent facilitation of person-centered planning is made available
- Natural and community supports are used
- The quality of the supports and services, as well as the health and safety of the beneficiary, are monitored
- Income/benefits are maximized
- Activities are documented
- Plans of supports/services are reviewed at such intervals as are indicated during planning

While supports coordination as part of the overall plan implementation and/or facilitation may include initiation of other coverage and/or short-term provision of supports, it shall not include direct delivery of ongoing day-to-day supports and/or training, or provision of other Medicaid services. Supports coordinators are prohibited from exercising the agency’s authority to authorize or deny the provision of services. Supports coordination may not duplicate services that are the responsibility of another program.

The supports coordination functions to be performed and the frequency of face-to-face and other contacts are specified in the beneficiary’s plan. The beneficiary’s record must contain sufficient information to document the provision of supports coordination, including the nature of the service, the date, and the location of contacts, including whether the contacts were face-to-face. The frequency and scope of supports coordination contacts must take into consideration the health and safety needs of the individual.

| Qualifications of Supports Coordinators | A minimum of a Bachelor’s degree in a human services field and one year of experience working with people with developmental disabilities if supporting that population; or a Bachelor’s degree in a human services field and one year of experience with people with mental illness if supporting that population. |
17.3.L. SUPPORTED/INTEGRATED EMPLOYMENT SERVICES

NOTE: This service is a State Plan EPSDT service when delivered to children birth-21 years.

Provide job development, initial and ongoing support services, and activities as identified in the individual plan of services that assist beneficiaries to obtain and maintain paid employment that would otherwise be unachievable without such supports. Support services are provided continuously, intermittently, or on a diminishing basis as needed throughout the period of employment. Capacity to intervene to provide assistance to the individual and/or employer in episodic occurrences of need is included in this service. Supported/integrated employment must be provided in integrated work settings where the beneficiary works alongside people who do not have disabilities.

Coverage includes:

- Job development, job placement, job coaching, and long-term follow-along services required to maintain employment.
- Consumer-run businesses (e.g., vocational components of Fairweather Lodges, supported self-employment)
- Transportation provided from the beneficiary’s place of residence to the site of the supported employment service, among the supported employment sites if applicable, and back to the beneficiary’s place of residence.

Coverage excludes:

- Employment preparation.
- Services otherwise available to the beneficiary under the Individuals with Disabilities Education Act (IDEA).

17.3.M. 1915(c) CHILDREN’S SERIOUS EMOTIONAL DISTURBANCE HOME AND COMMUNITY-BASED SERVICES WAIVER (SEDW)

All SEDW Wraparound enrolled providers must meet all the requirements in the enrollment standards as listed in the Qualified Staff subsection. In addition, due to the intense needs and level of risk of children/youth and their families served in the SEDW community-based waiver, all SEDW Wraparound providers must meet the following additional requirements:
• Wraparound facilitators must possess a bachelor’s degree and be a CMHP or be supervised by a CMHP.

• Wraparound facilitators and those who provide supervision to facilitators will attend additional training (16 hours) related to provision of support to children/youth and their families served in the waiver annually as required by MDHHS. This training is in addition to requirements identified in the Qualified Staff subsection and is for all supervisors and Wraparound facilitators.

• Caseloads shall be 8-10 per facilitator based on needs and risks of the child/youth and family. Caseloads may increase to a maximum of 12 when two child/youth and family teams are transitioning from Wraparound.

• SEDW site reviews will assess fidelity to the model through case file review, quality assurance of all SEDW-provided services/supports, and interviews with children/youth and family members.

• All SEDW enrolled providers must participate in the statewide evaluation project that consists of gathering data on the Family Status Report at intake, quarterly, and at graduation.

• Completion of the Michigan Wraparound Fidelity Index at six months and upon graduation.

• Participation in any additional model fidelity or quality assurance evaluation tools as requested by MDHHS.

17.3.N. FISCAL INTERMEDIARY SERVICES

Fiscal Intermediary Services is defined as services that assist the adult beneficiary, or a representative identified in the beneficiary’s individual plan of services, to meet the beneficiary’s goals of community participation and integration, independence or productivity while controlling his individual budget and choosing staff who will provide the services and supports identified in the IPOS and authorized by the PIHP. The fiscal intermediary helps the beneficiary manage and distribute funds contained in the individual budget. Fiscal intermediary services include, but are not limited to:

• Facilitation of the employment of service workers by the beneficiary, including federal, state and local tax withholding/payments, unemployment compensation fees, wage settlements, and fiscal accounting;

• Tracking and monitoring participant-directed budget expenditures and identifying potential over- and under-expenditures;

• Assuring adherence to federal and state laws and regulations; and

• Ensuring compliance with documentation requirements related to management of public funds.

The fiscal intermediary may also perform other supportive functions that enable the beneficiary to self-direct needed services and supports. These functions may include selecting, contracting with or employing and directing providers of services, verification of provider qualifications (including reference and background checks), and assisting the beneficiary to understand billing and documentation requirements.
Fiscal intermediary services may not be authorized for use by a beneficiary's representative where that representative is not conducting tasks in ways that fit the beneficiary's preferences, and/or do not promote achievement of the goals contained in the beneficiary's plan of service so as to promote independence and inclusive community living for the beneficiary, or when they are acting in a manner that is in conflict with the interests of the beneficiary.

Fiscal intermediary services must be performed by entities with demonstrated competence in managing budgets and performing other functions and responsibilities of a fiscal intermediary. Neither providers of other covered services to the beneficiary, family members, or guardians of the beneficiary may provide fiscal intermediary services to the beneficiary.
SECTION 18 - APPLIED BEHAVIOR ANALYSIS

The purpose of this policy is to clarify developmental screening policy for children who may be affected by Autism Spectrum Disorder (ASD), and to describe coverage and processes for the treatment of ASD for beneficiaries 18 months through 5 years of age.

According to the U.S. Department of Health & Human Services (HHS), autism is characterized by impaired social interactions, problems with verbal and nonverbal communication, repetitive behaviors, and/or severely limited activities and interests. Early detection and treatment can have a significant impact on the child’s development. Autism can be viewed as a continuum or spectrum, known as Autism Spectrum Disorder (ASD), and includes Autistic Disorder, Asperger's Disorder, and Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS). The disorders on the spectrum vary in severity and presentation, but have certain common core symptoms. The goals of treatment for ASD focus on improving core deficits in communication, social interactions, and restricted behaviors. Changing these fundamental deficits may benefit children by developing greater functional skills and independence.

18.1 SCREENING

The American Academy of Pediatrics (AAP) endorses early identification of developmental disorders as being essential to the well-being of children and their families. Early identification of developmental disorders through screening by health care professionals should lead to further evaluation, diagnosis, and treatment. Early identification of a developmental disorder and its underlying etiology may affect the medical treatment of the child and family intervention planning for his/her parents. Screening for ASD typically occurs during a well-child visit with the pediatrician or family physician as an Early and Periodic Screening, Diagnosis and Treatment (EPSDT) service.

18.2 REFERRAL

The primary care physician (PCP) who screened the child for ASD and determined a referral for further evaluation was necessary will contact the Pre-paid Inpatient Health Plan (PIHP) directly to arrange for a follow-up evaluation. After a beneficiary is screened and the PCP determines a referral is necessary for a follow-up visit, the PIHP is responsible for the Autism Benefit additional screenings, evaluation, assessment, diagnosis and services for Applied Behavior Analysis (ABA) for eligible Medicaid beneficiaries and for the related medically necessary services under the Mental Health Specialty Services. The PCP must refer the child to the PIHP in the geographic service area for Medicaid beneficiaries. The PIHP will contact the child’s parent(s) to arrange a follow-up appointment for a diagnostic evaluation. Each PIHP will identify a specific point of access for children who have been screened and are being referred for a diagnostic evaluation of ASD.

18.3 DIAGNOSIS/DETERMINATION OF ELIGIBILITY FOR TARGET GROUP

Accurate and early diagnosis of ASD is critical in ensuring appropriate intervention and positive outcomes. The following is the process for determining eligibility for ABA for a child referred to the PIHP with a suspected diagnosis of autism or one of the related ASDs, including Autistic Disorder, Asperger's Disorder, and PDD-NOS. The MDHHS Behavioral Health and Developmental Disabilities Administration (BHDDA) will make the final eligibility determination for ABA services.
Determination of diagnosis of ASD shall be performed by a child mental health professional (CMHP), which includes physicians, fully licensed psychologists, limited licensed psychologists, licensed or limited licensed master’s social workers, licensed or limited licensed professional counselors, and registered nurses with a minimum education of a master’s degree in a mental health-related field from an accredited school. The CMHP, as defined above, must have at least one year of experience in the examination and treatment of children with ASD, and is able to diagnose within their scope of practice and professional license. The determination of diagnosis will be performed using the Autism Diagnostic Observation Schedule-Second Edition (ADOS-2). A developmental family history interview, such as the Autism Diagnostic Interview-Revised (ADI-R), shall be administered with validation of diagnosis by a physician (preferably a child psychiatrist) and/or a fully licensed psychologist unless the diagnosis is made by either of those professionals.

The CMHP, as defined above, will use the appropriate ADOS-2 module that includes the Toddler Module or Module 1, 2, or 3. The ADOS-2 modules are appropriate to use from 12 months of age through adulthood. The ADOS-2 is to be administered at intake and discharge.

An ASD developmental family history interview, such as the ADI-R, shall be administered by the clinicians who are required to obtain advance training in conducting the ADI-R. Interviews should thoroughly address all domains relevant to ASD (social affective/communication skills, restricted repertoire).

The target group for the ABA benefit includes children 18 months through 5 years of age with a diagnosis of ASD based upon a medical diagnosis in the Diagnostic and Statistical Manual of Mental Disorders (DSM-5) of ASD and who have the developmental capacity to clinically participate in the available interventions covered by the benefit. A well-established DSM-IV diagnosis of Autistic Disorder, Asperger’s Disorder or PDD-NOS should be given the diagnosis of ASD.

A diagnosis of ASD must not be:

- attributable to a disorder of sensory impairment (e.g., deafness), to a primary language disorder, to schizophrenia, or to social phobia.
- associated with a progressive neurodegenerative condition that would preclude anticipated benefits of treatment, as determined by a physician.
- associated with motor or sensory deficits so severe as to preclude benefit from treatment.

The target group criteria for ASD are operationalized using the criteria below.

**18.3.A. CRITERIA FOR AUTISTIC DISORDER**

To be diagnosed with AUTISTIC DISORDER, the child must exhibit:

A. A total of six (or more) items from (1.), (2.), and (3.), with at least two from (1.) and one each from (2.) and (3.):

1. Qualitative impairment in social interaction, as manifested by at least two of the following:
   a. marked impairment in the use of multiple nonverbal behaviors (such as eye-to-eye gaze, facial expression, body postures, and gestures) to regulate social interaction.
b. failure to develop peer relationships appropriate to developmental level.
c. lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest).
d. lack of social or emotional reciprocity.

2. Qualitative impairment in communication, as manifested by at least one of the following:
   a. delay in, or total lack of, the development of spoken language (not accompanied by an attempt to compensate through alternative modes of communication such as gesture or mime).
   b. in individuals with adequate speech, marked impairment in the ability to initiate or sustain a conversation with others.
   c. stereotyped and repetitive use of language or idiosyncratic language.
   d. lack of varied, spontaneous make-believe play or social imitative play appropriate to developmental level.

3. Restricted, repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:
   a. encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity or focus.
   b. apparently inflexible adherence to specific, nonfunctional routines or rituals.
   c. stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole body movements).
   d. persistent preoccupation with parts of objects.

18.3.B. CRITERIA FOR ASPERGER'S DISORDER

To be diagnosed with ASPERGER'S DISORDER, the child must exhibit:

A. A total of three (or more) items from (1.) and (2.), with at least two from (1.) and one from (2.):
   1. Qualitative impairment in social interaction, as manifested by at least two of the following:
      a. marked impairment in the use of multiple nonverbal behaviors (such as eye-to-eye gaze, facial expression, body postures, and gestures) to regulate social interaction.
      b. failure to develop peer relationships appropriate to developmental level.
      c. lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest).
      d. lack of social or emotional reciprocity.
2. Restricted, repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:
   a. encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity or focus.
   b. apparently inflexible adherence to specific, nonfunctional routines or rituals.
   c. stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole body movements).
   d. persistent preoccupation with parts of objects.

B. A clinically significant impairment caused by the disturbance.

C. No clinically significant general delay in language.

D. No clinically significant delay in cognitive development [Developmental Quotient (DQ) or Intelligence Quotient (IQ) > 75] or in the development of age-appropriate self-help skills, adaptive behavior (other than in social interaction), and curiosity about the environment.

18.3.C. CRITERIA FOR PERVASIVE DEVELOPMENTAL DISORDER - NOT OTHERWISE SPECIFIED

To be diagnosed with PERVASIVE DEVELOPMENTAL DISORDER-NOT OTHERWISE SPECIFIED (PDD-NOS), the child must exhibit:

A. A total of four (or more) items from (1.), (2.), and (3.), with at least two from (1.) and one each from (2.) and (3.):
   1. Qualitative impairment in social interaction, as manifested by at least two of the following:
      a. marked impairment in the use of multiple nonverbal behaviors (such as eye-to-eye gaze, facial expression, body postures, and gestures) to regulate social interaction.
      b. failure to develop peer relationships appropriate to developmental level.
      c. lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest).
      d. lack of social or emotional reciprocity.
   2. Qualitative impairment in communication, as manifested by at least one of the following:
      a. delay in, or total lack of, the development of spoken language (not accompanied by an attempt to compensate through alternative modes of communication such as gesture or mime).
      b. in individuals with adequate speech, marked impairment in the ability to initiate or sustain a conversation with others.
      c. stereotyped and repetitive use of language or idiosyncratic language.
d. lack of varied, spontaneous make-believe play or social imitative play appropriate to developmental level.

3. Restricted, repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:
   a. encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity or focus.
   b. apparently inflexible adherence to specific, nonfunctional routines or rituals.
   c. stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole body movements).
   d. persistent preoccupation with parts of objects.

18.4 INDEPENDENT EVALUATION

The MDHHS/BHDDA will apply the needs-based criteria (described in the Needs-Based Criteria Subsection) to determine whether the child in the target group is eligible for ABA services.

The PIHP will provide evidence from diagnosis and assessments to MDHHS/BHDDA related to the child’s functional abilities in the areas of Social Interaction and Patterns of Behavior. Evidence regarding diagnosis will be based on the ADOS-2, an instrument for diagnosing and assessing autism.

The independent evaluation requires that a re-evaluation be performed annually. A formal review of the individual plan of service (IPOS) will occur no less than annually with the child and family. Neither the ADOS-2 nor the ADI-R (or similar tool) are required for re-evaluation. The Vineland Adaptive Behavior Scales-Second Edition (VABS-2) is administered at intake, annually as part of the IPOS review, and whenever there is a level of change. In addition, a behavioral outcome measurement tool (Verbal Behavior-Milestones Assessment and Placement Program [VB-MAPP] or Assessment of Basic Language and Learning Skills-Revised [ABLLS-R]) is to be administered at intake and every six months. On an annual basis, MDHHS/BHDDA will make the determination of continuing eligibility based on evidence provided by the PIHP that the child meets the needs-based criteria for the child to continue to receive the ABA benefit.

18.4.A. NEEDS BASED CRITERIA

The child demonstrates substantial functional impairment in social interaction (as evidenced by needing ABA to address two or more items from A below) and significant functional impairment in age-appropriate activities due to the interference by restricted, repetitive and stereotyped patterns of behavior, interests and activities (as evidenced by needing ABA to address one or more items from B below).

A. Qualitative impairment in social interaction, as manifested by at least two of the following:
   1. marked impairment in the use of multiple nonverbal behaviors (such as eye-to-eye gaze, facial expression, body postures, and gestures) to regulate social interaction.
   2. failure to develop peer relationships appropriate to developmental level.
3. lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest).

4. lack of social or emotional reciprocity.

B. Restricted, repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:

1. encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity or focus.

2. apparently inflexible adherence to specific, nonfunctional routines or rituals.

3. stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole body movements).

4. persistent preoccupation with parts of objects.

The child may possess age-appropriate expressive and receptive language skills, learning [defined as cognitive development (DQ or IQ > 75)], self-care skills, mobility, adaptive behavior (other than in social interaction), and curiosity about the environment.

18.5 INDEPENDENT ASSESSMENT

The independent assessment is performed by a psychologist who is fully-licensed, limited-licensed or temporary limited licensed by the State of Michigan (MCL 333.182 et seq.) and who has one year of experience working with children with ASD.

The independent assessment by the psychologist will determine recommendations for the intensity of the ABA service and should include cognitive testing. If cognitive testing is not completed at the initial assessment, it is required to be completed within the first quarter of intervention using one of the following cognitive assessment tools:

<table>
<thead>
<tr>
<th>Cognitive Assessment Tool</th>
<th>Age Range</th>
<th>Purpose of Tool</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mullen Scales of Early Learning</td>
<td>Children from birth to 5 years 8 months of age</td>
<td>Assesses motor, language, spatial processing skills, and global cognitive ability</td>
</tr>
<tr>
<td>Wechsler Preschool and Primary Scale of Intelligence-III (WPPSI-III) or Wechsler Preschool and Primary Scale of Intelligence-IV (WPPSI-IV)</td>
<td>Children 2 years 6 months of age through 7 years 6 months of age</td>
<td>Assess processing skills and the child's global IQ</td>
</tr>
<tr>
<td>Differential Ability Scales-II (DAS-II)</td>
<td>Children 2 years 6 months of age through 17 years 11 months of age</td>
<td>Assesses a child's global cognitive ability</td>
</tr>
</tbody>
</table>

An adaptive behavior assessment (the VABS-2 Interview) must be administered at the time of cognitive testing. The VABS-2 is an adaptive behavior assessment that is used from birth to 90 years of age and is administered at intake, annually and whenever there is a level of change.
It is required that one of the behavioral outcome measurement tools (VB-MAPP or ABLLS in the table below) be used and administered by a Board Certified Behavior Analyst (BCBA), licensed or limited licensed psychologist (LP, LLP), or CMHP who must possess a minimum of a master's degree from an accredited institution in one of the degree categories approved by the Behavioral Analyst Certification Board (BACB) every six months for every child that is receiving Early Intensive Behavioral Intervention (EIBI) and Applied Behavioral Intervention (ABI).

### Behavior Outcome Measurement Tools

<table>
<thead>
<tr>
<th>Behavior Outcome Measurement Tool</th>
<th>Age Range</th>
<th>Purpose of Tool</th>
</tr>
</thead>
<tbody>
<tr>
<td>Verbal Behavior-Milestones Assessment and Placement Program (VB-MAPP)</td>
<td>Children from birth to 4 years of age</td>
<td>Assesses verbal behavior, play-based behaviors</td>
</tr>
<tr>
<td>Assessment of Basic Language and Learning Skills-Revised (ABLLS-R)</td>
<td>Children from birth to 8 years of age</td>
<td>Assesses expressive and verbal language</td>
</tr>
</tbody>
</table>

Other medically necessary assessments of other functional domains will be performed by appropriately qualified professionals to determine service needs leading up to development of the IPOS. Results from the independent assessment and any other medically-necessary assessments by qualified providers including, but not limited to, behavioral, psychosocial, communication/speech, occupational and/or physical therapy assessments, as well as health/medical concerns and psychosocial/family support needs, are information used in the person-centered planning process. Assessment and planning functions are completed by a planning team, with a case manager, supports coordinator, or other qualified staff overseeing the development of the IPOS. The strengths, needs, preferences, abilities, interests, goals and health status of the child are determined through pre-planning and the person-centered planning process using the results of the independent assessment, other medically necessary assessments by qualified providers, and the family. For children, the concepts of person-centered planning are incorporated into a family-driven, youth-guided approach that encompasses the belief that the family is at the center of the service planning process and the service providers are collaborators.

The IPOS includes:

- the identification of outcomes based on the child's and family's stated goals;
- the establishment of meaningful and measurable goals to achieve identified outcomes;
- determination of the amount, scope, and duration of all medically-necessary services (including ABA) for those supports and services provided through the public mental health system; and
- identification of other services and supports the child and family or authorized representative(s) may require, to which the public mental health system will assist with linking the family or authorized representative(s).

The IPOS must address the health and welfare of the child. This may include coordination and oversight of any identified health care needs to ensure health and safety, such as medication complications, changes in psychotropic medications, medical observation of unmanageable side effects of psychotropic medications, or comorbid medical conditions requiring care. The IPOS must address risk factors identified for the child and family, specify how the risk factor may be minimized, and describe the backup plan for each identified risk. For example, a risk factor might describe how to ensure consistent staffing in the event of staff absence. The backup plan is that the agency has staff who are trained in the child’s
IPOS and can provide required services in the absence of staff. Each child and family must be offered the choice of working with a case manager, supports coordinator, other qualified staff, or an independent facilitator to assist them in being actively engaged in the process of the development of the IPOS. The case manager, supports coordinator, or other qualified staff will perform the core requirements of case management. This will include linking the child and family back to the medical home, and assure linkage of planning and information to the child’s PCP. The IPOS is a dynamic document that is revised based on changing needs, newly-identified or -developed strengths, and/or the result of periodic reviews and/or assessment. A formal review of the IPOS is to occur no less than annually with the child and family.

18.6 ABA INTERVENTION

ABA services are available for Medicaid beneficiaries diagnosed with ASD and are provided for all levels of severity of ASD. The behavioral intervention should be provided at an appropriate level of intensity in an appropriate setting(s) for an appropriate period of time, depending on the needs of the child and their family within their community. Clinical determinations of service intensity, setting(s), and duration are designed to facilitate the child’s goal attainment. These supports may serve to reinforce skills or lessons taught in school, therapy or other settings, but are not intended to supplant services provided in school or other settings or to be provided when the child would typically be in school but for the parent's choice to home-school the child. Each child's IPOS must document that these services do not include special education and related services defined in the Individuals with Disabilities Education Improvement Act of 2004 (IDEA) that are available to the individual beneficiary through a local education agency. The recommended service intensity, setting(s), and duration will be included in the child’s IPOS, with the planning team and the family reviewing the IPOS at regular intervals (minimally every three months) and, if indicated, adjusting service intensity and setting(s) to meet the child’s changing needs. Intensity includes the number of hours of intervention provided to the child. Service intensity determination will be based on research-based interventions integrated into an IPOS with input from the planning team.

Treatment methodology will use an ethical, positive approach to any serious behaviors (e.g., self-injury, aggression) based on a comprehensive bio-psychosocial assessment including, but not limited to, functional analysis/assessment performed by a BCBA. The use of punitive, restrictive, or intrusive interventions is prohibited during ABA. The use of restraints, seclusion, and aversive techniques are prohibited by MDHHS in all community settings.

There are two levels of intensity within ABA Services: Early Intensive Behavioral Intervention (EIBI) and Applied Behavioral Intervention (ABI). The PIHP’s Utilization Management will authorize the intensity of services prior to delivery of services. EIBI is available to any eligible child who has an ADOS-2 score that falls within the Autism range and is provided an average of 10-20 hours a week (actual hours as determined by an ABA plan and interventions required). EIBI is available for children 18 months through 5 years of age as defined by the child's ability to actively engage in the therapeutic treatment process. ABI is a level of intervention available for children 18 months through 5 years of age who have an ADOS-2 score that falls within the Autism or ASD range who are not receiving EIBI and is provided an average of 5-15 hours a week.

18.6.A. EARLY INTENSIVE BEHAVIORAL INTERVENTION (EIBI)

EIBI is a structured ABA program that relies upon discrete trial training (DTT) methods and incidental teaching opportunities that can be administered in a child’s home or clinic setting. This intensive intervention is available for children who have Autism Spectrum Disorder and an Autism Diagnostic Observation Schedule (ADOS-2) score that falls in the
classification range of autism. It is typically provided in the home or in a center, several hours per day, five to seven days per week, for two to three years. EIBI is used for reducing intrusive, disruptive behaviors, and/or stereotypic autistic behaviors and for improving socially acceptable behaviors and communication skills. The EIBI consists of various evidence-based interventions. (Refer to the National Autism Center's [NAC] National Standards Report, 2009, Chapter 4 located on the NAC website. Refer to the Directory Appendix for website information.) A comprehensive assessment is utilized to identify goals for intervention. Evidence-based interventions include DTT which includes the following Established Treatments: Behavioral Package, Antecedent Package, Comprehensive Behavioral Treatment for Young Children, Modeling, Joint Attention Intervention, Naturalistic Teaching Strategies, Peer Training Package, Pivotal Response Treatment, Schedules, Self-Management, and Story-based Intervention Package. DTT and other interventions from the NAC National Standards Report, 2009 are utilized over the course of treatment to teach imitation skills; establish play behaviors; integrate the family into treatment; develop early expressive and abstract language; increase peer interactions, social skills, and academic skills; and move toward integrating the family into the community and school system.

The comprehensive, individualized ABA behavior plan is part of the child's IPOS and identifies specific targeted behaviors for improvement and includes measurable, achievable, and realistic goals for improvement. Ongoing determination of this level of service (every six months) requires evidence of measurable and ongoing improvement in targeted behaviors as demonstrated with the use of reliable and valid assessment instruments, such as ABLLS-R or VB-MAPP. The IPOS is updated as the child gains new skills and addresses maintenance of acquired skills in a clear progression over the course of the intervention. The IPOS will be reviewed at regular intervals (minimally every three months) and, if indicated, adjusted for service intensity and settings to meet the child's changing needs. This intensive treatment involves training the parents/caregivers to continue the behavioral interventions in the home environment. Coordination with the school and/or early intervention program is also critical.

18.6.B. APPLIED BEHAVIORAL INTERVENTION

The ABA Intervention requires that ABI includes behavioral interventions provided with a focal approach toward targeted goals. This intervention is available for children who have Autism Spectrum Disorder, who are not receiving EIBI services, and who have an ADOS-2 score that falls in the classification range of autism or autism spectrum disorder. Like EIBI, interventions include those from the Established Treatment list from the NAC National Standards Report, 2009 and are directed toward developing functional communication, independent self-care tasks, receptive language, expressive language, play behaviors, social skills, imitation, and/or any additional behaviors that will enable the child to more readily integrate with typically developing peers. ABI may include a Behavioral Package, Antecedent Package, Comprehensive Behavioral Treatment for Young Children, Modeling, Joint Attention Interventions, Naturalistic Teaching Strategies, Peer Training Package, Pivotal Response Treatment, Schedules, Self-Management, and Story-based Intervention Package that focus on teaching specific adaptive skills.

As part of the IPOS, there is a comprehensive, individualized ABA plan that includes specific targeted behaviors for improvement, along with measurable, achievable, and
realistic goals for improvement. Ongoing determination of this level of service (every six months) requires evidence of measurable and ongoing improvement in targeted behaviors as demonstrated with the use of reliable and valid assessment instruments (i.e., ABLLS-R, VB-MAPP). If indicated, the ABA plan may adjust service intensity and setting(s) to meet the child’s changing needs. The IPOS will be reviewed at regular intervals (minimally every three months). ABI includes training for parents/caregivers that continues the intervention outside of the ABI professional intervention to extend the treatment into the home.

18.7 PROVIDER QUALIFICATIONS

ABA services are provided to increase developmentally-appropriate skills to facilitate a child’s independence. These services must be provided directly to, or on behalf of, the child by training their parents/caregivers, ABA Aides, and/or a Board Certified Assistant Behavior Analyst (BCaBA) to deliver the ABA services. The ABA services must be provided under the supervision of a BCBA, other appropriately qualified LP or LLP, or a Master’s-prepared CMHP.

- LPs and LLPs must have extensive knowledge and training in ABA. Extensive knowledge is defined as having taken documented coursework at the graduate level at an accredited university in at least three of the following six content areas:
  - Ethical considerations
  - Definitions, characteristics, principles, processes, and concepts of behavior
  - Behavioral assessment, selecting interventions, outcomes, and strategies
  - Experimental evaluation of interventions
  - Measurement of behavior, and developing and interpreting behavioral data
  - Behavioral change procedures and systems supports
- The CMHP providing ABA services or supervising others must possess a minimum of a master’s degree from an accredited institution in one of the degree categories approved by the BACB.
- The LP, LLP, or CMHP supervising the ABA plan must:
  - have one year of experience in diagnosing and/or treating children with ASD based on the principles of ABA;
  - enroll in a BCBA-eligible course sequence within one year of the time they begin providing ABA services;
  - complete all coursework and experience requirements; and
  - be certified as a BCBA no later than September 30, 2016.
- The LP and LLP must work in consultation with a BCBA, and the CMHP must be supervised by a BCBA. If the LP or LLP does not have the documented coursework as defined above, they are considered to be a CMHP requiring supervision by the BCBA.
- The BCaBA must have certification as a BCaBA through the BACB and work under the supervision of a BCBA. The BCBA must provide one hour of supervision for every 10 hours of direct treatment.
Other Bachelor-degreed professionals (supervised by a BCBA) may provide direct provision of ABA services.

The ABA Aide must be:
- at least 18 years of age;
- able to prevent transmission of communicable disease;
- able to communicate expressively and receptively;
- able to report on activities performed;
- in good standing with the law;
- able to perform basic first aid procedures; and
- trained in the child’s IPOS.

The ABA Aide must also:
- receive training in the principles of behavior, behavioral measurement and data collection, function of behaviors, basic concepts of ABA, generalization and its importance in sustainability of learned/acquired skills, and medical conditions/illness that impact behaviors.
- work under the supervision of a BCBA, LP, LLP or CMHP overseeing the ABA plan, with one hour of supervision for every 10 hours of direct treatment.
CHILDREN’S WAIVER COMMUNITY LIVING SUPPORT SERVICES APPENDIX

SECTION 1 - CHILDREN WITH CHALLENGING BEHAVIORS

1.1 PURPOSE

This Section is to help the CMHSP determine whether the challenging behavioral needs of the child support hourly care and other support services, and to determine the appropriate range of hourly care that can be authorized under the Community Living Support (CLS) waiver service. The following categories do not, in and of themselves, establish eligibility for publicly funded hourly care.

The amount of CLS services (i.e., the number of hours) that can be authorized for a child is based on several factors, including the child’s care needs which establish waiver eligibility, child's and family's circumstances, and other resources for daily care (e.g., private health insurance, trusts bequests, private pay). In addition to identifying the family situation and the specific behaviors as described in the category definitions, the following elements contribute to the overall assessment of need:

- Type of behaviors identified;
- Frequency, intensity, and duration of identified behaviors;
- How recently serious behaviors occurred;
- Actual specific effects of the behavior on persons in family and property;
- Level of family intervention required to prevent behavioral episodes;
- Extent to which family must alter normal routine to address behavioral needs of the child;
- Prognosis for change in the child's behavior;
- Whether or not child functions more effectively in any current setting than in other settings; and
- Age, size, and mobility of child.

1.2 CATEGORIES OF CARE

1.2.A. CATEGORY IV

<table>
<thead>
<tr>
<th>Qualifications</th>
<th>Demonstrates mild level behaviors that may interfere with the daily routine of the family.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Definitions</td>
<td><strong>Mild Behavior:</strong> Infrequent or intermittent behaviors including pinching, hitting, slapping, kicking, head banging, and/or elopement without careful supervision when there is evidence of lack of judgment regarding danger, or an extremely high activity level requiring extensive supervision and redirection.</td>
</tr>
</tbody>
</table>

Version: January 1, 2016  Mental Health/Substance Abuse  Page A1
Date: January 1, 2016  Children’s Waiver CLS Services Appendix
### 1.2.B. CATEGORY III

| Qualifications | Demonstrates a daily pattern of medium level behaviors including self-injurious, physically aggressive or assaultive behaviors that have not resulted in hospitalization or emergency room treatment for injuries in the past year, or has engaged in occasional, significant property destruction that is not life-threatening. |
| Definitions | **Pattern of Behavior:** In addition to a single serious episode in the last year, significant daily behaviors are documented. **Medium Behavior:** Includes behaviors defined in the Category II definition of "moderate behavior" when emergency room treatment or hospitalization have not been required for treatment of injuries resulting from the behavior. Examples include head banging resulting in bleeding and bruising without concussion or detached retina, hair pulling without removing hair from the scalp, smearing feces without PICA, and biting without drawing blood. **Occasional Property Destruction:** Property destruction that occurs with a frequency not greater than one time per week. |

### 1.2.C. CATEGORY II

| Qualifications | Demonstrates a daily pattern of moderate self-injurious, physically aggressive or assaultive behavior when medical intervention or emergency room treatment has been required for treatment of injuries in the past year without resulting hospitalization, or if the child has engaged in frequent, significant property destruction that is not life-threatening. |
| Definitions | **Moderate Behavior:** Includes behaviors that pose a significant risk of injury to self or others in the immediate environment. Examples include physical assault or self-abuse resulting in injuries requiring hospital emergency room treatment without hospital admission in the past year, biting that breaks the skin, hair pulling resulting in removal of clumps of hair from the scalp, multiple daily episodes of smearing feces with associated PICA, and head banging resulting in documented concussion or detached retina. |

### 1.2.D. CATEGORY I

| Qualifications | Demonstrates a pattern of severe self-injurious, physically aggressive or assaultive behavior, or life-threatening property destruction that has occurred one or more times in the past year. Documented evidence of additional behavioral problems on a frequent basis each day supports a need for one-to-one intensive behavioral treatment. |
| Definitions | **Severe Behavior:** Poses a very significant risk of serious injury or death to self, a family member, or others in the immediate environment. Examples include fire setting, physical assault or self-abuse resulting in injuries to self or others requiring inpatient hospital admission for treatment in the past year. |
**Section 2 - Medically and Physically Complex Children**

**2.1 Purpose**

The purpose of this Section is to help the CMHSP determine whether CLS services are medically necessary. The following categories do not, in and of themselves, establish eligibility for publicly funded hourly care.

### 2.1.A. Category IV

<table>
<thead>
<tr>
<th>Qualifications</th>
<th>A medical condition and requires significant levels of daily assistance or guidance with activities of daily living (ADLs). In addition, medical condition is stable and observations and interventions are required infrequently. Interventions require minimal training and are associated with minimal or no risk to health status.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Examples</td>
<td>Includes levels of support that would exceed those expected for a person of the child's age in the areas of:</td>
</tr>
<tr>
<td></td>
<td>• Assistance and/or guidance in ADLs including eating, toileting, bathing, grooming, dressing, and mobility (ambulation and transferring);</td>
</tr>
<tr>
<td></td>
<td>• Assistance and/or guidance with physical transfer (e.g. bed to chair);</td>
</tr>
<tr>
<td></td>
<td>• Assistance and/or guidance with therapeutic positioning and physical therapy; or</td>
</tr>
<tr>
<td></td>
<td>• The child weighs 80 pounds or more and is not ambulatory and/or not mobile and unable to assist the primary caregiver.</td>
</tr>
</tbody>
</table>

### 2.1.B. Category III

<table>
<thead>
<tr>
<th>Qualifications</th>
<th>A medical condition that routinely requires daily hourly care or support in order to maintain and/or improve health status. Clinical observations and interventions may be intermittent. Medical interventions are typically associated with minimal risk to health status, and delayed interventions are not associated with imminent risk to health status.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Examples</td>
<td>Includes a combination of interventions such as:</td>
</tr>
<tr>
<td></td>
<td>• G-tube feedings with no oral suctioning needs;</td>
</tr>
<tr>
<td></td>
<td>• PRN oxygen administration less often than daily over the past 30 days with or without pulse oximeter;</td>
</tr>
<tr>
<td></td>
<td>• Daily oxygen administration at less than two liters without pulse oximeter and without the need for on-going judgments and observations for oxygen needs (e.g. routine nightly administration without other skilled nursing interventions);</td>
</tr>
<tr>
<td></td>
<td>• Catheterization fewer than five times per day;</td>
</tr>
<tr>
<td></td>
<td>• Routine chest physiotherapy four or more times per day;</td>
</tr>
<tr>
<td></td>
<td>• Ostomy care;</td>
</tr>
<tr>
<td></td>
<td>• Total feeding or formal feeding program requiring more than 45 minutes per meal with need for special trunk-head positioning;</td>
</tr>
</tbody>
</table>
- Concurrent diagnosis of severe hypertonicity, severe contractures, or severe scoliosis that requires therapeutic positioning every two hours; or
- Documented evidence that positioning causes apnea and cyanosis, and that positioning is limited to positions with the body in less than a 45 degree angle to horizontal plane.

2.1.C. CATEGORY II AND CATEGORY I

Services for Category II and Category I children are covered under the Medicaid State Plan private duty nursing (PDN) benefit. Refer to the Private Duty Nursing Chapter of this manual for PDN coverage criteria.
SECTION 3 – COVERAGE DECISIONS

3.1 DECISION RESPONSIBILITY

The MDHHS Children's Waiver Review Team will continue to review all plans of service and current assessments, and prior authorize waiver services, for those children who:

- Qualify for Category of Care I; or
- Have been approved to receive additional CLS hours under the exception process.

The responsible CMHSP, following the Children's Waiver Decision Guide in the following subsection, will review and prior authorize waiver services for those Children's Waiver beneficiaries who are determined to qualify for Categories II, III, or IV.

3.2 DECISION GUIDE

The determination of the amount of hourly care should result from a person-centered planning/family-centered practice process that considers both the child's and family's needs. The Children's Waiver Decision Guide Table below assists in identifying the range of hours provided for children based on their category of care and the family's resources to provide that care. It is expected that hourly care services will be provided within the range for which the child qualifies. Within the four Categories of Care are five sections that apply to the child’s family status. In determining the total number of hours, it is acceptable to use the highest range within the appropriate section of the eligible category. If the child is receiving Home Help services, those hours must be considered as part of the total hours allowable. For example, a child determined to have Category III level of care needs is eligible for a maximum of six hours a day while in school. If that child receives two hours per day of Home Help, CWP could then provide a maximum of four hours of CLS staffing per day. The range of hours identified in the guide is an average daily amount that is provided seven days a week, based on a monthly total authorization.

If the child is attending school an average of 25 hours per week, the Section VI maximum would apply unless the maximum exceeds the range qualified for in Sections I-V. In that case, the maximum range in Sections I-V would apply. The Section VI maximum would not be required during school breaks, such as Christmas, Easter, and summer vacations, or if the child is out of school due to illness for 5 or more consecutive days.

### 3.3 DECISION GUIDE TABLE DEFINITIONS

The definitions used in each section of the Decision Guide Table are as follows:

<table>
<thead>
<tr>
<th>SECTION</th>
<th>DEFINITIONS</th>
</tr>
</thead>
</table>
| I - Number of Caregivers     | Caregiver is defined as a legally responsible adult(s) living in the home or adult(s) who is not legally responsible but chooses to participate in providing care for the child.  
Full-Time (F/T) is defined as a person who works 30 or more hours per week for wages, or a person who attends school 30 or more hours per week. |
| II - Health Status of Caregivers | Significant health concerns of a caregiver is defined as one or more of the primary caregivers have a significant health or emotional condition which prevents that caregiver from providing care for the child. Example: A parent that recently had back surgery with full body cast or similar condition.  
Some health concerns of a caregiver is defined as one or more primary caregivers (as defined above) have a health or emotional condition that interferes with, but does not prevent, provision of care. Examples: Alcoholism, depression, lupus, back pain when lifting, lifting restrictions and similar health concerns; or primary caregiver is in therapy three or more times per month. |
### DEFINITIONS

<table>
<thead>
<tr>
<th>SECTION</th>
<th>DEFINITIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>III - Additional Dependent Children</td>
<td>This section applies when the child has one or more siblings or related individuals under age 18, who reside in the home full-time and the caregiver is not paid for providing care.</td>
</tr>
</tbody>
</table>
| IV - Additional Children With Special Needs | Additional special needs are identified when the child has one or more siblings or related individuals who reside in the home and do not currently receive hourly care supports.  
Siblings with nursing needs are children who meet the criteria for Intensity of Care-High or Intensity of Care-Medium (refer to the Additional Mental Health Services (B3s) Section of this chapter), whether or not those children are developmentally disabled.  
Siblings without skilled nursing needs are children with needs as identified in Category of Care I-IV definitions. |
| V - Night Interventions | If the child requires one or two interventions at night and the time required to complete the interventions is one hour or less, Section V-1 applies.  
If the child requires an average of three or more interventions per night, or the time required to complete the interventions is more than one hour, Section V-2 applies. |
| VI - School | Average hours of school should be used to determine the appropriate range of hours.  
Include transportation time if provided by the school.  
The number of hours of school attendance is based on the school year that applies to the child’s educational classification. Variations in hours may be seen for children without a summer program.  
This factor limits the maximum number of hours that can be authorized for a child of any age in a center-based school program for more than 25 hours per week, or a child who has reached the age of 6 and for whom there is no medical justification for a home-bound school program.  
The school maximum is also waived for that time period when a child is out of school for at least 5 consecutive days due to illness, surgery, or scheduled school breaks. |

### 3.4 EXCEPTION PROCESS

The exception process ensures the safety and quality of care of children served by the waiver through consideration of the unique needs of each child and family, and special circumstances that may arise. When occasional relief through respite services is not sufficient, an exception of hourly care may be authorized.

Contingent upon the availability of funds and upon receipt of a Prior Review and Approval Request (PRAR), limited authority to exceed the published hourly care amount defined in the Decision Guide subsection may be granted by MDHHS to a CMHSP to better serve identified children with exceptional care needs. The PRAR must be developed pursuant to family request, person-centered planning/family-centered practice team recommendation, and CMHSP administrative concurrence.

The PRAR must document and substantiate both a current clinical (either medical or psychological) necessity for the exception and a current lack of natural supports requisite for the provision of the needed level of care. The hourly care services must be essential to the successful implementation of a plan of active treatment as defined by CMS ICF/IID rules, and any enhancements must be essential to maintain the child within their home. Consideration for an exception will be limited to situations outside...
the family’s control that place the child in jeopardy of serious injury or significant deterioration of health status such as:

- A temporary deterioration of the child’s clinical condition (e.g. need for nursing care following an acute hospitalization or surgical procedure, or an acute cyclic exacerbation of challenging behaviors);
- A temporary inability of the primary caregivers to provide the requisite level of care (e.g., an acute illness or injury);
- Health condition requires continuous implementation of high risk medically prescribed procedures requiring licensed nursing personnel that are not already addressed within the Decision Guide subsection. The procedures must be beyond the demonstrated capacity of the parents to provide;
- Behavior treatment needs significantly exceed the recommended ranges for the assigned category of care and this exception is essential to prevent an otherwise inevitable (i.e., previously documented) deterioration in behavior. The enhanced staffing must be continuously active in the implementation of the behavior treatment plan;
- Natural supports are unable to provide the requisite level of care (e.g., only available care providers have a physical, mental, or emotional disability or they cannot demonstrate competence with the procedures essential to the implementation of the treatment plan). The plan of service must also address plans to rectify the condition or circumstance.

Exceptions may be granted for a specified period not to exceed 180 days. Renewal requests must substantiate the continuing clinical necessity and lack of natural supports.

Exceptions approved by MDHHS can occur in one of the following ways:

- Temporary emergency basis only. Verbal approval can be given to the CMHSP, with written justification to be forwarded to MDHHS within 10 days; or
- In a non-emergency situation, the CMHSP provides MDHHS with written documentation of the specific rationale to support the exception (i.e., physician’s prescription). This would include a revised Plan of Care, highlighting the care needs to be provided with the additional staffing hours, and all current assessments. A response from MDHHS will occur within 10 working days.

When approval of an exception is not granted through either of the two processes listed above, the family, case manager, or MDHHS may request a meeting in order to clarify and reconsider the basis for the exception.

MDHHS has the option to request a home visit to meet the child when it is necessary for an effective decision.

### 3.5 Appeal Process

The child and family have the right, under the Michigan Mental Health Code, to appeal a negative coverage decision to the director of the CMHSP. The child and family may also request a recipient’s rights investigation through their CMHSP.
The CMS approval of the Children's Waiver requires the availability of a fair hearing for any Medicaid-eligible child enrolled in the Children's Waiver Program when that child is subject to a negative action. A negative action results when a Medicaid-covered service or benefit is taken away, reduced, or denied to a Medicaid beneficiary. The Medicaid beneficiary must be notified of the negative action in writing. The negative action notice must indicate:

- The beneficiary's right to appeal through the MDHHS administrative hearing process;
- The beneficiary has 90 days to submit an appeal; and
- Where to send the appeal.

The MDHHS appeal process may occur simultaneously with a recipient's rights or CMHSP administrative appeal process. Individuals and their families are encouraged to resolve disputes regarding waiver services at the local CMHSP level.

The CMHSP is financially responsible for any services that may be approved as a result of the judgment from the administration appeal process.
SECTION 1 - GENERAL INFORMATION

The Children’s Serious Emotional Disturbance Home and Community-Based Services Waiver (SEDW) Program provides services that are enhancements or additions to Medicaid state plan coverage for children up to age 21 with serious emotional disturbance (SED) who are enrolled in the SEDW. MDHHS operates the SEDW through contracts with the CMHSPs. The SEDW is a fee-for-service program administered by the CMHSP in partnership with other community agencies. The CMHSP will be held financially responsible for any costs authorized by the CMHSP and incurred on behalf of a SEDW beneficiary.

1.1 KEY PROVISIONS

The SEDW enables Medicaid to fund necessary home and community-based services for children up to age 21 with SED who meet the criteria for admission to a state inpatient psychiatric hospital and who are at risk of hospitalization without waiver services. The CMHSP is responsible for assessment of potential waiver candidates.

Application for the SEDW is made through the CMHSP. The CMHSP is responsible for the coordination of the SEDW services. The Wraparound Facilitator, the child and his family and friends, and other professional members of the planning team work cooperatively to identify the child’s needs and to secure the necessary services. All services and supports must be included in an IPOS.

A SEDW beneficiary must receive at least one SED waiver service per month in order to retain eligibility.

1.2 ELIGIBILITY

To be eligible for this waiver, the child must meet all of the following criteria.

- Live in a participating county (refer to the Coverage Area subsection in this chapter); OR
- Live in foster care in a non-participating county pursuant to placement by MDHHS or the court of a participating county, with SEDW oversight by a participating county’s CMHSP; AND
- Reside with the birth or adoptive family or have a plan to return to the birth or adoptive home; OR
- Reside with a legal guardian; OR
- Reside in a foster home with a permanency plan; OR
- Be age 18 or age 19 and live independently with supports; AND
- Meet current MDHHS criteria for the state psychiatric hospital for children; AND
- Medicaid eligibility criteria and become a Medicaid beneficiary; AND
Demonstrate serious functional limitations that impair the ability to function in the community. As appropriate for age, functional limitation will be identified using the Child and Adolescent Functional Assessment Scale (CAFAS®) or the Preschool and Early Childhood Functional Assessment Scale (PECFAS®):

- CAFAS® score of 90 or greater for children age 7 to 12; OR
- CAFAS® score of 120 or greater for children age 13 to 18; OR
- For children age 3 to 7, elevated PECFAS® subscale scores in at least one of these areas: self-harmful behaviors, mood/emotions, thinking/communicating or behavior towards others; AND

Be under the age of 18 when approved for the waiver. If a child on the SEDW turns 18, continues to meet all non-age-related eligibility criteria, and continues to need waiver services, the child can remain on the waiver up to their 21st birthday.

1.3 COVERAGE AREA

Waiver services are limited to eligible children (up to the federally-approved maximums) living in the counties whose CMHSPs have:

- An approved SED Waiver plan with MDHHS;
- Demonstrated strong collaboration with essential community partners;
- The capacity to provide intensive community-based services; and
- The fiscal capacity to manage interagency funding appropriately, or have been approved to participate in the MDHHS SED Waiver Pilot program.
SECTION 2 – COVERED WAIVER SERVICES

Each child must have a comprehensive IPOS that specifies the services and supports that the child and his family will receive. The IPOS is to be developed through the Wraparound Planning Process. Each child must have a Wraparound Facilitator who is responsible to assist the child/family in identifying, planning and organizing the Child and Family Team, developing the IPOS, and coordinating services and supports. The Wraparound Facilitator is responsible for monitoring supports and service delivery, as well as the health and safety of the child, as part of their regular contact with the child and family, with oversight by the Community Team.

In addition to Medicaid state plan services, children enrolled in the SEDW may receive any of the following SED waiver services as identified in the IPOS.

2.1 COMMUNITY LIVING SUPPORTS

Community Living Supports (CLS) are used to increase or maintain personal self-sufficiency, thus facilitating a beneficiary’s achievement of his goals of community inclusion and remaining in their home. The supports may be provided in the beneficiary’s home or in community settings (including, but not limited to, libraries, city pools, camps, etc.).

CLS provides assistance to the family in the care of their child while facilitating the child’s independence and integration into the community. The supports, as identified in the IPOS, are provided in the child’s home and may be provided in community settings when integration into the community is an identified goal. Skills related to activities of daily living (such as personal hygiene, household chores, and socialization) may be included. CLS may also promote communication, relationship-building skills, and participation in leisure and community activities. These supports must be provided directly to, or on behalf of, the child enabling the child to attain or maintain their maximum potential. These supports may serve to reinforce skills or lessons taught in school, therapy, or other settings.

Community Living Supports includes:

- Assistance with skill development related to:
  - Activities of daily living (such as personal hygiene)
  - Household chores
  - Socialization
  - Improving communication and relationship-building skills
  - Participation in leisure and community activities

- Staff assistance, support and/or training with such activities as:
  - Improving the child's social interactions and internal controls by instilling positive behaviors and increasing resiliency factors that should reduce risk factors
  - Non-medical care (i.e., not requiring nurse or physician intervention)
Transportation (excluding to and from medical appointments) from the beneficiary’s home to community activities, among community activities, and from the community activities back to the beneficiary’s residence

- Participation in regular community activities and recreation opportunities (attending classes, movies, concerts and events in a park; volunteering; etc.)
- Assisting the family in relating to and caring for their child
- Attendance at medical appointments
- Acquiring or procuring goods other than those listed as shopping and non-medical services
  - Reminding, observing, rewarding and monitoring of pro-social behaviors.
  - Medication administration.
  - Staff assistance with preserving the health and safety of the beneficiary in order that he may reside or be supported in the most integrated, independent community setting.

2.2 FAMILY HOME CARE TRAINING

Family Home Care Training provides training and counseling services for the families of beneficiaries served by this waiver. For purposes of these services, “family” is defined as the person(s) who lives with or provides care to a beneficiary served by the waiver, and may include a parent and/or siblings or the foster parent(s) for a child in Therapeutic Child Foster Care. This service is provided by a Master’s level social worker, psychologist, or QMHP, and includes instruction about treatment interventions and support intervention plans specified in the IPOS, and includes updates as necessary to safely maintain the child at home.

Family Home Care Training is also a counseling service directed to the family and designed to improve and develop the family’s skills in dealing with the life circumstances of parenting a child with special needs and to help the child remain at home. All family training must be included in the child’s IPOS and must be provided on a face-to-face basis (i.e., in person and with the family present).

2.3 FAMILY SUPPORT AND TRAINING

This service is provided by a peer-parent who has completed specialized training. It is a family-focused service provided to families (birth or adoptive parents, siblings, relatives, foster family, and other unpaid caregivers) of children with serious emotional disturbance (SED) for the purpose of assisting the family in relating to and caring for a child with SED. The services target the family members who are caring for and/or living with a child receiving waiver services. The service is to be used in cases where the child is hindered or at risk of being hindered in their ability to achieve goals of: performing activities of daily living; improving functioning across life domain areas; perceiving, controlling or communicating with the environment in which they live; or improving their inclusion and participation in the community or productive activity, or opportunities for independent living.

Coverage includes education and training, including instructions about treatment regimens, to safely maintain the child at home (as specified in the individual plan of service (POS)) and peer support provided by a trained peer-parent (one-on-one or in a group) for assistance with identifying coping strategies for successfully caring for or living with a person with SED. Parent-to-parent support is
designated to support parents/families of children with SED as part of the treatment process to be empowered, confident, and have skills that will enable them to assist their child to improve in functioning. The trained peer-parent support partner has had or currently has a child with special mental health needs; provides education, training, and support; and augments the assessment and mental health treatment process. The peer-parent support partner provides these services to the enrolled child's parents and their family. These activities are provided in the home and in the community. NOTE: The unit of service when billing S5111 HM for children/youth on the SEDW is per session, 45 minutes or more.

The peer-parent support partner must complete the MDHHS-approved statewide training curriculum and be provided regular supervision and team consultation by the treating professionals. Completion of the training curriculum is documented by a Certificate of Completion which must be maintained in the parent support partner's personnel file.

2.4 THERAPEUTIC ACTIVITIES

A therapeutic activity is an alternative service that can be used in lieu of, or in combination with, traditional professional services. The focus of therapeutic activities is to interact with the child to accomplish the goals identified in the POS. The POS ensures the child's health, safety and skill development and maintains the child in the community. Services must be directly related to an identified goal in the POS. Providers are identified through the wraparound planning process and participate in the development of a POS based on strengths, needs, and preferences of the child and family. Therapeutic activities may include the following: child and family training, coaching and supervision, monitoring of progress related to goals and objectives, and recommending changes to the POS. Services provided under Therapeutic Activities include music therapy, recreation therapy, and art therapy. NOTE: The unit of service when billing G0176 for children/youth on the SEDW is per session, 45 minutes or more.

The training, coaching, supervision and monitoring activities provided under this service are specific to music, art, and recreation therapy and must be provided by providers with the qualifications listed below.

<table>
<thead>
<tr>
<th>Recreation Therapy</th>
<th>Must be provided by a Certified Therapeutic Recreation Specialist credentialed by the National Council for Therapeutic Recreation Certification (NCTRC).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Music Therapy</td>
<td>Must be provided by a Music Therapist - Board Certified (MT-BC) or by a music therapist listed on the National Music Therapy Registry (NMTR).</td>
</tr>
<tr>
<td>Art Therapy</td>
<td>Must be provided by a Registered Art Therapist - Board Certified (ATR-BC).</td>
</tr>
</tbody>
</table>

2.5 RESPITE CARE

Respite care is services provided to beneficiaries unable to care for themselves that are furnished on a short-term basis because of the absence or need for relief of those persons normally providing the care.

Federal Financial Participation (FFP) may not be claimed for the cost of room and board except when provided as part of respite care furnished in a facility approved by the State that is not a private residence. Respite care can be provided in the following locations:

- Beneficiary's home or place of residence
- Family friend's home in the community
2.6 Child Therapeutic Foster Care

Child Therapeutic Foster Care (CTFC) is an evidence-based practice. It provides an intensive therapeutic living environment for a child with challenging behaviors. Important components of CTFC include:

- intensive parental supervision,
- positive adult-youth relationships,
- reduced contact with children with challenging behaviors, and
- family behavior treatment skills.

CTFC seeks to change the negative trajectory of a child's behavior by improving his social adjustment, family adjustment and peer group. CTFC attempts to decrease negative behavior, increase appropriate behavior, and build pro-social skills. Foster parents, teachers, therapists and other adults act as change agents for the child. The change agents contribute to the treatment of the child and the preparation of his family for the child's return to the home and community. Foster parents are specially recruited, trained and supervised. The total number of individuals (including beneficiaries served in the waiver) living in the home who are unrelated to the primary caregiver may not exceed one.

In addition to being licensed, all CTFC programs under this waiver are to be pre-enrolled by MDHHS to ensure they meet the requirements set forth in this policy. Separate payment will not be made for homemaker or chore services, for community living services provided by the foster parents, or for respite care furnished for the foster care parents to a child receiving CTFC services since these services are integral to, and inherent in, the provision of CTFC.

2.7 Therapeutic Overnight Camp

A group recreational and skill building service in a camp setting aimed at meeting the goal(s) detailed in the beneficiary's IPOS. A session can be one or more days and nights of camp. Room and Board costs are excluded from the SEDW payment for this service.

Additional criteria:

- Camps are licensed by MDHHS;
- The child's IPOS includes Therapeutic Overnight Camp; and
- Camp staff is trained in working with children with SED.

Coverage includes:

- Camp fees, including enrollment and other fees;
- Transportation to and from the camp; and
- Additional costs for staff with specialized training with this population.
Coverage excludes:

- Room and board for the camp.

### 2.8 Transitional Services

Transitional services is a one-time-only expense to assist beneficiaries returning to their family home and community while the family is in the process of securing other benefits (e.g., SSI) or resources (e.g., governmental rental assistance and/or home ownership programs) that may be available to assume these obligations and provide needed assistance.

Additional criteria for using Transitional Services:

- The beneficiary must have in his/her IPOS a goal to return to his/her home and community; and
- Documentation of the family's control (i.e., signed lease, rental agreement, deed) of their living arrangement in the family-centered plan of service; and
- Documentation of efforts (e.g., the family is on a waiting list) under way to secure other benefits (such as SSI) or public programs (e.g., governmental rental assistance, community housing initiatives and/or home ownership programs) so when these benefits become available, they will assume the obligation and provide the needed assistance.

Coverage includes:

- Assistance with utilities, insurance, and moving expenses where such expenses would pose a barrier to a successful transition to the beneficiary's family home;
- Interim assistance with utilities, insurance, or living expenses when the beneficiary's family, already living in an independent setting, experiences a temporary reduction or termination of their own or other community resources; and
- Home maintenance when, without a repair to the home or replacement of a necessary appliance, the beneficiary would be unable to move there or, if already living there, would be forced to leave for health and safety reasons.

All services provided must be in accordance with applicable state or local building codes. Standards of value purchasing must be followed. The home maintenance must be the most reasonable alternative, based on the results of a review of all options. The existing structure must have the capability to accept and support the proposed changes. The infrastructure of the home involved must be in compliance with any applicable local codes. The home maintenance involved shall exclude costs for improvements required exclusively to meet local building codes. The home maintenance must incorporate reasonable and necessary construction standards, excluding cosmetic improvements. The home maintenance or repair cannot result in valuation of the structure significantly above comparable neighborhood real estate values.

Coverage excludes those home maintenance or repairs to the home that are:

- Of general utility or are cosmetic;
- Considered to be standard housing obligations of the beneficiary's family;
Not of direct medical or remedial benefit to the child;
- On-going housing costs; and
- Costs for room and board that are not directly associated with transition arrangements while securing other benefits.

Requests for transitional services must be prior authorized by the CMHSP following denial by all other applicable resources (e.g., private insurance, Medicaid). All services shall be provided in accordance with applicable state or local building codes.

2.9 WRAPAROUND SERVICES

Wraparound services for children and adolescents is a highly individualized planning process facilitated by specialized supports coordinators.

Wraparound utilizes a Child and Family Team, with team members determined by the family often representing multiple agencies and informal supports. The Child and Family Team creates a highly individualized Wraparound plan with the child/youth and family that consists of mental health specialty treatment, services and supports covered by the Medicaid mental health state plan, waiver, B3 services, and other community services and supports.

The Wraparound plan may also consist of other non-mental health services that are secured from, and funded by, other agencies in the community. The Wraparound plan is the result of a collaborative team planning process that focuses on the unique strengths, values and preferences of the child/youth and family, and is developed in partnership with other community agencies. This planning process tends to work most effectively with children/youth and their families who, due to safety and other risk factors, require services from multiple systems and informal supports. The Community Team, which consists of parents/guardians/legal representatives, agency representatives, and other relevant community members, oversees Wraparound.

Coverage includes:

- Planning and/or facilitating planning using the Wraparound process, including at least one monthly face-to-face contact;
- Developing an IPOS utilizing the Wraparound process;
- Linking to, coordinating with, follow-up of, advocacy for, and/or monitoring of services with the Wraparound Community Team and other community services and supports;
- Brokering with providers of services with the assistance of the Wraparound Community Team;
- Assistance with access to other entitlements; and
- Coordination with the Medicaid Health Plan or other health care providers.

Coverage excludes:

- Case management that is the responsibility of the child welfare, juvenile justice, or foster care systems;
• Case management for legal or court-ordered non-medically necessary services;
• Direct service provision; and
• Services and supports that are the responsibility of other agencies on the Community Team.

All SEDW Wraparound enrolled providers must meet all of the requirements in the enrollment standards as listed in the Wraparound Services for Children and Adolescents subsection of the Mental Health/Substance Abuse chapter. In addition, due to the intense needs and level of risk of children/youth and their families served in the SEDW community-based waiver, all SEDW Wraparound providers must meet the following additional requirements:

• Wraparound facilitators must possess a bachelor’s degree and be a CMHP or be supervised by a CMHP.
• Wraparound facilitators and those who provide supervision to facilitators will attend additional training (16 hours) related to provision of support to children/youth and their families served in the waiver annually as required by MDHHS. This training is in addition to identified requirements for all supervisors and Wraparound facilitators.
• Caseloads shall be 8-10 per facilitator based on needs and risks of the child/youth and family. Caseloads may increase to a maximum of 12 when two child/youth and family teams are transitioning from Wraparound.
• SEDW site reviews will assess fidelity to the model through case file review, quality assurance of all SEDW-provided services/supports, and interviews with children/youth and family members.
• All SEDW Wraparound enrolled providers must participate in the statewide evaluation project that consists of gathering data on the Family Status Report at intake, quarterly and at graduation.
• Completion of the Michigan Wraparound Fidelity Index at six months and upon graduation.
• Participation in any additional model fidelity or quality assurance evaluation tools as requested by MDHHS.

2.10 HOME CARE TRAINING, NON-FAMILY

HCPCS Code S5116 – Non-Family Home Care Training/Session should be used to bill for this service. This service is reimbursable for up to four sessions per day but no more than 12 sessions per 90 days (i.e., three calendar months). A session can be of varying lengths of time but should meet the needs of the plan of service (POS); a billable session must be at least 45 minutes.

This service provides coaching, training, supervision and monitoring of Community Living Supports (CLS) staff by clinicians (i.e., licensed psychologist, Master’s level social worker, occupational therapist, physical therapist, speech therapist, or Child Mental Health Professional). Professional staff work with CLS staff to implement the consumer’s POS, with focus on services designed to improve the child’s/youth’s social interactions and self-control by instilling positive behaviors instead of behaviors that are socially disruptive, injurious to the consumer or others, or that cause property damage. The activities of the professional staff ensure the appropriateness of services delivered by CLS staff and continuity of care. This service can be provided by more than one clinician in any given month, as the service provider is selected on the basis of his/her competency in the aspect of the POS on which training is conducted.
Services must be provided by qualified providers who meet the requirements of, and in accordance with, 42 CFR §440.50 through §440.60(a) and other applicable state and federal laws or regulations.
SECTION 3 – MEDICAID STATE PLAN SERVICES

In addition to SEDW services, children served by the SEDW have access to Medicaid Mental Health State Plan services (e.g., psychotherapy, medication management, OT and PT evaluations, home based services) provided by their CMHSP on a fee-for-service basis. Services that can be billed to Medicaid are listed on the MDHHS CMHSP Serious Emotional Disturbance (SED) Waiver Database which is available on the MDHHS website. The database lists the CPT/HCPCS code, modifiers (when applicable), short description, Medicaid fee screen, and applicable quantity/timeframe parameters for each service. (Refer to the Directory Appendix for website information.)

Transportation is a Mental Health State Plan service covered under a number of HCPCS codes, only one of which can be billed fee-for-service for children on the SEDW. Parameters related to this service for SEDW enrollees are identified.

Prepaid Inpatient Health Plans (PIHPs) are responsible for transportation to and from the beneficiary's place of residence when provided so that a beneficiary may participate in a state plan, HSW, or additional/B3 service at an approved day program site or in a clubhouse psychosocial rehabilitation program. Medicaid Health Plans (MHPs) are responsible for assuring enrollee transportation to the primary health care services provided by the MHPs, and to non-mental health specialists and out-of-state medical providers. MDHHS is responsible for assuring transportation to medical appointments for Medicaid beneficiaries not enrolled in MHPs; and to dental, substance abuse, and mental health services (except those noted above and in the HSW program – described in the Habilitation Supports Waiver for Persons with Developmental Disabilities Section of this chapter) for all Medicaid beneficiaries.

For children enrolled in the SEDW, transportation may be reimbursed when separately specified in the individual plan of care and provided in order to enable a child served by the SEDW to gain access to waiver and other community services, activities, and resources. The transportation benefit is limited to mileage reimbursement, and can be paid to hourly staff (e.g., respite and CLS) and clinical/professional staff providers. Family, neighbors, friends, or community agencies that can provide this service without charge must be utilized before seeking funding through the SEDW. The SEDW-enrolled child, legally responsible caregivers, and foster care providers cannot be reimbursed for mileage.
SECTION 4 – PROVIDER QUALIFICATIONS

4.1 RESPITE AND CLS

Individuals who provide respite and CLS must, in addition to the specific training, supervision and standards for each support/service, be:

- A responsible adult at least 18 years of age;
- Free from communicable disease;
- Able to read and follow written plans of service/supports as well as beneficiary-specific emergency procedures;
- Able to write legible progress and/or status notes;
- In "good standing" with the law (i.e., not a fugitive from justice, a convicted felon or illegal alien); and
- Able to perform basic first aid and emergency procedures.

The individual must also have successfully completed Recipient Rights Training.

4.2 WRAPAROUND FACILITATOR

Wraparound facilitators must:

- Complete MDHHS wraparound training;
- Possess a bachelor’s degree in human services or a related field, or other approved work/personal experience in providing direct services or linking of services for children with SED;
- Have a criminal history screen, including state and local child protection agency registries; and
- Be supervised by an individual who meets criteria as a qualified mental health professional who has completed MDHHS required training.

4.3 CHILD THERAPEUTIC FOSTER CARE

Child Therapeutic Foster Care providers must be:

- Licensed as a Foster Care Provider (MCL 722.122);
- Certified by MDHHS;
- Enrolled by MDHHS as a CTFC provider; and
- Trained in the child’s IPOS.

4.4 THERAPEUTIC OVERNIGHT CAMP

Therapeutic Overnight Camps must be licensed and certified by MDHHS. Staff must be trained in the child’s IPOS.

**SECTION 1 - GENERAL INFORMATION**

MI Choice is a waiver program operated by the Michigan Department of Health and Human Services (MDHHS) to deliver home and community-based services to elderly persons and persons with physical disabilities who meet the Michigan nursing facility level of care criteria that supports required long-term care (as opposed to rehabilitative or limited term stay) provided in a nursing facility. The waiver is approved by the Centers for Medicare & Medicaid Services (CMS) under section 1915(c) and section 1915(b) of the Social Security Act. MDHHS carries out its waiver obligations through a network of enrolled providers that operate as Prepaid Ambulatory Health Plans (PAHPs). These entities are commonly referred to as waiver agencies. MDHHS and its waiver agencies must abide by the terms and conditions set forth in the waiver.

MI Choice services are available to qualified participants throughout the state, and all provisions of the program are available to each qualified participant unless otherwise noted in this policy and approved by CMS. MDHHS will not enact any provision to the MI Choice program that prohibits or inhibits a participant’s access to a person-centered plan of service, discourages participant direction of services, interferes with a participant’s right to have grievances and complaints heard, or endangers the health and welfare of a participant. The program must monitor and actively seek to improve the quality of services delivered to participants. Safeguards are utilized to ensure the integrity of payments for waiver services and the adequacy of systems to maintain compliance with federal requirements.

Waiver agencies are required to provide oral and written assistance to all Limited English Proficient applicants and participants. Agencies must arrange for translated materials to be accessible or make such information available orally through bi-lingual staff or through the use of interpreters.
SECTION 2 – ELIGIBILITY

The MI Choice program is available to persons 18 years of age or older who meet each of three eligibility criteria:

- An applicant must establish their financial eligibility for Medicaid services as described in the Financial Eligibility subsection of this chapter.
- The applicant must meet functional eligibility requirements through the online version of the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD).
- It must be established that the applicant requires at least two waiver services, one of which must be Supports Coordination, and that the service needs of the applicant cannot be fully met by existing State Plan or other services.

All criteria must be met in order to establish eligibility for the MI Choice program. MI Choice participants must continue to meet these eligibility requirements on an ongoing basis to remain enrolled in the program.

2.1 FINANCIAL ELIGIBILITY

Medicaid reimbursement for MI Choice services requires a determination of Medicaid financial eligibility for the applicant by MDHHS. As a provision of the waiver, MI Choice applicants benefit from an enhanced financial eligibility standard compared to basic Medicaid eligibility. Specifically, MI Choice is furnished to participants in the special home and community-based group under 42 CFR §435.217 with a special income level equal to 300% of the SSI Federal Benefit Rate. Medicaid eligibility rules stipulate that participants are not allowed to spend-down to the income limit to become financially eligible for MI Choice.

To initiate financial eligibility determination, waiver agencies must use the MI Choice Waiver Enrollment Notification form (MSA-0814) to notify MDHHS of individuals who have applied for MI Choice. The MI Choice Waiver Disenrollment Notification form (MSA-0815) must be used by waiver agencies to notify MDHHS of participants who no longer qualify for MI Choice enrollment. (Refer to the Forms Appendix for additional information.)

2.2 FUNCTIONAL ELIGIBILITY

The MI Choice waiver agency must verify an applicant’s medical/functional eligibility for program enrollment by inputting a valid Michigan Medicaid Nursing Facility Level of Care Determination (LOCD) into the online LOCD application. A valid LOCD is defined as an LOCD that was completed in-person with the applicant according to MDHHS policy and put in the online LOCD application within 14 calendar days after the date of enrollment into the MI Choice program. (Refer to the Directory Appendix for website information.) The LOCD is discussed in the Michigan Medicaid Nursing Facility Level of Care Determination subsection of this chapter. Additional information can be found in the Nursing Facility Coverages Chapter and is applicable to MI Choice applicants and participants.

The applicant must also demonstrate a continuing need for and use of at least two covered MI Choice services, one of which must be Supports Coordination. This need is originally established through the Initial Assessment using the process outlined in the Need for MI Choice Services subsection of this chapter.
2.2.A. MICHIGAN MEDICAID NURSING FACILITY LEVEL OF CARE DETERMINATION

MI Choice applicants are evaluated for functional eligibility via the Michigan Medicaid Nursing Facility Level of Care Determination. The LOCD is available online through Michigan’s Single Sign-on System. (Refer to the Directory Appendix for website information.)

Applicants must qualify for functional eligibility through one of seven doors. These doors are:

- Door 1: Activities of Daily Living Dependency
- Door 2: Cognitive Performance
- Door 3: Physician Involvement
- Door 4: Treatments and Conditions
- Door 5: Skilled Rehabilitation Therapies
- Door 6: Behavioral Challenges
- Door 7: Service Dependency

The LOCD must be completed in person by a health care professional (physician, registered nurse (RN), licensed practical nurse (LPN), licensed social worker (BSW or MSW), or a physician assistant) or be completed by staff that have direct oversight by a health care professional. The person completing the LOCD must either be waiver agency staff or in the waiver agency’s provider network.

The online version of the LOCD must be completed within 14 calendar days after the date of enrollment in MI Choice for the following:

- All new Medicaid-eligible enrollees
- Non-emergency transfers of Medicaid-eligible participants from their current MI Choice waiver agency to another MI Choice waiver agency
- Non-emergency transfers of Medicaid-eligible residents from a nursing facility that is undergoing a voluntary program closure and who are enrolling in MI Choice

Annual online LOCDs are not required, however, subsequent redeterminations, progress notes, or participant monitoring notes must demonstrate that the participant continues to meet the level of care criteria on a continuing basis. If waiver agency staff determines that the participant no longer meets the functional level of care criteria for participation (e.g., demonstrates a significant change in condition), another face-to-face online version of the LOCD must be conducted reflecting the change in functional status. This subsequent redetermination must be noted in the case record and signed by the individual conducting the determination.

Copies of the LOCD for participants must be retained by the waiver agency for a minimum period of six years. This information is also retained in the MDHHS LOCD database. For individuals who do not meet the LOCD criteria, a paper copy of the LOCD must be retained in the applicant’s record for no less than three years.
2.2.B. FREEDOM OF CHOICE

Applicants or their legal representatives must be given information regarding all long-term care service options for which they qualify through the nursing facility LOCD, including MI Choice, Nursing Facility and the Program of All-Inclusive Care for the Elderly (PACE). Qualified applicants may only enroll in one of these long-term care programs at any given time. Nursing facility, PACE, MI Choice, and Adult Home Help services cannot be chosen in combination with each other. Applicants must indicate their choice, subject to the provisions of the Need for MI Choice Services subsection of this chapter, and document via their signature and date that they have been informed of their options via the Freedom of Choice (FOC) form that is provided to an applicant at the conclusion of any LOCD process. Applicants must also be informed of other service options that do not require Nursing Facility Level of Care, including Home Health and Home Help State Plan services, as well as other local public and private service entities. The FOC form must be signed and dated by the supports coordinator and the applicant (or their legal representative) seeking services and is to be maintained in the applicant's case record.

2.2.C. RETROSPECTIVE REVIEW AND MEDICAID RECOVERY

MDHHS or its designee will perform retrospective reviews to validate the LOCD as performed by waiver agencies. The waiver agency must submit all supporting medical documentation requested by MDHHS or its designee. If the participant is found to be ineligible for MI Choice, MDHHS will recover all Medicaid payments made for the services rendered during the period of ineligibility.

Determinations resulting from such retrospective reviews may be appealed by the waiver agency through procedures established by MDHHS.

2.3 NEED FOR MI CHOICE SERVICES

In addition to meeting financial and functional eligibility requirements and to be enrolled in the program, MI Choice applicants must demonstrate the need for a minimum of two covered services, one of which must be Supports Coordination, as determined through an in-person assessment and the person-centered planning process. Applicants must also agree to accept to receive MI Choice services on a regular basis, at least every 30 days.

An applicant cannot be enrolled in MI Choice if their service and support needs can be fully met through the intervention of State Plan or other available services. State Plan and MI Choice services are not interchangeable. MI Choice services differ in nature and scope from similar State Plan services and often have more stringent provider qualifications.

2.3.A. INITIAL ASSESSMENT OF PARTICIPANTS

The MI Choice program has established the Resident Assessment Instrument – Home Care (iHC) as the approved assessment instrument for assessing the functional status of participants. The MI Choice Intake Guidelines, LOCD, and the iHC are not interchangeable tools. (Documents are available on the MDHHS website. Refer to the Directory Appendix for website information.)
Initial assessments are conducted by teams consisting of a minimum of a registered nurse and a social worker, both of whom are properly licensed by the State of Michigan.

2.3.B. REASSESSMENT OF PARTICIPANTS

Reassessments are conducted by either a properly licensed registered nurse or a social worker, whichever is most appropriate to address the circumstances of the participant. A team approach that includes both disciplines is encouraged whenever feasible or necessary. Reassessments are done in person with the participant at the participant’s home.

The supports coordinator documents that the participant continues to meet the nursing facility level of care within the case record, specifying the appropriate “door” through which the participant meets level of care criteria. Reassessments are conducted in person 90 days after the initial assessment, with a reassessment every subsequent 180 days, or sooner upon a significant change in the participant’s condition. Supports coordinators track reassessment dates within the waiver agency’s information systems. If a supports coordinator determines the participant no longer meets the nursing facility level of care, the supports coordinator initiates program discharge procedures and provides the participant with advance notice and information on appeal rights. A refusal which prevents a redetermination within the 180-day window is cause for termination from the program.
SECTION 3 – ENROLLMENT

MI Choice waiver agencies determine the enrollment dates upon MDHHS financial eligibility verification, and termination dates for each participant for whom they provide waiver services. No applicant shall be granted enrollment status without fully meeting all eligibility requirements. MI Choice applicants require at least two waiver services on a continual basis, one of which must be Supports Coordination, in order to be enrolled in MI Choice. When a potentially eligible applicant cannot be enrolled due to the agency being at capacity, the applicant is placed on a waiting list. Refer to the Waiting Lists subsection for additional information. MDHHS reviews and provides final approval for determinations that result in enrollment, denials or terminations for MI Choice.

3.1 GENERAL PROVISIONS OF PARTICIPATION

There are a number of circumstances that play a role in the eligibility status of MI Choice participants. The following subsections define these impacts.

3.1.A. ENROLLMENT IN MEDICAID HEALTH PLANS AND OTHER PROGRAMS

A program participant cannot be simultaneously enrolled in both MI Choice and a Medicaid Health Plan, PACE program, or any other §1915(c) waiver. Applicants must choose one program in which they wish to enroll. It is not necessary to either delay MI Choice enrollment or withhold MI Choice services pending the disenrollment process from any of the Medicaid Health Plans.

3.1.B. INSTITUTIONAL STAYS

There are occasions when a MI Choice participant requires a short-term admission to an institutional setting for treatment. The impact of such an institutional stay is dependent on the type of admission and the length of the stay.

A short-term hospital admission does not necessarily impact a participant’s MI Choice enrollment status. The participant’s supports coordinator must temporarily suspend the delivery of waiver services during the hospital stay to avoid unnecessary or redundant service delivery from the hospital or MI Choice, however, the supports coordinator is not required to remove the participant from MI Choice. A participant who is hospitalized for more than 30 days must have their enrollment terminated.

A participant admitted to a nursing facility for rehabilitation services or for any reason must be removed from MI Choice on the date prior to the nursing facility admission. The individual may be re-enrolled into MI Choice upon discharge from the nursing facility as long as the individual meets eligibility criteria as described in the Eligibility section.

3.2 MI CHOICE INTAKE GUIDELINES

The MI Choice Intake Guidelines is a list of questions designed to screen applicants for eligibility and further assessment. Additional probative questions are permissible when needed to clarify eligibility. The MI Choice Intake Guidelines does not, in itself, establish program eligibility. A properly completed MI Choice Intake Guidelines is mandatory for MI Choice waiver agencies prior to placing applicants on a MI Choice waiting list when the agency is operating at its capacity. Individuals who score as Level C,
Level D, Level D1 or Level E are those applicants determined potentially eligible for program enrollment and will be placed on the MI Choice waiting list. The date of the MI Choice Intake Guidelines contact establishes the chronological placement of the applicant on the waiting list. The MI Choice Intake Guidelines may be found on the MDHHS website. (Refer to the Directory Appendix for website information.)

When the waiver agency is at capacity, applicants requesting enrollment in MI Choice must either be screened by telephone or in person using the MI Choice Intake Guidelines at the time of their request for proper placement on the waiting list. If a caller is seeking services for another individual, the waiver agency shall either contact the applicant for whom services are being requested or complete the MI Choice Intake Guidelines to the extent possible using information known to the caller. For applicants who are deaf, hearing impaired, or otherwise unable to participate in a telephone interview, it is acceptable to use an interpreter, a third-party in the interview, or assistive technology to facilitate the exchange of information.

As a rule, nursing facility residents who are seeking to transition into MI Choice are not contacted by telephone but rather are interviewed in the nursing facility. For the purposes of establishing a point of reference for the waiting list, the date of the initial nursing facility visit (introductory interview) shall be considered the same as conducting a MI Choice Intake Guidelines, so long as the functional objectives of the MI Choice Intake Guidelines are met. (Refer to the Waiting Lists subsection for additional information.) Specifically, the introductory meeting must establish a reasonable expectation that the applicant will meet the functional and financial eligibility requirements of the MI Choice program within the next 60 days.

Applicants who are expected to be ineligible based on MI Choice Intake Guidelines information may request a face-to-face evaluation using the Michigan Medicaid Nursing Facility Level of Care Determination and financial eligibility criteria. Such evaluations should be conducted as soon as possible, but must be done within 10 business days of the date the MI Choice Intake Guidelines was administered. MI Choice waiver agencies must issue an adverse action notice advising applicants of any and all appeal rights when the applicant appears ineligible either through the MI Choice Intake Guidelines or a face-to-face evaluation.

When an applicant appears to be functionally eligible based on the MI Choice Intake Guidelines but is not expected to meet the financial eligibility requirements, the MI Choice waiver agency must place the applicant on the agency's waiting list if it is anticipated that the applicant will become financially eligible within 60 days. Individuals may be placed on the waiting lists of multiple waiver agencies.

The MI Choice Intake Guidelines is the only recognized tool accepted for telephonic screening of MI Choice applicants and is only accessible to MI Choice waiver agencies. It is not intended to be used for any other purpose within the MI Choice program, nor any other Medicaid program. MI Choice waiver agencies must collect MI Choice Intake Guidelines data electronically using software through the MDHHS contracted vendor.
3.3 ENROLLMENT CAPACITY

MI Choice capacity is limited to the number of participants who can be adequately served under the annual legislative appropriation for the program. Enrollment capacity for each individual waiver agency is at the agency’s discretion based on available funding and the expected costs of maintaining services to enrolled participants.

Waiver agencies are allocated a specific number of slots each fiscal year based upon legislative appropriation and must manage enrollments within that allocation.

3.4 WAITING LISTS

Whenever the number of participants receiving services through MI Choice exceeds the existing program capacity, any screened applicant must be placed on the waiver agency’s waiting list. Waiting lists must be actively maintained and managed by each MI Choice waiver agency. The enrollment process for the MI Choice program is not ever actually or constructively closed. The applicant’s place on the waiting list is determined by priority category in the order described below. Within each category, an applicant is placed on the list in chronological order based on the date of their request for services. This is the only approved method of accessing waiver services when the waiver program is at capacity.

Each waiver agency must follow these waiting list removal guidelines when removing an applicant from the MI Choice waiting list. A MI Choice waiver agency may remove an applicant from the MI Choice waiting list if the applicant:

- Enrolled in MI Choice;
- Enrolled in another community-based service or program;
- Was admitted to a nursing facility and is no longer interested in MI Choice;
- Died;
- Moved out of state;
- Was not eligible for MI Choice;
- Was no longer interested in or refused MI Choice enrollment; or
- Was unable to be contacted by the waiver agency using all of the following methods:
  - The waiver agency called at least three times with a varied day of week and time of day.
  - If the waiver agency was able to leave a message, the applicant did not return the call within 10 business days.
  - The waiver agency sent a letter to the applicant with a deadline to contact the waiver agency within 12 business days, and the applicant either did not respond or mail was returned.

An Adequate Action Notice must be sent to the applicant no later than the date of removal from the MI Choice waiting list. MI Choice waiver agencies can obtain a template for the Adequate Action Notice on the MDHHS website. (Refer to the Directory Appendix for website information.)
3.4.A. **PRIORITY CATEGORIES**

Applicants will be placed on a waiting list by priority category and then chronologically by date of request of services. Enrollment in MI Choice is assigned on a first-come/first-served basis using the following categories, listed in order of priority given.

Waiver agencies are required to conduct follow-up phone calls to all applicants on their waiting list. The calls are to determine the applicant’s status, offer assistance in accessing alternative services, identify applicants who should be removed from the list, and identify applicants who might be in crisis or at imminent risk of admission to a nursing facility. Each applicant on the waiting list is to be contacted at least once every 90 days. Applicants in crisis or at risk require more frequent contacts. Each waiver agency is required to maintain a record of these follow-up contacts.

3.4.A.1. **CHILDREN’S SPECIAL HEALTH CARE SERVICES (CSHCS) AGE EXPIRATIONS**

This category includes only those applicants who continue to require Private Duty Nursing services at the time such coverage ends due to age restrictions under CSHCS.

3.4.A.2. **NURSING FACILITY TRANSITIONS**

Nursing facility residents who desire to transition to the community and will otherwise meet enrollment requirements for MI Choice qualify for this priority status and are eligible to receive assistance with supports coordination, transition activities, and transition costs. Priority status is not given to applicants whose service and support needs can be fully met by existing State Plan services.

3.4.A.3. **ADULT PROTECTIVE SERVICES (APS) AND DIVERSIONS**

An applicant with an active Adult Protective Services (APS) case is given priority when critical needs can be addressed by MI Choice services. It is not expected that MI Choice waiver agencies solicit APS cases, but priority is given when necessary.

An applicant is eligible for diversion priority if they are living in the community or are being released from an acute care setting and are found to be at imminent risk of nursing facility admission. Imminent risk of placement in a nursing facility is determined using the Imminent Risk Assessment (IRA), an evaluation developed by MDHHS. Use of the IRA is essential in providing an objective differentiation between those applicants at risk of a nursing facility placement and those at imminent risk of such a placement. Only applicants found to meet the standard of imminent risk are given priority status on the waiting list. Applicants may request that a subsequent IRA be performed upon a change of condition or circumstance.

Supports coordinators must administer the IRA in person. The design of the tool makes telephone contact insufficient to make a valid determination. Waiver agencies must submit a request for diversion status for an applicant to MDHHS. A final approval of a diversion request is made by MDHHS.
3.4.A.4. **Chronological Order by Service Request Date**

This category includes applicants who do not meet any of the above priority categories or for whom prioritizing information is not known. As stated, applicants will be placed on the waiting list in the chronological order that they requested services as documented by the date of MI Choice Intake Guidelines completion or initial nursing facility introductory meeting.

3.5 **Enrollment Slots**

CMS approves a given number of enrollment slots for the MI Choice program in the waiver application process. A slot consists of the enrollment of a participant for the duration of the fiscal year or, in other words, the total number of slots used is an unduplicated count of participants for the fiscal year. Therefore, a participant who might be enrolled and disenrolled from MI Choice numerous times throughout a given fiscal year utilizes only a single slot. Similarly, a participant might be disenrolled from the program at any given time, yet continues to occupy a slot until the conclusion of the fiscal year. It is an important distinction between that which constitutes enrollment and what is counted as a slot. Having a slot does not infer current enrollment.
SECTION 4 – SERVICES

The array of services provided by the MI Choice program is subject to the prior approval of CMS. Waiver agencies are required to provide any waiver service from the federally approved array that a participant needs to live successfully in the community, that is:

- indicated by the current assessment;
- detailed in the plan of service; and
- provided in accordance with the provisions of the approved waiver.

Services must not be provided unless they are defined in the plan of service and must not precede the establishment of a plan of service. Waiver agencies cannot limit in aggregate the number of participants receiving a given service or the number of services available to any given participant. Participants have the right to receive services from any willing and qualified provider.

MDHHS and waiver agencies do not impose a copayment or any similar charge upon participants for waiver services. MDHHS and waiver agencies do not impose a premium, enrollment fee, or similar cost-sharing arrangement on waiver participants.

Although MI Choice participants must have services approved by the waiver agency, participants have the option to select any participating provider in the waiver agency’s provider network, thereby assuring freedom of choice.

Where applicable, the participant must use Medicaid State Plan, Medicare, or other available payers first. The participant’s preference for a certain provider or agency is not grounds for declining another payer in order to access waiver services.

4.1 COVERED WAIVER SERVICES

In addition to regular State Plan coverage, MI Choice participants may receive services outlined in the following subsections.

4.1.A. ADULT DAY HEALTH

Adult Day Health services are furnished four or more hours per day on a regularly scheduled basis, for one or more days per week, or as specified in the service plan, in a non-institutional, community-based setting, encompassing both health and social services needed to ensure the optimal functioning of the participant. Meals provided as part of these services shall not constitute a “full nutritional regimen,” i.e., three meals per day. Physical, occupational and speech therapies may be furnished as component parts of this service.

Transportation between the participant’s residence and the Adult Day Health center is provided when it is a standard component of the service. Not all Adult Day Health centers offer transportation to and from their facility. Additionally, some of those that offer transportation only offer this service in a specified area. When the center offers transportation, it is a component part of the Adult Day Health service. If the center does
not offer transportation or does not offer it to the participant’s residence, then MI Choice would pay for the transportation to and from the Adult Day Health center separately.

Participants cannot receive Community Living Supports while at the Adult Day Health center. Payment for Adult Day Health services includes all services provided while at the center. Community Living Supports may be used in conjunction with Adult Day Health services, but cannot be provided at the exact same time.

4.1.B. RESPITE

Respite services are provided to participants unable to care for themselves and are furnished on a short-term basis due to the absence of, or need of relief for, those individuals normally providing services and supports for the participant. Services may be provided in the participant’s home, in the home of another, or in a Medicaid-certified hospital or a licensed Adult Foster Care facility. Respite does not include the cost of room and board, except when provided as part of respite furnished in a facility approved by MDHHS that is not a private residence.

Services include:

- Attendant Care (participant is not bed-bound), such as companionship, supervision, and assistance with toileting, eating, and ambulation.
- Basic Care (participant may or may not be bed-bound), such as assistance with Activities of Daily Living (ADL), a routine exercise regimen, and self-medication.

There is a 30-days-per-calendar-year limit on respite services provided outside the home. The costs of room and board are not included except when respite is provided in a facility approved by the State that is not a private residence. Respite services cannot be scheduled on a daily basis, except for longer-term stays at an out-of-home respite facility. Respite should be used on an intermittent basis to provide scheduled relief of informal caregivers.

4.1.C. SUPPORTS COORDINATION

Supports Coordination is provided to assure the provision of supports and services required to meet the participant’s health and welfare needs in a home and community-based setting. Without these supports and services, the participant would otherwise require institutionalization. The supports coordination functions to be performed and the frequency of face-to-face and other contacts are specified in the participant’s plan of service. The frequency and scope of supports coordination contacts must take into consideration health and safety needs of the participant. Supports Coordination does not include the direct provision of other Medicaid services.
Supports coordinators perform the following functions:

- Conduct the initial and subsequent Nursing Facility Level of Care Determinations per state policy. Refer to the Functional Eligibility subsection for additional information.
- Conduct the initial Resident Assessment Instrument – Home Care assessment and periodic reassessments.
- Facilitate a person-centered planning process that is focused on the participant’s preferences; includes family and other allies as determined by the participant; identifies the participant’s goals, preferences and needs; provides information about options; and engages the participant in monitoring and evaluating services and supports.
- Assist the participant with developing a plan of service using the person-centered planning process, including revisions to the plan of service at the participant’s initiation or as changes in the participant’s circumstances may warrant.
- Referral to, and coordinate with, providers of services and supports, including non-Medicaid services and informal supports. This may include providing assistance with access to entitlements or access to legal representation.
- Monitor MI Choice waiver services and other services and supports necessary for achievement of the participants goals. Monitoring includes opportunities for the participant to evaluate the quality of services received and whether those services achieved desired outcomes. This activity includes the participant and other key sources of information as determined by the participant.
- Provide social and emotional support to the participant and allies to facilitate life adjustments and reinforce the participant’s sources of support. This may include arranging services to meet those needs.
- Provide advocacy in support of the participant’s access to benefits, assuring the participant’s rights as a program beneficiary, and supporting the participant’s decisions.
- Maintain documentation of the above-listed activities to ensure successful support of the participant, comply with Medicaid and other applicable policies, and meet the performance requirements delineated in the waiver agency’s contract with MDHHS.

Additional guidance for Supports Coordination is located in the contract between MDHHS and MI Choice waiver agencies which is available online. (Refer to the Directory Appendix for website information.) In addition to requiring and accepting Supports Coordination services, applicants must also require and agree to accept one additional MI Choice service which is needed by the applicant every 30 calendar days in order to qualify for the program.
4.1.D. Specialized Medical Equipment and Supplies

Specialized Medical Equipment and Supplies includes devices, controls, or appliances which enable participants to increase their abilities to perform activities of daily living, or to perceive, control, or communicate with the environment in which they live. This service also includes items necessary for life support or to address physical conditions, along with ancillary supplies and equipment necessary to the proper functioning of such items.

This service excludes those items that are not of direct medical or remedial benefit to the participant. Durable and non-durable medical equipment and medical supplies not available under the State Plan that are necessary to address the participant’s functional limitations may be covered by this service. Medical equipment and supplies furnished under the State Plan must be procured and reimbursed through that mechanism and not through MI Choice. All items must be specified in the participant’s plan of service.

All items shall meet applicable standards of manufacture, design and installation. Coverage includes training the participant or caregiver(s) in the operation and maintenance of the equipment or the use of a supply when initially purchased. Waiver funds may also be used to cover the maintenance costs of equipment.

Items reimbursed with waiver funds shall be in addition to any medical equipment and supplies furnished under the State Plan and shall exclude those items that are not of direct medical or remedial benefit to the participant.

4.1.E. Fiscal Intermediary

Fiscal Intermediary Services assist participants who choose the self-determination option in acquiring and maintaining services defined in the participant’s plan of service, controlling a participant’s budget, and choosing staff authorized by the waiver agency. The Fiscal Intermediary helps a participant manage and distribute funds contained in an individual budget. Funds are used to purchase waiver goods and services authorized in the participant’s plan of service. Fiscal Intermediary services include, but are not limited to, the facilitation of the employment of MI Choice service providers by the participant (including federal, state, and local tax withholding or payments, unemployment compensation fees, wage settlements), fiscal accounting, tracking and monitoring participant-directed budget expenditures and identifying potential over- and under-expenditures, and assuring compliance with documentation requirements related to management of public funds. The Fiscal Intermediary may also perform other supportive functions that enable the participant to self-direct needed services and supports. These functions may include verification of provider qualifications, including reference and criminal history reviews, and assisting the participant to understand billing and documentation requirements.

Fiscal Intermediary Services are available only to participants choosing the self-determination option.
4.1.F. GOODS AND SERVICES

Goods and Services are services, equipment or supplies not otherwise provided through either MI Choice or the Medicaid State Plan that address an identified need in the individual plan of services (including improving and maintaining the participant’s opportunities for full membership in the community) and meet the following requirements. The item or service would:

- decrease the need for other Medicaid services,
- promote inclusion in the community, and
- increase the participant’s safety in the home environment.

These goods and services are only available if the participant does not have the funds to purchase the item or service or the item or service is not available through another source.

Goods and Services are only approved by CMS for participants choosing the self-determination option. Experimental or prohibited treatments are excluded. Goods and Services must be documented in the individual plan of services.

4.1.G. CHORE SERVICES

Chore Services are needed to maintain the home in a clean, sanitary and safe environment. This service includes heavy household chores such as washing floors, windows and walls, tacking down loose rugs and tiles, and moving heavy items of furniture in order to provide safe access and egress. Other covered services might include yard maintenance (mowing, raking and clearing hazardous debris such as fallen branches and trees) and snow plowing to provide safe access and egress outside the home. These types of services are allowed only in cases when neither the participant nor anyone else in the household is capable of performing or financially paying for them, and where no other relative, caregiver, landlord, community or volunteer agency, or third party payer is capable of, or responsible for, their provision. In the case of rental property, the responsibility of the landlord, pursuant to the lease agreement, will be examined prior to any authorization of service.

4.1.H. COMMUNITY LIVING SUPPORTS

Community Living Supports (CLS) facilitate an individual’s independence and promote participation in the community. CLS can be provided in the participant’s residence or in community settings. CLS include assistance to enable participants to accomplish tasks that they would normally do for themselves if able. The services may be provided on an episodic or a continuing basis. The participant oversees and supervises individual providers on an ongoing basis when participating in self-determination options. Tasks related to ensuring safe access and egress to the residence are authorized only in cases when neither the participant nor anyone else in the household is capable of performing or financially paying for them, and where no other relative, caregiver, landlord, community/volunteer agency, or third party payer is capable of or responsible for their provision. When transportation incidental to the provision of CLS is included, it shall not
also be authorized as a separate waiver service for the participant. Transportation to medical appointments is covered by Medicaid through MDHHS.

CLS includes:

- Assisting, reminding, cueing, observing, guiding and/or training in household activities, ADL, or routine household care and maintenance.
- Reminding, cueing, observing and/or monitoring of medication administration.
- Assistance, support and/or guidance with such activities as:
  - Non-medical care (not requiring nurse or physician intervention) – assistance with eating, bathing, dressing, personal hygiene, and ADL;
  - Meal preparation, but does not include the cost of the meals themselves;
  - Money management;
  - Shopping for food and other necessities of daily living;
  - Social participation, relationship maintenance, and building community connections to reduce personal isolation;
  - Training and/or assistance on activities that promote community participation such as using public transportation, using libraries, or volunteer work;
  - Transportation (excluding to and from medical appointments) from the participant’s residence to community activities, among community activities, and from the community activities back to the participant’s residence; and
  - Routine household cleaning and maintenance.
- Dementia care including, but not limited to, redirection, reminding, modeling, socialization activities, and activities that assist the participant as identified in the individual’s person-centered plan.
- Staff assistance with preserving the health and safety of the individual in order that he/she may reside and be supported in the most integrated independent community setting.
- Observing and reporting any change in the participant’s condition and the home environment to the supports coordinator.

These service needs differ in scope, nature, supervision arrangements, or provider type (including provider training and qualifications) from services available in the State Plan. The differences between the waiver coverage and the State Plan are that the provider qualifications and training requirements are more stringent for CLS tasks as provided under the waiver than the requirements for these types of services under the State Plan.

CLS services cannot be provided in circumstances where they would be a duplication of services available under the State Plan or elsewhere. The distinction must be apparent by unique hours and units in the approved service plan.
4.1.I. COMMUNITY TRANSITION SERVICES

Community Transition Services (CTS) are non-recurrent expenses for participants transitioning from a nursing facility to a community setting. Allowable transition costs include the following:

<table>
<thead>
<tr>
<th>Housing or Security Deposits</th>
<th>A one-time expense to secure housing or obtain a lease.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Utility Hook-ups and Deposits</td>
<td>A one-time expense to initiate and secure utilities (television and internet are not included).</td>
</tr>
<tr>
<td>Furniture, Appliances, and Moving Expenses</td>
<td>One-time expenses necessary to occupy and safely reside in a community residence (diversion or recreational devices are not included).</td>
</tr>
<tr>
<td>Cleaning</td>
<td>A one-time cleaning expense to assure a clean environment, including pest eradication, allergen control, and over-all cleaning.</td>
</tr>
<tr>
<td>Coordination and Support Services</td>
<td>To facilitate transitioning of participant to a community setting.</td>
</tr>
<tr>
<td>Other</td>
<td>Services deemed necessary and documented within the participant’s plan of service to accomplish the transition into a community setting. Costs for CTS are billable upon enrollment into the MI Choice program.</td>
</tr>
</tbody>
</table>

CTS do not include monthly housing rental or mortgage expense, regular utility charges, or items that are intended for purely diversional and recreational purposes. Additional limitations on the amount, frequency, or duration of services are identified in the contract between the waiver agencies and MDHHS.

4.1.J. COUNSELING

Counseling services seek to improve the participant’s emotional and social well-being through the resolution of personal problems or through changes in a participant’s social situation.

Counseling services must be directed to participants who are experiencing emotional distress or a diminished ability to function. Family members, including children, spouses or other responsible relatives, may participate in the counseling session to address and resolve the problems experienced by the participant and to prevent future issues from arising. Counseling services are typically provided on a short-term basis to address issues such as adjusting to a disability, adjusting to community living, and maintaining or building family support for community living. Counseling services are not intended to address long-term behavioral health needs.

4.1.K. ENVIRONMENTAL ACCESSIBILITY ADAPTATIONS

Environmental Accessibility Adaptations (EAA) includes physical adaptations to the home required by the participant’s plan of service that are necessary to ensure the health and welfare of the participant or that enable the participant to function with greater
independence in the home, without which the participant would require institutionalization.

Adaptations may include:

- Installation of ramps and grab bars
- Widening of doorways
- Modification of bathroom facilities
- Modification of kitchen facilities
- Installation of specialized electric and plumbing systems that are necessary to accommodate the medical equipment and supplies necessary for the welfare of the participant
- Environmental control devices that replace the need for paid staff and increase the participant’s ability to live independently, such as automatic door openers

Assessments and specialized training needed in conjunction with the use of such environmental adaptations are included as a part of the cost of the service.

The case record must contain documented evidence that the adaptation is the most cost-effective and reasonable alternative to meet the participant’s need. An example of a reasonable alternative, based on the results of a review of all options, may include changing the purpose, use or function of a room within the home or finding alternative housing.

Environmental adaptations required to support proper functioning of medical equipment, such as electrical upgrades, are limited to the requirements for safe operation of the specified equipment and are not intended to correct existing code violations in a participant’s home.

The waiver agency must assure there is a signed contract or bid proposal with the builder or contractor prior to the start of an environmental adaptation. It is the responsibility of the waiver agency to work with the participant and builder or contractor to ensure the work is completed as outlined in the contract or bid proposal. All services must be provided in accordance with applicable state or local building codes.

The existing structure must have the capability to accept and support the proposed changes.

The environmental adaptation must incorporate reasonable and necessary construction standards, excluding cosmetic improvements. The adaptation cannot result in valuation of the structure significantly above comparable neighborhood real estate values.

The participant, with the direct assistance of the waiver agency’s supports coordinator when necessary, must make a reasonable effort to access all available funding sources, such as housing commission grants, Michigan State Housing Development Authority (MSHDA), and community development block grants. The participant’s case record must include evidence of efforts to apply for alternative funding sources and the acceptances
or denials of these funding sources. The MI Choice program is a funding source of last resort.

Adaptations may be made to rental properties when the lease or rental agreement does not indicate the landowner is responsible for such adaptations and the landowner agrees to the adaptation in writing. A written agreement between the landowner, the participant, and the waiver agency must specify any requirements for restoration of the property to its original condition if the occupant moves.

Excluded are those adaptations or improvements to the home that:

- Are of general utility
- Are considered to be standard housing obligations of the participant or homeowner
- Are not of direct medical or remedial benefit

Examples of exclusions include, but are not limited to:

- Carpeting
- Roof repair
- Sidewalks and driveways
- Heating
- Central air conditioning (except under exceptions noted in the service definition)
- Garages and raised garage doors
- Storage and organizers
- Hot tubs, whirlpool tubs, and swimming pools
- Landscaping
- General home repairs

MI Choice does not cover general construction costs in a new home or additions to a home purchased after the participant is enrolled in the waiver. If a participant or the participant’s family purchases or builds a home while receiving waiver services, it is the participant’s or family’s responsibility to assure the home will meet basic needs, such as having a ground floor bath or bedroom if the participant has mobility limitations. MI Choice funds may be authorized to assist with the adaptations noted above (e.g., ramps, grab bars, widening doorways, bathroom modifications, etc.) for a home recently purchased. If modifications are needed to a home under construction that require special adaptation to the plan (e.g., roll-in shower), the MI Choice program may be used to fund the difference between the standard fixture and the modification required to accommodate the participant’s need.

The infrastructure of the home involved in the funded adaptations (e.g., electrical system, plumbing, well or septic, foundation, heating and cooling, smoke detector systems, or roof) must be in compliance with any applicable local codes. Environmental
adaptations shall exclude costs for improvements exclusively required to meet applicable state or local building codes.

### 4.1.L. HOME DELIVERED MEALS

Home Delivered Meals (HDM) is the provision of one to two nutritionally sound meals per day to a participant who is unable to care for their own nutritional needs. The unit of service is one meal delivered to the participant’s home or to the participant’s selected congregate meal site that provides a minimum of one-third of the current recommended dietary allowance (RDA) for the age group as established by the Food and Nutritional Board of the National Research Council of the National Academy of Sciences. Allowances shall be made in HDMs for specialized or therapeutic diets as indicated in the participant’s plan of service. A Home Delivered Meal cannot constitute a full nutritional regimen.

Limitations on who can get a meal include:

- The participant must be unable to obtain food or prepare complete meals.
- The participant does not have an adult living at the same residence or in the vicinity who is able and willing to prepare all meals.
- The participant does not have a paid caregiver who is able and willing to prepare meals for the participant.
- The provider can appropriately meet the participant’s special dietary needs, and the meals available will not jeopardize the participant’s health.
- The participant must be able to feed himself/herself.
- The participant must agree to be home when meals are delivered, or contact the program when an absence is unavoidable.

### 4.1.M. NON-MEDICAL TRANSPORTATION

Non-Medical Transportation services are offered to enable waiver participants to access waiver and other community services, activities, and resources as specified in the individual plan of services. Whenever possible, family, neighbors, friends, or community agencies who can provide transportation services without charge must be utilized before MI Choice provides transportation services.

Non-Medical Transportation services offered through MI Choice are in addition to medical transportation required under 42 CFR 431.53 and transportation services under the State Plan, defined at 42 CFR 440.170(a), and does not replace State Plan services. MI Choice transportation services cannot be substituted for the transportation services that MDHHS is obligated to provide under the listed citations. Such transportation, when provided for medical purposes, is not reimbursable through MI Choice. When the costs of transportation are included in the provider rate for another waiver service (e.g., Adult Day Health), there must be mechanisms to prevent the duplicative billing of Non-Medical Transportation services.
4.1.N. NURSING SERVICES

Nursing Services are covered on an intermittent (separated intervals of time) basis for a participant who requires nursing services for the management of a chronic illness or physical disorder in the participant’s home. These services are provided by a registered nurse (RN) or a licensed practical nurse (LPN) under the direct supervision of an RN. Nursing Services are for participants who require more periodic or intermittent nursing than available through the Medicaid State Plan or third party payer resources for the purpose of preventive interventions to reduce the occurrence of adverse outcomes for the participant, such as hospitalizations and nursing facility admissions. MI Choice Nursing Services shall not duplicate services available through the Medicaid State Plan or third party resources.

When the participant’s condition is unstable, could easily deteriorate, or significantly changes, MI Choice covers nurse visits for observation and evaluation. The purpose of the observation and evaluation is to monitor the participant’s condition and report findings to the participant’s physician or other appropriate health care professional to prevent additional decline, illness, or injury to the participant. The supports coordinator shall communicate with both the nurse providing this service and the participant’s health care professional to assure the nursing needs of the participant are being addressed.

Participants must meet at least one of the following criteria to qualify for this service:

- Be at high risk of developing skin ulcers, or have a history of resolved skin ulcers that could easily redevelop.
- Require professional monitoring of vital signs when changes may indicate the need for modifications to the medication regimen.
- Require professional monitoring or oversight of blood sugar levels, including participant-recorded blood sugar levels, to assist with effective pre-diabetes or diabetes management.
- Require professional assessment of the participant’s cognitive status or alertness and orientation to encourage optimal cognitive status and mental function or identify the need for modifications to the medication regimen.
- Require professional evaluation of the participant’s success with a prescribed exercise routine to assure its effectiveness and identify the need for additional instruction or modifications when necessary.
- Require professional evaluation of the participant’s physical status to encourage optimal functioning and discourage adverse outcomes.
- Have a condition that is unstable, could easily deteriorate, or experience significant changes AND a lack of competent informal supports able to readily report life-threatening changes to the participant’s physician or other health care professional.

In addition to the observation and evaluation, a nursing visit may also include, but is not limited to, one or more of the following nursing services:

- Administering prescribed medications that cannot be self-administered (as defined under Michigan Compiled Law (MCL) 333.7103(1)).
• Setting up medications according to physician orders.
• Monitoring participant’s adherence to their medication regimen.
• Applying dressings that require prescribed medications and aseptic techniques.
• Providing refresher training to the participant or informal caregivers to assure the use of proper techniques for health-related tasks such as diet, exercise regimens, body positioning, taking medications according to physician’s orders, proper use of medical equipment, performing ADL, or safe ambulation within the home.

This service is limited to no more than two hours per visit. Participants receiving Private Duty Nursing services are not eligible to receive MI Choice Nursing Services.

4.1.O. PERSONAL EMERGENCY RESPONSE SYSTEM

A Personal Emergency Response System (PERS) is an electronic device that enables a participant to summon help in an emergency. The participant may also wear a portable "help" button to allow for mobility. The system is often connected to the participant's phone and programmed to signal a response center once a "help" button is activated. Installation, upkeep and maintenance of devices and systems are also provided. PERS does not cover monthly telephone charges associated with phone service.

The provider may offer this service for cellular or mobile phones and devices. The device must meet industry standards. The participant must reside in an area where the cellular or mobile coverage is reliable. When the participant uses the device to signal and otherwise communicate with the PERS provider, the technology for the response system must meet all other service standards.

4.1.P. PRIVATE DUTY NURSING

Private Duty Nursing (PDN) services are skilled nursing interventions provided to a participant age 21 and older on an individual and continuous basis to meet health needs directly related to the participant’s physical disorder. PDN includes the provision of nursing assessment, treatment, and observation provided by licensed nurses within the scope of the State’s Nurse Practice Act, consistent with physician’s orders and in accordance with the participant’s plan of service. To be eligible for PDN services, the waiver agency must find the participant meets either Medical Criteria I or Medical Criteria II, and Medical Criteria III. Regardless of whether the participant meets Medical Criteria I or II, the participant must also meet Medical Criteria III.

The participant's plan of service must provide reasonable assurance of participant safety. This includes a strategy for effective back-up in the event of an absence of providers. The back-up strategy must include informal supports or the participant’s capacity to manage his/her care and summon assistance.

PDN for a participant between the ages of 18-21 is covered under the Medicaid State Plan.
Medical Criteria I – The participant is dependent daily on technology-based medical equipment to sustain life. “Dependent daily on technology-based medical equipment” means:

- Mechanical rate-dependent ventilation (four or more hours per day) or assisted rate-dependent respiration (e.g., some models of bi-level positive airway pressure); or
- Deep oral (past the tonsils) or tracheostomy suctioning eight or more times in a 24-hour period; or
- Nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, associated with complex medical problems or medical fragility; or
- Total parenteral nutrition delivered via a central line, associated with complex medical problems or medical fragility; or
- Continuous oxygen administration (eight or more hours per day), in combination with a pulse oximeter and a documented need for skilled nursing assessment, judgment, and intervention in the rate of oxygen administration. This would not be met if oxygen adjustment is done only according to a written protocol with no skilled assessment, judgment or intervention required. Continuous use of oxygen therapy is a covered Medicaid benefit for beneficiaries age 21 and older when tested at rest while breathing room air and the oxygen saturation rate is 88 percent or below, or the PO2 level is 55 mm HG or below.

Medical Criteria II – Frequent episodes of medical instability within the past three to six months requiring skilled nursing assessments, judgments, or interventions (as described in III below) as a result of a substantiated medical condition directly related to the physical disorder.

Definitions of Medical Criteria II:

- “Frequent” means at least 12 episodes of medical instability related to the progressively debilitating physical disorder within the past six months, or at least six episodes of medical instability related to the progressively debilitating physical disorder within the past three months.
- “Medical instability” means emergency medical treatment in a hospital emergency room or inpatient hospitalization related to the underlying progressively debilitating physical disorder.
- “Emergency medical treatment” means covered inpatient and outpatient services that are furnished by a provider who is qualified to furnish such services and that are needed to evaluate or stabilize an emergency medical condition.
- “Emergency medical condition” means a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention would result in placing the health of the individual in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part.
- “Directly related to the physical disorder” means an illness, diagnosis, physical impairment, or syndrome that is likely to continue indefinitely, and results in significant functional limitations in three or more ADL.
“Substantiated” means documented in the clinical or medical record, including the nursing notes.

**Medical Criteria III** – The participant requires continuous skilled nursing care on a daily basis during the time when a licensed nurse is paid to provide services.

Definitions of Medical Criteria III:

- “Continuous” means at least once every three hours throughout a 24-hour period, and when delayed interventions may result in further deterioration of health status, in loss of function or death, in acceleration of the chronic condition, or in a preventable acute episode.
- Equipment needs alone do not create the need for skilled nursing services.
- “Skilled nursing” means assessments, judgments, interventions, and evaluations of interventions requiring the education, training, and experience of a licensed nurse. Skilled nursing care includes, but is not limited to:
  - Performing assessments to determine the basis for acting or a need for action, and documentation to support the frequency and scope of those decisions or actions.
  - Managing mechanical rate-dependent ventilation or assisted rate-dependent respiration (e.g., some models of Bi-PAP) that is required by the participant four or more hours per day.
  - Deep oral (past the tonsils) or tracheostomy suctioning.
  - Injections when there is a regular or predicted schedule, or prn injections that are required at least once per month (insulin administration is not considered a skilled nursing intervention).
  - Nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, associated with complex medical problems or medical fragility.
  - Total parenteral nutrition delivered via a central line and care of the central line.
  - Continuous oxygen administration (eight or more hours per day), in combination with a pulse oximeter, and a documented need for adjustments in the rate of oxygen administration requiring skilled nursing assessments, judgments and interventions. This would not be met if oxygen adjustment is done only according to a written protocol with no skilled assessment, judgment or intervention required. Continuous use of oxygen therapy is a covered Medicaid benefit for beneficiaries age 21 and older when tested at rest while breathing room air and the oxygen saturation rate is 88 percent or below, or the P02 level is 55 mm HG or below.
  - Monitoring fluid and electrolyte balances where imbalances may occur rapidly due to complex medical problems or medical fragility. Monitoring by a skilled nurse would include maintaining strict intake and output, monitoring skin for edema or dehydration, and watching for cardiac and respiratory signs and symptoms. Taking routine blood pressure and pulse once per shift that does not require any skilled assessment, judgment or intervention at least once every three hours during a 24-hour period, as documented in the nursing notes, would not be considered skilled nursing.
Participants receiving MI Choice Nursing Services are not eligible to receive Private Duty Nursing services.

- Where applicable, the participant must use Medicaid State Plan, Medicare, or third party payers first.
- The participant’s preference for a certain provider or agency is not grounds for declining another payer in order to access waiver services.
- It is not the intent of the MI Choice program to provide PDN services on a continual 24-hours-per-day/7-days-per-week basis. MI Choice services are intended to supplement informal support services available to the participant. Only under extreme circumstances should 24/7 PDN be authorized for a participant. These circumstances must be clearly described in the participant’s case record and approved by MDHHS.
- 24/7 PDN services cannot be authorized for participants who cannot direct their own services and supports, make informed decisions for themselves, or engage their emergency back-up plan without assistance. These participants must have informal caregivers actively involved in providing some level of direct services to them on a routine basis.
- All PDN services authorized must be medically necessary as indicated through the MI Choice assessment and meet the medical criteria set forth in this chapter.
- The participant’s physician, physician’s assistant, or nurse practitioner must order PDN services and work in conjunction with the waiver agency and provider agency to assure services are delivered according to that order.

4.1.Q. TRAINING

Training services consist of instruction provided to a MI Choice participant or caregiver(s) in either a one-to-one situation or a group basis to teach a variety of independent living skills, including the use of specialized or adaptive equipment or medically-related procedures required to maintain the participant in a community-based setting. The training needs must be identified in the comprehensive assessment or in a professional evaluation and included in the participant’s plan of service. Training is covered for areas such as activities of daily living, adjustment to home or community living, adjustment to mobility impairment, adjustment to serious impairment, management of personal care needs, the development of skills to deal with service providers and attendants, and effective use of adaptive equipment. For participants self-directing services, Training services may also include the training of independent supports brokers, developing and managing individual budgets, staff hiring and supervision, or other areas related to self-direction.

4.2 STATE PLAN SERVICES

MI Choice services are designed to address the unique needs and circumstances of program participants. Some waiver services appear to be the same as services offered in the State Plan; however, they differ in terms of key elements, such as scope of coverage or provider qualifications. Inasmuch as waiver services are designed to meet the specific demands of participants, it is expected that a waiver service will be more appropriate for a participant than a similar State Plan service. Under no circumstances shall the participant receive both services. Waiver agencies cannot authorize payment for services that are offered under the State Plan.
4.3 Hospice

MI Choice participants may receive State Plan-covered hospice services while participating in MI Choice. Participants must meet all hospice eligibility requirements outlined in the Hospice Chapter. If the beneficiary is receiving hospice and becomes eligible to receive waiver services, the waiver agency contacts the hospice to establish the first date of service for the waiver services.

State Plan Hospice services must be used to the fullest extent before similar MI Choice services are authorized. Inappropriate services (e.g., duplicative, non-covered) are subject to MDHHS recovery of the amounts paid for those services from the waiver agency.

A joint plan of service for Hospice and MI Choice must be developed and maintained by both the waiver agency and the hospice provider. It is important that the waiver agency understand the hospice philosophy so the two entities work for a common goal and avoid redundant services. Ongoing communication and coordination must occur between the MI Choice supports coordinator and the hospice provider during the time they are serving the participant. Written documentation of this communication and coordination must be kept in the participant's record at each agency.

4.4 Medication Administration

Medication administration in MI Choice is established through the provision of Nursing Services.

4.5 Operating Standards

MDHHS maintains and publishes the "Minimum Operating Standards for MI Choice Waiver Program Services" (known as the Minimum Operating Standards) document. This document defines both general and specific operating criteria for the program. All waiver agencies and service providers are subject to the standards, definitions, limits, and procedures described therein.

For each service offered in MI Choice, the Minimum Operating Standards are used to set the minimum qualifications for all direct service providers, including required certifications, training, experience, supervision, and applicable service requirements. Billing codes and units are also defined in the document.

4.6 Services in Licensed Settings

Licensing rules for residential setting providers reflect an attempt to make residing in these settings much like it would be in a home. Providers of licensed residential settings must meet the standard of providing a non-institutional setting licensed by the State of Michigan. For further details on what constitutes a home and community-based setting, refer to 42 CFR §441.530.
SECTION 5 - NURSING FACILITY TRANSITIONS

The process of transitioning nursing facility residents to a home or a community-based setting is a priority of MI Choice. The tenet of rebalancing the spectrum of long-term care services in Michigan was given impetus by the 1999 United States Supreme Court decision in Olmstead v. L. C.. MDHHS provides mechanisms to ensure an individual resides in the most independent setting.

5.1 TRANSITION CANDIDATES

Initial transition work begins prior to enrollment into the MI Choice program and often occurs before the verification of Medicaid eligibility. Candidates for Community Transition Services are nursing facility residents who have expressed a preference to live at home or in a community-based setting and who have barriers to transitioning that cannot be addressed through standard discharge procedures available to nursing facility staff. Nursing facilities are not relieved of their required discharge planning activities.

5.2 TRANSITION SERVICES

Transition services are one-time expenses necessary to assist a nursing facility resident in moving to a home or similar community setting. Examples of transition services that the waiver agency could provide are in the Services section of this chapter.

Community Transition Services are not intended to provide assistance in relocating from communal settings such as, but not limited to, adult foster care (AFC) homes, Homes for the Aged (HFAs), assisted living arrangements, or apartments to another home or home-like setting.

The MI Choice waiver agency must work with the nursing facility resident to develop a transition plan that includes all projected transition costs. The plan must be based on individual goals and needs and must be included in the nursing facility resident’s MI Choice record. It must be updated to reflect any changes.

For the contract period, MDHHS will reimburse the waiver agency for prudent and allowable transition expenses and supports coordination costs in accordance with Nursing Facility Transition Guidelines. As specified in the contract between MDHHS and the waiver agency, the waiver agency must notify MDHHS of its intention to transition a nursing facility resident to the MI Choice program when initiating a nursing facility transition plan. Procedures for notification are obtained from the MI Choice program contract manager. (Refer to the Directory Appendix for additional information.) The waiver agency must demonstrate the nursing facility resident has a Medicaid application pending with MDHHS or has been approved for Medicaid and meets MI Choice program criteria. Once the participant is enrolled in the MI Choice program, MDHHS will issue payment to the waiver agency for CTS. Non-waiver nursing facility transition funding is available for those who do not enroll in the MI Choice program upon transition or do not transition.
SECTION 6 - SUPPORTS COORDINATION

Supports coordination facilitates access to, and arrangement of, services and support needed and chosen by MI Choice participants. These are detailed and documented in the participant’s plan of service. Refer to the Supports Coordination service description in the Services section of this chapter for additional information.

Supports coordinators use a person-centered approach in working with a participant to determine how their needs will be met. Supports coordinators also monitor the quality of services received and explore other funding options and service opportunities when personal goals exceed the scope of available MI Choice services. For participants choosing the self-determination option for service delivery, the supports coordinator assists in the selection, coordination, and management of those services and providers.

MDHHS includes a Supports Coordination Service Performance Standards document as an attachment to all waiver agency provider contracts. The document prescribes acceptable standards and protocols for the provision of supports coordination services. It is reviewed and amended as necessary.

6.1 PERSON-CENTERED PLANNING

Person-centered planning (PCP) is a process for planning and supporting a participant receiving services that builds on the participant’s desire to engage in lawful activities that promote community life and that honor the participant’s preferences, choices, and abilities. The person-centered planning process involves families, friends, and professionals as the participant desires or requires. Waiver agencies and direct service providers must utilize a PCP process, informing the participant of service options in ways that are meaningful. This includes assessing the needs and desires of the participant, developing service and support plans, and continuously updating and revising those plans as needs and desires change. The participant and their chosen representative(s) must be provided with written information from the waiver agency detailing the right to participate in the PCP process. Waiver agencies and direct service providers implement PCP in accordance with the MDHHS Person-Centered Planning Guideline document that is an attachment to the waiver agency provider contract.

PCP meetings are conducted when the participant is not in crisis and at a time of the participant’s choice. The participant has authority to determine who will be involved in the PCP process as well as a time and location that meets the needs of all individuals involved in the process. An interim plan of service may be developed by the supports coordinator when the participant is experiencing a crisis situation that requires immediate services and the participant is not ready to fully participate in PCP. Interim care plans are authorized for no more than 30 days without a follow-up visit (or planning meeting) to determine the participant’s status.

6.2 PLAN OF SERVICE

The participant’s plan of service is an individualized, comprehensive document developed by the participant, their chosen representative(s), and the supports coordinator prior to the provision of services. Using a person-centered process, waiver agencies must establish a written plan of service for each participant that identifies the participant’s strengths, weaknesses, needs, goals, expected outcomes, and planned interventions. This document includes all services provided to, or needed by, the participant regardless of funding source. The plan of service is developed before MI Choice services are provided. The participant must approve all services and interventions before implementation and the waiver agency
must document participant approval. MI Choice services must be stipulated in the PCP planning process and the participant assessment.

The participant’s plan of service contains at a minimum:

- Issues, problems and concerns identified during participant (re)assessment
- Goals for each issue, problem and concern or reason for omission from the plan
- Planned interventions for each goal
- Desired outcome for each intervention
- Participant’s agreement to the plan
- A process for reviewing progress toward meeting goals and outcomes of the interventions in place
- The type of service(s) to be provided, including both MI Choice services and from other sources
- The frequency and duration of each service
- The type of provider to furnish each service

6.3 SELF-DETERMINATION

Self-Determination provides MI Choice participants the option to direct and control their own waiver services. Not all MI Choice participants choose to participate in self-determination. For those that do, the participant (or chosen representative(s)) has decision-making authority over staff who provide waiver services, including:

- Recruiting staff
- Referring staff to an agency for hiring (co-employer)
- Selecting staff from worker registry
- Hiring staff (common law employer)
- Verifying staff qualifications
- Obtaining criminal history review of staff
- Specifying additional service or staff qualifications based on the participant’s needs and preferences so long as such qualifications are consistent with the qualifications specified in the approved waiver application and the Minimum Operating Standards
- Specifying how services are to be provided and determining staff duties consistent with the service specifications in the approved waiver application and the Minimum Operating Standards
- Determining staff wages and benefits, subject to State limits (if any)
- Scheduling staff and the provision of services
- Orienting and instructing staff in duties
- Supervising staff
- Evaluating staff performance
- Verifying time worked by staff and approving timesheets
- Discharging staff (common law employer)
- Discharging staff from providing services (co-employer)
- Reallocating funds among services included in the participant’s budget
- Identifying service providers and referring for provider enrollment
- Substituting service providers
- Reviewing and approving provider invoices for services rendered

Participant budget development for participants in self-direction occurs during the person-centered planning process and is intended to involve individuals the participant chooses. Planning for the participant’s plan of service precedes the development of the participant’s budget so that needs and preferences can be accounted for without arbitrarily restricting options and preferences due to cost considerations. A participant’s budget is not authorized until both the participant and the waiver agency have agreed to the amount and its use. In the event that the participant is not satisfied with the authorized budget, he/she may reconvene the person-centered planning process. The waiver services of Fiscal Intermediary and Goods and Services are available specifically to self-determination participants to enhance their abilities to more fully exercise control over their services.

The participant may, at any time, modify or terminate the arrangements that support self-determination. The most effective method for making changes is the person-centered planning process in which individuals chosen by the participant work with the participant and the supports coordinator to identify challenges and address problems that may be interfering with the success of a self-determination arrangement. The decision of a participant to terminate participation in self-determination does not alter the services and supports identified in the participant’s plan of service. When the participant terminates self-determination, the waiver agency has an obligation to assume responsibility for assuring the provision of those services through its network of contracted provider agencies.

A waiver agency may terminate self-determination for a participant when problems arise due to the participant’s inability to effectively direct services and supports. Prior to terminating a self-determination agreement (unless it is not feasible), the waiver agency informs the participant in writing of the issues that have led to the decision to terminate the arrangement. The waiver agency will continue efforts to resolve the issues that led to the termination.
SECTION 7 - ADMINISTRATION

MDHHS serves as the single state agency in the operation of the MI Choice program. MDHHS contracts with entities to administer the program throughout the state. Certain administrative functions are assigned to the local agencies as defined in the Medicaid waiver application to CMS, as renewed and amended. To assist MDHHS in operating MI Choice, agencies are required to submit periodic reports as detailed in this section.

7.1 WAIVER AGENCIES AS PREPAID AMBULATORY HEALTH PLANS

MDHHS contracts with waiver agencies that operate as Prepaid Ambulatory Health Plans (PAHPs) to perform administrative functions. They are responsible for disseminating waiver information to applicants, assisting applicants with waiver enrollment (which includes assisting applicants with completion of the Medicaid Assistance Application (DHS-1171) to secure financial eligibility), managing waiver enrollment against approved limits, monitoring expenditures against approved limits, conducting assessments and LOCMD evaluations, reviewing participant plans of service to ensure that waiver requirements are met, conducting utilization reviews and quality management reviews, recruiting providers, and executing Medicaid provider agreements.

Each waiver agency must sign a provider contract with MDHHS assuring that it meets all program requirements.

Waiver agencies are responsible for securing qualified service providers to deliver services. Eligible provider applicants include public, private non-profit or for-profit organizations that provide services meeting established service standards, certifications or licensure requirements. Participants may only use providers in the waiver agency’s provider network.

7.2 WAITING LIST REPORTING

Waiting list data is collected and maintained on a secure, web-based application. Waiver agencies must complete all required fields for each qualified MI Choice applicant. Waiting list data must be entered online within one business day after completion of the MI Choice Intake Guidelines. If an applicant is removed from the MI Choice waiting list, the data must be completed online within five business days and include the reason for removal.

7.3 HEALTH INSURANCE PORTABILITY AND ACCOUNTABILITY ACT (HI PAA)

All MI Choice waiver agencies and providers are required to comply with the provisions of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and any subsequent revisions. Compliance is required in areas that include privacy and security rules, data sharing, and disclosure.
SECTION 8 - FINANCING AND REIMBURSEMENT

Annual funding levels for MI Choice are subject to appropriation allocations made by the Michigan Legislature. MDHHS contracts annually with waiver agencies to operate the MI Choice program and all waiver agency budget and reimbursement requirements and considerations must be defined in the contract, as amended. Any additional consideration or compensation to the waiver agency must also be included in the annual contract, as amended. Waiver agencies are paid through capitation payments and are required to submit all encounter data to MDHHS as outlined in the Encounter Reporting subsection of this chapter. Encounter data is processed through the Community Health Automated Medicaid Processing System (CHAMPS). Waiver agencies are required to submit all financial reports as detailed in the annual contract. Each agency is subject to review or audit by MDHHS, the State of Michigan, or their designee.

8.1 REIMBURSEMENT SCHEDULE

At the end of each month, MDHHS will run the 834 Enrollment file for each waiver agency. This file contains an electronic listing of individuals who are enrolled in the MI Choice program with each provider. The Medicaid Management Information System (MMIS) then performs quality checks, including:

- Verification of current Medicaid eligibility;
- A valid LOCD indicating the participant meets nursing facility level of care; and
- The participant is not enrolled in any other long-term care program.

On the fourth pay cycle of each month, the 820 premium payment will run and will electronically transfer the appropriate per member per month capitation payment for each participant enrolled with each waiver agency.

8.2 SPECIAL SERVICES

MDHHS may arrange special service structures that extend beyond the standard contract language to address special circumstances that arise.

8.2.A. GAP-FILLING SERVICES

Waiver agencies may authorize services for waiver participants to address situations that require immediate attention to alleviate barriers crucial to the participant’s independence when no other resources, including waiver services, are available to address such needs. These are referred to as gap-filling services and are to be included in the participant’s plan of service. Gap-filling services must also be included in encounter data submitted to MDHHS.

8.2.B. TEMPORARILY INELIGIBLE PARTICIPANT (TIP) SERVICES

Waiver agencies may authorize services for temporarily ineligible participants (TIP). TIP services are necessary to sustain a participant though a temporary period of ineligibility. TIP services are included in the participant’s plan of service and the reason such services are necessary must be documented by the waiver agencies. TIP services must be included in encounter data submitted to MDHHS. TIP services for any given participant
are limited to a cumulative total of no more than three months per calendar year unless prior approval is obtained from MDHHS.

### 8.3 Encounter Data Reporting

Medicaid is established as the payer of last resort. Waiver agencies must pursue and secure all third party liability (TPL) sources possible. Agencies must make every effort to enroll and utilize dually certified (Medicare and Medicaid) providers. Agencies cannot use waiver funds for services that are covered through another payment source.

Each waiver agency must submit all encounter data to MDHHS within 180 calendar days of the date that services were rendered. Waiver agencies must resolve issues related to encounters that are rejected by CHAMPS within 30 calendar days of notification by MDHHS or its designee. Agencies have 10 calendar days after the expiration of the 30-day resolution window to report on issues that cannot be resolved.

### 8.4 Administrative Expense and Other Financial Reporting

Each waiver agency shall submit an Administrative Expense Report (AER) to MDHHS as specified in the contract. The expenses reported must be actual expenses incurred by the waiver agency. Each AER shall cover one calendar month and is due within 30 calendar days after the conclusion of that month. Waiver agencies must submit additional financial reports and information as requested by MDHHS. MDHHS must communicate requirements for such additional information to the waiver agency in writing and allow sufficient time for a response.

### 8.5 Financial Audit Requirements

MI Choice waiver agencies are contractually obligated to comply with, and assure compliance by, its subcontractors with all requirements of the Single Audit Act and any amendments to this act. Waiver agencies must submit to MDHHS a Single Audit, Financial Statement Audit, or Audit Status Notification Letter. If submitting a Single Audit or Financial Statement Audit, waiver agencies must also submit a Corrective Action Plan for any audit findings that impact MDHHS-funded programs and a management letter (if issued) with a response.

Waiver agencies that expend $500,000 or more in federal awards during the agency’s fiscal year must submit to MDHHS a Single Audit that is consistent with the Single Audit Act Amendments of 1996 and Office of Management and Budget (OMB) Circular A-133, “Audits of States, Local Governments, and Non-Profit Organizations” (as revised).

Waiver agencies exempt from the Single Audit requirements that receive $500,000 or more in total funding from MDHHS in state and federal grant funding must submit to MDHHS a Financial Statement Audit prepared in accordance with Generally Accepted Auditing Standards (GAAS). Waiver agencies exempt from the Single Audit requirements that receive less than $500,000 of total MDHHS grant funding must submit to MDHHS a Financial Statement Audit prepared in accordance with GAAS if the audit includes disclosures that negatively impact MDHHS-funded programs including, but not limited to, fraud, financial statement misstatements, and violations of contract and grant provisions.

Waiver agencies exempt from both the Single Audit and Financial Statement Audit requirements (sections a and b) must submit an Audit Status Notification Letter that certifies these exemptions. The template
for the Audit Status Notification Letter and further instructions are available on the MDHHS website. (Refer to MI Choice Waiver Resources in the Directory Appendix for additional information.)

The required audit and any other required submissions (i.e., Corrective Action Plan and management letter with a response, or Audit Status Notification Letter) must be submitted within nine months following the end of the contractor’s fiscal year to the MDHHS Office of Audit, Quality Assurance and Review Section. (Refer to the Directory Appendix for contact information.)

Waiver agencies and each of their contractors are subject to the provisions of, and must comply with, the cost principles set forth in OMB Circular A-87, “Cost Principles for State, Local, and Indian Tribal Governments” (as revised) and OMB Circular A-122, “Cost Principles for Non-Profit Organizations”.
SECTION 9 – PROVIDERS

Authorization for provision of services is the responsibility of the waiver agencies. They determine the status of the qualifications and certifications (if applicable) for all direct service providers, negotiate and enter into contracts with the providers, and reimburse providers.

9.1 ENROLLMENT OF SERVICE PROVIDERS

Waiver agencies must use written contracts meeting the requirements of 42 CFR 434.6 to purchase services. Entities or individuals under subcontract with the waiver agencies must meet provider standards defined in the Minimum Operating Standards for MI Choice Waiver Program Services which is maintained by MDHHS and attached to each annual waiver agency contract. Only providers meeting the requisite waiver requirements are permitted to participate in the waiver program.

To assure network capacity, as well as choice of providers, each waiver agency must have a provider network with capacity to service at least 125% of their monthly slot utilization for each MI Choice service and at least two providers for each MI Choice service. When waiver agencies cannot assure this choice within 30 miles or 30 minutes travel time for each enrollee, they may request a rural area exception from MDHHS.

9.2 FAMILY MEMBERS AS SERVICE PROVIDERS

Waiver agencies may pay relatives of MI Choice participants to furnish services. This authorization excludes legally responsible individuals and legal guardians. The MI Choice participant must specify his/her preference for a relative to render services. The relative must meet the same provider standards as established for non-related caregivers. All waiver services furnished shall be included in the plan of service and authorized by the supports coordinator. The supports coordinator must periodically evaluate the effectiveness of the relative in rendering the needed service. If the supports coordinator finds that the relative fails to meet established goals and outcomes or fails to render services as specified in the plan of service, the supports coordinator must rescind the authorization of that relative to provide waiver services to the participant. When the supports coordinator finds the relative has failed to render services, payments must not be authorized.

9.3 REIMBURSEMENT RATES FOR PROVIDERS

Each waiver agency is responsible for sub-contracting with provider entities and for assuring access to services. The process of rate determination for providers resides in the contract negotiation between the waiver agency and the provider. MDHHS does not play a role in this process.

Rates paid for services provided through the waiver must be adequate to assure access to services needed by participants.

MDHHS does not make payment to legally responsible individuals for furnishing Community Living Supports or similar services.
9.4 CRIMINAL HISTORY REVIEWS

Each waiver agency and direct provider of home-based services must conduct a criminal history review through the Michigan State Police for each paid staff or volunteer who will be entering a participant’s residence. The waiver agency and direct provider shall have completed reference and criminal history checks before authorizing an employee or volunteer to furnish services in a participant’s residence. The scope of the investigation is statewide.

Both waiver agencies and MDHHS conduct administrative monitoring reviews of providers annually to verify that mandatory criminal history checks have been conducted in compliance with operating standards. Waiver agencies must comply with additional criminal history reviews mandated by the State for home and community-based services providers.

9.5 USE OF RESTRAINTS, SECLUSION OR RESTRICTIVE INTERVENTIONS

Providers are prohibited from using seclusion or restrictive interventions in addition to using restraints. Qualified reviewers conduct Clinical Quality Assurance Reviews and home visits which include a discovery process to examine the use of restraints, seclusion or restrictive interventions by family or caregivers. Supports coordinators have the primary responsibility for identifying and addressing the use of restraints, seclusion or restrictive interventions.
SECTION 10 - PROGRAM QUALITY

The process of ensuring the highest quality program involves a continuous cycle of discovery, intervention, and evaluation. MDHHS is resolute about assuring and improving the quality of services and protections it provides. To assure that level of service, MDHHS operates a comprehensive quality management system that incorporates reviews of the administrative operations of the waiver agencies, clinical reviews of participant records, home reviews with participants, continuous quality management and planning, and timely and effective responses to critical incidents.

10.1 ADMINISTRATIVE QUALITY ASSURANCE REVIEWS

MDHHS conducts periodic on-site Administrative Quality Assurance Reviews (AQAR) of each waiver agency on a biennial schedule, assuring MDHHS reviews each waiver agency at least once every two years. MDHHS seeks evidence of compliance to the AQAR standards during the on-site review through examination of waiver agency policies and procedures, provider contracts, financial systems, encounter accuracy, and quality management plans.

Each waiver agency shall adhere to the MDHHS MI Choice Waiver Program Provider Monitoring Plan (known as the Monitoring Plan). The document defines the procedures and standards used by the waiver agency in reviewing providers included in the waiver agency’s provider network. It includes the required protocols used to identify provider deficiencies and identifies timelines for remediation. (Refer to the Directory Appendix for additional information.) MDHHS will review each waiver agency’s process in detail during the AQAR.

MDHHS notifies each waiver agency in writing of deficiencies requiring corrective action and provides a date for the waiver agency to provide a corrective action plan to MDHHS. In the event of a continued deficiency, MDHHS has the authority to take action toward the waiver agency, including suspending new enrollments, adjusting capitation payments, or mandating further corrective action. MDHHS has the option to suspend or terminate the contract of any waiver agency that fails to correct stated deficiencies identified on a second review.

10.2 QUALITY MANAGEMENT PLANS

Each waiver agency shall have a written quality management plan that meets requirements specified in the MDHHS Quality Management Plan. The Quality Management Plan addresses quality assurance and improvement using measurable goals and quality performance indicators.

MDHHS reviews quality management plans annually. Waiver agencies are required to submit an annual report to MDHHS highlighting its quality management plan activities and improvements. (Refer to MI Choice Waiver Resources in the Directory Appendix for additional information.)

10.3 CLINICAL QUALITY ASSURANCE REVIEWS

MDHHS conducts an annual Clinical Quality Assurance Review (CQAR) of each waiver agency. The review is to determine whether the authorized services in the plan of service are sufficient to protect the health and welfare of the participant.

Randomly selected records are reviewed. Samples are derived using federally-approved sampling techniques with a minimum of 10 records reviewed at each agency. In addition, a minimum of five home
visits are conducted to verify information in the records. The review is conducted by a team of trained MDHHS reviewers.

10.4 CRITICAL INCIDENT RESPONSE AND REPORTING

MI Choice is required to track and to report certain events that might indicate exceptional risk to the participant. Not only are these requirements defined in regulation, but in law as well.

10.4.A. TYPES OF CRITICAL INCIDENTS AND SERIOUS EVENTS

The following are specific critical incidents or events that must be reported to MDHHS:

- Exploitation
- Illegal activity in the home with potential to cause a serious or major negative event
- Neglect
- Physical abuse
- Provider no-shows, particularly when the participant is bed-bound all day or there is a critical need for the service to be provided
- Sexual abuse
- Theft
- Verbal abuse
- Worker consuming drugs/alcohol on the job
- Suspicious or Unexpected Death that is related to providing services, supports, or care
- Medication errors
- Restraints, seclusion or restrictive interventions

10.4.B. CRITICAL INCIDENT RESPONSE

MI Choice waiver agencies have the initial responsibility for identifying, investigating, evaluating and responding to critical incidents that occur with participants as listed above. All suspected incidents of abuse, neglect and exploitation require reporting to MDHHS Adult Protective Services (APS) for investigation and follow-up. Agencies shall begin investigating and evaluating critical incidents within two business days of the date that it was noted that an incident occurred. Suspicious or unexpected death that is also reported to law enforcement agencies must be reported to MDHHS within two business days.

Each waiver agency is required to maintain written policy and procedures defining appropriate action to take upon suspicion or determination of abuse, neglect or exploitation. The policies and procedures must include procedures for follow-up activities with MDHHS-APS to determine the result of the reported incident and the steps to be taken if the results are unsatisfactory. All reports to MDHHS-APS must be maintained in the participant's case record.
10.4.C. CRITICAL INCIDENT REPORTING

Waiver agencies are responsible under contract for tracking and responding to individual critical incidents using the Critical Incident Reporting web-based system. Waiver agencies are required to report the type of critical incidents, the responses to those incidents, and the outcome and resolution of each event within 30 days of the date of knowledge of the incident. The online system allows MDHHS to review the reports in real time and ask questions or address concerns with the waiver agencies. MDHHS must receive notification from waiver agencies of suspicious deaths within two business days.
SECTION 11 - APPEALS

MDHHS has established participant and provider appeal processes that are applicable to MI Choice. The participant appeals process conforms to the Medicaid fair hearing requirements found at 42 CFR Part 431, Subpart E of the Code of Federal Regulations. Provider appeal rights conform to the requirements of Michigan law and rules found at MCL 400.1 et seq. and MAC R 400.3401 et seq.

11.1 PARTICIPANT APPEALS

MDHHS has established notice and appeals requirements to which waiver agencies must adhere when adverse action has been taken for program applicants or participants. According to 42 CFR 431.201 "Action" means a termination, suspension, or reduction of Medicaid eligibility or of covered services. This also includes determinations by the waiver agency that the applicant or participant does not meet the nursing facility level of care criteria and other denials of Medicaid eligibility or of covered services.

11.1.A. ADEQUATE ACTION NOTICES

MI Choice waiver agencies must send an Adequate Action Notice to applicants or participants informing them of adverse actions and determinations taken under the following circumstances:

- when the waiver agency is at operating capacity and unable to enroll MI Choice applicants who request a Michigan Medicaid Nursing Facility Level of Care Determination (LOCD).
- when the waiver agency determines applicants to be functionally ineligible for MI Choice services based on the results of a LOCD.
- when a participant requests additional services or additional amounts of services and the waiver agency denies the request.
- when an existing benefit is reduced, suspended or terminated, and meets the requirements for an exception from an Advance Action Notice as specified in 42 CFR 431.213.

11.1.B. ADVANCE ACTION NOTICES

An Advance Action Notice must be sent to MI Choice participants when action is being taken to reduce, suspend, or terminate service(s) a participant currently receives. This notice must be provided at least 12 days in advance of the intended action.

An Advance Action Notice is also issued if it is determined that a reduction in level or number of services is warranted based on the participant's current assessment. The notice must inform the participant that services will not be reduced until a formal decision has been rendered through the Medicaid Fair Hearings process if the participant formally requests a hearing before the specified date of the intended action.
11.1.C. NOTICES

Advance Action Notices and Adequate Action Notices that relate to the LOCD process are posted on the MDHHS website. (Refer to the Directory Appendix for website information.)

Waiver agencies may use additional notices for actions not related to the LOCD process. These notices must be approved by MDHHS prior to use to assure compliance with 42 CFR 431.210. Waiver agencies must supply a copy of the Request for Hearing form (DCH-0092) and a return envelope with each notice sent to an applicant or participant, or any time an applicant or participant requests such material. Waiver agencies are required to assist applicants or participants who request help in filing an LOCD exception review through the Michigan Peer Review Organization (MPRO), or a formal appeal for any reason through the Medicaid fair hearings process.

11.2 PROVIDER AND WAIVER AGENCY APPEALS

Medicaid providers, including waiver agencies, are afforded appeal rights under the Michigan Social Welfare Act (Public Act 280 of 1939, as amended) and the Michigan Administrative Code. Adverse actions that may be appealed by providers include, but are not limited to, the suspension or termination of participation in the Medicaid program, or a reduction, suspension, or adjustment of provider payments.

A Retrospective Review of the Michigan Medicaid Nursing Facility Level of Care Determination that results in a denial is an Adverse Action for the MI Choice Waiver agency when MDHHS proposes to recover payments made for services rendered to the beneficiary for whom the Retrospective Review was conducted. If the waiver agency disagrees with the MDHHS Adverse Action Notice, the agency may appeal if their written request is received by the MDHHS Michigan Administrative Hearing System within 30 calendar days from the date of the MDHHS Adverse Action Notice.

Information regarding the MDHHS appeal process is available in the General Information for Providers Chapter and on the MDHHS website. (Refer to the Directory Appendix for website information.)

**SECTION 1 - GENERAL INFORMATION**

Effective March 1, 2015, the Michigan Department of Health and Human Services (MDHHS), in partnership with the Centers for Medicare & Medicaid Services (CMS), implemented a new managed care program called MI Health Link. This program integrates into a single coordinated delivery system all physical health care, pharmacy, long term supports and services, and behavioral health care for individuals who are dually eligible for full Medicare and full Medicaid. The goals of the program are to improve coordination of supports and services offered through Medicare and Medicaid, enhance quality of life, improve quality of care, and align financial incentives.

MDHHS and CMS have signed a three-way contract with managed care entities called Integrated Care Organizations (ICOs) to provide Medicare and Medicaid covered acute and primary health care, pharmacy, dental, and long term supports and services (nursing facility and home and community based services). The MI Health Link program also includes a home and community-based services (HCBS) waiver for MI Health Link enrollees who meet nursing facility level of care, choose to live in the community rather than an institution, and have a need for at least one of the waiver services as described in this chapter. This waiver is called the MI Health Link HCBS Waiver.

The Michigan Prepaid Inpatient Health Plans (PIHPs) in the four demonstration regions are responsible for providing all Medicare and Medicaid behavioral health services for individuals who have mental illness, intellectual/developmental disabilities, and/or substance use disorders. The Eligibility and Service Areas section provides a list of the regions and related counties.
SECTION 2 – ELIGIBILITY AND SERVICE AREAS

Individuals who are eligible to participate are those who are age 21 or older, eligible for Medicare and Medicaid, and reside in one of the four demonstration regions:

<table>
<thead>
<tr>
<th>Region</th>
<th>Counties in the Region</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Alger, Baraga, Chippewa, Delta, Dickinson, Gogebic, Houghton, Iron, Keweenaw, Luce, Mackinac, Marquette, Menominee, Ontonagon, and Schoolcraft</td>
</tr>
<tr>
<td>4</td>
<td>Barry, Berrien, Branch, Calhoun, Cass, Kalamazoo, St. Joseph, and Van Buren</td>
</tr>
<tr>
<td>7</td>
<td>Wayne</td>
</tr>
<tr>
<td>9</td>
<td>Macomb</td>
</tr>
</tbody>
</table>

Excluded populations:

- Individuals under age 21
- Individuals previously disenrolled due to special disenrollment from Medicaid managed care as defined in 42 CFR 438.56
- Individuals not living in one of the four demonstration regions
- Individuals with Additional Low Income Medicare Beneficiary/Qualified Individual (ALMB/QI) program coverage
- Individuals without full Medicaid coverage (they have spenddowns or deductibles)
- Individuals with Medicaid who reside in a state psychiatric hospital
- Individuals with commercial Health Maintenance Organization (HMO) coverage
- Individuals with elected hospice services
SECTION 3 – ENROLLMENT PROCESS

Enrollment in the MI Health Link program occurs in two ways: 1) voluntary enrollment, and 2) passive enrollment. For voluntary enrollment, the eligible individual must call the enrollment broker contracted by the state for Medicaid managed care programs. The individual selects the ICO in which they wish to enroll, using the ICO provider networks and drug formularies to assist in making choices.

Eligible individuals who do not voluntarily enroll in the program will receive a notification letter at least 60 days prior to the enrollment effective date informing them they will be passively enrolled. Eligible individuals will have a period of 60 days to opt out of the program if they choose to do so prior to the enrollment effective date. Individuals may opt out by calling the entities as indicated in the notification letter. Individuals who do not opt out of the program prior to the effective date will be passively enrolled and an ICO will be assigned to them. Prior to the enrollment effective date, and at any time thereafter, individuals will have the opportunity to select a different ICO than the one assigned to them if there is another ICO option in the region.

After enrollment, individuals are issued an identification (ID) card that is specific to the MI Health Link program. This ID card is used instead of the traditional Medicare and Medicaid ID cards, and identifies the name of the ICO responsible for coverage along with the MI Health Link logo. Individuals will be enrolled in the benefit plan called ICO-MC, which is a benefit plan specific to the MI Health Link program. (Refer to the Beneficiary Eligibility Chapter for additional information.)

Individuals who are enrolled in the MI Choice waiver or the Program of All-Inclusive Care for the Elderly (PACE) are not passively enrolled into MI Health Link. These individuals may enroll in MI Health Link voluntarily, but must disenroll from MI Choice or PACE before the MI Health Link enrollment is effective. MDHHS will assist in this process to ensure a smooth transition between programs. Individuals who are enrolled in MI Choice or PACE and wish to enroll in MI Health Link must call the enrollment broker to start the enrollment process. The enrollment broker will send a message to MDHHS notifying MDHHS that the individual has chosen to enroll in MI Health Link. MDHHS staff will contact the appropriate MI Choice waiver agency or PACE organization to obtain current information and assessments for the individual. MDHHS will review the information received to determine if the individual’s needs can be met through MI Health Link. MDHHS will contact the individual to discuss whether his/her needs can be met in MI Health Link. If the individual still chooses to join MI Health Link at that time, MDHHS will initiate the formal enrollment in the program and will notify the ICO accordingly.

Individuals may choose to disenroll from MI Health Link at any time. Disenrollment is effective on the first day of the following month.
**SECTION 4 – LEVEL OF CARE CODES**

Level of care (LOC) codes specific to the MI Health Link program are as follows:

<table>
<thead>
<tr>
<th>Level of Care Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>03</td>
<td>Individual meets nursing facility level of care based on the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD), lives in the community, and participates in the MI Health Link HCBS waiver program.</td>
</tr>
<tr>
<td>05</td>
<td>Resident of any nursing facility or hospital long term care unit (private or county owned) that is not a County Medical Care Facility.</td>
</tr>
<tr>
<td>07</td>
<td>General population in the community.</td>
</tr>
<tr>
<td>15</td>
<td>Resident of a County Medical Care Facility.</td>
</tr>
</tbody>
</table>
SECTION 5 – COVERED SERVICES

MI Health Link offers the following services:

- Medicare covered services, including pharmacy
- Medicaid State Plan services, including personal care services
- Dental services
  - Equivalent to the Medicaid adult dental benefit as described in the Dental Chapter of this manual.
- Long Term Supports and Services (LTSS)
  - Nursing facility services
  - State Plan personal care services
  - Supplemental Services for individuals who live in the community and do not meet nursing facility level of care as determined by the LOCD.
  - MI Health Link HCBS Waiver services for individuals who live in the community and meet nursing facility level of care as determined by the LOCD
- Services provided through PIHPs for individuals’ needs related to behavioral health (BH), intellectual/developmental disability (I/DD) and substance use disorders (SUD)

Hospice is not a covered benefit. If an individual elects to receive hospice services, the individual is disenrolled from the ICO effective the last day of the same month in which the hospice enrollment is effective. For example, if the individual elects to receive hospice services on March 15, he/she will be disenrolled from MI Health Link effective April 1. The ICO is responsible for non-hospice related services until the individual is disenrolled from the ICO (the remainder of the month). After disenrollment from the ICO, the individual’s option for Medicaid services in the demonstration regions will be through fee-for-service (FFS). Medicare will cover the hospice services as well as any other non-hospice related services traditionally covered by Medicare. Individuals will not be eligible for the MI Health Link program as long as they continue to be enrolled in hospice.

The MI Health Link program waives the requirement for a three-day hospital stay prior to receiving rehabilitation or skilled care in a Michigan licensed nursing facility. Admission requirements include a physician-written order for nursing facility services, a completed LOCD, and a completed Pre-Admission Screening and Resident Review (PASRR).

5.1 STATE PLAN PERSONAL CARE SERVICES

For individuals enrolled in the MI Health Link program, State Plan personal care services will be provided and paid for by the ICO and will no longer be provided through the Medicaid Home Help program. Personal care services are available to individuals who require hands-on assistance in activities of daily living (ADLs) (i.e., eating, toileting, bathing, grooming, dressing, mobility, and transferring) as well as hands-on assistance in instrumental activities of daily living (IADLs) (i.e., personal laundry, light housekeeping, shopping, meal preparation and cleanup, and medication administration).
Personal care services are available to individuals living in their own homes or the home of another. Services may also be provided outside the home for the specific purpose of enabling an individual to be employed.

Providers shall be qualified individuals who work independently, contract with, or are employed by an agency. The ICO may directly hold provider agreements or contracts with independent care providers of the individual’s choice, if the provider meets MDHHS qualification requirements, to provide personal care services. Individuals who currently receive personal care services from an independent care provider may elect to continue to use that provider. The individual may also select a new provider if that provider meets State qualifications. Paid family caregivers will be permitted to serve as a personal care provider in accordance with the state’s requirements for Medicaid State Plan personal care services.

5.1.A. PROVIDER QUALIFICATIONS

A criminal history screen must be conducted for all personal care providers. In addition, the provider must meet the following qualifications:

- Be 18 years of age or older;
- Be able to follow instructions, personal care procedures, perform the services required and handle emergencies;
- Be physically able to perform the needed services;
- Be knowledgeable about when to seek assistance from appropriate sources in the event of an emergency;
- Be dependable and able to meet job demands; and
- Be willing to participate in available training programs if necessary.

5.1.B. ASSESSMENT REQUIREMENTS

During the Level I Assessment, ICO Care Coordinators (or designee who meets the qualifications for an ICO Care Coordinator) must consider if the individual may need personal care services. If the ICO Care Coordinator believes the individual may be eligible for MI Health Link personal care services, the ICO Care Coordinator will conduct the Personal Care Assessment. The face-to-face, comprehensive assessment is the basis for determining and authorizing the amount, scope and duration, and payment of services. The individual needs to be reassessed at least quarterly or with a change of functional and/or health status to determine and authorize the amount, scope and duration, and payment of services. The reassessment must be face-to-face.

ADLs and IADLs are ranked by the ICO Care Coordinator during the Personal Care Assessment. Through the assessment, ADLs and IADLs are assessed according to the following five point scale, where 1 is totally independent and 5 requires total assistance.
An individual must be assessed with need for assistance with at least one ADL to be eligible to receive personal care services. Payment for personal care services may only be authorized for needs assessed at the level three (3) ranking or greater. In addition, the individual must have an ADL functional ranking of three (3) or greater to be eligible for IADL services. Once an individual is determined eligible for personal care services, his/her authorized ADL and IADL services and the amount, scope and duration must be included in the Individual Integrated Care and Supports Plan (IICSP).

5.1.C. PERSONAL CARE SERVICES AND THE MI HEALTH LINK HCBS WAIVER

If an individual ranks at a level 1 or 2, he/she will not be eligible for State Plan Personal Care Services through MI Health Link. If an individual ranks at a level 2, he/she may be eligible for ADL assistance through the MI Health Link HCBS waiver Expanded Community Living Supports (ECLS) benefit if the individual requires prompting, cueing, guiding, teaching, observing, or reminding to complete ADLs. Through the MI Health Link HCBS waiver, an individual may receive IADL assistance if he/she receives prompting, cueing, guiding, etc. to complete ADLs.

ECLS may be provided in addition to State Plan Personal Care Services if the individual requires hands-on assistance with some ADLs, as covered under Personal Care Services, but requires prompting, cueing, guiding, teaching, observing, reminding, or other support (not hands-on) to complete other ADLs and IADLs independently to ensure safety, health, and welfare of the individual.

5.1.D. REASONABLE TIME AND TASK

When a task (activity) is assigned to a specific provider, the rank of the activity is used against a Reasonable Time Schedule (RTS) table to determine the recommended time that activity should be assigned. Providers should use the RTS table provided by MDHHS to record and report minutes spent delivering services. The maximum amount is across all assigned providers for an individual, so these are case maximums. When an individual’s needs exceed the hours recommended by the RTS, a rationale must be provided and maintained in the individual’s record.
5.1.E. COMPLEX CARE NEEDS

Complex care refers to conditions requiring intervention with special techniques and/or knowledge. These complex care tasks are performed for individuals whose diagnoses or conditions require more management. The conditions may also require special treatment and equipment for which specific instructions by a health professional or individual may be required in order to perform.

- Eating and feeding
- Catheters or legs bags
- Colostomy care
- Bowel program
- Suctioning
- Specialized skin care
- Range of motion exercises
- Peritoneal dialysis
- Wound care
- Respiratory treatment
- Ventilators
- Injections

The ICO Care Coordinator will allocate time for each task assessed a rank of 3 or greater based on interviews with the individual and provider, observation of the individual’s abilities, and use of the RTS as a guide. When hours exceed the RTS, a rationale must be provided and maintained in the individual’s record.

An assessment of need at a ranking of 3 or greater does not automatically guarantee the maximum allotted time allowed by the RTS. The ICO Care Coordinator must assess each task according to the actual time required for its completion.

5.1.F. REIMBURSEMENT AND RATES

After enrollment and according to the requirements of the three-way contract, the ICO must maintain the individual’s current personal care providers and amount, scope and duration of services until the IICSP is reviewed and updated and providers are secured with individual approval. An ICO should use the Medicaid Home Help Payment Schedule to continue paying providers as scheduled. (Refer to the Directory Appendix for additional information.) An ICO should follow this schedule until the ICO and personal care provider agree upon a new payment schedule, which should be defined in the contract between the ICO and the personal care provider. The ICO must publish a pay cycle and must pay these claims on the next available pay cycle date.

Furthermore, an ICO should use the Individual and Agency County Rates to determine payment rates for the transition period until the ICO and personal care provider agree
upon a rate that is defined in the ICO and personal care provider contract. (Refer to the Directory Appendix for additional information.)

After the transition period, payment rates for personal care services are established by the ICO. Tasks are assigned minute values which are converted to hours and billed as a total at the end of the ICO’s preferred pay period. Reimbursement is subject to any state or federal laws that may be applicable in the future.

A request for higher or lower hours than shown on the RTS is permissible. A textual rationale is required if the amount of services needed is different than the RTS. Possible reasons for using higher hours include incontinence, severely impaired speech, paralysis and obesity. Possible reasons for lower hours include shared living arrangements (specifically for IADLs, except for administering medications) and responsible relatives able and available to assist.

If the individual does not require the maximum allowable hours for IADLs, only the amount of time needed for each task shall be authorized. Assessed hours for IADLs (except medication administration) must be **prorated by one half** in shared living arrangements where other adults reside in the home as personal care services are only for the benefit of the individual. This does not include situations where others live in adjoined apartments, flats or in a separate home on shared property and there is no shared common living area. In shared living arrangements where it can be clearly documented that IADLs for the enrolled individual are completed separately from others in the home, hours for IADLs do not need to be prorated.

### 5.1.G. RESPONSIBLE RELATIVES AND GUARDIANS

Adult children (18 years of age or older) may provide personal care services to a parent. An individual’s spouse cannot be paid to provide personal care services to the individual as they are considered responsible relatives. Couples who are separated must provide verification that they are no longer residing in the same home. Verification may include a driver’s license, rent receipt or utility bill reflecting their separate mailing address. A spouse who is legally separated from a spouse cannot be paid to provide personal care services. ADLs may be approved when an individual’s spouse is unavailable or unable to provide these services. “Unavailable” means absence from the home for an extended period due to employment, school or other legitimate reasons. The responsible relative must provide a work or school schedule to verify they are unavailable to provide care. “Unable” means the responsible person has disabilities of their own which prevent them from providing care.

Shopping, laundry, or light housecleaning shall not be approved when a responsible relative of the individual resides in the home unless they are unavailable or unable to provide these services. These findings must be documented.

### 5.1.H. INDIVIDUALS IN ADULT FOSTER CARE FACILITIES AND HOME FOR THE AGED

For individuals in adult foster care facilities or home for the aged, a flat monthly supplement rate is established annually by the state legislature for those Medicaid beneficiaries who, according to a standardized assessment, have a documented need for
personal care services. The supplement rate is included in the ICO rates, and the ICOs must pay this rate to adult foster care homes and homes for the aged providers for individuals enrolled in MI Health Link. ICOs and Adult Foster Care facilities and Homes for the Aged must use the billing invoice provided by MDHHS.

5.2 SUPPLEMENTAL SERVICES

MI Health Link supplemental services are available for any individuals who live in the community, wish to move from a nursing facility to the community, do not meet LOCD and are not enrolled in the MI Health Link HCBS waiver. The four supplemental services are Adaptive Medical Equipment and Supplies, Community Transition Services, Personal Emergency Response System, and Respite.

5.2.A. ADAPTIVE MEDICAL EQUIPMENT AND SUPPLIES

This service includes devices, controls, or appliances specified in the IICSP that enable individuals to increase their abilities to perform activities of daily living, or to perceive, control, or communicate with the environment in which they live. Also included are items necessary for life support or to address physical conditions, along with ancillary supplies and equipment necessary to the proper functioning of such items, and durable and non-durable medical equipment and medical supplies not available under the Medicaid State Plan and Medicare that are necessary to address individual functional limitations. This will also cover the costs of equipment maintenance. The coverage includes training the individual and/or caregivers in the operation and/or maintenance of the equipment and the use of a supply when initially purchased. The ICO shall not authorize payment for herbal remedies, nutraceuticals, and/or other over-the-counter medications for uses not approved by the United States Food and Drug Administration (FDA).

All items shall meet applicable standards of manufacture, design, and installation. Each direct service provider must enroll in Medicare and/or Medicaid as a Durable Medical Equipment (DME) provider, pharmacy, etc., as appropriate. This must be verified at the beginning of service delivery and annually thereafter. The ICO may obtain some items directly from a retail store that offers the item to the general public. When utilizing retail stores, the ICO must ensure the item purchased meets the service standards. The ICO may choose to open a business account with a retail store for such purchases. The ICO must maintain the original receipts and maintain accurate systems of accounting to verify the specific individual who received the purchased item. Items must be of direct medical or remedial benefit to the individual, and this benefit must be documented in the individual's record.

It must be documented on the IICSP or Care Bridge Record that the item is the most cost-effective alternative to meeting the individual’s needs. There must be documentation on the IICSP or Care Bridge record that the best value in warranty coverage was obtained at the time of purchase. Liquid nutritional supplement orders must be renewed every six months by a physician, physician’s assistant, or nurse practitioner (in accordance with Michigan Scope of Practice laws). Where feasible, the ICO and/or direct service provider shall seek confirmation of the need for the item from the individual’s physician.
5.2.B. COMMUNITY TRANSITION SERVICES

Community Transition Services (CTS) include non-reoccurring expenses for individuals transitioning from a nursing facility to another residence where the individual is responsible for his/her own living arrangement. Person-centered planning must be used throughout the entire community transition process. The ICO shall begin CTS no more than six months before the expected discharge from the nursing facility. Allowable transition costs include the following:

- Housing or security deposit: A one-time expense to secure housing or obtain a lease.
- Utility hook-ups and deposits: A one-time expense to initiate and secure utilities (television service and internet are excluded).
- Furniture, appliances, and moving expenses: One-time expenses necessary to occupy and safely reside in a community residence (diversion or recreational devices are excluded).
- Cleaning: A one-time cleaning expense to ensure a clean environment, including pest eradication, allergen control, and over-all cleaning.
- Coordination and support services: To facilitate transitioning of an individual to a community setting.
- Other services deemed necessary and documented within the individual’s plan of service to accomplish the transition into a community setting.

Ongoing monthly rental or mortgage expense, ongoing utility charges, or items that are intended for purely diversional or recreational purposes are excluded under this service.

5.2.C. PERSONAL EMERGENCY RESPONSE SYSTEM

A Personal Emergency Response System (PERS) is an electronic device that enables individuals to secure help in an emergency. The individual may also wear a portable “help” button to allow for mobility. The system is connected to the individual’s phone and programmed to signal a response center once the “help” button is activated. The PERS provider may offer this service for cellular or mobile phones and devices. The device must meet industry standards. The individual must reside in an area where cellular or mobile coverage is reliable. When the individual uses the device to signal and otherwise communicate with the PERS provider, the technology for the response system must meet all other service standards. The PERS provider must ensure at least monthly testing of each PERS unit to maintain proper functioning.

PERS does not cover monthly telephone charges associated with phone service. This service is limited to persons who either live alone or who are left alone for significant periods of time on a routine basis and who could not summon help in an emergency without this device. The ICO may authorize PERS units for individuals who do not live alone if both the waiver individual and the person with whom they reside would require extensive routine supervision without a PERS unit in the home. An example of this is two individuals who live together and both are physically and/or cognitively unable to assist the other individual in the event of an emergency.
The Federal Communication Commission (FCC) must approve the equipment used for the response system. The equipment must meet UL® safety standards 1637 specifications for Home Health Signaling Equipment.

The provider must staff the response center with trained personnel 24 hours per day, 365 days per year. The response center will provide accommodations for persons with limited English proficiency. The response center must maintain the monitoring capacity to respond to all incoming emergency signals. The response center must have the ability to accept multiple signals simultaneously. The response center must not disconnect calls for a return call or put on a first call, first serve basis. The provider will furnish each responder with written instructions and provide training, as appropriate.

5.2.D. RESPITE

Respite services may be provided at the individual’s home, in the home of another person, or at another setting outside the individual’s home. Respite service criteria are different depending on the setting. Respite services are limited to a total of 14 overnight stays per 365 days regardless of the setting. The ICO may provide more respite services as an optional benefit. For individuals receiving respite services through the PIHP, they must first exhaust the respite benefit through the PIHP before using this respite service as an ICO supplemental service.

5.2.D.1. RESPITE PROVIDED AT THE INDIVIDUAL’S HOME OR IN THE HOME OF ANOTHER PERSON

Respite care services are provided on a short-term, intermittent basis to relieve the individual’s family or other primary caregiver(s) from daily stress and care demands during times when they are providing unpaid care. Relief needs of hourly or shift staff workers should be accommodated by staffing substitutions, plan adjustments, or location changes and not by respite care.

Respite services include:

- Attendant care (individual is not bed-bound), such as companionship, supervision, and/or assistance with toileting, eating, and ambulation.
- Basic care (individual may or may not be bed-bound), such as assistance with ADLs, a routine exercise regimen, and self-medication.

Members of an individual’s family who are not the individual’s regular caregiver may provide respite for the regular caregiver. However, the ICO shall not authorize funds to pay for services furnished to an individual by that person’s spouse. Family members who provide respite services must meet the same standards as providers who are unrelated to the individual.

Respite services cannot be scheduled on a long term daily basis. Respite should be used on an intermittent basis to provide scheduled relief of informal caregivers. Respite is not intended to be provided on a continuous, long-term basis where it is a part of daily services that would enable an unpaid caregiver to work elsewhere full time. The costs of room and board are not included in the payment for respite services.
5.2.D.2. RESPITE PROVIDED OUTSIDE THE HOME

Respite care services are provided on a short-term, intermittent basis to relieve the individual's family or other primary caregiver(s) from daily stress and care demands during times when they are providing unpaid care. Relief needs of hourly or shift staff workers should be accommodated by staffing substitutions, plan adjustments, or location changes and not by respite care.

Each out of home respite service provider must be a licensed group home as defined in Michigan Compiled Law (MCL) 400.701ff, which includes adult foster care homes and homes for the aged. Respite may include the cost of room and board if the service is provided in a licensed Adult Foster Care home or licensed Home for the Aged.

Respite services include:

- Attendant care (individual is not bed-bound) such as companionship, supervision and/or assistance with toileting, eating, and ambulation.
- Basic care (individual may or may not be bed-bound) such as assistance with ADLs, a routine exercise regimen, and self-medication.

Out-of-home respite may be scheduled for several days in a row depending upon the needs of the individual and the individual’s caregivers.

5.3 MI HEALTH LINK HCBS WAIVER SERVICES

These services are intended for individuals who meet all of the following criteria:

- are enrolled in the MI Health Link program,
- meet nursing facility level of care as determined by the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD) tool,
- demonstrate a need for one or more of the services listed below, which must be identified in the IICSP.

Individuals must receive at least one waiver service each month to remain on the waiver. The ICO and direct service providers must adhere to the service definition and operating standards to be eligible to receive payment of waiver expenses.

5.3.A. ADAPTIVE MEDICAL EQUIPMENT AND SUPPLIES

For the definition of the Adaptive Medical Equipment and Supplies service, refer to the Supplemental Services section, Adaptive Medical Equipment and Supplies.

5.3.B. ADULT DAY PROGRAM

Adult Day Program services are furnished four or more hours per day on a regularly scheduled basis, for one or more days per week, or as specified in the IICSP, in a non-institutional, community-based setting, encompassing both health and social services needed to ensure the optimal functioning of the individual. Meals provided as part of
these services shall not constitute a “full nutritional regimen,” i.e., three meals per day. Physical, occupational and speech therapies may be furnished as component parts of this service.

Transportation between the individual’s residence and the Adult Day Program center is provided when it is a standard component of the service. Not all Adult Day Program centers offer transportation to and from their location. Adult Day Program centers that do offer transportation may only offer it in a specified area. When the Adult Day Program center offers transportation, it is a component part of the Adult Day Program service. If the center does not offer transportation, then the ICO will pay for the transportation to and from the Adult Day Program center separately.

Individuals cannot receive personal care services or Expanded Community Living Supports during the time spent at the Adult Day Program facility. Payment for Adult Day Program includes all services provided while at the facility. Personal care services and Expanded Community Living Supports may be used in conjunction with Adult Day Program services, but cannot be provided at the same time unless the specific component of the service includes laundry, housecleaning, etc., that does not require the individual to be present.

Adult Day Program may be authorized only if the individual meets at least one of the following criteria:

- Requires regular supervision to live in his/her own home or the home of a relative.
- If he/she has a caregiver, the individual must require a substitute caregiver while his/her regular caregiver is unavailable.
- Has difficulty or is unable to perform ADLs without assistance.
- Capable of leaving the residence with assistance to receive services.
- In need of intervention in the form of enrichment and opportunities for social activities to prevent and/or postpone deterioration that may lead to institutionalization.

A referral from an ICO for a waiver individual shall replace any screening or assessment activities performed for other Adult Day Program individuals at the setting. The direct Adult Day Program service provider shall accept copies of the ICO’s assessments and IICSP to eliminate duplicate assessment and service planning activities.

Each program shall provide directly, or coordinate with the ICO to arrange for the provision of the following services.

- Transportation
- Personal Care
- Nutrition: one hot meal per eight-hour day which provides one-third of the recommended daily allowances and follows the meal pattern specified in the home delivered meals service standard. Individuals in attendance from eight to fourteen hours per day shall receive an additional meal to meet a combined two-thirds of the recommended daily allowances. Modified diet menus should be provided where feasible.
and appropriate. Such modifications shall take into consideration individual choice, health, religious and ethnic diet preferences.

- Recreation: consisting of planned activities suited to the needs of the individual and designed to encourage physical exercise, to maintain or restore abilities and skill, to prevent deterioration, and to stimulate social interaction.

If the program arranges for provision of any service at a place other than program-operated facilities, a written agreement specifying supervision requirements and responsibilities shall be in place. The ICO shall provide care coordination.

Each program shall keep all individuals’ files confidential in controlled access files. Each program shall use a standard release of information form that is time limited and specific as to the released information.

Each provider shall employ a full-time program director with a minimum of a bachelor’s degree in a health or human services field or be a qualified health professional. The provider shall continually provide support staff at a ratio of no less than one staff person for every ten participants. The provider may only provide health support services under the supervision of a Registered Nurse (RN). If the program acquires either required or optional services from other individuals or organizations, the provider shall maintain a written agreement that clearly specifies the terms of the arrangement between the provider and other individual or organization.

Each program shall establish written procedures (reviewed and approved by a consulting pharmacist, physician, or RN) that govern the assistance given by staff to individuals taking their own medications while participating in the program. The policies and procedures must minimally address:

- Written consent from the individual or individual’s representative to assist with medications.
- Verifications of the individual’s medication regimen, including prescriptions and dosages.
- The training and authority of staff to assist individuals with taking their own prescribed or non-prescription medications and under what conditions such assistance may take place.
- Procedures for medication set up.
- Secure storage of individuals’ medications. Medications must be returned to the individual.
- Instructions for entering medication information in individual files, including times and frequency of assistance.

Program staff shall have basic first-aid training and any other training as required by MDHHS and the ICO.

If the provider operates its own vehicles for transporting individuals to and from the program site, the provider shall meet the following transportation minimum standards:

- The Secretary of State shall appropriately license all drivers and vehicles and all vehicles shall be appropriately insured.
All paid drivers shall be physically capable and willing to assist persons requiring help to get in and out of vehicles. The provider shall make such assistance available unless expressly prohibited by either a labor contract or an insurance policy.

All paid drivers shall be trained to cope with medical emergencies unless expressly prohibited by a labor contract.

Each program shall operate in compliance with P.A. 1 of 1985 regarding seat belt usage.

The provider shall maintain all equipment and furnishings used during program activities or by program participants in safe and functional condition. Each Adult Day Program center must have the following furnishings:

- At least one straight back or sturdy folding chair for each individual and staff person.
- Lounge chairs and/or day beds as needed for naps and rest periods.
- Storage space for individuals’ personal belongings.
- Tables for both ambulatory and non-ambulatory individuals.
- A telephone accessible to all individuals.
- Special equipment as needed to assist persons with disabilities.

Each provider shall post emergency procedures (fire, severe weather, etc.) in each room of the program site. Practice drills of emergency procedures must occur once every six months. The program shall maintain a record of all practice drills.

Each Adult Day Program center must document that it is in compliance with:

- Barrier-free design specification of Michigan and local building codes.
- Fire safety standards.
- Applicable Michigan and local public health codes.

Adult Day Program settings must be compliant with the HCBS Final Rule as indicated in the Home and Community-Based Residential and Non-Residential Settings subsection.

### 5.3.C. ASSISTIVE TECHNOLOGY

The Assistive Technology service includes technology items used to increase, maintain, or improve an individual’s functioning and promote independence. The service may include assisting the individual in the selection, design, purchase, lease, acquisition, application, or use of the technology item. This service also includes vehicle modifications to the vehicle that is the individual’s primary method of transportation. This service includes repairs and maintenance of assistive technology devices. Vehicle modifications must be of direct medical or remedial benefit to the individual and specified under the IICSP. Some examples of assistive technology include, but are not limited to, van lifts, hand controls, computerized voice system, communication boards, voice activated door locks, power door mechanisms, adaptive or specialized communication devices, assistive dialing device, adaptive door opener and specialized alarm or intercom.
Cost limits for this service are as follows:

- $15,000 maximum for van lifts, including tie-downs, for the duration of the 5-year waiver period
- $5,000 yearly (waiver year) maximum for all other assistive technology devices

Items must be of direct medical or physical benefit to the individual. Where feasible, the ICO and/or direct service provider must seek confirmation of the need for the item from the individual’s physician. It must be documented in the IICSP that the item is the most cost-effective alternative to meeting the individual’s needs. Items must meet applicable standards of manufacture, design, and installation. There must be documentation that the best value in warranty coverage was obtained at the time of purchase.

Modifications will only be made to vehicles with proper insurance coverage, with the exception of new vehicles coming directly from an automotive factory to the entity performing the modification.

Direct service providers must enroll in Medicare and Medicaid as a Durable Medical Equipment, Prosthetics, Orthotics and Supplies (DMEPOS) provider, pharmacy, etc., as appropriate. Verification of provider qualifications must be conducted prior to service delivery and annually thereafter. Other contracted or subcontracted providers must have written policies and procedures compatible with requirements as specified in the contract between MDHHS and the ICO and/or the three-way contract. Contracted/subcontracted providers must have appropriate state licensure or certification required to complete or provide the service or item. Verification of provider qualifications must be conducted prior to service delivery and annually thereafter.

Items like cell phones, internet service, and full-home wiring systems are excluded from this benefit. This service also does not include paying for or leasing vehicles, vehicle insurance and vehicle repairs.

5.3.D. CHORE SERVICES

Chore Services include those duties needed to maintain the home in a clean, sanitary, and safe environment to provide safe access inside the home, and yard maintenance and snow plowing to provide access to and egress outside of the home. This service includes tasks such as heavy household chores (washing floors, windows, and walls), tacking loose rugs and tiles, moving heavy items of furniture, mowing, raking, cleaning hazardous debris such as fallen branches and trees, weatherization, and pest control. The service may include materials and disposable supplies used to complete chore tasks. The ICO may also use waiver funds to purchase or rent the equipment or tools used to perform chore tasks for waiver individuals.

Chore services are covered only in cases when neither the individual nor anyone else in the household is capable of performing or financially paying for them, and where no other relative, caregiver, landlord, community or volunteer agency, or third party payer is capable of, or responsible for, their provision. In the case of rental property, the responsibility of the landlord, pursuant to the lease agreement, will be examined prior to any authorization of service.
Verification of provider qualifications must be conducted prior to service delivery and annually thereafter. Providers must have previous relevant experience and/or training for the tasks specified and authorized in the IICSP. The ICO must deem the chosen provider capable of performing the required tasks. Pest control suppliers must be properly licensed.

5.3.E. COMMUNITY TRANSITION SERVICES

For the definition of Community Transition Services (CTS), refer to Community Transition Services in the Supplemental Services subsection.

For persons expected to enroll in the MI Health Link HCBS waiver, when a transitioning individual requires a home modification (ramp, widened doorways, etc.) before the transition can take place, the ICO shall authorize only those modifications immediately necessary for community transition as CTS. The ICO shall authorize all other needed modifications as Environmental Modifications services or Chore services through the waiver, as appropriate.

5.3.F. ENVIRONMENTAL MODIFICATIONS

The Environmental Modifications service covers physical adaptations to the home, required in the individual’s IICSP, that are necessary to ensure the health and welfare of the individual or that enable the individual to function with greater independence in the home. Such adaptations include the installation of ramps and grab bars, widening of doorways, modification of bathroom facilities, or installation of specialized electric and plumbing systems that are necessary to accommodate the medical equipment and supplies necessary for the welfare of the individual. Complex kitchen and bathroom modifications may be completed if medically necessary for the individual. Environmental modifications are those which are installed in the residence versus enhanced equipment or assistive technology which are portable from residence to residence. A ramp or lift will be covered for only one exterior door or other entrance.

The modification/adaptation must be for a primary residence, but may include additional residences subject to prior authorization by the ICO. Examples of additional residences might be a family member's cottage or the individual's second home or cottage so the individual can go there to be with family.

The modification/adaptation must be the most cost-effective and reasonable alternative. Any modifications/adaptations shall only be used to modify existing spaces or structures. The existing structure must have the capability to accept and support the proposed changes. Repairs, modifications, or adaptations shall not be performed on a condemned structure. Modifications must comply with local building codes. The infrastructure of the home involved in the funded adaptations (e.g., electrical system, plumbing, well or septic, foundation, heating and cooling, smoke detector systems, or roof) must be in compliance with any applicable local codes.

Environmental modifications/adaptations required to support proper functioning of medical equipment, such as electrical upgrades, are limited to the requirements for safe
operation of the specified equipment and are not intended to correct existing code violations in an individual’s home.

The ICO may use MI Health Link funds for labor costs and to purchase materials used to complete the modification to prevent or remedy a safety hazard. The direct service provider shall provide the equipment or tools needed to perform the tasks unless another source can provide the equipment or tools at a lower cost or free of charge and the provider agrees to use those tools.

Prior to the start of the modification of a rental property or unit, the landlord must approve the modification plan. A written agreement between the landlord, the individual, and the ICO must specify that the ICO and individual are not responsible for any costs to restore the property to the original condition.

Excluded from this service are those adaptations or improvements to the home that:

- Are of general utility.
- Are considered to be standard housing obligations of the individual or homeowner.
- Are not of direct medical or remedial benefit to the individual. For example, kitchen modifications must be required for the individual to prepare his/her own meals.
- Modifications to rental properties if the rental agreement states that it is the responsibility of the landlord to provide such modifications.
- Are used for upgrades to the home or for additions to homes (adding square footage, etc.).
- Are improvements exclusively required to meet local building codes and not directly related to an individual’s medical or physical condition.

Some examples of exclusions include, but are not limited to, carpeting, roof repair, sidewalks, driveways, heating, central air conditioning (unless it is the most cost effective and reasonable alternative), garages, raised garage doors, storage and organizers, hot tubs, whirlpool tubs, swimming pools, landscaping and general home repairs.

The ICO shall not cover general construction costs in a new home or additions to a home purchased after the individual is enrolled in the waiver. If an individual or the individual’s family purchases or builds a home while receiving waiver services, it is the individual’s or family’s responsibility to ensure the home will meet basic needs, such as having a ground floor bath or bedroom if the individual has mobility limitations. However, MI Health Link funds may be authorized to assist with the adaptations noted above (e.g. ramps, grab bars, widening of doorways, bathroom modifications, etc.) for a home recently purchased. If modifications are needed to a home under construction that require special adaptation to the plan (e.g. roll-in shower), the ICO may fund the difference between the standard fixture and the modification required to accommodate the individual’s need.

Contracted providers (such as licensed building contractors) must have appropriate certification or licensure under Michigan regulations and law such as MCL 339.601(1), MCL 339.601.2401, or MCL 339.601.2403(3). Verification of certification, licensure, or other provider qualifications must be done prior to execution of the contract related to the modification project to be done.
5.3.G. EXPANDED COMMUNITY LIVING SUPPORTS

To receive ECLS, individuals MUST need prompting, cueing, observing, guiding, teaching, and/or reminding to independently complete ADLs. ECLS does not include hands on assistance for ADLs unless something occurs incidental to this service. ECLS includes social/community participation, relationship maintenance, and attendance at medical appointments.

ECLS includes:

- Assisting, reminding, cueing, observing, guiding and/or training in the following activities:
  - Meal preparation
  - Laundry
  - Routine, seasonal, and heavy household care and maintenance
  - ADLs such as bathing, eating, dressing, and personal hygiene
  - Shopping for food and other necessities of daily living
- Assistance, support, and/or guidance with activities such as:
  - Money management
  - Non-medical care (not requiring nursing or physician intervention)
  - Social participation, relationship maintenance, and building community connections to reduce personal isolation
  - Transportation (excluding to and from medical appointments) from the individual’s residence to community activities, among community activities, and from the community activities back to the individual’s residence
  - Participation in regular community activities incidental to meeting the individual’s community living preferences
  - Attendance at medical appointments
  - Acquiring or procuring goods and services necessary for home and community living
- Reminding, cueing, observing, and/or monitoring of medication administration
- Staff assistance with preserving the health and safety of the individual in order that he/she may reside and be supported in the most integrated independent community setting.
- Training or assistance on activities that promote community participation, such as using public transportation, using libraries, or volunteer work.
- Dementia support, including but not limited to redirection, reminding, modeling, socialization activities, and activities that assist the individual as identified in the individual’s IICSP.
- Observing and reporting to the ICO Care Coordinator any changes in the individual’s condition and the home environment.
Individual providers chosen by the individual must meet the following provider qualifications (qualifications must be verified prior to initial service delivery and annually thereafter):

- Providers must be at least 18 years of age, have ability to communicate effectively both orally and in writing and follow instructions, be trained in first aid and cardiopulmonary resuscitation, be able to prevent transmission of communicable disease and be in good standing with the law as validated by a criminal history review. If providing transportation related to this service, the provider must possess a valid Michigan driver’s license.

- Providers of ECLS must have previous relevant experience or training and skills in housekeeping, household management, good health practices, observation, reporting, recording information, and reporting and identifying abuse and neglect. The individual(s) must also be trained on the individual's specific needs as identified in the IICSP. Additionally, skills, knowledge, and experience with food preparation, safe food handling procedures are highly desirable.

- Previous relevant experience and training to meet MDHHS operating standards. Refer to the Three-Way Contract, supporting documentation, and agreements within the provider’s contract with the ICO.

- Must be deemed capable of performing the required tasks by ICO.

Home Care agency providers must meet the following provider qualifications (qualifications must be verified prior to initial service delivery and annually thereafter):

- Providers must be at least 18 years of age, have the ability to communicate effectively both orally and in writing and follow instructions, be trained in first aid, be trained in universal precautions and blood-borne pathogens, and be in good standing with the law as validated by a criminal history review.

- A RN licensed to practice nursing in the State shall furnish supervision of ECLS providers. At the State's discretion, other qualified individuals may supervise ECLS providers. The direct care worker's supervisor shall be available to the worker at all times the worker is furnishing ECLS services.

- The ICO and/or provider agency must train each worker to properly perform each task required for each individual the worker serves before delivering the service to that individual. The supervisor must ensure that each worker can competently and confidently perform every task assigned for each individual served. MDHHS strongly recommends each worker delivering ECLS services complete a certified nursing assistance training course.

- ECLS providers may prompt, cue, or supervise the individual to perform higher-level, non-invasive tasks such as maintenance of catheters and feeding tubes, minor dressing changes, and wound care if the direct care worker has been individually trained and supervised by an RN for each individual who requires such care. The supervising RN must ensure each worker’s confidence and competence in the performance of each task required.
ECLS service providers must have previous relevant experience or training and skills in housekeeping, household management, good health practices, observation, reporting, and recording information. Additionally, skills, knowledge, and/or experience with food preparation, safe food handling procedures, and reporting and identifying abuse and neglect are highly desirable.

Previous relevant experience and training to meet MDHHS operating standards. Refer to the Three-Way Contract, supporting documentation, and agreements within the provider’s contract with the ICO.

When the ECLS services include transportation, the following standards apply:

- The ICO may not use MI Health Link funds to purchase or lease vehicles for providing transportation services to waiver individuals.
- The Secretary of State must appropriately license all drivers and register all vehicles used for transportation supported all or in part by MI Health Link funds. The provider must cover all vehicles used with liability insurance.
- All paid drivers for transportation providers supported entirely or in part by MI Health Link funds shall be physically capable and willing to assist persons requiring help to and from and to get in and out of vehicles. The provider shall offer such assistance unless expressly prohibited by either a labor contract or insurance policy.
- The provider shall train all paid drivers for transportation programs supported entirely or in part by MI Health Link funds to cope with medical emergencies, unless expressly prohibited by a labor contract or insurance policy.
- Each provider shall operate in compliance with P.A. 1 of 1985 regarding seat belt usage.

Each direct service provider who chooses to allow staff to assist individuals with self-medication shall establish written procedures that govern the assistance given by staff. These procedures shall be reviewed by a consulting pharmacist, physician, or RN and shall include, at a minimum:

- The provider staff authorized to assist individuals with taking their own prescription or over-the-counter medications and under what conditions such assistance may take place. This must include a review of the type of medication the individual takes and its impact upon the individual.
- Verification of prescription medications and their dosages. The individual shall maintain all medications in their original, labeled containers.
- Instructions for entering medication information in individual files.
- A clear statement of the individual’s and his/her legal representative’s responsibility regarding medications taken by the individual and the provision for informing the individual and his/her legal representative of the provider’s procedures and responsibilities regarding assisted self-administration of medications.
ECLS providers may only administer medications in compliance with Michigan Administrative Rule 330.7158:

- A provider shall only administer medication at the order of a physician and in compliance with the provisions of section 719 of the act, if applicable.
- A provider shall ensure that medication use conforms to federal standards and the standards of the medical community.
- A provider shall not use medication as punishment, for the convenience of the staff, or as a substitute for other appropriate treatment.
- A provider shall review the administration of a psychotropic medication periodically as set forth in the individual's IICSP and based upon the individual's clinical status.
- If an individual cannot administer his/her own medication, a provider shall ensure that medication is administered by or under the supervision of personnel who are qualified and trained.
- A provider shall record the administration of all medication in the individual's record. The ICO may do this electronically or via paper format, but the records must be readily available if requested by MDHHS.
- A provider shall ensure that medication errors and adverse drug reactions are immediately and properly reported to a physician and recorded in the individual's record.

ECLS cannot be provided in circumstances where they would be a duplication of services available through MI Health Link. The distinction must be apparent by unique hours and units in the approved IICSP.

ECLS may be furnished outside the individual's home.

The individual oversees and supervises individual providers on an on-going basis when participating in arrangements that support self-determination. This may also include transportation to allow people to get out into the community when it is incidental to the IICSP. When transportation incidental to the provision of ECLS is included, the ICO shall not also authorize transportation as a separate waiver service for the individual.

Members of an individual’s family may provide ECLS to the individual. However, the ICO shall not directly authorize funds to pay for services furnished to an individual by that person's spouse or legal guardian or other financially responsible person. Family members who provide this service must meet the same standards as providers who are unrelated to the individual. Roommates or other individuals who live with the individual may provide ECLS services, but payment for services must be pro-rated by one-half if the service will also benefit the person performing the service (i.e., meal preparation, laundry, housecleaning, etc.). Paid ECLS services are only for the benefit of the individual receiving the services.

In shared living arrangements where there is more than one person in the home receiving the service by the same caregiver, payment for services must be based on a pro-rated percentage/fraction relative to the care each person receives. When services can be clearly documented separately from other individuals in the home, payment need not be pro-rated. Providers must be trained to perform each required task prior to
service delivery. The supervisor must ensure the provider can competently and confidently perform each assigned task.

With the assistance of the individual and/or individual’s caregiver, the ICO or direct service provider shall determine an emergency notification plan for each individual, pursuant to each visit for emergencies and provider no-shows or late arrivals.

ECLS does not include the cost associated with room and board. ECLS also excludes nursing and skilled therapy services.

ECLS provided in a licensed setting includes only those supports and services that are in addition to, and shall not replace, usual and customary care furnished to residents in the licensed setting. Documentation in the individual’s record must clearly identify the individual’s need for additional supports and services not covered by licensure. The IICSP must clearly identify the portion of the individual’s supports and services covered by ECLS. The setting must comply with the requirements of the Home and Community-Based Services (HCBS) Final Rule as described in the Home and Community-Based Residential and Non-Residential Settings subsection.

5.3.H. FISCAL INTERMEDIARY

Fiscal Intermediary (FI) services assist the individual to live independently in the community while controlling his/her individual budget and choosing the staff to work with him/her. The FI helps the individual to manage and distribute funds contained in the individual budget. The individual uses funds to purchase home and community based services authorized in the IICSP. FI services include, but are not limited to, the facilitation of the employment of service workers by the individual, including federal, state, and local tax withholding/payments, unemployment compensation fees, wage settlements; fiscal accounting; tracking and monitoring individual-directed budget expenditures and identify potential over and under expenditures; ensuring compliance with documentation requirements related to management of public funds. The FI helps the individual manage and distribute funds contained in the individual budget. The FI also assists with training the individual and providers, as necessary, in tasks related to the duties of the FI including, but not limited to, billing processes and documentation requirements.

FI services are available only to individuals participating in arrangements that support self-determination. Additionally, FI services may not be provided by the individual’s family, guardian, or providers of other services for the same individual. The ICO and fiscal intermediary must abide by the Self-Determination Implementation Technical Advisory and any other requirements provided by MDHHS. FI services through the MI Health Link HCBS waiver must only be used for MI Health Link HCBS services as identified in the CMS-approved 1915(c) waiver application.

Each FI must:

- Be bonded and insured. The insured amount must exceed the total budgetary amount the FI is responsible for administering.
• Demonstrate the ability to manage budgets and perform all functions of the FI including all activities related to employment taxation, worker’s compensation, and state, local, and federal regulations.

• Demonstrate competence in managing budgets and performing other functions and responsibilities of a fiscal intermediary.

• Provide four basic areas of performance:
  ➢ Function as the employer agency for individuals directly employing workers to ensure compliance with payroll tax and insurance requirements;
  ➢ Ensure compliance with requirements related to management of public funds, the direct employment of workers by individuals, and contracting for other authorized supports and services;
  ➢ Facilitate successful implementation of the self-determination arrangements by monitoring the use of the budget and providing monthly budget status reports to each individual and ICO; and
  ➢ Offer supportive services to enable individuals to self-determine and direct the supports and services they need.

5.3.1. HOME DELIVERED MEALS

This service is the provision of one to two nutritious meals per day to individuals who are unable to care for their nutritional needs. This service must include and prioritize healthy meal choices that meet any established criteria under state or federal law. Meal options must meet individual preferences in relation to specific food items, portion size, dietary needs, and cultural and/or religious preferences. ICOs must follow the minimum operating standards for this service as provided by MDHHS.

Each ICO must have written eligibility criteria for persons receiving home delivered meals through the waiver which include, at a minimum:

• The individual must be unable to obtain food or prepare complete meals.
• The individual does not have an adult living at the same residence or in the vicinity that is able and willing to prepare all meals.
• The individual does not have a paid caregiver that is able and willing to prepare meals for the individual.
• The provider can appropriately meet the individual’s special dietary needs, and the meals available would not jeopardize the health of the individual.
• The individual must agree to be home when meals are delivered. For any unavoidable absence, the provider or ICO must be contacted. If the ICO is contacted, they must contact the provider.
5.3.J. NON-MEDICAL TRANSPORTATION

This service is offered to enable individuals to gain access to waiver and other community services, activities, and resources, specified by the Individual Integrated Care and Supports Plan (IICSP). Whenever possible, the ICO shall utilize family, neighbors, friends, or community agencies that can provide this service free of charge. Need for this service and details as to whom and how it will be provided should be discussed in the person-centered planning meeting and documented in the IICSP.

Direct service providers shall be a centrally organized transportation company or agency. Transportation may be provided by any of the following methods:

- **Demand/Response:** Characterized by scheduling of small vehicles to provide door-to-door or curb-to-curb service on demand. The provider may include a passenger assistance component and either or both of the following variations:
  - **Route Deviation Variation:** A normally fixed-route vehicle leaves the scheduled route upon request to pick up the individual.
  - **Flexible Routing Variation:** Providers constantly modify routes to accommodate service requests.

- **Public Transit:** Characterized by partial or full payment of the cost for an individual to use an available public transit system. (This can be either a fixed route or demand/response). The provider may include a passenger assistance component.

- **Volunteer:** Characterized by reimbursement of out-of-pocket expenses for individuals who transport individuals in their private vehicles. The provider may include a passenger assistance component.

- **Ambu-cab:** Characterized by a wheelchair-equipped van to provide door-to-door service on demand. The provider shall include a passenger assistance component.

Transportation vehicles must be properly licensed and registered by the State and must be covered with liability insurance. MI Health Link funds may not be used to purchase or lease vehicles for providing transportation services to waiver individuals. All paid drivers for transportation providers supported entirely or in part by MI Health Link funds shall be physically capable and willing to assist persons requiring help to and from and to get in and out of vehicles. The provider shall offer such assistance unless expressly prohibited by either a labor contract or insurance policy. The provider shall train all paid drivers for transportation programs supported entirely or in part by waiver funds to cope with medical emergencies, unless expressly prohibited by a labor contract or insurance policy. Each provider shall operate in compliance with P.A. 1 of 1985 regarding seat belt usage.

MI Health Link funds shall not be used to reimburse caregivers (paid or informal) to run errands for individuals when the individual does not accompany the driver of the vehicle.

5.3.K. PERSONAL EMERGENCY RESPONSE SYSTEM

For the definition of the Personal Emergency Response System (PERS) definition, refer to Personal Emergency Response System in the Supplemental Services subsection.
5.3.L. PREVENTIVE NURSING SERVICES

Preventive Nursing Services are covered on a part-time, intermittent (separated intervals of time) basis for an individual who generally requires nursing services for the management of a chronic illness or physical disorder in the individual’s home and are provided by a RN or a licensed practical nurse (LPN) under the supervision of a RN. Nursing services are for individuals who require more periodic or intermittent nursing than otherwise available for the purpose of preventive interventions to reduce the occurrence of adverse outcomes for the individual such as hospitalizations and nursing facility admissions. An individual using this service must demonstrate a need for observation and evaluation.

When the individual’s condition is unstable, could easily deteriorate, or when significant changes occur, the ICO covers nurse visits for observation and evaluation. The purpose of the observation and evaluation is to monitor the individual’s condition and report findings to the individual’s physician or other appropriate health care professional such as the ICO Care Coordinator to prevent additional decline, illness, or injury to the individual. The ICO Care Coordinator shall communicate with both the nurse providing this service and the individual’s health care professional to ensure the nursing needs of the individual are being addressed.

Individuals must meet at least one of the following criteria to qualify for this service:

- Be at high risk of developing skin ulcers, or have a history of resolved skin ulcers that could easily redevelop.
- Require professional monitoring of vital signs when changes may indicate the need for modifications to the medication regimen.
- Require professional monitoring or oversight of blood sugar levels, including individual-recorded blood sugar levels, to assist with effective pre-diabetes or diabetes management.
- Require professional assessment of the individual’s cognitive status or alertness and orientation to encourage optimal cognitive status and mental function or identify the need for modifications to the medication regimen.
- Require professional evaluation of the individual’s success with a prescribed exercise routine to ensure its effectiveness and identify the need for additional instruction or modifications when necessary.
- Require professional evaluation of the individual’s physical status to encourage optimal functioning and discourage adverse outcomes.
- Have a condition that is unstable, could easily deteriorate, or experience significant changes AND a lack of competent informal supports able to readily report life-threatening changes to the individual’s physician or other health care professional.

In addition to observation and evaluation, a nursing visit may also include, but is not limited to, one or more of the following nursing services:
- Administering prescribed medications that cannot be self-administered (as defined under Michigan Complied Law (MCL) 333.7103(1)).
- Setting up medications according to physician orders.
- Monitoring individual adherence to his/her medication regimen.
- Applying dressings that require prescribed medications and aseptic techniques.
- Providing refresher training to the individual or informal caregivers to ensure the use of proper techniques for health-related tasks such as diet, exercise regimens, body positioning, taking medications according to physician's orders, proper use of medical equipment, performing ADL, or safe ambulation within the home.

This service is limited to **no more than two hours per visit.**

Individuals receiving Private Duty Nursing services are not eligible to receive Preventive Nursing Services.

All providers must be licensed in the State of Michigan as a RN or LPN.

**5.3.M. PRIVATE DUTY NURSING**

Private Duty Nursing (PDN) services are skilled nursing interventions provided to an individual age 21 or older on an individual and continuous basis, **up to a maximum of 16 hours per day**, to meet the individual’s health needs directly related to the individual’s physical disability.

**Medical Criteria**

To be eligible for PDN services, the ICO must find the individual meets either Medical Criteria I or Medical Criteria II, and Medical Criteria III (see criteria below). Regardless of whether the individual meets Medical Criteria I or II, the individual must also meet Medical Criteria III.

- **Medical Criteria I** – The individual is dependent daily on technology-based medical equipment to sustain life. “Dependent daily on technology-based medical equipment” means:
  - Mechanical rate-dependent ventilation (four or more hours per day), or assisted rate dependent respiration (e.g., some models of Bi-PAP); or
  - Deep oral (past the tonsils) or tracheostomy suctioning eight or more times in a 24-hour period; or
  - Nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, associated with complex medical problems or medical fragility; or
  - Total parenteral nutrition (TPN) delivered via a central line, associated with complex medical problems or medical fragility; or
  - Continuous oxygen administration (eight or more hours per day), in combination with a pulse oximeter and a documented need for skilled nursing assessment, judgment,
and intervention in the rate of oxygen administration. This would not be met if oxygen adjustment is done only according to a written protocol with no skilled assessment, judgment or intervention required. Continuous use of oxygen therapy is a covered Medicaid benefit for individuals 21 years of age or older when tested at rest while breathing room air and the oxygen saturation rate is 88 percent or below, or the PO2 level is 55 mm HG or below.

- Medical Criteria II – Frequent episodes of medical instability within the past three to six months, requiring skilled nursing assessments, judgments, or interventions (as described in III below) as a result of a substantiated medical condition directly related to the physical disorder. Definitions:
  - “Frequent” means at least 12 episodes of medical instability related to the progressively debilitating physical disorder within the past six months, or at least six episodes of medical instability related to the progressively debilitating physical disorder within the past three months.
  - “Medical instability” means emergency medical treatment in a hospital emergency room or inpatient hospitalization related to the underlying progressively debilitating physical disorder.
  - “Emergency medical treatment” means covered inpatient and outpatient services that are furnished by a provider that is qualified to furnish such services and are needed to evaluate or stabilize an emergency medical condition.
  - “Emergency medical condition” means a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention would result in placing the health of the individual in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part.
  - “Directly related to the physical disorder” means an illness, diagnosis, physical impairment, or syndrome that is likely to continue indefinitely, and results in significant functional limitations in three or more ADL.
  - “Substantiated” means documented in the clinical or medical record, including the nursing notes.

- Medical Criteria III – The individual requires continuous skilled nursing care on a daily basis during the time when a licensed nurse is paid to provide services. Definitions:
  - “Continuous” means at least once every three hours throughout a 24-hour period, and when delayed interventions may result in further deterioration of health status, in loss of function or death, in acceleration of the chronic condition, or in a preventable acute episode. Equipment needs alone do not create the need for skilled nursing services.
  - “Skilled nursing” means assessments, judgments, interventions, and evaluations of interventions requiring the education, training, and experience of a licensed nurse. Skilled nursing care includes, but is not limited to:
    - Performing assessments to determine the basis for acting or a need for action, and documentation to support the frequency and scope of those decisions or actions;
♦ Managing mechanical rate-dependent ventilation or assisted rate-dependent respiration (e.g., some models of Bi-PAP) that is required by the individual four or more hours per day;

♦ Deep oral (past the tonsils) or tracheostomy suctioning;

♦ Injections when there is a regular or predicted schedule, or injections that are required as the situation demands (prn), but at least once per month (insulin administration is not considered a skilled nursing intervention);

♦ Nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, or is associated with complex medical problems or medical fragility;

♦ TPN delivered via a central line and care of the central line;

♦ Continuous oxygen administration (eight or more hours per day), in combination with a pulse oximeter, and a documented need for adjustments in the rate of oxygen administration requiring skilled nursing assessments, judgments and interventions. This would not be met if oxygen adjustment is done only according to a written protocol with no skilled assessment, judgment or intervention required. Continuous use of oxygen therapy is a covered Medicaid benefit for beneficiaries age 21 or older when tested at rest while breathing room air and the oxygen saturation rate is 88 percent or below, or the PO2 level is 55 mm HG or below;

♦ Monitoring fluid and electrolyte balances where imbalances may occur rapidly due to complex medical problems or medical fragility. Monitoring by a skilled nurse would include maintaining strict intake and output, monitoring skin for edema or dehydration, and watching for cardiac and respiratory signs and symptoms. Taking routine blood pressure and pulse once per shift that does not require any skilled assessment, judgment or intervention at least once every three hours during a 24-hour period, as documented in the nursing notes, would not be considered skilled nursing.
All nurses providing PDN to waiver individuals must maintain a current State of Michigan nursing license, and meet licensure requirements and standards according to Michigan laws found under MCL 333.17201-17242. PDN may include medication administration according to MCL 333.7103(1).

This service must be ordered by a physician, physician’s assistant, or nurse practitioner. The ICO is responsible for ensuring there is a physician order for the PDN services authorized. The physician may issue this order directly to the provider furnishing PDN services. However, the ICO is responsible for ensuring the PDN provider has a copy of these orders and delivers PDN services according to the orders. The ICO shall maintain a copy of the physician orders in the Care Bridge Record. The individual’s physician, physician’s assistant, or nurse practitioner must order PDN services and work in conjunction with the ICO and provider agency to ensure services are delivered according to that order.

Through a person-centered planning process, the ICO shall determine the amount, scope and duration of services provided. The direct service provider shall maintain close contact with the authorizing ICO to promptly report changes in each individual’s condition and/or treatment needs upon observation of such changes. The direct service provider shall send case notes to the care coordinator on a regular basis, preferably monthly, but no less than quarterly, to update the care coordinator on the condition of the individual.

Individuals receiving Preventive Nursing Services are not eligible to receive PDN services.

All PDN services authorized must be medically necessary as indicated through the assessment and meet the medical criteria described above.

5.3.N. RESPITE

5.3.N.1. RESPITE PROVIDED AT THE INDIVIDUAL’S HOME OR IN THE HOME OF ANOTHER PERSON

Respite services are provided on a short-term, intermittent basis to relieve the individual’s family or other primary caregiver(s) from daily stress and care demands during times when they are providing unpaid care. Relief needs of hourly or shift staff workers should be accommodated by staffing substitutions, plan adjustments, or location changes and not by respite care.

Respite services include:

- Attendant care (individual is not bed-bound), such as companionship, supervision, and/or assistance with toileting, eating, and ambulation.
- Basic care (individual may or may not be bed-bound), such as assistance with ADLs, a routine exercise regimen, and self-medication.

Members of an individual’s family who are not the individual’s regular caregiver may provide respite for the regular caregiver. However, the ICO shall not authorize funds to pay for services furnished to an individual by that person’s spouse. Family members who
provide respite services must meet the same standards as providers who are unrelated to the individual.

Respite services cannot be scheduled on a long term daily basis. Respite should be used on an intermittent basis to provide scheduled relief of informal caregivers. Respite is not intended to be provided on a continuous, long-term basis where it is a part of daily services that would enable an unpaid caregiver to work elsewhere full time. The costs of room and board are not included in payment for respite services.

5.3.N.2. RESPITE PROVIDED OUTSIDE OF THE HOME

Respite care services are provided on a short-term, intermittent basis to relieve the individual's family or other primary caregiver(s) from daily stress and care demands during times when they are providing unpaid care. Relief needs of hourly or shift staff workers should be accommodated by staffing substitutions, plan adjustments, or location changes and not by respite care.

Each out of home respite service provider must be a licensed group home as defined in MCL 400.701ff, which includes AFC homes and HFA. Respite may include the cost of room and board if the service is provided in a licensed AFC or licensed HFA.

Respite services include:

- Attendant care (individual is not bed-bound), such as companionship, supervision and/or assistance with toileting, eating, and ambulation.
- Basic care (individual may or may not be bed-bound), such as assistance with ADLs, a routine exercise regimen, and self-medication.

Out of home respite may be scheduled for several days in a row, depending upon the needs of the individual and the individual's caregivers.
SECTION 6 – CONTINUITY OF CARE

Individuals enrolled in the MI Health Link program must maintain their current Medicare and Medicaid providers, supports and services for the following timeframes after enrollment: Individuals have the right to continue to see providers who are not in the ICO’s network during the Continuity of Care period. Communication between the individual, providers, and the ICO is essential to ensure providers are identified so services can be provided and covered by the ICO. The ICO must work to bring individuals’ current providers into the plan’s network.

</tr>
</tbody>
</table>

The ICO is required to review Medicare and Medicaid utilization data provided by CMS and MDHHS to determine which providers have existing relationships with individuals. Continuity of care protection is automatic for providers which are verified through utilization data to meet the prior relationship requirement.
The individual must have a relationship with a provider to establish continuity of care. A relationship is deemed to exist in the following circumstances:

**Specialists:** The individual must have seen the specialist at least once within the 12 months prior to enrollment into an ICO for a nonemergency visit.

**Primary Care Provider:** The individual must have seen the primary care provider at least twice within the 12 months prior to enrollment into an ICO for a non-emergency visit.

**Other Covered Providers:** The individual must have received services from other providers within the past 12 months prior to enrollment into an ICO.

If the ICO cannot determine if a relationship exists based on the available data, the ICO shall ask the provider and individual to provide documentation of the visit from the medical record or proof of payment to establish the relationship. An attestation that a relationship exists is not sufficient.

The ICO must ask the individual about any upcoming appointments to ensure agreements are in place with out-of-network providers. If data is not available to establish relationship with the individual’s provider, the individual or his/her appointed/legal representative may request continuity of care. The individual’s out-of-network provider may also request continuity of care on behalf of the individual. Requests for continuity of care should be made by contacting the ICO’s member services department or the individual’s ICO Care Coordinator. Requests can be made verbally or in writing. When requesting continuity of care, the name of the provider, contact person, phone number, service type and appointment date, if applicable, should be shared with the ICO.

Generally, ICOS must start processing a request for continuity of care within five working days after the request is received. The ICO has a maximum of 30 days to complete the request. However, if the individual’s medical condition requires more immediate attention (e.g., an upcoming appointment); the ICO must complete the request within 15 days. If there is a risk of harm to the individual or rescheduling of the appointment would be required, the request must be completed within three days of the request. The ICO may verbally convey Continuity of Care approval with the requester and record such approval in the individual’s record.

If the criteria for the prior relationship as outlined above are satisfied, an out-of-network provider can be reimbursed retroactively for services provided without an approved continuity of care request as long as the provider submits the request for payment within 30 days of the first date of service.

The ICO must cover services during the continuity of care period for providers that do not have documented quality of care concerns that would cause the ICO to exclude the provider based on state or federal requirements.

**Pharmacy**

ICOs are required to maintain current prescriptions for medications for 180 days if medications are not on the ICO’s formulary unless directed otherwise by CMS and MDHHS. The individual can ask the ICO to make an exception to cover a drug that is not on the ICO’s formulary.

**Nursing Facilities**
Out-of-network nursing facilities must be offered Single Case Agreements by the ICO to continue to care for the individual through the life of the program if the nursing facility does not participate in the ICO’s network and the individual: 1) resides in the nursing facility at the time of enrollment; 2) has a family member or spouse that resides in the nursing facility; or 3) requires nursing facility care and resides in a retirement community that includes a nursing facility. This continuity of care protection is available as long as the individual resides in the nursing facility. Continuity of care in a nursing facility is automatic. The individual does not have to make a request for continuity of care. The ICO must refill prescriptions for individuals in a nursing facility for a minimum of 91 days and the ICO must refill the drug multiple times during the first 90 days of enrollment, as needed. This allows the prescriber time to change the drugs to those on the drug list or ask for an exception.

**Personal Care Providers**

The ICO must allow choice of personal care service providers, including non-financially responsible family members or friends, to provide the service if they meet the criteria to enroll in the ICO’s network.

The ICO may enter into an agreement for non-agency personal care providers when a permissible exclusion is identified through a background check. The ICO may allow for this exclusion if the individual is informed of the details of the permissible exclusion and agrees, in writing, to allow the person to provide personal care to the individual during the continuity of care period. During this time period, the individual can seek alternatives to receiving personal care services if the ICO does not continue the agreement beyond the required continuity of care period.

Under no circumstance must the ICO enter into an agreement if it is discovered the personal care services provider falls under the policy for mandatory exclusion from providing personal care services.

**Other Providers**

Continuity of care does not extend to DME providers or ancillary service providers (e.g. suppliers of medical supplies or laboratories). Although continuity of care does not extend to these types of providers, the ICO must still provide continuity of care for services and the ICO is responsible for finding an in-network provider to deliver services without disruption.
SECTION 7 – CARE COORDINATION, ASSESSMENT AND PERSON-CENTERED PLANNING

The MI Health Link program requires coordination of services for all individuals to ensure effective integration and coordination between providers of medical services and supplies, BH, SUD and/or I/DD, pharmacy, and LTSS. This requires coordination between the ICO and the Pre-paid Inpatient Health Plan (PIHP) or the LTSS entities, where applicable. The ICO shall contract with the PIHP to deliver Medicare BH, SUD and/or I/DD services to individuals. This contract and any other downstream contracts related to care coordination activities will be monitored by the CMS and MDHHS contract management team to ensure all delivery system requirements of MI Health Link are met and all individuals receive the appropriate care coordination services. To accomplish this, the ICO must:

- Develop and implement a strategy that uses a combination of initial screenings, assessments, referrals, administrative claims data, and other available information to help prioritize and determine the care coordination needs of each individual.
- Focus on providing services in the most integrated and least restrictive setting.
- Maintain flexibility to use innovative care delivery models and to provide a range of community-based services as a way to promote independent living and alternatives to high-cost institutionally based services.
- Exhaust the use of community-based services before utilizing institutional settings for LTSS.
- Wherever possible, include a person familiar with the needs, circumstances and preferences of the individual when the individual is unable to participate fully in or report accurately to the Integrated Care Team (ICT).
- Ensure that the individual has a primary care provider (PCP) appropriate to meet his or her needs and assist the individual in accessing services.

7.1 THE CARE BRIDGE

The care coordination model for MI Health Link is the Care Bridge, which includes both technology and people through the person-centered planning process. The ICO is required to utilize a care coordination platform supported by web-based technology that is discussed in this section and referred to as the Care Bridge.

The Care Bridge allows secure access to information and enables all individuals and members of the ICT to use and (where appropriate) update information. Through the electronic Care Bridge, the members of the individual’s ICT facilitate access to formal and informal supports and services identified in the individual’s Individual Integrated Care and Supports Plan (IICSP) developed through a Person-Centered Planning process.

The Care Bridge includes an electronic care coordination platform which will support an Integrated Care Bridge Record (ICBR) to facilitate timely and effective information flow between the members of the ICT. The electronic Care Coordination platform will include a mechanism to alert ICT members of emergency department use or inpatient admissions. The ICBR will allow ICO Care Coordinators, PIHP and LTSS coordinators, where applicable, and providers to post key updates and notify ICT members of changes.

This platform will be compliant with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and other relevant laws, and provide for the exchange of data in a standard format.
The approved electronic care coordination platform will generate and maintain an individualized individual record referred to as ICBR including:

- Current integrated condition list;
- Contact information for the ICO Care Coordinator and ICT members;
- Current medications list;
- The date of service and the name of the provider for the most recently provided services;
- Historical and current utilization and claims information;
- Historic Medicaid and Medicare utilization data: MDHHS will provide the ICO with access to the CareConnect360 (CC360) system to view and extract historic utilization data.
- MDHHS will initially provide the ICO with extract files containing historical data for all individuals for the previous 24 months. Updates thereafter are available on a monthly basis or by the frequency identified by the ICO.
- Initial screening, Assessments (Level I and Level II), nursing facility LOCD and Personal Care Assessment results;
- Service outcomes, including specialty provider reports, lab results, and emergency room visits;
- IICSP; and
- Notes and correspondence across provider settings.

7.2 HEALTH PROMOTION AND WELLNESS ACTIVITIES

The ICO must provide a range of health promotion and wellness informational activities for individuals, their family members, and other informal caregivers. The focus and content of this information must be relevant to the specific health status needs and high-risk behavior in the Medicare-Medicaid population. Interpreter services must be available for individuals who are not proficient in English. Examples of health promotion and wellness topics include, but are not limited to, the following:

- Chronic condition self-management;
- Smoking cessation;
- Nutrition; and,
- Prevention and treatment of alcohol and substance abuse.

7.3 INTEGRATED CARE TEAM (ICT)

Every individual shall have access to and input in the development of an ICT to ensure the integration of all the individual’s supports and services, including medical, behavioral, psychosocial, and LTSS. The ICT will be person-centered, respecting and incorporating the individual’s specific preferences and needs. The ICT will deliver services with transparency, individualization, accessibility, respect, linguistic and cultural competence, and dignity. The ICT will honor the individual’s choice about his/her level of participation and interaction with the ICT. This choice will be periodically revisited with the individual by the ICO Care Coordinator.
7.3.A. INTEGRATED CARE TEAM MEMBERS

The ICO Care Coordinator will lead the ICT. It will be the responsibility of the ICO Care Coordinator to set and lead ICT meetings as well as facilitate communication among ICT members. LTSS and PIHP Supports Coordinators will be members of ICTs (as applicable) to encourage communication and collaboration between ICOs, PIHPs and other providers. While the ICO Care Coordinator will be the ICT lead, the individual may request the LTSS or PIHP Supports Coordinator remain his/her main point of contact regarding the ICT.

ICT membership will include the individual and the individual’s chosen allies, ICO Care Coordinator, primary care physician, and LTSS Supports Coordinator or PIHP Supports Coordinator (as applicable). Additional membership on the ICT may vary depending on the changing needs of the individual. The ICT may also include the following persons as needed and available:

- Family caregivers and natural supports
- Primary care nurse care manager
- Specialty providers
- Personal care providers
- Hospital discharge planner
- Nursing facility representative
- Others as appropriate

7.3.B. INTEGRATED CARE TEAM RESPONSIBILITIES

The role of ICT is to work collaboratively with the individual to meet goals identified in the IICSP and ensure the best possible health care outcomes. The ICO Care Coordinator is responsible to ensure the completion of tasks listed below for the ICT. ICT members will:

- Ensure the IICSP is developed, implemented, and revised according to the person-centered planning process and the individual’s stated goals, including making whatever accommodations are appropriate for individuals whose disabilities create obstacles to full participation with the ICT.
- Participate in the Person-Centered Planning process at the individual’s discretion to develop the IICSP;
- Collaborate with other ICT members to ensure the Person-Centered Planning process is maintained;
- Assist the individual in meeting his/her goals;
- Monitor and ensure that their part of the IICSP is implemented in order to meet the individual’s goals;
- Update the ICBR as needed pertinent to the ICT member’s role on the ICT;
• Review assessment, test results and other pertinent information in the ICBR;
• Address transitions of care when a change between care settings occur;
• Ensure continuity of care requirements are met; and
• Monitor for issues related to quality of care and quality of life.

The operations of ICTs will vary depending on the needs and preferences of the individual. An individual with extensive service needs may warrant periodic meetings with all ICT members. An individual with less intense needs may warrant fewer meetings with selected members of the ICT. Communication among the ICT members will be maintained by the ICO Care Coordinator and other direct communication with ICT members.

The ICT will adhere to an individual's determination about the appropriate involvement of his/her medical providers and caregivers, according to HIPAA and other laws, and for individuals in SUD treatment, 42 C.F.R. Part 2.

7.4 ICO CARE COORDINATOR

ICO Care Coordinators must have the experience, qualifications and training including MDHHS required training appropriate to the needs of the individual, and the ICO must establish policies for appropriate assignment of ICO Care Coordinators.

ICO Care Coordinators must have knowledge of physical health, aging and loss, appropriate support services in the community, frequently used medications and their potential negative side-effects, depression, challenging behaviors, Alzheimer's disease and other disease-related dementias, behavioral health, substance use disorder, physical and developmental disabilities, issues related to accessing and using durable medical equipment as appropriate, available community services and public benefits, quality ratings and information about available options such as nursing facilities, applicable legal non-discrimination requirements such as the ADA, person-centered planning, cultural competency, and elder abuse and neglect.

The ICO Care Coordinator must be a Michigan:

• Licensed registered nurse;
• Licensed nurse practitioner;
• Licensed physician's assistant;
• Licensed Bachelor's prepared social worker;
• Limited license Master's prepared social worker; or
• Licensed Master's prepared social worker.

ICO Care Coordinator Training

The ICO Care Coordinator will participate in train-the-trainer Person-Centered Planning and Self-Determination educational opportunities offered by MDHHS. The ICO will be responsible for training any new ICO Care Coordinator staff. The ICO will report participation of its ICO Care Coordinators in the MDHHS and ICO trainings as required.
The ICO will participate, train and report on any other training required or offered by MDHHS or its
designee.

ICO Care Coordinator Responsibilities

The ICO Care Coordinator will be responsible for care coordination for each individual. The ICO Care
Coordinator will conduct the Level I Assessment, ensure the person-centered planning process is
complete, prepare the IICSP, coordinate care transitions, and lead the ICT.

The ICO Care Coordinator will be responsible to:

- Support an on-going person-centered planning process;
- Assess clinical risk and needs by conducting an assessment process that includes an Initial
  Screening, a Level I Assessment, and completion of or referral for a Level II Assessment (as
  appropriate);
- Facilitate timely access to primary care, specialty care, LTSS, BH, SUD, and I/DD services,
  medications, and other health services needed by the individual, including referrals to address
  any physical or cognitive barriers or referrals to the PIHP;
- Create and maintain an ICBR for each individual to manage communication and information
  regarding referrals, transitions, and care delivery;
- Facilitate communication among the individual’s providers through the use of the care
  coordination platform and other methods of communication including secure e-mail, fax,
  telephone, and written correspondence;
- Notify the ICT of the individual’s hospitalization (psychiatric or acute), and coordinate a discharge
  plan if applicable;
- Facilitate face-to-face meetings, conference calls, and other activities of the ICT as needed or
  requested by the individual;
- Facilitate direct communication between the provider and the individual or the individual’s
  authorized representative and/or family or informal supports as appropriate;
- Facilitate individual and family education;
- Coordinate and communicate, as applicable, with the PIHP Supports Coordinator and/or the LTSS
  Supports Coordinator to ensure timely, non-duplicative supports and services are provided;
- Develop, with the individual and ICT, following the person-centered planning process, an IICSP
  specific to individual needs and preferences, and monitor and update the IICSP at least annually
  or following a significant change in needs or other factors;
- Coordinate and make referrals to community resources (e.g., housing, home delivered meals,
  energy assistance programs) to meet IICSP goals;
- Perform ongoing care coordination;
- Monitor the implementation of the IICSP with the individual, including facilitating the individual’s
  evaluation of the process, progress and outcomes and identifying barriers and facilitate problem
  resolution and follow-up;
• Advocate with or on behalf of the individual, as needed, to ensure successful implementation of the IICSP;

• Support transitions in care when the individual moves between care settings including:
  – The ICO Care Coordinator will contact the individual once notified of an emergency room visit to review discharge orders, schedule follow-up appoints, review any medication changes, and evaluate the need for revising the IICSP to include additional supports and services to remain in or return to the community;
  – The ICO Care Coordinator will ensure immediate and continuous discharge planning, including electronic and verbal communication, with the individual and ICT members following an individual’s admission to a hospital or nursing facility. Discharge planning will ensure that necessary care, supports and services are in place in the community for the individual when discharged. This includes scheduling an outpatient appointment, ensuring the individual has all necessary medications or prescriptions upon discharge, and conducting follow-up with the individual and/or caregiver.
  – The ICO Care Coordinator shall inform the individual of his/her right to live in the most integrated setting, inform the individual of the availability of services necessary to support his/her choices, and record the home and community-based options and settings considered by the individual.
  – The Care Coordinator shall make every effort to ensure that home and community based services are in place upon hospital discharge to avoid unnecessary nursing facility placements. The ICO Care Coordinator shall be able to arrange for expedited assessments and other mechanisms to ensure prompt initiation of appropriate HCBS. If the individual is being discharged from a nursing facility or hospital, the Care Coordinator shall coordinate efforts with the nursing facility social worker, discharge planner, or other staff to ensure a smooth transition.
  – Evaluating Section Q of the Minimum Data Set (MDS) for individuals currently in a nursing facility and discussing options for returning to the community, revising the IICSP, and transitioning the individual to the most integrated setting.
  – The ICO Care Coordinator will inform the individual of his/her right to live in the most integrated setting, inform the individual of the availability of services necessary to support his/her choices, and record the home and community-based options and settings considered by the individual.
  – Engage in other activities or services needed to assist the individual in optimizing his/her health status, including assisting with self-management skills or techniques; health education; referrals to support groups, services, and advocacy agencies, as appropriate; and other modalities to improve health status;
  – Ensure the Medicaid eligibility redetermination process is completed timely to prevent the loss of benefits; and
  – If the individual is receiving services that require meeting the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD) standards, ensure through required Level I and/or Level II assessments that the individual continues to meet the criteria or transitions to services that do not require LOCD standards. The ICO Care Coordinator is required to conduct the LOCD assessment for individuals with identified long term care needs, and MDHHS will make final eligibility determinations, unless otherwise directed by the State and CMS.
Individual ICO Care Coordinator Assignments and Change Requests

- The ICO shall allow the individual or his/her authorized representative choice in ICO Care Coordinator.
- The ICO shall ensure every individual has an ICO Care Coordinator with the appropriate experience and qualifications based on the individual’s assigned risk level and individual needs (e.g., communication, cognitive, or other barriers).
- The ICO must have a process to ensure that an individual or his/her authorized representative is able to request a change in his/her ICO Care Coordinator at any time including a process for the transition from one ICO Care Coordinator to another.
- The ICO must establish policies for appropriate assignment of ICO Care Coordinators to align with the individual’s known or expressed cultural, religious and ethnic preferences by considering the knowledge and experience of the ICO Care Coordinator.

7.5 Coordination with PIHP and LTSS Supports Coordinators

The ICO Care Coordinator must collaborate with the applicable PIHP Supports Coordinator or identified behavioral health representative as defined in the contract between the ICO and the PIHP when:

- The individual has received services through a PIHP within the last 12 months, or
- A new individual requests, or is identified as having potential need for, BH, I/DD, or SUD services.

If the individual has need of LTSS, the ICO Care Coordinator will collaborate with the individual’s chosen LTSS Supports Coordinator when:

- The individual has received LTSS within the last 12 months, or
- A new individual requests or is identified as having potential need for LTSS.

7.5.A. LTSS Supports Coordinator

LTSS Supports Coordinator will be offered to all individuals who have needs for long term supports and services. The LTSS Supports Coordinator must be a Michigan:

- Licensed registered nurse;
- Licensed nurse practitioner;
- Licensed physician’s assistant;
- Licensed Bachelor’s prepared social worker;
- Limited license Master’s prepared social worker; or
- Licensed Master’s prepared social worker.

The LTSS Supports Coordinator must:

- Have knowledge of HCBS;
- Have completed a person-centered planning and person-centered direction training;
- Be culturally competent;
- Be able to provide information regarding the quality ratings and licensure status, if applicable, of available options;
- Be knowledgeable about risk factors and indicators of, and resources to respond to, abuse and neglect;
- Be familiar with applicable long term care facility licensing requirements and resources such as the long term care ombudsman program; and
- Have experience conducting LTSS needs assessments.

**LTSS Supports Coordinator Responsibilities**

The ICO will be responsible to provide, directly or contractually, the following LTSS Supports Coordination services:

- Support an on-going person-centered planning process;
- Assist the individual to take a lead role in the person-centered planning process;
- Provide information to the individual and ICT;
- Communicate and collaborate with the PIHP when BH, SUD, or I/DD needs are identified in the Level I Assessment;
- Participate in the assessment process as needed, including conducting the Level II Assessment specific to the individual’s needs;
- Participate on the individual’s ICT;
- Develop, with the individual and the ICT, an IICSP;
- Ensure optimal utilization of information and community supports;
- Arrange services as identified in the IICSP;
- Update the ICBR with current individual status information to manage communication and information flow regarding referrals, transitions, and care delivery;
- Monitor service implementation, service outcomes, and the individual’s satisfaction;
- Collaborate with the ICO Care Coordinator to assist the individual during transitions between care settings, including full consideration of all community options; and
- Advocate for the individual and support self-advocacy by the individual.

The ICO Care Coordinator may serve as the LTSS Supports Coordinator and complete the required functions of both roles.
7.6 ASSESSMENT TOOLS AND PROCESS

7.6.A. INDIVIDUAL STRATIFICATION

The ICO will develop and implement a strategy that uses a combination of initial screenings, assessments, assessment tools, functional assessments, referrals, administrative claims data, etc. to help prioritize and determine the level of Care Coordination needed by each individual.

The ICO must review program level data through CHAMPS and CareConnect360 or through file exacts provided by MDHHS as part of the initial screening process. CareConnect360 contains past Medicare and Medicaid utilization data from the MDHHS Data Warehouse. The ICO must review program level data and utilization data within 15 calendar days of enrollment.

Levels of stratification should be based on:

- Individual demographics, medical conditions, functional status, care patterns, resource utilization data; and
- The individual’s risk for long term care institutionalization or avoidable hospitalization.
- Individuals receiving services in the Habilitation Supports Waiver (HSW) or an individual transitioning to MI Health Link from the MI Choice waiver are automatically stratified as high risk.
- The ICO will determine the parameters and definitions for other individuals defined as high risk as well as definitions for low or moderate risk individuals.

The ICO may also choose to use existing predictive modeling software to support the screening and assessment requirements are not be required to do so.

7.6.B. INITIAL SCREENING

The purpose of the initial screening is to identify individuals with immediate needs in order to prioritize in-person Level I Assessments. The initial screening is a series of individual reported yes/no questions related to historical and current service usage. This screening is conducted via telephone when individuals call the enrollment broker to enroll in MI Health Link.

For those individuals passively enrolled into the ICO or those not completing the screen during the enrollment call, the ICO must make its best efforts to administer the initial screening within 15 calendar days of enrollment.

The ICO must document attempts in the ICBR to contact the individual for the purpose of scheduling or conducting the initial screening on different days of the week and at different times during the day, including times outside of standard work hours. If the initial contact is not made within 15 calendar days of enrollment, the ICO must continue efforts to contact the individual and document such in the ICBR.
The ICO will review the individual’s responses to the initial screening questions to identify current utilization of PIHP services, nursing facility care, community-based supports and services, and hospital care (inpatient or emergency room treatment).

The ICO must document the individual’s responses to the initial screening questions in the ICBR.

7.6.C. LEVEL I ASSESSMENTS

Each individual must receive, and be an active participant in (to the extent they desire), a timely Level I Assessment of medical, behavioral health, psychosocial, and LTSS needs completed by the ICO Care Coordinator unless one of the following circumstances applies:

- An individual declines an assessment. Should that occur, the ICO will honor the individual’s decision and will only contact the individual regarding an assessment if the individual requests one or a new assessment is needed according to the reassessment requirements.

- An individual is not reachable through the contact information provided by MDHHS or CMS. The ICO must document its attempts to reach the individual and what means of communication were used.
  - The ICO shall attempt to contact the individual at least five times within the first 45 days of enrollment. Attempts must be on different days of the week and at different times during the day, including times outside of standard work hours.
  - ICO shall use community resources where possible to identify and engage individuals.

- The ICO Care Coordinator will identify, through the Level I Assessment, individuals who may require institutional level of care or personal care services.

- The ICO will perform the Level I Assessment using its tool approved by MDHHS to assess each individual’s current health, welfare, functional needs and risks.

- The ICO will use the DSM V screening tool as part of or in addition to its Level I Assessment tool to identify Individuals with BH, SUD, and/or I/DD needs.

The ICO Care Coordinator may complete the Level I Assessment in lieu of the initial screening if the Level I Assessment is completed within 15 calendar days of enrollment.

Level 1 Domains

Level I Assessment domains must include, but not be limited to, the following:

- Individual preferences, strengths, and goals including Self-Determination arrangements;
- Natural supports, including family and community caregiver capacity, and social strengths and needs;
- Communication needs, including hearing, vision, cultural and linguistic needs and preferences, and individual health literacy;
Current services, including those covered by Medicare and Medicaid, community supports, and care transition needs;

Medical health risk, status, and history, including but not limited to medications (prescription, over-the-counter, and herbal supplements), frequent falls, and treatment for recurring urinary tract infections;

BH and SUD risk status; BH, SUD, and I/DD history and needs, including medications;

Nutritional strengths and needs;

ADL and IADL, including any assistive technology used or needed and immediate environmental or housing needs;

Cognitive strengths and needs;

LTSS;

Quality of life including physical, mental, and psycho-social well-being;

Discussion and education related to abuse, neglect, and exploitation; and

Advance Directives

The ICO may include State-approved domains as appropriate. Additional domains should be included in the ICO’s Level I Assessment tool when submitting the tool for approval by MDHHS.

Involvement in the Level I Assessment

The Level I Assessment will be completed by the ICO Care Coordinator (see qualifications above) employed or contracted with the ICO who is accountable for providing Care Coordination services. The ICO may delegate through contract with entities or individuals meeting the Care Coordinator qualifications for performance of Initial Screenings, Level I Assessments and LTSS Level II Assessments, as well as Care Coordination functions. The ICO retains responsibility and accountability for utilization management functions, appeals, and approval of services. The Care Coordinator role cannot be delegated through contract or other means to Long Term Supports and Services providers who are otherwise responsible for providing services to individuals, such as nursing facilities.

The ICO will include the appropriate PIHP or LTSS Supports Coordinator or nursing facility staff in conducting the Level I Assessment if the individual has been active in the PIHP or LTSS system during the previous 12 months or is currently residing in a nursing facility.

Family members or other individuals may also be included in the Level I Assessment process to the extent desired by the individual.

Level I Results and Referral

The ICO will use the results of the Level I Assessment to confirm the appropriate acuity or risk stratification level for individual Care Coordinator assignments. The Level I Assessment and the DSM-V screening tool for BH, SUD, I/DD, will be used to determine need for a Level II Assessment, referral for PIHP services, or development of the IICSP.
The ICO will make referrals according to the process identified in ICO/PIHP contract to the PIHP/BH system for individuals identified as having BH, SUD, and/or I/DD needs.

The PIHP will conduct in person or adopt current Level I Assessments for individuals identified as receiving services from the Habilitation Supports Waiver and/or the Specialty Services and Supports Program. The PIHP will conduct a telephonic screen using the MDHHS approved tool to determine:

- If the individual has mild to moderate needs that can be met through referral for additional services; or
- If the individual has needs that require the Level II Assessment.

The PIHP will coordinate service referrals to ICO or PIHP network providers or conduct further assessment as needed. The PIHP will document the results from the telephonic screen and referral in the ICBR.

The ICO Care Coordinator is responsible for ensuring completion of further assessment for individuals with medically complex conditions. The ICO will coordinate with the primary care provider to ensure that further follow-up relevant to these needs is provided to the individual.

The individual will continue to receive any services in any existing care plan prior to the Level I Assessment. The ICO will adhere to all transition requirements for services, as outlined in the Continuity of Care section and any other documentation provided by CMS or MDHHS.

Level I Assessments will be documented in the ICBR and results will be used in the development of the IICSP.

**Timing of Level I Assessments**

Level I Assessments will be completed within 45 calendar days of enrollment. ICOs approved by CMS and MDHHS to conduct early Level I Assessment may start the assessment no earlier than 20 days before the enrollment effective date. Early assessment does not impact the time frames for completing other assessments. Other Assessments cannot be completed before the enrollment effective date. Individuals identified with immediate needs or as having high risk should have Level I Assessments completed earlier than 45 calendar days from enrollment, as appropriate.

**In-person Level I Assessments**

The ICO Care Coordinator is encouraged to conduct the Level I Assessment in person. Individuals identified with immediate needs or as having high risk will have assessments completed in person.

**Locating Individuals**

The ICO shall identify individuals through referrals, transition information, service authorizations, alerts, memos, assessment results, and from families, caregivers, providers, community organizations and ICO personnel. The ICO shall notify the primary
care provider (PCP) of an individual who has not completed a Level I Assessment within the time period set forth above and whom the ICO has been unable to contact. The ICO shall encourage the PCPs to conduct outreach to these individuals and to schedule visits. The ICO shall collaborate with clinics, hospitals, or urgent care centers to identify individual contact information for individuals the ICO has not been able to contact.

7.6.D. TRIGGERS FROM THE LEVEL I ASSESSMENT

Michigan Medicaid Nursing Facility Level of Care Determination (LOCD)

The Michigan Medicaid Nursing Facility Level of Care Determination tool must be conducted for all individuals according to the Michigan Medicaid Nursing Facility Level of Care Determination requirements in the Medicaid policy and additional guidance provided by MDHHS. For the MI Health Link program only, the Nursing Facility Level of Care Exception Review criteria will be applied at the time the LOCD is conducted for the individual if the individual does not meet LOCD criteria under Doors one through seven.

PIHP Telephonic Screen

The ICO shall refer individuals identified in the Level I screen as having BH, SUD or I/DD needs to the PIHP for additional assessment. Of this population, those individuals without a known history of PIHP services will receive a telephonic screen to determine service needs. The PIHP will determine if the individual has mild to moderate needs which can be addressed through additional assessment or referral to providers (PIHP or ICO). For all other individuals, the PIHP will complete the appropriate Level II assessment. The PIHP has flexibility to perform the telephonic screening function within the current intake system as long as identification of needs is completed using the prescribed tool.

7.6.E. LEVEL II ASSESSMENT

The ICO Care Coordinator will collaborate with the PIHP to ensure that the Level II Assessment is conducted for individuals identified through the telephonic screen as needing referral to the PIHP for Level II Assessment. The ICO Care Coordinator will ensure that the Level II Assessment is conducted for individuals demonstrating LTSS needs identified in the Level I Assessment.

Level II assessments must be completed using the tools approved by MDHHS.

Qualifications for Completing Level II Assessment

Level II Assessments will be conducted by professionally knowledgeable and trained LTSS Supports Coordinators or PIHP Supports Coordinators or behavioral health case managers, who have experience working with the population. Each Level II Assessment tool has specific qualifications for the person completing the tool.

Timing of Level II Assessments

Any Level II Assessment completed prior to enrollment by the PIHP Supports Coordinator, a trained LTSS Supports Coordinator or a behavioral health case manager
may be adopted if it is not past the reassessment date. The Level II Assessment should be reviewed to determine if it is complete, accurate and appropriate for the individual’s current status. Level II Assessments will be conducted in person within 15 calendar days of completion of the Level I Assessment. Level II Assessments will be documented in the ICBR and results will be used in the development of the IICSP.

7.6.F. REASSESSMENTS

7.6.F.1. LEVEL I REASSESSMENTS

The ICO is responsible to ensure that an annual Level I reassessment for each individual (including analysis of medical, LTSS, BH, and I/DD utilization data) is completed within 12 months of the last Level I Assessment. If prior to the annual reassessment, the individual experiences a major change impacting health status, the ICO is required to reassess the individual and review and revise the IICSP with members of the ICT as needed. The ICO must ensure that a reassessment and an IICSP update are performed:

- As warranted by the individual’s condition but at least every 12 months after the Level I Assessment completion date;
- When there is a change in the individual’s health status or needs;
- As requested by the individual, his/her caregiver or authorized representative, or his/her provider; and
- Upon any of the following trigger events:
  - A hospital admission;
  - Transition between care settings;
  - Change in functional status;
  - Loss or change in circumstances of a caregiver so that the individual supports or services are affected;
  - Change in diagnosis; and
  - As requested by a member of the ICT who observes a change that requires further investigation.

The ICO will analyze utilization data of all individuals monthly to identify acuity and risk level changes. As acuity and risk levels change, reassessments will be completed as necessary and IICSP and interventions updated and documented in the ICBR.

The ICO is responsible to complete a reassessment as often as desired by the individual and update the IICSP with members of the ICT as needed. The ICO is encouraged to conduct reassessments in person.

7.6.F.2. LEVEL II REASSESSMENTS

Level II reassessments will be completed according to the reassessment timeframe of each assessment tool utilized. For assessments adopted at the time of enrollment, the next assessment date will follow the annual scheduled described above for each tool.
unless the individual has a significant change of conditioning requiring a new assessment.

For individuals receiving nursing facility level of care services, the reassessment must confirm that the individual continues to meet the Michigan Medicaid Nursing Facility LOCD standards. If the standards are not met, a new LOCD tool must be completed to allow the individual rights to an appeal. The ICO will initiate planning for transitioning the individual to more appropriate supports and services. Reassessments will be documented in the ICBR and results will be used in the development of the IICSP.

7.7 CARE PLANNING

Individual Integrated Care and Supports Plan (IICSP)

The ICO Care Coordinator, individual, providers, and other ICT members develop a comprehensive, person-centered, written IICSP for each individual. The person-centered planning process must be conducted in-person unless the individual chooses otherwise. The individual may choose to participate in person-centered planning to the extent he/she desires.

Every individual must have a IICSP. The IICSP should be developed based on the outcome of the person-centered planning meeting unless the individual chooses not to participate and the refusal to participate is documented in the IICSP and ICBR. At a minimum the ICO Care Coordinator or Supports Coordinator must provide his/her contact information to the individual and re-visit the opportunity to participate in person-centered planning and development of the IICSP at the time of reassessment, a change of condition, or upon the individual’s request.

The ICO must complete the initial IICSP within 90 calendar days of enrollment. Existing person-centered service plans or plans of care may be incorporated into the IICSP. The ICO must review the adopted plan with the individual to determine if revisions are necessary to address the individual’s goals and meet the individual’s needs. The IICSP must be contained in the ICBR and shared with the individual and the ICT.

The ICO must discuss advance directives with the individual including the choice to execute a directive, its incorporation in the IICSP, and assurance of provider knowledge of the individual’s directive.

The IICSP must:

- Focus on supporting the individual to achieve personally defined goals in the most integrated setting;
- Be developed following MDHHS principles for person-centered planning;
- Include the individual’s preferences for care, services, and supports;
- Include the individual’s prioritized list of concerns, goals and objectives, and strengths;
- Include specific providers, supports and services including amount, scope, and duration;
- Include a summary of the individual’s health status;
- Include the plan for addressing concerns or goals and measures for achieving the goals;
- Include person(s) responsible for specific interventions, monitoring, and reassessment; and
• Include the due date for the interventions and reassessment.

**IICSP Monitoring**

The ICO will review the individual’s IICSP to ensure the IICSP continues to meet the individual’s needs and is updated accordingly.

• The ICO must review IICSPs of high-risk individuals least every 30 calendar days.
• The ICO must review IICSPs of moderate-risk individuals at least every 90 calendar days.
• The ICO must review IICSPs of low-risk individuals at least every 180 calendar days.

The ICO will make contact with the individual to inquire if the IICSP continues to meet the individual’s needs. This contact may be telephonic, unless in-person contact is requested by the individual. The ICO must update the individual’s IICSP at least annually and more frequently if conditions warrant, or if an individual requests a change.
SECTION 8 – CRITICAL INCIDENT REPORTING

The ICO must report critical incidents to MDHHS and other authorities as required by CMS and the State.

8.1 TYPES OF CRITICAL INCIDENTS THAT NEED TO BE REPORTED

ICOs must report the following:

- Exploitation
- Illegal activity in the home
- Medication Errors
- Neglect
- Physical Abuse
- Provider no shows
- Restraints, Seclusion, or restrictive interventions
- Sexual Abuse
- Suspicious or Unexpected Death
- Theft
- Verbal Abuse
- Worker consuming drugs or alcohol on the job
SECTION 9 – MI HEALTH LINK HCBS WAIVER

The MI Health Link HCBS waiver offers home and community-based services to allow MI Health Link individuals to remain in the community instead of an institution. MI Health Link individuals who require services through this waiver must apply to MDHHS and be approved for enrollment. ICOs or their subcontractors, according to a contractual agreement, must submit an application to MDHHS for review and approval. Waiver eligibility must be re-determined on an annual basis.

Waiver enrollment is limited to a certain number of individuals that has been approved by CMS.

9.1 APPLICATION PROCESS

When a MI Health Link individual is interested in participating in the MI Health Link HCBS waiver, the ICO must submit an application packet to MDHHS for review and approval prior to an individual participating in the waiver. Applications may be submitted to MDHHS electronically via the Waiver Support Application system or via hard copy paper format using U.S. Mail, United Postal Service, FedEx, or fax as directed by MDHHS.

The ICO will be notified by MDHHS of the outcome of the application review, approval, or rejection via telephone, email, U.S. Mail, or the electronic Waiver Support Application system.

9.2 PERSON-CENTERED PLANNING

The person-centered planning process and IICSP for MI Health Link HCBS waiver individuals must be compliant with the Home and Community-Based Services (HCBS) Final Rule (CMS-2249F; CMS-2296-F) that was released by CMS on January 16, 2014. At a minimum, the IICSP must include the following components:

- The ICO must develop the IICSP before providing services.
- The individual must approve of all services in the service plan.
- The ICO must document individual approval and participation on the IICSP, including:
  - Individual’s preferences for care, services, supports, residential settings, and non-residential settings
  - Supports and services options that were discussed with the individual, and his/her (or legal representative’s) choice of those services and providers
  - When the individual selects controlled residential settings such as licensed AFC or HFA, the following must be included in the IICSP
    - The chosen setting
    - The individual’s resources
    - Whether or not the individual chooses to have a roommate as well as any specific preferences for roommates, bathroom schedules, etc.
    - Preference for engaging in community activities outside the home, and whether or not the individual needs assistance with arranging transportation, finding work, or otherwise getting involved in the community outside the home and how to make that happen
♦ Personal safety risks, and any interventions, that may affect the individual’s ability to engage in community activities outside the home without supervision

♦ Any modifications to existing policy and procedure and home and community-based setting requirements (including HCBS Final Rule) at the home to accommodate an individual’s assessed needs; indicate established timeframes for periodic review of these modifications

- Individual’s health and safety risks
- Individual’s prioritized list of concerns, goals and objectives, strengths
- Summary of the individual’s health status
- The plan for addressing concerns or goals, actions for achieving the goals, and specific providers, supports and services including amount, scope and duration
  - The individual’s (or legal representative’s) rights and choices of specific providers (and alternative providers, if necessary)
  - A contingency (backup) plan for providers in the event of unscheduled absence of a caregiver, severe weather, or other emergencies
    - Person(s) responsible for specific monitoring, reassessment, and evaluation of health and well-being outcomes
    - Individual’s informed consent
    - Due date for interventions and reassessment

The IICSP clearly identifies the types of services needed from both paid and non-paid providers of supports and services. The amount (units), frequency, and duration of each waiver service to be provided are included in the IICSP. The individual chooses the supports and services that best meet his/her needs and whether to use the option to self-direct applicable services or rely on a ICO Care Coordinator and/or LTSS Supports Coordinator to ensure the services are implemented and provided according to the IICSP. When an individual chooses to participate in arrangements that support self-determination, information, support and training are provided by the ICO Care Coordinator and/or LTSS Supports Coordinator and others identified in the IICSP and according to the Self-Determination Implementation Technical Advisory. When an individual chooses not to participate in self-determination, the ICO Care Coordinator or LTSS Supports Coordinator ensures that supports and services are implemented as planned. The ICO Care Coordinator and/or LTSS Supports Coordinators, as applicable, oversee the coordination of State Plan and waiver services included in the IICSP. This oversight ensures that waiver services in the IICSP are not duplicative of similar State Plan services available to or received by the individual.

9.3 Home and Community-Based Residential and Non-Residential Settings

The HCBS Final Rule (CMS-2249F; CMS-2296-F) applies to 1915(c) waiver programs. The ICO has been provided with the HCBS Final Rule Federal Register, CMS webinars, and other information regarding the rule. The ICO, and its subcontractors as appropriate, must be familiar with all aspects of the HCBS Final Rule as it applies to the MI Health Link HCBS waiver. All residential settings in which MI Health Link HCBS waiver individuals live must comply with the requirements of the HCBS Final Rule. Similarly, non-residential settings, such as Adult Day Program settings, must comply with the HCBS Final Rule. Residential and non-residential settings must be immediately compliant with the HCBS Final Rule for the
MI Health Link program. This compliance will be assessed prior to the individual’s enrollment in the waiver. The ICO must utilize the standard statewide Provider Survey tool produced by MDHHS, and this survey must be conducted in-person with the provider and as directed otherwise by MDHHS. Licensed settings used for the Respite service do not need to be assessed unless the individual stays in the setting for more than 30 days.

9.4 Self-Determination

Self-Determination provides MI Health Link HCBS waiver individuals the option to direct and control their own waiver services. For those MI Health Link HCBS waiver individuals who choose to participate in arrangements that support self-determination, the individual (or chosen representative(s)) has decision-making authority over providers of waiver services, including:

- Recruiting staff
- Referring staff to an agency for hiring
- Hiring staff
- Verifying staff qualifications
- Obtaining criminal history review of staff
- Specifying additional service or staff qualifications based on the individual’s needs and preferences so long as such qualifications comply with those described in the 1915(c) waiver application approved by CMS, and any additional guidance provided by MDHHS
- Specifying how services are to be provided and determining staff duties consistent with the service guidelines as indicated in the CMS-approved waiver application and additional guidance provided by MDHHS
- Determining staff wages and benefits, subject to State and federal limits if applicable
- Scheduling staff and the provision of services
- Orienting and instructing staff in duties
- Supervising staff
- Evaluating staff performance
- Verifying time worked by staff and approving timesheets
- Discharging staff from providing services
- Reallocation of funds among services included in the individual’s budget
- Identifying service providers and referring for provider enrollment
- Substituting service providers
- Reviewing and approving provider invoices for services rendered

Budget development for individuals using arrangements that support self-determination occurs during the person-centered planning process and is intended to involve any persons chosen by the individual. Planning for the individual’s IICSP precedes the development of the individual’s budget so that needs and preferences can be accounted for without arbitrarily restricting options and preferences due to cost considerations. An individual’s budget is not authorized until the individual and the ICO have agreed to
the amount and its use. In the event that the individual is not satisfied with the authorized budget, he/she may reconvene the person-centered planning process. Fiscal Intermediary services are available through the waiver to help individuals more fully exercise control over their services.

At any time, the individual may modify or terminate the arrangements that support self-determination.

The individual, his/her chosen allies, the ICO Care Coordinator and LTSS Supports Coordinator must all work together to identify challenges and address problems that may be a barrier to a successful self-determination arrangement. The decision of an individual to terminate participation in self-determination does not alter the supports and services identified in the IICSP. When the individual no longer wishes to participate in self-determination, the ICO must assume responsibility for ensuring the provision of those services through its network of contracted provider agencies while still maintaining and honoring the individual’s choice of providers to extent possible.

An ICO may terminate self-determination for an individual when problems arise due to the individual’s inability to effectively direct supports and services. Prior to terminating a self-determination agreement (unless it is not feasible), the ICO informs the individual in writing of the issues that have led to the decision to terminate the arrangement. The ICO will continue efforts to resolve the issues that led to the termination.

9.5 WAIVER SUPPORT APPLICATION SYSTEM

The ICO must utilize the waiver management database in the Waiver Support Application (WSA) system for anything related to MI Health Link HCBS Waiver enrollments, application submission, slot management, and disenrollments. The ICO is required to submit a list of users for this system, and the ICO must keep the list updated on a regular basis as staff come onboard or leave. When approved users leave the organization, the organization must notify the appropriate person as directed by MDHHS.
SECTION 10 – CRIMINAL HISTORY REVIEWS

Each ICO and direct provider of home-based services must conduct a criminal history review through the Michigan State Police (ICHAT), at a minimum, for any paid or volunteer individuals who will be entering the individual’s residence. The ICO and direct provider must have completed reference and criminal history reviews before authorizing the person providing services in an individual’s residence. At a minimum, the scope of the reference and criminal history investigation is statewide.

ICOs and MDHHS will conduct annual reviews to ensure mandatory criminal history reviews have been conducted in compliance with direction given by MDHHS or otherwise required by federal and state law, policy or operating standards.
SECTION 11 – USE OF RESTRAINTS, SECLUSION, AND RESTRICTIVE INTERVENTIONS

Providers are prohibited from using methods of seclusion, restraint, and/or other restrictive interventions. MDHHS will conduct site reviews to ensure these methods are not used. ICO Care Coordinators and LTSS Supports Coordinators, as applicable, have the primary responsibility for identifying and addressing the use of seclusion, restraints, and/or restrictive interventions.
**SECTION 12 – PROVIDER PARTICIPATION**

Providers have the opportunity to participate in MI Health Link by joining the provider networks of the ICOs. ICOs are encouraged to contract with existing service providers for individuals eligible for and enrolling in the program to ensure continuity of care. Likewise, service providers are encouraged to participate in ICO networks to provide choice, continuity of care and high quality service. The ICO will be responsible for authorizing and paying for Medicare and Medicaid services. Additional information regarding how providers may participate in MI Health Link can be found on the MI Health Link website. (Refer to the Directory Appendix for website information.)
SECTION 13 – MEDICAID POLICY

Current and future Medicaid policies are applicable to the Medicaid portion of the MI Health Link benefit package unless otherwise specified in this chapter or other policies or guidance.
SECTION 14 – QUALITY ASSURANCE

ICOs and PIHPs, as applicable, must comply with requirements set forth in the three-way contract, MI Health Link waiver applications approved by CMS, any other supporting documentation, and the contracts between the ICOs and PIHPs.
SECTION 15 – APPEALS

The three-way contract establishes individual notice and appeal rights that must be adhered to when any grievable or adverse action is taken by the ICO or contracted entities that would fall under the grievance or appeals processes available to individuals through Medicare and Medicaid guidelines.
SECTION 16 – OMBUDSMAN

ICOs and providers must work with the MI Health Link Ombudsman to resolve enrollment and service issues. ICOs must provide the Ombudsman contact information in their member materials.
NURSING FACILITY

This chapter is comprised of three parts:

The **COVERAGES** portion of the chapter outlines nursing facility requirements for beneficiary eligibility and admission, for providing services, and for informing beneficiaries of their rights and responsibilities.

The **SURVEY, CERTIFICATION & ENFORCEMENT APPENDIX** includes information regarding Medicaid certification of nursing facilities, staff certification, the survey process, and enforcement remedies.

The **COST REPORTING & REIMBURSEMENT APPENDIX** contains Medicaid policy pertaining to nursing facility ownership, reimbursement, costs, and financial reporting.

SECTION 1 – GENERAL INFORMATION

This chapter discusses Medicaid nursing facility coverage which is intended to assist beneficiaries in attaining or maintaining the highest practical physical, mental, and psychosocial well-being and maximize independence and decision-making. The chapter outlines nursing facility requirements for beneficiary eligibility and admission, for providing services, and for informing beneficiaries of their rights and responsibilities.

Nursing facilities provide services to many of the state’s most vulnerable citizens. Medicaid, as the primary payer for beneficiaries who reside in nursing facilities, adheres to all State and Federal regulations that govern care provided in these facilities. Governing regulations include, but are not limited to:

- Americans with Disabilities Act (ADA)
- 42 CFR §431, §438, §440, §441, §448, §483, §485, §488
- State Medicaid Operations Manual
- Medicare Catastrophic Coverage Act of 1988, Public Law 100-360
- Certificate of Need Commission Act 368 of 1978, as amended – Part 222
- Social Security Act
- Michigan Medicaid State Plan

Only those services covered by the Medicaid Program, as outlined in this chapter, are reimbursable. Included is a full description of:

- **Covered Services:**
  - Services covered by the facility’s per diem rate; and
  - Ancillary services that must be billed separately by the service provider.

- **Non-Covered Services** that the beneficiary may purchase with their patient-pay amount.

A Medicaid-certified nursing facility is defined as a nursing home, county medical care facility, or hospital long-term care unit with Medicaid certification. Also included are swing beds as defined in the Federal State Operations Manual (SOM) and/or State Medicaid Policy.

Beneficiary is defined as a Medicaid beneficiary, or a person legally sanctioned to make medical decisions on his behalf (i.e., guardian, conservator, activated Durable Power of Attorney).

Resident is defined as a nursing facility resident (irrespective of payer source) or a person legally sanctioned to make medical decisions on his behalf (i.e., guardian, conservator, activated Durable Power of Attorney).

Individual, as used in this chapter, means any person.
SECTION 2 – MEDICAID HEALTH PLAN

The Medicaid Health Plan (MHP) is responsible for restorative or rehabilitative care in a nursing facility up to 45 days in a rolling 12-month period. If nursing facility services will exceed this coverage, the health plan may initiate the disenrollment process by submitting the Request for Disenrollment Long Term Care form (MSA-2007). The nursing facility may bill Medicaid after the disenrollment is processed.

Beneficiaries who reside in a nursing facility are excluded from subsequent enrollment in a MHP. However, due to administrative error, a beneficiary may occasionally be enrolled in a MHP. Disenrollment of the beneficiary from the MHP due to an administrative error may be requested by either the nursing facility or MHP. For a nursing facility to request disenrollment, the facility must submit a Nursing Facility Request to Disenroll From Medicaid Health Plan form (DCH-1185) along with a copy of the Facility Admission Notice form (MSA-2565-C). The completed forms must be mailed or faxed to the Michigan Department of Health and Human Services (MDHHS) Enrollment Services Section as indicated on the DCH-1185. A MHP uses the Request for Administrative Disenrollment form (MSA-2008) for disenrollment.

The nursing facility or MHP must submit a disenrollment request to MDHHS within six months of the administrative error occurrence. Disenrollment requests that exceed six months from the date of occurrence will be retroactive to six months from receipt of the request.
SECTION 3 – QUALITY

MDHHS is committed to a quality long-term care system that supports people with long-term care needs, regardless of the setting in which the individual receives those services, including nursing facilities, supported living settings, and their own home. Medicaid supports a system that moves away from the traditional medical model for care to one of enhanced beneficiary participation. Nursing facilities with Medicaid certification are expected to assess and plan care with resident participation and to provide services in ways that promote and support person-centered planning and quality service delivery.

3.1 QUALITY INDICATORS

Quality is indicated by the following components:

- Regular, ongoing, and systematic monitoring and revision of individualized plans of care, progress and outcomes by the beneficiary and his support system. In order to participate, beneficiaries may require support, such as regular opportunities and assistance in reviewing key considerations. Planning results should be documented in ways that are meaningful to the beneficiary and useful to people with responsibilities for implementing the plan.
- Risk and safety concerns are considered and plans developed to minimize risk of harm while promoting independence and safety.
- Behavioral interventions and medication management are used only when necessary, and are appropriately managed and monitored.
- Care coordination must support the individual’s participation in his care.
- Support for personal responsibility and community relationships that avoid the unintended and detrimental consequences of organizational involvement. Facilities should minimize the disempowerment of beneficiaries or displacement of family members by professional decision-makers and/or service providers, assume the beneficiary is competent and capable of participating in his relationships and the community, and provide assistance and support only when there are unmet needs.
- Individual freedom to exercise civic rights and decision-making authority exists to the maximum extent possible.
- Individuals are free to exercise their due process and grievance rights, and are provided the information necessary to do so.
- Individuals and their support system express satisfaction and the care leads to positive outcomes.
- Diverse cultural and ethnic backgrounds are supported.
- A system of continuous quality improvement that includes input from residents and families.

Current models that utilize person-centered planning and introduce the systems/culture change to support ongoing quality in nursing facilities include, among others, The Eden Alternative™, Wellspring™, and Gentlecare™.
3.2 Quality of Life

Nursing facilities must provide services for residents in a manner and in an environment that promotes maintenance or enhancement of the resident’s quality of life. Elements of quality of life include dignity, self-determination, participation in community life and in other activities, participation in resident and family groups, and accommodation of needs through the end of life. Quality of life is defined, measured, and evaluated by residents and their support systems, and may include quality of care outcomes.

3.3 Quality of Care

Nursing facilities must meet the needs of residents in compliance with State and Federal laws, rules, codes, and established clinical guidelines and practices. (Refer to the Nursing Facility section of the Directory Appendix for specific website links for Best Practice Information.)

Complaints regarding the quality of care in any Michigan nursing facility can be made to the Health Facility Complaint Line. (Refer to the Nursing Facility Section of the Directory Appendix for contact information.)
SECTION 4 – BENEFICIARY RIGHTS

All nursing facility residents have the right to:

- A dignified existence;
- Self-determination; and
- Communication with, and access to, persons and services inside and outside the facility.

In accordance with Federal and State rules and regulations, nursing facilities are required to protect and promote beneficiary rights. These rights include, but are not limited to:

- The right to exercise their rights as citizens of the United States;
- The right to be free of interference, coercion, discrimination, and reprisal from the facility in exercising their rights;
- The right to receive notice of their rights, rules and regulations, both orally and in writing, in a language that the resident understands;
- Access to their medical records and information;

(In accordance with Federal regulations, a beneficiary [or his representative] must be allowed to inspect his records within 24 hours [excluding weekends and holidays] of such request. Also, in accordance with Michigan Public Health Code, a beneficiary [or his representative] is entitled to receive and examine an explanation of his bill or an itemized statement setting forth services paid for and services rendered, regardless of the source of payment.)

- The right to be informed about their health status;
- The right to refuse treatment;
- The right to non-discrimination, including non-discrimination based on payment source;
- Notification of covered and noncovered services, and any additional costs;
- Notification of any changes in room, policies, physician, health status, and treatment;
- Protection and appropriate management of resident funds;
- The right to covered services;
- Notification of transfer or relocation;
- The right to pain and symptom management at the end of life; and
- The right to re-admission to the nursing facility and to have their bed held during an emergency hospital stay, as defined in the Holding a Bed subsection of this chapter.

In general, beneficiaries cannot be charged for Medicaid-covered services, except for approved patient-pay amounts, copays or deductibles, whether they are enrolled as a fee-for-service beneficiary, MDHHS is paying their Health Maintenance Organization (HMO) premium to a contracted health plan, or services are provided under Community Mental Health Services Program (CMHSP) or Substance Abuse Coordinating Agency (CA) capitation. However, beneficiaries may be charged if they choose to obtain a
service from an out-of-network or non-participating provider, as long as they have prior knowledge they
will be obligated to pay the entire charge and, with that knowledge, they request the service.

Medicaid beneficiaries may not be charged the difference between the provider's charge and the Medicaid
payment for a service, nor can they be charged for missed appointments.

Medicaid beneficiaries cannot be charged for the copying of medical records for the purpose of providing
them to another health care provider.
SECTION 5 – BENEFICIARY ELIGIBILITY AND ADMISSION PROCESS

5.1 NURSING FACILITY ELIGIBILITY

There are five components that determine beneficiary eligibility and Medicaid nursing facility reimbursement.

- Verification of financial Medicaid eligibility
- PASARR Level I screening
- Physician-written order for nursing facility services
- A determination of medical/functional eligibility based upon a web-based version of the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD) that was conducted online at the time the resident was either Medicaid eligible or Medicaid pending and conducted within the timeframes specified in the Michigan Medicaid Nursing Facility Level of Care Determination subsection of this chapter.
- Computer-generated Freedom of Choice (FOC) form signed and dated by the beneficiary or the beneficiary's representative.

These components are defined below.

5.1.A. VERIFICATION OF FINANCIAL MEDICAID ELIGIBILITY

Medicaid reimbursement for nursing facility services for an individual requires a determination of Medicaid financial eligibility for that individual by MDHHS. When a Medicaid financially-eligible beneficiary is admitted to a nursing facility, or when a resident becomes Medicaid financially eligible while in a facility, the nursing facility must submit the Facility Admission Notice (MSA-2565-C) to the local MDHHS office to establish/confirm the individual’s eligibility for Medicaid benefits. The facility should also submit the MSA-2565-C for residents who are potentially financially eligible.

MDHHS will return a copy of the MSA-2565-C to the facility noting an individual’s Medicaid financial eligibility status and patient-pay amount (do not wait for MDHHS to return a copy of the MSA-2565-C; the online Michigan Medicaid Nursing Facility Level of Care Determination must be conducted within the required timeframe for Medicaid or Medicaid-pending beneficiaries). A copy of the MSA-2565-C is available on the MDHHS website and in the Forms Appendix of this manual.

In order for Medicaid to reimburse for nursing facility services from the date of admission of a Medicaid-eligible beneficiary, the Medicaid beneficiary must be in a Medicaid-certified bed, and the LOCD must be conducted online ONLY for Medicaid eligible or Medicaid pending beneficiaries and within the timeframes outlined in the Michigan Medicaid Nursing Facility Level of Care Determination subsection of this chapter.
Federal regulations require annual recertification that residents meet Medicaid financial eligibility requirements. The annual recertification process is performed by MDHHS.

**5.1.B. CORRECT/TIMELY PREADMISSION SCREENING/ANNUAL RESIDENT REVIEW (PASARR)**

The Level I Preadmission Screening/Annual Resident Review (PASARR) must be performed prior to admission as described in the PASARR Process Section of this chapter.

A Level I Preadmission Screen must be performed for all individuals admitted to a Medicaid-certified nursing facility regardless of payer source. The Level I screening form (Preadmission Screening [PAS]/Annual Resident Review [ARR] (Mental Illness/Intellectual Disability/Related Conditions Identification); DCH-3877) is available on the MDHHS website. (Refer to the Directory Appendix for website information.) The nursing facility is required to ensure that the PASARR Level I screening has been completed and passed (does not trigger a PASARR Level II) by the individual prior to admission.

Placement options for Medicaid beneficiaries who are determined through Level II Preadmission screening to have (1) a mental illness or (2) an intellectual disability, or a condition related to mental illness or intellectual disability, are determined through the federal PASARR screening process requirements.

MDHHS performs retrospective reviews, randomly and when indicated, to determine that the nursing facility has complied with federal PASARR requirements. MDHHS reviews retrospectively to determine that the Level I screening was performed, and that the Level II evaluation was performed when indicated.

MDHHS is required to recover any payments made to nursing facilities for the period that a participant may have been admitted to a nursing facility when the PASARR screening process was not completed.

**5.1.C. PHYSICIAN ORDER FOR NURSING FACILITY SERVICES**

A physician-written order for nursing facility admission is required. By renewing orders, the physician certifies the need for continuous nursing facility care. The order must be signed and dated by the physician. The physician's degree must appear with the signature. A stamped signature is not acceptable.

With the exception of beneficiaries 21 years of age or under residing in a psychiatric facility, a physician (MD or DO) must approve a beneficiary’s need for long-term care not more than 30 calendar days prior to the beneficiary’s admission to a nursing facility.

For an individual who applies for Medicaid financial eligibility while a resident in a nursing facility, the physician must reaffirm the need for long-term care not more than 30 calendar days prior to the submission of the application for Medicaid financial eligibility.
5.1.D. APPLICABLE PLACEMENT BASED ON MICHIGAN MEDICAID NURSING FACILITY LEVEL OF CARE DETERMINATION

5.1.D.1. MICHIGAN MEDICAID NURSING FACILITY LEVEL OF CARE DETERMINATION

Financially eligible Medicaid residents must meet medical/functional eligibility for Medicaid reimbursed nursing facility services. To verify medical/functional eligibility, the nursing facility (i.e., hospital long term care unit, county medical care facility, ventilator dependent unit, hospital swing bed) must complete the online LOCD under the provider’s NPI prior to the start of Medicaid reimbursable services. The nursing facility must submit the information from any hard-copy LOCD into the LOCD’s web-based version only for Medicaid eligible and Medicaid pending beneficiaries, and within the timeframes specified in the Michigan Medicaid Nursing Facility Level of Care Determination subsection of this chapter under ONLINE LOCD.

The nursing facility may bill for services based upon a valid LOCD. A valid LOCD is an LOCD that was conducted within policy guidelines for a Medicaid-eligible or Medicaid-pending beneficiary. Policy guidelines are further defined in the Nursing Facility Eligibility subsection and the Verification of Financial Medicaid Eligibility subsection of this chapter. Additionally, the Medicaid-eligible or Medicaid-pending beneficiary must be determined medically/functionally eligible through the web-based version of the LOCD or the Nursing Facility LOC Exception Process criteria.

A determination of Medicaid medical/functional eligibility via the hard copy or online LOCD conducted at any time in which the resident was a private pay resident is an invalid LOCD. An LOCD that was conducted online but not within policy’s specified timeframes is an invalid LOCD. The nursing facility may not bill for services rendered based upon an invalid LOCD. Refer to the Michigan Medicaid Nursing Facility Level of Care Determination subsection of this chapter (under ONLINE LOCD) for timeframes in which an online LOCD must be conducted for Medicaid-eligible or Medicaid-pending beneficiaries. The nursing facility may not bill the beneficiary unless the beneficiary has been advised of the denial and elects, in advance, to pay privately for services.

Ventilator-Dependent Care Units (VDCUs) and Medicare/Medicaid Crossover Claims: Medicaid-enrolled VDCUs have a distinct National Provider Identifier (NPI) number for Medicaid billing. The number is separate from the “regular” facility NPI number. An LOCD must be completed under the “regular” NPI number for days 1 to 100. For days 101 and forward, the facility must complete an LOCD under the VDCU’s distinct NPI number.
A copy of the Michigan Medicaid Nursing Facility LOC Determination, Field Definition Guidelines, Nursing Facility LOC Exception Process criteria and other information referenced in this section are available on the MDHHS website. (Refer to the Directory Appendix for website information.) The website also contains contact information for technical support to:

- register to access the web-based assessment.
- complete the web-based assessment.
- complete the exception process.
- complete the immediate review process.
- transition beneficiaries.

The Michigan Medicaid Nursing Facility LOC Determination must be applied by a health professional (physician, registered nurse, licensed practical nurse, licensed clinical social worker [BSW or MSW], or licensed physician's assistant) representing the proposed provider. Non-clinical staff may perform the evaluation with clinical oversight by a licensed professional. The nursing facility must bill Medicaid only for beneficiaries who meet the web-based Michigan Medicaid Nursing Facility LOC Determination criteria or the Nursing Facility LOC Exception Process criteria.

**ONLINE LOCD:** The web-based LOCD must be completed as follows:

- Within 14 calendar days from the date of a new admission of a Medicaid-eligible applicant, regardless of primary payer source.
- Within 14 calendar days from the date of a non-emergency transfer of a Medicaid-eligible resident to another nursing facility, including transfers originating from a nursing facility that is undergoing a voluntary facility closure.
- Within 14 calendar days from the date of disenrollment of a beneficiary from a Medicaid Health Plan which has been paying for nursing facility services.
- Within 14 calendar days from the date a Medicaid financial application was registered with MDHHS (i.e., date-stamped by MDHHS on the date the application is received) by a current private-pay nursing facility resident requesting Medicaid as the payer for nursing facility services.
- Within 14 calendar days from the date a dually eligible beneficiary chooses to return to their Medicaid nursing facility bed, refusing their Medicare SNF benefit following a qualified Medicare hospital stay.
- Within 14 calendar days from the date of a Medicaid-eligible resident's transfer into a new nursing facility from a nursing facility that is undergoing an involuntary facility closure due to federal or state regulatory enforcement action.

Nursing facilities do not need to complete the entire Michigan Medicaid Nursing Facility LOC Determination criteria, but must submit the information requested on the web-based Emergency/Involuntary Transfer form by selecting "Emergency/Involuntary Transfer" from the bottom of the LOC Determination welcome screen.
Once admitted into the facility, however, the resident must meet the medical/functional eligibility criteria on an ongoing basis, as with all other residents covered under Medicaid fee-for-service as the primary payer. A proactive discharge plan must be provided to beneficiaries who fail to qualify, and an adverse action notice must be issued if appropriate. Retrospective review of transferred residents will still apply.

- Within 14 calendar days from the date of a Medicaid-eligible resident’s emergency transfer into a new nursing facility from a nursing facility experiencing a hazardous condition (e.g., fire, flood, loss of heat) that could cause harm to residents when such transfers have been approved by the Department of Licensing and Regulatory Affairs (LARA), State Survey Agency.

Nursing facilities do not need to complete the entire Michigan Medicaid Nursing Facility LOC Determination criteria, but must submit the information requested on the web-based Emergency/Involuntary Transfer form by selecting "Emergency/Involuntary Transfer" from the bottom of the LOC Determination welcome screen.

Once admitted into the new facility, however, the resident must meet the medical/functional eligibility criteria on an ongoing basis, as with all other residents covered under Medicaid fee-for-service as the primary payer. A proactive discharge plan must be provided to beneficiaries who fail to qualify, and an adverse action notice must be issued if appropriate. Retrospective review of transferred residents will still apply.

Completion of the Michigan Medicaid Nursing Facility LOC Determination is not required for:

- Hospice beneficiaries who are being admitted to the nursing facility for any services.
- Nursing facility readmissions where a web-based Michigan Medicaid Nursing Facility LOC Determination was previously completed for the original admission and the beneficiary met the nursing facility criteria, and the beneficiary’s level of care code determined by MDHHS has not changed.

The Michigan Medicaid Nursing Facility LOC Determination’s medical/functional criteria include seven domains of need:

- Activities of Daily Living
- Cognitive Performance
- Physician Involvement
- Treatments and Conditions
- Skilled Rehabilitation Therapies
- Behavior
- Service Dependency

For beneficiaries who qualify under Physician Involvement, Treatments and Conditions, or Skilled Rehabilitation Therapies, specific restorative nursing plans and assertive discharge planning must be evident and documented within the medical record (except for end-of-life care). These requirements are specified in the Process Guidelines.
The admitting provider must complete the web-based Michigan Medicaid Nursing Facility LOC Determination only one time for each Medicaid or Medicaid-pending beneficiary. However, if the beneficiary has a significant change in condition as noted in the provider's nursing notes or Minimum Data Set and that significant change in condition may affect the beneficiary's current medical/functional eligibility status, the provider must conduct a subsequent web-based Michigan Medicaid Nursing Facility LOC Determination. If the resident is discharged and admitted to another provider, the new provider must complete the web-based Michigan Medicaid Nursing Facility Level of Care Determination within 14 days of admission, even if the new provider is owned by the same corporation as the previous provider. The Michigan Medicaid Nursing Facility Level of Care Determination is not conducted on a routine quarterly or annual basis.

5.1.D.2. NURSING FACILITY LEVEL OF CARE EXCEPTION PROCESS

The Nursing Facility Level of Care (LOC) Exception Review is available for Medicaid financially pending or Medicaid financially eligible beneficiaries who do not meet medical/functional eligibility based on a valid online Michigan Medicaid Nursing Facility LOC Determination (LOCD), but demonstrate a significant level of long term care need. The Nursing Facility LOC Exception Review process is not available to private pay individuals. The Nursing Facility LOC Exception Review may be initiated only when the provider telephones the MDHHS designee on the date the provider conducted a valid online LOCD and requests the LOC Exception Review on behalf of the LOCD ineligible beneficiary. The Nursing Facility LOC Exception Criteria is available on the MDHHS website. A beneficiary needs to trigger only one of the LOC Exception criteria to be considered as eligible under the Exception Review.

5.1.D.3. TELEPHONE INTAKE GUIDELINES

The Telephone Intake Guidelines are questions that identify potential medically/ functionally eligible beneficiaries. The Telephone Intake Guidelines do not determine program eligibility. Use of the Telephone Intake Guidelines is at the discretion of the nursing facility. This document is available on the MDHHS website.

5.1.D.4. ONGOING ASSESSMENTS

The nursing facility must ensure that residents continue to meet the Michigan Medicaid Nursing Facility LOC Determination criteria on an ongoing basis in order for services to be reimbursed by Medicaid. Quarterly and annual Minimum Data Set (MDS) assessments and progress notes must demonstrate that the resident has met the criteria on an ongoing basis.

5.1.D.5. RETROSPECTIVE REVIEW AND MEDICAID RECOVERY

At random and whenever indicated, the MDHHS designee will perform retrospective reviews to validate the Michigan Medicaid Nursing Facility LOC Determination and the quality of Medicaid MDS data overall. The provider must submit all medical documentation requested by the MDHHS designee. If the resident is found to be ineligible for nursing facility services, MDHHS will recover all Medicaid payments made for nursing facility services rendered during the period of ineligibility.
5.1.D.6. ADVERSE ACTION NOTICE

When the provider determines that the beneficiary does not qualify for services based on the Michigan Medicaid Nursing Facility LOC Determination, and the provider does not contact the MDHHS designee to request the Nursing Facility LOC Exception process on behalf of the beneficiary, the provider must immediately issue an adverse action notice to the beneficiary or his authorized representative. The provider must also offer the beneficiary referral information about services that may help meet his needs. The action notice must include all of the language of the sample letters for long term care. These letters are available on the MDHHS website.

The Medicaid financially eligible beneficiary or the Medicaid financially pending beneficiary may request an administrative hearing for a Medicaid benefit denial. The Michigan Administrative Hearing System (MAHS) Policy and Procedures Manual explains the process by which each different case is brought to completion. The manual is available for review on the MDHHS website. (Refer to the Directory Appendix for contact information for MAHS.)

When a beneficiary appeals an adverse action notice to MAHS, the facility must notify MDHHS LTC Services of the hearing. (Refer to the Directory Appendix for contact information.) Both a facility representative and an MDHHS LTC Services representative must be present at the hearing.

Immediate Review-Adverse Action Notices

The MDHHS designee may conduct an Immediate Review only for a Medicaid pending or a Medicaid eligible beneficiary who was determined medically/functionally ineligible based on a valid web-based Michigan Medicaid Nursing Facility LOC Determination. The MDHHS designee may not conduct an Immediate Review for private pay residents. The MDHHS designee will conduct an Immediate Review of preadmission or continued stay adverse action notices upon request by a Medicaid pending or Medicaid eligible beneficiary or their representative only when the beneficiary or their representative requests an Immediate Review before noon of the first business day after the date of receipt of the notice as follows:

- The MDHHS designee will request that the nursing facility provide medical documentation by close of business of the first business day after the date the beneficiary or their representative requests an Immediate Review.
- The MDHHS designee will review the medical documentation, obtain information from the Medicaid-eligible/Medicaid-pending beneficiary and/or their representative and notify the beneficiary or their representative and the provider of the determination within three business days of receipt of the medical documentation.
- Only a Medicaid pending or Medicaid eligible beneficiary or their representative may request an MDHHS hearing based on a LOC Denial.
- Medicaid pending or Medicaid eligible beneficiaries may contact the MDHHS designee to request an Immediate Review. (Refer to the Directory Appendix for contact information.)
5.1.E. FREEDOM OF CHOICE

When a Medicaid-pending or Medicaid-eligible beneficiary has qualified for services under the LOCD criteria, the computer-generated FOC form lists LTC service options. The computer-generated form must be printed hard copy, and the beneficiary must choose and note on the form the services they choose to receive. This election must take place prior to initiating nursing facility services under Medicaid.

The applicant (or representative) must be informed of services available through:

- Medicaid-reimbursed nursing facilities
- The MI Choice program
- The Program of All-Inclusive Care for the Elderly (PACE) program, where available.

If applicants are interested in community-based care, the nursing facility must provide appropriate referral information as identified in the Access Guidelines to Medicaid Services for Persons with Long Term Care Needs. The guidelines are available on the MDHHS website. Applicants who prefer a community long term care option, but are admitted to a nursing facility because of unavailable slots or other considerations, must also have an active discharge plan documented for at least the first year of care.

Applicants must acknowledge that they have been informed of their program options in writing by signing the computer-generated Freedom of Choice form. If the applicant has a legal representative, the legal representative must sign the computer-generated Freedom of Choice form. The health professional conducting the Michigan Medicaid Nursing Facility LOC Determination must also sign and date the form. The completed form (i.e., signed and dated) must be kept in the medical record if the applicant chooses to receive nursing facility services. A copy of the completed form for non-admissions must be retained for a period of three years. A copy of a non-computer generated Freedom of Choice form is available on the MDHHS website.

5.2 APPEALS

5.2.A. INDIVIDUAL APPEALS

5.2.A.1. FINANCIAL ELIGIBILITY

A determination by MDHHS that a Medicaid financially pending beneficiary is not financially eligible for Medicaid is an adverse action. The Medicaid financially ineligible beneficiary may appeal a determination of Medicaid financial ineligibility to MDHHS.

5.2.A.2. MEDICAL/FUNCTIONAL ELIGIBILITY

A determination by the web-based Michigan Medicaid Nursing Facility LOC Determination that a Medicaid financially pending or Medicaid financially eligible beneficiary is not medically/functionally eligible for nursing facility services is an adverse action. If the Medicaid financially pending or Medicaid financially eligible beneficiary or their representative disagrees with the determination, he has the right to request an
administrative hearing before an administrative law judge. Information regarding the appeal process is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

5.2.B. PROVIDER APPEALS

A Retrospective Review of the Michigan Medicaid Nursing Facility Level of Care Determination that results in a denial is an Adverse Action for the nursing facility when MDHHS proposes to recover payments made for services rendered to the beneficiary for whom the Retrospective Review was conducted. If the facility disagrees with the MDHHS Adverse Action Notice, the facility may appeal if their written request is received by the MDHHS Michigan Administrative Hearing System within 30 calendar days from the date of the MDHHS Adverse Action Notice.

Information regarding the MDHHS appeal process is available in the General Information for Providers Chapter and on the MDHHS website. (Refer to the Directory Appendix for website information.)

5.3 ADMISSION PROCESS

Prior to or upon admission, the nursing facility must provide beneficiaries and their representatives the following information. The information must be provided both orally and in a written language that the beneficiary understands. Beneficiaries must be provided copies of those items noted with an asterisk (*).

- Rights as identified in federal regulations;
- All rules and regulations governing beneficiary conduct and responsibilities during their stay in the facility; *
- Rights as a Medicaid beneficiary and a list of Medicaid-covered services (services for which the resident may not be charged) as published in the Medicaid "Know Your Rights" booklet; *
- Noncovered items and services, as well as the costs, for which the beneficiary may be charged (admission to a facility cannot be denied because the beneficiary is unable to pay in advance for noncovered items/services); *
- Facility policies regarding protection and maintenance of personal funds; *
- A description of the facility’s policies to implement advance directives; *
- Facility policies regarding the availability of hospice care; *
- The name, specialty and contact information of the physician responsible for their care;
- Information about how to apply for Medicare and Medicaid; * and
- How to file a complaint.

Facilities must notify residents and their representatives (both orally and in a written language that the beneficiary understands) of any changes to the information listed above.

Receipt of the above information and any amendments must be acknowledged, in writing, by the beneficiary or his representative. Individual facilities may develop their own documentation for this process.
5.4 PREADMISSION CONTRACTS

Nursing facilities must abide by all state and federal regulations regarding preadmission contracts.

Nursing facilities are prohibited from requiring a Medicaid-eligible person or a Medicaid beneficiary, his family, or his representative to pay the private-pay rate for a specified time before accepting Medicaid payment as payment in full. Nursing facilities violating this prohibition are subject to the appropriate penalties (i.e., revocation of their Medicaid provider agreement).
SECTION 6 – MEDICAL RECORDS

Nursing facilities are required to maintain a medical record for all residents as outlined in State and Federal statutes and regulations.

Nursing facilities are required to comply with all State and Federal requirements regarding medical record confidentiality, including compliance with all Health Insurance Portability and Accountability Act (HIPAA) requirements regarding privacy.

Nursing facilities must maintain all resident assessments completed within the previous 15 months in the resident’s active record. Facilities with a “paperless” system in which clinical records are electronically maintained must be able to produce a paper copy if requested for record review by State surveyors.

Nursing facilities must respect the resident’s access to their medical records as required by State and Federal laws and regulations.
SECTION 7 – CARE PLANNING PROCESS

Nursing facility care planning is a continuous and ongoing process of assessment, planning, evaluation, and revision. The purpose of the care planning process is to gather information from a variety of sources, and develop a written strategy to insure that the resident receives services and supports necessary to attain or maintain the highest practical physical, mental, and psychosocial well-being. Sources of information to support care planning include the resident, his family and friends, physicians, specialists, nurses, nurse aides, dietitians, therapists and assessment tools (including the Minimum Data Set [MDS] for Nursing Facility Resident Assessment and Care Screening). A comprehensive plan identifies and addresses all aspects of the resident’s health and well-being (physical/medical, emotional, mental, spiritual), not just those services that will be provided by the facility or covered by insurance. Using the principles and essential elements of person-centered planning, facilities are expected to involve residents and their designated support system throughout the entire process.

7.1 PERSON-CENTERED PLANNING

Person-centered planning is an ongoing process that recognizes the worth and dignity of each individual and his ability to choose how supports, services and/or treatment may be used to improve his life. The following principles apply:

- **Participation in planning** - Each individual has unique strengths, abilities and preferences and is able to express preferences and make choices. Each individual can participate in planning his life, with appropriate support if needed.

- **Support for planning** - People trusted by the individual and committed to supporting the individual’s choices must be involved in planning for long-term care. The process is dependent on the participation of supportive relationships, such as family members and friends, and encourages their involvement, to the extent that the choices of the individual are reflected. These relationships support the individual's right to choose, even the right to take risks.

- **Outcome orientation** - Person-centered planning is outcome-oriented. The planning should lead to positive outcomes in the individual’s life, i.e., helping to attain or maintain the highest practicable physical, mental, and psychosocial well-being. The individual determines what constitutes a positive outcome. For a younger adult with a disability, this may include building a career. For an older person near the end of life, the positive outcomes may include deciding where one dies and who is present.

Evidence of person-centered planning includes:

- An assessment process that offers the opportunity for gathering information concerning each resident’s preferences, personal goals, needs and abilities, health status, and other available supports. This information should be used in developing an individualized plan of care. The individual’s life plans should give direction to plans with service providers, such as discharge planning from nursing facilities into community-based settings. Nursing facilities should not exclude residents in the care planning process in order to meet facility requirements for writing care plans, obtaining signatures, and so forth.

- An assessment process that includes input from professionals and others chosen by the individual. In addition to the professionals required to participate in care planning, individuals should have support for making informed choices about the additional people and professionals
they invite to their person-centered planning meetings. For example, federal guidelines require an interdisciplinary team that includes a registered nurse who has responsibility for caring for the resident and prepares care plans. In addition, the resident may choose to invite a favorite nurse aide and a former neighbor/caregiver to participate in care planning.

- A plan of care that comprehensively addresses each individual’s need for health care and other services in accordance with the individual’s preferences and goals.
- Services delivered in accordance with the individualized plan of care.
- Informed choice, which includes, but is not limited to, choosing among covered services and enrolled service providers, decisions about the planning process, and evaluation of the planning and its outcomes. Informed choice means knowing the options in ways that are meaningful to the individual and having information when it is useful, not only at admission, but throughout the care process.
- Support for informed choice, which requires an organizational commitment to provide information and/or experiences that sufficiently inform an individual of their options. This commitment should be met through multiple and flexible means of providing information. These might include alternative forms of communication (e.g., Braille, sign language, audio-recorded documents), hands-on experiences with options, peer support from experienced participants, and so forth.

7.2 ASSESSMENT

In collaboration with the resident and individuals identified by the resident, appropriate facility staff must assess residents regularly and as needed to identify their preferences, wishes, goals, outcomes, capabilities, and medical and psychosocial needs. Nursing facilities should use assessment tools that are accessible (e.g., large print, verbal, appropriate language, etc.) to residents and individuals identified by the resident.

Assessment tools must include, but are not limited to, the Minimum Data Set (MDS) for Nursing Facility Resident Assessment and Care Screening. Nursing facilities are expected to use assessment tools and methods that accommodate the needs and preferences of individuals (e.g., mental health assessment tools, self-assessment tools in large print, etc.).

7.3 MINIMUM DATA SET (MDS)

Nursing facilities must conduct a comprehensive, accurate, standardized, and reproducible assessment of each resident’s functional capacity. The use of the current federally specified Resident Assessment Instrument (RAI), which includes the MDS, Care Area Assessment (CAA) process, and utilization guidelines, is mandatory. Michigan has made a determination not to have a state-specific Section-S, but reserves the right to develop and require its data collection as need arises.

The MDS assessment must be conducted:

- Promptly upon admission, but no later than 14 days of admission;
- Promptly after a significant change in the resident’s physical or mental condition or within two weeks, whichever is sooner; and
- Not less than once every twelve months.
The facility must examine each resident once every three months, revising the assessment as appropriate to ensure its continuing accuracy.

Results of the MDS assessment must be used, in addition to other information gathered and in collaboration with the resident, for developing, reviewing, and revising the resident’s plan of care. The assessment must be maintained in the resident’s medical record and kept confidential.

**NOTE:** The Michigan Medicaid MI Choice Waiver Agencies are the designated Local Contact Agency (LCA) relative to Section Q of the MDS. (Refer to the Directory Appendix for contact information.)

Each MDS assessment must be conducted or coordinated (with the appropriate participation of other health professionals) by a licensed, registered nurse who signs and certifies the completion of the assessment. Each person who completes a portion of the assessment must sign and certify the accuracy of that portion. Data accuracy resides with the nursing facility as the source of the data.

A facility must electronically transmit to the State, at least monthly, encoded, accurate, complete MDS data for all assessments conducted since the previous transmission. A facility that fails to transmit electronic RAI data to the State is considered out of compliance and, therefore, subject to enforcement actions. (Refer to the Nursing Facility Certification, Survey and Enforcement Appendix of this chapter.)

An individual who willfully and knowingly certifies a material and false statement, or causes another individual to do so, is subject to a civil money penalty.

Questions about the Resident Assessment Instrument should be directed to the Department of Licensing and Regulatory Affairs, Bureau of Community and Health Systems (BCHS), RAI Coordinator. (Refer to the Directory Appendix for contact information.)

Federal regulations require that facilities coordinate the PASARR process and MDS. MDHHS recommends that nursing facility administrators establish mechanisms to track completion dates of PAS and ARR evaluations so that, to the maximum extent practicable, they are coordinated with resident assessments and completion of the MDS.

### 7.4 PREADMISSION SCREENING/ ANNUAL RESIDENT REVIEW (PASARR)

The Preadmission Screening and Annual Resident Review (PASARR) must be completed for all individuals seeking to enter a nursing facility regardless of payer source. Although not federally mandated, Michigan has elected to require the Annual Resident Review (ARR) for all residents in Medicaid-certified nursing facilities regardless of payer source.

The purpose of the PASARR process is to encourage community care by supporting the placement of individuals with Mental Illness (MI) or Intellectual Disability (ID) or having a related condition in a nursing facility only when their medical needs clearly indicate that they require the level of care provided by a nursing facility. For individuals with mental illness or an intellectual disability or having a related condition, the PASARR process ensures the appropriate determination of the need for nursing facility services and the need for specialized services. The PASARR process also includes an appeals system for individuals who wish to dispute a PASARR determination.
Screening and evaluations performed under PASARR and all PASARR notices must be adapted to the cultural background, language, ethnic origin, and means of communication used by the individual being evaluated.

(Refer to the PASARR Process section of this chapter for additional information.)

7.5 PLAN OF CARE

Nursing facilities are required to provide services and activities to attain or maintain the highest practicable physical, mental, and psychosocial well being of each resident. A written individualized plan of care must be developed in the context of a person-centered planning process in order to specify services and activities, and to accommodate individual needs and preferences. The plan outlines the goals, strengths and needs of the resident and how those will be addressed. A comprehensive plan identifies and addresses all aspects of the resident’s health and well being (physical/medical, emotional, mental, spiritual), not just those services that will be provided by the facility or covered by insurance. The plan also identifies the resident’s wishes and capabilities regarding the potential of relocation to a lesser level of care and includes discharge planning.

The comprehensive plan of care must be developed with direct involvement of:

- The beneficiary, family and/or his/her representative;
- The attending physician;
- An RN who has assessed the beneficiary, or who is familiar with the assessment;
- Other appropriate staff disciplines; and
- Any other trusted individuals that the beneficiary might wish to include.

Medicaid requires that a nursing facility ensure that a licensed physician supervises a beneficiary’s medical care. The physician must review the entire individualized plan of care on an on-going basis. The entire plan of care may include sections for:

- Nursing care;
- Rehabilitative services (if required);
- Medication;
- Treatment;
- Restorative services;
- Diet;
- Activities;
- Special plans for health and safety;
- Continuing care, measurable objectives and timetables;
- Discharge (as appropriate); and
- Mental health services.

All services rendered must be documented and consistent with the written individualized plan of care.
7.6 EVALUATION/ RE-ASSESSMENT/ PLAN REVISION

Care planning is a continuous and ongoing process that requires regular re-assessment and revision of the plan of care. Federal guidelines require that the facility examine each resident not less than once every three months, and revise the resident’s assessment as appropriate to ensure its continuing accuracy. Re-assessment should also occur with significant changes in the resident’s condition and at the request of the resident or his representative. Once the re-assessment is completed, the current plan should be evaluated and revised to meet current goals and needs.
SECTION 8 – PASARR PROCESS

Pre-admission Screening/Annual Resident Review (PASARR) in Michigan is a two-level screening and evaluation process. The Level I screening and Level II evaluation procedures and forms are the same for Pre-admission Screening (PAS) and Annual Resident Review (ARR). The forms may be obtained from the MDHHS website.

The PASARR process must be completed:

- Prior to admission to a nursing facility;
- Promptly after a significant change in a resident’s physical or mental condition; and
- Not less than annually.

The PASARR process is not required in the following situations:

- When an individual is admitted to an Intermediate Care Facility for Individuals with Intellectual Disabilities (ICF/IID).
- When an individual is admitted to and resides in a hospital swing bed. However, the PASARR process must be completed prior to admission if the individual transfers to a nursing facility.
- When an individual is readmitted to a nursing facility after a hospital stay. If the Annual Resident Review date occurs during a period of hospitalization, the screening must be completed within 30 days of admission or readmission to the nursing facility.
- For an individual transferring from one nursing facility to another, with or without an intervening hospital stay, unless a Level I screen has not been performed previously. If a Level I screening or Level II evaluation has been completed, the screening evaluation should accompany the beneficiary to the receiving nursing facility.
- For an individual returning to the nursing facility from therapeutic leave, unless the resident’s condition has changed. Therapeutic leave does not change the due date for Annual Resident Review. Advance planning may be necessary to ensure timeliness of review.
- A beneficiary receiving Medicaid hospice services (Benefit Plan ID of Hospice) entering a nursing facility for the five-day hospice respite benefit. A Level I screening must be completed if the beneficiary enters the facility for a length of time beyond the five-day respite period.

The purpose of the Level I screening is to identify individuals who may have a mental illness or intellectual disability or have a related condition. If the patient is on antipsychotic, antianxiety, or antidepressant medications for purposes of pain control/symptom relief for end of life, note that information on the DCH-3877. This allows the Community Mental Health Services Program (CMHSP) to better evaluate the need for Level II screening. If the patient is on any of the above mentioned psychotropic medication groups for a related mental illness, the CMHSP will determine the need for Level II screening.
The following table outlines screening requirements.

<table>
<thead>
<tr>
<th>Screening Type</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Pre-Admission Screening (PAS)</strong></td>
<td>A Level I screening is required for all individuals seeking to enter a nursing facility regardless of payer source, except as noted above. The Level I screening, and the Level II evaluation when indicated, must be completed prior to admission to a nursing facility.</td>
</tr>
<tr>
<td><strong>Annual Resident Review (ARR)</strong></td>
<td>All residents in Medicaid-certified nursing facilities must be reviewed at least annually to determine if the resident is in need of mental health services and/or continued nursing care. Annually means within every fourth quarter after the previous Level I screening or Level II evaluation, whether it was completed for admission, condition change, or annual review. The Level I screening must be completed for all residents, and a Level II evaluation must be performed if indicated. If a resident was hospitalized when an ARR was due, the Level I screening must be completed within 30 days of readmission, and any subsequent Level II evaluation must be completed within the quarter following readmission to the nursing facility.</td>
</tr>
<tr>
<td><strong>Change in Condition</strong></td>
<td>A Level I screening must be completed immediately or, at most, within 14 days when there is a significant change in the resident's mental health, or a physical change that may impact the resident's mental health needs. Federal regulations define a &quot;significant change&quot; as a major decline or improvement in the resident's status that will not normally resolve itself without further intervention by staff or by implementing standard disease-related clinical interventions, that has an impact on more than one area of the resident's health status, and requires interdisciplinary review or revision of the care plan or both. Changes to the Minimum Data Set (MDS), Section E (indicators of depression, anxiety, mood) would indicate a significant change for PASARR purposes. The nursing facility must notify their local CMHSP via a DCH-3877 for a Level II evaluation.</td>
</tr>
<tr>
<td><strong>30-Month Rule</strong></td>
<td>During the PASARR process, a nursing facility resident may be identified as no longer in need of nursing services but in need of specialized services. In this situation, if the resident has lived in a nursing facility for 30 continuous months, the CMHSP must advise the individual of their options, which may include community placement with specialized services or continued residence in the nursing facility with specialized services. Under these circumstances, no appeal needs to be filed in order to maintain nursing facility residency. The individual's status as a long-term resident must be evident in their nursing facility medical record. Individuals determined to need specialized services, who have resided in a nursing facility for less than 30 months, and who are found to no longer need nursing services must be assisted to transition to a more appropriate setting.</td>
</tr>
<tr>
<td><strong>Transfer Trauma</strong></td>
<td>Transfer trauma protections (see Transfer Trauma subsection in this chapter) apply to individuals with mental illness or intellectual disability who are determined to not need nursing facility services during PASARR Level II evaluations.</td>
</tr>
</tbody>
</table>

### 8.1 LEVEL I SCREENING

The purpose of the Level I Screening is to identify individuals who may have a mental illness or intellectual disability or have a related condition. Level I Screening is documented on the "Preadmission Screening (PAS)/Annual Resident Review (ARR) (Mental Illness/Intellectual Disability/Related Conditions Identification)" form (DCH-3877). (Refer to the Forms Appendix for a sample form.) The DCH-3877 must be completed and signed by a registered nurse, licensed Bachelor's or Master's Social Worker, licensed professional counselor, psychologist, physician's assistant, or physician.
The professional who completes the Level I Screening must provide a copy of the DCH-3877 to the prospective nursing facility resident or their legal representative. Notification must also be adapted to the cultural background, language, ethnic origin and means of communication of the person being evaluated. (For the distribution of forms and documentation, refer to the Distribution of PASARR Documentation subsection later in this section.)

The following table contains a list of psychopharmacological drugs that may indicate the presence of a mental illness. Included are examples of anti-depressant and anti-psychotic medications. The list is not meant to be all-inclusive.

8.2 LEVEL II EVALUATION

The purpose of the Level II evaluation is to assess individuals who are identified as having a mental illness or intellectual disability or as having a related condition to determine the need for nursing facility services, specialized services, and/or mental health services. All individuals identified by Level I screening as possibly having a mental illness or intellectual disability or having a related condition (a “yes” response to any question on the Level I screening form, DCH-3877) must receive a Level II evaluation, unless it is documented that they meet one of the exemption criteria outlined in the next subsection, or the MDHHS/CMHSP finds that the individual does not meet the criteria for a serious mental illness under the PASARR provisions. The CMHSP is responsible for providing the nursing facility and the individual and/or legal representative with written documentation that the individual does not meet the PASARR criteria for
8.3 LEVEL II EVALUATION EXEMPTION

If the individual qualifies for an exemption to the Level II evaluation based on the criteria outlined below, the DCH-3878, "Mental Illness/Intellectual Disability/Related Condition Exemption Criteria Certification" form must be completed. (Refer to the Forms Appendix for a sample form.) The DCH-3878 may be completed by a registered nurse, licensed Bachelor’s or Master’s Social Worker, licensed professional counselor, psychologist, physician’s assistant, or physician and must be signed by a physician.

Exemptions to the Level II evaluation may be requested based on the following criteria:

- The individual is in a coma. If the individual is in a coma at the time the Level II evaluation is to be performed, the individual may be exempted from the Level II evaluation process. A physician must certify that the individual is in a coma. The individual may then be admitted to the nursing facility without a Level II evaluation. When the individual is no longer in a coma, the nursing facility must complete a Level I screening and refer for a Level II evaluation, if indicated.

- The individual has a primary diagnosis of dementia (such as Alzheimer’s disease or another dementing illness). An exemption due to dementia cannot be claimed for any individual who is also identified as having an intellectual disability or having a related condition, or for any individual with another primary psychiatric diagnosis. For example, an individual with dementia alone may be exempted. An individual diagnosed with dementia and depression may not be exempted. A physician must certify that the individual meets the clinical criteria for dementia and does not have another primary psychiatric diagnosis, intellectual disability, or a related condition.

- The individual is convalescing after hospitalization for an acute illness and meets all of the following conditions:
  - The individual will be admitted to a nursing facility directly from a hospital after receiving acute inpatient care at the hospital. Treatment in an emergency room is not considered a hospital stay. An individual who received inpatient treatment in a psychiatric facility cannot be admitted to a nursing facility claiming this exemption, nor can an individual who comes directly from home or any other community placement.
  - The individual requires nursing facility services for the condition for which they received care in the hospital.
  - The attending physician has certified before admission to the nursing facility that the individual is likely to require less than 30 days nursing facility services.

Medicaid approves payment for a hospital discharge/convalescent care stay up to 30 days only. If the individual needs nursing care beyond 30 days, the nursing facility must notify the local CMHSP at least five working days before the end of the 30-day stay that a Level II evaluation is needed. The local CMHSP completes the Level II evaluation within 14 days of the date of notification and forwards the evaluation to MDHHS. The entire determination process must be completed within 40 days of the individual’s admission from the hospital. If MDHHS determines that the individual no longer requires nursing facility services, Medicaid reimburses up to five days beyond the date of the determination to allow for appropriate discharge planning. It is expected that a nursing facility will begin discharge
planning for residents at the time of admission from the hospital and discontinue this planning only when a determination is made that the resident will not be discharged from the nursing facility.

The person completing the Level II evaluation exemption must provide a copy of the DCH-3877 to the prospective nursing facility resident or their legal representative. Notification must also be adapted to the cultural background, language, ethnic origin and means of communication of the person being evaluated. (Refer to the Distribution of PASARR Documentation subsection of this chapter for additional information.)

8.4 LEVEL II EVALUATION COMPLETION

Individuals who are identified at the Level I screening as having a mental illness or intellectual disability or having a related condition, and who do not meet exemption criteria outlined previously, must be referred to the local CMHSP for a Level II evaluation. Level II evaluations are conducted by mental health professionals through the local CMHSP under contract with MDHHS. The evaluation involves an interview with the individual, review of medical records, and consultation with nursing facility and/or hospital staff. The mental health professional must conduct the Level II evaluation in accordance with the MDHHS OBRA Operations Manual. A copy of this manual may be requested from the MDHHS OBRA Office or the local CMHSP.

When a Level II Evaluation is required, it must be completed prior to nursing facility admission.

When a Level II evaluation is indicated for an Annual Resident Review (ARR), the nursing facility must notify the local CMHSP of the need for the Level II evaluation at least 30 days prior to the due date of the ARR by sending them a new DCH-3877 (Level I screening form). For example, if the initial Level II evaluation was completed on April 15, 2004, the ARR is due April 15, 2005, and the facility must notify the local CMHSP that a new Level II is due by March 15, 2005. The local CMHSP is responsible for timely completion of Level II evaluations and for providing facilities with written documentation of PASARR determinations in a timely manner.

Once completed, the CMHSP forwards all documentation of the Level II evaluation to MDHHS. Based on this documentation, MDHHS determines whether the individual requires nursing facility services or can be served in an alternate setting. MDHHS also determines whether specialized services or other mental health services are needed to treat the individual’s mental illness or intellectual disability.

The MDHHS decision regarding the need for nursing facility services and the need for specialized services is forwarded to the referring CMHSP. It is the responsibility of the CMHSP to explain the evaluation and determination to the individual and his legal representative within 30 days. The CMHSP must provide a copy of the evaluation and the MDHHS determination letter to the individual and his legal representative, and explain the appeal rights to the individual and their legal representative. This information must also be adapted to the cultural background, language, ethnic origin and means of communication of the individual being evaluated.

The local CMHSP notifies the attending physician, nursing facility, and discharging hospital of the results of the evaluation and the MDHHS determination in writing within 30 days of the review. A copy of this notification must be retained in the individual’s record. (Refer to the Distribution of PASARR Documentation subsection of this chapter for additional information.)
Given that all other admission criteria outlined in this chapter are met, a nursing facility may admit an individual on the basis of a verbal Pre-admission Screening determination from MDHHS. This determination may be communicated to the nursing facility by the CMHSP.

If the facility does not receive a written determination as follow-up to a verbal determination within 30 days of an admission, the facility must send a written reminder to the CMHSP and the MDHHS OBRA Office within 45 days of the admission. (Refer to the Directory Appendix for contact information.)

The nursing facility is responsible for verifying that required PAS and ARR processes are completed and documented in the resident’s record. The nursing facility medical record must include the determinations of the level of care, the need for specialized services, the original DCH-3877 and DCH-3878 forms, and the Level II evaluation report and supporting documents.

### 8.5 DISTRIBUTION OF PASARR DOCUMENTATION

The following chart shows the correct distribution of copies of PASARR forms (DCH-3877, DCH-3878) and Level II evaluation documentation. All originals must be fully completed and signed.

8.6 COMPLIANCE

Failure of a nursing facility to comply with OBRA PASARR requirements will result in the loss of Medicaid reimbursement to the facility for services provided for that resident for any period during which a correct and timely screening or review was not completed for that resident. A claim should not be submitted for dates of services provided during periods for which required Pre-admission Screening or Annual Resident Review has not been completed.

The resident or parties responsible for the resident cannot be charged for the loss of reimbursement caused by the facility’s failure to meet PASARR requirements.

The Level I screening is considered completed when the DCH-3877 has been filled out, signed, and distributed or, if exemption criteria are met, both the DCH-3877 and DCH-3878 have been filled out, signed, and distributed. The Level II evaluation process is completed when the CMHSP has completed the evaluation and the individual has been notified of the MDHHS determination.

For a screening or evaluation to be correct, the completed forms must contain information consistent with documentation in the resident’s nursing facility medical record.

Compliance is monitored through the survey process, complaint investigations, and audits. Retrospective payment adjustments through interim gross adjustments and/or final settlements are made to recover funds as necessary. A nursing facility is not penalized for failures to meet PASARR provisions for which it is not responsible and/or could not prevent.

8.7 APPEALS OF PASARR DETERMINATIONS

Individuals adversely affected by PASARR determinations may appeal the determination or another person may appeal the determination on their behalf. Examples may include the determination that the individual no longer requires specialized services when they have received those services in the past and wish to continue. An individual may decline nursing facility admission or specialized services without appeal.

Information regarding the MDHHS administrative hearing (appeal) process is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

8.8 COMPLAINTS

Complaints or concerns regarding a nursing facility’s implementation of the PASARR regulations should be directed to the Health Facility Complaint Line. (Refer to the Directory Appendix for contact information.)

Complaints or concerns about local CMHSP implementation of PASARR policy should be sent to the MDHHS OBRA Office. (Refer to the Directory Appendix for contact information.)
SECTION 9 – MEDICAID COVERED AND NON-COVERED SERVICES

Determination of medical necessity and appropriateness of Medicaid services is the responsibility of the attending physician (MD or DO) and is subject to MDHHS review. Services must be within the scope of currently accepted medical practice, limitations of the Medicaid Program, and State and Federal requirements.

9.1 MEDICARE-COVERED SERVICES

For Medicare Part B covered services, MDHHS only pays up to a Medicare-enrolled beneficiary's obligation to pay (i.e., coinsurance and deductibles) or the Medicaid fee screen, whichever is less. In addition, Medicaid covers the coinsurance and deductible amounts on any Medicare-covered service not normally covered by Medicaid.

Medicaid co-insurance payments for Part A are the lower of the co-insurance charge or the current maximum co-insurance rate established under the formula stated in the Social Security Act. The facility's total payments from Medicare, Medicaid and other insurance may be up to, but cannot exceed, the amount established by Medicare as reasonable (i.e., the amount allowed by Medicare).

If the beneficiary has a Medicare benefit available, that benefit must be utilized before Medicaid pays any portion of the claim. If a beneficiary who has Medicare coverage is receiving services under CMHSP or CA capitation, the CMHSP/CA assumes the MDHHS payment liability described in this section.

For Medicare coinsurance days billed to Medicaid, the beneficiary may be in either a Medicare certified or Medicare/Medicaid dually certified bed.

Prior authorization is not required for billing the Medicare deductible and coinsurance amounts, even if the service would require prior authorization if Medicaid were the payer. However, if the facility is uncertain of Medicare coverage, prior authorization from Medicaid should still be obtained. This allows the facility to render the service, bill Medicare and then, if appropriate, bill Medicaid for its share of the service. If Medicare Part B covers an item or service that is included in the Medicaid per diem, the nursing facility is responsible for any coinsurance or deductible, even when billed by an ancillary provider.

Services for which Medicare has made a payment may not be used to offset the patient-pay amount.

If a beneficiary has Medicare Part B coverage, and Medicare does not cover a service, Medicaid considers the service to be included in the Medicaid reimbursement for routine nursing care.

9.2 MEDICARE DENIAL OF BASIC CARE

Medicare covers only skilled care. Medicaid covers both basic and skilled care. In the event a dually eligible Medicare/Medicaid beneficiary requires basic care, Medicaid will cover the service if all other admission criteria are met (e.g., physician order for nursing facility care and beneficiary meets the Medicaid Nursing Facility LOC Determination for NF care).
9.3 *MEDICAID REIMBURSEMENT FOR A NURSING FACILITY BED FOLLOWING A QUALIFYING MEDICARE HOSPITAL STAY*

A dually eligible beneficiary who resides in a Medicaid-only certified bed and is admitted to a hospital for acute care services may be eligible for Medicare-reimbursed Skilled Nursing Facility (SNF) benefits at the time of hospital discharge. If that beneficiary wants to return to the Medicaid NF bed he originally occupied, he may refuse his Medicare SNF benefit and Medicaid will reimburse for all medically necessary nursing facility days and other medically necessary services. The days billed to Medicaid must be included in the Medicaid census statistics.

The nursing facility must advise beneficiaries of their right to refuse their Medicare SNF benefit in order to return to their Medicaid NF bed. This notice must be in a manner that the beneficiary, family member, or beneficiary’s legal representative can understand or have clearly explained to them as needed.

9.3.A. REQUIRED DOCUMENTATION

The facility must maintain, in the beneficiary’s clinical and fiscal record, documentation that supports the beneficiary made the choice to forego Medicare-reimbursed services and return to his Medicaid-only certified bed. This documentation must be signed and dated by the beneficiary (or his authorized representative) and a nursing facility representative.

9.3.B. **MEDICARE PART B**

Required outpatient physical or occupational therapy, or outpatient speech pathology for NF beneficiaries must be provided and billed under Medicare Part B where applicable, even if no payments are made under Medicare Part A for the nursing facility stay.

9.4 **OTHER INSURANCE**

Many Medicaid beneficiaries have insurance coverage (either traditional health insurance or an HMO) through private and/or employer-based commercial policies. That insurance is always primary, and the rules of that insurer must be followed. This includes, but is not limited to, prior authorization requirements, qualifications of providers, and providing services through the insurer’s provider network. MDHHS does not pay for services denied by the primary insurer because the primary insurer's rules were not followed.

MDHHS pays appropriate copays and deductibles up to the beneficiary’s financial obligation to pay or the Medicaid fee screen, whichever is less. If the primary insurer has negotiated a rate for a service that is lower than the Medicaid fee screen, MDHHS cannot be billed more than the negotiated rate. Medicaid-covered services not included in the primary insurer’s plan are reimbursed by MDHHS up to the Medicaid fee screen if all MDHHS coverage rules are followed. If a beneficiary with other insurance coverage is enrolled in a MHP or is receiving services under CMHSP or CA capitation, the MHP/CMHSP/CA assumes the MDHHS payment liabilities described in this section.
9.5 Payment for Non-covered Services

For necessary medical or remedial care recognized under State law but not covered by the Medicaid Program, the Medicare Catastrophic Coverage Act of 1988, Public Law 100-360, allows nursing facility beneficiaries to access their patient-pay amount to pay for these services. The services would include services rendered by providers not enrolled in the Medicaid program. The offset to the patient-pay amount must be reported for the month that services were provided. If Medicare covers the medical service, then Medicaid will continue to cover the Medicare deductible and coinsurance in the event it does not exceed the Medicaid fee screen.
**SECTION 10 - MEDICAID SERVICE DESCRIPTIONS**

The following table outlines those services that are included in the facility’s per diem rate or are an ancillary service that may be provided to beneficiaries in a nursing facility. Following the table is a more detailed description of each service.

---

The nursing facility should contact the ancillary provider or Medicaid Provider Inquiry Line to confirm Medicaid coverage of ancillary services.

---

All services required as a condition of licensure/certification are included in the per diem rate.

10.1 **Administrative Services**

Nursing facilities must be administered in a manner that effectively and efficiently uses its resources to attain or maintain the highest practicable physical, mental and psychosocial well-being of each resident in compliance with all applicable State and Federal licensure and certification laws, codes and regulations. Services rendered in the general administration of the facility are included in the facility's per diem rate. Services include, but are not limited to:

- Arranging appointments;
- Building, equipment, and grounds maintenance;
- Development, adoption, and posting of patient rights;
- Development of disaster plans;
- Development of patient councils;
- Infection control;
- Insect and vermin control;
- Management of patient trust funds;
- Nursing care determinations;
- Quality control;
- Record keeping; and
- Utilization control.

10.2 **Admission Kits**

Routine personal hygiene items in an admission kit are included in the per diem rate. Nonroutine personal hygiene items in an admission kit are not reimbursable and are not allowable costs.

10.3 **Ancillary Services**

Ancillary services (i.e., services other than daily care services), excluding physician services, must be ordered and documented, in writing, by the beneficiary's attending physician, and the documentation must be retained in the beneficiary's medical record. The physician's signature on prior authorization
forms, treatment plans, etc., certifies the necessity of ancillary services. The physician must review the beneficiary's progress resulting from the ancillary service not less than every 60 days and summarize the progress resulting from the ancillary service provided.

The orders must be for a specific beneficiary (no blanket orders) and prior to the service being rendered. Orders may be received by telephone but must be written in the beneficiary's medical record. Such services must be provided and billed by the appropriate enrolled provider. It is suggested that the facility contact the ancillary provider or the Medicaid Provider Inquiry Line to ascertain whether the service is covered prior to arranging for the provision of the service. (Refer to the Directory Appendix for contact information.)

The facility is responsible for arranging all ancillary and non-covered medical services. Arranging appointments and transportation for these services is included in the per diem rate.

The beneficiary or beneficiary's representative may choose to purchase non-covered services directly from an ancillary provider. The beneficiary pays the ancillary provider directly for the services provided. The nursing facility must retain, in the beneficiary's fiscal record, receipts showing that the beneficiary paid for the particular non-covered service. Medicaid post-payment reviews will be conducted to assure that the beneficiary's fiscal record contains the receipts.

Nursing facilities may not bill Medicaid for ancillary services except for therapies, oxygen, and the Medicare coinsurance or deductible for ancillary services. Otherwise, the ancillary provider must bill for the service. The Billing & Reimbursement for Institutional Providers Chapter contains the allowable nursing facility provider types that can bill for ancillary services.

Therapies may be billed by the facility regardless of coverage by Medicare. However, Medicaid remains the payer of last resort.

Ancillary services (e.g., physical therapy) provided to a beneficiary on the day of discharge may be billed to Medicaid, even if the beneficiary was admitted and discharged on the same date.

### 10.4 Beauty and Barber Services

Services of a professional beautician or barber are not included in the per diem rate and are not covered by the Medicaid Program. The beneficiary may purchase such services from personal funds. A beneficiary’s patient-pay amount may not be used to cover these costs.

### 10.5 Chiropractic Services (Medically-Necessary)

Chiropractic services, such as x-rays and treatment, are an ancillary service and are not included in the facility's per diem rate.
10.6 DENTAL SERVICES

The facility’s per diem rate includes providing assistance with, and supplies for, daily oral hygiene. Dental supplies include, but are not limited to:

- Dental floss
- Mouthwash
- Mouthwash cups
- Denture adhesive
- Denture cleaner
- Denture cups
- Toothbrushes
- Toothpaste

Routine and emergency dental services are an ancillary service and are not included in the facility’s per diem rate.

10.7 DIETARY SERVICES AND FOOD

Residents must be provided nourishing, palatable, well-balanced meals that meet their daily nutrition and special dietary needs. Dietary services must also meet the preferences of residents and offer substitutes of similar nutritional value.

Nutrition appropriate for each resident’s condition is included in the facility’s per diem rate. This includes, but is not limited to:

- Daily nutritious meals and snacks
- Reasonable food substitutes of a similar nutritive value
- Dietary supplements
- Enteral formulas, supplies, equipment, and associated nursing services
- Infant formulas
- Nursing services associated with total parenteral nutrition (TPN)
- Special diets
- Therapeutic diets
- Water solutions

Medicaid reimburses non-profit nursing facilities that incur costs resulting from the purchase of raw food and food preparation associated with special dietary needs for religious reasons. (Refer to the Cost Reporting and Reimbursement Appendix of this chapter for more information.)

---

* The formula, equipment, and supplies required for the TPN feedings are an ancillary service and are not included in the facility’s per diem rate.
10.8 DURABLE MEDICAL EQUIPMENT

10.8.A. STANDARD EQUIPMENT

Standard durable medical equipment is included in the facility’s per diem rate. The durable medical equipment supplier and the nursing facility must make arrangements for purchasing or renting required equipment. Standard durable medical equipment includes, but is not limited to:

- Adaptive Activities of Daily Living (ADL) equipment
- Air mattresses
- Autoclaves
- Bed boards
- Bed cradles
- Bed pans
- Bed rails
- Beds (including hospital beds)
- Bedside safety rails
- Bedside stands
- Blood pressure apparatus
- Canes
- Comfortable cushioned chair
- Commodes
- Crutches
- Emesis basins
- Food pumps
- Footboards
- Footrails
- Footstools
- Freestanding trays for meals
- Geriatric chairs
- Infrared lamps
- Lap and half-lap trays
- Lifts
- Oxygen equipment and supplies
- Pads, water-circulating devices to apply heat or cold therapy (e.g., hot/cold packs, heating pads)
- Positioning pillows
- Pressure-relief positioning cushions
- Reading lights
- Sitz baths
- Splints
- Standard manual wheelchairs
- Suction machines
- Traction equipment
- Trapeze equipment
- Tub lifts
- Urinals
- Walkers
- Wash basins
- Wheelchairs for transport in or out of the facility

Such equipment must be available for all the residents demonstrating need. Previously acquired equipment should be adapted to meet the beneficiary’s needs, if appropriate.
The facility is required to repair/maintain standard equipment, and this expense is included in the per diem rate. This may not be billed separately to Medicaid, the beneficiary, his family, or representative.

Replacement, repair and maintenance of standard equipment owned or rented by the beneficiary is not a Medicaid-covered benefit.

Medicaid policy has historically established that standard wheelchairs and other specified durable medical equipment are included in the Medicaid facility per diem rate in accordance with federal standards and state licensure requirements. The following describes what is meant by standard wheelchairs relative to current types of wheelchair products that are routinely prescribed and commonly available in the marketplace, and routinely prescribed and required for patient use in the long-term care environment.

In addition, nursing services include positioning and body alignment and preventive skin care. The nursing facility is responsible for proper pressure relief and positioning. The use of medical equipment as a substitute for responsible patient care is inappropriate and not covered.

Standard manual wheelchairs are included in the facility's Medicaid per diem rate. A standard manual wheelchair is any wheelchair that is routinely prescribed and required for patient use in the long-term care environment. Standard manual wheelchairs that must be available to meet health and care standards include wheelchairs and accessories that are manufactured stock items, including heavy-duty, light- or ultra-light-weight and/or -strength; hemi chairs; wheelchairs with adjustable or reclining backs; manual tilt-in-space; removable/adjustable arms; variable seat height, width or depth; anti-thrust seats; laterals, abductors, and adductors; or other non-custom positioning options. In addition, pressure-relief positioning cushions, positioning pillows, trochanter rolls, etc. required for proper beneficiary use of the wheelchair or the provision of nursing services are the responsibility of the facility.

10.8.B. CUSTOM-FABRICATED SEATING AND/OR POWER WHEELCHAIRS

Custom-fabricated seating and/or power wheelchairs for nursing facility residents may be covered when the established standards of coverage are met and the severity and intensity of the disease process requires custom-fabricated seating or a power-operated wheelchair as medically necessary and is an integral part of the facility's daily nursing plan of care.

Repairs to custom-fabricated equipment by the durable medical equipment provider are covered only when it is necessary to make the equipment serviceable. Extensive repairs and maintenance by authorized technicians are covered if the warranty has expired. The durable medical equipment provider may bill for authorized repairs. Routine periodic servicing, such as cleaning, testing, regulating, and checking of the equipment, is not separately reimbursable.
10.8.B.1. **MEDICAL NECESSITY**

A physician's order by itself is not sufficient documentation of medical necessity, even when it is signed by the treating physician. Clinical documentation from the medical record must support the medical necessity for the request and substantiate the physician's order. In addition, Medicaid coverage is not based solely on a physician’s order; the request must also meet the standards of coverage published by MDHHS. (Refer to the Medical Necessity subsection of the Medical Supplier chapter for a complete description of medical necessity requirements.)

The nursing facility's responsibility for each resident's health care needs and other services, including patient care, transfers, safety, skin care, equipment, medical supplies, etc., are described in federal regulations and state licensure requirements. The use of medical equipment as a substitute for responsible patient care is inappropriate and not covered.

Refer to the Medical Supplier chapter for additional information regarding Medicaid definitions and standards of coverage for mobility and custom-fabricated seating systems.

10.8.B.2. **NONCOVERED**

Power wheelchairs and custom-fabricated seating systems, including add-on components, are not covered outside the facility per diem rate when:

- There is an appropriate economic alternative.
- The devices are not related to, or an integral part of, the nursing facility daily plan of care.
- The accessory or add-on component is deemed to be standard under the definition of a standard manual wheelchair.
- The wheelchair is used as a restraint or for the purpose of treating aberrant behaviors.
- The need for the wheelchair is a substitute for appropriate clinical nursing services, as defined in federal regulations.
- The wheelchair is inappropriate for the beneficiary's cognitive level or behavioral level.
- The beneficiary is unable to safely operate the wheelchair.
- A standard wheelchair meets functional need or outcome as defined in the plan of care.
- The device is ordered for nonstandard use (e.g., therapeutic modality or exercise).
- The device is ordered to increase sitting tolerance that exceeds acceptable medical guidelines for skin care and pressure.

10.8.C. **PRIOR AUTHORIZATION**

Prior authorization is required for Medicaid coverage of medically-necessary power wheelchairs, custom-fabricated seating, and manual wheelchairs with custom-fabricated seating systems outside of the facility per diem rate. The treating physician must initiate
the referral for custom-fabricated seating or a power-operated vehicle (POV) based on an identified medical need in the plan of care. Facility clinicians who are responsible for the overall nursing plan of care for, and treatment of, the resident prepare and submit prior authorization requests, medical documentation, and the Evaluation and Medical Justification for Complex Seating Systems and Mobility Devices form (MSA-1656) within 90 days of the date the evaluation was completed. (Refer to the Prior Authorization subsection of the Medical Supplier chapter for additional information, and to the Forms Appendix for a copy of the form and form completion instructions.)

10.9 END OF LIFE CARE

Facilities are expected to have systems and policies in place to address appropriate advance care planning and end of life care. Facilities must notify residents at admission of their policies regarding the implementation of advance directives and the availability of hospice care. Residents are entitled to adequate and appropriate pain and symptom management as a basic and essential part of their medical treatment. Best Practice Information for end-of-life care and pain management for nursing facilities and hospital LTC units is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

10.10 ENRICHMENT PROGRAMS

Facilities are required to provide or arrange for an ongoing program of activities designed to meet the interests and physical, mental and social well-being of each resident. An individualized program may be developed as part of the person-centered care planning process. Programs designed to maintain the resident's quality of life are included in the facility's per diem rate. Such services include, but are not limited to:

- Social services;
- Books;
- Current periodicals (e.g., newspapers, magazines) [If the beneficiary personally subscribes to a periodical (e.g., newspaper, magazine) for his own use, he is responsible for payment of that subscription.];
- Diversional programs;
- Motivational programs;
- Reality-oriented programs; and
- Recreational programs.

10.11 FAMILY PLANNING SERVICES

Family planning services are an ancillary service and are not included in the facility's per diem rate.

10.12 HEARING SERVICES

Hearing evaluations are an ancillary service and are not included in the facility's per diem rate.

A Medicaid copayment is not required for nursing facility beneficiaries.
10.13 HOSPICE SERVICES

Upon admission to a nursing facility, residents must be advised of the facility's policies regarding the availability of hospice care.

Nursing facility beneficiaries (including Medicaid-approved complex care cases) are eligible for Medicaid hospice services if determined by a hospice provider to meet hospice level of care. Additionally, in certain situations (such as lack of a caregiver in the home), a hospice beneficiary, in consultation with the hospice provider, may elect to enter a nursing facility to receive end of life care. Medicare beneficiaries receiving or eligible for the 100-day skilled nursing benefit have the right to choose hospice instead. This decision should not be influenced by differences between hospice and Medicare skilled nursing facility reimbursement rates.

If the beneficiary is enrolled in a MHP and is admitted to the nursing facility with the hospice benefit, the MHP is responsible for reimbursement of hospice services.

For nursing facilities that elect to contract with hospice providers, a written contract is required between the hospice provider and the nursing facility that specifically outlines the responsibilities of each. Additionally, the contract must specify how the hospice provider will reimburse the nursing facility for room and board.

Nursing facilities cannot bill Medicaid directly for room and board or any other services for hospice beneficiaries. A hospice is responsible for all costs for a person receiving hospice care. The hospice bills Medicaid for room and board, then reimburses the nursing facility at the rate specified in the contract between the providers.

MDHHS reimburses the hospice for its daily rate, for room and board, and QAS for beneficiaries in Medicaid or Medicaid/Medicare dually certified beds. The room and board rate is 95% of the facility's Medicaid per diem rate, plus 100% of the QAS amount. Although the rate paid to the hospice by Medicaid is set, it is not necessarily the rate that the hospice must pay the facility. It is expected that some services may be purchased or traded between the facility and the hospice, so the negotiated room and board rate must be stipulated in the contract.

Hospice services are reimbursable for day of discharge if services were rendered, regardless of the setting in which the services were provided. This includes the transfer of the beneficiary from one hospice provider to another as long as services were provided by both agencies. (This will be randomly verified by post payment audit and as indicated.) If the beneficiary has hospice as of 12:01 a.m., the hospice is responsible for the payment of services provided to the beneficiary until midnight. The hospice will continue, for payment purposes, as the primary provider for the full day of discharge.

Room and board for a hospice/nursing facility (NF) resident is reimbursable on the day of discharge only if the discharge is due to resident death. Room and board reimbursement for the day of discharge from the NF for any other reason is not covered as the resident is not there at the midnight census to be counted as a resident.

Because Medicaid is making a payment for room and board (even though it is paid to the hospice), beneficiaries must be treated as all other Medicaid beneficiaries. For example, the facility cannot seek or accept additional or supplemental payment from the beneficiary, his family, or representative in addition to the amount paid for the covered service, even when a beneficiary has signed an agreement to do so.
10.13.A. NURSING FACILITY RESPONSIBILITIES

Nursing facilities must adhere to all State licensure requirements, even though some of the components of care are provided by the hospice rather than the nursing facility. An example of a licensure component completed by the hospice is that, upon admission, the hospice provides the facility with copies of the beneficiary’s history and physical, interdisciplinary assessment, and plan of care. For purposes of licensure, these copies are accepted as appropriate.

If a beneficiary is already receiving hospice services and elects admission to a nursing facility, the nursing facility should note that the beneficiary has elected hospice on the Facility Admission Notice (MSA-2565-C) sent to the local MDHHS office. The eligibility response should indicate the Benefit Plan ID of Hospice after MDHHS processes the MSA-2565-C. (Refer to the Beneficiary Eligibility chapter for additional information.) The beneficiary (or their designated representative) should contact the local MDHHS office if the eligibility response does not indicate the Benefit Plan ID of Hospice.

Hospice staff cannot be utilized to meet staffing patterns required for licensure (i.e., the facility cannot include hospice staff on staffing reports).

Although the hospice is responsible for developing the coordinated plan of care, the nursing facility, as well as the beneficiary, must be an active participant in its development.

If the hospice beneficiary in a nursing facility has a patient-pay amount, it is the hospice’s responsibility to collect that amount from the beneficiary. The nursing facility cannot collect the patient-pay amount from a hospice beneficiary unless the contract with the hospice specifically delegates that responsibility to the facility.

Services that must be provided by the nursing facility include:

- Room and board;
- Laundry (including facility items as well as personal items); and
- All other non-terminal illness-related services afforded other Medicaid beneficiaries (e.g., services included in the per diem rate).

Hospice covered beneficiaries residing in the nursing facility must not experience any lack of nursing facility services or personal care due to their status as a hospice beneficiary. Facilities must offer the same drugs, services, medical supplies and equipment to all beneficiaries who have elected the hospice benefit in the same manner that services are provided to other beneficiaries in the facility who have not elected hospice care. If a service is normally furnished as part of the facility’s per diem rate, the service must also be provided to hospice beneficiaries. If services are provided for needs associated with a non-terminal illness and are normally furnished and billed by another provider, that practice would continue.
10.13.B. HOSPICE RESPONSIBILITIES

Hospice must certify/re-certify the beneficiary’s need for hospice care.

If a beneficiary already living in a nursing facility elects the hospice benefit, it is the responsibility of the hospice to submit to MDHHS, Enrollment Services Section, a Hospice Membership Notice form (DCH-1074). The eligibility response will indicate a Benefit Plan ID of Hospice after MDHHS processes the DCH-1074. (Refer to the Beneficiary Eligibility chapter for additional information.)

The hospice, in collaboration with the beneficiary and/or family and nursing facility, will establish a coordinated plan of care for the beneficiary. The plan must specify the overall care to be provided and indicate, in detail, which services will be provided by the hospice and which will be provided by the facility.

If the hospice beneficiary has a patient-pay amount, it is the hospice’s responsibility to collect that amount from the beneficiary. The nursing facility cannot collect the patient-pay amount from a hospice beneficiary unless the contract with the hospice specifically delegates that responsibility to the facility.

10.13.C. SERVICE PROVISION

The following is intended for use as a guideline only. It identifies services for which the hospice is responsible, services that the hospice may arrange, and services that are "negotiable."

10.13.C.1. SERVICES THAT HOSPICE MUST PROVIDE (RELATED TO THE TERMINAL ILLNESS)

- A coordinated plan of care outlining the responsibilities of each provider;
- Intermittent (i.e., less than eight hours per day) nursing care of the hospice beneficiary;
- Counseling (defined as bereavement, nutritional, and spiritual); and
- Social work services.

10.13.C.2. SERVICES THAT HOSPICE MAY ARRANGE (RELATED TO THE TERMINAL ILLNESS)

- Spiritual care; and
- Home health aide/homemaker services. This applies only for services not provided during the facility’s normal provision of care. For example, if the facility normally provides baths five times a week but the hospice plan of care calls for a bath each day, the hospice aide would provide baths on the days the facility does not.
10.13.C.3. NEGOTIABLE SERVICES

Services that must be available for hospice beneficiaries but appropriate contracted providers may render, as related to the terminal illness and as included in the patient plan of care, include the following. These services are the responsibility of the hospice, and cannot be billed to Medicaid by the contracted provider.

- Inpatient care for acute episodes of pain and symptom control;
- Inpatient respite care (not available for beneficiaries residing in a nursing facility);
- Laboratory;
- Pharmacy;
- Durable medical equipment, medical devices, and supplies;
- Radiology;
- Medical;
- Up to 24 hours of continuous care (at least eight hours of which must be nursing care) during periods of crisis;
- Physical therapy;
- Occupational therapy;
- Speech/language therapy; and
- Emergency ambulance transportation (if the service is included as part of the hospice plan of care).

10.14 HOSPITAL SERVICES

A nursing facility must have in effect a transfer agreement with one or more hospitals.

10.14.A. PLANNED INPATIENT HOSPITAL ADMISSION

When a hospital admission is planned, the beneficiary must be discharged from the nursing facility. The nursing facility must not count the day of discharge as reimbursable by Medicaid. This day is included on the hospital’s claim when billing. The facility may not bill Medicaid for hospital leave days for a planned admission. (Refer to Holding a Bed [Hospital Leave and Therapeutic Leave] subsection of this chapter for more information.)

10.14.B. EMERGENCY INPATIENT HOSPITAL ADMISSION

When a resident is admitted to the hospital on an emergency basis, the nursing facility may receive Medicaid reimbursement for holding their bed. (Refer to Holding a Bed [Hospital Leave and Therapeutic Leave] subsection of this chapter for more information.)

10.14.C. OUTPATIENT AND EMERGENCY ROOM

Outpatient and emergency room services are an ancillary service and are not included in the facility's per diem rate.
A beneficiary who goes to the hospital for outpatient or emergency room services is not discharged from the nursing facility because the beneficiary is not admitted to the inpatient hospital. The beneficiary should be included in the census of the nursing facility, and this day may be billed to Medicaid even if the beneficiary was being treated at midnight in the hospital outpatient or emergency room.

10.15 **HOUSEKEEPING AND MAINTENANCE**

Facility and room/bed maintenance necessary to maintain a sanitary, orderly, and comfortable environment are a required service and included in the nursing facility's per diem rate.

10.16 **INTRAVENOUS THERAPY**

Intravenous therapy nursing services, supplies and equipment (including all pumps) are included in the facility's per diem rate.

Pharmaceuticals used in IV therapy are an ancillary service and are not included in the facility's per diem rate.

10.17 **LABORATORY SERVICES**

Any nursing facility that performs laboratory services must be certified/accredited under the Clinical Laboratory Improvement Amendments (CLIA).

Laboratory tests that are listed as waived tests under CLIA are included in the facility's per diem rate (e.g., Testrip). A list of these tests and the instrumentation needed to perform them can be found on the FDA website. (Refer to the Directory Appendix for website information.)

Laboratory services that can only be performed with special laboratory equipment by professional laboratory staff may be provided and billed by the appropriate enrolled ancillary provider (e.g., independent laboratory, outpatient hospital). Such services are not included in the facility's per diem rate.

Drawing, collecting and delivery of laboratory specimens are routine nursing services. As such, they are included in the facility's per diem rate regardless of who actually performs the service (i.e., nursing facility or ancillary provider).

10.18 **LAUNDRY SERVICES**

Facilities are responsible for general laundry services (e.g., bedding) and the beneficiary's personal laundry (e.g., clothing). Such services are included in the facility's per diem rate.

Dry cleaning services may be billed to the beneficiary if the beneficiary requests the service in writing, he has prior knowledge that the service is not covered by Medicaid, and he agrees to accept the cost. A beneficiary's patient-pay amount may not be used to cover these costs.
10.19 **Medically-Related Social Services**

Nursing facilities must provide medically related social services to attain or maintain the highest practicable physical, mental and psychosocial well-being of each resident. These services may include, for example, information and referral, resident and family support, discharge planning, and are included in the facility’s per diem rate.

10.20 **Mental Health Services**

Nursing facilities are required to have a written agreement with the local CMHSP outlining their working relationship to provide screening, evaluation and specialized services to nursing facility residents. The agreement must include a description of the process to be used to ensure the annual review of residents previously identified as having a mental illness or intellectual disability. The agreement must also specify the means through which the facility and the CMHSP will deliver mental health services for nursing facility residents.

Completion of required Pre-admission Screening and Annual Resident Review is included in the facility’s per diem rate. Prior to admission to a nursing facility, all individuals, regardless of payment source, must receive the Level I Pre-admission Screening (PAS) to identify the need for mental health and specialized services. Additional screening for mental health and specialized services is done as an Annual Resident Review (ARR), or more frequently in response to a change in a beneficiary’s condition. (Refer to PASARR Process section of this chapter for more information.)

Mental health services provided by the nursing facility staff, as specified in the resident’s plan of care, are included in the facility’s per diem rate. Nursing facilities must provide mental health and/or intellectual disability services that are of lesser intensity than specialized services to all residents who need such services.

10.20.A. **Specialized Services**

Specialized services are those identified by the PASARR Level II and are provided or arranged by the CMHSP. These services must be available to nursing facility individuals regardless of whether they are identified and required by the PASARR process, or whether the individual is determined to require additional services to be provided or arranged for by the State as specialized services. Individuals with a primary diagnosis of dementia are also covered by this requirement, even though the PASARR process exempts individuals with a primary diagnosis of dementia.

The PASARR Level II evaluation may provide recommendations regarding the specialized services and programs needed by the resident. Recommendations are based on evaluation of the resident’s impairment in functional skills and the severity of those deficits. Nursing facilities must meet the responsibilities as outlined in this section for providing specialized services.

“Specialized Services” are defined as those mental health services for residents who have a mental illness or intellectual disability which are:

- Of greater intensity than those normally required from a nursing facility;
- Provided in conjunction with usual nursing facility services;
Specialized services for residents with **mental illness** may include, for example, individual, group and family psychotherapy, crisis intervention services, and formal behavior modification programs.

Specialized services for residents with **intellectual disability** include specialized professional involvement because the service need is related to the resident’s intellectual disability. Evaluators must carefully distinguish between those service needs that require the involvement of an intellectual disability professional, and those which are "generic" and do not require specifically-trained professionals. For example, administering medication is a "generic" service, while teaching a resident to self-administer may be a "specialized service" because it requires the involvement of an intellectual disability professional to design and monitor the program.

For residents with **multiple diagnoses**, such as intellectual disability and mental illness or intellectual disability and dementia, evaluators may recommend either specialized services or other mental health services, depending on the interrelationship of the two diagnoses.

**10.20.B. NURSING FACILITY RESPONSIBILITIES**

Responsibilities of the nursing facility include:

- Providing all of the usual and customary services (refer to the Medicaid Covered Services subsection) and as required by licensing and certification. This includes specialized mental health rehabilitation services as defined in 42 CFR 483.120.

- Monitoring the need for PASARR evaluations and ensuring that they are completed on time (refer to the PASARR Process section). The nursing facility must notify the CMHSP when a Level II evaluation is indicated.

- Collaborating with the resident or his legal representative and the CMHSP to develop an individualized plan of care for specialized services based on the needs identified during the PASARR Level II evaluation. The plan of care must outline the responsibilities of each provider for the specialized services.

- Coordinating the identified services (which may be obtained from the local CMHSP) and implementing and monitoring the services recommended in the individualized plan of care. Nursing facilities must also provide interventions which complement, reinforce and are consistent with any specialized services the individual is receiving or is required to receive by the State through the CMHSP. The individualized plan of care must specify how the facility will integrate relevant activities throughout all hours of the day at the facility to achieve consistency and enhancement of the goals identified in the individualized plan of care.
10.20.C. CMHSP RESPONSIBILITIES

Responsibilities of the CMHSP include:

- Performing the comprehensive evaluation (Level II evaluation) when required by the PASARR Screening.
- Collaborating with the resident or his legal representative and the nursing facility to develop an individualized plan of care for specialized services based on the needs identified during the PASARR Level II evaluation. The plan of care must outline the responsibilities of each provider for the specialized services.
- Providing specialized services to nursing facility residents who have been determined to need them through the PASARR process. MDHHS has allocated funds to local CMHSPs for this purpose.
- Providing training to nursing facility direct care staff to implement and monitor the programs as designed, and participating in the evaluation and modification of the plan of care as needed.
- Providing services to nursing facility residents on the same basis as to all other persons in the region. A nursing facility may use the local CMHSP as a mental health service provider in order to fulfill the nursing facility’s obligation to provide specialized mental health rehabilitation services. Services for residents with a primary diagnosis of dementia are also available from a local CMHSP on the same basis.

In 1991, funds were made available to local CMHSPs to provide specialized services and other mental health services to individuals residing in nursing facilities. Priority for use of these funds is for individuals with the most severe mental health problems who need specialized services. To the extent there are funds remaining after this priority group is served, MDHHS has given local CMHSPs authorization to serve individuals who need mental health services other than specialized services.

Ancillary providers of mental health services may bill Medicaid directly.

10.21 NURSING CARE

Nursing facilities must have nursing staff sufficient to provide nursing and other related services to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident.

Nursing care includes the responsibility for development, implementation and oversight of a plan of care that remains consistent with on-going observation, assessment and intervention by licensed nurses. The following are examples of custodial and rehabilitative nursing care that may be performed by, or under the supervision of, licensed nurses and are included in the per diem rate. Nursing services include, but are not limited to:

- Observing vital signs and recording the findings in the beneficiary’s medical record
- Administration of topical, oral, or injectable medications, including monitoring for proper dosage, frequency, or method of administration, including observation for adverse reactions
Treatment of skin irritations or small superficial or deep skin lesions requiring application of medication, irrigation, or sterile dressings

Routine changing of dressings in chronic, non-infected skin conditions and uncomplicated postoperative incisions

Nursing observation and care of beneficiaries with unstable or complex medical conditions which can only be provided by, or under the immediate direction of, licensed nursing personnel

Proper positioning in bed, wheelchair, or other accommodation to prevent deformity and pressure sores

Provision of bed baths

Routine prophylactic and palliative skin care (e.g., application of creams and lotions) for the prevention of skin irritation and pressure sores

Administration of intravenous solutions on a regular and continuing basis

Administration of tube feedings

Nasopharyngeal aspiration required for maintenance of a clear airway

Care of a colostomy or iliostomy during early postoperative period, on an on-going basis, and conducting colostomy training

Use of protective restraints, bed rails, binders, and supports (if ordered by a physician and in compliance with state and federal regulations) provided in accordance with written patient-care policies and procedures

Use of intermittent positive pressure breathing equipment and nebulizers

Care of catheters

Care of tracheostomies, gastrostomies, and other indwelling tubes

Administration of oxygen or other medicinal gases on a regular and continuing basis in the presence of an unstable medical condition or when nursing assessment is required to determine frequency and necessity of administration

Identifying the need for, and insuring arrangements for, prompt and convenient clinical, laboratory, x-ray, and other diagnostic services

Use of heat as a palliative and comfort measure, such as whirlpool and hydrocolator

Training and assistance in transfer techniques (bed to wheelchair, wheelchair to commode, etc.)

Training, assistance, and encouragement of self-care as required for feeding, grooming, toileting activities (including toilet routine to encourage continence), and other activities of daily living

Normal range-of-motion exercises as part of routine maintenance nursing care

Pain assessment and management

10.22 Orthotics

Orthotics are an ancillary service and are not included in the facility’s per diem rate.
10.23 OXYGEN

The administration of oxygen and the related nursing services are included in the per diem rate.

Oxygen gas, equipment, and supplies for intermittent and infrequent use are included in the facility's per diem rate.

If a beneficiary requires frequent or prolonged oxygen on a daily basis (i.e., at least 8 hours per day):

- As a resident in the Nursing Facility, the oxygen gas, equipment, and supplies must be billed by an enrolled medical supplier, not the nursing facility.
- As a resident in a County Medical Care Facility or a Hospital Long Term Care Unit, the oxygen gas, equipment, and supplies must be billed by the facility. A DME provider cannot bill for oxygen gas, equipment, and supplies for these residents.

NOTE: The rental of a concentrator is billable by a Medical Supplier and should not be confused as needing to be billed by the facility.

(Refer to the Billing & Reimbursement for Institutional Providers Chapter in this manual for billing instructions.)

Oxygen services (i.e., gas, equipment, and supplies) are not covered by Medicaid if Medicare is paying for the stay. Medicare's per diem reimbursement rate includes the oxygen services.

10.24 PERSONAL COMFORT ITEMS

Medicaid does not cover individual personal comfort items (e.g., telephone, television, radio, guest trays). Such services are not included in the facility's per diem rate. Beneficiaries may purchase individualized services with personal funds. A beneficiary's patient-pay amount may not be used to cover these services.

If the facility provides personal comfort items to all its beneficiaries (e.g., a television in the recreation room), the service is included in the facility's per diem rate.

10.25 PERSONAL HYGIENE ITEMS

Items needed for personal hygiene are included in the facility's per diem rate. Such items include, but are not limited to, the following:

- Bacteriostatic soaps
- Body lotions
- Combs and brushes
- Cotton swabs
- Deodorant/antiperspirant
- Facial tissues
- Hair conditioners (as appropriate)
- Incontinence supplies
- Medicine cups
- Oral hygiene supplies
- Patient gowns
- Personal hygiene preparations
- Safety razors
- Sanitary napkins
- Shampoo
- Shaving
- Soaps
10.26 PHARMACY

Nursing facilities must provide pharmaceutical services to meet the needs of each resident.

Prescriptions must be ordered and documented, in writing, in the beneficiary’s medical record by the attending physician. These prescriptions comply with the federally mandated tamper resistant prescription pad policy as long as the beneficiary does not have the opportunity to handle the medical record. Additional information on the tamper resistant prescription pad policy can be found in the Pharmacy Chapter of this manual.

A Medicaid copayment is not required for prescription pharmaceuticals for nursing facility beneficiaries.

The Michigan Pharmaceutical Product List (MPPL) contains the over-the-counter and prescription pharmaceutical products covered by Medicaid and any restrictions placed on those products, including when prior authorization is required. The prior authorization process is outlined in the MPPL and may be obtained by the physician or their designee. The Michigan Pharmaceutical Products List is available online. (Refer to the Directory Appendix for website information.)

Pharmaceuticals dispensed in nursing facilities must be billed through a pharmacy (unless pharmacy is included in the per diem rate, i.e., ICF/IID).

10.26.A. OVER-THE-COUNTER PRODUCTS (OTC’s)

- The MPPL designates when an OTC drug is included in the facility’s per diem rate. It is the responsibility of the facility to provide these products. Examples of OTCs in the per diem include mouthwash, topical antiseptics, analgesics, cough and cold preparations, ointments (both generic and brand name [e.g., Vaseline, Gold Bond]), and vitamins and minerals. The pharmacy or supplier must make arrangements with the nursing facility for reimbursement.

- OTCs not included in the per diem rate that may be billed to Medicaid, as outlined in the MPPL, are reimbursable to the pharmacy for nursing facility beneficiaries. Examples include Diphenhydramine and Insulin.

10.26.B. MEDICATION REVIEWS

Medication reviews, as required by federal regulations, are the responsibility of the facility and are included in the per diem rate. The pharmacist must make arrangements with the facility for reimbursement of such services.

10.26.C. RETURN OF UNUSED DRUGS

Nursing facilities must, with a few exceptions for drugs such as controlled substances that are prohibited from being reused, properly credit Medicaid by returning unused prescription medications to the pharmacy. This policy applies to Medicaid beneficiaries where Medicaid is paying for the prescription medication. This does not apply to residents who have Medicare Part D.
The nursing facility must maintain documentation of:

- The quantity of medications dispensed and consumed by a beneficiary; and
- The return of all unused medications to the pharmacy so the pharmacy can credit Medicaid.

The nursing facility is required to return all prescription drugs that can be appropriately returned to the pharmacy due to the following reasons:

- Discontinuation in use by the prescriber
- Transfer to another facility (e.g., hospital or nursing facility)
- Discharge from nursing facility
- Death of beneficiary

The nursing facility and pharmacy may be subject to post-payment review to ensure the unused prescription drugs (as allowed by Federal and State law) are being returned by the nursing facility, and Michigan Medicaid is properly credited for the returned unused prescription drugs.

The nursing facility provider must not return prescription drugs to the pharmacy which are unsuitable for return according to State and Federal law.

The returned prescription drugs must:

- Have been properly stored
- Be returned unopened
- Not be a compounded product
- Be dispensed in the original packaging
- Be a non-controlled substance

The nursing facility should contact its contracted pharmacist consultant for assistance regarding which prescription drugs are not appropriate for return.

### 10.26.D. Beneficiary Pharmacy Insurance Deductible, Coinsurance, Copays and Premiums

Beneficiaries who are enrolled in Medicaid and Medicare are considered dual eligibles. Dual eligibles who reside in nursing facilities do not have to pay premiums, coinsurance, deductibles and copays for prescription drugs if they are enrolled in a Medicare Part D plan. However, the Medicare Part D benefit requires that Medicaid make a payment(s) for nursing facility care for one full calendar month before the dual eligible is exempt from prescription drug copays. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).
Under either Medicare or Medicaid, a nursing facility is not responsible for paying the pharmacy for a beneficiary's liability (copays, deductibles, and/or coinsurance) unless the facility has assumed this obligation by contract or such payment is required by state law.

10.26.D.2. COORDINATION WITH MEDICARE PART D

Medicaid does not coordinate benefits with the Medicare Part D benefit. Medicaid does not reimburse a pharmacy for the beneficiary's liability for prescription drugs if the beneficiary is:

- Enrolled in a Medicare Part D plan and the prescription drugs are covered under the Medicare Part D benefit.
- Eligible to join a Medicare Part D plan but chooses to retain his commercial insurance in place of joining a Medicare Part D plan.

If a beneficiary joins a Medicare Part D plan that has a premium more than the Medicare standard premium established for Michigan, the beneficiary must pay the difference in the cost that Medicare does not pay.

The following table gives conditions on when a nursing facility can offset the patient-pay amount for the beneficiary's liability for prescription drugs.

<table>
<thead>
<tr>
<th>If</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beneficiary recently enters a nursing facility and his liability is not exempt under the Medicare Part D benefit until Medicaid has made a payment for one month, and it is established that the beneficiary will reside in the nursing facility for one month or more.</td>
<td>Nursing facility can offset the patient-pay amount for the beneficiary's liability during the initial month of the nursing facility stay.</td>
</tr>
<tr>
<td>Beneficiary is retroactively enrolled in Medicaid and his liability exemption under the Medicare Part D benefit has not yet taken effect.</td>
<td>The offsetting of the patient-pay amount for the beneficiary's liability can only occur for the first month if the retroactive enrollment in Medicaid is more than one month. The beneficiary's liability for subsequent months must be billed to the Medicare Part D plan by the pharmacy.</td>
</tr>
<tr>
<td>Beneficiary is prescribed drugs not covered by Medicare Part D, Medicaid or commercial insurance.</td>
<td>Nursing facility can offset the patient-pay amount.</td>
</tr>
<tr>
<td>Beneficiary has pharmacy copays, coinsurance, and deductibles from his commercial/private insurance.</td>
<td>Nursing facility can offset the patient-pay amount.</td>
</tr>
</tbody>
</table>

**Nursing facilities cannot offset the patient-pay amount for insurance premiums.**

If a beneficiary becomes retroactively enrolled in Medicaid and a Medicare Part D plan, a pharmacy can bill the Medicare Part D plan for the beneficiary’s liability during the retroactive period in which the drugs were dispensed. However, in order for the pharmacy to bill Medicare Part D retroactively, the pharmacy must receive proof that Medicare Part D was made retroactive. The nursing facility can assist in getting the appropriate information to the pharmacy by obtaining the proof of retroactive eligibility from the beneficiary or the beneficiary’s representative (this could be the facility). The pharmacy cannot make the decision of retroactive eligibility on its own. Hence, it is important that the nursing facility communicate with the pharmacy about the retroactive information so that the pharmacy can bill the Medicare Part D plan.

10.26.D.5. BENEFICIARIES INELIGIBLE FOR MEDICARE PART D

For beneficiaries who are not eligible for the Medicare Part D benefit, Medicaid will continue to coordinate benefits with their commercial/private insurance.

10.26.D.6. QUESTIONS ON MEDICARE PART D

Questions regarding a beneficiary's eligibility for Medicare Part D, specific Medicare Part D drug coverage, or retroactive enrollment in Medicare Part D must be directed to Medicare. Also, the Michigan Medicare/Medicaid Assistance Program (MMAP) provides free education and personalized assistance to people with Medicare and Medicaid, their families, and caregivers (including the nursing facility). (Refer to the Directory Appendix for contact information.)

Beneficiaries must contact their/spouse’s employer human resources department for questions concerning the coordination of their commercial/private insurance and Medicare Part D.

10.27 PHYSICIAN SERVICES

Physician services must be provided and are an ancillary service. Such services are not included in the facility’s per diem rate. In accordance with federal requirements, residents have the right to choose an attending physician.

A physician must initially examine a resident within 48 hours of admission to the nursing facility, unless the resident has been examined by a licensed physician within five days before admission and a copy of that examination is available in the facility at the time of the resident’s admission. If the admission occurs on a Friday, the exam must be completed within 72 hours.

A physician must evaluate a beneficiary every 30 days for the first 90 days after admission. The resident must then be evaluated every 60 days unless otherwise justified and documented by the physician. At a minimum, the resident must be evaluated at least once every 90 days on an ongoing basis.
A physician visit is considered timely if it occurs no later than ten days after the required visit. After the initial visit, the physician may alternate personal visits between the physician and a physician assistant or nurse practitioner.

**10.28 Podiatry Services**

Palliative treatment and routine foot care (e.g., trimming of the nails, removal of corns and calluses) are included in the facility’s per diem rate.

Medically necessary podiatry physician services are an ancillary service and are not included in the facility’s per diem rate.

**10.29 Private Duty Nursing**

Private duty nurses are not covered in a nursing facility by the Medicaid Program nor are they included in the facility’s per diem rate. The beneficiary may use personal funds to purchase private duty nursing services. A beneficiary’s patient-pay amount may not be used to cover the cost of private duty nursing.

**10.30 Private Room**

When a Medicaid beneficiary requires a private room due to medical necessity, the nursing facility is reimbursed at the usual per diem rate. Private rooms required for medical necessity are included in the facility’s per diem rate. Written documentation of medical necessity must be part of the beneficiary’s medical record.

Medical necessity is defined as a documented medical condition that creates the need to isolate the resident for his safety and/or the safety of others (i.e., infection control). This also includes behavioral conditions related to a medical condition (i.e., aggression related to dementia). The medical necessity must be documented, as well as addressed, in care planning and treatment.

If a beneficiary requests a private room and there is no medical necessity, the beneficiary may elect to pay privately. The nursing facility must advise the beneficiary that a private room is not a Medicaid-covered service unless it is medically necessary, and that the beneficiary or family is responsible for paying the difference between the cost of a semi-private and private room. The facility may only charge the difference between what it would normally charge a private-pay resident for a semi-private and a private room. Facilities may not charge beneficiaries the difference between the Medicaid per diem rate and the rate charged a private-pay resident for a private room. For example, if the facility charges $98.00/day for semi-private room and $112.00/day for a standard private room, the charge is $14.00/day. The beneficiary’s patient-pay amount may not be used for this purpose.

If the beneficiary agrees to pay the difference between the semi-private and private room rate, the beneficiary or family member must request permission, in writing, from MDHHS. The Request for Authorization of Private Room Supplemental Payment for Nursing Facility form (MSA-1580) is used to obtain the permission. The MSA-1580 is completed by the beneficiary or family member. (Refer to the Forms Appendix and to the Directory Appendix for downloading the MSA-1580 and other contact information.) Requests to supplement the cost of a private room are reviewed for cost and reason for request on a case-by-case basis. A response will be sent to the requestor, the beneficiary (if different), and the facility within ten working days.
This response must be retained as part of the beneficiary's medical record. Subsequently, these charges are subject to audit by MDHHS, CMS or designated representatives of either of those entities. These charges must be reported by the nursing facility as revenue received. This response, however, does not guarantee that the beneficiary will be provided a private room. The agreement to provide a private room is given by the nursing facility.

If a Medicaid beneficiary is in a private room (either Medicaid-certified or dually-certified) because the private room is the only bed available, the facility cannot request the beneficiary or beneficiary’s family pay the difference between the semi-private and the private room rate, nor can the facility transfer or discharge the beneficiary due to non-payment of the difference.

**10.31 Prosthetics**

Prosthetic services are an ancillary service and are not included in the facility’s per diem rate.

**10.32 Radiology**

Radiology services are an ancillary service and are not included in the facility’s per diem rate.

**10.33 Substance Abuse Services and Treatment**

Services rendered for the treatment of alcohol and drug abuse are an ancillary service and are not included in the facility’s per diem rate.

**10.34 Supplies, Accessories and Equipment**

Supplies, accessories, and equipment necessary to achieve the goals of the beneficiary’s plan of care are included in the facility’s per diem rate and must be available to the beneficiary. Medical supplies, accessories, and equipment include, but are not limited to:

- Atomizers
- Bandage products
- Bed linens
- Bib or protective cover
- Catheters/accessories and irrigation solution
- Cloth diapers
- Cotton balls
- Cotton swabs
- Deodorizers
- Diagnostic agents (e.g., Testape, Kyotest)
- Disposable diapers
- Disposable gloves
• Dressings (e.g., surgical pads, cellulose wadding, tape)
  Note: Some supplies for complex wound care are not included in the per diem rate and must be obtained through a medical supplier or pharmacy. Supplies that must be billed by a medical supplier, including information for interpreting the list of supplies, are on the MDHHS website. (Refer to the Directory Appendix for additional information.)

• Elastic hose
• Enema kits
• Finger cots
• First aid trays
• Flameproof cubicle curtains
• Foot soaks
• Hot water bottles
• Hypodermic needles/syringes
• Ice bags
• Incontinence pads, pants, and liners
• IV supplies and equipment; related supplies (including IV infusion pump)
• Minor medical/surgical supplies
• Miscellaneous applicators
• Nebulizers (hand-held or used with a compressor)
• Ostomy supplies
• Plastic waste bags
• Recreational/therapeutic equipment and supplies to conduct ongoing activities
• Safety pins
• Sheepskin, devices and solutions for preventing/treating decubiti
• Slings
• Stethoscopes
• Straws
• Syringes/needles
• Thermometers
• Tongue blades (depressors)
• Towels/washcloths
• Tracheostomy care kits and cleaning supplies
• Trochanter rolls
• Water carafes/glasses
Note: This list is not complete. Generic equivalents and products in the same family (i.e., same general use) are also included in the facility's per diem rate.

10.35 TELEMEDICINE

A nursing facility can be either an originating or distant site for telemedicine. Refer to the Billing & Reimbursement for Institutional Providers Chapter for information regarding billing the originating site facility fee. Refer to the Telemedicine Section of the Practitioner Chapter for additional information regarding telemedicine services.

Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

10.36 THERAPIES

Nursing facilities must provide or obtain specialized rehabilitative services if required by the beneficiary's plan of care.

Routine maintenance therapy consists of the repetitive services required to maintain function. The development of the therapy and treatment are included in the per diem rate. Such therapy does not require the therapist to perform the service, nor does it require complex and sophisticated procedures.

Non-routine occupational therapy (OT), physical therapy (PT) and speech/language/pathology (ST) are ancillary services that are covered if prior authorization is obtained and the following conditions are met:

- The therapy must be billed by the facility;
- There must be a written order by the attending physician/licensed physician's assistant for each calendar month of therapy; and
- The written orders must be signed by the attending physician/licensed physician's assistant and retained in the beneficiary's medical record.

Non-routine ancillary therapy is therapy that requires the skills of qualified technical or professional health personnel such as physical therapists, occupational therapists, speech pathologists or audiologists, and is directly provided by or under the general supervision of these skilled personnel to assure the safety of the beneficiary and achieve the medically desired results as ordered by the beneficiary's physician.

Federal regulations require the facility to have a valid contract with the OT, PT, or ST provider. A valid contract allows the facility to retain professional and administrative control over the services provided. Therefore, an agreement that stipulates only the use of facility space does not constitute a valid contract.

If Medicaid funds have inappropriately been paid to a facility for OT, PT, or ST services when a facility did not possess a valid contract, the funds may be recovered by gross adjustment or at the time of cost settlement, as appropriate.

The following clarifies the professional responsibilities of the nursing facility, the physician, and the therapist in the provision of OT, PT or ST services for Medicaid beneficiaries.

- The facility has administrative and professional responsibility for the management of the total health care needs of the beneficiary as outlined in the plan of care. The facility must assure that
appropriate OT, PT, or ST services are available to the beneficiary as needed. In situations where the therapist is not an employee of the facility, the facility must establish a valid contract with a therapist/speech pathologist who meets applicable licensure/certification/accreditation requirements.

- The attending physician is responsible for determining the medical necessity and appropriateness for services and preparing the written orders for OT, PT or ST evaluation and treatment. These are reviewed and approved/disapproved by the MDHHS Program Review Division.
- The therapists are responsible for evaluating the beneficiary’s needs; developing a written plan of treatment, including goals and objectives; and providing or overseeing the appropriate services. A copy of the treatment plan must be retained in the beneficiary’s medical record.

The facility’s responsibilities, as described above, are not meant to conflict in any way with the professional responsibilities of OTs, PTs or STs in the evaluation and treatment of the beneficiary.

The cost of supplies and equipment (e.g., plate guards) used as part of the therapy program is included in the reimbursement for the therapy/speech pathology.

Therapies provided to nursing facility beneficiaries outside the nursing facility premises must be provided in the outpatient department of a general hospital or medical care facility.

Therapies provided to county medical care facility, hospital long term care unit or hospital swing bed beneficiaries outside their respective facilities must be provided in the outpatient department of a general hospital. ST may also be provided by a hearing center. Prior authorization must be obtained by the facility regardless of where the service is to be provided.

**Note:** Therapy provided by a physician (MD or DO) is not a covered benefit for beneficiaries in a nursing facility.

### 10.36.A. OCCUPATIONAL THERAPY (OT)

Occupational therapy (OT) must be active and restorative. A licensed occupational therapist or a licensed occupational therapy assistant must render the services. If the assistant renders the service, the assistant must be under the supervision of the therapist.

The following are examples of occupational therapy services that may be covered by Medicaid:

- Training in activities of daily living;
- Fabrication of adaptive equipment;
- Perceptual motor training;
- Splinting;
- Testing;
- Therapeutic exercises; and
- Prosthetic and orthotic training.

OT services that are provided and billed simultaneous with PT are not covered. Also, diversional OT, reality orientation, and restorative nursing functions are considered part of the per diem rate, and are not separately reimbursable.
10.36.B. PHYSICAL THERAPY (PT)

Active, restorative, or specialized maintenance physical therapy (PT) programs, as explained below, are benefits of the Medicaid Program. There must be the expectation that the beneficiary’s condition will improve significantly in a reasonable and generally predictable period of time.

A licensed physical therapist (temporary permit is acceptable), physical therapy assistant, or physical therapy aide must provide the services. If the assistant or aide renders the service, they must be under the supervision of the therapist.

The following are examples of restorative PT services which may be covered by Medicaid:

- Hot pack, ice pack, infrared treatment, or whirlpool bath is covered when provided as a prerequisite to a skilled physical therapy procedure;
- Gait training is covered when provided to a beneficiary whose ability to walk has been impaired by neurological, muscular, or skeletal abnormality;
- Prosthetic and orthotic training is covered when instructing the beneficiary in using the prosthetic or orthotic device; and
- Range of motion exercises are covered when provided as part of the treatment of a specific disability which has resulted in a loss or restriction of mobility.

For specialized maintenance physical therapy, the therapist’s initial evaluation of the beneficiary’s needs and designing of the program are covered. The program must be appropriate to the beneficiary’s capacity, tolerance, and treatment objectives. The instructions to the beneficiary or to other members of the health team (e.g., nursing personnel) in carrying out such an individualized treatment plan and infrequent re-evaluations, as may be required, are also covered.

10.36.C. SPEECH PATHOLOGY/THERAPY (ST)

The services must be for active, restorative treatment and must be rendered by a licensed speech pathologist. For speech pathology evaluations, a copy of the speech pathologist’s license must accompany the first prior authorization request for that pathologist.

The following are examples of conditions that may warrant speech pathology services:

- Cerebral vascular accident (CVA) or trauma
- Neurological disease, such as Parkinsonism or multiple sclerosis
- Laryngectomy
- Voice disorders caused by conditions such as nodules, polyps, papilloma, ulcers, cysts, or cord damage (the exact diagnosis must be included in the physician’s order)
- Maxillofacial abnormalities with traumatic or surgical excision of the tongue, lips, or hard or soft palate
When properly documented, other diagnoses and conditions may be covered if they meet the above requirements and are prior authorized.

Since the purpose of speech pathology services is restorative rather than habilitative, these services are not covered for:

- Speech problems due to symptoms of organic brain syndrome or chronic brain syndrome; or
- Speech problems due to intellectual disability.

Medicaid does not cover ST when another public agency (e.g., local or intermediate school district special education program) can assume the responsibility of services for the beneficiary.

10.36.D. PRIOR APPROVAL FOR THERAPIES

The Occupational Therapy - Physical Therapy - Speech Pathology Prior Approval Request/Authorization (MSA-115) is used to request prior authorization. The MSA-115 must be reviewed and signed by the attending physician. Refer to the Forms Appendix or MDHHS website for a copy of, and instructions for, the MSA-115.

The initial evaluation does not require prior authorization and cannot be provided more often than twice in a 12-month period (and at least six months apart).

**Exception:** Evaluation of oral pharyngeal swallowing cannot be provided more than four times in a 12-month period.

Prior authorization may be requested for up to two calendar months per request.

The therapist or speech pathologist must keep appropriate notes that include the date of treatment, the name of the therapist, the type and length of treatment, and the resident’s response to treatment. These notes must be maintained in the beneficiary’s medical record.

Prior authorization requests for group therapy require documentation that group therapy is in the best interest of the beneficiary’s treatment.

10.36.D.1. INITIAL REQUEST

When making the initial request for prior authorization of therapy, the facility must attach a copy of the initial evaluation and the written treatment plan. The initial evaluation and treatment plan must include the following information:

- Statement of the problem (i.e., the specific physical entity and functional incapacity involved or the specific speech and/or language diagnosis based upon results of formal/informal testing);
- Baseline condition at initial evaluation, measured in units appropriate to the problem (for speech pathology, this would include the baseline description of clinical and functional performance in all language modalities);
- Short-term goals appropriate to the beneficiary’s diagnosis, level of severity, prognosis, and functional needs;
- Proposed technique for reaching goals, including the planned progression from the baseline condition to the goal; and
- Method by which progress will be measured.

**10.36.D.2. CONTINUED REQUEST**

Authorization of the initial service does not guarantee authorization of continued service. The therapist must submit the MSA-115 for continued therapy with documentation of the most recent progress. The progress summary must be concise and refer to the baseline established in the initial evaluation. Progress must be objective and measurable.

**10.36.D.3. PROCESS**

The MDHHS consultant will make a determination and return to the provider a letter indicating approved, denied, insufficient data, no action, or approved as amended. If approved, the approval letter will contain a PA number with start and end dates. If a portion of the request is denied, Medicaid will only reimburse for the authorized services. The prior authorization number must be entered on the claim when billing. The facility must retain a copy of the approved request as part of the beneficiary’s medical record.

Approval of the request confirms that a beneficiary is in need of services that can be covered by the Program. It does not verify beneficiary eligibility, level of care, nor guarantee the fee charged. The facility is responsible for verifying the beneficiary’s Medicaid eligibility prior to providing the service.

Whenever a beneficiary is admitted to the facility directly from a general hospital or from another nursing facility where the beneficiary was receiving reimbursable therapy services, the name of that facility and the date of discharge from that facility should be included on the prior authorization request. In order to assure continuity of the treatment regimen in such instances, retroactive authorization may be requested if the request is filed within ten days following admission. Retroactive authorization may be granted when the service is rendered within Program guidelines for coverage (e.g., is restorative in nature).

Facilities participating in Medicare are not required to obtain prior authorization for the deductible and/or coinsurance amounts when Medicare approves the services.

**10.36.D.4. BILLING**

CHAMPS is programmed to match the services authorized with the services billed. The facility must not bill until authorization is received and the services are rendered. Services billed must not exceed the services authorized.
10.36.D.5. PROGRESS NOTES

The therapist/speech pathologist must keep progress notes. Such notes include the:

- date of treatment
- name of the individual who rendered treatment
- type and length of treatment
- beneficiary's response to the treatment

The progress notes must be included in the beneficiary's medical record.

10.37 TRANSPORTATION

10.37.A. NON-EMERGENCY NON-AMBULANCE TRANSPORTATION

The nursing facility is responsible for non-emergency non-ambulance transportation for all Medicaid beneficiaries, including Medicare/Medicaid beneficiaries when Medicare is covering the cost of the care. This transportation includes transport to medical appointments/treatment not available in the facility (e.g., dialysis treatment), as well as when the facility arranges for services to be provided at the facility (e.g., hearing aid dealer). The facility must either arrange or provide transportation. Reimbursement for non-emergency non-ambulance transportation, whether the beneficiary is transported to the appointment or the services are provided at the facility, is included in the facility per diem rate. The per diem rate also includes transportation for newly-admitted beneficiaries from a hospital or another residence.

Travel to out-of-state medical providers (other than Michigan Medicaid-enrolled "borderland" providers as defined in the General Information for Providers chapter of this manual) is not the responsibility of the facility and must be prior authorized by MDHHS.

The facility must select the most appropriate, cost-effective mode of transportation. Whenever possible, a facility-owned vehicle should be used. This vehicle must comply with the Americans with Disabilities Act (ADA).

In rare situations, the condition of a beneficiary needing non-emergency transport requires an attendant in addition to the driver. In such cases, it is appropriate for a nurse aide to accompany the beneficiary and this cost should be reflected in the annual cost report as "staffing costs associated with providing needed medical care." Sending a nurse aide or other staff member with the beneficiary being transported must not negatively impact the care of residents remaining in the facility.

The need for a nurse aide to accompany a beneficiary must not be confused with the responsibility of the family or legal guardian "to attend the beneficiary if escort is needed to sign consent forms, decide treatment options, sign insurance forms, provide histories, etc." A nurse aide is not to be responsible for these legal and medical decisions and knowledge.
10.37.B. Emergency Ambulance

Nursing facilities must have contractual arrangements for ambulance services for emergencies. When there is an emergency, an ambulance provider renders the service and bills Medicaid.

10.37.C. Non-emergency Ambulance

When a physician issues a written order for non-emergency ambulance transportation, usually due to the need for a stretcher or other emergency equipment, the ambulance provider may bill Medicaid directly and must maintain the physician's order as documentation of medical necessity. The written order must contain, at a minimum, the following information:

- Beneficiary's name and Medicaid identification (ID) number;
- Attending physician's NPI number and attending physician or provider signature;
- Type of transport necessary;
- Explanation of the medical necessity for ambulance transport (i.e., why other means of transport could not be used);
- Origin and destination;
- Diagnosis;
- Frequency of needed transports (required for ongoing, planned treatment); and
- Type of ongoing treatment (required for ongoing, planned treatment).

A separate physician's order is required for each individual transport, unless a beneficiary has a chronic medical condition that requires planned treatment. For chronic conditions, a physician may order non-emergency transportation for a maximum time period of up to 60 days in a single order. The physician's order for ongoing treatment must state the frequency of the transport and the type of ongoing treatment necessary. If non-emergency ambulance transport is not ordered by the beneficiary's physician, arrangements for payment must be between the facility and the ambulance provider, and cannot be charged to the beneficiary, beneficiary's family or used to offset the patient-pay amount. The cost of non-emergency ambulance transports not ordered by the beneficiary's physician must be identified and removed on Worksheet 1-B by the nursing facility.

10.38 Vaccines

Reimbursement for any vaccination ordered by the attending physician and administered in the nursing facility is included in the per diem rate. The invoiced purchase cost of the vaccine should be included as an allowable medical supply expense on the facility's cost report.

10.39 Vision

Vision services (examinations and glasses) are ancillary services and are not included in the facility's per diem.
A Medicaid copayment is not required for nursing facility beneficiaries.
SECTION 11 – SPECIAL PLACEMENTS AND AGREEMENTS

11.1 DEMENTIA UNITS

A nursing facility may elect to designate beds or units to address the special needs of beneficiaries with Alzheimer’s disease or other dementing illnesses. Care for Medicaid beneficiaries in dementia specialty beds is reimbursed as defined for any other nursing facility bed.

11.2 HOLDING A BED (HOSPITAL LEAVE AND THERAPEUTIC LEAVE)

Medicaid reimburses the nursing facility for holding a bed while the beneficiary is admitted to a hospital for emergency medical treatment (hospital leave) or takes a therapeutic leave from the facility for non-medical reasons.

Prior to therapeutic leave or transfer to a hospital, providers must give written notice of the facility’s bed hold and readmission policy to the beneficiary and a family member or legal representative. This must include information about Medicaid coverage for therapeutic and hospital leave. In an emergency, notice must be given to the beneficiary and family or legal representative within 24 hours. If the beneficiary refuses to have a family member notified, this must be documented in the beneficiary’s record.

The hospital leave portion of this policy only applies when Medicaid is the primary payer for room and board for the nursing facility stay at the time of the emergency hospital admission. For beneficiaries who are dually eligible for Medicare/Medicaid or have other insurance, Medicaid will not reimburse for holding a bed if Medicare or the other insurance is the primary payer for room and board for the nursing facility stay at the time of hospital admission. Medicaid will reimburse for the bed, however, if the resident who was Medicaid at the time of the hospitalization returns to the facility within the ten-day period with Medicare or other insurance coverage for the subsequent stay.

The written notice must specify:

- The Medicaid bed hold policy under which the beneficiary is permitted to return and resume residence in the facility; and
- The facility’s written policy under which a beneficiary is readmitted to the facility when their absence is in excess of the Medicaid-reimbursed leave days.

---

The beneficiary must be readmitted immediately to the first available bed if the beneficiary still requires nursing facility services and is still Medicaid eligible.

NOTE: This readmission policy also applies to Medicaid residents admitted before the effective date of the Denial of Payment for New Admissions (DPNA) who take temporary leave before, on, or after the effective date of the DPNA and are not considered new admissions upon return and, therefore, are not subject to the denial of payment.
11.2.A. HOSPITAL LEAVE DAYS

Medicaid reimburses a nursing facility to hold a bed for up to ten days during a beneficiary's temporary absence from the facility due to admission to the hospital for emergency medical treatment only when the facility's total available bed occupancy* is at 98 percent or more on the day the beneficiary leaves the facility. "On the day" is defined as the facility's census at midnight (i.e., 12:01 a.m. - the first minute of the day).

Facilities at 97.50 percent occupancy or more may round up to 98 percent. Facilities may not round up 97.45 percent – 97.49 percent to 98 percent.

Occupancy includes all licensed beds (e.g., Medicaid-certified, dual Medicare/Medicaid certified, licensed only). The 98 percent or more occupancy does not include beds held open for hospital or therapeutic leave day(s).

In cases where a facility's available bed occupancy is below 98 percent on the day the beneficiary leaves for an emergency admission to the hospital, but rises to 98 percent or more during his hospital stay, no hospital leave days can be billed for the beneficiary. Hospital leave days are only billable for a beneficiary if the occupancy rate is 98 percent or more on the day the beneficiary leaves the hospital.

In cases where the available bed occupancy is at 98 percent on the day the beneficiary leaves and drops below 98 percent during his hospital stay, the facility may bill up to 10 hospital leave days.

In instances where a facility is enrolled with Medicaid and has more than one provider NPI number, the available bed occupancy must be calculated separately for each provider NPI number.

Examples of Worksheet for Determining % of Occupancy

<table>
<thead>
<tr>
<th></th>
<th>Example 1</th>
<th>Example 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Total Licensed Beds (excluding beds in an approved non-available bed plan and/or beds disapproved by LARA for occupancy)</td>
<td>179</td>
<td>140</td>
</tr>
<tr>
<td>B. Number of Total Licensed Beds Not Occupied (unoccupied beds available for a new resident)</td>
<td>2</td>
<td>7</td>
</tr>
<tr>
<td>C. Beds for Residents on Hospital Leave (Medicaid or private pay is paying to hold the bed)</td>
<td>6</td>
<td>8</td>
</tr>
<tr>
<td>D. Beds for Residents on Overnight Therapeutic Leave</td>
<td>0</td>
<td>10</td>
</tr>
<tr>
<td>E. Total Residents on Leave (C + D = E)</td>
<td>6</td>
<td>18</td>
</tr>
<tr>
<td>F. Adjusted Licensed Beds (A – E = F)</td>
<td>173</td>
<td>122</td>
</tr>
<tr>
<td>G. Number of Residents Physically in Facility (total occupancy minus total residents on leave) (A – B – E = G)</td>
<td>171</td>
<td>115</td>
</tr>
</tbody>
</table>

* Calculation of available bed occupancy for purposes of Medicaid reimbursement for hospital leave days is different than calculation of occupancy for cost reporting purposes.
Facilities billing for Hospital Leave Days, must document in the beneficiary’s medical (clinical) record what the facility’s census was at the time the beneficiary left the facility for a hospital leave.

<table>
<thead>
<tr>
<th>Example 1</th>
<th>Example 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>G / F = H</td>
<td></td>
</tr>
</tbody>
</table>

- **Example 1**: Occupancy (number of residents physically in facility divided by adjusted bed capacity) \( G / F = H \)
  - \( 171 / 173 = 99\% \)
  - \( 115 / 122 = 94\% \)

The facility must hold the bed and may bill Medicaid if there is reasonable expectation by the attending physician at the point of admission to the hospital that the beneficiary will return to the nursing facility by the end of the tenth day. The hospital admission must be for emergency medical treatment, as documented by the attending physician in the beneficiary’s medical record.

An “emergency medical condition” is defined as a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that the absence of immediate medical attention could reasonably be expected to result in placing the health of the beneficiary (or, with respect to pregnant women, the health of the woman or her unborn child) in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part.

The beneficiary must return to the nursing facility in ten or fewer days in order for the nursing facility to bill Medicaid for hospital leave days.

If the beneficiary is in the hospital for more than ten days, the nursing facility is released from its obligation to hold the bed and cannot bill Medicaid for any hospital leave days. The resident may be charged to hold the bed for those days if they agree in advance. (See Medicaid Non-Covered Leave Days subsection.) The facility is encouraged to monitor the resident during the hospital stay to determine the likely length of hospitalization.

If the resident is expected to be in the hospital for ten days or fewer and dies while in the hospital, the nursing facility may bill Medicaid for the hospital leave days up to the day before the resident died.

If the resident returns to the nursing facility under Medicare coverage, and was Medicaid eligible prior to the emergency admission, the facility may bill Medicaid for the hospital leave days if the emergency hospitalization was for ten days or fewer.

A resident is counted in the facility census if they are in the facility at midnight. If the resident is out of the facility on hospital leave at midnight, that day must be counted as a hospital leave day. If the resident returns to the nursing facility from the hospital, then is re-admitted to the hospital for the same condition that they were hospitalized for previously, the 10-day period of Medicaid reimbursed hospital leave days continues if the
resident was not counted in the facility census for that day. If, given the circumstances above, the resident was counted in the facility census, a new 10-day period of Medicaid reimbursed hospital leave days may begin.

The resident need not be shown on the Medicaid claim as discharged from the nursing facility unless the hospital admission was a planned admission (not an emergency) or was longer than 10 days. NOTE: If the claim does show discharged, the facility is reminded of Medicaid's readmission policy. The beneficiary must be readmitted immediately to the first available bed if the beneficiary still requires nursing facility services and is still Medicaid eligible. This readmission policy also applies to Medicaid residents admitted before the effective date of the Denial of Payment for New Admissions (DPNA) who take temporary leave before, on, or after the effective date of the DPNA and are not considered new admissions upon return and, therefore, are not subject to the denial of payment.

Patient-pay amounts and billing methods are not affected by this hospital leave day policy. The nursing facility should continue to collect any patient-pay amount, typically on the first day of the month, and indicate the amount collected on the Medicaid claim. CHAMPS automatically deducts the patient-pay amount and reimburses the provider for the balance. If the facility bills Medicaid for hospital leave days that occur at the beginning of the month, then the nursing home should collect the patient-pay amounts as usual. The facility should charge the amount against the patient-pay that Medicaid will pay for that day. For example, if a resident has a patient-pay of $200 and is in the hospital for an emergency condition for the first five days of the month (the stay is 10 days or fewer), the nursing facility should collect the patient-pay amount from the resident, then submit a Medicaid claim. Medicaid would reimburse the facility the hospital leave day per diem rate, minus the patient-pay amount. Using 2002 figures, the facility reimbursement would be $150.30 [($70.06 x 5)-$200].

There is no limit to the number of hospital leave days per resident that may be billed to Medicaid annually as long as there are no more than 10 consecutive leave days per hospital stay.

Medicaid hospital leave days are not included in the Medicaid census statistics. Leave days reimbursed by other payer sources must be included in the census statistics.

11.2.B. THERAPEUTIC LEAVE DAYS

If the beneficiary has a temporary absence from the nursing facility for therapeutic reasons as approved by a physician, Medicaid reimburses the facility to hold the bed open for up to a total of 18 days during a 365-day period. Therapeutic leave is for non-medical reasons, such as overnight stays with friends or relatives. A resident is counted in the facility census if they are in the facility at midnight. If the beneficiary is out of the facility on therapeutic leave at midnight, that day must be counted as a therapeutic leave day.
The Medicaid Program covers up to 18 therapeutic leave days in a 365-day period for each beneficiary if:

- The facility reserves the bed for the beneficiary during his absence; and
- The beneficiary’s written plan of care provides for out-of-facility visits; and
- The beneficiary returns to the facility.

There is no limit to the number of therapeutic leave days that may be reimbursed at one time as long as the total does not exceed 18 days in a 365-day period (not the calendar year). For example, if a resident goes on a 5-day family vacation beginning April 10, 2003, that resident has 13 therapeutic leave days remaining until April 9, 2004.

If a beneficiary does not return from a therapeutic leave, the beneficiary must be discharged on the date he left the facility. The date of admission and the date of discharge may not be billed as therapeutic leave days.

**Therapeutic leave days must be included in the Medicaid census statistics if the therapeutic leave day is being paid by the beneficiary or Medicaid.**

### 11.2.C. Medicaid Non-Covered Leave Days

Medicaid does not reimburse providers to hold a bed for reasons other than emergency transfer to a hospital (10-day maximum per hospital admission), or therapeutic leave (18-day maximum per 365-day period). However, the facility may hold the beneficiary’s bed for other reasons and for leave days not covered by Medicaid, and bill the beneficiary if the beneficiary:

- Has prior knowledge that the service is not a Medicaid benefit; and
- Desires to have the bed reserved; and
- Agrees, in writing, to pay the facility to hold the bed at a specified rate. (The beneficiary’s patient-pay amount may not be used for this purpose.)

If the beneficiary elects to not pay privately, the beneficiary has the option to return to the next available, equivalent bed. A beneficiary cannot be involuntarily transferred/discharged after a temporary absence, including discharge to obtain acute care in an inpatient hospital, unless the appropriate criteria are met and the appropriate regulations, policies, and procedures are followed.
Except for Medicaid-covered leave days and when beneficiaries have paid to hold a bed, the beneficiary must be discharged from the facility and then readmitted upon return to the first available bed.

**11.3 INVOLUNTARY TRANSFER OR DISCHARGE**

**11.3.A. CONDITIONS**

A nursing facility must not involuntarily transfer or discharge a beneficiary unless:

- It is necessary for the welfare of the beneficiary, and the beneficiary’s needs cannot be met in the facility; *
- The beneficiary’s health has improved sufficiently so the beneficiary no longer needs the services provided by the facility; *
- It is necessary to protect the safety of individuals in the facility;
- It is necessary to protect the health of individuals in the facility; *
- The beneficiary has failed, after reasonable and appropriate notice, to pay (or to initiate payment under Medicaid) for a stay at the facility; or
- The facility ceases to operate.

The facility must include documentation in the beneficiary’s clinical record for any of the above circumstances.

**11.3.B. TRANSFER TRAUMA**

For certain residents (defined below), transfer trauma must be considered when that resident may be moved due to a change in the level of nursing need.

Transfer trauma is defined as “any adverse psychological and/or physical effects occasioned by the transfer of a nursing home patient that would be materially detrimental to the physical or mental health of the patient.”

Residents for whom transfer trauma must be considered include all those who have resided in the current nursing facility for at least one year, or who have been involuntarily transferred within the previous year. (A discharge to obtain acute care in an inpatient hospital, followed by an immediate readmission within three weeks to the same nursing facility, does not interrupt the continuity of a resident’s stay.)

The SSA evaluates transfer trauma. This evaluation considers the social, mental and emotional adjustment of the resident, including the length of time that the resident has

* Items require documentation of medical necessity by the attending physician.
been in the nursing facility and the relationships that the resident has formed in the facility. This evaluation may also consider the resident's age, history and success of previous placements, and history of adapting to change. Consideration must also be given to the opinion of the attending physician regarding the resident's social and emotional adjustment and the physical effects of the proposed transfer.

Transfer trauma must be considered before the resident is notified of a nursing level of care change. When Medicaid is the payer source, Medicaid payment at the current level continues while transfer trauma is being considered.

If Medicaid was not the payer source immediately prior to the transfer trauma issue being raised, then Medicaid payment is not made until a decision is reached.

If the transfer trauma decision upholds the beneficiary's medical need to remain in a bed not certified for his present level of care, then the beneficiary's prior level of care will be retained to provide for continued Medicaid coverage.

If it is determined that there is no issue of transfer trauma, the beneficiary must be transferred to a bed or setting appropriate for the new level of care. MDHHS will change the Benefit Plan Assignment, which can be appealed by the beneficiary or their designated representative.

Concerns about involuntary transfer and/or transfer trauma should be reported to the Health Facility Complaint Line. (Refer to the Directory Appendix for contact information.)

11.3.C. BENEFICIARY NOTIFICATION

Nursing facilities must give beneficiaries a 30-day written notice regarding transfer unless:

- The transfer or discharge is a health care emergency;
- The safety or health of beneficiaries or staff is endangered;
- The beneficiary agrees to the transfer/discharge;
- The beneficiary's health has improved sufficiently so the beneficiary no longer needs the services provided by the facility; or
- The facility ceases to operate.

The notice must include:

- The reason for the transfer or discharge;
- The effective date of the transfer or discharge;
- The location to which the beneficiary will be transferred or discharged;
- The name, address, and (toll-free) telephone number of the State Long Term Care Ombudsman;
• For beneficiaries with developmental disabilities (DD), the mailing address and telephone number of the agency responsible for the protection and advocacy of DD individuals, established under the Developmental Disabilities Assistance and Bill of Rights Act;

• For nursing facility beneficiaries with mental illness (MI), the mailing address and telephone number of the agency responsible for the protection and advocacy of MI individuals, established under the Protection and Advocacy for Mentally Ill Individuals Act; and

• Appeal rights.

The facility must also provide:

• Sufficient preparation and orientation to beneficiaries to ensure safe and orderly transfer or discharge from the facility, as required by state and federal regulations; and

• Notice of the facility's bed-hold and re-admission policy, including the Medicaid bed-hold policy.

If a nursing facility elects to discontinue operations (voluntary closure) or withdraw from the Medicaid program, the facility must provide notice to the beneficiary as outlined above not less than 30 days before the closure or withdrawal. The notice must be sufficient to allow for suitable relocation arrangements.

11.4 MARRIED COUPLES

When married beneficiaries or blood relatives live in the same Medicaid nursing facility, they may share a room if both spouses or their relatives consent. (This policy applies only to beneficiaries who both require nursing facility services. It does not apply when one beneficiary does not require nursing facility services. For example, if both spouses wish to share a room in a nursing facility, in order for Medicaid to cover both of them in the facility, they must both require nursing facility services. If only one of them requires nursing facility services, Medicaid only covers services for that person.)

11.5 COMPLEX CARE

The Complex Care Prior Approval-Request/Authorization for Nursing Facilities form (MSA-1576) is used to request prior approval (PA) for the placement of a Medicaid beneficiary for whom placement from a hospital has been, or could be, hindered due to the cost and/or complexity of nursing care or special needs. The authorization covers an individually negotiated reimbursement rate for the placement. Special individualized placement requests and payment arrangements are based on medical necessity and/or service/supply needs exceeding those covered by Medicaid reimbursement for routine nursing facility care.

Examples include, but are not limited to:

• Ventilator dependent care (for nursing facilities not contracted with MDHHS to provide ventilator dependent care)

• Multiple skin decubiti utilizing several treatment modalities
Tracheostomy with frequent suctioning needs
Beneficiaries who require intensive nursing care or treatment.

Program requirements:
- Referrals must come from the nursing facility.
- Hospitals must document that at least ten (10) Medicaid certified nursing facilities within a 50 mile radius of the hospital refused to admit the beneficiary due to the complexity of the patient’s care needs.
- Nursing facilities may request approval after admitting a beneficiary if the hospital failed to accurately document the beneficiary’s condition and needs prior to transfer to the nursing facility. The nursing facility must request approval within 30 days from the date of admission to the nursing facility.

The following information must be submitted:

- A completed MSA-1576, including any requests for additional nursing, CENA, supplies or equipment. **NOTE:** The only supplies or equipment that will be considered are those not included in the facility’s per diem rate or not separately billable by a Medicaid-enrolled medical supplier. An electronic copy of the form is available on the MDHHS website. (Refer to the Directory Appendix for website information.) (Refer to the Medicaid Service Descriptions Section of this chapter for information regarding what services are to be provided by the NF as part of the daily per diem reimbursement.)
- The beneficiary's medical background, including:
  - current medical status;
  - admitting history and physical;
  - a copy of all consultations;
  - most recent three-day physician progress notes;
  - treatment/nursing care plan; and
  - justification for any additional nursing hours and/or special equipment requested.
  (This information should be included on the MSA-1576.)
- Recent (within the past 30 days) lab, x-ray, and diagnostic or therapeutic test results or reports.
- A list of 10 nursing facilities (as documented by the hospital) within a 50-mile radius that have denied admission, including:
  - Name, address, and telephone number of the nursing facility
  - Contact person’s name and title
  - Date of contact
  - Reason for denial
- Documentation of the financial resources available to the beneficiary, including:
  - Medicaid coverage
Medicare Parts A and B
★ Other commercial insurance coverage.
  ▪ Name and telephone number of a contact person at the nursing facility seeking the additional reimbursement for complex care.

It may take up to 15 business days for the MSA-1576 to be processed. If it appears that a beneficiary, upon discharge, will require intensive nursing care, the hospital's discharge planning coordinator should initiate the MSA-1576 as early in the beneficiary's hospital stay as possible to ensure a smooth transition to the nursing facility.

MDHHS will make a determination and return to the provider a letter indicating approved, denied, insufficient data, no action, or approved as amended. If approved, the approval letter will contain a PA number with start and end dates. To renew a request, the facility must submit another MSA-1576 at least 15 business days prior to the expiration/end date.

A beneficiary residing in a nursing facility with an active complex care prior authorization for vent care for two consecutive years must receive a pulmonary evaluation at the beginning of the third year and annually thereafter. A beneficiary may be exempt from the annual pulmonary evaluation if, at the time the scheduled evaluation is due, the beneficiary elects not to have the evaluation, the physician documents a medical reason to not perform it, or the beneficiary received a pulmonary evaluation within the current year, such as during a hospital stay. If the beneficiary chooses not to have the evaluation, the nursing facility must notify the beneficiary's physician of that decision. Documentation of the decision to decline the evaluation by either the beneficiary or the physician must be in the beneficiary's medical record.

11.6 ONE-DAY STAY

A nursing facility is reimbursed for a one-day stay if a Medicaid beneficiary is admitted to the facility and, the same day, is discharged from the facility due to death, return home, or transfer to another institution that is not a Medicaid-enrolled provider. The one-day stay does not apply to a beneficiary admitted to a nursing facility if, later that day, the beneficiary is discharged and transferred to another nursing facility or an inpatient hospital and, at midnight, the second facility or hospital claims the beneficiary in its daily census.

A one-day stay must be included in the Medicaid census statistics.
11.7 RELIGIOUS NON-MEDICAL HEALTH CARE CENTER

Religious Non-medical Health Care Centers may be licensed as nursing facilities and certified for Medicaid. Beneficiaries in Medicaid-certified facilities, under the care of a practitioner, may be determined to be in need of nursing care and, therefore, covered by Medicaid.
SECTION 12 – SPECIAL PROVIDER TYPE COVERAGES AND LIMITATIONS

12.1 HOSPITAL SWING BEDS

In order to address the shortage of rural nursing facility beds, federal requirements allow rural hospitals to provide post-hospital extended care services. Such a hospital, known as a swing bed hospital, can “swing” beds between hospital and nursing facility levels of care on an as-needed basis. In order to receive Medicaid reimbursement, hospital swing beds must meet all applicable state and federal requirements and provide all required services.

Providers of hospital swing bed services may bill Medicaid for hospital swing bed days only when the combined length of stay in the acute care bed and swing bed exceeds the average length of stay for the Medicaid inpatient diagnosis related group (DRG) of the admission. Hospitals that are exempt from the DRG reimbursement system may bill for Medicaid-covered swing bed days beginning the day of admission to the swing bed.

The total number of Medicaid-reimbursed hospital swing bed days is limited to 100 days per beneficiary per calendar year.

A hospital swing bed provider must not provide extended care services if the hospital owns or operates a hospital long-term care unit that has beds available at the time a patient requires admission for extended care services.

Medicaid does not require the MDS for clinical assessment purposes or reimbursement for beneficiaries in hospital swing beds. The PASARR process must be completed, as outlined earlier in this chapter, prior to placement in a nursing facility.

(Refer to the Billing & Reimbursement for Institutional Providers Chapter of this manual for additional swing bed billing instructions.)

12.2 VENTILATOR-DEPENDENT CARE UNITS

There may be occasions when a beneficiary no longer requires acute hospital care but requires specialized care in a Ventilator Dependent Care Unit (VDCU). Medicaid authorizes admission of ventilator dependent Medicaid beneficiaries to hospital and nursing facility ventilator units with which it has agreements to provide VDCU services, and for which there is an enhanced Medicaid reimbursement.

12.2.A. PLACEMENT CRITERIA

A request for placement must show that the:

- Beneficiary is dependent on life-supporting mechanical ventilating equipment for at least six hours per day.
- Beneficiary stay normally meets or exceeds the hospital high-day outlier threshold for DRG 207.
Approval for admission to a VDCU will not be given for a beneficiary who is only on CPAP or BiPAP. If a beneficiary has weaning potential or requires other rehabilitative services (in addition to the respiratory care) and is enrolled in a Medicaid Health Plan (MHP), the MHP is responsible for the first 45 days reimbursement in the post-acute setting. If there is no weaning potential and the beneficiary does not require rehabilitative services, disenrollment from the MHP may occur at the time the beneficiary is discharged from the hospital.

In situations where a beneficiary cannot immediately be placed in a nursing facility or hospital VDCU, Medicaid will cover nursing days in the inpatient hospital. When the beneficiary is in a hospital setting because a nursing facility placement is not available, Medicaid will cover the ancillary services provided by the hospital.

The hospital cannot charge a beneficiary the difference between the hospital’s charge and the MDHHS payment for nursing days.

If a beneficiary refuses an appropriate placement to a VDCU, the beneficiary is responsible for all hospital charges incurred after the date of referral.

12.2.B. AUTHORIZATION FOR VDCU PLACEMENT

To begin the prior authorization process once a VDCU has agreed to accept the beneficiary, the VDCU must contact (by telephone) the MDHHS Medicaid Prior Authorization Contractor for authorization. The MDHHS Medicaid Prior Authorization Contractor will consider the request for ventilator-dependent unit care based on current Medicaid policy. The request will be approved or denied immediately during the telephone call. (Refer to the Directory Appendix for contact information.)

Note: If the PA request is approved, the MDHHS Medicaid Prior Authorization Contractor will:

- request the VDCU's National Provider Identifier (NPI) for inclusion in the prior authorization record; and
- provide the VDCU with a prior authorization number for billing purposes.

The nursing facility must report any change of condition, such as weans from ventilators, transfers, discharges, re-hospitalizations and deaths of these complex care residents to the MDHHS Medicaid Prior Authorization Contractor.

Residents who are weaned from their ventilators will be allowed a 14-day stay in the VDCU from the date they are removed from the ventilator, at the allotted VDCU reimbursement rate, in order to assure complete wean is maintained. Once the 14 days of successful wean has been maintained, it is then the responsibility of the VDCU to
transfer the resident to a Medicaid LTC bed within the facility, transfer the resident to another nursing facility, or discharge the resident home with appropriate care planning involving family, responsible party, and community resources. Once successful wean has been maintained, the PA number will be retired.

12.2.C. NON-AUTHORIZATION OF NEW ADMISSIONS TO A MEDICAID APPROVED VDCU IF FACILITY HAS A SURVEY CITATION OF ACTUAL HARM

New admissions to a VDCU will not be approved from the date a nursing facility receives the CMS-2567 (written survey report) containing the survey citation at a level of actual harm or higher on the scope and severity grid (G, H, I, J, K or L) pertaining to a resident or residents of the VDCU. Authorizations of new admissions will resume when the Department of Licensing and Regulatory Affairs, State Survey Agency notifies the State Medicaid Agency that all deficiencies have been corrected and the facility has been found to be in substantial compliance. This policy does not apply to the renewal of authorizations for Medicaid beneficiaries residing in a VDCU prior to the survey citation of actual harm.

</table>
SECTION 1 – INTRODUCTION

Michigan Department of Health and Human Services (MDHHS), under an approved State Plan as required by the Social Security Act, is responsible for annual Medicaid certification of all nursing facilities (other than State-owned facilities). Michigan Department of Licensing and Regulatory Affairs (LARA) is responsible for ensuring all Medicaid-certified nursing facilities are in compliance with Health Survey and Life Safety Code Survey requirements.

As required by federal law, the State Medicaid Agency (MDHHS, Medical Services Administration) has entered into an interagency agreement with the State Survey Agency (Michigan Department of Licensing and Regulatory Affairs [LARA], Bureau of Community and Health Systems [BCHS]) to conduct surveys of Medicaid providers and applicants. The State Medicaid Agency (SMA) accepts State Survey Agency (SSA) certification decisions as final, but exercises its own determination whether to enter into agreements with providers.

For the purposes of this appendix, a Medicaid-certified nursing facility (NF) is defined as a non-state-owned nursing home, county medical care facility, or hospital long term care unit with Medicaid certification. This appendix includes information regarding Medicaid certification of nursing facilities, staff certification, the survey process, and enforcement remedies when facilities are not in compliance with applicable requirements.
SECTION 2 - MEDICAID CERTIFICATION AND DE-CERTIFICATION OF NURSING FACILITY BEDS AND MEDICAID PROVIDER ENROLLMENT

This Section describes Medicaid certification requirements for nursing facilities, certification and de-certification of nursing facility beds, and how nursing facility providers enroll in Medicaid.

The SMA is responsible for initial certification and annual certification of beds for nursing facilities seeking Medicaid reimbursement. In order for a provider to receive Medicaid reimbursement for nursing care, the nursing facility beds must be Medicaid certified by the SMA and the provider must be enrolled with Medicaid. The SSA is responsible for conducting any required certification surveys for the SMA.

2.1 DUAL CERTIFICATION

MDHHS requires all new Medicaid-certified nursing facility beds to also be certified for Medicare. Requests for certification of new Medicaid beds that are not Medicare-certified will be denied. Requests for initial Medicare certification may be made to the provider’s SSA Licensing Officer. Facilities must meet state and federal regulations for certification.

Providers may seek annual certification of nursing facility beds currently certified as Medicaid-only. Beds that were certified as Medicaid-only as of August 1, 2004 are not required to become Medicare-certified. This exception also applies to Medicaid-only certified beds that were designated as unavailable for occupancy on August 1, 2004. However, MDHHS strongly encourages Medicare and Medicaid (dual) certification of all nursing facility beds in order to maximize access for beneficiaries.

A nursing facility that has certified beds that were granted an exception under this policy, and that is subsequently involved in circumstances that would require it to enroll with Medicaid (such as a change in ownership), must secure Medicare certification for Medicaid beds within one year. A provider’s failure to secure dual certification for all Medicaid-certified beds will result in denial of Medicaid certification and termination of Medicaid enrollment.

A provider that requests new Medicaid certification for some beds in a nursing facility must dually certify all Medicaid beds in the facility before any new Medicaid bed certifications will be approved for the facility, even if the existing Medicaid-certified beds were granted an exception under this policy. For example, a nursing facility has a distinct part or unit that is certified as Medicaid-only and is granted an exception under this policy. The provider adds a new wing and requests Medicaid certification for the new beds. The new beds will be approved for Medicaid certification only if all Medicaid beds in the nursing facility are also certified for Medicare, including the beds in the historically Medicaid-only unit.

A licensed nursing facility entity that becomes a provider as a result of the purchase of a previously closed or currently operating Medicaid-only nursing facility must receive Medicare certification for all Medicaid-certified beds in that nursing facility within one year from the date of purchase of an operating nursing facility or the date of reopening of a previously closed nursing facility. The provider will receive a provisional Medicaid provider agreement while pursuing Medicare certification of the Medicaid-certified beds. This provisional agreement is time limited and holds the provider to the loss of Medicaid certification and disenrollment without appeal if Medicare certification is denied. If warranted, the SMA may grant an additional grace period contingent upon evidence that substantial progress has been made toward Medicare certification. Failure to meet this requirement will result in de-certification of the Medicaid beds and termination of Medicaid enrollment.
A nursing facility that currently has Medicare certification of its Medicaid beds must maintain the dual certification. A nursing facility that voluntarily disenrolls or decertifies beds from Medicare will lose Medicaid certification of those beds. A nursing facility that loses its Medicare certification through the Centers for Medicare & Medicaid Services (CMS) regulatory enforcement actions will automatically lose its Medicaid certification. An exception or exemption to this dual certification may be made pursuant to the provisions contained in Section 21718 of P.A. 368 of 1978 (MCLA 333.21718). Any exception or exemption granted to a nursing facility under Section 21718 of P.A. 368 of 1978 prior to August 1, 2004 will be recognized.

Facilities granted a Certificate of Need (CON) for special population beds, as defined in the Certificate of Need Review Standards for Nursing Home and Hospital Long-Term Care Unit Beds, are also required to dually certify some types of special population beds (e.g., ventilator dependent care beds). TCF/IID or MI beds need not be dually certified.

A provider must request and receive dual Medicaid and Medicare certification for new Medicaid beds acquired through the CON process, e.g. new construction or the redistribution of certified beds.

### 2.2 Medicaid Bed Certification Limits

Individual facilities seeking to enroll in the Medicaid program or seeking to increase the number of Medicaid-certified beds must apply as outlined in the Medicaid Nursing Facility Bed Certification Process subsection of this appendix. Requests to the SMA will be reviewed in date order and must be received 45 days before the first of the month beginning the next quarter of the provider's cost reporting year. MDHHS will authorize Medicaid-certified beds, limited by the aggregate Upper Bed Limit (set in 1996 at 47,542), based on the criteria outlined in the Criteria for Evaluation of Medicaid Bed Certification Requests subsection. Preference will be given to facilities that are requesting Medicaid certification in order to dually certify beds, to facilities that are creating innovative living environments for beneficiaries who choose nursing facility care, and to facilities in geographic areas with limited Medicaid accessibility. Changes in bed certifications will take place after approval is granted effective on the first of the month beginning the next quarter of the provider's cost reporting year. Changes in bed certifications will not be approved on a retroactive basis.

### 2.3 Criteria for Evaluation of Medicaid Bed Certification Requests

The SMA will collaborate with the SSA when making a determination regarding the approval or denial of any application for Medicaid bed certification and provider enrollment. Approval or denial of an application to MDHHS for Medicaid bed certifications will be based on the following criteria:

- Verification from the SSA that the beds are also Medicare-certified.
- The nursing facility's historical and current survey performance demonstrates no regulatory deficiencies or only deficiencies with minimal impact on residents. The nursing facility has not been subject to one of the following actions or concerns within two years (or as noted) of the filing of an application for Medicaid bed certification:
  - A state enforcement action involving license revocation, a limited or total Ban on Admissions, reduced license capacity, selective transfer of residents, receivership, or appointment of a clinical/administrative advisor or temporary manager.
  - Termination of Medicaid enrollment initiated by MDHHS.
- A state rule violation showing failure to comply with state minimum staffing requirements and/or a federal citation documenting potentially harmful resident care deficits resulting from insufficient staff.
- A state or federal finding of Immediate Jeopardy.
- Repeat citations at the harm or substandard quality of care level. "Repeat citation" is defined as two citations of the same federal deficiency, or two or more citations within the same regulatory grouping, at the substandard quality of care, harm, or Immediate Jeopardy levels, issued within the last two years or two standard survey cycles.
- A number of citations at Level Two or above on the scope and severity grid on two consecutive standard surveys that exceeds twice the statewide average number of citations. (The time frame for this criterion may exceed two years.)
- A number of citations resulting from abbreviated surveys at Level Two or above on the scope and severity grid during any calendar year that exceeds twice the statewide average of abbreviated survey citations.
- A federal or state termination or decertification action.
- A federal or state action to deny payment for new or all admissions.
- A filing of bankruptcy or failure to meet financial obligations that threatens the ability of the nursing facility to achieve or maintain compliance with state and federal requirements.
- An outstanding debt to MDHHS (i.e., cost settlement, civil money penalty [CMP] fine, provider Quality Assurance Assessment Program (QAAP) tax, licensing fees). This does not include financial issues that are in the appeal process.

NOTE: When a provider sells a nursing facility, the provider is responsible for all QAAP assessments billed and incurred prior to the date of the sale. The purchaser(s) must assure escrow of any outstanding QAAP amounts owed, or the purchaser(s) becomes responsible for payment of the QAAP and penalty amounts owed before Medicaid participation is granted.

- Failure to comply with a state correction notice order.
- Enforcement action against the administrator’s license in current or previously administered nursing facilities.
- Any other concerns reasonably related to the ability of the nursing facility to maintain compliance with Medicare and Medicaid Requirements for Long Term Care Facilities or to provide appropriate care to residents.

- If currently enrolled as a Medicaid provider, in addition to the criteria above, must be a provider in good standing, defined as:
  - The nursing facility, owner(s), administrator, or other staff are not sanctioned or excluded by Medicare or Medicaid;
  - The nursing facility is in compliance with the Medicare and Medicaid Requirements for Long Term Care Facilities.
Medicaid may enter into a provisional enrollment with a provider (or the owner or management company) that does not meet the above criteria if:

- The applicant and the owner or management company take actions acceptable to MDHHS to correct, improve or remedy any conditions or concerns that would result in denial of the application; and
- The applicant and the owner or management company attains and maintains compliance with the criteria above during the period of the provisional Medicaid enrollment. Failure of the provider to comply with the terms of the conditional agreement will result in termination without appeal of the provisional Medicaid enrollment.

2.4 Medicaid Nursing Facility Bed Certification Process

Current providers who wish to change their Medicaid-certified beds (increase, decrease, relocate) and providers who wish to enroll in the Medicaid Program may do so as outlined in this subsection. A written request to change Medicaid-certified beds must contain the following:

- Number and location of facility beds.
- Current certification designation of all facility beds by unit or wing.
- Requested number and proposed location of increased, decreased, or relocated Medicaid beds, with an attached layout of the facility showing the current and proposed distribution of beds.

A provider may request a change in Medicaid bed certifications at the time of annual survey and any time throughout the year up to once per quarter.

The change in bed certifications will take place after approval is granted effective on the first of the month beginning the next quarter of the provider’s cost reporting year. Changes in bed certifications will not be approved on a retroactive basis.

In addition to the process outlined below, nursing facilities must abide by the procedures outlined in the State Operations Manual, Section 3202.

MDHHS will respond to Medicaid bed certification requests with a determination within 45 days of receipt of all requested information.

2.4.A. Bed Certification Process for Medicaid Enrolled Providers

Nursing facilities that are currently enrolled with Medicaid and want to change their number of Medicaid-certified beds must file a written request with their SSA Licensing Officer and with the SMA. The SMA and the SSA will coordinate regarding the consideration and disposition of requests for additional Medicaid beds. The SSA will conduct surveys as needed. Medicaid approval or denial of the application will be based on the considerations outlined in the Criteria for Evaluation of Medicaid Bed Certification Requests and the Dual Certification subsections of this appendix.

Once the SMA makes a determination regarding the request for additional Medicaid bed certifications, the provider, the SSA, MDHHS Provider Enrollment, and the MDHHS LTC Reimbursement and Rate Setting Section (RARSS) will be notified, in writing, by the SMA.
If the request is denied, the provider will be notified of their appeal rights in writing. If the request is approved, the SSA will be given approval to issue a new Notice of Licensure/Certification Action (LC-180) reflecting the change.

2.4.B. BED CERTIFICATION PROCESS FOR NURSING FACILITIES NOT ENROLLED IN MEDICAID

This subsection applies to providers operating existing facilities that have not previously participated in the Medicaid Program, or providers seeking to certify Medicaid beds following the loss of certification due to a regulatory action.

Non-Medicaid providers seeking to receive Medicaid certification for nursing facility beds and receive Medicaid payment must file a written request with their SSA Licensing Officer and with the SMA. The SMA and the SSA will coordinate regarding the consideration and disposition of the request for Medicaid bed certifications. The SSA will conduct surveys as needed. Medicaid approval or denial of the application will be based on the considerations outlined in the Criteria for Evaluation of Medicaid Bed Certification Requests subsection of this appendix.

Once the SMA makes a determination regarding the request for additional Medicaid bed certifications, the provider, the SSA, MDHHS Provider Enrollment, and RARSS will be notified, in writing, by the SMA. If the request is denied, the SMA will notify the provider of their appeal rights in writing. If the request is approved, the SMA will authorize the SSA to issue a new LC-180 reflecting the change.

The provider must also enroll in Medicaid as outlined in the Medicaid Provider Enrollment subsection of this appendix.

2.4.C. BED CERTIFICATION PROCESS DURING A CHANGE IN OWNERSHIP (CHOW)

A provider seeking a change in ownership of a nursing facility must first receive approval through the CON process within MDHHS. The new provider can avoid a delay in payment and address any potential certification issues by submitting a written 90-day advance notice, plus a copy of the sale and/or lease agreement, to the SSA Licensing Officer, the SMA/LTC Services Section and RARSS. (Refer to the Directory Appendix for contact information.)

The following are changes in ownership that must be reported to the SMA and SSA, regardless of whether a CON is required:

- A change from sole proprietorship to partnership or corporation,
- A change from partnership to sole proprietorship or corporation,
- A change from corporation to sole proprietorship, partnership or corporation,
- Sale or lease of a nursing facility,
- Transfer or sale of stock resulting in a change of the controlling interest in a privately held company,
- Consolidation or merger of two or more corporations that results in the creation of a new corporation.
If the new owner does not want to make any changes in bed certifications, no additional action regarding certifications is required and the certifications continue as they were under the previous owner. However, if the facility has beds designated as Medicaid-only, the new owner must dually certify all Medicaid beds within one year as outlined in the Dual Certification subsection. As part of the CHOW approval process, the SMA may deny bed certifications and recommend against Medicaid enrollment based on the criteria in the Criteria for Evaluation of Medicaid Bed Certification Requests subsection. In addition, dual certification requirements apply as outlined in the Dual Certification subsection.

If the new owner wants to change the bed certifications, a written request must be filed with the SSA Licensing Officer and with the SMA Long Term Care Services Section. The SMA and the SSA will coordinate regarding the consideration and disposition of the request for additional Medicaid bed certifications. The SSA will conduct surveys as needed. Medicaid approval or denial of the application will be based on the considerations outlined in the Criteria for Evaluation of Medicaid Bed Certification Requests subsection.

Once the SMA makes a determination regarding the request for additional Medicaid bed certifications, the provider, the SSA, MDHHS Provider Enrollment, and the RARSS will be notified, in writing, by the SMA. If the request is denied, the SMA will notify the provider of appeal rights in writing. If the request is approved, the SMA will authorize the SSA to issue a new LC-180 reflecting the change.

A new owner is considered a new provider and must enroll in Medicaid as outlined in the Medicaid Provider Enrollment subsection, regardless of whether any bed certification changes are made.

2.4.D. BED CERTIFICATION PROCESS FOR A NEW NURSING FACILITY OR NEWLY LICENSED NURSING FACILITY BEDS

A provider seeking to build a new nursing facility, build a new section of a nursing facility, significantly remodel, or newly license nursing facility beds must first receive approval through the CON process within MDHHS.

Providers seeking to receive Medicaid certification for the new nursing facility beds and receive Medicaid payment must file written requests with the SSA Licensing Officer and with the SMA. The SMA and the SSA will coordinate regarding the consideration and disposition of the request for Medicaid bed certifications. Medicaid approval or denial of the application will be based on the Criteria for Evaluation of Medicaid Bed Certification Requests.

Once the SMA makes a determination regarding the request for additional Medicaid bed certifications, the provider, the SSA, MDHHS Provider Enrollment, and RARSS will be notified in writing. If the request is denied, the SMA will notify the provider of appeal rights in writing. If the request is approved, the SMA will authorize the SSA to issue a new LC-180 reflecting the change.

If not already enrolled, the provider must enroll in Medicaid as outlined in the Medicaid Provider Enrollment subsection.
2.5 Medicaid Enrollment as a Ventilator Dependent Care Unit (VDCU) and Additional VDCU Beds

Medicaid approval or denial of Medicaid enrollment as a VDCU and requests to increase the number of VDCU beds is based on Medicaid policies in the Dual Certification and the Criteria for Evaluation of Medicaid Bed Certification Requests sections of this appendix. In addition, VDCU requests will be coordinated with the facility’s Licensing Officer in the LARA Bureau of Community and Health Systems (BCHS) Long-Term Care Division and the Health Facilities Division, Health Facilities Engineering Section.

2.6 Medicaid Provider Enrollment

To enroll with Medicaid, a nursing facility must:

- Receive CON approval of the beds (new providers and CHOW)
- Receive written notice from the SMA approving the Medicaid bed certifications.
- Receive an LC-180 from the SSA authorizing the Medicaid bed certifications. This document must indicate Medicare certification of the new Medicaid certified beds.
- Complete a New Provider Information Packet to establish data with the RARSS. (A New Provider Information Packet may be obtained from RARSS or the MDHHS website. Refer to the Directory Appendix for contact and website information.)
- Complete the on-line CHAMPS Provider Enrollment application process. Refer to the Provider Enrollment Section of the General Information for Providers Chapter for additional information.

A provider will not be enrolled with Medicaid until all of the above requirements are met.

NOTE: The provider’s employer identification or tax identification number (EIN/TIN) registered with the Vendor Registration System must agree with the EIN/TIN on file with the RARSS and in the nursing facility enrollment information in the CHAMPS Provider Enrollment system.

2.7 Notification Process for Regulatory Actions

MDHHS or CMS may make decisions that result in the loss or reduction of a provider’s Medicaid-certified beds. Loss of certification, or de-certification, means that Medicaid will no longer pay for any service in the nursing facility related to the de-certified beds.

MDHHS or its designee notifies the following entities, in writing, of the loss of Medicaid certification at least 30 days prior to the effective date of payment termination:

- The affected nursing facility,
- The local MDHHS office, and
- The public by means of public notice in a local newspaper.

This notification of the nursing facility’s loss of certification will state that residents must either:

- Make other arrangements for payment to the nursing facility; or
- Relocate to a setting that is Medicaid certified.
The provider may request assistance from MDHHS to coordinate relocation for those beneficiaries who wish to transfer. MDHHS may choose to apply the Nursing Facility Closure Protocol described in the Nursing Facility Closure Protocol subsection to protect the best interests of residents faced with transfer.

2.8 NURSING FACILITY CLOSURE PROTOCOL

An interagency agreement exists, including the SMA, the Office of Services to the Aging (OSA), the SSA, and MDHHS, to delineate the roles and responsibilities of the respective agencies when residents of licensed/certified nursing facilities must be relocated due to nursing facility involuntary or voluntary closure. The agreement applies to all nursing facilities, including those that are county medical care facilities or hospital long-term care units. At the time of a closure, the nursing facility will be provided with a copy of this agreement and contact information for the agency representatives who will be involved in the closure.

2.9 VOLUNTARY WITHDRAWAL FROM PARTICIPATION IN THE MEDICAID PROGRAM OR VOLUNTARY NURSING FACILITY CLOSURE

A provider may choose to close voluntarily, not as a result of regulatory action. A provider may also choose to continue operating as a nursing facility, but withdraw from participation in the Medicaid Program. In both situations, the nursing facility must follow established guidelines to assure safe and appropriate care of residents.

When a provider decides to close voluntarily, the administrator of the nursing facility must provide written notification prior to the impending closure to the:

- State Survey Agency (SSA),
- State Medicaid Agency (SMA) /Long Term Care (LTC) Services Section,
- LTC Ombudsman,
- Residents of the nursing facility, and
- Legal representatives of such residents or other responsible parties.

Written notice must be provided at least 60 days before the date of closure. Note: In cases where the Secretary of the U.S. Department of Health & Human Services (HHS) terminates the facility’s participation in either the Medicare and/or Medicaid programs, notice must be provided no later than the date that the Secretary of the U.S. Department of Health & Human Services (HHS) determines appropriate for such notification.

This 60-day notice requirement begins before any attempt to transfer a resident out of the facility in anticipation of a facility closure/withdrawal. The provider must ensure that no new residents are admitted on or after the date on which such written notification is submitted.

The written notice of a voluntary closure must include the plan for closure. The plan must be approved by the SSA and the SMA/LTC Services Section prior to notification of residents of the closure. The plan must outline the transfer and adequate relocation of residents that assures placement in the most appropriate facility or other setting in terms of quality, services, and location, taking into consideration the needs, choice, and best interests of each resident.
Upon approval of the plan by the SSA and the SMA/LTC Services Section, actual notice of closure must be given, which means that the notice must be given to the resident and a family member or legal representative in a form that they can understand and must be explained to them as needed. The notice must include the plan as approved by the State for the transfer and adequate relocation of the residents by the date specified by the State prior to closure. It must also include assurances that the residents would be transferred to the most appropriate facility or other setting in terms of quality, services, and location, including home or community-based settings, taking into consideration the needs, choice, and best interests of each resident. The notice must include contact information for the LTC Ombudsman and the Area Agency on Aging.

In the event of a voluntary closure, the nursing facility remains Medicaid-certified until all residents are relocated.

If the nursing facility chooses to withdraw from Medicaid but remain open as a licensed nursing facility, residents who are Medicaid eligible at the time of facility disenrollment may remain in the facility and receive Medicaid payment. The nursing facility’s Medicaid enrollment will continue for purposes of payment for state plan services as long as Medicaid residents remain in the facility.

The interagency agreement referenced in the Nursing Facility Closure Protocol subsection of this appendix addresses voluntary closures as well as regulatory closures, and outlines the responsibilities of the state agencies involved. The SSA monitors the withdrawal or closure of a nursing facility. The provider may request MDHHS assistance with resident relocation if needed.

If the provider does not fulfill their responsibilities for the safe and appropriate relocation of residents, as reported by the SSA, the State Closure Team may change the closure into a regulatory action. At that point, the closure becomes non-voluntary and the State Closure Team may request the assistance of a closure agent or take other measures to insure a safe and orderly transfer of residents. The interagency agreement referenced in the Nursing Facility Closure Protocol subsection of this appendix would apply.

2.10 NURSING FACILITY FILING OF BANKRUPTCY

Medicaid-enrolled providers are required to notify the MDHHS Long Term Care Services Section Manager and the RARSS Manager immediately upon filing for bankruptcy. (Refer to the Directory Appendix for contact information.)

2.11 RE-ENTRY AFTER DE-CERTIFICATION

A nursing facility may re-enter the Medicaid Program after decertification (whether voluntary or involuntary) if the following conditions are met:

- Submission of a request to the SSA for re-entry, including documentation indicating that the factors leading to a regulatory termination no longer exist.
- Evidence that all of the applicable statutory and regulatory requirements have been met.
- There is reasonable assurance that the deficiencies that caused the regulatory termination will not reoccur.
- The facility is concurrently pursuing Medicare certification.
- The facility meets all enrollment criteria outlined in this section.
Upon re-entry into the Medicaid Program, all Medicaid beds must also be Medicare certified.

The process for re-entering the Medicaid Program includes:

<table>
<thead>
<tr>
<th>ACTION</th>
<th>DESCRIPTION OF PROCESS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application</td>
<td>The nursing facility must make application for program re-entry to the SSA. The SSA forwards the completed application and evidentiary confirmation to CMS and the SMA for review and processing. A nursing facility may apply for re-certification at any time; however, the Criteria for Evaluation of Medicaid Bed Certification Requests apply as outlined in this section.</td>
</tr>
<tr>
<td>Departmental Review</td>
<td>The SMA makes a formal review of the nursing facility's financial status and requests confirmation of compliance with all civil rights requirements from the Office of Civil Rights (OCR). If financial responsibility and compliance with the civil rights requirements are confirmed, a reasonable assurance period (not subject to appeal) is set and the SSA is asked to conduct an initial survey.</td>
</tr>
<tr>
<td>Survey Activity</td>
<td>There will be at least two surveys during the reasonable assurance period.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Initial Survey</strong> - A survey is conducted at the beginning of the reasonable assurance period to document compliance with previously cited deficiencies. The initial survey may be a partial or full survey at the discretion of LARA. A finding of substantial compliance at this survey will allow the nursing facility to begin the reasonable assurance period. If the nursing facility is found to not be in substantial compliance, then it must re-apply.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Second Survey</strong> - A full survey must be conducted and the nursing facility must be in substantial compliance in order for the reasonable assurance period to end. The SSA will schedule the survey to coincide with the end of the established reasonable assurance period. If the nursing facility has maintained compliance during the reasonable assurance period, it may be approved for Medicaid enrollment. If the nursing facility is not in substantial compliance at the second survey, it must enter another reasonable assurance period if it continues to seek re-entry into Medicaid.</td>
</tr>
<tr>
<td></td>
<td>- <strong>General Survey Protocol</strong> - Facilities are afforded the same rights for challenging survey results as in the standard certification process, which is through the administrative review process within the SSA. During the reasonable assurance period, the SSA may conduct as many surveys as approved by Medicaid to document compliance with state and federal requirements. Surveys are unannounced; therefore, the nursing facility will only receive acknowledgement of receipt of the approved application and that Medicaid enrollment is based on the outcomes of the surveys conducted. All survey reports (CMS-2567L) are forwarded to the SMA within 10 working days to determine the significance of any findings and the resultant action plan. The results of each survey are evaluated to ensure that the reasons for the termination no longer exist or are at the level of substantial compliance (Level One - Cells A, B or C). Facilities are notified of the determination, in writing, by the SMA. If the SSA determines that the conditions for re-entry are met, Medicaid enrollment will be approved. If the SSA determines that the conditions for re-entry have not been met, the SSA will send the provider a denial letter. The nursing facility may correct the deficiencies and re-apply for certification, resulting in another reasonable assurance period.</td>
</tr>
<tr>
<td>ACTION</td>
<td>DESCRIPTION OF PROCESS</td>
</tr>
<tr>
<td>------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| Reasonable Assurance Period | The reasonable assurance period is designed to assure that a nursing facility can operate for a certain period of time without the re-occurrence of the deficiencies that led to termination from participation in the program(s). The SMA contacts the SSA to conduct surveys during the reasonable assurance period.  

The reasonable assurance period begins when the initial survey is completed, which assures LARA that the nursing facility is complying with requirements for which they were originally de-certified. The SMA will establish a reasonable assurance period, typically from one to six months duration. The length of the reasonable assurance period is not subject to appeal. The time frame for reasonable assurance is based upon criteria, which may include:

- A history of maintaining compliance  
- Absence of a pattern of repeat citations  
- Timely submission of plans of correction and implementation of approved plans of correction when needed  
- Number of adverse actions initiated in the past three years  
- History of termination and re-admission to the program  
- Current compliance status  
- Existence of other factors that may affect compliance, e.g., staffing concerns, turnover of key personnel, pay scale  

The SMA will not approve Medicaid enrollment until the reasonable assurance period has been satisfied.  

During the reasonable assurance period, the nursing facility must:

- Employ adequate management and care staff to provide care in accordance with all applicable federal, state and local regulations.  
- Limit admissions to two residents per day or four residents in a seven-day period, regardless of payment source.  
- Develop an admissions informed consent document that is acceptable to the SMA and that explains the re-entry process. The document should further explain to the resident (or authorized representative) that his residency in the nursing facility could be temporary and a transfer to another setting may be necessary if the nursing facility fails to meet all of the requirements for certification. This notice must be explained to, and signed by, the resident or his authorized representative. A signed copy of this document must be placed in the resident's record. |
<p>| Appeals Procedure       | An applicant may appeal a denial of Medicaid enrollment by submitting a written request within 60 days of the date of the denial decision. The appeal should be addressed to the Michigan Administrative Hearing System (MAHS). (Refer to the Directory Appendix for contact information.) The written appeal must include documentation to support the appeal. If the applicant fails to submit documentation within the 60 days, then the denial decision remains in effect. |</p>
<table>
<thead>
<tr>
<th>ACTION</th>
<th>DESCRIPTION OF PROCESS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Payment</td>
<td>Providers are eligible for Medicaid reimbursement when the nursing facility has been found to meet the conditions for re-entry and is an enrolled Medicaid provider. Under extraordinary circumstances, the SMA may elect to enter into a provisional Medicaid provider agreement during the reasonable assurance period. In most cases, Medicaid reimbursement is not available until the facility has met all required conditions.</td>
</tr>
</tbody>
</table>

### 2.12 NON-AVAILABLE BEDS

Any nursing facility bed is considered available for occupancy if the bed is licensed and Medicaid certified, unless it is removed from service due to a regulatory ban on admissions or removed voluntarily using the SMA's non-available bed policy.

The SMA allows nursing facilities to designate beds as non-available, thereby removing them from the occupancy and rate setting calculations. For more information on this policy, refer to the Cost Reporting & Reimbursement Appendix of this chapter.
SECTION 3 - STAFF CERTIFICATION

All health care professionals performing duties within Medicaid-certified nursing facilities must possess the licensure and certification credentials required for their individual disciplines.

3.1 NURSE AIDE CERTIFICATION AND TRAINING

A nurse aide employed in a Medicaid-certified nursing facility must be a Certified Nurse Aide (CNA). Medicaid reimburses facilities through the annual cost settlement process for the Medicaid share of documented costs directly related to meeting the nurse aide training and testing requirements. Training programs and testing sites must be approved by the SSA in order for those costs to be reimbursed by Medicaid. A nursing facility may not charge its employed aides for training, testing, and registry costs related to meeting these requirements. (Refer to the Cost Reporting & Reimbursement Appendix of this chapter for additional information.)

The SSA is responsible for approval of programs that train and certify nurse aides for employment in all Medicaid-certified nursing facilities.

- For information about training requirements, programs or facilities, or concerns regarding the testing program or information placed on the Nurse Aide Registry, contact the LARA Bureau of Professional Licensing.
- For testing registration information or assistance, or test site concerns, contact the Michigan Nurse Aide Customer Service.
- To inquire about a nurse aide's listing on the Registry, name and good standing, contact the Michigan Nurse Aide Registry.

(Refer to the Directory Appendix for contact information.)

3.2 EMPLOYEE SCREENING (CRIMINAL BACKGROUND CHECKS)

Nursing facilities are prohibited from employing, independently contracting with, or granting clinical privileges to any individual making application or being offered privileges who has been convicted of certain crimes. Public Act 303 of 2002 requires nursing facilities to facilitate and bear the cost of criminal background checks, either through the Michigan State Police or the Federal Bureau of Investigation (depending on defined criteria), on all individuals seeking to perform direct services to residents. The law also provides for the sharing of criminal background information with other member agencies of the provider community for the purpose of applicant screening.

An overview of Public Act 303 of 2002 and template forms for use by nursing facilities conducting criminal history checks on applicants are available on the MDHHS website. (Refer to the Directory Appendix for website information.)
SECTION 4 - NURSING FACILITY SURVEY

The purpose of surveying nursing facilities in the State of Michigan is to ensure quality of life and quality of care for residents. In order to fully comply with the applicable federal and state statutes, the SMA has contracted with the SSA to conduct nursing facility certification surveys. This contract represents the intent and purpose of both agencies to promote high quality health care and services for beneficiaries under the Medicaid Program to:

- comply with state and federal statutes, regulations and guidelines requiring the proper expenditure of public funds for the administration of the Medicaid Program and certification of health care providers;
- assure that the services provided under Title XIX and Title V of the Social Security Act are consistent with the needs of beneficiaries and the programs’ objectives and requirements.

Reports generated as a function of this process are used by MDHHS to assure proper payment of claims submitted, to facilitate enforcement actions, and to assess continued certification under the current Medicaid enrollment.

4.1 SURVEY PROCESS

The basic survey protocol, including criteria and procedures, is the same for participation in both the Medicaid and Medicare Programs. The SSA:

- At appropriate intervals as prescribed by federal and state regulations, conducts on-site surveys, re-surveys and other necessary monitoring of the providers applying to or already participating in the Medicaid Program to determine compliance with program requirements.
- Recommends to the SMA certification of those providers that meet applicable federal and state statutes and regulations. The methodology of survey, evaluation and certification complies with applicable statutes, regulations, the provisions of the intra-agency agreement and is subject to review and comment by the SMA.
- Notifies the SMA and the individual provider within five working days of a certification determination and 30 calendar days prior to the expiration or automatic cancellation date of a time limited certification. Such notifications shall be made by a document process mutually agreed upon by both agencies and shall include information sufficient in detail to allow Medicaid to carry out appropriate provider agreement action. This document process shall also allow for extensions of existing certifications as provided for in federal regulations.
- Annually provides to Medicaid a complete listing of all certifications in effect on January 1st of that year.
- Determines and authorizes any waiver of provider requirements granted, the conditions of the waiver, and the time period such waiver will be in effect.
4.2 SURVEY REVIEW

The SSA sends all survey reports with enforcement recommendations to the SMA for review. Reports and subsequent enforcement recommendations include information sufficient in detail to allow the SMA to carry out appropriate provider agreement action. Following review and authorization by the SMA, the SSA may be designated to generate any or all of the necessary certification and enforcement documentation pertaining to a participating provider.
SECTION 5 - NURSING FACILITY ENFORCEMENT

This enforcement policy applies when the State Survey Agency (SSA) or the Centers for Medicare & Medicaid Services (CMS) determines, on the basis of a standard, abbreviated, extended, or partial extended survey, that a provider is or was out of compliance with the federal certification requirements as stated in 42 CFR Part 488, Survey, Certification and Enforcement Procedures. In Michigan, the LARA Bureau of Community and Health Systems (BCHS) functions as the SSA.

5.1 AUTHORITY

The Omnibus Budget Reconciliation Act (OBRA) of 1987, as amended, incorporated specific provisions for nursing home reform into the Social Security Act, including revised requirements for survey, certification, and enforcement of providers participating in the Medicare and Medicaid programs. Applicable regulations are found at 42 CFR Part 488.

5.2 GUIDING PRINCIPLES OF ENFORCEMENT

5.2.A. PHILOSOPHY

- All long term care providers have the responsibility to provide person-centered quality care and services appropriate to the needs of the residents they serve.
- Long term care providers are an essential resource for communities, providing health care services, education, and employment.
- LARA, as the licensing and certification authority, must insure that all Michigan long term care providers fulfill their responsibility to provide quality services.

5.2.B. PURPOSE

To develop, implement, and support an enforcement system that:

- Promotes continuous provision of quality care and the highest practicable physical, mental and psychosocial functioning of each resident.
- Protects the health, welfare, rights, and choices of long term care residents, as defined by law and regulation, without infringing upon the rights of the resident.
- Promptly corrects noncompliance through effective application of appropriate regulatory remedies.

5.3 ENFORCEMENT PRINCIPLES

- The enforcement system must reflect a philosophy of serving resident needs by providing quality care.
The SSA and the SMA must both strive for consistency in identifying deficiencies and in decision-making for selection and application of remedies. This enforcement principle is consistent with the intent of federal enforcement regulations, the State Operations Manual, and the CMS evaluation process for SSA performance.

The SMA's enforcement plan contains a range of remedies. This allows an appropriate remedy scheme tailored to the facility and the cited deficiencies.

Repeat noncompliance or failure to obtain compliance will result in the application of progressively stronger remedies.

Remedies that displace residents from their homes will only be used as a last resort; such remedies include facility closure, termination of Medicaid or Medicare provider agreements, or transfer of residents. These remedies will not be used unless the health, safety and/or welfare of the residents is seriously affected, other remedies have not resulted in the facility's ability to achieve and maintain substantial compliance, and/or the physical plant is not a viable setting for quality care and services.

State enforcement remedies for nursing facilities must include, at a minimum, statutorily specified remedies for skilled nursing facilities and may include additional or alternative remedies approved by CMS.

5.4 FACILITY COMPLIANCE AND DEFICIENT PRACTICE

The SSA or CMS, on the basis of a standard, abbreviated, extended or partial extended survey, will determine whether a participating provider is in compliance with the federal regulations governing Medicaid certification. Based on this determination, one or more remedies (corrective actions) may be selected based on the seriousness of the deficiency, facility history, welfare of the residents, and the likelihood that the remedy will promote prompt and sustained compliance. Enforcement remedies include both federal and state enforcement options. Criteria have been designed to minimize the time between identification of the deficiencies and application of remedies. Repeated or uncorrected deficiencies will be assessed progressively stronger remedies. If the SSA finds that a provider currently meets the requirements, but previously was noncompliant, the SSA may impose a remedy for the days it finds that the facility was not in compliance. Nothing in this paragraph shall be construed as restricting the remedies available to the LARA to address a nursing facility's deficiencies.

5.5 DETERMINING THE SERIOUSNESS OF DEFICIENCIES

To determine the seriousness of deficiencies for the purpose of selecting enforcement remedies, LARA will consider the factors of scope and severity. Scope represents how much of the facility, or how many residents, are or may be affected by a specific deficient practice. Severity represents the potential for harm, or the level of harm that has occurred. Scope and severity are assigned an alphabetic and numeric level on the remedy determination grid. The most serious deficiency cited (based on level of scope and severity) determines the category or categories of remedies to be applied. Other factors in the selection of remedies include:

- whether the deficiencies immediately jeopardize the health, safety, or welfare of the facility's residents
- the relationship of one deficiency to other deficiencies
- the facility's compliance history
the likelihood that the selected remedy will promote correction and continued compliance
- the provider’s culpability, i.e., whether noncompliance is the result of neglect, indifference or disregard
- the relationship of one remedy to other remedies

### 5.5.A. SEVERITY

<table>
<thead>
<tr>
<th>LEVEL OF SEVERITY</th>
<th>DEFINITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>No actual harm with a potential for minimal harm</td>
<td>The deficiency has the potential for causing no more than a minor negative impact on the resident(s).</td>
</tr>
<tr>
<td>No actual harm with a potential for more than minimal harm, but not Immediate Jeopardy</td>
<td>Noncompliance that results in minimal physical, mental, and/or psychosocial discomfort to the resident and/or has the potential (not yet realized) to compromise the resident’s ability to maintain and/or reach his highest practicable physical, mental and psychosocial well being as defined by an accurate and comprehensive resident assessment, plan of care, and provision of services.</td>
</tr>
<tr>
<td>Actual harm that is not Immediate Jeopardy</td>
<td>Noncompliance that results in a negative outcome that has compromised the resident’s ability to maintain and/or reach his highest practicable physical, mental, and psychosocial well being as defined by an accurate and comprehensive resident assessment, plan of care, and provision of services.</td>
</tr>
<tr>
<td>Immediate jeopardy to resident health or safety</td>
<td>A situation in which immediate corrective action is necessary because the provider’s noncompliance with one or more requirements of participation has caused, or is likely to cause, serious injury, serious harm, impairment, or death to a resident receiving care in the facility.</td>
</tr>
</tbody>
</table>

### 5.5.B. SCOPE

<table>
<thead>
<tr>
<th>SCOPE OF IMPACT</th>
<th>DEFINITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Isolated</td>
<td>Scope is isolated when one or a very limited number of residents are affected and/or one or a very limited number of staff are involved, and/or the situation has occurred only occasionally or in a very limited number of locations.</td>
</tr>
<tr>
<td>Pattern</td>
<td>Scope is a pattern when more than a very limited number of residents are affected, and/or more than a very limited number of staff are involved, and/or the situation has occurred in several locations, and/or the same resident(s) has been affected by repeated occurrences of the same deficient practice. The effect of the deficient practice is not found to be pervasive throughout the facility.</td>
</tr>
<tr>
<td>Widespread</td>
<td>Scope is widespread when the problems causing the deficiencies are pervasive in the facility or represent systemic failure.</td>
</tr>
</tbody>
</table>

### 5.6 ENFORCEMENT REMEDIES

A remedy is a corrective action. Remedies available to LARA are specified in federal and state law. When the scope and severity increase, the deficiencies repeat, or the facility fails to maintain substantial compliance, selected remedies may also increase.
5.6.A. FEDERAL ENFORCEMENT REMEDIES

Each federal remedy listed below is described in rules as stated in 42 CFR Part 488 et. seq., and further discussed in the CMS State Operations Manual for Medicaid and/or Medicare certified facilities. Federal remedies available to LARA or CMS include, but are not limited to:

- Denial of payment for new Medicare and/or Medicaid admissions
- State monitoring
- Temporary management
- Directed plan of correction
- Directed inservice training
- Civil money penalties
- Transfer of residents
- Closure of facility with transfer of residents
- Termination of Medicaid enrollment
- Denial of payment for all Medicare and/or Medicaid residents imposed by CMS
- Alternative or specified state remedies approved by CMS
- Administrative/Clinical Advisor

5.6.B. STATE ENFORCEMENT REMEDIES

The SSA has the option of imposing any state or federal remedy based on the facility’s failure to maintain compliance, deficiencies cited within the same regulatory grouping that repeat within the last 24 months (or two standard survey cycles), and the degree of culpability of the facility. In addition to federal remedies, the SMA may accept one or more of the following enforcement actions taken by the SSA under state licensure authority. Also see Michigan Enforcement Rules for Long Term Care Facilities at R 330.11001-330.11017.

- Emergency Order Limiting, Suspending or Revoking a License
- Notice of Intent to Revoke Licensure
- Correction Notice to Ban Admissions or Readmissions
- Transfer Selected Patients; Reduce Licensed Capacity; or Comply with Specific Requirements
- Appointment of a Temporary Manager or Clinical/Administrative Advisor
- State Patient Rights Penalties, if applicable
5.7 DENIAL OF PAYMENT FOR NEW ADMISSIONS (DPNA)

Denial of payment for new admissions may be imposed at any time a provider is not in substantial compliance and must be imposed when a provider is not in substantial compliance within three months of being found out of compliance.

The DPNA enforcement remedy stops Medicaid payment for any new residents admitted to the facility after the effective date of the DPNA. The resident’s status on the effective date of the denial of payment is the controlling factor in determining whether readmitted residents are subject to the denial of payment.

Guidelines for the definition of new admission are:

- Medicaid residents admitted to the facility on or after the effective date of the denial of payment for new admissions are considered new admissions. If Medicaid residents are discharged and readmitted to the facility, they continue to be considered new admissions, and are subject to the denial of payment.
- Medicaid residents admitted to the facility and discharged before the effective date of the DPNA are considered new admissions if they are readmitted to the facility on or after the effective date of the DPNA. Therefore, they are subject to the denial of payment.
- Medicaid residents admitted before the DPNA and discharged on or after the effective date of the DPNA are not considered new admissions if subsequently readmitted. Therefore, they are not subject to the denial of payment.
- Medicaid residents admitted before the effective date of the DPNA who take temporary leave before, on, or after the effective date of the DPNA are not considered new admissions upon return and, therefore, are not subject to the denial of payment.
- Medicaid residents admitted on or after the effective date of the DPNA who take temporary leave (e.g., hospital or therapeutic leave) are not considered new admissions when they return. If they were subject to the DPNA before their leave, they continue to be subject to it after their return.
- Private pay residents admitted to the facility after the effective date of the DPNA who then become eligible for Medicaid are subject to the denial of payment.
- Private pay residents in the facility prior to the effective date of the DPNA who then become eligible for Medicaid after the effective date of the DPNA are not subject to the denial of payment.

5.8 RECOVERY OF MEDICAID FUNDS FOR ADMISSIONS DURING DPNA

Under federal regulations, no federal funds will be paid to a nursing facility or to a state for any resident admitted when the facility is under a Denial of Payment for New Admissions sanction. Nursing facilities will be subject to Medicaid post-payment review to determine if any new residents were admitted during a period of time when the facility was under a DPNA sanction and, if so, Medicaid funds will be recovered from the facility. Facilities will be notified in advance of any recovery action and given the opportunity to produce documentation indicating that the admission was not a new resident and/or to appeal the MDHHS determination.
5.9 MINIMUM DATA SET - RESIDENT ASSESSMENT INSTRUMENT

A nursing facility is required to submit resident assessments to the QIES ASAP system using the Medicare Data Communication Network (MDCN). Comprehensive assessments must be transmitted electronically within 14 days of the Care Plan Completion Date (V0200C2). All other MDS assessments must be submitted within 14 days of the MDS Completion Date (Z0500B). Failure to comply will result in citations and imposition of remedies, including requirement of a plan of correction. Continued failure to comply will result in increasingly severe remedies up to and including termination of Medicaid enrollment.

An individual who willfully and knowingly certifies a material and false statement in a resident assessment will be subject to civil money penalty fines as outlined in 42 CFR § 483.20(f)(5)(j)(1).

5.10 TERMINATION

This remedy may be imposed at any time when appropriate, but must be imposed when a provider has been out of substantial compliance for six months.

5.11 PURPOSE OF REMEDIES

<table>
<thead>
<tr>
<th>TYPE OF REMEDY</th>
<th>PURPOSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directed Plan of Correction</td>
<td>The purpose of the directed plan of correction is to achieve correction and continued compliance with federal requirements. It is used when specific corrective action is required or the corrective action must be accomplished within a specified time, e.g., when a facility’s heating system fails and specific repairs or replacement must be made within a specific period of time; when a provider has had difficulty attaining compliance after a revisit; or when assistance with a plan of correction is needed to ensure an effective revisit prior to imposition of a denial of payment or termination of provider status.</td>
</tr>
<tr>
<td>Directed In-Service Training</td>
<td>The purpose of directed in-service training is to provide basic knowledge to achieve compliance and remain in compliance with federal requirements. Directed in-service training is used when education is likely to correct deficiencies and help the provider achieve substantial compliance.</td>
</tr>
<tr>
<td>State Monitoring</td>
<td>The purpose of state monitoring is to oversee correction of cited deficiencies as a safeguard against further harm to residents when harm or a situation with a potential for harm has occurred. State monitoring is appropriate if the provider has had three consecutive standard surveys with substandard quality of care; poor compliance history, pattern of poor quality of care, and/or many complaints; immediate jeopardy without a temporary manager appointment; concern that conditions in a facility have potential to worsen; the provider refuses to accept appointment of a temporary manager; the provider is unwilling or unable to take corrective action for cited substandard quality of care. LARA may impose state monitoring without notice.</td>
</tr>
<tr>
<td>Denial of Payment for New Admissions</td>
<td>The purpose of Denial of Payment for New Admissions (DPNA) is to encourage prompt and sustained compliance. DPNA may be imposed any time the provider is found out of substantial compliance and must be imposed when a provider is out of compliance three months after a determination of noncompliance. DPNA may be imposed alone or in combination with other remedies.</td>
</tr>
</tbody>
</table>
## Type of Remedy

<table>
<thead>
<tr>
<th>Type of Remedy</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Denial of Payment for All Medicare and Medicaid Residents</td>
<td>The purpose of Denial of Payment for All Medicare and Medicaid Residents is to encourage prompt and sustained compliance. This remedy may be imposed any time the provider is out of substantial compliance, but only by CMS. Factors considered in imposing this remedy include the seriousness of current survey findings, noncompliance history of the facility, and failure of other remedies to achieve or sustain compliance.</td>
</tr>
<tr>
<td>Temporary Management</td>
<td>The purpose of a temporary manager is to oversee correction of deficiencies and ensure the health and safety of the facility's residents while corrections are being made. A temporary manager may be imposed as a federal remedy any time a provider is not in substantial compliance; when a facility's deficiencies constitute immediate jeopardy or widespread actual harm and is imposed as an alternative to termination; or to oversee the orderly closure of a facility. The authority and qualifications of the temporary manager are described in the State Operations Manual at Section 7550.</td>
</tr>
<tr>
<td>Temporary Administrative and/or Clinical Advisor</td>
<td>The purpose of a Temporary Administrative and/or Clinical Advisor is to monitor and mentor the facility administrative and/or clinical staff through the period of corrective action. This is an additional federal Category 2 enforcement remedy defined in the State Plan and MDHHS Rule 330.11007(6). Authority for this remedy is found at §488.303(e) and §488.406(a)(8)&amp;(9).</td>
</tr>
</tbody>
</table>

### 5.12 Revisit Policy

Revisits are not assured and, depending on the circumstances of any given situation, termination can occur any time for any level of facility noncompliance without regard to revisits. Facilities have the responsibility to correct their deficiencies and notify the SSA when corrections will be completed. It is expected that revisit requests will be made prudently so that the likelihood of additional revisits is reduced. If correction is not achieved at the expected time, the facility should notify the SSA that correction has been delayed so that the revisit can be delayed. LARA’s expectation is that the facility has achieved compliance status as alleged in the Plan of Correction. Revisits may be conducted for any level of noncompliance. Remedies may be imposed for any level of noncompliance. Revisits are not assured before imposition of denial of payment for new admissions or termination.

The SSA is authorized, at its discretion, to perform up to three revisits to verify compliance. A fourth revisit may be conducted by the SSA only with the authorization of the SMA. An approved Plan of Correction must be received by the SSA with each revisit request. A fourth revisit requires justification.

### 5.13 Choosing the Compliance Date

LARA follows CMS policy related to revisits. On a first revisit, the compliance date is the accepted Plan of Correction completion date if it is determined at the time of the revisit that the deficiencies were corrected and the facility is in substantial compliance. If a revisit survey identifies that the facility had a deficiency after the completion date that was corrected before the revisit date, the actual correction date is used.

On the second revisit, the compliance date is the revisit date, unless there is specific evidence of earlier compliance. In this case, observation of compliance is relevant, as is evidence indicating a specific date of correction.
On third or subsequent revisits, the compliance date is the revisit date, without exception.

5.14 Evidence of Compliance in Lieu of a Revisit

Revisits may be conducted at any time for any level of noncompliance. Revisits are required whenever a survey finds noncompliance at Level F (Substandard Quality of Care), Harm, or Immediate Jeopardy (IJ) and must continue for all citations at that level until compliance is achieved with F (SQC), Harm, or IJ citations. In other cases, appropriate to the type of deficiency, acceptable evidence of compliance may be allowed in lieu of a revisit at the SSA’s discretion. Evidence of compliance is not acceptable after a second revisit has been conducted within an enforcement cycle. When a facility is allowed to present acceptable evidence in lieu of a revisit, the compliance date is the date the evidence indicates the facility was in substantial compliance.

5.15 Setting the Mandatory Three- and Six-Month Remedy Time Frames

The three-month mandatory denial of payment for new admissions and the six-month mandatory termination dates will be set based on full months rather than on a number of days. With few exceptions, these dates will coincide with the same numerical date of the month of survey exit that identified the noncompliance. For example, if a survey ended on 1/15, the three-month effective date for mandatory denial of payment for new admissions is 4/15, and the six-month termination date is 7/15. Exceptions involve those cases for which a three-month or six-month numerical date is not on the calendar. In these cases, the effective date of the remedy will be the next calendar day.

Immediate Jeopardy situations generally have 23-day termination cycles.

5.16 Failure to Readmit a Qualified Medicaid Resident

A daily civil money penalty (CMP) of $400 will be imposed when an enrolled Medicaid facility refuses to readmit a qualified Medicaid resident (as defined by CMS) following hospitalization. An opportunity to correct will not be provided. This daily CMP will start on the date validated by LARA that nursing home readmission should have occurred. The daily $400 CMP continues until the resident is offered the next qualifying available Medicaid bed at the refusing facility, or the resident is placed in another suitable facility. The refusing facility will be notified by the SSA when an allegation of failure to readmit a qualified Medicaid resident is being investigated.

<tr>
<td>Deficiency</td>
<td>A facility’s failure to meet any participation requirement specified in the Social Security Act or in 42 CFR, Subpart B, 483.5 - 485.75.</td>
</tr>
<tr>
<td>Failure to Maintain Compliance</td>
<td>Inability of the facility to maintain substantial compliance for at least three months, or a facility having three or more survey cycles in a 12-consecutive month period.</td>
</tr>
<tr>
<td>Immediate Jeopardy</td>
<td>Immediate Jeopardy to resident health or safety means a situation in which immediate corrective action is necessary because the nursing facility's noncompliance with one or more requirements of participation has caused, or is likely to cause, serious injury, serious harm, impairment, or death to a resident receiving care in the facility. Such a finding is made in accordance with the criteria and definitions in the CMS State Operations Manual Appendix Q - Guidelines For Determining Immediate Jeopardy.</td>
</tr>
<tr>
<td>Noncompliance</td>
<td>Any deficiency that causes a facility to not be in substantial compliance.</td>
</tr>
<tr>
<td>No Opportunity to Correct</td>
<td>The facility will have remedies imposed immediately after a determination of noncompliance has been made.</td>
</tr>
<tr>
<td>Opportunity to Correct</td>
<td>The facility is allowed an opportunity to correct identified deficiencies before remedies are imposed.</td>
</tr>
<tr>
<td>Past Noncompliance</td>
<td>Past noncompliance is noncompliance that occurred between two certifications of compliance, against which a civil money penalty is imposed. If past noncompliance is cited, a civil money penalty must be imposed.</td>
</tr>
<tr>
<td>Plan of Correction (POC)</td>
<td>Mandatory for all deficiencies of scope and severity levels B through L on the remedy determination grid. A POC must be provided to the SSA within 10 days of the receipt of the survey report (CMS-2567). The POC must be approved by the SSA; if disapproved, remedies may be imposed immediately.</td>
</tr>
<tr>
<td>Remedy</td>
<td>A corrective action. Some remedies are specified in federal law; others are specified in state law.</td>
</tr>
<tr>
<td>Repeat Deficiency</td>
<td>When deficiencies in the same regulatory grouping of requirements are found more than once within 24 months or two standard survey cycles.</td>
</tr>
<tr>
<td>Repeated Noncompliance</td>
<td>For purposes of enforcement action, this term refers to findings of Substandard Quality of Care on three (3) consecutive standard surveys, but does not refer to citations in which the substance of a deficiency or the exact tag number of a deficiency is repeated.</td>
</tr>
<tr>
<td>Substandard Quality of Care</td>
<td>Deficiencies at 42 CFR 483.13 (Resident Behavior and Facility Practices, F tags 221-226); 483.15 (Quality of Life, F tags 240-258); or 483.25 (Quality of Care, F tags 309-333) on the remedy determination grid in cells F, H, I, J, K, or L.</td>
</tr>
<tr>
<td>Substantial Compliance</td>
<td>Survey findings or acceptable evidence of compliance in lieu of revisit indicate that no actual harm has occurred and there is a potential for no more than minimal harm.</td>
</tr>
</tbody>
</table>
5.18 SUBSTANDARD QUALITY OF CARE (SQC)

When a standard or abbreviated survey identifies substandard quality of care (SQC), an extended or partial extended survey is conducted. In addition to the imposition of remedies, the SSA takes the following actions:

- Notifies the attending physicians of residents identified during the survey process as having been affected by the substandard quality of care.
- Notifies the state licensure board responsible for licensing the facility's administrator of all findings of substandard quality of care.
- Prohibits the facility from providing nurse aide training and competency evaluation programs for two years.

If a facility has been found to have provided SQC on the last three (3) consecutive standard surveys, along with other remedies, LARA will impose:

- Mandatory denial of payment for new admissions;
- State monitoring.

5.19 IMMEDIATE JEOPARDY

When the SSA identifies that Immediate Jeopardy to resident health or safety exists, the provider is notified and directed to submit as soon as possible an allegation that the Immediate Jeopardy has been removed. Within two calendar days of the last day of the survey during which Immediate Jeopardy was identified, the SSA will notify the provider that the SMA must terminate Medicaid enrollment within 23 calendar days of the last day of survey if the Immediate Jeopardy has not been removed. At its discretion, the SMA may appoint a temporary manager who must remove the Immediate Jeopardy within 23 days to avoid termination.

In order for a 23-day termination timeclock to be stopped, the provider must submit an acceptable Plan of Correction to the SSA. A subsequent revisit must then be conducted to verify removal of the Immediate Jeopardy, even if the underlying deficiencies have not been fully corrected.

Civil Money Penalties (CMP) of $3,050 to $10,000 per day will be imposed for each day an Immediate Jeopardy was identified before removal. Following removal of the Immediate Jeopardy, CMPs will continue until the facility is found to be in substantial compliance, but will be selected from a lower fine range of $50 to $3,000 per day. The upper range of CMPs will apply for a minimum of one day, even if the Immediate Jeopardy is removed immediately after identification and notification. No CMP will apply on the day the facility is determined to be in substantial compliance.

The SSA may consider using a Per Instance Civil Money Penalty of $1,000 to $10,000 when the beginning date of the deficiency cannot be determined, or when a Civil Money Penalty is combined with other enforcement actions, e.g., a discretionary denial of payment for new admissions, directed plan of correction, or directed in-service training.
5.20 **NO OPPORTUNITY TO CORRECT**

Providers will not be given an opportunity to correct deficiencies before remedies are imposed when they have deficiencies of actual harm (or higher) on the current survey event, as well as on the previous standard survey or any intervening survey. The previous harm (or higher) level deficiency must have been in a completed survey cycle with compliance verified. LARA will impose either a Civil Money Penalty or Denial of Payment for New Admissions, or both. LARA may impose other optional federal remedies.

5.21 **OPPORTUNITY TO CORRECT**

An opportunity to correct deficiencies before remedies are imposed is not assured. The SSA has no obligation to give a provider an opportunity to correct deficiencies prior to imposing remedies and must only meet the minimum notice requirements that are applicable to the imposition of remedies. At the SSA’s discretion, it may provide facilities an opportunity to correct deficiencies before remedies are imposed when they do not meet the criteria for "No Opportunity to Correct."

When an opportunity to correct deficiencies before remedies are imposed is offered, the SSA will request an acceptable plan of correction, provide initial notice of possible enforcement action, conduct a revisit (if applicable), and provide formal notice of other remedies if noncompliance continues at revisit. While formal notice of denial of payment for new admissions is generally provided in the first revisit letter, the SSA may provide it to the facility in the initial deficiency notice.

LARA must impose DPNA no later than three months after the last day of the survey that identified the noncompliance if substantial compliance is not achieved.

LARA may impose either a per day or per instance Civil Money Penalty for past noncompliance, for days of noncompliance after the finding is made, or a combination thereof. Amounts will be determined by LARA based on facility history, repeating deficiencies, high numbers of deficiencies, culpability of the provider, failure to achieve or maintain substantial compliance, and for increasing noncompliance.

5.22 **PROHIBITION OF APPROVAL OF NURSE AIDE TRAINING AND COMPETENCY EVALUATION PROGRAMS**

Federal law, as specified in the Social Security Act at Sections 1819(f)(2)(B) and 1919(f)(2)(B), prohibits approval of nurse aide training and competency evaluation programs and nurse aide competency evaluation programs offered by, or in, a facility which, within the previous two years, has operated under a Section 1819(b)(4)(C)(ii)(I) or Section 1919(b)(4)(C)(ii) waiver; has been subject to an extended or partial extended survey as a result of a finding of substandard quality of care; has been assessed a total civil money penalty of not less than $5,000; has been subject to a denial of payment, the appointment of a temporary manager or termination; or, in the case of an emergency, has been closed and/or had its residents transferred to other facilities. Exceptions to this, as specified in Public Law 105-15, Permitting Waiver of Prohibition of Offering Nurse Aide Training and Competency Evaluation Programs in Certain Facilities, will apply.

5.23 **NEW OWNER**

A new owner may apply to the SSA to have approval of the facility’s nurse aide training and competency evaluation program restored before a two-year lockout period has expired.
5.24 NOTICE OF CMP ASSESSMENT

Prior notice is not required before the imposition of CMPs. A penalty equivalent to a one-day penalty will apply in all circumstances even if the violation(s) is immediately corrected. The daily penalty will end on the day prior to the determination of substantial compliance, or on the day prior to the determination that a civil money penalty is no longer warranted. The SSA determines compliance. CMP amounts may be increased to reflect changes in levels of noncompliance at revisit. CMP amounts may increase for repeat deficiencies.

The SSA has developed a CMP schedule for Immediate Jeopardy and Harm or Potential Harm occurrences to promote a consistent application of penalties. The CMP schedule conforms to 42 CFR 488.408 and is intended to cover the majority of cases of CMP imposition. Situations may occur that justify exception to the guidelines. The CMP schedule is subject to change without notice. For further information, contact LARA Bureau of Community and Health Systems (BCHS). (Refer to the Directory Appendix for contact information.)

Accrual of CMPs ceases when one of the following situations occurs:

- the facility is determined by the SSA to have achieved substantial compliance
- the appointment of a receiver by a circuit court
- closure of a facility
- appointment of a temporary manager for the purpose of overseeing the orderly closure of the facility
- termination of a provider agreement

5.25 USE OF CMP FUNDS

Money collected by the SMA as a result of civil money penalties is held in a special fund to be applied to the protection of the health or property of residents of any nursing facility that LARA finds deficient. Money recovered by the SMA from funds due a facility (because of lack of payment of civil money penalties by the facility) is also deposited into this fund.

5.26 COST REPORTING FOR REMEDIATION EXPENSES

Temporary manager and (limited) other remediation expenses incurred by the provider as a result of an enforcement action are a Medicaid allowable routine nursing care cost as part of the owner/administrator cost classification. Total owner/administrator compensation is subject to established program cost limitations and allowable cost principles. Civil money penalties are not allowable Medicaid costs. (Refer to the Cost Reporting & Reimbursement Appendix of this chapter for additional information.)

5.27 APPEAL RIGHTS

The provider is notified of appeal rights at the time of remedy imposition. Providers may only appeal the existence of a deficiency and/or the number of days considered in violation. The established daily amount of the CMP is not subject to appeal. Appeals are through MDHHS. (Refer to the Directory Appendix for contact information.)
MDHHS has developed an informal review process for resolution of disputes regarding deficiencies cited by surveyors. Information regarding this process can be found on the MDHHS website. (Refer to the Directory Appendix for website information.)

The provider is also notified of waiver rights at the time of remedy imposition. Within 60 calendar days of the notice of appeal rights, the provider may elect to waive the right to appeal. The waiver must be in writing and be received by the SSA Enforcement Unit and by the Michigan Administrative Hearing System (MAHS) within 60 days of the notice of appeal rights. Waiver of the right to appeal will reduce the total CMP amount by 35%.

5.28 PENALTY COLLECTION

Collection of civil money penalties will be made by voluntary transmittal, in a check payable to the State of Michigan, within 30 calendar days of notice of penalty amount due or within 15 days of issuance of appeal results. If voluntary transmittal does not occur, the CMP will be recovered by gross adjustment against the next available Medicaid warrant or as a component of final cost settlement in a change of ownership. No repayment schedules will be allowed for any penalty assessments. Civil money penalties are not allowable Medicaid costs.

SECTION 1 – INTRODUCTION

This appendix outlines Medicaid policy pertaining to nursing facility ownership, nursing facility reimbursement, nursing facility costs, and nursing facility financial reporting. Cost reporting, rate determination, financial settlement, audit, and appeal processes are addressed in this appendix. Costs classifications (such as plant, variable, allowable and non-allowable, add-ons) used to determine nursing facility reimbursement are defined.

Throughout the appendix references will be made to the State Medicaid Agency (SMA) and the State Survey Agency (SSA). The Michigan Department of Health and Human Services (MDHHS), Medical Services Administration, is the designated SMA, and is responsible for administration of the Medicaid program. The Michigan Department of Licensing and Regulatory Affairs (LARA), Bureau of Community and Health Systems (BCHS) is the designated SSA.

1.1 REIMBURSEMENT RATE METHODOLOGY – GENERAL

The Medicaid nursing facility reimbursement rate is prospectively determined based on the nursing facility's historical or acquisition costs, which are subject to limitations put forth in policy. Participating Medicaid providers' nursing facility resident days and cost information are reported to the SMA on an annual cost report submitted by the nursing facility. The nursing facility industry aggregate cost data is used to analyze and determine facility class reimbursement limits and related cost levels necessary for calculating nursing facility per diem rates and other analysis. The facility's routine nursing care per diem rate includes plant and variable cost based on the facility's audited allowable costs, measured against class wide rate limitations. Additional reimbursement for specific services outside of the routine nursing care per diem rate are also analyzed and determined from the facility's annual cost report and included in the Medicaid annual reimbursement settlement.

The intent of the Medicaid nursing facility reimbursement system is to:

- Assure high quality services at reasonable costs.
- Encourage the efficient use of nursing care resources.
- Provide reimbursement for allowable costs incurred by prudent, cost-conscious facility managers.
- Provide a review and appeal mechanism to assure that nursing facility providers receive fair and equitable treatment.

Reductions may be implemented to the variable cost portion of the NF rate due to Executive Order, legislative mandate, or cost savings initiatives. Notice of a reduction, or continuation of a reduction, will be issued via a policy bulletin. A record of recent NF variable rate reductions will be maintained on the MDHHS website. (Refer to the Directory Appendix for website information.)

1.2 MEDICARE PRINCIPLES OF REIMBURSEMENT

Unless stated otherwise in this appendix, Medicaid reimbursement rates are determined for nursing facilities in accordance with the federal Principles of Reimbursement established for the Medicare Program. Nursing facility providers are expected to comply with applicable provisions in these Principles, with policies published by the SMA, and with all relevant federal and state statutes, rules and regulations.
When reviewing the Principles of Reimbursement, any references to "intermediary" should be interpreted as referring to the SMA.

Medicare Principles of Reimbursement appear in the Code of Federal Regulations (CFR), at Title 42, Part 413, and in manuals published by the federal Centers for Medicare & Medicaid Services (CMS). The Provider Reimbursement Manual, also referred to as PRM-15 and Pub. 15, may be obtained from CMS electronically or by contacting CMS. (Refer to the Directory Appendix for website and contact information.)
SECTION 2 - OWNERSHIP CHANGES AND MEDICAID TERMINATION

2.1 PREREQUISITE

When an ownership change is anticipated, the Certificate of Need (CON) requirement must be satisfied before Medicaid enrollment can occur. MDHHS administers the CON Program. Contact information and subject matters pertaining to the CON may be found on-line on the MDHHS website. (Refer to the Directory Appendix for website information.)

2.2 OWNERSHIP CHANGES

When an ownership change is anticipated, the proposed Seller(s) and the proposed Purchaser(s) must provide written notice to both the State Medicaid Agency (SMA) and the State Survey Agency (SSA) at least 90 calendar days prior to the anticipated ownership change. The written notice to the SMA must be sent to the MDHHS LTC Reimbursement and Rate Setting Section (RARSS) and to the Provider Enrollment Unit. (Refer to the Directory Appendix for contact information.) The written notice to the SSA must be sent to the nursing facility’s licensing officer. Failure to provide written notice to either agency could result in payment and settlement delays.

Prior to the ownership change date, the new ownership must complete a New Provider Information Packet to provide RARSS with the necessary information for the rate setting and reimbursement process. Failure to provide this information prior to or immediately upon completion of the purchase will delay the rate setting and reimbursement processing for the new ownership. For New Facility/Owner Requirements, refer to the Cost Reporting Section of this appendix.

If a facility changes ownership, the facility must register the NPI for the new owner through the on-line CHAMPS Provider Enrollment (PE) subsystem. If the provider tax identification number (TIN) did not change, the NPI can be reported through the CHAMPS PE maintenance function. If the change involves a new TIN, the provider must complete a new enrollment application. The new owner must not use the prior owner’s NPI for reporting and billing Medicaid services. Failure of the new ownership to register the new provider NPI number for billing subjects the new owner to financial responsibility for the prior owner’s claim liability. Refer to the Provider Enrollment Section of the General Information for Providers Chapter for additional information.

The Seller(s) and the Purchaser(s) will be notified by RARSS and advised of any requirements related to cost reporting and rate setting, including final settlement for the former owner. For information regarding reimbursement settlement, refer to the Cost Report Reimbursement Settlement Section of this appendix.

2.3 NURSING FACILITY SALE BETWEEN FAMILY MEMBERS

The sale of a family owned nursing facility between family members is allowable and recognized as a transfer of ownership and a recognized sale transaction for Medicaid reimbursement within allowable cost and reimbursement limits if all of the following requirements are met. However, if it is subsequently determined control is not relinquished by the prior entity or interested parties, asset values will revert back to the values prior to the recognized sale and any additional reimbursement paid will be recovered.
A purchase contract or agreement must be present. The transaction must terminate the seller's interest in the business. The seller must not have any recourse or ownership protection to retain or have a security interest in obtaining future ownership of that nursing facility in the event of the termination of the new ownership (purchaser) at a later date.

Borrowing or financing for the sale transaction must be between the purchaser and a non-related third party (i.e., a financial institution). Financial loans from the family-related seller individual or entity to the family-related purchaser are not allowable for reimbursement. The finance instrument must not be a land contract from the seller.

Total dollar amount of allowable borrowings cannot exceed the purchase price (allowable asset value). The Capital Asset Value (CAV) limit applicable to the nursing facility immediately prior to the sale, appropriately adjusted for nursing facility asset items that are excluded from the sale transaction, is the maximum reimbursable borrowing balance applicable to the asset transaction.

The nursing facility property appraisal must be obtained. The facility appraisal value must support the purchase price negotiated between the sales parties. Refer to the Appraisal Guidelines Section of this appendix for additional information.

The new ownership operation must be a different legal entity in which the family-related seller is not an officer or board member exercising control over the new operation. The nursing facility entity may remain as an ongoing business entity in a situation where the real estate sale does not involve the licensed nursing facility operator. This occurs where a related party lease exists between the nursing facility entity prior to the real estate transaction, and the real estate transaction of the leased nursing facility is between the family-related parties. The requirement that the family-related lessor/seller cannot exercise active interest or control in the management of the nursing facility after the sale must be met.

The following will be applied to a change in ownership as a result of a sale between family members:

- The allowable asset value to the purchaser is limited to the allowable historical capital asset cost of the seller party (or nursing facility entity owned by the family member) minus the dollar amount of depreciation expense allowed and reimbursed under the Medicaid Program. There is no increase in nursing facility asset values. MDHHS considers Medicaid reimbursement to the nursing facility for depreciation expense was zero dollars during the time period that the seller provider was reimbursed by Medicaid for plant cost based upon capital asset value tenure reimbursement rate.

- The tenure factor for the nursing facility following the sale will revert to zero due to the capital asset transaction affecting a plant cost increase.

- The Medicaid program plant cost reimbursement limitations of the Deficit Reduction Act (DEFRA) of 1984 will not apply to the transaction as a result of the purchase limitation to the historical asset cost base of the seller.

- The seller may be subject to depreciation recapture dependent on the sale price of the assets and the depreciation reimbursement made to the seller during the time period in which the seller was reimbursed a plant cost component under the depreciation cost method. The reimbursement period of depreciation recapture is limited to Medicaid services reimbursed during the time period from October 1, 1984 through the date in which the nursing facility transferred to the tenure plant cost component reimbursement. The dollar amount of depreciation recapture may impact the asset acquisition allowable dollar amount for the purchaser.
2.4 FACILITY ASSET CHANGE OF OWNERSHIP

In the event of a binding agreement and/or sale occurring on or after July 18, 1984, the Plant Cost Component for the nursing facility, attributable to the agreement and/or sale, is limited to the Medicaid Program policy provisions applying federal reimbursement limits of the DEFRA. Refer to the plant cost component rate determination provisions in the Rate Determination Section of this appendix for additional information.

At the time of the facility asset ownership change, the Provider must complete a Plant Cost Certification and submit a copy of the purchase and/or lease agreement, along with plant cost information, to the MDHHS LTC Reimbursement and Rate Setting Section (RARSS). The information is necessary to establish the reimbursement rate for the Plant Cost Component due to the asset ownership change. For Plant Cost Certification requirements and timeframes for filing the data, refer to the Plant Cost Certification Section of this appendix.

For an explanation of the effect of the sale of assets on the Tenure Factor, refer to the Rate Determination Section of this appendix.

In the event of a sale after March 31, 1985, Medicaid will recapture from the selling provider any reimbursement received in the form of depreciation expense, through the date of either the sale and transfer of assets or, for a Class I facility, that provider's conversion to a “Return on Current Asset Value Component” reimbursement, whichever is earlier. This reimbursement provision does not apply to Class I nursing facility providers whose ownership began after March 31, 1985. For information regarding depreciation reimbursement adjustment, refer to the Cost Report Reimbursement Settlements Section of this appendix.

2.5 TERMINATION OF MEDICAID PARTICIPATION

A nursing facility that loses its Medicaid certification as a result of regulatory action, irrespective of whether that action requires facility closure, or a nursing facility that chooses to terminate its participation in the Medicaid program without closing must comply with notice and cost reporting requirements. Refer to the Cost Reporting Section in this appendix and to the Nursing Facility Closure Section in the Survey, Certification and Enforcement Appendix of this chapter for relevant information.

When Medicaid participation is terminated voluntarily or involuntarily, payment for at least one month of services rendered is retained for Final Settlement.
**SECTION 3 – DEFINITIONS**

General definitions are provided in this section. More detailed explanations are provided in relevant sections related to cost, audit or rate setting.

<table>
<thead>
<tr>
<th>Definition</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Abuse</strong></td>
<td>Provider practices that are inconsistent with sound fiscal, business, or medical practices and result in an unnecessary cost to the Medicaid program or in reimbursement for services that are not medically necessary or that fail to meet professionally recognized standards for health care.</td>
</tr>
<tr>
<td><strong>Acceptable Cost Report</strong></td>
<td>A complete and accurate accounting of the financial and statistical activities of a nursing facility provider prepared in accordance with Medicaid policy and cost reporting instructions on the electronic format required by the SMA. The cost report must include the certification statement signed by an authorized representative of the nursing facility certifying the cost report as a true, correct and complete statement of facility financial and statistical activities prepared from the nursing facility provider’s books and records.</td>
</tr>
<tr>
<td><strong>Administrator</strong></td>
<td>A nursing facility administrator is a person(s) who is on site and responsible for the professional administration, supervision and management of the nursing facility and operations as they relate to resident care. The nursing facility administrator must be licensed in accordance with the law in Michigan.</td>
</tr>
<tr>
<td><strong>Allowable Costs</strong></td>
<td>Costs incurred in the provision of nursing facility services subject to guidelines and limitations set forth in Medicare Principles of Reimbursement, as they appear in federal regulations and in manuals published by the federal Centers for Medicare &amp; Medicaid Services, unless stated to the contrary in policies and procedures issued by the SMA.</td>
</tr>
<tr>
<td><strong>Ancillary Services</strong></td>
<td>Services for which charges are customarily made in addition to routine service charges. Services are defined in the Coverages portion of this chapter.</td>
</tr>
</tbody>
</table>
| **Asset Acquisition Cost** | The cost or value for a nursing facility asset determined in accordance with Medicare Principles of Reimbursement. Medicaid further defines acquisition cost as the cost incurred by the present owner in acquiring the asset.  
  **For Class I, II, III and IV Nursing Facilities**  
  For depreciable assets acquired after July 31, 1970, the historical cost may not exceed the lower of current reproduction cost adjusted for straight-line depreciation over the life of the asset to the time of purchase, or the fair market value of the asset at the time of its purchase.  
  **For Class III and IV Nursing Facilities**  
  For depreciable assets acquired on or after December 1, 1997, the allowable historical cost of the asset may not exceed the historical cost less depreciation allowed to the owner of record as of August 5, 1997 or, if the asset did not exist as of August 5, 1997, the first owner of record after August 5, 1997. |
| **Authorized Representative** | An individual who has legal authority to obligate the nursing facility entity. The individual may be an officer, senior or majority partner, possess controlling ownership interest or an appropriate management employee of the licensed nursing home business entity. For purpose of signatures required for cost reporting and reimbursement request actions, individuals not included in these positions must have designated legal right to act on behalf of the subject business entity. |
| Available Bed | A bed considered available for occupancy. Beds are considered available except in the following situations:  
| | - Unoccupied beds when the facility is under a regulatory Ban on Admissions (does not include beds unoccupied when the facility is under a Denial of Payment for New Admissions action).  
| | - Beds covered under a SMA-approved Non-Available Bed Plan.  
| | - Beds temporarily unoccupied due to renovation or construction where the SSA has deemed the beds unacceptable for occupancy. |
| Available Bed Days | The number of available bed days for a facility is the number of available beds in the facility multiplied by the number of days in the cost reporting period that they are available. |
| Average of Variable Costs | See Class Average of Variable Costs. |
| Ban on Admissions | A regulatory/enforcement sanction, imposed by the SSA, prohibiting the admission of any new resident(s) into the nursing facility, regardless of payment type, while the prohibition is in effect. Readmissions are allowed during this period on an individual case basis at the discretion of the SSA. A modified ban on admissions is a regulatory/enforcement sanction, imposed by the SSA, which may be imposed for a period of time after a ban on admissions has ended. The length of the modified ban on admissions is at the discretion of the SSA and may limit the number of new admissions for a designated period of time.  
| | Note: A Ban on Admissions is different from a Denial of Payment for New Admissions. |
| Base Costs | Costs that cover activities associated with direct patient care. Major items under these categories are payroll and payroll-related costs (salaries, wages, related payroll taxes, fringe benefits) for departments of nursing, nursing administration, dietary, laundry, diversional therapy, and social services; food; linen (does not include mattress and mattress support unit); workers compensation; utility costs; consultant costs from related party organizations for services relating to base cost activity, nursing pool agency contract service for direct patient care nursing staff, and medical and nursing supply costs included in the base cost departments. With the exception of nursing pool services, purchased services and contract labor from unrelated parties or from related organizations, incurred in lieu of base costs as previously defined, are separated into base and support costs using the industry-wide average base-to-variable cost ratio. |
| Base Costs Per Day | Facility base costs divided by the total number of resident days for the same period. |
| Base Cost Component, Indexed | See Indexed Base Cost Component. |
| Base Period | An interval of time for which cost data is obtained and used in the calculation of a prospective reimbursement rate. |
| Capital Expenditure | Expenditure not limited to cost of construction, engineering, and equipment, which, under Generally Accepted Accounting Principles, is not properly chargeable as an expense of operation. |
| Census | See Resident Days/Occupancy. |
Census Day

A census day is counted when a resident is occupying a nursing facility bed at midnight. A census day is counted if:

- the resident is away from the facility for therapeutic leave and the facility is paid by any payer source to hold the bed;
- the resident is on a one-day stay and the nursing facility is paid for the day;
- the resident is discharged due to death and the nursing facility is paid for the day;
- the leave days (bed holds) are paid for by non-Medicaid sources; or
- it is a resident’s day of discharge that qualifies as a late discharge by the Medicare program.

A resident is counted for census purposes if the resident is admitted to the hospital, except when the facility may be reimbursed by Medicaid to hold the bed or when a Medicaid beneficiary is hospitalized and the facility is ineligible for reimbursement because it is not at 98% occupancy (unless the facility is reimbursed by another payer source to hold the bed). If a resident is hospitalized and the facility is not paid by any source to hold the bed, the day is not included in the census. A resident is counted for census purposes on the day of admission, but not on the day of discharge except as noted above.

Chain Organization

A group of two or more nursing care facilities, or at least one nursing care facility and another business or entity, that is owned, leased, or through any other device controlled or operated by one organization. Chain nursing facility organizations include, but are not limited to proprietary organizations and various religious, charitable, and governmental organizations, any of which may be engaged in other activities not directly related to health care.

Change of Ownership

The exchange of real property, e.g., a sale of stock or real estate, including a sale of a building housing a nursing facility provider as a lessee; a change in corporate structure for a nursing facility, e.g., a change from a sole proprietorship to a corporation; or any other ownership change that affects the provider/licensed operator of a nursing facility.

Class I Facilities

Proprietary and nonprofit nursing facilities that do not fall under the Class II, Class III, Class IV or Class V definitions.

Class II Facilities

Proprietary nursing facilities for the mentally ill or developmentally disabled (intellectual disability), with a different variable cost limit than Class I facilities.

Class III Facilities

Proprietary nursing facilities, hospital long term care units, and nonprofit nursing facilities that are county-operated medical care facilities.

Class IV Facilities

State-owned and operated institutions for individuals with intellectual disabilities (developmentally disabled), Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID), and nonprofit nursing facilities for individuals with intellectual disabilities.

Class V Facilities

A distinct part of a special nursing facility for the care of ventilator-dependent residents.

Class VI Facilities

Hospitals that provide a program of short-term nursing care (Swing Beds) not exceeding 100 days per stay.
### Class Average of Variable Costs (AVC)

The total indexed variable costs for all facilities in a class divided by the total resident days for all facilities in the class. An AVC is calculated for each nursing facility class. For example, the AVC for October 1, 2003, which is used for rate year October 1, 2003 to September 30, 2004, is based on variable costs reported in cost reports for facility fiscal years ending in 2002, indexed to October 1, 2002.

### Class Variable Cost Limit (VCL)

A limit set at the 80th percentile of the Indexed Variable Costs (IVC) for facilities in a particular class during the current calendar year. The 80th percentile is determined by rank ordering facilities from the lowest to the highest IVC, then accumulating Medicaid resident days of the rank-ordered facilities, beginning with the lowest, until 80% of the total Medicaid resident days for the class are reached. The Variable Cost Limit for the class of facilities equals the IVC of the nursing facility in which the 80th percentile of accumulated Medicaid resident days occurs. A VCL is calculated for Class I and Class III nursing facilities. For example, the VCL for October 1, 2003, which is used for rate year October 1, 2003 through September 30, 2004, is based on variable costs reported in cost reports for facility fiscal years ending in 2002, indexed to October 1, 2002.

### Common Ownership

A situation in which more than one individual possesses significant (5% or greater) ownership or equity in a nursing facility or an organization serving the nursing facility provider.

### Compensation

The total monetary, fringe, and/or benefits received by an employee or owner for services rendered to the nursing facility.

### Control

A situation where an individual or organization has the power, directly or indirectly, to significantly influence and/or direct the actions or policies of a nursing facility or an organization serving the nursing facility provider.

### Corporate Official or Employee

An individual representing an organization with the authority to exercise control over a nursing facility.

### Cost Center

A division, department, or subdivision thereof; a group of services; or any other unit or type of activity into which functions of an organization or nursing facility are divided for purposes of cost assignment and allocation.

### Cost Index

An indicator used to adjust nursing facility cost levels. The cost index used by Medicaid is Global Insight's Skilled Nursing Facility Market Basket Without Capital Index, which is published quarterly in the Global Insight DRI-WEFA Health Care Cost Review. The cost index is used to adjust reported costs from the facility's cost report period end date to October 1 of the year that is one year prior to the rate year being calculated. For example, cost report data used to set rates for the October 1, 2003 to September 30, 2004 nursing facility rate year are indexed to October 1, 2002.

### Cost Report

A formal compilation of the nursing facility ownership, financial and statistical data in MDHHS prescribed format, and required on an annual basis for the reporting period generally extending over a 12-month period based on the nursing facility's fiscal year. Each nursing facility provider's cost report must include an itemized list of all expenses as recorded in the formal and permanent accounting records of the facility.

### Current Provider

The provider that operated the nursing facility during the time period of the last cost report on which normal rate setting would occur. Also see Provider.

### DEFRA

Deficit Reduction Act of 1984
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
</table>
| **Denial of Payment for New Admissions (DPNA)** | A regulatory/enforcement action, imposed by the CMS or the SMA, prohibiting payment for new Medicare and/or Medicaid admissions. Medicaid will not pay for services provided to a resident admitted during a DPNA.  
Note: A Denial of Payment for New Admissions is different from a Ban on Admissions. |
| **Economic Inflation Rate** | The annual economic inflation percentage for Class I and Class III nursing facilities established by the state legislature through the appropriations process. |
| **Economic Inflation Update** | The Economic Inflation Rate (EIR) for the facility class applied to the lesser of the Variable Rate Base for the facility or the class Variable Cost Limit. |
| **Facility** | An entire nursing facility or a distinct part thereof being considered for rate setting. The entire building may be considered a distinct part unit for rate setting purposes. A unit smaller than the entire building may also be considered a distinct part unit for rate setting purposes if the identified facility space area meets required certification requirements. |
| **Fair Market Value** | The price that an asset would bring by bona fide bargaining between well-informed buyers and sellers at the date of acquisition, generally comparable to the price at which other sales have been consummated for assets of like type, quality and quantity in a particular market at the time of acquisition. |
| **Fiscal Year - Facility** | For purposes of cost reporting, a nursing facility provider's financial reporting year for tax purposes, normally a 12-month period unless approved for exception due to change in provider ownership or fiscal period end date change. |
| **Fiscal Year - State** | October 1 through September 30. |
| **Fixed Equipment (Major)** | Equipment that is affixed to or constitutes a structural component of the nursing facility as defined by the current version of the American Hospital Association Chart of Accounts. |
| **Hold A Bed Day** | See Leave Day. |
| **Home Office** | The central office of a chain organization. (see Chain Organization) |
| **Hospital-Attached Long Term Care Unit (HLTCU)** | A distinct part of a general hospital licensed as a nursing facility. |
| **Hospital Leave Day** | See Leave Day - Hospital. |
| **Indexed Base Cost Component** | A facility's total per resident day allowable base costs indexed to October 1 of the year that is one year prior to the rate year being calculated. |
| **Indexed Support Cost Component** | A facility's indexed base cost component multiplied by the lesser of the facility's support-to-base ratio or the support-to-base ratio limit for that facility's bed-size group. |
| **Indexed Variable Costs** | The sum of a facility's allowable base and support costs per resident day indexed to October 1 of the year that is one year prior to the rate year being calculated. |
| **Leave Day - Hospital** | A day for which a facility may be reimbursed by Medicaid to hold a resident's bed for his/her return. (Medicaid policy pertaining to reimbursement is contained in the Coverages portion of this chapter.) Leave days reimbursed by other payer sources must be included in the facility census for cost reporting purposes. |
| **Leave Day – Therapeutic** | A day where a facility may be reimbursed by any payor source to hold a resident's bed for his/her return. Medicaid policy pertaining to reimbursement is contained in the Coverages portion of this chapter. The day is counted as a census day of care for resident occupancy on the nursing facility's cost report. |
| **Management Company** | An entity contracted by a licensed and Medicaid-enrolled nursing facility provider to manage one or more of the daily operations of the facility. |
| **Medical Care Facility (MCF)** | A county-operated nursing facility. |
| **Net Quality Assurance Supplement (Net QAS)** | The Quality Assurance Supplement minus the Medicaid share of the assessment, based on non-Medicare nursing facility days. |
| **New Facility (for rate-setting purposes)** | A nursing facility provider that does not have a current Medicaid historical cost, including a newly constructed facility or an existing facility that has never before participated in the Medicaid program, or a facility that has participated in Medicaid in a different provider class, or an existing facility that qualified as a "No Medicaid" or "Low Medicaid" activity cost reporting provider for two consecutive fiscal years. A nursing facility that has made physical plant additions and/or renovations, including a total replacement or a facility that has been sold or resold is not considered a new facility. |
| **New Provider in a Medicaid-Enrolled Facility** | A person or business entity that has purchased or is purchasing a nursing facility that previously had Medicaid participation and whose new ownership individual(s) or business entity are not related through family or business ties to the owner's business entity of the previous owner. Under certain circumstances, a sale between family members may be approved by the SMA and the new owner may be considered a new provider. |
| **Non-Medicare Nursing Facility Days** | Nursing Facility days for which Medicare (Part A [Fee for Service] and Part C [Medicare Advantage]) is not the primary source of reimbursement. |
| **Nursing Facility or Nursing Home** | A facility (or distinct part of a facility) that is licensed by the State of Michigan to provide nursing care and related medical services for residents who require such care above the level of room and board. |
| **OBRA** | The federal Omnibus Budget Reconciliation Act, initially passed in 1987 as Public Law 100-203, with amendments in 1988, 1989, 1990 and 1994. This law incorporated specific provisions for nursing facility reform, including revised requirements for the survey and certification process and for the enforcement process. |
| **Occupancy** | See Resident Days/Occupancy. |
| **Occupancy Rate** | The total number of resident days in a given time period divided by the number of available bed days in the facility for the same time period. |
| **Owner/Administrator** | A person who is employed and functions as the administrator, assistant administrator, business manager, or in any other administrative capacity in the nursing facility, and who is also part or full owner of the nursing facility operating entity, i.e., the provider and/or the nursing facility's real property. If a Director of Nursing is an owner and acts occasionally in an administrator capacity, the time acting in an administrative capacity is allocated to the owner/administrator salary. |
| **Ownership/Corporate Interest** | A person, partnership, or corporation that:  
- Has ownership interest totaling 5% or more in a nursing facility, i.e., in the disclosing entity, or in the corporate entity owning the facility; or  
- Has an indirect ownership interest equal to 5% or more in a nursing facility, i.e., in the disclosing entity, or in the corporate entity owning the facility; or  
- Has a combination of direct and indirect ownership interests equal to 5% or more in a nursing facility, i.e., in the disclosing entity, or in the corporate entity owning the facility; or  
- Owns an interest of 5% or more in any mortgage, deed of trust, note, or other obligation secured by a nursing facility, i.e., in the disclosing entity, or in the corporate entity owning the facility, if that interest equals at least 5% of the value of the property or assets of the facility/disclosing entity; or  
- Is an officer or director of a nursing facility, i.e., in the disclosing entity, that is organized as a corporation; or  
- Is a partner in a nursing facility, i.e., in the disclosing entity, which is organized as a partnership.  

Examples:  
- If Ms. C owns 10% of a note secured by 60% of the nursing facility provider's assets, Ms. C's interest in the provider's assets equates to 6% and must be reported. Conversely, if Mr. S owns 40% of a note secured by 10% of the provider's assets, Mr. S's interest in the provider's assets equates to 4% and need not be reported.  
- If Mr. F owns 10% of the stock in a corporation that owns 80% of the nursing facility, Mr. F's interest equates to an 8% indirect ownership interest and must be reported. Conversely, if Ms. N owns 80% of the stock of a corporation that owns 5% of the stock of the nursing facility, Ms. N's interest equates to 4% indirect ownership interest and need not be reported. |

| **Patient** | See Resident. |

| **Per Resident Day Cost** | The total cost for a cost component divided by the total number of resident days. The number of resident days used is the greater of the number of resident days listed in the facility's cost report or 85% of the total number of available bed days for the cost reporting period. |

| **Plant Costs** | Plant costs include depreciation, interest expense (incurred for either working capital or capital indebtedness, mortgage discount points), property taxes, amortization costs associated with loan financing costs (e.g., letters of credit), letter of credit application or commitment fees, amortization of legal fees pertaining to acquisition, recording fees or other fees relating to the capital asset acquisition, and specific lease expenses. |

| **Property Owner** | A person, partnership, corporation, organization, or entity, other than the nursing facility provider, having the property rights to the building in which a nursing facility operates or to the land on which a nursing facility sits. |

| **Proprietary Provider** | A provider or organization that is organized and operated with the expectation of earning profit for its owner[s], as distinguished from providers organized and operated on a nonprofit basis. Proprietary providers may be sole proprietorships, partnerships, or corporations. |
| **Provider** | A legal entity (person, partnership, corporation, or organization) that has been approved to participate in the Michigan Medicaid Program. Some conditions of provider participation continue after enrollment in Medicaid has ended, e.g., record retention. |
| **Purchase Allowance** | A deduction granted for damage, delay, shortage, imperfection, or other causes, excluding discount and return. |
| **Purchase Discount** | A reduction (off the original price for property, goods or services) granted for the settlement of debts (e.g., 5/10 days which means a 5% discount if paid within 10 days). |
| **Purchase Price** | The total price agreed upon between a buyer and a seller for property, goods or services. |
| **Quality Assurance Assessment Factor (QAAF)** | The percentage increase determined and implemented by Medicaid for a class of nursing facilities. |
| **Quality Assurance Supplement (QAS)** | The product of the QAAF for the class times the lesser of the Variable Rate Base for the facility or the class Variable Cost Limit. Class III publicly-owned facilities basis is the lesser of the Class III VCC or the Class I VCL. |
| **Related Entity or Organization** | An entity having a business relationship with a nursing facility provider that has 5% or greater beneficial interest or common ownership in or has control of the facility or the facility owner, whether such control has legal standing or is utilized. Also see Chain Organization and Ownership/Corporate Interest. |
| **Related Party** | An individual, group of individuals, or business entity that meets criteria similar to that defining a related entity or organization. |
| **Resident** | An individual who has been admitted to the provider’s facility and has not been discharged. |
| **Resident Days/Occupancy** | Resident days or occupancy for nursing facility Medicaid cost reporting is the sum of the census days in a specified period of time. To calculate the resident days for a particular day, total the census days for that day. (Medicaid residents who are hospitalized are not counted in the census). **Example:**
- Residents occupying beds in facility = 100
- Residents on therapeutic leave = 5
- Hospitalized Medicaid residents = 3
- Paid bed hold days = 1
- Total resident days = 106 |
<p>| <strong>Restricted Revenue</strong> | Revenue that is designated or earmarked, by law, to finance some specific activity or group of related activities. |
| <strong>Routine Nursing Costs</strong> | Costs including, but not limited to, necessary medical, nursing, and mental health services, and all items of expense that nursing facility providers incur in the provision of routine nursing services. Costs must be included in the nursing facility provider’s Medicaid cost reporting in accordance with established cost classifications. |
| <strong>Routine Nursing Services</strong> | Organized nursing care and activities for the resident, under the observation and assessment of licensed nurses, who enable the resident to attain or to maintain the highest practicable physical, mental, and psychosocial well being in accordance with a written plan of care. |</p>
<table>

<tr>
<td><strong>Support Costs</strong></td>
<td>Costs that are payroll and benefit-related (salaries, wages, related payroll taxes, fringe benefits) for the departments of housekeeping, maintenance of plant operations, medical records, medical director, and administration; administrative costs; all consultant costs not specifically identified as base; all equipment maintenance and repair costs; purchased services; and contract labor not specified as base costs.</td>
</tr>
<tr>
<td><strong>Support Costs Per Day</strong></td>
<td>A facility's support costs divided by the total number of resident days for the same period.</td>
</tr>
<tr>
<td><strong>Support Cost Component, Indexed</strong></td>
<td>See Indexed Support Cost Component.</td>
</tr>
<tr>
<td><strong>Support-to-Base Ratio</strong></td>
<td>A facility's allowable support costs divided by allowable base costs. A facility's support-to-base ratio is limited to the 80th percentile support-to-base ratio for the facility's bed-size group. The bed-size groups are defined as 0-50, 51-100, 101-150, and 151+ nursing care beds in the facility. Group bed size is based on the number of licensed beds in a facility regardless of bed type or whether the bed is available. This includes all types of licensed nursing beds, Home for the Aged beds, or any other type of licensed bed where nursing care is provided. A facility's support-to-base ratio is rebased annually from the most recent audited base period, regardless of ownership.</td>
</tr>
<tr>
<td><strong>Support-to-Base Ratio Limit for Bed Size Group</strong></td>
<td>The support-to-base ratio limit for a bed-size group is set at the 80th percentile of the support-to-base ratios for facilities in the same bed-size group. The bed-size groups are defined as 0-50, 51-100, 101-150, and 151+ nursing care beds in the facility. The 80th percentile is determined by rank-ordering facilities within the same bed-size group from the lowest to the highest support-to-base ratio, then accumulating Medicaid resident days of the rank-ordered facilities, beginning with the lowest, until 80% of the total Medicaid resident days for the group are reached. The support-to-base ratio limit for the bed-size group equals the support-to-base ratio of the nursing facility in which the 80th percentile of accumulated Medicaid resident days occurs.</td>

<td>-------------------------</td>
<td>-----------------------------</td>
</tr>
<tr>
<td><strong>Variable Rate Base</strong></td>
<td>The sum of a facility's indexed base cost component and indexed support cost component. For rate setting purposes, the figure used as the facility's Variable Rate Base is the lesser of the facility's calculated Variable Rate Base or the Class Variable Cost Limit.</td>
</tr>
</tbody>
</table>
SECTION 4 - COST REPORTING

A nursing facility participating in the Medicaid program must submit a Medicaid cost report to MDHHS annually as a condition of participation. An electronic copy of the cost report, the cost report completion instructions, completion and submission checklists, and related information are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

4.1 EXCEPTIONS

4.1.A. EXCEPTION FOR HOSPICE PROVIDER OWNED NURSING FACILITY

A hospice provider that owns and operates a nursing facility is not required to file an annual cost report to Medicaid. The nursing facility industry aggregate cost data is used in place of individual facility cost data to establish a Medicaid reimbursement rate for this type of nursing facility. Rate determination procedures are addressed in the Rate Determination Section of this appendix.

4.1.B. EXCEPTION FOR SWING BEDS

Hospitals providing short term nursing services (swing beds) are not required to submit a Medicaid nursing facility cost report. Costs associated with swing beds are combined with those of the hospital and submitted on the hospital cost report. Refer to the Hospital Chapter of this manual for information regarding cost reporting requirements related to swing beds.

4.2 NURSING FACILITY COST REPORT

An annual cost report is required for the cost reporting period which is based on the nursing facility's fiscal reporting year end. Each cost report must include an itemized list of all expenses as recorded in the formal and permanent accounting records of the facility. These records must be maintained in a manner consistent with cost finding regulations in the Medicare Principles of Reimbursement except where modified by Medicaid reimbursement and cost reporting policy. Records must also be kept in a manner consistent with previous cost reporting periods. The accrual method of accounting is mandated for all providers. For any cost situation that is not covered by the Medicare Principles of Reimbursement guidelines or Medicaid policy, Generally Accepted Accounting Principles (GAAP) should be applied.

Related organizations and costs to related organizations, as defined in federal regulations, must be disclosed on the nursing facility cost report. Related organization costs claimed for Medicaid reimbursement through the nursing facility's rate determination process must be documented to RARSS on a completed home office cost report or on alternative cost reporting schedules as defined in the Home Office, Chain Organization, or Related Party Cost Reporting subsection of this appendix.

RARSS retains the filed nursing facility cost reports for a minimum of three years from the date of receipt. Nursing facilities are required to retain documentation supporting filed cost reports for a minimum of seven years from the end of the applicable cost reporting period, or beyond the seven year period if audit determinations have not been resolved.
4.3 COST REPORT REQUIREMENTS

The RARSS will send a notice electronically through the File Transfer application to the facility or business office as designated by the provider soon after the end date of the nursing facility's cost reporting period on record. The notice specifies the nursing facility's county and license number coding, fiscal reporting period end date, cost report due date, and other pertinent data necessary for the completion of the cost report. The provider will have access to the specific information required to file an acceptable Medicaid Cost Report package in File Transfer. File Transfer has the applicable electronic cost report template, completion instructions, construction cost index for asset acquisitions, and other pertinent information in downloadable form.

The completed cost report package submitted to RARSS must include:

- The standardized electronic cost report (ECR) data in accordance with specified formatting and software.
- An electronic copy of the Certification Statement (Worksheet A), which has been prepared and printed from the completed ECR file, and physically signed by an authorized representative of the nursing facility certifying to the accuracy of the prepared cost report.
- A copy of the nursing facility's trial balance of revenues and expenses.

The completed cost report package must be delivered electronically through File Transfer to RARSS as indicated in the notice.

4.4 COST REPORT ACCEPTANCE

Each cost report submitted to RARSS is verified prior to its acceptance. The cost report package will only be accepted if all of the following conditions are met:

- The package is complete.
- The cost report calculations are mathematically accurate, reasonable and consistent.
- The completed electronic cost report (ECR) data uses the required software and specified format.
- MDHHS audit staff can generate a full cost report applicable to the cost year from the ECR file.
- The paper copy of the Certification Statement is completed and signed, and agrees with the submitted ECR file.
- The data meets a set of validation checks contained within the ECR plus the appropriate bed size and certification reporting requirements.
- The submitted ECR file includes proper reporting of costs and related cost report allocations in accordance with prior year(s) audit adjustment determinations for like costs or cost reporting issues.
- The cost report preparation complies with Medicaid policy and cost reporting instructions.

A cost report is considered not filed until it is accepted by RARSS. If the submitted cost report is determined to be unacceptable, RARSS will return the cost report to the nursing facility for correction and
provide notice of the date the corrected cost report is due. The returned cost report will include information that indicates the reason(s) for the unacceptable report.

A corrected cost report – a revision of the most recently submitted cost report – may be submitted to RARSS for acceptance upon approval by RARSS. The provider should contact RARSS to obtain the acceptance status of that reporting period’s most recent cost report ECR file prior to submission of a corrected cost report. A corrected cost report that is accepted by RARSS defaults as the original cost report.

4.5 LESS THAN COMPLETE COST REPORT

With written approval from the RARSS, a nursing facility may submit a less than complete cost report.

4.5.A. NO MEDICAID UTILIZATION

A nursing facility that has not furnished any services to Medicaid beneficiaries during the entire cost reporting period does not need to submit a cost report to comply with Medicaid’s cost reporting requirements. The nursing facility may replace the cost report with a letter signed by an authorized representative that identifies the cost reporting period to which the statement applies (includes the facility name and provider NPI number), and states that:

- No covered services were furnished during the reporting period.
- No claims for Medicaid reimbursement will be filed for this reporting period.

The signed statement must be submitted to the RARSS within 30 calendar days following the date of the nursing facility cost report filing notice.

4.5.B. LOW MEDICAID UTILIZATION

RARSS may authorize a less than complete cost report for a nursing facility with low utilization of Medicaid services in a reporting period. “Low utilization” is defined as an average of five or fewer Medicaid residents per day in the facility for the cost year, i.e., fewer than 1,825 Medicaid nursing days. The nursing facility must submit a written request to RARSS for approval to file a less than complete cost report for the specific cost reporting period. The request must be signed by an authorized representative of the nursing facility, identify the reporting period the request applies to, include the facility’s name and provider NPI number, and:

- Indicate the reason(s) for the request.
- Indicate Medicaid utilization and the approximate Medicaid dollar amount of payments received for the year.

The written request must be submitted to the RARSS within 30 calendar days following the date of the nursing facility cost report filing notice.

After RARSS reviews the filed utilization and payment information, RARSS will send a written response to approve or deny the facility’s request to submit a less than complete
cost report. If approved, the facility will be required to furnish the following information using the required formats (ECR file worksheets):

- Information and Certification page.
- Statistical and Fiscal Data page.
- Ownership Information and Questionnaire.

In addition, the facility must prepare and submit the following information for the cost reporting period:

- Balance Sheet, and
- Prepared Financial Statements.

The nursing facility must submit the data within the same time period required for complete cost reports. Medicaid reserves the right to require the facility to file a complete cost report.

4.6 COST REPORT DUE DATE

The RARSS will notify the nursing facility of the cost report due date by letter mailed to the nursing facility or designated business office. An acceptable cost report must be received by RARSS within five months following the nursing facility's cost reporting period end date. Subsequent notice of the cost report due date is addressed in the Cost Report Delinquency subsection of this appendix.

A cost report is considered filed timely if the acceptable cost report is submitted to the RARSS on or before the last day of the fifth month following the cost report period end date. Late submission of an acceptable cost report may cause a delay in determination of the provider's annual reimbursement rate and the rate notice to the provider. Refer to the Rate Determination subsection of this appendix for additional information.

4.6.A. CORRECTED COST REPORT DUE DATE

If the cost report is returned to the provider unaccepted, the provider is given 15 calendar days from the date that RARSS returned the cost report to resubmit a corrected cost report. A written request for an extension may be made to RARSS for additional days (not to exceed 30 calendar days from the return date). The RARSS will notify the provider in writing of the extension decision. If a corrected cost report is not received by the correction due date, the nursing facility is subject to cost report delinquency and payment termination notification. Refer to the Cost Report Delinquency subsection of this appendix for additional information.

4.6.B. COST REPORT FOR FACILITY CLOSURE OR CHANGE OF OWNERSHIP

A nursing facility that has terminated its Medicaid program participation, either voluntarily or as the result of regulatory action, is required to submit a final cost report within five months following termination date.
The former owner of a nursing facility that has undergone a change of ownership is required to submit a final cost report within five months following the effective date of the ownership change.

### 4.7 NEW FACILITY/OWNER REQUIREMENTS

A new Medicaid provider (either a new owner or a new Medicaid participating provider) must notify RARSS of its fiscal year and cost reporting period, and other pertinent information regarding the nursing facility. In order for RARSS to establish the facility's Medicaid reimbursement rate, this notice must be submitted to MDHHS at least 30 calendar days prior to the begin date of Medicaid participation. Untimely submission of the data will result in delaying Medicaid payment to the nursing facility.

The new provider information packet is available by request to the RARSS. An electronic copy of the packet may also be accessed on the MDHHS website. (Refer to the Directory Appendix for contact and website information.)

The new provider information data must include the following items:

- Operations begin date.
- Fiscal year reporting period.
- Federal employer identification number.
- Facility business name.
- Corporate name (if different from business name).
- Facility address.
- Business mail address (if different from facility address).
- Affiliation to a home office chain or related nursing facility group, including corporate organization, address, fiscal reporting time period, federal employer identification number and contact person information.
- Nursing facility Medicare Program status.

The new provider information data packet must be signed and submitted by an authorized representative of the nursing facility.

### 4.8 CHANGING A COST REPORTING PERIOD

An annual cost report is required for the reporting period based on the nursing facility's fiscal reporting year. A nursing facility must file an annual cost report in accordance with the cost reporting period established with RARSS. However, under certain circumstances, RARSS may authorize a change in the nursing facility cost reporting period. The new cost reporting period must concur with the time period of the nursing facility financial reporting year.

#### 4.8.A. NEW FACILITY/NEW OWNERSHIP INITIAL COST REPORT

A new Medicaid provider (either a new owner or a new Medicaid participating provider) must notify RARSS of its fiscal year and cost reporting period, and other pertinent
information regarding the nursing facility. The initial cost report must cover a period of at least two months but may not exceed 13 months.

4.8.B. WRITTEN REQUEST FOR COST REPORTING PERIOD CHANGE

A nursing facility owner interested in changing a cost reporting period must submit a written request to RARSS. The request for such a change must be filed at least two months prior to the first day of the new fiscal reporting period being requested. The request must include documentation supporting the change, such as a copy of an approval of Medicare Program reporting change or Internal Revenue Service reporting year change notice. If the reporting year change is not yet approved by these agencies, a copy of notice to Internal Revenue Service reporting or application for Medicare Program reporting change may be submitted. The request must also include a copy of the nursing facility director or governing board approval resolution or minutes adopting the fiscal reporting revision.

RARSS will notify the provider in writing of the approval or denial of the request and cost report time period requirements resulting from the request.

4.8.C. APPROVAL FOR TRANSITION PERIOD COST REPORTING

If the change is approved, the nursing facility will be required to file a cost report for the period between the end date of the original cost reporting period and the beginning date of the new cost reporting period. This cost report must cover a time period not less than two months and not more than 13 months. Cost report periods that cover a period less than seven months may be used for Medicaid reimbursement for retrospective cost settlement determination for specific cost items, but are not used for prospective rate setting determinations affecting a subsequent rate setting year.

4.8.D. EXTENDED PERIOD COST REPORT

A provider may submit a request for a cost reporting period of more than 12 months but not greater than 13 months if:

- the provider is terminating Medicaid Program participation; or
- the facility is closing.

Written request must be made to the RARSS and must outline the exceptional circumstances. The provider will be notified in writing of approval or denial.

The RARSS may approve such requests if the Medicaid program or the nursing facility is not significantly adversely affected. Examples include requests in which:

- the request is not made for purpose to gain access to higher ceiling rates or economic inflation adjustors;
- the cost report data will have limited use for reimbursement determinations, i.e., not used for annual rate setting;
the report is not used for subsequent time period rate determination; and
it is used solely for retrospective settlement items.

4.9 COST REPORT DELINQUENCY

The nursing facility cost report is considered delinquent if:

- An accepted cost report has not been received by RARSS by the cost report due date and the cost report remains not filed with RARSS.
- A corrected cost report has not been received by RARSS by the cost report due date or correction period due date and the cost report remains not filed with RARSS.

If the nursing facility cost report is delinquent, RARSS will send a delinquency and Medicaid payment termination notice by certified mail to the nursing facility or the provider's designated business office. The notice will indicate the date (not less than ten business days from the notice date) on which Medicaid payment will be terminated unless a cost report is received by the RARSS.

If an acceptable cost report is received after payment termination, payments will be reinstated through the normal pay cycle(s) process. Medicaid will remove the payment termination entry pertaining to the cost report delinquency action allowing the release of all payments withheld for the cost report delinquency action.

4.10 AMENDED COST REPORT

An amended cost report to adjust a previously accepted cost report may be permitted or required by Medicaid.

An amended cost report is accepted by Medicaid to:

- Correct material errors detected subsequent to the filing of the original cost report.
- Comply with health insurance policies or regulations.
- Reflect the settlement of a contested liability.

Before completing and submitting an amended cost report, the nursing facility should contact the RARSS by verbal or written communication to determine the appropriate mode for making the necessary amendment(s). Amended cost report data will be effective for reimbursement rate determination and payment for nursing facility services rendered beginning in the month following the receipt of the provider's notice to RARSS of the need to amend the cost report.

The provider must include a disclosure letter with the amended cost report identifying the reason for the amended report and citing the cost report Worksheet(s) and the data input cell(s) within the Worksheet(s) that have been revised.
The provider cannot amend an audited cost report. Amended cost reports will not be accepted by RARSS after the completion of an audit except in cases where the filed and audited cost report continues to be the basis for the nursing facility’s current reimbursement rate. An amended cost report must properly reflect any audit adjustments made to the original cost report. Amended data will be used, as appropriate, to compute future rates but will not be used to retroactively change a previously paid prospective rate. Use of amended cost report data for retroactive application to prior services will only be made in cases related to fraud or failure to disclose required information in the cost reporting. Situations where retroactive changes are permissible are described in the Cost Report Reimbursement Settlements Section of this appendix.

4.11 HOME OFFICE, CHAIN ORGANIZATION, OR RELATED PARTY COST REPORTING

Nursing facilities that have costs applicable to services, facilities, and supplies furnished to the provider by organizations or entities related to the nursing facility by common ownership or control may include the costs in the nursing facility cost report. These costs may arise from arrangements involving a home office of a chain organization or services provided to the nursing facility or purchased by the nursing facility from related party businesses.

For facilities that are operated as part of a chain organization, home office costs claimed on the individual nursing facility’s cost report must be reported using the Medicaid Nursing Facility Home Office Cost Statement (MSA-1578).

For nursing facilities reporting costs of services provided by a related party organization, the MSA-1578 must be used for reporting costs. A CD containing an electronic copy of the MSA-1578 will be forwarded to providers at least 60 days prior to the provider’s deadline for submission. Alternative cost reporting worksheets or accounting schedules may be substituted for the Home Office Cost Statement if RARSS agrees that the alternative format provides supporting documentation to adequately identify expenses and the allocation of costs to the nursing facility. RARSS will approve the format as submitted, require additional data or revisions to the reporting format, or disapprove the alternative reporting.

When the fiscal year for the home office or related organization coincides with the nursing facility’s fiscal year, the due date for the home office or related party organization cost report must coincide with the nursing facility’s annual cost report due date. In cases where the fiscal years do not coincide, the nursing facility must submit the cost report of the home office or related party organization for the most recently completed fiscal year of that entity. If the report was previously submitted to RARSS, it must be resubmitted by the same due date as the nursing facility’s cost report. Exception: Participation in the cost allocation option (as outlined in the Related or Chain Organization Cost Allocation subsection of this chapter) supersedes this requirement. (Refer to the Related or Chain Organization Cost Allocation subsection in this appendix for additional information.)

If the facility does not provide the above referenced supporting documentation to support home office or related party organization costs, the facility must remove the costs from the nursing facility’s cost report. The nursing facility’s cost report will not be accepted if the provider does not remove the unsupported costs.
4.11.A. HOME OFFICE COSTS - CHAIN ORGANIZATION

For Medicaid purposes, a chain organization consists of a group of two or more nursing facilities, or at least one nursing facility and any other business or entity owned or operated and controlled by one organization.

For Medicaid policy regarding allowable costs, refer to the Cost Classification and Cost Finding Section of this appendix.

4.11.B. RELATED PARTY BUSINESS TRANSACTIONS

The operating costs of a related ownership organization are allocated to the individual nursing facility as a purchased service. This cost must be identified within the appropriate cost center in the Medicaid cost report. Identification of the type of service determines if the costs qualify to be apportioned between base and support cost using the industry-wide base and support cost percentages. If the service does not qualify to be apportioned by this method, the allocated costs are classified as support costs in the individual nursing facility.

The related party organization cost reporting is required for the specific related party organization business entity in the following cases:

- If the dollar amount of routine nursing care costs to the individual nursing facility exceeds $10,000 in aggregate, regardless of the number or type of services provided.
- If the sum (total dollar amount) of routine nursing care costs to multiple nursing facilities exceeds $50,000 in aggregate, regardless of the number or type of services provided and number of nursing facilities served.

These dollar limits apply to related party business transactions whether they are routine or ancillary nursing services.

Facility lease arrangements between related parties must be separately reported in the cost report as described in the Allowable and Non-Allowable Cost Section of this appendix.

4.12 COST REPORT FILED UNDER PROTEST

As part of the cost settlement and cost report audit process, a nursing facility provider may dispute a Medicaid regulatory or policy interpretation. (Refer to the Appeal Process Section of this appendix for additional information.) If the provider has a dispute regarding the annual cost report, the nursing facility must submit a separate cost report, referred to as a “protest cost report” to establish their reporting of the dispute issue. In order to preserve the nursing facility cost report claim, this separate cost report must be identified as under protest for the disputed issues that remain under appeal or are subject to an appeal. The protest cost report filing must include an accompanying letter, signed by the nursing facility authorized representative, listing the disputed issue(s) and respective dollar amount(s) for the basis of the protest cost report filing. Protest cost reporting issues will be addressed in the cost report audit process dependent upon resolution of the disputed issues. The cost report filed under protest will not be used for rate determination, but will provide information for audit consideration.
relative to disputed issues. The auditor will address necessary audit adjustments to the accepted cost report to reflect the appeal resolution.

Protest cost report filing is not for general disagreement with promulgated Medicaid policy. The RARSS will not accept protest cost reports filings that include items considered as disagreement or dissatisfaction with promulgated policy.
SECTION 5 - PLANT COST CERTIFICATION

Medicaid reimburses nursing facilities for costs associated with capital asset ownership. The costs are referred to as plant costs and are reimbursed as the Plant Cost Component of the per diem reimbursement rate. The Plant Cost Component is based on the cost report data submitted by the nursing facility for the previous calendar year. The Plant Cost Component includes costs associated with capital asset acquisition, depreciation, interest expense (either working capital or capital indebtedness), property taxes, amortization costs associated with loan financing costs (letters of credit, asset acquisition legal fees) and specific lease expenses. The Plant Cost Component of the reimbursement rate determined for a nursing facility remains consistent throughout the State's fiscal year period (October through September), unless the facility qualifies for an interim reimbursement rate.

Example: Plant cost data from cost report year-end December 31, 2002 is the basis for the Plant Cost Component for the October 2003 through September 2004 rate period. Refer to the Cost Classification and Cost Finding, and the Rate Determination sections of this appendix for additional information.

The process used to determine if a facility qualifies for an interim reimbursement rate is called Plant Cost Certification. Special rate setting provisions qualify facilities to use current year costs associated with capital ownership instead of the prior year's cost report data to determine the Plant Cost Component of the reimbursement rate. Rate setting provisions are available for facilities incurring exceptional changes in the facility's plant costs during the current year. Qualifying situations such as new construction or renovation, new asset acquisition, new ownership, or changes in the nursing facility's bed size or the type of resident services are considered to determine eligibility for Plant Cost Certification.

5.1 PLANT COST CERTIFICATION ELIGIBILITY CRITERIA

A facility may plant cost certify when there is no plant cost data available or when the plant cost data inadequately reflects the current rate period plant costs. Plant Cost Certification is available in the following situations:

- The nursing facility provider is constructing a new building or incurring physical plant improvements with Certificate of Need (CON) approval, or the asset costs are, on average, $1500 per licensed bed in capital expenditures in a single cost reporting period.
- There is an approved CON ownership change for an existing facility, or the nursing facility assets have changed ownership in a manner that requires CON review.
- The SSA has changed the class level of the facility, change in Medicaid certified beds, or the type of nursing or resident care services provided in the nursing facility.
- The nursing facility has an approved non-available bed plan in the cost report period.
- The nursing facility is in the first full cost report year following the termination of an approved non-available bed plan.

5.2 PLANT COST CERTIFICATION SUBMISSION

The provider must complete the Plant Cost Certification process and qualify in order to receive an interim reimbursement rate. The RARSS must receive a compilation of the nursing facility's expected allowable plant costs and a statement signed by the nursing facility's authorized representative attesting to the
data’s accuracy and adherence to the Plant Cost Certification policy. The provider must use the MDHHS required format for document preparation. A provider having a nursing facility license and leasing the facility must report facility costs of the lessor in accordance with Medicaid’s reimbursement policy. Refer to the Allowable Cost and Non-Allowable Cost, and Cost Classification and Cost Finding sections in this appendix for additional information.

A provider requesting an interim reimbursement rate must provide the information in the Medicaid Long Term Care Plant Cost Certification format and submit copies of supporting documentation. A copy of the format is available on the MDHHS website. (Refer to the Directory Appendix for website information.) The Plant Cost Certification packet of accepted sample formats is available by request to RARSS. An electronic copy of the packet can also be accessed on the MDHHS website.

Supporting documentation must include the following items for a transfer of ownership of a license, acquisition, or lease that requires CON approval:

- CON Approval Letter
- Purchase Agreement
- Mortgage and Loan Agreements
- At least 36 months of Interest Amortization Schedules for Financing prepared by the lender
- Property Tax Statements
- Capital Asset Cost Appraisal
- Purchase Closing Statement or Recording

Supporting documentation must include the following items, where applicable, for a renovation, addition, or new construction:

- CON Approval Letter (if CON approval is required)
- Licensed Bed Notice issued by the State Survey Agency (SSA)
- Mortgage and Loan Agreements, if applicable
- At least 36 months of Interest Amortization Schedules for Financing prepared by the lender
- Property Tax Statements
- Construction Contract Statement or Summary

The completed information and support documentation may be mailed or delivered to the RARSS. Inquiries relating to the submission of the data should be directed to the RARSS office. (Refer to the Directory Appendix for contact information.)

If RARSS determines that the plant certification eligibility criteria are met, the submitted cost data will be desk reviewed, adjusted if necessary, and used to calculate the nursing facility’s Plant Cost Component. If the fiscal year cost report filing and subsequent cost report audit determine the data used to calculate the reimbursement for the Plant Cost Component resulted in an overpayment or underpayment to the provider, the Medicaid recovery or additional reimbursement due the provider is included in the cost report reimbursement settlement. (Refer to the Cost Report Reimbursement Settlement section of this appendix for additional information.)
5.2.A. PLANT COST CERTIFICATION REQUIREMENT FOR REIMBURSEMENT – BUILDING AND EQUIPMENT CHANGES

A new or existing provider or business entity operating a nursing facility that is incurring a change involving the nursing facility's building and equipment must complete a Plant Cost Certification. A provider that obtains ownership of the nursing facility building and equipment or enters a lease agreement for the facility must submit a completed Plant Cost Certification. In the instance that a lease change is the result of a facility ownership change where the provider has a different landlord, a plant cost certification is required if any terms of the lease agreement changes, such as lease amount, duration, etc.

The Plant Cost Component of the reimbursement rate will be zero until the Plant Cost Certification is received by the RARSS. In order to be eligible for retroactive reimbursement, the provider must submit a completed Plant Cost Certification on or before the date of the initial filing of cost report for the year in which the ownership change or asset transaction occurred. The effective date of the Plant Cost Certification will be the month that new ownership becomes the licensed entity or the asset transaction. Plant Cost Certification requests received by RARSS subsequent to the cost report filing will not be eligible for retroactive reimbursement, and future plant cost reimbursement rates will be effective as outlined under the effective time period policy.

5.2.B. PLANT COST CERTIFICATION SUBMISSION WAIVER

If the provider qualifies for Plant Cost Certification under the approved non-available bed plan or because it is the first cost report year after the non-available bed plan termination, the data submission requirement is waived. The provider has the option to file during the rate year or to defer the plant cost rate revision until the cost report reimbursement settlement. Settlement adjustments for plant costs for the cost report period will automatically apply to non-available bed time periods. If a Plant Cost Certification is not filed, the nursing facility's interim Plant Cost Component will continue to be based on the previous year's cost report, and the cost report reimbursement settlement will be adjusted to the allowable plant cost level for the cost report time period. Refer to the Cost Report Reimbursement Settlement section of this appendix for additional information.

5.3 PLANT COST CERTIFICATION EFFECTIVE TIME PERIOD

The effective time period of the plant cost certification will be determined by the RARSS. A completed Medicaid Long Term Care Plant Cost Certification request in required format, with documentation, received by the RARSS prior to the 16th of the month is effective and included in the reimbursement rate as of the first day of the following month (e.g., a request received between September 16 and October 16 will be reflected for days of care beginning November 1).

The effective date of the plant cost certification cannot be prior to the month in which the facility experienced the change of ownership or the qualifying asset change. The rate is not revised for partial months. For interim rate setting, the revised reimbursement rate due to the Plant Cost Certification will not be applied to prior service dates except in instances where a provider meets certification eligibility under the nursing facility ownership change or lease provisions. If a plant cost certification is filed prior to the provider's cost report year end, an interim reimbursement rate is effective on a prospective basis.
for service dates after filing date. Retroactive reimbursement due to the plant cost change for that cost report year services will be addressed in the initial and final settlement determination of the cost report. Refer to the Cost Report Reimbursement Section of this appendix for additional information.

If a Plant Cost Certification is filed after the provider's cost report year end, the plant cost reimbursement rate change is only effective on a prospective basis in accordance with the time period established by the Plant Cost Certification request receipt date.

The Plant Cost Certification interim reimbursement ends when the nursing facility's prospective Plant Cost Component is based on the first complete cost report year that reflects the plant costs which qualified the nursing facility for Plant Cost Certification.

**Example:** A nursing facility with a cost report period of January 1, 2004 through December 31, 2004 completes an eligible renovation project in June 2004, and submits a Plant Cost Certification before June 16, 2004 to be effective July 1, 2004. (Note: Rate Year refers to a time period coinciding with the state fiscal year rate period. The time periods listed below the Rate Year identify the period during which the rate will be paid and the cost report year on which the rate is based.)

### Nursing Facility Initial Period Interim Rates for Plant Cost Reimbursement

|---|---|---|

### Nursing Facility Final Rates for Plant Cost Reimbursement

### 5.4 Plant Cost Certification Updates and Revisions

The nursing facility's initial Plant Cost Certification will continue to be used for the interim Plant Cost Component unless the nursing facility submits a revision to the Plant Cost Certification.
Following the initial submission of the Plant Cost Certification, the nursing facility is responsible to submit an updated or revised Plant Cost Certification to assure the interim Plant Cost Component reimbursement is representative of the current rate period plant costs.

The nursing facility provider may revise its submitted Plant Cost Certification at the beginning of subsequent fiscal year rate periods or the beginning of a calendar quarter, but not more than two times per year. The effective timeframes for payment based on the updated information are the same as noted above.

The overpayment penalty provisions, if applicable, remain in effect regardless of payment based on initial submission or revised data.

**5.5 Plant Cost Certification Overpayment Penalty**

At the time of the MDHHS audit of the provider's fiscal year cost report, if the interim reimbursement payments resulting from Plant Cost Certification exceed cost report settlement plant cost reimbursement, all excess funds paid as a result of the Plant Cost Certification request will be recovered by Medicaid. The provider will be assessed a penalty for overpayments resulting from Plant Cost Certification. The penalty will be 10 percent of the aggregate dollar amount difference between the interim reimbursement payments resulting from the Plant Cost Certification and the cost report settlement plant cost reimbursement. The penalty will be waived if the aggregate dollar amount difference is equal to or less than 10 percent of the provider's aggregate Plant Cost Component reimbursement amount for the cost settlement period. Overpayment recovery and penalty determination are included in the Cost Report Reimbursement Settlements Section.
**SECTION 6 - AUDIT**

The goal of the cost report audit is to provide the MDHHS assurances that the cost report information is accurate for the determination of Medicaid reimbursement rates, and includes the following objectives:

- To review, analyze, and test the nursing facility's Statement of Reimbursable Cost and underlying financial records to confirm that only reasonable and allowable costs have been included.
- To confirm that the methods used to calculate the required statistical information are adequate and that the statistical data is recorded accurately.
- To confirm that the cost finding and cost apportionment have been accurately and fairly computed.
- To confirm the accuracy of the costs allocated to Medicaid by independently applying the method approved for the provider's use in computing reimbursable cost.
- To confirm that, in all material aspects, the nursing facility provider is in compliance with the reimbursement regulations.
- To review, analyze and test the nursing facility's revenue and billings to determine the propriety of billing practices and identify potential errors and financial risk to Medicaid.
- To identify the underlying causes of significant errors or problems noted during the audit and to suggest improvements.
- To follow up on significant problem areas identified in previous audits.
- To confirm consistent and uniform application of federal and state laws, rules, and regulations for reimbursable costs.

**6.1 AUDIT PROCESS**

The annual audit process may include a desk audit/review, a computer check, and/or an onsite audit. This process may be performed by MDHHS audit staff or by a qualified designee.

Onsite audits will be conducted no less than once every four years. An audit of either limited or full scope will be performed on the records of each participating nursing facility provider to ensure that the expenses attributable to allowable cost items are accurately reported in accordance with established principles and guidelines.

A Preliminary Summary of Audit Adjustments Notice is issued to the facility upon completion of the audit.

**6.1.A. REQUIRED INFORMATION**

Each provider must allow access or arrange for access by MDHHS staff, or their designees, to required financial records and statistical data including:

- Records required by the Medicare Principles of Reimbursement
- Complete financial records of related organizations
● Complete records of lessors necessary to determine underlying costs of leasing facilities and items of equipment

These records include, but are not limited to, the following:

● Census records and numbers and types of leave days for each Medicaid beneficiary/resident (i.e., hospital, therapeutic)
● Resident medical records, with details of medical services received by each resident
● Resident service charge schedules
● Resident trust fund account records, with evidence of quarterly reporting to each resident
● Medicaid Cost Report with supporting documentation for cost finding statistics utilized on the report
● Supporting documentation for Nurse Aide Training and Competency Evaluation Program activity and cost data
● Documentation to support the cost and activity level for special Medicaid reimbursement provisions beyond the scope of services included in routine nursing care
● Total and Medicaid ancillary charge summaries and logs
● Medicare Cost Report, if applicable
● Medicare and other health insurance billing and payment records for each resident
● Books of original entry, including standard/special journals, payroll journals, disbursement journals, etc.
● Employee records, including detailed payroll records, personnel files, employee wage scales, shift schedules, union contracts, agreements, fringe benefits (e.g., deferred compensation, pension plans, insurance, personal use of assets, special allowances), individual accounts of leave days, job descriptions, and payroll tax returns.
● Facility policy and procedure manuals and related materials
● Plans for internal control
● Minutes of meetings of the governing body
● General and subsidiary ledgers, including stock ledgers, cash receipts, etc.
● Purchase requisitions and orders
● Vouchers and invoices in detail to support services and goods purchased
● Records related to management fees, executive services or personal services contracts, and contracts for services under arrangement
● Charts of accounts
● Checking account registers, canceled checks, and bank statements
● Vehicle mileage and use logs
● Fixed asset records
● Capital expenditure records and depreciation lapse schedules
6.1.B. AVAILABILITY OF INFORMATION

The nursing facility must have an accounting and records maintenance system to provide accurate cost, revenue and statistical data, and other information that can be verified by Medicaid auditors. MDHHS audit staff or their designees will not complete an audit if the nursing facility does not make required information available. If the required information is not released within 15 business days of a written request by an auditor during an audit, MDHHS may assess a financial penalty to the provider until the requested records are made available to the auditor. MDHHS will issue prior notice to the provider that they will assess the penalty equal to 20 percent of the facility's monthly Medicaid payments, effective in the first month following the expiration of the 15-day notice period. Waiver of the penalty assessment is only allowed by approval of the Medicaid Director following the provider's request for waiver consideration, including justification for the request and additional time to provide the records.

NOTE: A nursing facility provider that has been assessed a penalty is prohibited from collecting additional funds from Medicaid beneficiaries to compensate for the penalty.

If, after the 15-day period, the records become available for auditor review, an authorized representative of the nursing facility must give written notice of record availability to the MDHHS Office of Audit. This acknowledgement to release the requested records must designate the contact person and record location. The payment penalty will be discontinued effective for the month following the date the auditor determines that the required records have been released and the dollar amount of penalty assessments will be refunded to the nursing facility provider. The auditor's determination that the requested records have been provided will be made within 60 calendar days of such written agreement to release the requested records.
The auditor may determine that records necessary to verify specific cost report expenses are required to complete the audit. Failure to release the requested records within 15 business days of a written request will result in a disallowance of costs associated with the item in question. If the nursing facility disagrees with the disallowance, this disallowance can be appealed at the completion of the audit. (Refer to the Appeal Process Section of this appendix for additional information.)

6.1.C. RETROACTIVE RATE CHANGES

A retroactive change in a nursing facility's rate and reimbursement may be made after completion of an audit in the following situations:

- For those providers that are retrospectively settled.
- For those providers that had an interim rate set prior to completion of the cost report audit.
- For those providers that were retrospectively settled because they were granted Rate Relief.
- For audit adjustments required as a result of a hearing decision.

Refer to the Reimbursement Rate Determination section of this appendix for detailed information regarding retroactive effective time periods for rate determination and reimbursement actions.

6.1.D. REOPENING AUDIT DETERMINATIONS

MDHHS may elect to reopen an audit determination following completion and closing of the audit of a nursing facility cost report. MDHHS will provide notice to the nursing facility of the audit reopening and the issues for which the audit is under review. Results of the audit reopening will be submitted to the provider, who will be given the opportunity to review the findings and appeal in accordance with Medicaid policy. If it is determined that the audit cost report contains incorrect data, MDHHS will use corrected data to compute future rates. The audit revisions will be effective for reimbursement rate determination and payment for nursing facility services rendered beginning the month following notice to the provider that the subject audit is being reopened.

The results of audit reopening actions will only be effective for retroactive reimbursement revision in cases of fraud or when the provider's failure to disclose required information was pertinent to the determination of allowable cost.

MDHHS will not reopen an audit determination for any reason other than fraud beyond three years following the date of final settlement.

6.1.E. RECORD RETENTION

Each nursing facility's accounting and related records must be kept for a period of not less than seven years. This obligation does not end if a provider closes or sells a facility. All records, source documents, contractual agreements, and corporate minutes must be available onsite, or at a readily accessible location, for verification and inspection by
MDHHS staff or their designees. When accounting personnel, books and records are located out of state, the provider is required to pay auditor travel expenses if MDHHS staff or their designees deem it necessary to access documentation during the course of an audit.

6.2 Financial Fraud and Abuse

Federal Medicaid law and regulations require the Medicaid program to establish and maintain methods and criteria for the identification, investigation, and referral of potential fraud and abuse. In accordance with federal and state requirements, MDHHS will authorize the suspension of Medicaid payments (in whole or in part) to a nursing facility provider on receipt of reliable evidence that the provider committed fraud or willful misrepresentation while enrolled as a Medicaid provider. The provider will receive written notice of such suspension and may request an administrative review. (Refer to the Appeal Process Section of this appendix for additional information.)

A MDHHS auditor or designee who observes potential fraud or financial abuse will prepare a separate report of observations. Observations of potential fraud or abuse include, but are not limited to, the following:

- Recording of personal expenses
- Overutilization of services to inflate charges
- Unauthorized use of resident trust funds
- Payroll entries of personnel who provide no services
- Concealment of business activities
- Falsifying records
- Charging Medicaid for costs not incurred
- Duplicate billing
- Billing beneficiaries inappropriately for Medicaid services
- Soliciting, offering, or receiving a kickback, bribe, or rebate
- Knowingly failing to disclose required information in the Medicaid cost report

Reports of observations will be reviewed by MDHHS staff and appropriate actions taken. This may include forwarding a copy of the report and supporting documentation to the state Attorney General’s Health Care Fraud Division.
SECTION 7 - COST REPORT REIMBURSEMENT SETTLEMENTS

The nursing facility reimbursement rate is determined in accordance with the policy provisions outlined in the Rate Determination Section of this appendix. The reimbursement rate may include routine nursing care services and various rate add-on amounts depending on the Medicaid reimbursement policy effective at the time. The facility rate is a per diem amount. Rate determination may be based on filed cost report data, audited cost report data, cost data submissions and projections for specific reimbursement activity, or interim reimbursement provisions in accordance with Medicaid policies. The reimbursement rate is determined at the beginning of the rate year and the nursing facility is provided notice of the rate determination prior to implementation of the rate. The reimbursement rate may be revised any time during the rate year in accordance with rate determination policies. Rate revisions can result from the following actions as detailed in the Rate Determination Section:

- More recent Fiscal Year filed cost report
- Audited cost report
- Plant Cost Certification
- Nurse Aide Training and Competency Evaluation Program
- Special Dietary Cost Allowance
- Special Reimbursement policy actions

Reimbursement for ancillary services provided to Medicaid-eligible residents will be made in accordance with policies identified in the Coverage portion of this chapter and in the Billing & Reimbursement for Institutional Providers Chapter.

7.1 INTERIM REIMBURSEMENT AND RATE REVISIONS

The Rate Determination Section in this appendix outlines the process for determining the nursing facility's annual reimbursement rate. If RARSS determines that a reimbursement rate must be revised, the rate change may affect payment for future and/or previous dates of service. RARSS will notify the provider of the rate change and the rate's applicable time period.

If a rate revision applies to future dates of service, RARSS will send written notice to the provider's designated address specifying the revised rate and the applicable time period for the rate.

If a rate revision must be applied to previous dates of service in the current cost report year, RARSS will notify the provider of the applicable time period and the reimbursement rate. If the rate revision applies to previous dates of service in the current cost report year, RARSS will make the determination of an underpayment or overpayment amount, and RARSS will notify the provider of the process for implementing the payment adjustment(s).

If the rate revision applies to a prior cost report year's dates of service, the payment adjustment process is addressed in the Initial Settlement Section of this appendix.
7.2 Initial Settlement

The SMA may determine that a retroactive adjustment to the nursing facility reimbursement rate and payments is needed after the end of the provider’s rate year. The retroactive adjustment may be due to a previous interim rate revision or to implement a rate based on actual cost report data. After the filing and acceptance of the cost report, the RARSS will determine if an Initial Settlement adjustment is necessary to make a retroactive payment adjustment for the rate period covered by the cost report. The Initial Settlement uses the most recent accepted cost report data to calculate the retroactive reimbursement and paid Medicaid claims and other payment data. (Refer to the Rate Determination Section of this appendix for additional information.)

The RARSS will consider provider requests for Initial Settlements on an exception basis in the following situations:

- The provider anticipates a significant amount due them by Medicaid and requests an Initial Settlement in writing. The provider may make the request with the filing of the cost report.
- A payment adjustment is necessary for several months of the cost report period, and the current date is beyond the cost report period end date.
- The review of a filed cost report identifies that the interim rate add-on amount, plant cost certification amount, or other special reimbursement interim amount included in the interim rate exceeds the amounts filed in the cost report.
- The provider has terminated Medicaid participation and has failed to file an acceptable cost report. An overpayment determination will be made for the payments to the provider during the time period that cost report data is required for determining final reimbursement.

If the RARSS determines that the Initial Settlement is an underpayment amount to the nursing facility, additional payment will be made to the provider for not less than 70 percent and not more than 80 percent of the determined settlement amount due the provider based on a review of the provider's financial situation and the effect of the filed cost report data on the reimbursement settlement determination. Although the provider may request a review of the Initial Settlement amount, the Initial Settlement payment level percentage is not subject to appeal.

If RARSS determines there is an overpayment to the nursing facility, the SMA will recover the overpayment amount as outlined in the Medicaid Recovery of Overpayments subsection.

Before making any payment adjustment, the RARSS will notify the provider in advance using a Notice of Program Reimbursement letter. The provider is given 15 calendar days for review of the settlement determination. After the time period afforded the provider to review the Notice of Program Reimbursement, a notice stating the payment adjustment date(s) is mailed to the provider. A provider may request up to an additional 30 days to review an Initial Settlement. The provider must submit a written request stating the reason and the amount of the additional time needed (up to 30 days) for review. RARSS will review the request and notify the provider in writing of the approval or denial for additional time.

If the settlement action requires correction following the review, a new notification and review time period will apply to the corrected settlement. After the time period afforded the provider to review the Notice of Program Reimbursement, a notice stating the recovery payment date(s) is mailed to the provider.
The RARSS may process a Revised Initial Settlement for the cost report period if it determines that additional payment adjustment is necessary after processing an original Initial Settlement and before completing a final settlement. A Revised Initial Settlement will be completed when there are significantly more approved claims, rate revisions or errors in the prior determination and a final settlement action cannot yet be completed. The notification and payment processing actions identified with the original Initial Settlement procedures also apply to the Revised Initial Settlement process. The payment criteria will be applicable to the aggregate dollar amount of the Initial and Revised Settlements for the reimbursement time period.

7.3 Final Settlement

The RARSS may determine that withholding of payment is necessary or that a retroactive adjustment to the nursing facility reimbursement rate and payments is needed after the end of the provider's rate year. A retroactive adjustment may be due to a previous interim rate revision or to implement a rate based on actual cost report data. After a cost report is audited, RARSS will determine if a Final Settlement adjustment is necessary to make a retroactive payment adjustment for the rate period covered by the cost report. The Final Settlement uses the audited cost report data to calculate the retroactive reimbursement and paid Medicaid claims and other payment data. Final Settlements determine if additional payment is due to the nursing facility or Medicaid.

When Medicaid participation is terminated voluntarily or involuntarily, payment for at least one month of services rendered is retained for Final Settlement.

RARSS mails a Notice of Program Reimbursement to the provider's designated address. The notice explains the:

- Settlement adjustment(s) and the process prior to RARSS taking the payment action.
- Provider's appeal rights.

The provider is allowed 15 calendar days for review of the settlement determination. After the time period afforded the provider to review the Notice of Program Reimbursement, a notice stating the payment adjustment date(s) is mailed to the provider.

To obtain an extension, RARSS will review written requests from the provider stating the exceptional reason and the amount of additional time needed for the review (up to 30 calendar days). RARSS will review the exceptional circumstances stated in the request and notify the provider in writing of the approval or denial for additional time. If approved, an extended time period of up to an additional 30 calendar days may be granted to the provider for review. After the time period afforded the provider to review the Notice of Program Reimbursement, a notice stating the recovery payment date(s) is mailed to the provider.

If the settlement action is corrected following a review, a new notification and review time period will apply to the revised determination. After the time period afforded the provider to review the Notice of Program Reimbursement, a notice stating the payment adjustment date(s) is mailed to the provider.
RARSS may process a Revised Final Settlement for the cost report period if RARSS determines that additional adjustments are necessary subsequent to processing the Final Settlement. The adjustment(s) will be processed if significant adjustments or errors exist in the prior settlement calculation. Notification and payment processes outlined in the Final Settlement process also apply to the Revised Final Settlement process.

### 7.4 Depreciation Recapture Reimbursement Adjustment

If a provider has been reimbursed for asset depreciation expense in the Plant Cost Component and has sold the nursing facility assets, the sold assets may be subject to a depreciation recapture reimbursement adjustment in the reimbursement settlement for the cost report period in which the nursing facility assets are sold. The depreciation reimbursement adjustment uses reimbursement rates paid for services between October 1, 1984 and the date the facility was sold, or the date the Plant Cost Component of the per diem rate was converted to the tenure plant cost reimbursement method. (Refer to the Rate Determination Section of this appendix for additional information.)

The depreciation recapture adjustment is only applicable to the reimbursement rate time periods the provider was paid a rate that specifically included depreciation expense in the Plant Cost Component of the Medicaid per diem rate. If the provider has never received Plant Cost Component reimbursement that specifically includes depreciation expense as a cost element of the rate calculations, the provider is not subject to the depreciation recapture reimbursement adjustment and is not required to complete the Medicaid Program Depreciation Recapture reporting.

A nursing facility provider that was reimbursed for depreciation in the Plant Cost Component and sells the nursing facility’s assets must complete the Medicaid Program Depreciation Recapture reporting schedules for each applicable cost reporting year where depreciation was reimbursed. The Medicaid Program Depreciation Recapture schedule must be submitted with the cost report for the year that the asset sale occurs. Reporting schedules and instructions will be provided to the provider with the final period cost reporting request or may be requested from RARSS. The reporting schedules (Excel file) and completion instructions (Word file) are available in electronic format or hard copy format.

If the Medicaid Program Depreciation Recapture is not applicable, the schedules must indicate N/A (not applicable) and be submitted with the cost report filing. If RARSS does not receive completed reporting schedules, RARSS will apply a 100 percent depreciation expense reduction rate to calculations for each cost report period used to calculate the settlement.

The net depreciation reimbursement adjustment for each cost report year the provider was reimbursed by Medicaid will be included in the settlement calculation. The depreciation adjustment will be limited to the amount Medicaid reimbursed for depreciation expense in each cost report year. Plant cost reimbursement allowances will be included in the calculation of the depreciation adjustment, and may result in reducing the net depreciation adjustment if the provider had not previously qualified for the incentive allowances prior to the depreciation reduction. The cost report reimbursement settlement notice will include the determination of depreciation recapture reimbursement adjustment.
7.5 MEDI ACAID RECOVERY OF OVERPAYMENTS

Overpayment(s) due from a participating provider will first be offset against other settlements, payment adjustments, claims processing or any amounts due to the provider through lump sum or sequential installments until the overpayment amount is satisfied. If the provider is not participating in Medicaid, the overpayment amount must be paid to the State of Michigan for the Medicaid program immediately upon notification.

7.5.A. REQUEST FOR SETTLEMENT EXTENDED PAYMENT OF SCHEDULE

If a participating provider alleges inability to repay the total overpayment amount in a lump sum or in sequential offset(s), the provider may request consideration for an extended repayment schedule. Extension requests for Settlement repayments must be received by RARSS within 15 calendar days of the Notice of Program Reimbursement date sent to the provider from RARSS. RARSS will notify the provider in writing of the decision. Requests received after 15 calendar days will be considered at the discretion of RARSS.

7.5.B. CRITERIA FOR DETERMINING EXTENDED PAYMENT ARRANGEMENTS

Extended settlement repayment schedules will only be considered if the net dollar amount of the current settlement notice reflects an overpayment amount of more than 10 percent of the provider's normal monthly Medicaid reimbursement payment(s). The provider's request must demonstrate that lump-sum recovery will create extraordinary financial hardship on the provider, and that the cash flow need of the nursing facility prevents the immediate repayment of the overpayment amount. Other factors that must not be present in creating financial hardship to the provider are significant expenditures for unallowable costs, ownership and management compensation exceeding Medicaid allowable cost limits, or significant dollar amounts for unallowable related party business transactions.

RARSS will mail the notification of the provider's repayment schedule and the repayment recovery dates and dollar amounts to the designated address. Requests for longer than three months will only be considered under exceptional circumstances, e.g., the monthly recovery schedule amount would be greater than 50 percent of the provider's normal monthly Medicaid reimbursement payment.
SECTION 8 - ALLOWABLE AND NON-ALLOWABLE COSTS

Unless stated to the contrary in this section, Medicaid allowable costs for nursing facilities are determined in accordance with provisions in the federal Principles of Reimbursement established for the Medicare program. This section does not propose to set reimbursement standards or reimbursement methodology. The focus here is the determination of allowable costs. Reasonable costs associated with nursing facility services included in the provider’s per diem rate, as identified in the Coverages portion of this chapter, are allowable costs within the parameters of the Principles.

NOTE: Definitions for the principal terms used in this section may be found in the Definitions Section of this appendix. A copy of the cost report referenced in this section, completion instructions for the report and related information are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

8.1 ADVERTISING

Allowable advertising costs are considered those costs incurred by the nursing facility for an informational objective to inform the public about its services. Costs incurred for a promotional objective in an attempt to increase patient utilization are not properly related to patient care and are not allowable. Advertising in the Yellow Pages is an allowable cost, except that Medicaid limits the cost to that associated with a black ink Yellow Pages ad listing not to exceed 2” x 2” in size.

8.2 APPRAISALS

Appraisal expenses incurred by providers may be allowable costs (administrative and general) if the appraisal is of assets related to resident care and if it meets the Medicaid Appraisal Guidelines. Expense for an appraisal of assets not related to resident care is not an allowable expense. Refer to the Appraisal Guidelines Section of this appendix for additional information.

8.3 ATTORNEY AND LEGAL FEES

The provider must maintain documentation and evidence of expenses incurred for legal fees and related costs as being related to the nursing facility’s furnishing of patient care in order for such expenses to be allowable costs. Attorney fees are considered allowable costs incurred in the course of providing patient care, except as noted below.

Where MDHHS or the Centers for Medicare & Medicaid Services (CMS) takes action against the provider by initiating an enforcement action or issuing an audit finding, then the legal costs of responding to the action are allowable only in the following circumstances.

8.3.A. AUDIT FINDINGS AND RATE ACTIONS

- The provider prevails and the action is reversed.  
  Example: The audit finding is not upheld and the audit adjustment or rate action is reversed.

- The provider prevails as defined by reduction of the contested audit finding by 50 percent or more.  
  Example: An audit finding for an adjustment of $50,000 is reduced to $25,000.
8.3.B. ENFORCEMENT ACTIONS

- The provider prevails and the action is reversed.
  **Example:** A Denial of Payment for New Admissions is rescinded and does not go into effect, or when a provider is not in compliance before the effective date of the DPNA but succeeds in disputing the imposition and the DPNA is rescinded with no interruption in payment for the covered service.

- The time period of imposition of a DPNA is reduced by 50 percent due to a change in the date that a nursing facility is determined to have been in compliance.
  **Example:** The length of a DPNA is reduced from 20 days to 10 days.

- The provider prevails as defined by reduction of a fine by 50 percent or more.
  **Example:** A Civil Money Penalty fine is reduced from $5,000 to $2,500.

- A federal enforcement action (F tag) is reduced in scope or severity.
  **Example:** An H-level citation reduced to a G-level citation, an F (SQOC)-level citation reduced to an E-level citation, or an Informal Dispute Resolution decision results in a reduction from an E-level citation to a D-level citation. Abatement of an Immediate Jeopardy or correction of a deficiency does not constitute a reduction.

- A state enforcement action is eliminated.

- A settlement agreement is reached between the provider and the state and federal government prior to a Hearing.

8.3.C. GENERAL ADMINISTRATION OF THE FACILITY

- Attorney fees incurred in connection with facility acquisition, mortgage or finance transactions are allowable if Medicaid determines the fees reasonable. The fees must be reported under plant cost and capital asset cost reporting. Legal expenses incurred relative to a nursing facility or capital asset acquisition are considered allowable if they are capitalized and amortized over the loan for up to a five-year period.

- Legal fees incurred in the process of securing financing or refinancing of facility loans must be amortized over the life of the mortgage.

- Attorney fees relating to employer activities, labor negotiation, or in response to employment related issues or allegations, to the extent that the engaged services or actions are not prohibited under federal principles of allowable cost.

8.4 BAD DEBTS, CHARITY AND COURTESY ALLOWANCES

Bad debts, charity, and courtesy allowances, as defined in the Medicare Principles, are deductions from revenue and are not allowable costs.

Bad debts are amounts considered to be uncollectable from accounts and notes receivable that were created or acquired in providing services. Charity allowances are reductions in charges made by the nursing facility provider due to the indigence of a resident. Courtesy allowances indicate a reduction in charges in the form of an allowance to physicians, clergy, members of religious orders, and others as approved by the governing body of the nursing facility, for services received by the provider.
Uncollected revenue for Medicare coinsurance and deductible billing amounts and patient payments for Medicaid eligible residents, and for non-covered services for Medicaid are not allowable costs.

8.5 **Civil Money Penalties**

Costs incurred for fines or money penalties for violation of federal, state, or local laws are not allowable.

8.6 **Educational Activities and In-service Training**

Medicaid has established credentials/requirements for educational activities to be recognized as allowable costs. Educational activities outside the continental United States are not allowable.

Approved educational activities are formally organized or planned programs of study engaged in by nursing facility providers in order to enhance the quality of resident care in a facility. These activities must be licensed where required by state law. Where licensing is not required, those presenting the educational activity must be recognized as a professional for the particular activity. Examples of allowable educational activities costs are:

- Part-time education for a facility's employee at properly accredited academic or technical institutions (including other providers) devoted to undergraduate or graduate work to enhance the quality of medical care or the operating efficiency of the nursing facility.
- Costs, including associated travel expense within the continental United States, for employees to participate in educational seminars and workshops to enhance the quality of medical care or the operating efficiency of the nursing facility that does not lead to the ability to practice and begin employment in a nursing or allied health specialty.

The costs of the following in-service training activities are recognized as routine nursing care costs and are allowable costs:

- Orientation and on-the-job-training.
- Mandatory in-service education for Medicaid and Medicare certification.
- Maintenance of a medical library.
- Training of a resident or resident's family in the use of medical appliances.

Costs incurred for activities related to an approved Nurse Aide Training and Competency Evaluation Program (NATCEP) are not allowed under routine nursing care, except as provided in the Medicaid allowable cost and reimbursement policy outlined in the Cost Classifications and Cost Finding Section of this appendix.

8.7 **Facility Vehicles and Travel**

The cost of operating a facility-owned or leased vehicle must be adequately documented and differentiated between types resident care serviced, business use or personal use. Only the costs for resident care and costs related to the conducting of facility business are allowable vehicle and travel costs. Use of a facility vehicle by facility personnel to commute from home to the facility and to return home at the end of the daily work period or other personal travel activity is considered personal use. Cost related to personal use travel activity is not allowable. Vehicle personal use is only allowable if the
costs are reported employee compensation and satisfies Internal Revenue Service individual compensation tax reporting requirements.

The minimum documentation that must be retained and be available to auditors for all vehicles is:

- A Mileage log for each vehicle.
  - The log must contain at least the date, total miles for business use, name of driver, origination and destination, and the reason(s) for the vehicle use.
  - The log must report the monthly beginning and ending odometer reading.
- Business mileage and total mileage use of the vehicle to support the dollar allocation for determining allowable cost.
- Charge slips or invoices for fuel, maintenance, and other similar items.

If the reason for a trip is to transport a resident for medical care or treatment, the medical condition necessitating the trip must be documented. If the reason is to attend a seminar, convention, or meeting is related to nursing facility operation, invoices must document proof of attendance and mileage logs must be documented to identify the reason for the trip. Vehicle use for general business travel or other activity must include the reason in the mileage log.

Medicaid considers mileage that is not logged as not related to resident care or facility operation. The cost relating to unrecorded or non-supported as business use mileage is not allowable.

Travel by nursing facility personnel via personal vehicle use is an allowable expense if the travel is consistent with the aforementioned purpose criteria. Medicaid will allow such documented mileage at the State of Michigan, Department of Technology, Management & Budget (DTMB), approved private vehicle rate. The mileage rate includes all vehicle costs and is treated as a variable support cost. The approved private vehicle mileage rate information can be accessed on the DTMB website. (Refer to the Directory Appendix for website information.)

8.8 INTEREST

Interest is the cost incurred for the use of borrowed funds. Necessary and proper interest on both current and capital indebtedness is an allowable cost in accordance with Medicare Principles of Reimbursement. The allowance for interest expense is determined using one of the following principles:

- Allowable interest expense is determined in accordance with current Medicare Principles. Medicaid applies the following guidelines, although not fully inclusive, in determining allowable interest expense. Interest expense must be reduced by all investment income, except where such income is from:
  - Gifts, grants, and endowments held separately or pooled with other funds.
  - Qualifying deferred compensation and/or self-insurance trust funds.
  - Income from a provider's qualified pension fund.
- The rate of interest on a loan must not be in excess of what a prudent borrower would have had to pay in the market place at the time the loan was made.
Interest expense, to be allowable, must be paid to a lender not related through control, ownership, or personal relationship to the borrowing organization. Interest paid by the provider to partners, stockholders, or related organizations of the provider is, therefore, not allowable.

**Exception:** A nursing facility operated by a religious order is allowed to borrow funds from the order and claim necessary interest expense for those funds.

- Interest on loans in excess of asset value acquisitions (after July 1970) is not an allowable cost. In a situation where the purchase price exceeds the historical cost or the cost basis, the interest expense on that portion of the loan used to finance the excess is not allowable.
- Interest expense applicable to borrowings principle balance for a nursing facility acquisition must be separately identified and reported from interest expense applicable to working capital or miscellaneous capital asset acquisitions (assets that are not part of or related to a facility acquisition). See Cost Finding and Cost Classifications for borrowing principle balance descriptions.

Working capital borrowings are considered funds borrowed for a relatively short time period of 12 months or less to meet current normal operating expenses. For lines of credit, the borrowing shall be compliant with the 12 month requirement if the provider repays the entire amount withdrawn within 12 months of the date of the first draw.

- The loan must meet allowable cost principles. The rules on working capital borrowings do not apply to loans on capitalized assets. Interest on current indebtedness meeting the 12 month requirement and other program working capital criteria is allowable, whereas interest expense for long-term working capital indebtedness is not considered allowable.
- The nursing facility must document the need and due date for the working capital loan. The need must be to meet normal operating expenses and must be supported by an application of funds analysis demonstrating the use of loan proceeds for nursing facility expenses.
- For the application of funds analysis, the provider must show that current cash receipts are not sufficient to meet the accounts payable, payroll, and other financial obligations. The provider must also demonstrate that the loan proceeds went directly into the appropriate cash account. The provider must document when each withdrawal was used, how each withdrawal was used, and how the funds are being applied to a purpose related to patient care. If the Home Office is the recipient of funds and intends to transfer funds to a provider under the Home Office, the provider must demonstrate the financial need for the funds, how the money was used, and how the use is related to patient care.
- The loan must include/require repayment of the principal balance within a prescribed time period, including regular scheduled repayment amounts applying to the principal borrowings amount. The provider may repay the principal balance of the loan on a monthly, quarterly, or annual basis. If the provider repays the entire principal balance before the expiration of the loan term, the interest expense on that loan is considered allowable. If the provider has a line of credit, the provider must repay the entire amount withdrawn within 12 months of the date of the first draw for the interest expense to be considered allowable.
Interest income is applied first as a reduction to mortgage related borrowing allowable interest expense, and then to other borrowings allowable interest expense.

Interest expense is distinguished from penalty or finance late fees by the existence of a lender and borrower relationship pertaining to the financed amount. Penalty and finance fee assessments relating to late payment of liabilities are not considered borrowing costs and are not allowable.

8.8.A. INTEREST CLASS I AND CLASS II NURSING FACILITIES

For the Class I and Class II facility, interest on borrowed funds related to the facility acquisition allowable interest expense is determined in accordance with the Principles in effect on July 17, 1984, prior to the changes associated with the mandates of the DEFRA of 1984 and its limitations on the revaluation of assets.

- The dollar amount of facility acquisition financing is limited to the lesser of:
  - the purchase price of the nursing facility,
  - the current reproduction cost adjusted for straight-line depreciation over the life of the asset to the time of purchase, or
  - fair market value at the time of purchase; minus the purchase down payment.

- Interest expense on the dollar amount of a facility acquisition loan principle in excess of the financing limit is not allowable.

- Depreciated replacement cost is defined as the current reproduction cost adjusted for straight-line depreciation over the life of the asset.

- Depreciated replacement cost must be determined by an independent appraiser, chosen and paid for by the nursing facility provider, in accordance with the "Appraisal Guidelines" in the Principles.

Note: For Class I and Class II facilities that choose to forego increased reimbursement for interest expense, they must adopt the prior owner’s financing and acquisition costs, interest expense schedule of borrowings, principal amortization, and interest expense recognized for reimbursement by the Medicaid program prior to the sale. Annual cost reporting must continue to be based on the prior owners.

8.9 LEASE COSTS

The Medicaid allowable cost provisions for asset lease transactions depend on the type of asset. Generally, asset lease transactions require that the lease expense be removed from cost and replaced by the underlying ownership cost of the property owner. Lease or long-term rental agreement (more than twelve months duration) transactions must be reported in the Medicaid cost report Statement of Leased Capital Assets. Cost reporting disclosure of lease costs is required to properly classify ownership costs for determining Medicaid reimbursement. There are also specific asset lease transactions that must be reported in the cost report statement, but are exception to the underlying ownership disclosure requirement. Specific types of lease expenses are discussed in the following sections.

Maintenance costs for leased capital assets, other than lease situations qualifying under “pass-through lease” criteria, are classified as variable costs. The nursing facility must determine and report these costs.
in the appropriate cost center or department. This requirement may necessitate the breakout of the maintenance costs for the lease contract.

Lease costs are differentiated from incidental or non-recurring rental expenses incurred to address a limited need of the facility. Rental expense incurred for incidental or limited time rental items, or non-recurring rental transactions, are allowable operating costs in the applicable cost center or department requiring the rental action. Limited time rental is considered as not longer than twelve months, non-recurring, and prohibits several/numerous sequential transactions for the same or similar rental items.

**Exception:** An extended period up to 24 months may be approved by RARSS in instances related to construction or renovation. The provider must submit an extension request to RARSS in writing at least 45 calendar days prior to the effective date of the extension. The request requires disclosure of item, duration, and action that precipitated the need to extend the project. RARSS will respond in writing.

### 8.9.A. FACILITY LEASE

Cost reporting and reimbursement for capital assets relating to the nursing facility premises are under the same methods whether the items are owned or leased. For items to be considered allowable costs, the acquisition dates and asset costs, interest expense and other applicable ownership costs must be reported. Allowable lease costs are determined using one of the following principles:

- A nursing facility provider that entered into an acceptable, arm's-length lease prior to September 1, 1973, where the lessor has refused to open its books, is allowed an actual lease cost up to a maximum of $2.50 per resident day. This limit was developed from the average lease/rental costs for facilities leased prior to September 1, 1973, at which time the current method of calculation was effected. The pre-September 1, 1973, lessee has the right of appeal of an acceptable, arm's-length lease agreement for costs that exceed the $2.50 limit.

- A nursing facility provider that entered into, or amended, an acceptable, arm's-length lease agreement on or after September 1, 1973, is allowed a plant cost component determined in accordance with the Rate Determination section of this appendix, as applicable to an owner-provider, if the lessee discloses the allowable cost information required for rate setting. Leased assets are treated as though the lessor and the lessee are one and the same. Without full disclosure, lease expenses are not an allowable cost.

Interest expense allowed in the case of the lessor is also limited by Medicare Principles of Reimbursement. Further, interest income of the provider (lessee) is offset against all interest expense, including interest expense allowed on rental properties.

### 8.9.B. PLANT COST LEASE OTHER THAN FACILITY SPACE

Lease expense for nursing facility equipment or other activity that does not qualify for pass through lease expense is not allowable and must be reported utilizing the ownership underlying cost reporting requirement. If a lease is a virtual purchase and the lessee becomes the property owner at the termination of the lease, or for a nominal buyout amount, ownership cost reporting must be applied. The definition criteria of a virtual purchase are addressed in the federal Principles of Reimbursement.
Office space costs incurred in a home office or related party administrative service transaction are allowable under application of allowable depreciation, interest and property tax underlying ownership cost principles. Reasonable and necessary lease expenses incurred by a home office or related party for administrative services office space are allowable. Ownership underlying cost reporting is not required for leased business office space or similar leased space except in rental transactions involving a related party landlord. Related party transactions for office space are limited to ownership underlying costs applicable to allowable depreciation cost principles. The cost of office space is included in the cost of the home office or related party administrative services space cost and must be reported in accordance with Medicaid policy identified in the Cost Classification and Cost Finding Section of this appendix.

8.9.C. PLANT COST PASS THROUGH LEASES

A select group of rental and lease situations are exceptions to the requirement for disclosure of the underlying ownership costs. The lease or rental cost of qualifying items is allowed as plant cost in the lease rental cost classification to the extent that the asset use and cost is related to patient care. The pass through lease allowance applies to the following:

- Vehicle lease to a maximum of $425/month or $5,100/year, per vehicle
- Photocopiers
- Postage meters
- Telecommunications systems (including fax machines)
- Desktop or notebook computers and printers
- Parking lots and off-site record storage for rental from an unrelated party ownership and arm's length transaction

8.10 LIFE INSURANCE PREMIUMS

Life insurance premiums are allowable when the premium is a fringe benefit for the insured employee when the beneficiary of the employee's insurance is not the provider. The cost of life insurance premiums for insurance on the lives of officers and employees, including provider-based physicians, is an allowable cost only within the provisions of Medicare Principles of Reimbursement.

8.11 LIQUIDATION OF SHORT-TERM LIABILITIES

A short-term liability must be liquidated within one year after the end of the cost reporting period in which the liability is incurred. The liquidation of liabilities requirement for Medicaid applies the federal Principles of Reimbursement for the determination of allowable costs. In instances where a nursing facility provider does not liquidate a short-term liability within the period specified in the federal requirements, the costs for the related goods and services are not allowed in the cost reporting period in which the liability was incurred, but are allowable in the cost report period when the liability is paid.

Exception to the one-year time limit to liquidate a short-term liability will be considered in accordance with the federal Principles of Reimbursement. A provider may request an extension for good cause to liquidate short-term liability. The provider must submit a written request at the time of submission of the
Medicaid cost report to RARSS identifying the liability amount(s) and an explanation for the nonpayment of the liabilities and expected payments to liquidate the liability. RARSS will review the request and notify the Provider of the approval of an extension, not to exceed three years after the end of the cost report period that the request is filed, or of the denial of the request.

8.12 LOBBYING AND POLITICAL ACTIVITY COSTS

A provider's costs incurred to support or oppose decisions of the federal Congress or state Legislature, costs related to campaigns for particular candidates or issues, and contributions to political action committees involving partisan elections are not allowable. Costs incurred, whether directly or indirectly through organization membership dues, fees or assessments, for these activities or to influence legislation are not allowable. Contacts with federal or state agencies in the course of business operations of the nursing facility and general comment on proposed policies are not considered lobbying activity.

8.13 MAINTENANCE OF EFFORT CONTRIBUTIONS BY COUNTY GOVERNMENT

In accordance with Public Act 408 of 1984, as amended, county governments that own and operate a nursing facility are responsible for maintenance of effort funding levels for the operation of the county owned and operated nursing facility. The county government contributions to the nursing facility operations specifically due to the provisions of the Act, as amended, are not allowable costs of the county medical care facility Medicaid cost reporting.

8.14 MEMBERSHIP FEES

Reasonable costs of memberships in professional, technical, or business-related organizations are allowable if the organization's mission or objectives are primarily related to resident care and/or long term care services activities. Costs of memberships in civic organizations for the purpose of implementing civic objectives are also allowable for Medicaid purposes (e.g., Chamber of Commerce). Any portion of membership fees used for lobbying, supporting political candidates and campaigning, or in social, fraternal, and other such organizations are not allowable. Awareness of an organization's ongoing lobbying and political activities requires identification of the portion of the organization's fees, dues, assessments or other allocations of costs to members or associated nursing facility providers. If an amount of non-allowable cost is not identified relating to this purpose, all costs associated with the fees or dues are non-allowable, unless the provider can document the appropriate unallowable portion.

8.15 MEDICAL DIRECTOR/PHYSICIAN SERVICES

The nursing facility must have a designated medical director that maintains responsibility for the implementation of resident care policies, for coordinating medical care, and is directly accountable to nursing facility management. The cost(s) applicable to the provision of the duties and responsibilities of the medical director is allowable routine nursing care. The nursing facility must maintain adequate records to document the level and type of services rendered by the medical director as a facility employee, or under a service contract or some other designated capacity. The cost(s) relating to the medical director duties and responsibilities must be distinguished from physician services activities that are not allowable routine nursing care. Refer to the Practitioner Chapter for discussion regarding physician services.
8.16 NON-PAID WORKERS/Volunteers

The value of services of non-paid workers is an allowable cost. The services must be performed on a regular, scheduled basis. The services must be of the type customarily performed by full-time employees and necessary to enable the nursing facility provider to carry out the functions of normal resident care and the operation of the facility. The value of services of a type for which providers generally do not remunerate individuals performing such services is not an allowable cost.

Example: Donated services of individuals in distributing books and magazines to residents, administering a provider canteen or cafeteria or a provider gift shop are not allowable/reimbursable.

8.17 Owner and Administrator Compensation

The cost for compensation to nursing facility owners is determined in accordance with Medicare Principles of Reimbursement, except the compensation to administrators, owner/administrators, or owners who function as administrators or assistant administrators, and corporate office executive management compensation is subject to specific dollar amount cost limits. Allowable cost limits are applied to nursing facilities based upon the bed size of the facility. Allowable cost limits are applied to individuals based upon the aggregate number of beds in nursing facilities being served or within the corporate organization. Compensation is remuneration to the individual for job performance and includes the costs of salary and wages, fringe benefits, director fees, and costs of services or items provided to the individual.

The compensation limit schedule is available on the MDHHS website. MDHHS annually adjusts the Owner/Administrator Compensation Limits to include cost-of-living changes as reflected by the United States Department of Labor Consumer Price Index for the metropolitan Detroit area. (Refer to the Directory Appendix for the website address.) Owner/Administrator Compensation Limits are expressed as facility annual compensation amounts and must be pro-rated on a monthly basis in situations where the cost reporting time period is not 12 months.

8.17.A. Compensation Limit for Individual Nursing Facility

The allowable cost limit for compensation to nursing facility administrators, owner/administrators, or owners who function as administrators or assistant administrators is determined according to the following criteria.

- Facility bed size includes licensed beds for nursing home, home for the aged and hospital services beds. Other categories of resident beds or housing arrangement beds are not included in determining the facility bed size for determining the appropriate compensation limit.
- The owner/administrator compensation limit used must coincide with the number of beds available for occupancy. The measurement criteria for determining the facility bed size is the number of beds available for resident or patient care at the beginning of the cost reporting period.
- Each nursing facility having 50 licensed beds or more must have a full-time licensed facility administrator. As required under State law, this individual is expected to be in the facility directing, conducting, or participating in activities directly related to the nursing facility during the normal 40-hour business week. A current position description that
adequately defines the duties and responsibilities for the administrator position must be retained at the facility.

- The total compensation amount claimed for allowable costs for the facility administrator and related positions must not exceed amounts established by the SMA. These amounts are established by facility bed size: 1-49 beds, 50-99 beds, 100-149 beds and 150 beds or more.

The owner/administrator compensation limits apply to the costs for the positions of administrator, assistant administrator, and/or other administrative employees performing functions or having work responsibilities normally considered nursing facility administrator work activity. If an individual is functioning in a position that requires a nursing facility administrator's license, that person's compensation must be subjected to the limit. However, if a person does not have a license, but is performing the job functions and work activity of an administrator, that individual's compensation must also be included in the amount subjected to the limit. Inclusion of an individual's compensation in the total amount subjected to the limit is not only based on the individual having a license, it is also based on the job functions and work activity. Compensation paid by a related party or central office and charged directly to the nursing facility for individuals performing these activities must be included in the individual nursing facility compensation amount subject to the limit.

The compensation limit schedule does not apply to the salary of owners employed in capacities other than administration of the nursing facility provider's operation. The allowable salary level of an owner employed in a non-administration position cannot exceed the market value salary for that position, e.g., director of nursing, social services director. The allowable salary level must be commensurate with the amount of time the owner spends working in the non-administration position. If the owner also participates in facility administration, the portion of the payroll costs attributed to the administrative work must be included in the owner/administrator salary compensation and subject to the appropriate salary limits. The individual's administrative work must be appropriately documented with a position description and job responsibilities, and the allowable salary level for the administrative work must not exceed salary levels for similar administrative positions.

8.17.B. COMPENSATION LIMIT FOR OWNER AND/OR ADMINISTRATOR SERVING MULTIPLE NURSING FACILITIES

Where an individual is involved in the administration of more than one nursing facility, the maximum compensation allowed for allocation per facility and the allowable facility compensation is computed as follows:

- Total the number of beds, as defined in the individual nursing facility section, in all facilities served by the owner and/or administrator.
- Determine the appropriate compensation limit from the published schedule for the total number of beds.
- Compare the appropriate compensation limit with the actual allowable total salary and fringe benefits paid to the individual. The compensation limit is expressed as an annual amount (12-month time period) and applicable to a full time position defined as a
minimum of 40 hours per week committed to nursing home related management and administrative activity. Adequate work activity records must be available for verification of time expended for nursing facility related activity. Time commitment for less than full time requires the compensation limit be prorated to reflect the portion of time committed to this activity. Example, if 30 hours per week during an annual period is attributed to this activity, the adjusted limit for the individual is 75 percent of the appropriate compensation limit:

- The lesser of total allowable compensation or the compensation limit per the schedule is then allocated to all the facilities served by the owner and/or administrator based on a ratio of the number of beds in the individual facility to the total number of beds in all facilities served. The hours directly devoted to individual homes may be used as the allocation basis if verified by auditable records.

- Combine the allocated owner and/or administrator compensation with the allowable compensation of the facility's administrator/assistant administrator/co-administrator.

- Compare the combined compensation amount to the compensation limit schedule maximum allowable for the number of beds for that particular sized facility. The lesser of the facility's combined compensation or the facility's compensation limit is the allowable compensation to be used in the determination of allowable cost related to resident care.

The following illustrates an example of the allowable owner/administration compensation limit application for a group of four facilities of varying sizes with a total of 330 beds, and the allowable facility compensation. The owner and/or administrator total compensation is $225,000 for full time nursing facility related activity for a cost reporting period ending December 31, 2003. The compensation is $48,914 greater than the limit ($225,000 minus $176,086 equals $48,914).

| Total number of beds in all facilities served | 400 |
| Compensation Cost Limit for 150+ bed facility as of 12/31/2003 | $176,086 |
| Owner and/or Administrator Total Compensation | $225,000 |
| Amount allowed for allocation to individual facilities (lesser of bed size limit or actual compensation) | $176,086 |
| Amount of compensation not allowed | $48,914 |

</table>

¹ The percentage of the facility’s beds of the total across all four facilities is multiplied by the compensation limit, e.g., 40/400 x $176,086.

² Total compensation equals the sum of the allocation amount and the individual nursing facility administrator compensation.

8.17.C. COMPENSATION LIMITATION FOR HOME OFFICE EXECUTIVE/ MANAGEMENT

Salary and wages, fringe benefits and other related compensation costs for home office executive and management staff are included in the provider’s home office cost report, and costs are allocated to the individual nursing homes and other business activities conducted by the organization. The allocation of the compensation costs is made to the operating entities of the corporation through the home office cost statement, and these costs are not included in the limit imposed on the individual nursing facility owner/administrator compensation.

The compensation limit for high-level management employees at the corporate home office level is enhanced to acknowledge increased scope of the business activity and corporate responsibility. The enhanced compensation limit is applicable in chain organization or related party management services situations where home office cost statement reporting exists, and full management oversight and administrative services are being provided to the nursing facilities and other business activities of the organization. Compensation costs for corporate office individuals under the enhanced compensation limit must be documented by a current position description, employment contract or other verifiable documentation that adequately defines the position, duties and responsibilities for the individual, and demonstrates the presence of services provided to the organization. Compensation to an individual employee of the corporate or central office, regardless of employment position or job activity function, is subject to the enhanced compensation limit to determine allowable cost. The enhanced compensation limit is expressed as an annual amount (12-month time period) and is applicable to a full time position.

Employees paid by the corporate or central office but charged directly to the individual nursing facility for administrator or assistant administrator work functions at that facility are not eligible for the enhanced compensation limit. Allowable cost limits for such employees are addressed under individual nursing facility compensation limit.

The enhanced Medicaid allowable compensation for individual corporate office official and executive management employee personnel is applicable only to organizations greater
than 150 beds. The enhanced compensation limit is based on the total number of beds owned and operated by and under full management control of the corporate organization and determined in accordance with the following schedule:

<table>
<thead>
<tr>
<th>Number of Beds in the Chain Organization</th>
<th>Enhanced Compensation Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>151 to 500 beds</td>
<td>100% of the 150+ bed facility limit</td>
</tr>
<tr>
<td>501 to 1,000 beds</td>
<td>120% of the 150+ bed facility limit</td>
</tr>
<tr>
<td>1,001 to 2,000 beds</td>
<td>130% of the 150+ bed facility limit</td>
</tr>
<tr>
<td>Over 2,000 beds</td>
<td>150% of the 150+ bed facility limit</td>
</tr>
</tbody>
</table>

The total number of beds includes all types of nursing home, home for the aged, hospital services, resident and other housing arrangement beds. If the business activity for the beds is not included in the allocation of the home office costs, the beds must not be counted for determining the number of beds in the chain organization. The 150+ bed facility limit used to determine the enhanced compensation limit amount is the MDHHS published limit for the year end corresponding to the reporting time period end date of the home office cost statement.

**8.18 Oxygen**

Medicaid coverage of oxygen services for residents in nursing facilities is addressed in the Medicaid Services Descriptions Section of the Coverages portion of this chapter. The costs of oxygen gas, equipment, and supplies for intermittent and infrequent use are allowable in the routine nursing care cost and are included in the per diem reimbursement rate. Oxygen equipment rental costs for a limited time period for purposes of providing this service are allowable in accordance with the incidental rental cost provisions addressed in the Lease Cost subsection of this appendix.

The costs of oxygen related services for frequent or prolonged use on a daily basis (i.e., at least 8 hours per day), regardless of payer source, is an ancillary services cost and is not an allowable routine nursing care cost. For residents requiring frequent and prolonged oxygen use who are in a nursing facility, the oxygen gas, equipment, and supplies must be billed by an enrolled medical supplier, not the nursing facility. For residents requiring frequent and prolonged oxygen use in a County Medical Care Facility or a Hospital Long Term Care Unit, the oxygen gas, equipment, and supplies must be billed by the nursing facility, not the medical supplier. These costs must be separately identified in the facility's accounting records or adequately compiled and verifiable for audit, and excluded from Medicaid cost report routine nursing care unit cost.

**8.19 Patient Transportation**

The Transportation Section of the Coverages portion of this chapter addresses the nursing facility's responsibility to arrange or provide for non-emergency patient transportation. The cost for this transportation is a routine nursing care cost included in the nursing facility's annual cost report, and any reimbursement for the services is included in the routine nursing care per diem rate. Patient transportation costs are classified as support costs for Medicaid cost reporting.
The nursing facility must select the most efficient and cost-effective mode of transportation for resident care which may include utilizing a facility-owned vehicle or contracted outside service. Whenever possible, a facility-owned vehicle should be used. Costs relating to the nursing facility vehicle operation are addressed under the Facility Vehicles and Capital Asset Cost subsections of this appendix.

Costs incurred for contracted outside service for patient transportation must be included in the Medicaid cost reporting under the following reporting procedures:

- Administration and General Transportation – when the expense is not directly identified for specific residents or the care unit in which the resident resides in the facility; or
- Routine Nursing Care, Miscellaneous Support Cost
  - when there is only one routine nursing care unit in the facility and all resident transportation is for residents in that unit, or
  - when there are multiple nursing or residential care units in the facility, and the expense is directly identified by individual resident and location unit where the individual resides in the facility. Costs must be allocated to the corresponding nursing unit cost center identified in the Medicaid cost report.

**8.19A. NON-EMERGENCY AMBULANCE**

When a physician issues a written order for non-emergency ambulance transportation, usually due to the need for a stretcher or other emergency equipment, the ambulance provider may bill Medicaid directly and must maintain the physician’s order as documentation of medical necessity. If non-emergency ambulance transport is not ordered by the beneficiary’s physician, arrangements for payment must be between the facility and the ambulance provider and cannot be charged to the beneficiary, beneficiary’s family, or used to offset the patient-pay amount. The cost of non-emergency ambulance transports not ordered by the beneficiary’s physician must be identified and removed on Worksheet 1-B by the nursing facility.

**8.20 PERSONAL COMFORT ITEMS**

The costs of services and items that do not contribute primarily to the resident’s treatment of an illness or the resident’s ability to function are not allowable. Direct costs, and the appropriate share of indirect costs, relating to such items as telephones, televisions and/or radios that are located in the patient’s accommodations and furnished solely for the personal comfort of the resident, are not allowable. The cost of television and radio services furnished to residents generally is allowable if furnished in common use areas of the facility such as day rooms, recreation rooms or similar purpose area of the facility for the common benefit of facility residents. The cost of nurse-patient communications system that has no capability other than nurse and patient communication is allowable.

The costs of systems, including nurse-patient communications, television and telephone services, and similar items, may have the capability of providing residents with outside entertainment and providing nurse-patient communications. Only the cost of the component for nurse-patient communication is allowable routine nursing care. Direct distinction of cost related to the nurse-patient communication must be made for proper cost reporting, or an appropriate allocation must be established for Medicaid approval for the purpose of identifying the patient-related and personal comfort-related cost portions of combined systems.
8.21 PRIVATE DUTY NURSES

Costs for nursing staff services provided by or under the supervision of a registered professional nurse are allowable; however, the costs of services of a private-duty nurse or other private-duty attendant are not allowable routine nursing care. Private-duty nurses or private-duty attendants are registered professional nurses, licensed practical nurses, or any other trained attendant whose services ordinarily are rendered to, and restricted to, a particular patient under arrangement between the patient and the private-duty nurse or attendant.

A patient, or someone acting on their behalf, may arrange and pay for a private-duty nurse, or the nursing facility that initially incurs the requested costs may look to the patient for payment of the non-covered nursing facility service. Where the nursing facility acts on behalf of the resident, the services of the private-duty nurse or other attendant(s) under this arrangement are not allowable routine nursing care services regardless of the payment process to the private duty or other personnel or the control which the nursing facility may exercise with respect to the services rendered by the private-duty nurse or attendant.

8.22 PROVIDER DONATIONS FOR OUTSTATIONED STATE STAFF

Provider donations and administrative costs and incidental costs (workspace and telephone), incurred by the provider for outstationed staff are allowable costs. Costs are allowable to the amount contractually determined with the State.

8.23 PURCHASE DISCOUNTS

All discounts, allowances, and refunds of expenses are reductions in the cost of goods or services purchased and are not income. When they are received in the same accounting period in which the purchases were made or expenses were incurred, they will reduce the purchases or expenses of that period. However, when they are received in a later accounting period, they will reduce the comparable purchases or expenses in the period in which they are received.

Purchase discounts have been classified as cash, trade, or quantity. Cash discounts are reductions granted for the settlement of debts before they are due. Trade discounts are reductions from list prices granted to a class of customers before consideration of credit terms. Quantity discounts are reductions from list prices granted because of the size of individual or aggregate purchase transactions. Whatever the classification of purchase discounts, like treatment in reducing allowable costs is required.

As with discounts, allowances and rebates received from purchases of goods or services and refunds of previous expense payments are clearly reductions in costs and must be reflected in the determination of allowable costs. In addition, late charges on purchases are not an allowable expense. These would be in addition to regular costs authorized.

8.24 REBATES LARGER THAN ONE YEAR’S EXPENSE AND EXTRAORDINARY EXPENSE

Normal refund or rebate amounts are reported as a reduction offset to current operating costs in accordance with federal Principles of Reimbursement. A refund or rebate amount of previous years’ allowable expenses must not be reported in total in the current fiscal year-end cost report where the refund or rebate amount pertains to more than one prior year reported expense. Likewise, extraordinary expense pertaining to more than one prior year must not be reported in total in the current fiscal year-end cost report.
end cost report. Refund or rebate and the extraordinary expense amounts pertaining to more than one prior year must be equally spread over as many subsequent years as the number of years represented by the refund or rebate or the extraordinary expense amount not to exceed three years. In the instance of a sale, the selling provider must include 100 percent of the remaining rebate balance in the final cost report. The apportionment will start in the cost-reporting year in which the refund amount is received or the extraordinary expense is discovered. These provisions are limited to Medicaid cost reporting requirements and do not change the applicable accounting principles for financial reporting.

8.25 RESEARCH ACTIVITIES

The cost of research activities is allowable in accordance with Medicare Principles. If research is conducted in conjunction with, and as a part of, the care of residents, the costs of usual resident care are allowable to the extent that such costs are not met by funds provided for the research.

8.26 ROUTINE NURSING SERVICES

A provider's costs associated with the provision of necessary medical, nursing and mental health services, within the provisions of Medicare Principles of Reimbursement and requirements specified in the Coverages portion of this chapter, are allowable expenses. This includes costs incurred for meeting state federal requirements associated with specialized mental health rehabilitation services, e.g., monitoring the necessity for Annual Resident Reviews and coordinating or providing required services. The medical supply costs associated with routine nursing services and reimbursed by Medicare Part B are not allowable routine costs for Medicaid if the provider is reimbursed by Medicare.

8.27 SICK LEAVE

The reasonable cost of sick leave taken (or payment in lieu of sick leave taken) by an employee is recognized as a fringe benefit and is included in allowable costs in the cost reporting period when paid. If the sick leave is vested and refunded, contributions to the fund are allowed under applicable provisions of the Medicare Principles. However, where the nursing facility provider's sick pay plan grants employees the right to demand cash payment for unused sick leave at the end of each year, the pertinent accruals are includable, without funding, in the cost reporting period when earned.

8.28 TAXES AND FEES

Taxes, including employee payroll taxes, sales taxes, and state imposed sales and use taxes, are allowable variable costs. The Michigan Business Tax and the Michigan Corporate Income Tax are allowable variable support costs.

8.28.A. GENERAL TAXES

Real and personal property taxes are allowable plant costs.

8.28.B. QUALITY ASSURANCE ASSESSMENT TAX

A nursing facility's Quality Assurance Assessment Tax is an allowable cost and must be reported in the nursing facility Medicaid annual cost report. The tax must be reported on the provider's cost report as assessed and accounted for on the accrual basis. The
Quality Assurance Assessment Tax cost is adjusted through the cost reporting process to be segregated from use in rate setting.

8.28.C. FEES AND ASSESSMENTS

Costs incurred for late payments, or for violation of federal, state, or local laws, are not allowable.

8.28.D. PENALTY TAXES UNDER THE PATIENT PROTECTION AND AFFORDABLE CARE ACT

Penalty taxes that may be assessed on employers under the employer-shared responsibility provisions in the Patient Protection and Affordable Care Act (PPACA) are not allowable costs used to calculate the Medicaid room and board rate. As such, the facility must remove these penalty taxes from allowable costs via a Worksheet 1-B adjustment.

8.29 THERAPY AND PATHOLOGY SERVICES

A nursing facility provider must establish accounting procedures to reflect individual cost centers for reimbursable ancillary services, including physical therapy, occupational therapy, speech pathology and other services not classified as routine nursing care. Whether the therapist/pathologist is salaried, under contract, or an independent provider, a nursing facility provider must record Medicaid program payments as income and all expenditures for therapist/pathologist supportive personnel, equipment and its maintenance, supplies, and other costs directly attributable to rendering services in these cost centers.

The service is considered ancillary if the complexity of the service prescribed for the resident is such that it can be performed safely and/or effectively only under the general supervision of skilled rehabilitation personnel. Ancillary therapy services are evidenced by the presence of the following conditions:

- A written physician order.
- The skills of qualified technical or professional health personnel, such as physical therapists, occupational therapists, speech pathologists or audiologists, are required.
- Services are provided directly by, or under the general supervision of, the skilled personnel to assure the safety of the patient and to achieve medically desired results. General supervision requires that initial direction and periodic inspection of the actual activity is necessary.
- Services are rendered as part of an active treatment for a specific condition that has resulted in a loss or restriction of mobility or function.

Therapy services considered routine nursing care are services rendered under circumstances where the general supervision of exercises, which have been taught to the patient, can be performed repetitiously without skilled rehabilitation personnel. This includes maintenance programs where the performances of repetitive exercises, which may be required to maintain functions, do not require the involvement and services of skilled rehabilitation personnel, but may require the assistance of a trained nurse aide. Routine nursing care may include repetitive exercises to improve gait, maintain strength or endurance, passive exercises to maintain range of motion in paralyzed extremities, and assistive walking.

The cost of the development of the maintenance plan when prepared by a licensed therapist is allowable. A provider must maintain documentation, which includes the amount of time required by the therapist to...
develop the maintenance plan. Medicaid considers maintenance plan development as routine nursing care included in the per diem rate.

The cost of the MDS assessment is allowable. A provider must maintain documentation, which includes the amount of time required by the therapist to complete the MDS assessment. Medicaid considers the MDS assessment as routine nursing care included in the per diem rate.

Depreciation for equipment and facility space assigned to these services must be included as an expense in the ancillary cost centers and computed in accordance with Medicaid guidelines for allowable depreciation. A uniform charge structure must be applied to the entire facility population receiving the services.
SECTION 9 - COST CLASSIFICATIONS AND COST FINDING

Medicaid-enrolled providers must develop and adopt a uniform Chart of Accounts that meets the minimum requirements established by Medicaid for classifying and reporting costs incurred in providing care to nursing facility residents. A nursing facility's accounting system will normally include more detailed accounts for recording facility costs. However, for cost reporting purposes, the detailed accounts are compiled into aggregate cost classification centers in accordance with program policies.

The following cost descriptions are guidelines to provide consistency in nursing facility provider cost reporting. Reimbursement classifications are identified for individual cost elements in examples available on the MDHHS website. (Refer to the Directory Appendix for website information.) More detailed discussions of cost categories are in the Allowable and Non-Allowable Costs section of this appendix.

9.1 NURSING FACILITY BED DAYS AND RESIDENT OCCUPANCY

A provider must report nursing facility bed days and resident occupancy statistics in the annual cost report. Policy related to facility census is presented in the Definitions section of this appendix. Specific attention should be directed to the following definitions: available bed, available bed days, ban on admissions, census, census day, denial of payment for new admissions, hold a bed day, leave day – hospital, leave day – therapeutic, occupancy, occupancy rate, per resident day cost, resident, resident days/occupancy, therapeutic leave day.

The nursing facility's resident occupancy statistics and cost reporting requirements will be significantly affected in cases where the provider requests, and is granted, approval for designating non-available beds as outlined in the Non-Available Beds subsection of this appendix.

9.2 VARIABLE COSTS – BASE AND SUPPORT

Variable costs include the total allowable base and support costs in a facility’s routine nursing service units. A provider must allocate variable costs (support or base) depending on the activity for which the cost was incurred. The provider must also report direct costs for ancillary service costs and other non-reimbursable service costs. The direct costs incurred or attributed to these activities will not specifically be identified as base or support costs, however, the cost report cost finding process will allocate general services cost activities as base or support costs depending on the activity for which the cost was incurred.

9.2.A. BASE COSTS

Base costs cover activities associated with direct patient care. Major activities under these categories are payroll and payroll-related costs for departments of nursing, nursing administration, dietary, laundry, diversional therapy and social services, food, linen (excluding mattress and mattress support unit), workers compensation, utility costs, consultant costs from related party organizations for services relating to base cost activity, nursing pool agency contract service for direct patient care nursing staff, and medical and nursing supply costs included in the base cost departments.
9.2.B. SUPPORT COSTS

Support costs cover allowable activities not associated with direct patient care. Major items under these categories are payroll and payroll-related costs for the departments of housekeeping, maintenance of plant operations, medical records, medical director, and administration, administrative costs, all consultant costs not specifically identified as base, all equipment maintenance and repair costs, purchased services, and contract labor not specified as base costs. Contract services costs for these departments are also support costs.

9.2.C. BASE/SUPPORT COSTS – PAYROLL RELATED

Nursing facility expenses related to payroll taxes and employee health and welfare are classified as base/support costs. These costs include fringe benefits such as employer contributions to FICA, FUTA, MESC, employee life and health insurance, retirement, physicals and all other insurance provided to employees as fringe benefits. If a nursing facility's accounting records do not separately reflect the payroll taxes and employee health and welfare expenses for "base" and "support" personnel by cost center identification, the total amount of these costs must be reported in the appropriate "base/support" cost category. Workers compensation is a base cost and not divided between base and support.

If the nursing facility's accounting system allows the allocation of costs to specific personnel or activities, the specified costs must be used on the cost report. If the nursing facility accounting system does not allow for this specificity, then a reclassification of costs must be made to the appropriate service areas. In these cases, it will be necessary to reclassify such costs on the basis of salary and wage costs distribution.

9.2.D. BASE/SUPPORT COSTS – CONTRACT SERVICES FOR DIRECT PATIENT CARE

A provider that purchases direct care services as an alternative to employing personnel may apportion the contract services costs between base and support cost by applying the industry-wide average base-to-variable cost ratio. The nursing facility must appropriately report these costs in the annual cost report. Medicaid reviews the industry-wide average base-to-variable cost ratio annually and revises it if a difference of two percent or greater exists between the current calendar year cost report aggregate average industry data and the previously promulgated industry-wide base-to-variable cost ratio. If a revision is applicable, the revised cost ratio will be effective for subsequent year cost reporting.

9.3 PLANT COSTS

Plant costs include depreciation, interest expense (either working capital or capital indebtedness), real estate and personal property taxes, amortization costs associated with loan financing costs (amortization of legal fees, recording fees or other fees relating to the capital asset acquisition points, letters of credit), and specific lease expenses.
9.4 CAPITAL ASSET EXPENDITURE

Medicaid limitations on capital expenditure costs are determined in accordance with Medicare Principles except as modified by Medicaid policy.

A nursing facility provider anticipating capital expenditures should contact the CON Evaluation Section to make application for a CON. (Refer to the Directory Appendix for contact information.)

If a CON is approved, the provider may be eligible for increased reimbursement, subject to Plant Cost Component limits. If a new capital expenditure required CON review and was denied, the provider's reimbursement rate must exclude the costs of the denied capital expenditure. The provider's cost report must identify capital expenditures approved and denied by CON.

The nursing facility must have written policies and procedures that establish dollar level thresholds beyond which an asset acquisition is considered a capital asset. Medicaid sets the thresholds at having an estimated useful life of at least two years and a historical cost of at least $5,000. The nursing facility capital asset policy may have lower dollar level threshold than the Medicaid limit, but may not have a higher limit. The provider must follow its established policy for cost reporting when its capitalization policy sets lower thresholds than Medicaid.

Assets that are acquired as part of an integrated system must be considered as a single asset for capitalization purposes. Assets that have a stand-alone functional capability may be considered on a single item basis. Individual asset items that do not meet the dollar and useful life threshold are classified as minor equipment and will be reported as minor equipment expense in the cost report of the year of acquisition.

Example: An office workspace with connecting portions dependent upon other portions for support and stability; a communication system installed in the facility and in resident rooms to allow the full functioning of two-way communication system.

Repair and improvement costs related to assets that result in extending useful life or increased productivity must be capitalized for Medicaid if they are capitalized under Generally Accepted Accounting Principles. Providers must demonstrate consistency in financial reporting.

Providers must follow Generally Accepted Accounting Principles (GAAP) in reporting repairs to capital assets. Repairs that should be capitalized under GAAP must not be an expense item on the cost report.

9.4.A. CAPITAL ASSET COST DATA FOR CLASS I FACILITIES

9.4.A.1. CAPITALIZED ASSET ACQUISITION COSTS

Capitalized asset acquisition costs are used to determine the Current Asset Value for the Plant Cost Component in the Class I nursing facility reimbursement rate. The Medicare Principles of Reimbursement are used to determine the acquisition costs allowable to the original provider/owner of the asset. The SMA uses only the acquisition cost incurred by the original owner to determine the capital asset value cost data. Asset acquisition costs are allowed for related party transactions in accordance with Medicare's interpretation for costs to related organizations.
The cost basis for capital assets is the CAV value determination of the original owner's audited historical acquisition cost. It is the responsibility of the current owner to provide the audited historical cost and purchase year of the original owner; otherwise, the assets are assumed obsolete for payment determination purposes, i.e., of no current asset value. The current provider must annually report the cost and the applicable year's depreciation for newly purchased assets and value changes to previously acquired assets. Cost reporting for asset acquisition costs related to a capital asset that is traded-in for a new replacement item must also report the value of the capital assets.

Capital costs related to assets that are no longer used in the facility operation and assets that are not necessary for resident care, e.g., excessive land not allowed under the Principles, are not allowable in the nursing facility capital asset value cost data.

To ensure that Medicaid does not pay for assets that are no longer being used to provide resident care, the original acquisition costs, or an estimate thereof, are removed from the current capital asset cost data. The costs of retirement or replacement of buildings, building improvements, building additions, fixed building equipment, land improvements, or movable equipment are removed from the capital asset cost data for the corresponding year of the original acquisition of that retired or replaced asset.

When the original value can be ascertained through such methods as component part depreciation records, the provider must remove the original costs of the retired or replaced assets from the year of the original acquisition, and report the new asset item cost for the year purchased.

Building components, building services equipment or other fixed equipment assets or land improvements may have historically been included within the asset price of the building to which they are attached and, as a result, are not separable for purposes of calculating depreciation or the capital asset cost data. However, in the determination of the Current Asset Value, an asset must exist in the nursing facility for it to have a value. Therefore, if a fixed asset has been retired or replaced and the asset cost cannot be determined from the provider's Medicaid/Medicare asset cost schedule, construction records, or tax records, the provider must determine and report the original asset cost based on the cost of a similar asset.

If a nursing facility provider is unable to report the original asset cost by either individual asset cost or component basis, the new asset will be assumed as a replacement of a similar asset for determining the necessary revisions to the capital asset cost data using the asset trade-in provisions.

When a capital asset is traded-in for a new replacement item, either the original owner's cost or a derived value of the item traded in is removed from the capital asset cost data. The purchase price of the new asset, prior to consideration of the value of any trade-in, is added into the capital asset cost data for the current year of purchase. If the original cost of the item is unknown, the provider must derive a value by backdating the purchase price amount for the new replacement asset. If the asset being replaced is of a different quality or type than the new asset, the amount to be backdated may be based on the expected current cost of a similar asset of like quality and type. The derived value calculation is made by applying a construction cost index (exclusive of the annual obsolescence adjustment) to the value of the new asset item cost, then subtracting the
derived value from the previous capital asset cost data historical cost for that original acquisition year. An electronic copy of the annual economic index compilation and the derived application process used for nursing facility cost reporting can be accessed on the MDHHS website. (Refer to the Directory Appendix for website information.)

Capital assets that are leased or rented are treated as obsolete assets for rate determination purposes when the underlying historical acquisition cost to the original owner has not been disclosed, or when the underlying information cannot be verified through audit.

Capital assets recorded in the central office, home office, or related organization financial records that are identifiable to a specific nursing facility are included in that facility's capital asset cost data determination process. The asset values, interest, and property taxes identified with these assets must be charged directly to the nursing facility and will be reimbursed in accordance with the applicable policy.

Costs of capital assets associated with the operation of related organizations are not included in the capital asset cost data determination for a specific nursing facility. The plant and variable costs of such organizations are treated as purchased services. (Refer to the Variable Costs – Base and Support subsections for discussion regarding purchase and contract services.)

9.4.A.2. EXCEPTIONS TO ASSET ACQUISITION COST CAPITALIZATION

Exceptions to the acquisition cost basis for assets may be allowed in the following situations:

- For the occasional purchase of used, movable equipment for ongoing nursing facility operations when the purchase is not related to a change in facility ownership. For the purchase of used replacement equipment, e.g., re-manufactured beds, a used lawn tractor, or used vehicles, the asset acquisition is treated as if new items were purchased. The allowable cost of acquisition is included in the year the asset is put into service by the current purchaser.

- For the nursing facility land value. The land value to be included in the Current Asset Value is based on the current owner's allowable acquisition cost determined in accordance with Medicare Principles, and not to exceed the amount reported to the Internal Revenue Service for federal tax purposes. The cost of the prior owner's land improvement asset, which is an integral part of the nursing facility land component, and is included in the new or current owner's land acquisition cost, must be excluded from the historical capital asset cost data. The current facility ownership capital asset cost data cannot include both the land purchase price and the original owner's land improvement cost data.

- When equipment is purchased as "used" equipment as part of a facility change of ownership, or only a change of ownership of the facility equipment has occurred, the prior owner's (seller) computation of value at the time of sale is continued to the new owner.
9.4.B. CAPITAL ASSET CATEGORIES (FIXED ASSETS)

Capital asset classifications and asset useful life for depreciation purposes are determined in accordance with the American Hospital Association (AHA) guidelines in effect at the time of the asset acquisition.

General descriptions of the asset cost categories for cost reporting are:

**Land** – includes the land owned and used in the provider operations and includes off-site sewer and water lines, public utility costs necessary to service the land, government assessments for street paving and sewers, cost of permanent roadways and grading of a non-depreciable nature, cost of curbs and sidewalks where the replacement is not the responsibility of the nursing facility, and other land expenditure of a non-depreciable nature.

**Land Improvement** – improvements of a depreciable nature including paving, tunnels, underpasses, on-site sewer and water lines, parking lots, shrubbery, fences, walls, etc. where replacement is the responsibility of the nursing facility.

**Building** – includes the basic building structure, shell or frame, and additions thereto, building components, exterior walls, interior framing, walls, floors and ceiling, architectural, consulting, and interest expense associated with new construction or acquisition.

**Building Improvement** – includes building equipment attachments to buildings, such as wiring, electrical fixtures, plumbing, elevators, heating and air conditioning systems, etc. The general characteristics of fixed equipment are: (a) attached to or installed in the building structure, and (b) fairly long life but may be less than the building.

**Leasehold Improvement** – includes betterments and additions made by the lessee to the leased property, whereby the improvements become the property of the lessor after expiration of the lease. These items generally meet the requirements of building improvement assets.

**Department Equipment** – includes assets generally assigned to a specific department within the nursing facility with relatively fixed location but capable of being moved; as distinguished from building equipment. (Refer to Building Improvement.)

**Furniture and Fixtures** – includes assets similar in characteristic to department equipment, however, normally with no fixed location or used by various departments within the facility.

**Transportation Equipment** – includes vehicles used in conducting nursing facility operations relative to resident transportation, plant operations and maintenance, or general means of transport.

Capital asset costs incurred by a landlord who is leasing facility assets to a provider must be disclosed and reported in the provider’s annual cost report. Capital asset cost reporting and allowable cost policies are applicable to the reporting of the leased assets in the same manner as if the assets were owned by the provider.
9.4.C. DEPRECIATION

Class I and Class II nursing facilities are under the tenure plant cost reimbursement methodology, and potential reimbursement is not based on depreciation expense for the nursing facility capital assets. The costs of services provided from home office or related party transactions, other than for capital assets related to the nursing facility physical plant, may include depreciation expense for asset costs applicable to the operations of the home office or related party business. Allowable depreciation costs for the home office or related party will be determined in accordance with Medicare Principles. These costs will be included in the home office or related party administrative services space costs and must be reported in accordance with Medicaid policy identified in the Related or Chain Organization Cost Allocation subsection of this appendix. Class III and Class IV nursing facilities reimbursed under the depreciation plant cost reimbursement methodology will have depreciation costs determined in accordance with allowable cost principles defined in this policy. The allowance for depreciation is determined in accordance with Medicare Principles except that only the straight-line method of depreciation may be used. The historical asset cost basis and the depreciation basis for nursing facility sales is subject to the limitation on the valuation of assets mandated by the Medicare Principles.

In addition to the depreciation standards in the Medicare Principles, Medicaid also requires adherence to the following standards:

- Consistent use of either component or composite asset depreciation schedules. Component depreciation is permitted in the case of a newly constructed facility and for recognized building improvements where the costs can be separated and acceptable useful lives determined. Composite depreciation must be used in the case of a newly purchased, existing facility.
- All abandonment losses are considered as a depreciation expense item.

9.4.D. DISPOSAL OF DEPRECIABLE ASSETS

9.4.D.1. CLASS I NURSING FACILITIES

Class I nursing facilities will account for asset acquisition and disposal in accordance with the Capital Asset Cost Data for Class I Facilities subsection of this appendix.

A Class I nursing facility purchased on or after March 31, 1985 is not subject to depreciation adjustment. In the event of a sale, the assets of Class I facilities whose ownership began prior to March 31, 1985, amounts included in the Medicaid per diem rate as an explicit depreciation expense item are subject to recapture in the event of a gain on the disposal of assets. The selling Provider must complete Medicaid Program Depreciation Recapture reporting schedules along with the applicable fiscal year cost report. Refer to the Cost Report Reimbursement Settlement, Depreciation Recapture Reimbursement Adjustment subsection of this appendix for additional information.
9.4.D.2. CLASS III NURSING FACILITIES

Class III providers whose Medicaid rate includes depreciation expense must adhere to the Medicare Principles of Reimbursement to account for the disposal of depreciable assets. If the disposal of depreciable assets in the reporting year results in a gain or aggregate loss below $5,000, the adjustment will be made in the nursing facility provider's current year cost reporting allowable cost. The allowable gain is limited to the amount of depreciation previously included in the provider's allowable costs for the disposed assets.

In the event of a sale of the entire nursing facility and the termination of Provider participation in the Medicaid program, the terminating Provider must complete Medicaid Program Depreciation Recapture reporting schedules along with the applicable fiscal period cost report. Refer to the Cost Report Reimbursement Settlement, Depreciation Recapture Reimbursement Adjustment section of this appendix for additional information.

9.5 LOANS/BORROWINGS BALANCE REPORTING

Necessary and proper interest on current and capital debt is a Medicaid allowable cost. All interest expense, whether on current or long term debt, is classified as a plant cost. Determination of allowable interest expense will be in accordance with Medicare allowable cost principles. However, there are reimbursement limits for determining the Plant Cost Component specific to Medicaid which are addressed in the Rate Determination section of this appendix.

Medicaid requires nursing facilities to report the loans and borrowings balance in the annual cost report. The cost report instructions identify the schedules that must be used to report borrowing principle balances. The nursing facility must report the beginning balance and monthly end balance of outstanding allowable loans and borrowings for the time period corresponding to the cost report year. The loans and borrowings in the borrowing balance report must only include the outstanding loans or other liability obligations for which the nursing facility is claiming interest expense related to that borrowing principle. If the nursing facility is filing a cost report claim for interest expense as an allowable cost, the nursing facility must document the corresponding borrowing obligation related to the interest expense. The outstanding borrowing balance is defined as the allowable borrowing principle amount on which the interest rate, normally expressed as an "interest rate percentage", is applied for the purpose of calculating the interest expense applicable to the specific cost report time period.

Loans from related parties or unallowable borrowings must be excluded from the cost report borrowing balance schedule. The interest incurred on excluded borrowings must be removed from incurred interest costs in a like manner. Interest income or investment income which is required to be offset to interest expense in the cost report period must not be considered a reduction in the outstanding borrowing balance principle.

Mortgage principle balances or similar finance arrangements for the purpose of nursing facility or business acquisition must be separately identified from other loan balances in the cost report borrowing balance schedule. Examples of other loan balances include working capital and miscellaneous asset acquisition purpose loans. In the event of refinancing and co-mingling of separate loan balances into a single finance arrangement, the nursing facility must identify the appropriate portions of the combined financed amount used for different purposes, and maintain the separation for cost reporting. Likewise, multiple loans for the same purpose must be combined for the appropriate category for cost reporting.
Borrowing principle obligations incurred by a home office must be reported on the individual nursing facility cost report borrowing balance worksheet only for loans directly associated with financing the individual nursing facility asset purchases or facility acquisition costs. The interest expense applicable to such loans must also be identified, directly charged to the individual nursing facility, and reported as interest expense for the nursing facility. Working capital and other loans incurred directly under the home office operation and not related to nursing facility acquisition are considered general administrative costs and are included, to the extent determined necessary and reasonable, in the home office cost allocation to the individual nursing facilities and other business operations of the corporate chain.

Allowable outstanding loan balances of landlord entities that are leasing nursing home facility assets to a provider must be disclosed and reported in the provider's annual cost report. Borrowings balance cost reporting and allowable cost policies are applicable to the reporting of the underlying cost of the landlord entity in the same manner had the borrowings been recorded on the financial records of the provider.

9.6 COST FINDING

Cost finding is the process of recasting the data from the accounts kept by a provider to determine the cost of services rendered, allocating direct costs, and prorating indirect costs in accordance with Medicare Principles of Reimbursement, except where modified by Medicaid policy. Medicaid determines reimbursement rates for nursing facility providers based on specific categories of cost, as addressed in other sections of this appendix.

9.6.A. COST ALLOCATION BASIS

The Medicaid cost reporting process establishes the cost finding process. Indirect and non-revenue producing cost centers are allocated using a statistical basis that reflects an equitable measurement of the services provided to, or benefits derived by, a revenue producing or non-reimbursable activity. The nursing facility must develop and maintain adequate statistical data to corroborate the basis of the cost allocation. Adequacy requires that the data be accurate and include sufficient detail to accomplish the purpose for which it is intended. When completing the allocation of the general service cost centers, the nursing facility provider should first allocate those cost centers that render the most services to, and receive the least services from, other cost centers.

9.6.A.1. FACILITY SQUARE FOOTAGE AND SPACE REPORTING

A facility space cost allocation is based on square footage identified with specific service areas or activities occupying and using that space. Square footage is an allocation base that may be applicable for multiple indirect cost center activities. However, for cost centers where the basis is the same (e.g., square feet), the total statistical basis over which the costs are to be allocated will differ because of the prior elimination of cost centers that have been allocated.

A consistent and uniform process must be used by the nursing facility for compiling and charging the square footage to each service activity that is primarily benefiting from or using that space. Facility space that is used for multiple activities must be documented and connected to each applicable activity based upon current data that reflects actual use and is available for audit verification. Hallway space located within a specific department or service area is considered usable space for that department. Areas of the
facility for general use, such as connecting hallways, reception areas, lobby, and elevator, used or benefiting all service activities are considered common space. Identifying and counting common space must be consistent for all service areas of the facility.

For example, common space in one service department cannot be excluded from space allocated to that service activity, while similar common space located in other services departments is included in the space allocation of other services activities. The allocation basis must apply either the gross method, where all common area is included and charged to the specific services activity, or the net method, where common space located within the identified service area is not charged to the service activity. The nursing facility's handling of common space area in the cost report allocation must result in equitable distribution of costs associated with the common space to appropriate activities. A change in the process or methodology that the nursing facility uses for allocating space is a change in allocation basis, so appropriate notice and a request must be made to the SMA.

9.6.A.2. Ancillary/Therapy Services Space Reporting

Facility space used for ancillary services delivery must be identified and charged to the appropriate ancillary services cost center. For example, space used for skilled rehabilitation services provided based on a physician’s order must be allocated to the appropriate ancillary cost center.

Accounting procedures must be established and implemented to reflect individual cost centers for reimbursable therapy and pathology services. Irrespective of the therapist or pathologist’s status as an employee, contractor or independent provider, the nursing facility must record all charges as income and all expenditures for supportive personnel, equipment and its maintenance, supplies and other costs directly attributable to reimbursable expenses in these cost centers.

9.6.A.3. Ancillary/Therapy Services Administrative Overhead

Medicaid requires that administrative overhead associated with ancillary services be allocated to the ancillary services cost center. The required basis for distribution of administrative costs to the benefiting activities of the nursing facility is accumulated costs. The accumulated costs base generally includes all service activities of the nursing facility.

In specific situations, the nursing facility may request exclusion of certain ancillary service groups from the administrative cost overhead allocation in the Medicaid cost report. The determination applies only to those service items where the billing to the third party only allows for the recovery of the direct cost of the service. The provider must demonstrate considerable inequity of the overhead cost allocation to these service activities that have been identified as excluded groups under the Medicare regulations and that it is not incurring additional costs beyond the activity for arranging for the services. The incidental costs for inclusion of the ancillary service bill preparation must be as follows:
The facility representatives arrange for the services to be performed by an agency or entity that is not part of the nursing facility operation.

The nursing facility is not directly involved in providing the ancillary service.

The nursing facility does not incur any costs for supplies and equipment necessary to perform the service.

The ancillary service is being recorded through the accounting records and billing system of the nursing facility for the consolidated billing of the services provided to the nursing facility resident.

The nursing facility does not have physical space dedicated for the purpose of delivery or rendering of the ancillary service. Dedicated space is considered space that is used predominantly for the purpose of the ancillary service delivery.

The nursing facility is not charging a mark-up related to the billing of the service.

If the nursing facility is allowed to bill for, or recover revenue in excess of, the direct cost of the services, the statistical and fiscal worksheet of the cost report may be adjusted to reflect the revenue received. The amount of revenue exceeding the direct cost will be considered the overhead amount that must be reflected as an adjustment to the "miscellaneous expense" in the Administrative and General cost center, in addition to the direct cost adjustment to exclude the ancillary service cost from the cost allocation step-down. The nursing facility must demonstrate that the excess revenue is a fair representation of the overhead cost or activity associated with providing the service. If this requirement is not met, the ancillary services activity must be included in the administrative cost allocation basis for the apportionment of overhead to the activity.

9.6.A.4. ANCILLARY GROUP EXCLUSION

A provider may request an ancillary group exclusion. The exclusion request must be approved by RARSS. The request must include the parameters under which the exception is requested. If the request is approved by RARSS and it is later determined non-applicable, the exclusion is void for that entire cost report period.

9.6.A.5. CHANGE OF OWNERSHIP – EXCLUSION REQUEST

If a CHOW occurs, the prior owner’s ancillary group exclusion is no longer applicable. The new owner may submit an ancillary group exclusion request to RARSS for approval. The exclusion process is outlined in the Ancillary Group Exclusion subsection of this appendix.

9.6.B. CHANGE IN COST ALLOCATION BASIS

A provider who wishes to change the allocation basis for a particular cost center, or the order in which the cost centers are allocated, must submit a written request to the RARSS. (Refer to the Directory Appendix for contact information.) The request must include reasonable justification and supporting documentation that the new basis is more accurate and appropriate for allocation of the cost activity for Medicaid reimbursement determination. The request must be made prior to the beginning of the cost-reporting period in which the change is to apply. The effective date of the change will be the
beginning of the cost-reporting period for which the request has been made. Failure to submit a timely written request will result in an audit adjustment. The nursing facility provider must maintain both prior and proposed statistics base data until the change is approved.

Medicaid may reject a submitted cost report if a request to change the allocation basis has not been submitted and approved by RARSS. If the previous allocation basis methodology has not been maintained for the current year, Medicaid may accept previous year's statistics for the current year cost reporting.

9.6.C. RELATED OR CHAIN ORGANIZATION COST ALLOCATION

The Medicare Principles of Reimbursement define a related organization as an organization linked to a nursing facility provider by common ownership or control, including a chain organization. Medicaid extends an option for cost allocation for related or chain organizations. An immediate family relationship establishes an irrefutable presumption of relatedness.

For Medicaid purposes, a chain organization consists of a group of two or more nursing facilities, or at least one nursing facility and any other business or entity owned or operated and controlled by one organization. To the extent that the home office furnishes services related to patient care to the nursing facility, the reasonable costs of the services are included in the nursing facility's cost report. Medicaid policy for related organization costs is determined in accordance with provisions in the federal Provider Reimbursement Manual for related organization costs. Exceptions to the application of federal provisions are addressed in the Cost Classifications and Cost Finding and the Allowable and Non-Allowable Costs sections of this appendix.

Home office costs apportioned to individual nursing facilities through the Home Office Cost Statement are classified as support costs. Cost report requirements for home office are addressed in the Cost Reporting section of this appendix.

Costs incurred by a nursing facility for services furnished by the related organization are allowable costs to the nursing facility at the level of cost to the related organization for the service provision. The cost allocated to the nursing facility cannot exceed the price of comparable services, facilities, or supplies that could be purchased in competitive market conditions. The principles of reimbursement applied for the determination of allowable cost to the nursing facility are also applicable in the determination of the allowable cost of the related organization. If a cost would be unallowable to the nursing facility, it would be unallowable to the related organization.

The operating costs of a related ownership organization are allocated to an individual nursing facility as a "purchased service" and must be identified within the appropriate cost center for Medicaid cost reporting. The type of service determines if the costs qualify to be apportioned between base and support cost using the industry-wide base and support cost percentages. If the service does not qualify to be apportioned by this method, the allocated costs are classified as support costs in the individual nursing facility. Refer to the Cost Classifications and Cost Finding section of this appendix for additional information.
If the home office accounting period differs from the cost reporting period of the nursing facility, the allowable home office costs in the facility cost report must only include the costs allocated to the facility for the time period in which the completed home office cost statement coincides with the facility's cost report period. There may be a portion of the year where home office costs have not yet been determined or finalized. The facility must submit to RARSS a disclosure letter with its cost report data stating that the cost report includes partial year home office costs. After the home office reporting period is completed, the nursing facility must amend its cost report submitted to RARSS to include complete home office cost data. The cost report filed originally will be used for program reimbursement actions until an amended cost report is filed. An accepted, amended cost report will be used for reimbursement determination actions for the same time period as the initial cost report. The nursing facility amended cost report must be submitted to RARSS within three months after the end of the home office or related party cost report year. Amended cost reports submitted after the three-month filing requirement will be effective only on a prospective basis for the routine nursing care per diem rate determination. The Medicaid audit of the home office cost statement and related allocation to the nursing facility will be made in accordance with the final cost report filing data.

**Example:** The home office has an accounting year ending August 31; Nursing Facility A has a cost report year ending December 31; Nursing Facility B has a cost report year ending March 31.

</tbody>
</table>

Individual nursing facility cost reports for 12/31/2006 and 3/31/2007 must be amended following completion of the home office cost reporting year 8/31/2007 to include the portion of that year costs in the nursing facility cost report.

**Option**

For cost reports where the home office and the individual nursing facility’s fiscal year ends are different, a provider may elect to forego the inclusion of an allocation of the current year’s home office costs in the current year’s individual provider cost report. A written request must be submitted annually to RARSS, with the individual provider’s cost report signed by the appropriate corporate official acknowledging that the cost report is being submitted with the prior fiscal year’s home office costs. The written request must also indicate that the corporation is waiving the right to inclusion of any allocation of the current year’s home office costs in the current year’s individual provider cost report.

For example, a home office fiscal year end (FYE) is 12/31 and the individual facility’s FYEs are 05/31, 08/31, 09/30 and 12/31. For individual facility cost reporting for fiscal year 2005 ending in May, August, September and October, the individual facility may elect to report only the home office costs from the FYE 12/31/2004 home office cost report. The home office allocation of costs from FYE 12/31/2004 to the individual facility would be reported and audited. During the audit of the individual facility cost report, adjustments to allocate actual FYE 12/31/2005 home office costs would not be made.
For individual facilities with FYE 12/31/2005, the home office costs from FYE 12/31/2005 cost report would be reported.

9.7 DISTINCT PART UNIT REPORTING

For reimbursement purposes, the Nursing Facility is defined as the unit that is certified for participation in the Medicaid program, whether that unit comprises all of, or a distinct part of, a larger institution.

Certification regulations require that a distinct part be physically distinguishable from the larger institution and fiscally separate for cost reporting purposes. The provider must demonstrate to Medicaid that the system used for recording the hours of nursing services can be audited and equitably allocates the nursing services costs between the distinct part and other parts of the facility. The nursing services costs are only the gross salaries and wages of nursing and related personnel, such as RNs, LPNs, and CNAs. Costs applicable to general services areas of the institution must be allocated in accordance with the Cost Finding section of this appendix.

Nursing services costs allocated to that distinct part of the facility must relate only to services provided to those residents. While a provider may choose the record keeping method used to allocate these costs, the system must be capable of accurately reflecting the hours of nursing service applicable to the distinct part and other parts of the institution. Various systems may be employed to record and accumulate the hours of nursing services such as actual time spent taken from payroll records, assignment schedules, sign-in sheets, etc. Providers wishing to use any other method that does not identify actual time must obtain written approval from the RARSS prior to changing its cost allocation method. The request must identify the reason for the change and must demonstrate that the proposed method is representative of actual nursing staffing within the facility and results in an equitable and accurate allocation of nursing services costs.

A nursing services cost allocation alternative may be applied only with the prior written permission from RARSS.

An institution may have more than one Medicaid distinct unit in specific cases where Medicaid has certified beds as special use for specialized nursing care. The specialized nursing care beds must be physically distinguishable, within a designated area, and identified as a separate nursing bed class for Medicaid reimbursement. Requirements for reporting nursing services costs also apply to nursing services for residents in specialized nursing care beds. The nursing facility must have prior approval from Medicaid for participation in a program for specialized nursing care.

9.8 DAY CARE SERVICES PROVIDED IN THE NURSING FACILITY

According to federal regulations, day care services provided to an employee's dependent are not a fringe benefit when furnished for the convenience of the provider. Medicaid considers day care services provided to an employee's dependent a convenience to the provider due to potential support of staff recruitment and retention.

9.8.A. EMPLOYEE DEPENDENTS

According to federal regulations, a nursing facility operating a day care center for the children of its employees and for employees of a related facility is classified as such an activity and must not be included in facility costs as an employee fringe benefit. The
costs are allowable to the extent that the amount is reasonable. "Reasonableness" means that the services are provided in accordance with regulations established for the provision of such services and must take into account both direct and indirect costs of the services. The provision of services must also be considered reasonable in that the costs of operating a facility demonstrate sufficient benefits. For example, the number of children participating justifies the provision of services.

Total cost must not exceed what a prudent and cost conscious buyer pays for like services. If costs are determined to exceed such level and the nursing facility cannot provide clear evidence that the higher costs were unavoidable, the excess costs are not allowable. The day care center operations must be provided in accordance with, and satisfy applicable regulatory requirements governing the operations of, such activities. The nursing facility must maintain accounting records and documentation to demonstrate the total cost and utilization of day care services.

The following costs are non-allowable:

- diapers
- toiletries
- lotions
- oils
- similarly used hygiene products

9.8.B. SERVICES PROVIDED TO NON-EMPLOYEE DEPENDENTS

If a provider renders services to non-employee dependents, the day care center must be established as a separate entity even if services are also provided to employee dependents. Medicaid will allow costs relative to intergenerational activities as an offset when the day care center suffers a financial loss, which is limited to the lesser of total documented intergenerational activities or the amount of the loss. Intergenerational activities must be documented, organized activities between the children attending the day care and the nursing facility residents.

The nursing facility must maintain accounting records and documentation to demonstrate the total cost and utilization of day care services.

9.9 NURSE AIDE TRAINING AND COMPETENCY EVALUATION PROGRAM (NATCEP) AND COMPETENCY EVALUATION PROGRAM (CEP)

The Omnibus Budget Reconciliation Act (OBRA) of 1987 and 1990 requires that any nurse aide employed in a nursing facility complete a competency evaluation program. Medicaid will reimburse a Medicaid certified nursing facility for the Medicaid share of allowable costs directly related to meeting the nurse aide training and competency evaluation requirements. Reimbursement includes only costs incurred with a NATCEP or CEP approved by the SSA. Medicaid reimbursement applies only to Certified Nurse Aides (CNA) working in a Medicaid certified nursing facility and are not available to CNAs in other residential or patient care settings.

A nurse aide who is employed by a nursing facility or who has received an offer of employment from a nursing facility on the date on which the nurse aide begins a NATCEP may not be charged for any portion of the cost of the program. The nursing facility must reimburse newly employed CNAs who have
personally paid for NATCEP or CEP costs prior to employment in the facility, in accordance with criteria identified in the Nurse Aide Reimbursement section of this appendix. Medicaid in turn reimburses the nursing facility.

Providers may obtain reimbursement from Medicaid for CNA costs. The reimbursement process and necessary forms are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

9.9.A. NURSE AIDE COMPETENCY EVALUATION PROGRAM AND NURSE AIDE REGISTRY

Nurse aide candidates must pass both a clinical skills test and a knowledge test in order to become certified. Fees for the individual nurse aide to take the tests, and retake each test up to three times, are allowable costs for nursing facility reimbursement. Refer to the Nursing Facility Reimbursement and Nurse Aide Reimbursement subsections of this appendix.

When a nurse aide has successfully passed the CEP, their name is placed on the Michigan Nurse Aide Registry. Fees relating to initial registration and biennial registry renewal are allowable costs for nursing facility reimbursement. For currently employed nurse aides, the nursing facility is responsible for the direct payment of biennial registry renewal fees. Refer to the Nursing Facility Reimbursement and Nurse Aide Reimbursement subsections of this appendix.

Information about training requirements, competency evaluation program and registry data is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

9.9.B. NURSING FACILITY REIMBURSEMENT

Reimbursement to the nursing facility for NATCEP related costs is calculated as an add-on to the routine per diem rate. The Nurse Aide Training and Testing Program Interim Reimbursement Request (MSA-1324) and instructions are available on the MDHHS website. The total NATCEP add-on amount will be adjusted through the annual cost report settlement process. The Medicaid share of the costs is computed based on the ratio of Medicaid resident days to total resident days for all nursing care provided in the facility during the cost report period. Refer to the Cost Report Reimbursement Settlement section and the Rate Determination section of this appendix for additional information.

The NATCEP cost center on the Medicaid cost report must be used to report the following:

- Costs of conducting a nursing facility based NATCEP.
- Costs of having employees participate in an approved NATCEP outside the nursing facility.
- Costs of employee competency testing by a regional testing facility.

The costs and staffing levels relating to and charged to the NATCEP cost center must not be included in the nursing facility determination of routine nursing care costs.
The determination of allowable NATCEP costs is made in accordance with provisions in the federal Principles of Reimbursement established for the Medicare Program, and cost limitations in Medicaid policy. Training and evaluation program costs claimed for services and supplies furnished to or purchased by the facility from related organizations must adhere to related party allowable cost principles. The cost of such transactions must not exceed the cost of like items or services in an arms-length transaction with a non-related organization, or the actual cost to the related organization, whichever is lower.

The following are not NATCEP costs and must be classified as routine nursing care costs on the cost report:

- Administrative overhead in a facility-based training program.
- Space costs in a facility-based training program.
- Uniform allowance costs.
- Required in-service training.

NATCEP and CEP allowable cost must only include the costs of activities or items that are directly related to providing approved training and the competency evaluation process. The following table contains eligible training and evaluation activities.

| Training Staff | Salaries and wages, employee benefits and payroll taxes for conducting training and evaluation activities, including supervised practical training, and direct time devoted to development and preparation for conducting the NATCEP. Payroll costs allowed for NATCEP do not include the cost of time that the training staff devote to routine in-service training activities, general nursing administration or direct patient care, except for supervised practical training. These costs must be classified as routine nursing care cost for consideration in the routine per diem rate. |
| Training Consultants | Costs incurred for non-facility staff to assist in developing and conducting the facility's NATCEP. |
| Student Staff | Salaries and wages, employee benefits and payroll taxes incurred for the time the student is enrolled in the approved training program, i.e., classroom and required supervised practical training. A reasonable time allowance for student employees traveling to and from the off-site training location or competency evaluation, in accordance with a nursing facility's established and documented travel policy, is allowable as NATCEP cost. Payroll costs allowed for NATCEP do not include the cost of staff time for patient care activities that the nurse aide is performing during the time period the student is completing the training program. These costs must be classified as routine nursing care cost for consideration in the routine per diem rate. |
| Training Program Supplies | Costs of supplies and materials used in conducting an approved NATCEP. |
## Medicaid Provider Manual

### Michigan Department of Health and Human Services

#### Training Program Transportation
- Travel or transportation costs incurred by facility staff in conducting the NATCEP activity, and for transportation or travel reimbursement to student staff for off-site NATCEP or CEP attendance. Refer to the Facility Vehicle and Transportation, Allowable and Non-Allowable Cost section of this appendix for mileage allowance provisions.
- Use of a facility owned vehicle for staff transportation for training is not charged to NATCEP. Facility vehicle operation cost must be classified as administrative overhead and is considered in the routine per diem rate.

### Outside Contracted NATCEP Paid Directly by the Facility
- Cost to obtain approved nurse aide training of facility employees by an outside entity approved NATCEP. The nursing facility is responsible to ensure that the contractor is an approved NATCEP.

### Outside Contracted NATCEP Costs Reimbursed to Employee
- Cost for reimbursement to an employed CNA who had personally paid for an approved NATCEP participation and completion prior to being employed in the facility. Refer to the Nurse Aide Reimbursement subsection of this appendix for additional information.

### Competency Evaluation Fees Paid Directly by the Facility
- Fees paid by the nursing facility to a State-approved competency evaluator. This includes testing and retesting fees, rescheduling fees, and nurse aide registry.

### Competency Evaluation Fees Reimbursed to Employee
- Cost for reimbursement to an employed CNA who had personally paid for State-approved competency evaluation and registration fee prior to being employed in the facility. Refer to the Nurse Aide Reimbursement subsection of this appendix for additional information.

### Miscellaneous Costs
- Allowable costs that are not specifically identified in another category include, but are not limited to, the following items:
  - Rental costs for space located out of the facility are allowable only if the space is used solely for the training and competency evaluation program. Space costs not meeting this requirement are reimbursable with the Plant Cost Component of the routine per diem.
  - Reasonable rental expense for training equipment necessary for conducting an approved training program.
  - Nurse aide biennial Registry Document renewal fees for current employees.

### Equipment Purchased
- Equipment purchased and used specifically for the nursing facility based NATCEP are reported as NATCEP cost center costs for Medicaid cost reporting and reimbursement purposes. NATCEP equipment costing less than $5,000 may be expensed in the year of acquisition and reported in the NATCEP cost center. Equipment acquired as part of an integrated system costing greater than $5,000 must be amortized at an annual rate of 15% for each cost reporting year the equipment is used in the NATCEP, up to a maximum of seven years. Instructions for NATCEP equipment reporting are included in the annual cost reporting instructions.

### 9.9.C. Nurse Aide Reimbursement

A nursing facility must reimburse a newly hired CNA if the CNA paid for nurse aide training, competency evaluation and registry, and completed the approved training program within 12 months prior to employment in that facility. The nursing facility is not required to reimburse the CNA in cases where the expenses were paid by an employment or education training program, or were reimbursed by the CNA's previous employer. The
nurse aide should not be reimbursed for more than 100 percent of the NATCEP or CEP costs they paid.

The nursing facility is responsible to ensure that a newly hired CNA who requests reimbursement of training and testing expenses has not already received payment for these costs. An aide who paid for any of these eligible costs and received payment of a portion of the expenses from prior facility employment is eligible for only the remaining balance from the new employer.

The CNA must request reimbursement by submitting to the nursing facility the Nurse Aide Training and Competency Evaluation Program, Certified Nurse Aide Training Reimbursement form (MSA-1326), available in the Forms Appendix and on the MDHHS website. The reimbursement should be requested within the first six months of employment or work as a certified CNA.

NATCEP costs that are eligible for reimbursement to the individual nurse aide include:

- Training program cost including fees for textbooks and required course material up to a maximum of $650. Medicaid will update the maximum allowable reimbursement limit effective October 1, 2006 and biennial thereafter, based on the Global Insight's Skilled Nursing Facility Market Basket Without Capital Index corresponding to that update period. The training program maximum reimbursement amount will be updated biennially on the RARSS website.

- Competency Evaluation Program testing fees, including retesting fees; CEP testing required due to the nurse aide registry document expiration; and rescheduling fees.

- Registry or Registry Renewal Document fees that the CNA personally paid within 24 months prior to being employed in the nursing facility.

For cost reporting and audit purposes, the nursing facility must maintain a copy of the MSA-1326 signed by the employee and documentation reflecting reimbursement to the employee. This documentation must include a copy of a receipt for cash payment, a copy of a cancelled check, or a credit card receipt showing the amount paid by the nurse aide and the date of payment, as well as copies of the nursing facility's cancelled checks disclosing reimbursement to the employee.

The nursing facility has the option to reimburse the individual via a one-time payment or payment installments. The reimbursement to the individual, regardless of full-time or part-time employee status, must be fully paid within six months of the individual's date of employment, or must be prorated based on their dates of employment in the facility if employed for less than six months. If the nursing facility fails to reimburse a CNA employed in the facility within this timeframe, the unpaid balance will not be an allowable NATCEP or routine nursing care cost. This determination does not relieve the nursing facility of its obligation to reimburse the nurse aide. Wages may not be reduced to offset the facility's obligation to pay the nurse aide for training, competency evaluation, and registry costs.

The nursing facility is not obligated to pay the remaining balance of nurse aide training costs at the time an employee who has worked less than six months leaves facility employment. The CNA has the opportunity to recoup the non-reimbursed costs through
subsequent employment at other nursing facilities. The facility should properly record payments so that the unpaid amount is not carried as a payment obligation.

9.9.D. NURSING FACILITY LOCKOUT AND LOSS OF NATCEP APPROVAL

A provider with a facility-based training CNA program is not eligible for Medicaid reimbursement of training costs when it has been issued a final notice from CMS or the SSA of the withdrawal of NATCEP approval, or of a NAT prohibition (lockout). For Medicaid reimbursement purposes, the lockout effective time period coincides with the SSA time period notice to the nursing facility. The nursing facility must not claim Medicaid reimbursement for costs associated with any facility-based training class beginning after the withdrawal or lockout effective date identified in the final notice. Nurse aide students beginning training prior to the withdrawal effective date are allowed to complete training, and the related costs to complete that training class are eligible for NATCEP reimbursement. Nurse aide training costs incurred for that facility based program subsequent to completion of that student class are not allowable NATCEP costs. This disallowed cost is also not allowable under routine nursing care cost.

Although the nursing facility experiencing approval withdrawal or lockout status cannot conduct its own training, the nursing facility must provide and reimburse for training and competency evaluation of its new nurse aide employees at approved sites. Such costs are eligible for Medicaid cost reporting and reimbursement in the annual cost report under the appropriate NATCEP cost categories. Nurse aide reimbursement for eligible training and competency evaluation personally paid expenses are allowable to be reported as NATCEP cost in the nursing facility annual cost report.

In the event that the nursing facility has been granted a waiver for a NAT program prohibition or lockout by the SSA, the nursing facility must comply with the provisions of the nursing facility waiver request and the requirements set forth by the SSA in the waiver approval. The facility-based NATCEP operating under a waiver is subject to audit by Medicaid for compliance with these requirements. If the nursing facility fails to conduct the program in accordance with these requirements, the training program expenses are not allowable costs for NATCEP or routine nursing cost reimbursement by Medicaid.

9.10 BEAUTY AND BARBER SERVICE COST CENTER

Personal services for residents, such as simple barber and beautician services (e.g., shaves, haircuts, shampoos, and simple hair sets), that residents need are considered routine patient care. The provision of such services is reimbursed in the routine per diem rate when provided routinely without charge to the resident in the nursing facility.

If the nursing facility designates an area for providing non-routine personal hygiene services, such as professional manicures, or hair styling, costs must be separately reported and accounted for in the cost report. Direct and overhead costs related to these services must be separately accounted for in this special services cost center and should not be included in the cost of providing routine nursing care.
9.11 SPECIAL DIETARY COST CENTER

Medicaid provides for reimbursement outside the per diem rate to non-profit nursing facilities for the cost of meeting residents’ special dietary needs for religious reasons. Nursing facilities requesting reimbursement must report these costs as a separate cost center in the Medicaid annual cost report. Direct costs may include food purchase, salary and wages for the extra staff time for preparation, supplies and kitchen utensils necessary for preparation and service. The costs applicable to plant operations costs related to the special dietary needs will be determined through the Medicaid cost finding process.

9.12 HOSPITAL LEAVE DAYS

A separate accounting of costs incurred due to hospital leave days is not necessary.

9.13 NON-AVAILABLE BEDS

In special circumstances, nursing facility beds may be designated “non-available for occupancy” for Medicaid cost reporting when the patient care rooms in which the beds are located are not used for resident care. Beds with a “non-available” designation remain licensed or certified; the designation is for Medicaid cost reporting and reimbursement determinations only. An approved non-available bed plan reduces the total number of beds used for calculating available bed days for the annual cost report period coinciding with the time period of the non-available bed plan. Non-available beds must be located in a discrete area and readily identified for statistical cost reporting. During the time period the area is designated non-available for patient care, Medicaid does not reimburse for variable and plant costs attributed to the area designated as having non-available beds.

9.13.A. QUALIFYING CRITERIA

A non-available bed plan must include all of the licensed beds in a patient care room. The rooms must be a discrete area and primarily consist of a contiguous physical arrangement of rooms. Rooms may not be a random collection of individual rooms or beds located throughout the nursing facility.

Common physical space located adjacent to or within the designated rooms area will normally be included in the designated non-available bed area. Planned use of any common areas within the designated non-available bed area must be disclosed in the written notice to the RARSS.

Rooms with non-available beds may not be used for resident care service regardless of payer source nor can the space be used for any other normally reimbursable purpose.

Resident rooms that are not used for resident care do not qualify for non-available bed designation. Although the rooms may be used for alternative services, the beds located within the room area must continue to be counted as available for resident care. Physical plant area used for alternative use must appropriately be charged to the applicable alternative services cost center if the services activity results in ancillary care services or other revenue services.
The written request must be submitted within 30 calendar days of the date that the provider removes the beds from service.

9.13.B. WRITTEN NOTICE AND REQUEST FOR PLAN APPROVAL

The provider must submit a written request for a non-available bed plan to RARSS. The RARSS must receive the request within 30 calendar days of the date that the beds are to be removed from resident care service. Non-available bed plan requests will not be approved on a retroactive basis. (Refer to the Directory Appendix for contact information.)

The written notice from the provider to RARSS must:

- Indicate the date that the beds will be removed from resident care service and the expected duration of the non-available plan.
- Indicate the reason for the request.
- Include a floor plan of the facility that marks the beds to be designated as non-available.

The RARSS will review the request and provide a written response of approval, denial or a request for additional information. If approved, the RARSS will notify the SSA of the non-available bed designated rooms and effective time period.

9.13.C. LIFE OF AN APPROVED PLAN

Beds must remain non-available for not less than the balance of the provider's fiscal cost reporting year in which the beds are deemed non-available plus the entire following fiscal year. An exception is when the non-available bed plan is effective on the first day of the provider's fiscal year. The cost report year may qualify as the entire time period of the non-available bed plan if the cost report period is not less than twelve months.

Non-available bed designations will be effective on the first day of the month. If the notice is not received within the required 30 calendar day period, the plan will become effective on the first of the month in which RARSS received the notice if the beds have not been utilized during that month.

The initial period of the non-available bed plan expires upon completion of the minimum required time period.

The nursing facility may request up to two extensions of 12 months each following this minimum time period. The agreement may be extended on the basis of the provider's fiscal year. A request for extension must be submitted in writing to the RARSS 30 calendar days prior to expiration of the initial plan. The request for a second extension must be submitted to RARSS 30 calendar days prior to expiration of the first extension. The requests must include at least one of the following items:

- The same rooms and bed area.
- A revision to bring some, but not all, of the beds back into service (if applicable).
A revision to increase the number of non-available beds that includes all of the beds already designated as non-available.

A change in the room and bed designation area that is equal to the number of beds designated as non-available in the initial plan.

Requests for a revision to bring some, but not all, beds back into service must include:

- The same rooms and the same bed area.
- If applicable, the change in room and bed designation area that is equal to the number of beds designated as non-available in the initial plan.

The extensions must meet the elements of the qualifying criteria, notice requirements and related policy for initial non-available bed requests.

Non-available bed plans expiring on or after April 1, 2005 are limited to two 12-month extensions. When a provider’s initial or extended non-available bed plan ends, the nursing facility must return the beds to service or decertify the beds from Medicaid participation. Medicaid will not approve a non-available bed plan that substitutes beds elsewhere in the facility for the formerly non-available beds.

The nursing facility will not be eligible to submit a new non-available bed plan for 24 months following the expiration of the previously approved plan.

A provider may only request a grace period after the final extension period if the provider can demonstrate progress to place the non-available beds into resident care service. The request for a grace period must be made to LTC Services 30 calendar days prior to the expiration of the final extension period. (Refer to the Directory Appendix for contact information.) The request for a grace period must be submitted before expiration of the final extension period, and must meet the elements of the qualifying criteria, notice requirements and related policy for initial non-available bed requests. The request must specify the date that the beds will be available for occupancy and may not exceed 12 months. An example for such action is gradual facility renovation involving periodic non-available beds in a nursing unit and replacement with non-available beds in another unit as renovation plans progress.

Nursing facilities holding a written agreement with an accredited medical school instructing students in providing geriatric care may request consideration for an exception to non-available bed plan policy. Requests must be submitted in writing to the MDHHS LTC Reimbursement and Rate Setting Section (RARSS) and should outline the provisions of the agreement, stating that the medical school staff determines admissions into the program and facility. The request must establish an area in the facility that is a distinct unit for the purpose of conducting the educational program, and the area must continue to meet all other non-available bed plan requirements. A copy of the agreement or contract between the facility and the medical school must be provided to RARSS with the exception request. If the agreement or contract undergoes change, a copy of the new terms of agreement must be submitted for approval prior to implementation.
All requests for an exception to policy will include a review of the facility’s historical and current survey performance. Criteria regarding survey history (found in the Criteria for Evaluation of Medicaid Bed Certification Requests subsection of the Nursing Facility Certification, Survey & Enforcement Appendix of this manual) are also applicable to this exception request.

The provider must meet all appropriate certification requirements for distinct part units for the remaining Medicaid beds. Additional beds may have to be decertified in order to meet the distinct nursing unit requirements. The nursing facility may request re-certification of these beds for Medicaid participation after a 24-month time period. A request to re-certify must meet all current Medicaid certification requirements.

9.13.D. CHANGE OF OWNERSHIP (CHOW)

The non-available bed plan approval expires with a change of ownership of the nursing facility. If the new owner wishes to continue the non-available bed plan, they must submit a written request to the RARSS within 90 calendar days of the CHOW. A non-available bed plan submitted after the 90-day period will be considered a new request and must satisfy the qualifying criteria and related policy requirements. If the new owner does not request continuation of the existing plan, the beds will be deemed available for occupancy effective with the date of ownership change.

The new owner may apply to extend the plan to coincide with its cost reporting period by following the extension request policy outlined in the Life of an Approved Plan subsection. The nursing facility change of ownership does not relieve the nursing facility from the restrictions for non-available bed designation limitations for plan extensions other than allow for coinciding with the cost report year of the new ownership.

9.13.E. AMENDING A PLAN

The nursing facility may amend an approved non-available beds designation by submitting a written request to the RARSS. (Refer to the Directory Appendix for contact information.) A non-available bed plan may be amended only one time during the life of the non-available bed plan. A request for an amendment must include the same information as an initial request and will be reviewed using the same criteria. A plan amendment increasing the number of non-available beds is subject to the minimum time period requirement and the designation of all the beds must be effective for the time period of not less than the balance of the provider’s current fiscal cost reporting year in which the beds are deemed non-available plus the following fiscal cost report year.

A nursing facility holding a written agreement with an accredited medical school that instructs students in providing geriatric care may be permitted to amend a non-available plan more than once in the plan’s approved period. Requests to amend a plan under these circumstances must adhere to the requirements outlined in the Life of an Approved Plan subsection of this appendix. As noted, all requests will include a review of the facility’s historical and current survey performance consistent with the Criteria for Evaluation of Medicaid Bed Certification Requests subsection of the Nursing Facility Certification, Survey & Enforcement Appendix of this manual.
9.13.F. Penalty for Use of Non-Available Beds

Admitting residents to any beds in the area designated non-available for occupancy, regardless of payer source, before the end of the plan negates the non-available bed agreement. All beds covered by a non-available bed agreement that is negated during the initial period of the plan will be considered available for patient care for the plan’s entire initial period.

All beds covered by a non-available bed agreement that is negated during a plan’s extension period will be considered available for patient care beginning with the first day of that cost reporting period of the extension.

9.13.G. Returning Beds to Service

All of the beds in the non-available bed plan will be considered returned to service and available for occupancy when the non-available bed plan expires.

In special circumstances, such as a sudden increase in demand due to closure of a nearby facility, non-available beds may be returned to service before the end of the approved plan with prior approval of the RARSS. A nursing facility with an approved non-available beds plan may submit a written request to return beds to nursing care if the individual nursing facility experiences the need for the beds due to the exception circumstances. The request must identify the reason for the need and the specific beds and room designations being made available. RARSS will provide immediate review and response to the nursing facility request.

9.13.H. Plant Cost Certification

A provider with an approved non-available beds plan has the option to submit to a Plant Cost Certification for the cost report fiscal period in which the beds are approved as non-available for occupancy or the termination of the plan. Refer to the Plant Cost Certification Section in this appendix for additional information.

9.13.I. Cost Reporting

The variable and plant costs attributed to the area designated as non-available and the related capital asset cost are not Medicaid reimbursable costs. The non-available rooms and bed numbers must be reported as a Non-Available Beds cost center on the provider’s Medicaid cost report.

Each general service cost center must be evaluated separately to determine if the non-available bed area benefits from the service. The nursing facility may charge specific costs to the Non-Available Beds cost center only when the dollar amount is identifiable. Costs that cannot be specifically identified must be apportioned to the non-available beds cost center using the Medicaid cost report allocation methodology. The statistic or measure used for the general services cost center must also be used to allocate costs to the non-available bed cost center.
Example: If square feet are used to allocate costs to the housekeeping activity, the general services cost center, then square feet must also be used to allocate costs to the non-available bed area. The allocation to the non-available bed cost center is zero when the non-available bed area receives no benefit from the general service.

Example: If a wing is designated as non-available and does not receive any housekeeping services, then the allocation to the non-available cost center is zero.

The reduction in available beds is included in the provider’s cost report effective for the fiscal period in which the non-available bed plan is approved by the RARSS. For Medicaid reimbursement determination of tenure and allowable average borrowings, the percentage of the total plant asset costs applicable to available beds must equal the percentage of the facility remaining available for resident nursing care.

9.14 COMPLEX CARE

Medicaid-approved complex care cases provide an enhanced reimbursement rate to the facility due to the cost and/or complexity of nursing care or special needs of the beneficiary. Separate cost records are not required for identifying these costs. The Program has designated the special care revenue amount equal to cost. Providers with an approved complex care case must adjust the annual Medicaid cost report by removing the dollar amount of the total difference between reimbursement at the complex care rate and the established routine Medicaid rate from the appropriate nursing care costs. The approved complex care rate is identified on the Complex Care Prior Approval-Request/Authorization for Nursing Facilities form (MSA-1576) issued to the facility for the specific beneficiary.
SECTION 10 - RATE DETERMINATION

There are six classes of nursing care facilities for which there are specific reimbursement methods. For a definition of the six classes, refer to the Definitions section in this appendix. Providers reimbursed for care using a special reimbursement calculation or method are addressed at the end of this section.

The determination of a nursing facility's class is made by the SSA. If a nursing facility changes ownership or the services it provides such that a change in class is appropriate, the facility will be reimbursed according to the respective facility class to which it has been changed. The effective date of the reimbursement change is the effective date of the SSA's determination. Nursing facility providers other than Class IV are reimbursed under a methodology that pays the lower of the customary charge to the general public or a prospective payment rate determined by Medicaid.

Payment rates described in this section refer to the provider's prospective per resident per diems and are generally set 30 calendar days in advance of the State's fiscal year, which is October 1 through September 30. (Rate determination timing is dependent on legislative approval of the MDHHS budget.)

**NOTE:** An illustration of the timeline and calculations for per diem rate setting is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

Prospective payment rates are calculated using the facility's cost report ending in the previous calendar year. If this cost report covers a time period that is less than seven months, the cost report used for rate setting is the most recent cost report available prior to the previous calendar year that covers a period of at least seven months.

The reimbursement rate determination process uses a provider's most recent fiscal period audited cost data to calculate the routine nursing care per diem rate. If audited data is not available, an interim prospective rate is calculated using the filed cost report, if the cost report was acceptable and was filed with Medicaid within five months from the end date of the cost reporting period. If an acceptable cost report was not filed within this time frame, Medicaid is not required to set the prospective payment rate in advance of the State's fiscal year. If the nursing facility did not file within the five month time period, or has amended an original cost report subsequent to the five month period, Medicaid will calculate the prospective rate for an effective date for services no later than the beginning of the fourth month (January 1) of the State fiscal year. Nursing facilities that are required to file an amended cost report in order to include home office costs that were not included in the original cost report due to the difference in cost reporting period from the home office are exempt from this provision. The amended cost report, if filed timely following the completion of the home office cost statement, will be considered filed timely if the original cost report had met the five month filing requirement. Refer to the Cost Classification and Cost Finding section of this appendix for home office cost statement and nursing facility amended cost reports.

10.1 RATE DETERMINATION PROCESS

The per diem reimbursement rate for Class I and Class III nursing facility providers is made up of three components: a plant cost component, a variable cost component, and add-ons.

- For Class I facilities, the plant cost component is made up of the Property Tax/Interest Expense/Lease Component plus the Return on Current Asset Value Component.
For Class III facilities, the Plant Cost Component is the lesser of the Facility Per Patient Day Plant Cost or the Facility Plant Cost Limit. The Facility Plant Cost Component is the depreciation, interest and lease expenses calculated on a per patient day basis.

For Class I and Class III facilities, the Variable Cost Component is made up of the facility's Variable Rate Base plus the Economic Inflationary Update.

Class II facilities, being proprietary nursing facilities for individuals with mental illness or intellectual disability, are reimbursed an all-inclusive prospective payment rate negotiated with the MDHHS State Mental Health Agency on an annual basis. Final reimbursement is a retrospective cost settlement, not to exceed a ceiling limit. The provider may be eligible for a reimbursement efficiency allowance in the final rate if total allowable costs do not exceed the prospectively established ceiling limit.

Class IV facilities, being state-owned and -operated institutions, Intermediate Care Facilities for Individuals with Intellectual Disabilities (Developmentally Disabled), and non-profit nursing facilities for individuals with intellectual disabilities, are reimbursed allowable costs determined in accordance with Medicare Principles of Reimbursement and are retrospectively cost settled.

Per diem rates for Class V facilities, Ventilator Dependent Care Units, are set prospectively. Services included in the per diem rate are outlined by contract with Medicaid.

Payment rates for Class VI Hospital Swing Beds are set prospectively as a flat per resident day rate determined by Medicaid.

10.2 RETROACTIVE RATE CHANGES

A retroactive change may be made for facilities that have interim prospective rates based on filed cost reports. A retroactive change may be made for:

- audit adjustments to a filed cost report that was used for setting an interim rate.
- facilities that were approved for Plant Cost Certification due to capital cost changes, an approved non-available bed plan, or a plant rate affected by a DEFRA rate limitation for the cost report time period.
- audit adjustments that are required as a result of an appeal.
- audit adjustments that are required as a result of fraud or facility failure to disclose required financial information.
- Class I nursing facilities approved for Rate Relief for the rate year period.

The Plant Cost Component of a rate for the nursing facility that experiences a change of ownership will be retroactively adjusted under the Plant Cost Certification process. The DEFRA Reimbursement Limit application will continue to apply to each rate year until a fiscal year retrospective rate change results in zero DEFRA limit. The nursing facility Plant Cost Component will be calculated on a prospective basis for the year following the zero DEFRA limit rate year.
10.3 PLANT COST COMPONENT CLASS I NURSING FACILITIES

The prospectively established Plant Cost Component for each Class I nursing facility provider is the sum of the facility Net Property Tax/Interest Expense/Lease Component and Return on Current Asset Value Component. The Plant Cost Component is expressed as a per patient day amount.

10.3.A. Net Property Tax/Interest Expense/Lease Component Per Patient Day

The Net Property Tax/Interest Expense/Lease Component per patient day is calculated under the following formula:

\[
\text{Net Property Tax/Interest Expense/Lease Plant Cost} = \frac{\text{Property Tax/Interest Expense/Lease Plant Cost} - \text{CAV Excess Borrowings Limit} + \text{DEFRA Reimbursement Limit (not to exceed zero)}}{\text{Nursing Facility Resident Days}}
\]

10.3.A.1. Property Tax/Interest Expense/Lease Plant Costs

These plant costs consist of allowable costs for real estate and personal property taxes, interest expense, and lease expense defined under the Allowable and Non-Allowable Cost section and the Cost Classification section of this appendix. The aggregate dollar amount for these plant costs is obtained from the nursing facility cost report. The time period of the cost report will correspond with the cost basis period identified for the respective State rate year.

10.3.A.2. CAV Excess Borrowings Limit

The CAV excess borrowings limit is unreimbursable interest due to excess borrowings. An example of the calculation is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

The dollar amount of allowable interest expense included in the reimbursable plant cost will be reduced if the nursing facility loan balance applicable to the nursing care unit exceeds the facility reimbursement limit. The nursing facility's average allowable borrowing balance cannot exceed the lesser of the "Nursing Facility Current Asset Value" or the "Nursing Facility Capital Asset Value Limit." If the nursing facility borrowing balance exceeds the limit, a reduction is made to the allowable plant cost for the portion of the excess borrowing. The amount of the reduction is based on the ratio of the limit amount to the average borrowings balance times the dollar amount of allowable interest expense. The following formula is applied to calculate the reduction:
A nursing facility that has undergone a change of ownership and is incurring interest costs relating to the acquisition financing will be subject to a DEFRA Reimbursement Limit disallowance. The DEFRA Reimbursement Limit calculation will determine if the nursing facility acquisition and financing costs exceeds Medicaid allowable reimbursement increase limit. Reductions to the facility total borrowing balance are made to avoid including the borrowings balance in the reimbursable interest, and to avoid including the total allowable interest expense amount in both the DEFRA limit and the CAV excess borrowing limit.

If the nursing facility has a DEFRA Reimbursement Limit due to the nursing facility acquisition, the nursing facility's total average borrowing balance used in the calculation for CAV excess borrowings limit will be reduced by a calculated dollar amount of borrowings corresponding with the DEFRA Reimbursement Limit. The borrowing amount corresponding with the DEFRA Reimbursement Limit is calculated under the following formula:

\[
\text{Dollar Amount of DEFRA Reimbursement Limit} \div \left( \text{Nursing Facility Total Allowable Interest Expense} \times \text{Nursing Facility Total Borrowing Balance} \right) = \text{Reduction to NF Average Borrowing Balance}
\]

**10.3.A.3. DEFRA REIMBURSEMENT LIMIT**

Increases in reimbursement for tenure and interest expense subsequent to a sale or resale (after July 18, 1984) are limited under provisions of the Deficit Reduction Act (DEFRA) of 1984 as defined in federal Medicaid law. The Medicaid application of DEFRA provisions is a limit on the dollar amount of plant cost component reimbursement increase to the provider due to the nursing facility change of ownership. An established formula calculation is used to determine the new ownership's eligible increase reimbursement for tenure and interest (DEFRA Application Limit). If the new ownership tenure and interest increase before application of the DEFRA Reimbursement Limit does not exceed the DEFRA Application Limit, the DEFRA Reimbursement Limit is not applicable. If the new ownership tenure and interest increase before application of the DEFRA Reimbursement Limit exceeds the DEFRA Application Limit allowable increase, the DEFRA Reimbursement Limit reduction will be made to the allowable plant costs.
The calculation is made as follows:

\[
\text{DEFRA Application Limit} - \text{Increase in tenure and interest for new ownership prior to DEFRA Limit} = \text{DEFRA Reimbursement Limit (not applicable if greater than zero)}
\]

DEFRA Application Limit is determined as:

\[
\text{Allowable historical capital asset cost to the asset original owner (excluding land) for assets in the NF at the time of sale} \times 3.33\% + \text{Allowable land value to the seller} + \text{Historical capital asset cost of the asset's original owner for assets in the nursing facility at the time of sale} - \text{Purchaser down payment} \times \text{Purchase Mortgage interest rate} = \text{DEFRA Application Limit}
\]

For purposes of the DEFRA Reimbursement Limit calculation, allowable acquisition cost is the cost to the original owner of the asset. An example of this calculation is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

Increase in tenure and interest for the new ownership prior to DEFRA Limit is determined as:

\[
\text{Purchaser tenure and allowable interest after acquisition} - \text{Seller tenure and allowable interest in the Medicaid rate prior to the sale} = \text{Increase in tenure and interest for new ownership prior to DEFRA Limit}
\]

The calculation formula is defined for application when using annualized cost data (reflective of 12-month time period). Tenure refers to the purchaser's initial ownership year. Allowable interest refers to interest associated with a facility acquisition. If all of the data elements needed in the calculation do not include data for a 12-month period,
the data elements must be adjusted to reflect a time period of equal duration to the cost report base period used in determining the "purchaser tenure and allowable interest after the sale."

The DEFRA Reimbursement Limit continues to apply to the new ownership annual Property Tax/Interest Expense/Lease Component rate using the Plant Cost Certification reimbursement settlement procedure until the limit amount is zero.

10.3.B. RETURN ON CURRENT ASSET VALUE (CAV) COMPONENT

The Return on Current Asset Value Component is a per resident day amount representing a use allowance on facility assets. The return amount is determined by multiplying the "tenure factor" times a CAV calculated for the nursing facility. A nursing facility's CAV is determined by a formula using historical costs of the nursing facility's capital assets, as identified in the Allowable and Non-Allowable Costs section in this appendix, times the difference between an asset value update factor and an obsolescence factor. Assets purchased prior to 1960 are treated as assets brought into service in 1960. A nursing facility's CAV for rate reimbursement calculation cannot exceed the "current asset value upper limit" and will not be less than the "current asset value floor."

The calculation for the return on current asset value component is:

\[
\text{Lesser of NF CAV or NF CAV Limit} \times \text{Tenure Factor} = \text{Total NF Return on CAV} \\
\text{Total NF Return on CAV} \div \text{NF Resident Days} = \text{Return on CAV Component Per Resident Days}
\]

10.3.B.1. ASSET VALUE UPDATE FACTOR

The asset value update factor used to calculate CAV depends on the type of capital asset. Land improvements, buildings, building improvements, and fixed building equipment are updated using a construction cost index for steel frame buildings in the central United States from the fiscal year the asset was brought into service until the most recent period for which cost report data is available for the respective rate year calculation. The asset value update factor is not applied to land and other assets not specifically listed above.

10.3.B.2. ASSET VALUE OBSOLESCENCE FACTOR

The obsolescence factor is applied based on the classification category of the capital asset. Land has an obsolescence factor of zero. Land improvements, buildings, building improvements, and fixed building equipment have an obsolescence factor of .03 for each year the asset has been in service. Movable equipment and other capital assets have an obsolescence factor of .10 for each year the asset has been in service up to a maximum of 10 years. The number of years that the asset has been in service is determined by
subtracting the year the asset was put into service from the most recent fiscal year for which data is available under the standard rate setting timeframe.

10.3.B.3. CURRENT ASSET VALUE FORMULA

A nursing facility's CAV is determined by a formula using historical costs of capital assets. The current asset value for each asset is the historical cost of that asset times the difference between its Asset Value Update Factor and its Asset Value Obsolescence Factor. Assets purchased prior to 1960 are recorded as assets brought into service in 1960. Current asset values are updated annually based on the most recent audited or reviewed cost report. A nursing facility's current asset value is the sum of current asset values for the various asset types.

Example: Building assets with historical cost of $100,000 in service for 10 years through the cost report year used in the rate calculation; the update factor for the 10 years is 1.50; the obsolescence factor is .30 (10 years times .03); the amount included in the CAV compilation for the nursing facility for these assets is $120,000 [$100,000 times (1.50 minus .30)].

If the nursing facility Plant Cost Component is calculated based on Plant Cost Certification data, the new capital assets acquired in the current cost report year and the immediate prior cost report year will be included in the nursing facility historical asset costs for compiling the CAV. The update factor for these assets will be 1.0, and the obsolescence factor will be zero.

10.3.B.4. NURSING FACILITY CURRENT ASSET VALUE

The current asset value calculation process determines the CAV for the entire nursing facility since capital assets are used for all types of service delivery in that facility. Only the portion of the nursing facility assets having a use related to routine nursing resident care are included for reimbursement under the return on current asset value component. The reference to Nursing Facility CAV is defined as the nursing unit portion of the nursing facility's total current asset value applicable to routine nursing care. The apportionment, expressed as a percentage, of a total facility that is applicable to the routine nursing care unit is determined by means of the facility's annual cost report. The SMA cost reporting process apportions the nursing facility asset costs into the appropriate cost centers for reimbursement purposes.

The Nursing Facility CAV is calculated as:

\[ \text{Total CAV for the NF} \times \frac{\text{Percentage representing the nursing unit apportionment}}{\text{NF CAV}} \]
**10.3.B.5. CLASS I NURSING FACILITY CURRENT ASSET VALUE LIMIT PER BED**

The current asset value upper limit is a maximum per bed dollar amount that will be used for calculating the individual Nursing Facility CAV. The per bed value of the upper limit is based on the historical costs of construction and other asset acquisition costs for nursing facilities opened on or after January 1, 1975. The historical costs are updated through 1983 using the U.S. Department of Commerce Composite Construction Index, and annual updates after 1983 are made using a construction cost index for steel frame buildings. The update index does not apply an obsolescence factor. The current asset value limit is the sum of the updated historical costs for the facilities included in this calculation divided by the total number of beds in those facilities. The current asset value limit is recalculated annually to include construction costs of new facilities reported on the most recent calendar year filed cost report and the construction index update. The per bed upper limit is effective for the time period corresponding to the State rate year.

The current asset value floor is 30 percent of the current asset value upper limit.

Class I nursing facility current asset value limits per bed for each rate year are available on the MDHHS website. Refer to the Directory Appendix for website information.

**10.3.B.6. NURSING FACILITY CURRENT ASSET VALUE LIMIT**

A current asset value limit is determined by the individual nursing facility and is dependent on the number of beds in the Medicaid nursing unit for the time period corresponding with the respective rate effective date. The current asset value upper limit is a maximum dollar amount for the individual Nursing Facility CAV that will be used for calculating the return on current asset value. The Nursing Facility CAV Limit is the number of available beds in the nursing unit times the Class Current Asset Value Limit Per Bed.

The current asset value floor limit is a minimum dollar amount for CAV that will be used for calculating the return on current asset value for that nursing facility. The individual Nursing Facility CAV floor is the Nursing Facility CAV Limit times 30 percent.

**10.3.B.7. TENURE FACTOR**

The tenure factor is dependent on the nursing facility provider's number of full years of continued licensure as of the beginning of the Medicaid rate year, i.e., months of continuous licensure divided by 12 and ignoring fractions.

Continued licensure is based on the number of full years that have elapsed from the effective date of a nursing facility provider's license (issued by the SSA) to the beginning of the Medicaid rate year. For example, a provider that has been licensed for 42 continuous months has, for purposes of the tenure factor, been licensed for three full years. The provider's years of ownership are translated into a tenure rate, and applicable rates are identified in the following table.
The rate of return on current asset value is expressed as an annual return rate. Qualification for the total return rate requires that the time period included in the nursing facility cost report used as the basis for the facility plant cost rate include twelve calendar months. In cases where the nursing facility cost report does not include twelve calendar months, the following formula is used to calculate the return rate:

\[
\text{Number of calendar days in the cost report period} + 365 \times \text{Rate of return on CAV (for the respective years of ownership)} = \text{Return Rate}
\]

**Example:** A nursing facility has seven years of ownership and the cost report period used for plant costs in the rate calculation is for a nine-month time period (275 days). The adjusted return rate is .030 (275/365 times .0400).

If a nursing facility is sold or totally replaced (regardless of facility ownership), years of ownership return to zero. If a facility is remodeled or expanded and facility ownership remains unchanged, the years of ownership remain continuous.

When licensure has changed but there has been no effective change in operator/provider, and there has been no transaction that would affect Medicaid reimbursement other than the tenure factor, the provider may request that Medicaid recognize the continuous tenure such that the licensure tenure schedule would not revert to zero years at the time of the licensure change. The provider's written request must be submitted at the time licensure is changed.
Exception: Where licensure does not change after a sale of nursing facility assets, the nursing facility provider (new owner) must choose either to retain the original licensure tenure schedule and forego increased reimbursement for interest expense, or to receive increased reimbursement for interest expense, subject to the DEFRA Reimbursement Limit, and allow the licensure tenure schedule to revert to zero years and a tenure factor of .0250. Should the provider elect to retain the previous licensure tenure schedule, Medicaid will not recognize, for allowable cost and per diem rate determination purposes, any interest expense beyond the schedule of borrowings, principal amortization, and interest expenses that would have been incurred were the former owner's loans maintained or assumed by the new owner. This provision applies to all property transactions between lessors, lessees, and/or operators.

10.4 PLANT COST COMPONENT CLASS III NURSING FACILITIES

The prospectively established plant cost component for each county medical care facility provider and hospital long term care unit provider is the lesser of the allowable per resident day facility plant cost or the per resident day facility plant cost limit. Proprietary providers are permitted to retain, as part of the plant cost component, up to $.50 of the difference between allowable per resident day plant costs and the per resident day plant costs in effect on March 31, 1985 ($5.66 per resident day).

10.4.A. FACILITY PLANT COST PER RESIDENT DAY

The allowable per resident day plant cost is the sum of depreciation expense, interest expense, property taxes, and allowable lease costs divided by total resident days as determined from the provider's cost report. A facility with a change in facility asset costs may qualify for plant cost limit updates.

10.4.B. FACILITY PLANT COST LIMIT PER RESIDENT DAY

The individual provider facility Plant Cost Limit is dependent upon when facility beds were constructed and brought into service for Medicaid residents. Nursing facilities existing prior to July 1, 1978 were initially assigned the facility Class Plant Cost Limit for new construction as of that date. A nursing facility constructed after that date is initially assigned the facility Class Plant Cost Limit effective in the year facility beds are constructed and brought into service for Medicaid.

A facility's Plant Cost Limit, expressed as per resident day, is the sum of the per resident day component limits for depreciation expense, interest expense, financing fees and property taxes. The individual nursing facility Plant Cost Limit is updated for a nursing facility that undergoes a significant change in facility asset costs. The nursing facility must complete the Plant Cost Certification process to qualify for consideration of the update to the individual facility Plant Cost Limit. The provider must meet the qualifying provisions for Plant Cost Certification eligibility, other than non-available bed designation or returning non-available beds to service, to be eligible for a revised plant cost limit. The non-available bed plan designation criteria does not qualify the nursing facility for an update to the facility plant cost limit. An existing provider with a change of facility class, major addition, renovation or new construction may be eligible for a Plant Cost Limit update to reflect the change in facility asset costs. An existing facility that chooses to become a Medicaid-participating provider may also qualify for an updated plant cost limit.
The updated plant cost limit is applicable to a nursing facility dependent upon the facility's capital asset project. A nursing facility that is a total new construction, a facility that incurs major capital asset renovation and/or addition, a facility newly participating in the Medicaid program, or a facility that experiences a change in facility class are eligible for updated depreciation, interest, finance fees and property tax components for the facility Plant Cost Limit. The update in the limit is based on a compilation of the facility limit prior to the capital asset change and the Class Plant Cost Limit.

The individual facility updated Plant Cost Limit effective with the completion of the capital asset project is a weighted average of the historic individual facility Plant Cost Limit for the portion of the facility prior to the new construction and the current Class Plant Cost Limit applicable to the new capital asset project. The weighting factors used are the respective ratios of the allowable historic asset costs of the facility prior to the new construction, and the allowable asset costs of the new construction, to the combined allowable old and new asset costs of the nursing facility after construction. The current Class Plant Cost Limit used in the weighted calculation applicable to the new capital cost portion will be the class limit in effect for the year corresponding to the new asset acquisitions being placed into service.

Nursing facility providers that incur a capital asset change resulting from a facility sale of assets will use, as a plant cost basis, only those allowable costs identified in the Allowable and Non-Allowable Costs section in this appendix. The individual nursing facility updated Plant Cost Limit after the sale is only eligible for an update for the interest expense component limit to reflect changes in interest rates.

10.4.C. FACILITY CLASS PLANT COST LIMIT PER RESIDENT DAY

The Class Plant Cost Limit is the maximum reimbursement rate, expressed as per resident day amount, for a nursing facility's new construction. The Class Plant Cost Limit is applicable to new construction nursing facilities dependent upon when facility beds were constructed and brought into service for Medicaid residents. The Class Plant Cost Limit is the sum of the per resident day component limits for depreciation expense, interest expense, financing fees and property taxes. The Class Plant Cost Limit components are updated annually to reflect changes in industry construction cost, interest rates and corresponding effect on financing fees and real estate taxes due to changes in capital costs. The new construction limit is used in determining the individual nursing facility limit in cases where the nursing facility is an entire new construction or an existing nursing facility has completed a significant capital improvement.

The per resident day Class Plant Cost Limit is the amount that would be paid for a recently constructed and prudently financed facility. Calculation of the plant cost limit is based on a survey of nursing facilities constructed between January 1, 1975 and December 31, 1977, and initially updated to June 30, 1978. The original Class Plant Cost limit individual components are updated annually using published economic indicators identified in the subsections addressing the specific component of the limit. The Class Plant Cost Limit annual updates are available on the MDHHS website. (Refer to the Directory Appendix for website information.)
10.4.C.1. FACILITY CLASS PLANT COST LIMIT DEPRECIATION EXPENSE COMPONENT

The value for the depreciation expense component is a sum based on the mean of the surveyed values of depreciable assets (referenced above) and the mean depreciation rate for assets of similar type using straight-line depreciation with useful lives determined in accordance with Medicare Principles of Reimbursement. The per resident day depreciation expense component is updated each calendar quarter to reflect the change in costs of construction and changes in standards and regulations which have a direct impact on plant costs. The depreciation component is updated using the economic index release as published under U.S. Department of Commerce, Bureau of Economic Analysis, National Income and Product Accounts Tables for Nonresidential Structures.

10.4.C.2. FACILITY CLASS PLANT COST LIMIT INTEREST EXPENSE COMPONENT

The value for interest expense is based on the surveyed mean of interest rates paid (referenced above) and the mean asset values for facilities constructed during the initial three-year survey time period. The per resident day interest component is updated annually based on the changes in interest rates. The interest rate data used to calculate the interest component limit is updated by applying an index of change in interest rates for home mortgage loans (reflected in conventional new home mortgage rates, as published by the Federal Housing Finance Board for Newly Built Homes) to the interest rate used to calculate the original interest component limit.

A nursing facility that undergoes a change of ownership is eligible for an update to the individual facility Plant Cost Limit. The update will only include an adjustment to the interest component of the individual facility Plant Cost Limit in effect prior to the sale. The adjustment will be made to the interest component of that prior limit to reflect the change in the interest rate index between the time period reflected in the prior limit calculation and the date of the facility sale.

10.4.C.3. FACILITY CLASS PLANT COST LIMIT FINANCING FEES COMPONENT

The value for financing fees is based on the mean of financing fees of the surveyed construction (referenced above). The per resident day financing fees component limit is updated using the same update factor used for the depreciation expense component limit update. The update factor is applied to the original financing fees component limit.

10.4.C.4. FACILITY CLASS PLANT COST LIMIT TAX EXPENSE COMPONENT

The value for property taxes is based on the mean of property taxes of the surveyed taxable properties (referenced above). The per resident day property tax component limit is updated using the same update factor used for the depreciation expense component limit update. The update factor is applied to the original property tax component limit.
10.5 VARIABLE COST COMPONENT (VCC) – CLASS I AND CLASS III FACILITIES

The variable cost component of the nursing facility per resident day rate reflects the Medicaid determination for reimbursement for the nursing facility base and support costs incurred for routine nursing care. Base and support cost classifications are discussed in detail in the Cost Classifications and Cost Finding subsection of this appendix. The calculation of the component uses nursing facility historical costs and economic index application to adjust cost levels to coincide with the State rate year time periods. The support costs and total variable (base plus support) costs are separately subjected to rate ceiling reimbursement limits dependent on individual facility bed size and facility class.

For Class I and Class III nursing facility rate setting periods beginning on or after October 1, 2003, the Variable Cost Component is a per resident day rate and is equal to the lesser of the facility's Variable Rate Base (VRB) or the Class Variable Cost Limit (VCL), plus the Economic Inflationary Update (EIU).

\[ \text{VCC} = (\text{lesser of VRB or Class VCL}) + \text{EIU} \]

10.5.A. VARIABLE RATE BASE (VRB)

The facility Variable Rate Base is the sum of the facility's indexed base cost component and the facility's indexed support cost component. For rate setting purposes, the per resident day amount used for the provider’s Variable Rate Base is the lesser of the calculated Variable Rate Base or the Class Variable Cost Limit.

\[ \text{VRB} = \text{Base Cost Component} + \text{Support Cost Component} \]

10.5.A.1. BASE COST COMPONENT (BCC)

A facility's BCC is the facility per patient day allowable base costs indexed to October 1 of the year that is one year prior to the rate year being calculated.

\[ \text{BCC} = \left( \frac{\text{base costs}}{\text{total number of resident days}} \right) \times \text{Cost Index} \]

Facility's base cost per day - the facility base costs divided by the total number of resident days for the cost reporting period.

10.5.A.2. SUPPORT COST COMPONENT (SCC)

A facility's support cost component is the facility's BCC multiplied by the lesser of the facility's support-to-base ratio or the support-to-base ratio limit for that nursing facility bed-size group.

\[ \text{SCC} = \text{BCC} \times \text{applicable S/B ratio (Facility or Bed-Size Group Limit)} \]

- Facility's support cost per day - the facility support costs divided by the total number of resident days for the cost reporting period.
- Facility Support-to-Base Ratio (S/B-Facility) - the nursing facility's allowable support costs divided by the allowable base costs for the cost reporting period. The individual provider's S/B ratio for rate calculation is limited to the Support-to-Base Ratio Bed Size Group Limit for the provider's bed-size group. The individual nursing facility bed-size group classification is based on the number of nursing home licensed beds, Home for the
Aged beds, or any other type of licensed beds where nursing care is provided. The provider's S/B ratio is rebased annually from the most recent audited cost period, regardless of ownership.

- **Support-to-Base Ratio – Bed Size Group Limit (S/B-Group)** – the 80th percentile of the support-to-base ratios for nursing facilities in the same bed-size group for a cost reporting year. The bed-size groups are defined as 0-50, 51-100, 101-150, and 151+ nursing care beds in the nursing facility. The nursing facility bed-size group classification is based on the number of nursing home licensed beds, Home for the Aged beds, or any other type of licensed beds where nursing care is provided. The 80th percentile is determined by rank ordering the provider nursing facilities within the same bed-size group from the lowest to highest S/B ratio, then accumulating nursing facility Medicaid resident days of the rank ordered providers, beginning with the lowest, until 80 percent of the total Medicaid resident days for this group of providers is reached. The S/B ratio limit for the bed-size group equals the support-to-base ratio of the nursing facility in which the 80th percentile of accumulated Medicaid days occurs.

### 10.5.B. Cost Index (CI)

A facility cost index is the Global Insight's Skilled Nursing Facility Market Basket Without Capital Index, which is published quarterly in the Global Insight DRI-WEFA Health Care Cost Review. The cost index will be used to index reported costs from the end of the facility's cost report period to October 1 of the year that is one year prior to the rate year being calculated.

**Example:** Cost report data used to set reimbursement rates for the October 1, 2003 to September 30, 2004 rate year will be indexed to October 1, 2002.

### 10.5.C. Class Average Variable Costs (AVC)

The Class Average Variable Cost is defined as the total indexed variable costs for all facilities in the Class divided by the total resident days for all facilities in the class for a cost reporting year. An AVC is calculated for Class I and Class III nursing facilities. The Class AVC is used for rate calculations for nursing facilities that meet the qualifying criteria as a new provider for Medicaid participation and determining provider eligibility for Class I nursing facility rate relief.

\[
AVC = \frac{\text{total Indexed Variable Costs for all NF's in the class}}{\text{total resident days for all NF's in the class}}
\]

- **Facility's Variable Costs (VC)** - the total allowable base and support costs for a facility to provide routine nursing care services to residents, as determined in accordance with Medicaid allowable costs and reporting requirements.

- **Indexed Variable Costs (IVC)** - the facility's total VC indexed to October 1 of the year that is one year prior to the rate year being calculated.

**Example:** The AVC for October 1, 2003, which is used for the rate year October 1, 2003 to September 30, 2004, is based on variable costs reported in cost reports ending in calendar year 2002 indexed to October 1, 2002.
10.5.D. CLASS VARIABLE COST LIMIT (VCL)

The Variable Cost Limit for a class of nursing facilities is set at the 80th percentile of the Indexed Variable Costs (IVC) per resident day for facilities in the class during the current calendar year. The 80th percentile is determined by rank ordering providers from the lowest to the highest IVC per resident day, then accumulating nursing facility Medicaid resident days of the rank ordered providers, beginning with the lowest, until 80 percent of the total Medicaid resident days for the facility class of providers is reached. The VCL for the class of providers equals the IVC per resident day of the nursing facility in which the 80th percentile of accumulated Medicaid resident days occurs. A VCL is calculated for Class I and Class III nursing facilities.

- Facility’s Variable Cost per resident day (VC/pd) - the facility VC divided by the total number of resident days for the cost reporting period.
- Indexed Variable Costs Per Resident Day (IVC/pd) – the facility’s VC/pd indexed to October 1 of the year that is one year prior to the rate year being calculated.

Example: The VCL for October 1, 2003, which is used for the rate year October 1, 2003 to September 30, 2004, is based on variable costs per resident day reported in cost reports ending in calendar year 2002 indexed to October 1, 2002.

10.5.D.1. CLASS I NURSING FACILITY VCL EXCEPTION - NEW PROVIDER RATE RELIEF

A Class I nursing facility that qualifies for rate relief as a new provider, as defined for rate relief, in a Medicaid enrolled nursing facility with a VRB less than or equal to 80 percent of the class AVC will have an exception VCL in the rebasing rate year. The rate Variable Cost Component for the initial rate year of accelerated rebasing is limited to the Class I Average of Variable Costs. Refer to the Rate Relief for Class I Nursing Facilities subsection in this appendix for additional information.

10.5.D.2. CLASS III NURSING FACILITY VCL EXCEPTION – NEW HOSPITAL LONG TERM CARE UNITS AFTER JULY 1, 1990

Class III nursing facilities that are new long term care units of a hospital, and have a Certificate of Need (CON) approval from the Michigan Department of Health and Human Services (MDHHS) [formerly Michigan Department of Community Health (MDCH) and Michigan Department of Public Health] dated on or after July 1, 1990, are reimbursed according to the method for Class III facilities except that the facility Variable Cost Component is determined as the lesser of the facility Variable Rate Base or the Class I Variable Cost Limit (VCL).

10.5.E. ECONOMIC INFLATIONARY UPDATE (EIU)

The economic inflationary update for a facility is the Economic Inflation Rate (EIR) for the class applied to the lesser of the Variable Rate Base or the Class Variable Cost Limit.

EIU = EIR X (lesser of VRB or Class VCL)
Economic Inflation Rate (EIR) - the State legislative appropriations process will determine the annual economic inflation percentage for Class I and Class III nursing facilities.

10.6 CLASS V NURSING FACILITIES - VENTILATOR DEPENDENT CARE (VDC) UNITS

The reimbursement rate for special nursing facilities caring for ventilator-dependent residents (Class V) is set prospectively as an individual nursing unit rate per resident day determined by Medicaid.

Reimbursement is made for prior authorized ventilator-dependent services/care for residents who have been transferred to a Medicaid contracted facility. The prospective rate covers all ventilator care requirements of the residents, including all the costs of benefits associated with Medicare Parts A and B while the resident resides in the special nursing facility. This includes, but is not limited to, all routine, ancillary, physician, and other services.

Factors used in the determination of the per diem rate include audited costs of facilities providing similar services, the inflationary factor for the effective period of the prospective rate, the supply response of providers, and the number of residents for whom beds are needed. The prospective rate does not exceed 85 percent, nor fall below 15 percent, of an estimated average inpatient hospital rate for currently placed acute care Medicaid residents who are ventilator-dependent. The prospective rate is periodically re-evaluated to ensure reasonableness of supply and demand for special care. A new VDC nursing unit that has not previously participated in Medicaid for VDC services will have a reimbursement rate in the initial two years of operations based upon the statewide average VDC unit reimbursement rate for the current year.

10.7 NURSING FACILITY QUALITY ASSURANCE ASSESSMENT PROGRAM (QAAP)

The Quality Assurance Assessment Program (QAAP) was implemented by Medicaid in compliance with Michigan law. The QAAP provides a Quality Assurance Supplement to nursing facility reimbursement rates incorporating funds from the quality assurance assessment tax. When a provider sells a nursing facility, the provider is responsible for all QAAP assessments billed and incurred prior to the date of the sale. The purchaser(s) must assure escrow of any outstanding QAAP amounts owed, or the purchaser(s) becomes responsible for payment of the QAAP and penalty amounts owed before Medicaid participation is granted. If the provider quits the business, the provider is responsible for all QAAP assessments billed and prorated as of the date MDHHS determines the facility closed. The QAAP applies to Class I, Class III and Class V nursing facilities.

10.7.A. CLASS I AND CLASS III NURSING FACILITIES

The nursing facility will receive a QAAP payment as a monthly gross adjustment. The monthly gross adjustment for an individual nursing facility will be determined based on one-twelfth of the facility's annual historical Medicaid utilization (resident days) multiplied by the facility's Quality Assurance Supplement (QAS) per resident day. The facility's historical Medicaid utilization will include all routine nursing care and therapeutic leave days billed to Medicaid by the facility. A nursing facility that is experiencing a significant increase or decrease in its current rate year Medicaid utilization which will cause a difference of greater than five percent in the nursing facility's total QAS payments for the year must contact the SMA for consideration of adjustment to the facility's monthly QAS payment. Current year Medicaid resident census data must be provided to MDHHS to
document the change in order to revise the monthly QAS payment amounts. It is the desired intent of MDHHS to assure accuracy of total QAS monthly payments and to approximate the annual reimbursement due the facility. MDHHS reserves the right to adjust the individual nursing facility monthly QAS payment to reflect the current year Medicaid activity to achieve this goal.

A facility's QAS is equal to the lesser of the facility's Variable Cost Component for Class III publicly-owned nursing facilities, Variable Rate Base, or Class I Variable Cost Limit times the Quality Assurance Assessment Factor (QAAF) determined by MDHHS. A provider's QAS will be reconciled at the end of the fiscal year to accommodate the actual Medicaid utilization, changes to the variable rate from filed to audited cost report data, and to adjust the increase initially estimated to accommodate the fixed pool of funds established by the QAAP and any legislative offsets to that pool.

The QAAF is determined based on the estimated pool of funds created by the quality assurance assessment tax as well as the projected number of Medicaid nursing facility days for the fiscal year. In aggregate, the quality assurance assessment fee may not exceed 5.5 percent of total industry revenue for the fiscal year.

QAS payments to Class I, III and V providers will be reduced by the amount of restricted funding revenue written off during the current fiscal year. This reduction will be allocated across Class I, III and V providers participating in the QAAP program that receive QAS payments. QAS payments will be reduced by both the state and federal share of the uncollected restricted revenue. Any restricted revenue that is subsequently collected after being included in a QAS reduction will be restored to providers. The QAS reduction will be equal to the total QAAP shortage divided by the total number of Medicaid days used in the QAS payment calculation multiplied by the number of Medicaid days in each facility.

It is the intent of MDHHS that nursing facilities that provide hospice care for residents by contracting with a hospice provider also benefit from this quality program. Medicaid will reimburse hospice providers 100 percent of a nursing facility's Quality Assurance Supplement (QAS) rate add-on for Medicaid beneficiaries provided hospice care in Medicaid participating nursing facilities. It is the responsibility of the hospice provider to pay the room and board rate to the nursing facility as specified in their contract for services.

10.7.B. CLASS V NURSING FACILITIES - VENTILATOR DEPENDENT CARE (VDC) UNITS

Qualifying VDC units will receive a QAAP payment as a monthly gross adjustment. The monthly gross adjustment for an individual unit will be determined based on one-twelfth of the VDC unit's annual historical Medicaid utilization (resident days) multiplied by the unit's Quality Assurance Supplement (QAS) per resident day basis. The unit's Medicaid utilization will include all days billed to Medicaid by the VDC unit. A nursing unit that is experiencing a significant increase or decrease in its current rate year Medicaid utilization which will cause a difference of greater than five percent in the nursing unit's total QAS payments for the year must contact MDHHS for consideration of adjustment to the unit's monthly QAS payment. Current year Medicaid resident census data must be provided to the SMA to document the change in order to make revision to the monthly QAS payment.
amounts. It is the desired intent of MDHHS to assure accuracy of total QAS monthly payments to approximate the annual reimbursement due the VDC unit. MDHHS reserves the right to adjust the individual VDC unit monthly QAS payment to reflect the current year Medicaid activity to achieve this goal.

The VDC unit QAS is equal to the Class I Variable Cost Limit times the Quality Assurance Assessment Factor (QAAF) determined by MDHHS. A provider’s QAS will be reconciled at the end of the fiscal year to accommodate the actual Medicaid utilization and to adjust the total increase initially estimated to accommodate the fixed pool of funds established by the QAAP and any legislative offsets to that pool.

The QAAF is determined based on the estimated pool of funds created by collection of the quality assurance assessment tax and the projected number of Medicaid nursing facility days for the fiscal year. In aggregate, the quality assurance assessment tax may not exceed 5.5 percent of total industry revenue for the fiscal year.

10.7.C. ANNUAL RECONCILIATION

The reconciliation of approved Medicaid days, changes to the variable rate from filed to audited cost report data, and QAS payments is completed on an annual basis within 90 calendar days after the end of the State’s fiscal year.

The Reimbursement and Rate Setting Section (RARSS) will reconcile the QAS payments to the provider against the provider’s approved Medicaid days and filed and audited cost report data. If RARSS determines that an underpayment has been made, the provider will receive a gross adjustment payment. If RARSS determines that an overpayment has been made, recovery will be made by gross adjustment recovery against future payments. The gross adjustment process follows the Initial Settlement and Final Settlement practices described in the Cost Report Reimbursement Settlements section of this chapter. A provider may submit a written request to RARSS for an extended repayment schedule to repay the Program. The request must include a written justification of the need for extended payment.

The provider will be given advance notice of the actions taken on QAS payments and has 30 calendar days from the date of the advance notice to request a review of the determination with RARSS. The provider’s request for a review must cite specific concerns with the determination.

10.8 CLASS II NURSING FACILITIES – PROPRIETARY NURSING FACILITY FOR INDIVIDUALS WITH MENTAL ILLNESS OR INTELLECTUAL DISABILITIES

The Class II proprietary nursing facilities for individuals with mental illness or intellectual disabilities are reimbursed an all-inclusive prospective payment rate negotiated with the MDHHS State Mental Health Agency on an annual basis. Rate ceiling limits are prospectively set for allowable costs and resident occupancy for determining final reimbursement for the annual services. Final reimbursement is retrospective cost settlement, not to exceed the ceiling limit. Nursing facility allowable costs included for reimbursement are determined in accordance with Medicaid cost reporting requirements and allowable and non-allowable cost policies, including plant cost based on allowable depreciation expense. The
provider is paid a reimbursement efficiency allowance equal to the lesser of $2.50 per resident day or the
difference between the prospective ceiling limit and the nursing facility actual allowable cost.

10.9 **CLASS IV NURSING FACILITIES – INSTITUTIONS FOR INDIVIDUALS WITH DEVELOPMENTAL DISABILITIES**

State-owned and -operated institutions, Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID), and non-profit nursing facilities for individuals with intellectual disabilities are retrospectively cost settled.

The State Mental Health Agency must submit rate information regarding the facility's expected costs for
the prospective year in an Interim Rate Request letter to Medicaid at the beginning of the Medicaid rate year. Subsequent requests may be submitted during the rate year if rate adjustments are necessary. The reimbursement rate for the new Medicaid rate year will not be updated until the State Mental Health Agency submits the Interim Rate Request letter.

The provider is reimbursed an interim per diem rate based on the cost information submitted. The interim reimbursement is adjusted to actual allowable costs through annual cost settlement. Refer to the Cost Reporting and the Rate Setting sections of this appendix for additional information.

10.10 **CLASS VI NURSING FACILITIES – HOSPITAL SWING BEDS**

The reimbursement rate for hospital Swing Beds (Class VI) is set prospectively as a flat per diem rate
determined by Medicaid. Swing bed reimbursement occurs after the combined length of stay in an acute
care bed and a swing bed exceeds the average length of stay for the Medicaid diagnosis related group (DRG) for the admission.

The rate is the weighted statewide average per diem rate paid for routine nursing care. The rate
calculation sums Medicaid per diem payments and divides the sum by the number of Medicaid service
days paid to Class I and Class III facilities as reflected on the State's prior fiscal year's Medicaid report of
services and payments.

10.11 **ADD-ONS**

Add-ons are items that provide reimbursement to a provider for costs that are not previously included in
the provider's variable cost component.

10.11.A. **SPECIAL DIETARY**

The Coverages portion of this chapter, Dietary Services and Food subsection, provides for program reimbursement to non-profit nursing facilities for special dietary needs for religious reasons. Interim payment reimbursement to the nursing facility will be made by inclusion of a per diem rate add-on amount to the nursing facility routine nursing care rate. The total special dietary add-on reimbursement to the nursing facility during the reimbursement year will be adjusted through the annual cost report reimbursement settlement. Refer to the Cost Report Reimbursement Settlement section of this appendix for additional information.
A qualifying nursing facility that has previous year cost history of special dietary costs will have the interim payment rate add-on based on special dietary cost center allocated cost and nursing facility resident census data determined in the nursing facility cost report. The most recent annual filed or audited cost report that is used for determining the nursing facility current routine nursing care rate will be the source of the cost data for the current interim rate add-on.

A qualifying nursing facility that does not have previous year cost history of special dietary costs will have an interim reimbursement rate add-on based on estimated cost data. The nursing facility must submit a written request identifying the estimated costs to be incurred in food purchase and preparation associated with special dietary needs for religious reasons. The request must be submitted to the RARSS and must include a certification statement attesting to the accuracy of the data and signed by the nursing facility authorized representative. (Refer to the Directory Appendix for contact information.) The written request must present the following data for the current cost report year:

- Estimated resident days (not less than 85% occupancy rate for all nursing facility resident units)
- Estimated raw food purchase costs, including a detailed listing of the types of food to be purchased for special dietary needs for religious reasons.
- Estimated cost for supplies, tableware, cooking utensils, etc. for food preparation and service associated with special dietary needs for religious reasons.

The submitted data will be subject to review and adjustment by Medicaid for consideration and calculation of the interim rate and the add-on reimbursement rate to the facility. The submitted data will be utilized for interim rate determination until annual cost reporting data has been filed and accepted by Medicaid.

10.11.B. NURSE AIDE TRAINING AND COMPETENCY EVALUATION PROGRAM (NATCEP) ADD-ON

Certification, Survey & Enforcement Appendix, Staff Certification section provides for nursing facility Medicaid reimbursement for Medicaid's share of costs incurred by the nursing facility for approved Nursing Aide Training and Competency Evaluation Program (NATCEP) expenditures. Interim payment reimbursement to the nursing facility will be made by inclusion of a per diem rate add-on amount to the nursing facility routine nursing care rate. The total NATCEP add-on reimbursement paid to the nursing facility during the nursing facility's cost report reimbursement year will be adjusted through the annual cost report reimbursement settlement. Refer to the Cost Classifications and Cost Finding section and Cost Report Reimbursement Settlement section of this appendix for additional information.

The interim rate add-on amount is limited to a maximum per diem of $1.00 per resident day; however, the nursing facility cost reimbursement settlement for these training costs is not subject to a per diem limit. The interim payment rate add-on will reflect the nursing facility's prior year cost history of NATCEP costs utilizing the NATCEP cost center allocated cost and nursing facility resident census data determined in the nursing facility cost report. The most recent annual filed or audited cost report that is used for
determining the nursing facility current routine nursing care rate is the source of the cost data for the current interim rate add-on, except where a more recent interim reimbursement request has been submitted by the nursing facility.

A nursing facility that is notified by the SSA of loss of NATCEP or CEP, has been placed on NATCEP lockout status, or has a NATCEP withdrawal of program approval will be notified by Medicaid that its interim reimbursement NATCEP add-on amount will be deleted from the reimbursement rate. The nursing facility must submit a completed interim reimbursement request identifying expected NATCEP allowable costs, in accordance with policy provisions referenced above, for consideration of an interim reimbursement add-on amount for allowable NATCEP costs incurred during the lockout period.

A nursing facility is eligible to submit an interim reimbursement request for a change in the interim payment rate add-on amount in the following situations:

- The nursing facility is experiencing a change in its current year NATCEP cost level that would cause a per diem increase or decrease in excess of $.25 per day in the current period reimbursement rate add-on.
- The nursing facility does not have previous year cost history of NATCEP cost.
- The nursing facility has been identified a lockout facility for NATCEP or CEP, or has loss of approval of its NATCEP, and has made acceptable arrangements for securing approved nurse aide training for nursing facility staff.

The nursing facility must submit a completed Nurse Aide Training and Testing Program Interim Reimbursement Request (form MSA-1324) identifying the estimated costs to be incurred in providing approved NATCEP training for the nursing facility staff and projected resident census data. The request must be submitted to RARSS and must include the signed certification statement attesting to the accuracy of the data and signed by the nursing facility authorized representative. (Refer to the Directory Appendix for contact information.) Electronic copies of the request form and completion instructions can be accessed on the MDHHS website. (Refer to the Directory Appendix for website information.)

The submitted data is subject to review and adjustment by Medicaid for consideration and calculation of the interim rate add-on payment to the facility. Medicaid will issue the provider a rate notice indicating the accepted cost level for interim rate determination, or a request denial and reason for such action. The submitted data will be utilized for interim rate determination until annual cost reporting data has been filed and accepted by Medicaid.

10.12 SPECIAL CIRCUMSTANCES – RATE DETERMINATION

10.12.A. NEW FACILITY AND PROVIDER

A new facility is a provider operating a nursing facility where there is not Medicaid historical cost. Examples include:

- A newly constructed facility.
10.12.A.1. NEW PROVIDER NURSING FACILITY PER RESIDENT DAY PLANT COST

A new provider in the Medicaid program is eligible for the Plant Cost Certification process to reflect the facility asset costs and related plant costs. The Plant Cost Certification data submission will be used for calculation of the nursing facility Plant Cost Component as outlined in the policy for the respective nursing facility class. Refer to the Plant Cost Certification section of this appendix for additional information.

10.12.A.2. NEW PROVIDER NURSING FACILITY VARIABLE COST COMPONENT

The Variable Rate Base for the new facility and provider will be determined using special methods. During the first two cost reporting periods, new facilities and facilities with a change of class will have a Variable Rate Base equal to the Class Average of Variable Costs. This rate base will be used in the calculation of the nursing facility Variable Cost Component as outlined in the policy for the respective nursing class. In subsequent periods, the nursing facility's Variable Rate Base will be determined using the methods described in "Variable Cost Component" subsection of this appendix.

A new provider that purchases an existing facility participating in the Medicaid program or a provider with an existing, participating facility that makes major additions, renovations, or new construction does not qualify for these special methods because there are historical variable costs on which to base rates. The Variable Rate Base will be determined in accordance with Medicaid policy identified in applicable subsections of this appendix.

10.12.B. COMPLEX CARE

The Nursing Facility Coverages chapter of this manual details Medicaid policy on complex care cases. Complex care cases are those requiring specialized care beyond services covered by the usual Medicaid per diem rate. The payment rate for specially-placed residents is a negotiated prospective rate per resident day.

Reimbursement is made for prior authorized services/care to residents who have specialized and concentrated nursing and support service needs and who have been transferred from an acute care hospital setting to an approved skilled nursing facility. The negotiated rate provides reimbursement adequate to meet the unusual needs of this type of resident in a less costly and more appropriate environment than an acute care hospital setting.

Factors used in Medicaid's negotiation of the per resident day prospective rate include, but are not limited to, complexity, type of equipment and supplies required, the
resident's condition, and the market place availability of placement. Any authorized increase in the per diem rate represents only the cost of the service. The negotiated prospective rate is re-evaluated, in consideration of the resident's needs, prior to the last day of the approval period.

10.12.C. HOSPITAL LEAVE DAYS

The Hospital Leave Days Section in the Coverages portion of this chapter identifies the parameters for program reimbursement.

Reimbursement for a hospital leave day is a single rate paid to all nursing facility providers regardless of facility class. The rate is determined annually with an effective time period coinciding with the State fiscal year. The rate determination utilizes the Class I nursing facility Class Average Variable Cost (AVC) for the State fiscal year. The hospital leave day reimbursement rate represents a calculated salary and wage component of the room and board cost portion of the total AVC. The room and board portion is equal to 95 percent of the Class I nursing facility AVC, and the salary and wage component is determined as 66 percent of the room and board cost. The formula for calculating the hospital leave day rate is:

\[
\text{AVC (Class I NF)} \times 95\% \text{ (room and board portion)} \times 66\% \text{ (salary and wage component)} = \text{Hospital Leave Day Rate}
\]

Hospital Leave Day rate information is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

10.12.D. THERAPEUTIC LEAVE DAY

The Therapeutic Leave Days section in the Coverages portion of this chapter identifies the parameters for program reimbursement.

The reimbursement rate for a therapeutic leave day is the nursing facility's established per diem rate in effect for the period coinciding with the leave day.

10.12.E. ONE-DAY STAY

The One-Day Stay section of the Coverages portion of this chapter identifies the parameters for program reimbursement.

The reimbursement rate for an approved one-day stay is the nursing facility's established per diem rate in effect for the period coinciding with the stay.

10.12.F. OUT OF STATE NURSING FACILITY (NONENROLLED MICHIGAN AND BORDERLAND PROVIDERS)

The General Information for Providers Chapter, Nonenrolled Michigan and Borderland Providers and Beyond Borderland Area subsections provide for reimbursement of nursing care services to out-of-state nursing facilities. The out-of-state nursing facility must
comply with the provisions outlined. There is no cost reporting or reimbursement settlement activity for out-of-state nursing facilities.

The routine nursing care per diem rate for the out-of-state nursing facility is the lesser of the individual provider's home state Medicaid rate or the Michigan Medicaid out-of-state provider ceiling rate. The ceiling rate is effective for the time period coinciding with the State fiscal year rate period October 1 through September 30. The ceiling rate is the sum of three components: 1) Class I nursing facility Variable Cost Limit (VCL) for the corresponding rate year, 2) Economic Inflationary Update, and 3) most recent Plant Cost 80th percentile per diem amount. Out-of-state nursing facility rates do not participate in the Quality Assurance Assessment program.

The out-of-state nursing facility must submit a copy of the nursing facility's home state Medicaid program reimbursement rate to the RARSS to be assigned a reimbursement rate. (Refer to the Directory Appendix for contact information.) Out-of-state nursing facility rate assignments will only be effective on a prospective basis for the first day of the month following receipt of the rate request by that office. The out-of-state nursing facility will be issued a written notice of the rate determination action. The reimbursement rate request and rate assignment for an individual nursing facility are limited to once per calendar quarter.

10.12.G. FACILITY INNOVATIVE DESIGN SUPPLEMENTAL (FIDS) PROGRAM

Effective for dates of service on and after October 1, 2007, Medicaid providers participating in the Facility Innovative Design Supplemental (FIDS) program are eligible to receive supplemental reimbursement for room and board services provided to Medicaid beneficiaries when the beneficiary resides in a FIDS bed. FIDS participating facilities are eligible for the reimbursement supplement for up to 20 consecutive years beginning in the fiscal year of the project completion date. For projects completed on or after January 1, 2008, providers must plant cost certify or forgo the FIDS reimbursement supplement.

The FIDS facility standards and required culture change must be maintained throughout the Medicaid supplemental payment program. FIDS participating facilities will be reviewed annually by the Office of Services to the Aging (OSA) to certify continued participation in the culture change. Reimbursement of the FIDS payment will be terminated if it is determined that a facility is not compliant with the culture change requirement. FIDS participating nursing facilities receive increased capital reimbursement for FIDS construction and renovation projects. The increased reimbursement is paid through the claims reimbursement process. Reimbursement of the supplement amount is contingent upon sufficient appropriation to the Medicaid budget.

10.12.G.1. CHANGE OF OWNERSHIP

A new owner may receive reimbursement for the balance of the facility's eligible years of participation in the FIDS program. In order to receive the supplemental Medicaid payment, the new owner must continue the FIDS facility standards and culture change. If the new owner initially decides to discontinue participation as a FIDS facility and
subsequently decides to participate as a FIDS facility, the provider must notify the LARA, Bureau of Community and Health Systems (BCHS) licensing officer and OSA. MDHHS will notify the provider of the supplemental payment amount upon reinstatement of participation in FIDS. MDHHS will notify the provider of the terminated supplemental payment if the facility is determined ineligible for the supplemental payment because the new owner has discontinued or plans to discontinue the FIDS facility standards or culture change.

10.12.G.2. FIDS PROGRAM REIMBURSEMENT METHODOLOGY

FIDS participating facilities that have received approval from LARA for construction or renovation design plans that complied with quality goals of the FIDS program to improve nursing facility quality of life and nursing facility structures are eligible for reimbursement. If a provider chooses to discontinue participation in the design and/or culture change aspects of the FIDS program, the provider must contact the MDHHS LTC Reimbursement and Rate Setting Section (RARSS) 30 days prior to the discontinuance. (Refer to the Directory Appendix for contact information.) The FIDS reimbursement supplement will be discontinued when the facility no longer participates in the design and/or culture change.

MDHHS confirmation and approval that a FIDS participating facility has completed the pre-approved construction or renovation project(s) allows the facility to be eligible for the capital reimbursement supplement. The reimbursement supplement only applies to qualifying FIDS costs above the nursing facility's Capital Asset Value (CAV) Limit for Class I and the Plant Cost Limit (PCL) for Class III. Qualifying costs are the cost of capital assets such as land, land improvement, building, building improvement, and equipment that meet the MDHHS capital asset classification. Providers submitting for plant cost certification can identify all costs for certification but must distinguish FIDS qualifying costs on the certification request. As FIDS qualifying costs fall below the nursing facility's CAV or the nursing facility's PCL, the supplement amount is adjusted. The reimbursement supplement reflects qualifying costs prorated over 20 consecutive years. Medicaid reimbursement methodology for the FIDS program follows current MDHHS nursing facility cost-based principles and rate determination guidelines and policy, including plant cost certification, except as identified below for Class I and Class III providers.

10.12.G.3. CLASS I NURSING FACILITY REIMBURSEMENT FOR FIDS

For Class I nursing facilities participating in the FIDS program, the supplement amount, up to five dollars ($5) per Medicaid day, is added to the Return on Current Asset Value Component (RCAV) for qualifying FIDS construction or renovation project costs above the nursing facility's CAV Limit. Medicaid reimbursement methodology for the FIDS program follows current Medicaid nursing facility reimbursement guidelines and policy with the exceptions noted below:

- Up to five dollars ($5) per Medicaid day is added to the nursing facility's RCAV.
- The supplement amount is based on qualifying costs above the nursing facility's CAV Limit determined by MDHHS either by plant cost certification or by cost reporting. When the plant cost certification estimate is used, the amount of the supplement is subject to
an adjustment following the completion of an audit to the applicable period’s cost report in which the FIDS project is initially reported.

- To determine the amount of the FIDS supplement, MDHHS will utilize the following calculation:
  - Qualifying FIDS construction or renovation costs above the CAV Limit are divided by the number of FIDS beds in the project divided by the number of years remaining in the supplemental program divided by 365 days.

10.12.G.4. CLASS III NURSING FACILITY REIMBURSEMENT FOR FIDS

For Class III nursing facilities participating in the FIDS program, MDHHS will increase the Plant Cost Component (PCC) up to five dollars ($5) per Medicaid day for FIDS construction or renovation project costs above the nursing facility’s PCL. MDHHS reimbursement methodology for the FIDS program follows current MDHHS nursing facility reimbursement guidelines and policy with the exceptions noted below.

- Up to five dollars ($5) per Medicaid day is added to the nursing facility’s PCC.
- The supplement amount is based on qualifying costs above the re-determined PCL determined by MDHHS either by plant cost certification or by cost reporting. When the plant cost certification estimate is used, the amount of the supplement is subject to an adjustment following the completion of an audit to the applicable period’s cost report in which the FIDS project is initially reported.
- To determine the amount of the FIDS supplement, MDHHS will apply the following to qualifying project costs:
  - For FIDS renovation projects, the supplement is determined using qualifying costs to calculate the plant cost per resident day above the facility’s PCL per resident day. For a newly constructed facility, the calculation will be based on plant cost per resident day above the Class PCL per resident day effective the quarter the new construction is placed into service.

10.12.G.5. FIDS PROGRAM BILLING AND REIMBURSEMENT PROCESS

Participating FIDS providers are reimbursed per Medicaid day when claims are submitted for services provided in the FIDS area. FIDS facilities compliant with facility standards and culture change are eligible for the supplemental payment. Only participating FIDS providers billing for room and board in a FIDS area are to use the following revenue codes:

- For a single occupancy/private room, bill revenue code 0119
- For a double occupancy/semi-private room, bill revenue code 0129
- For Therapeutic Leave Day claims, bill revenue code 0189
- For hospice room and board, bill revenue code 0659
FIDS reimbursement is subject to post-payment audit action, including the prospective elimination of a provider's supplemental payment if the provider submits claims for FIDS services not provided in an approved FIDS area.

**10.13 RATE RELIEF FOR CLASS I NURSING FACILITIES**

Medicaid reimbursement rate relief for current and new nursing facility providers is determined on a case-by-case basis in accordance with specific criteria for evaluating eligibility for relief and rate methodology for determining the rate level. The following definitions of nursing facility providers are applied in this rate relief policy for Class I nursing facilities:

- Current provider is defined as the provider that operated the facility during the time period of the last cost report on which the normal rate setting would occur, and will operate the facility during the time period for which rate relief is requested.
- New provider is defined as a person or business entity that has purchased or is purchasing a nursing facility that had immediate prior Medicaid participation, and the new provider ownership individual(s) or business entity is not related through family or business ties to the ownership individual(s) or business entity of the previous provider. A nursing facility sale between family members may be approved by Medicaid and the new owner may be considered a new provider under certain circumstances, as outlined in the Ownership Changes and Medicaid Termination section of this appendix.

**10.13.A. ELIGIBILITY CRITERIA**

The provider must be a Class I nursing facility:

- The provider must demonstrate that the current Medicaid reimbursement (Rate + QAS) does not provide adequate funding to deliver a level of care to Medicaid beneficiaries in the facility that assures “each resident attains and maintains the highest practicable physical, mental, and psycho-social well-being” as required by the Omnibus Budget Reconciliation Act (OBRA) of 1987.
- The nursing facility Variable Rate Base amount must meet the following criteria:
  - For a Current Provider – The facility's Variable Rate Base is at or below the corresponding Class Average Variable Cost. The Average Variable Cost used for the class is the one that corresponds with the October 1 to September 30 rate year for which rate relief has been requested.
  - For a New Provider in a Medicaid-enrolled nursing facility – The facility's current Variable Rate Base is at or less than 80 percent of the corresponding Class Average Variable Cost. The Average Variable Cost used for the class is the one that corresponds with the October 1 to September 30 rate year for which rate relief has been requested. A new provider in a facility with a Variable Rate Base between 80 and 100 percent of the corresponding Class Average Variable Cost is eligible for accelerated rebasing and is treated as a current provider.
- A current Medicaid provider agreement for the facility is in effect. The rate relief period is applied to the facility and not the owner, provider, or licensee. A change of ownership, provider, or licensee during the rate relief period does not end the agreement for rate...
relief under this policy as long as the new owner, provider, or licensee fully complies with the requirements of the rate relief agreement.

- The nursing facility provider must also meet at least one of the following six criteria:

  - The sum of the provider's Variable Rate Base, Economic Inflation Update, and other associated rate add-ons (excluding Nurse Aide Training and Testing reimbursement), plus the Net Quality Assurance Supplement, must be less than the provider's audited Medicaid variable cost per resident day for the provider's two fiscal cost reporting periods (not rate setting periods) of not less than seven months immediately prior to the first period of rate relief. This comparison to cost is a measurement to normal reimbursement rate calculation methodology and excludes the effect of Executive Order reimbursement actions. The provider must submit a per diem cost analysis using the outline format presented as a reference titled "Worksheet to Establish Criteria for Nursing Facility Class I Rate Relief". The required cost analysis information is available in electronic file format on the MDHHS website. (Refer to the Directory Appendix for website information.)

  - The provider is required, as a result of a survey by the SSA, to correct one or more substandard quality of care deficiencies to attain or sustain compliance with Medicaid certification requirements. The survey must have occurred within six months prior to the provider's request for rate relief. The provider must submit a copy of the citation and an approved Plan of Correction outlining the action being taken by the provider to address the requirement(s). The provider must submit to the MDHHS LTC Reimbursement and Rate Setting Section (RARSS) a copy of the citation and an approved Plan of Correction outlining the action being taken by the provider to address the deficiencies. A copy of facility staffing levels before and after the survey citation must be provided to RARSS to demonstrate the staffing increase is sustained and is not for short-term training purposes only.

  - The provider has experienced a significant change in the level of care needed for current Medicaid residents in the nursing facility. Significant change is defined as an increase of ten minutes per patient day, as demonstrated by Minimum Data Set (MDS) data, which results in a corresponding increase in direct care staffing equal to or greater than the increase in patient minutes per day. The provider must submit an analysis comparing resident acuity levels from the rate base year to current resident acuity levels. Minimum Data Set (MDS) data must be used for this comparison. The data is subject to a clinical review by Medicaid. The analysis must also include a comparison of the previous and current nurse staffing levels required based on actual residential census or actual patient days and other nursing related costs or requirements likely to increase the operational costs. This does not include nursing administration staff.

  - The provider is new in a Medicaid-enrolled facility and the facility's most recent cost report submitted to Medicaid was incomplete, undocumented or had unsubstantiated cost data by the previous provider. Inadequate cost reporting includes non-payment of accrued liabilities due to the previous provider's bankruptcy as determined by Medicaid auditors or their designees in accordance with Medicaid allowable costs, or inadequate records to support the filed cost report. Proof of the change of ownership must be submitted along with an explanation of why the cost report data is inadequate to calculate the provider's reimbursement rate.
Rate relief is needed to prevent closure of a Medicaid-enrolled facility due to a regulatory action by the SSA, where the facility's closure would result in severe hardship for its residents and their families due to the distance to other nursing facilities, and no new provider would operate the facility at its current reimbursement rate. A facility would meet this hardship criteria only if a new owner has agreed to take over its operation and it is either the only nursing facility in the county or the facility has at least 65 percent of the Medicaid nursing facility (Class I, III and V) certified beds in that county.

The provider’s current Variable Rate Base is less than or equal to 60 percent of the corresponding rate year’s Variable Cost Limit. A facility is not eligible under this criterion if an owner’s or administrator’s compensation is above the current compensation limit. A provider with non-allowable related party transaction costs or non-allowable related party lease costs is not eligible under this criterion.

10.13.B. RATE RELIEF PETITION PROCESS

All petitions for rate relief must be in writing and submitted to RARSS. An authorized representative from the entity that holds the nursing facility license must sign the petition.

Medicaid will make the final determination for the approval or disapproval of the rate relief request. Medicaid will provide a written response within 60 calendar days of Medicaid’s receipt of the rate relief request. The response may include a request for additional information. The 60 calendar day time period does not begin until the provider has submitted all of the necessary documentation for Medicaid to evaluate the rate relief request. Once the nursing facility provider has complied with the request(s) for additional information, a written notice of the approval or disapproval is given within 30 calendar days of Medicaid’s receipt of the additional information.

If Medicaid requests additional or supporting documentation needed to complete the evaluation of the rate relief request, the provider must submit the documentation within 30 calendar days of the request. If Medicaid does not receive the documentation or the provider has not received a one-time extension for 30 additional calendar days, the SMA will issue a denial notice for rate relief. Appropriate time allowances will be made in cases where the needed data is for a time period that is not yet concluded. Subsequent rate relief requests by the provider will only be effective on a prospective basis following receipt of the new requests and documentation for rate relief.

10.13.C. RATE RELIEF AGREEMENT

If the rate relief petition is approved, Medicaid will prepare a rate relief agreement to be signed by the nursing facility authorized representative and an authorized representative of Medicaid. Once the agreement is approved, the provider’s Medicaid rate is adjusted consistent with the relief granted. The agreement outlines the rate relief granted, the effective date and any conditions or requirements.
Requirements may include, but are not limited to:

- Annual and interim cost reporting requirements during the period of rate relief.
- Appointment of a monitor, at facility cost, for oversight if, after consultation with staff in the SSA, such action is deemed appropriate.
- Follow-up surveys by the SSA.

### 10.13.D. RATE RELIEF PERIOD

Rate relief is effective on a prospective basis beginning in the month after receipt of the request by RARSS. No retroactive rate relief will be approved.

Nursing facility providers may apply and receive rate relief under this policy once every seven years, i.e., 84 months. This seven-year period begins on the effective date of rate relief.

**Example:** If rate relief takes effect January 1, 2003, the facility would not be eligible for rate relief again until on or after January 1, 2010.

The rate relief period is based on the facility, not on the owner or licensee. A change of ownership does not void the seven-year period under this policy.

### 10.13.E. WITHDRAWAL OF RATE RELIEF AGREEMENT

Medicaid may withdraw the rate relief agreement if the facility is cited by the SSA for serious certification violations while receiving rate relief. If the citation(s) is for serious and immediate threat or substandard quality of care, or the provider is not spending the money in accordance with the plan filed for special rate relief, the rate relief agreement may be withdrawn. Medicaid will review the nursing facility actions to determine if rate relief termination is warranted. If Medicaid terminates the agreement, the nursing facility's Medicaid rate will be recalculated in accordance with existing Medicaid reimbursement policy without rate relief. The rate change would take effect at the beginning of the month following issuance of a 30-calendar day notice to the provider.

### 10.13.F. RATE RELIEF APPEALS

Nursing facility providers that receive notices of denial for rate relief or are notified that a rate relief agreement has been withdrawn may file an appeal. Appeals are handled in accordance with the existing appeals process. Additional information appears in the Appeal Process section in this appendix.

### 10.13.G. RATE RELIEF FOR A NEW PROVIDER IN A MEDICAID-ENROLLED NURSING FACILITY WITH A VARIABLE RATE BASE LESS THAN OR EQUAL TO 80 PERCENT OF THE CLASS AVERAGE VARIABLE COST

A new provider in a Medicaid enrolled nursing facility with a Variable Rate Base less than or equal to 80 percent of the Class Average Variable Cost may request an increase in the current facility rate. The new provider must be operating in a facility that has previously participated with Medicaid.
10.13.G.1. RATE RELIEF METHODOLOGY

A new rate is calculated using the Class I Average Variable Cost for the appropriate year as the Variable Rate Base for the calculation of the facility Variable Cost Component, thereby increasing the facility per diem rate. This Variable Rate Base is in effect through the current State fiscal year rate period ending September 30.

Effective October 1 of the State fiscal year rate period starting after the new provider begins operation, the Variable Rate Base is determined using accelerated rebasing. The accelerated rebasing utilizes the new provider’s first cost reporting period that reflects at least seven months of nursing facility operation. The cost reporting time period is based on the new provider’s established fiscal year. The nursing facility allowable variable cost is indexed to October 1 of the year that is one year prior to the new rate year being calculated by applying the appropriate cost index. The new provider Variable Rate Base is limited to the Class I Average Variable Cost for the corresponding rate year time period.

The new provider receiving rate relief in this category must utilize the standardized data to file a Class I Rate Relief Interim Cost Statement prior to September 15. The Interim Cost Statement excerpted worksheets from the Medicaid annual cost report (Medicaid cost reporting formats identified below) must reflect actual or expected costs incurred by the nursing facility for the new provider’s first cost reporting period (as referenced above). The facility’s annual cost report may be used in lieu of the Interim Cost Statement if the cost report will be filed with Medicaid prior to September 15.

The Rate Relief Interim Cost Statement must contain the following completed schedules of the cost report in the MDHHS required electronic format:

- Checklist
- Worksheet A
- Worksheet B
- Worksheet 1
- Worksheet 1-C (only if claiming allocated related party costs)
- Worksheet 2

The Interim Cost Statement is used to determine the interim rate utilizing the accelerated rebasing provisions. The interim rate is revised when the acceptable annual cost report is submitted and used for accelerated rebasing.

The subsequent rate year calculation is in accordance with standard reimbursement methodology.

Example: A new nursing facility provider begins operations on January 1, 2004 and selects a September 30 year-end cost reporting period. Following request, the provider is approved for rate relief for rate year October 1, 2003 to September 30, 2004. The facility per diem rate is set using the Class I Average Variable Costs effective for the rate year beginning October 1, 2003 (effective for the new provider on January 1, 2004). The
provider must complete an interim cost statement for variable costs for the period January 1, 2004 through September 30, 2004 that must be filed by September 15, 2004. Effective October 1, 2004, the Variable Rate Base is the lesser of the variable costs from the interim cost statement indexed to October 1, 2003 or the Class Average Variable Cost effective October 1, 2004. Following the filing of the annual cost report, the variable costs from the annual report are indexed to October 1, 2003, and the interim Variable Rate Base is recalculated.

Rate relief is subject to audit and settlement with reimbursement adjustment using the principles and guidelines outlined in Medicaid policy. Rate relief reimbursement cannot exceed the appropriate cost and rate limitations. The provider is reimbursed by Medicaid for any underpayment, and the provider must reimburse Medicaid for any overpayment. If the interim Variable Rate Base determined for rate relief reimbursement to the provider exceeds the audited Variable Rate Base reimbursement by more than three percent, the provider will be assessed a penalty equal to 10 percent of the total overpayment amount.

A nursing facility provider receiving rate relief is allowed to participate in any other add-on reimbursement programs at their election. These programs are handled under the Medicaid policy applicable to the program. The costs associated with these add-on programs are not included in the cost settlement of the variable costs for rate relief as previously described.

10.13.G.2. RATE RELIEF DOCUMENTATION

It is the provider's responsibility to present supporting documentation with the rate relief petition. Petition from a new provider must include:

- Identification of the criteria under which relief is requested.
- Supporting documentation for the criteria.
- Detail of the circumstances causing the need for the rate relief request.
- The proposed effective date. The actual effective date of the rate relief is based on the date the petition is received by Medicaid. The earliest effective date would be the first day of the next month following the receipt of the request.
- The services time period that is the basis for which rate relief is requested.
- Specific details reflecting how the additional funds will be spent (i.e., staffing, consultants, medical supplies, etc.).
- Plans on how these changes will ensure the required level of resident care.

10.13.H. RATE RELIEF FOR A CURRENT PROVIDER OR A NEW PROVIDER IN A MEDICAID ENROLLED NURSING FACILITY WITH A VARIABLE RATE BASE BETWEEN 80 PERCENT AND 100 PERCENT OF THE CLASS AVERAGE VARIABLE COST

A current or new provider in a Medicaid enrolled nursing facility with a Variable Rate Base between 80 percent and 100 percent of the Class Average Variable Cost may request accelerated rebasing.
Rate relief applies only to the nursing facility’s Variable Rate Base. The facility’s qualification for adjustment of the Plant Cost Component in the Medicaid rate and Nurse Aide Training and Testing costs is handled in accordance with current Medicaid policy.

10.13.H.1. RATE RELIEF METHODOLOGY

Accelerated rebasing is the use of the Medicaid cost report data from the period ending in the current calendar year in the rate setting process, rather than using cost report data from the period ending in the previous calendar year under the standard reimbursement methodology. The nursing facility’s allowable variable cost is indexed to October 1 of the year that is one year prior to the rate year being calculated by applying the appropriate cost index.

Example: The provider's cost report for the period ending December 31, 2010 could be used to set the October 1, 2010 rate if approved for rate relief under the criteria established in the Eligibility Criteria Section of this Appendix. The provider would be allowed to participate in any add-on reimbursement programs at their election.

The cost reporting is based on the provider's established fiscal year and must not cover a time period of less than seven months. The cost report period used for accelerated rebasing must have a reporting period end date prior to January 1 of the State rate year. This example is applicable to the third and fourth criteria for rate relief qualifications as stated in the Eligibility Criteria Section of this Appendix.

Example: A cost report time period ending after January 1, 2010 could not be used for accelerated rebasing of a rate effective during the State rate year October 1, 2009 through September 30, 2010.

10.13.H.2. RATE RELIEF DOCUMENTATION

It is the provider's responsibility to submit supporting documentation with the rate relief petition. Petition from the provider must include:

- Identification of the criteria under which rate relief is requested.
- Supporting documentation for the criteria.
- Detail of the circumstances causing the need for the rate relief request.
- A requested effective date (the actual effective date of the rate relief is based on the date that the petition is received by Medicaid). The earliest effective date would be the first day of the next month. For example, a petition received on August 31 may be effective as soon as September 1.
- The services time period that is the basis for which rate relief is requested.
- Detail of the expenses that are not in the base period for the current or subsequent fiscal year Medicaid rate and how these expenditures relate to the provision of resident care.
- Plans on how these changes will ensure the required level of resident care.
10.13.I. RATE RELIEF FOR A CURRENT PROVIDER IN A MEDICAID ENROLLED NURSING HOME FACILITY WITH A VARIABLE RATE BASE LESS THAN OR EQUAL TO 60 PERCENT OF THE VARIABLE COST LIMIT

A current provider in a Medicaid enrolled nursing facility with a Variable Rate Base of less than or equal to 60 percent may request rate relief.

10.13.I.1. RATE RELIEF METHODOLOGY

A new Variable Rate Base of the rate is calculated that will be no more than 50 percent of the difference between the Class I Average Variable Cost and the existing Variable Rate Base for the current rate year. The resulting new Variable Cost Component will thereby adjust the facility's per diem rate. This Variable Rate Base will remain in effect through the current State fiscal year rate period ending September 30.

Example: A nursing facility has a current Variable Rate Base of $96, the Variable Cost Limit is $160, and the Class I Average Variable Cost is $150 (none of the figures are based on actual data, they are used for example purposes). Based on the facility's request for rate relief, they are found eligible for the maximum 50 percent of the difference between their current Variable Rate Base and the Average Variable Cost. Their Variable Rate Base will then increase from $96 to $123.

The provider receiving rate relief in this category must utilize the standardized data to file a Class I Rate Relief Interim Cost Statement at the time of application for relief. The Interim Cost Statement excerpted worksheets from the Medicaid annual cost report (Medicaid cost reporting formats identified below) must reflect actual or expected costs incurred by the nursing facility for the provider's cost reporting period. A facility with less than seven months remaining in its cost reporting period may file a second Interim Cost Statement at the end of that fiscal year.

The Rate Relief Interim Cost Statement must contain the following completed schedules of the cost report in the MDHHS required electronic format:

- Checklist
- Worksheet A
- Worksheet B
- Worksheet 1
- Worksheet 1-C (only if claiming allocated related party costs)
- Worksheet 2

The Interim Cost Statement is used to determine the interim rate for the remainder of the rate period. The interim rate is revised when the acceptable annual cost report is submitted and used for accelerated rebasing.
Effective October 1 of the following State fiscal year rate period, MDHHS determines the Variable Rate Base using accelerated rebasing. The accelerated rebasing utilizes the provider's first cost reporting period that reflects at least seven months of nursing facility operation after rate relief. The cost reporting time period is based on the provider's established fiscal year. The nursing facility allowable variable cost is indexed to October 1 of the year that is one year prior to the new rate year being calculated by applying the appropriate cost index.

The subsequent rate year calculation is in accordance with standard reimbursement methodology.

**Example 1 - Request Received with Less Than Seven Months in the Cost Reporting Period:** A provider has a cost reporting period ending on December 31 of each year. The provider is approved for rate relief for rate year October 1, 2014 to September 30, 2015. The facility per diem rate is set using a new Variable Rate Base of no more than 50 percent of the difference between the Variable Rate Base and Class I Average Variable Costs effective for the rate year beginning October 1, 2014. The provider must complete an Interim Cost Statement for variable costs for their cost report period that must be filed with their rate relief request. In this instance, they may submit a revised Interim Cost Statement for the provider's cost reporting period January 1, 2015 through December 31, 2015. The rate year beginning October 1, 2015 would then utilize the accelerated rebasing to determine the rate for that period based on the December 31, 2015 fiscal year.

**Example 2 - Request Received with Seven Months or More in the Cost Reporting Period:** A provider has a cost reporting period ending December 31 of each year. The provider is approved for rate relief and submits their Interim Cost Statement ending on February 1, 2014. The facility per diem rate is set using a new Variable Rate Base of no more than 50 percent of the difference between the Class I Average Variable Cost and the Variable Base Cost effective for the rate period February 1, 2014 through September 30, 2014. The rate relief would be effective through the end of the rate relief period of September 30, 2014. The rate year beginning October 1, 2014 would then utilize the accelerated rebasing to determine the rate for that period based on the December 31, 2014 fiscal year.

Rate relief is subject to audit and settlement, with reimbursement adjustment using the principles and guidelines outlined in Medicaid policy. Rate relief reimbursement cannot exceed the appropriate cost and rate limitations. The provider is reimbursed by Medicaid for any underpayment, and the provider must reimburse Medicaid for any overpayment. If the interim Variable Rate Base determined for rate relief reimbursement to the provider exceeds the audited Variable Rate Base reimbursement by more than three percent, the provider will be assessed a penalty equal to 10 percent of the total overpayment amount.

A nursing facility provider receiving rate relief is allowed to participate in any other add-on reimbursement programs at their election. These programs are defined under the Medicaid policy applicable to the program. The costs associated with these add-on programs are not included in the cost settlement of the variable costs for rate relief as previously described.
10.13.1.2. RATE RELIEF DOCUMENTATION

It is the provider's responsibility to submit supporting documentation with the rate relief petition. A petition from the provider must include:

- Identification of the criteria under which rate relief is requested.
- Supporting documentation for the criteria.
- Detail of the circumstances causing the need for the rate relief request.
- A requested effective date (the actual effective date of the rate relief is based on the date that the petition is received by Medicaid). The earliest effective date would be the first day of the next month (i.e., a petition received on August 31 may be effective as soon as September 1).
- The services time period that is the basis for which rate relief is requested.
- Detail of the expenses that are not in the base period for the current or subsequent fiscal year Medicaid rate and how these expenditures relate to the provision of resident care.
- Plans on how these changes will ensure the required level of resident care.

10.14 COUNTY MEDICAL CARE FACILITIES SPECIAL PAYMENTS (CMCFSP) PROGRAM

Eligible County Medical Care Facilities (CMCF) may receive special payments for unreimbursed costs incurred for services to Medicaid beneficiaries. Allocations to individual facilities will be determined based upon unreimbursed costs certified as public expenditures in accordance with the Code of Federal Regulations (CFR) 42 CFR 433.51. MDHHS will make special payments to CMCFs who provided services to Medicaid beneficiaries for dates of service on and after January 1, 2009.

10.14.A. ELIGIBILITY FOR CMCFSP PROGRAM

To be eligible for participation in the CMCFSP Program, each provider must meet the following conditions:

- The provider must be a county-owned and -operated licensed CMCF.
- The provider must be certified to serve Medicaid beneficiaries.
- The provider must have reported Medicaid bed days during the fiscal year covered.
- The provider must have incurred allowable costs in excess of Medicaid reimbursement for Medicaid bed days reported during the fiscal year covered.

10.14.B. ENROLLMENT IN CMCFSP PROGRAM

To participate in the CMCFSP Program, a Medicaid-participating CMCF must submit a signed copy of the Attestation of Participation form to the MDHHS LTC Reimbursement and Rate Setting Section (RARSS). (Refer to the Directory Appendix for contact information.) Providers must acknowledge and agree to the terms of participation in the CMCFSP Program as outlined in this section and in the attestation form.
If a provider desires to receive interim payments during their fiscal year, the request to participate in the CMCFSP Program must be received prior to that fiscal year for which participation is desired. A provider may also wait to submit a request to participate until the filing of their annual Medicaid cost report. If a provider opts to participate when they file their annual cost report, the provider may receive payments for unreimbursed costs through the initial and final reconciliation, but will not receive interim payments.

If participation is approved, RARSS will enroll the provider in the CMCFSP Program in the provider’s fiscal year following the approval of RARSS. The provider must submit an attestation form for each year that the provider desires to participate in the CMCFSP Program.

**10.14.C. CALCULATION OF CMCFSP PAYMENT**

An interim payment and reconciliation process will be employed to make payments to qualifying facilities. Allowable unreimbursed costs for services provided to Medicaid beneficiaries will be determined based on information obtained from the most recently filed cost report. Costs will be trended to the current state fiscal year using an inflation factor, without capital, taken from the Health Care Cost Review, which is published quarterly by Global Insight. Interim payments will then be made to qualifying CMCFs.

Interim payments will be reconciled twice. First, an interim reconciliation of the original payments will be conducted based on allowable Medicaid costs. Information needed to reconcile initial payments will be obtained from the cost report filed with MDHHS for the applicable reporting period. Second, payments will be readjusted based on changes to the filed cost report for the applicable reporting period, resulting from an audit of that cost report conducted by MDHHS.

Facilities receiving special payments for unreimbursed Medicaid costs are liable for any overpayment amount identified in the reconciliation process. Providers must repay any overpayment amount within 120 days of the date of notification of overpayment.
SECTION 11 - APPEAL PROCESS

A nursing facility participating in the Medicaid program may appeal an adverse action and certain determinations made by Medicaid. The provider will be given a written notice of the determination or action that outlines the proposed action, the provider's appeal rights, and the appeal process.

Adverse actions include, but are not limited to:

- A suspension or termination of a provider's Medicaid program participation.
- A reduction, suspension, or adjustment of provider payments.
- A retroactive adjustment following an audit or review of a facility's daily reimbursement rate or other services reimbursement.
- The prospective reimbursement rate determination.

Some elements of the Medicaid nursing facility reimbursement determination methodology are not appealed through an administrative process, but may be appealed to a court of appropriate jurisdiction. These are elements where an administrative remedy, if permitted for a single provider, would imply or necessitate a change for all providers or for all providers in a class and include, but are not limited to:

- The formula for the determination of the nursing facility cost factor.
- The Principles of Reimbursement and guidelines that define allowable costs.
- Medicaid Interim Payment (MIP) Program normal payment amount or reconciliation of payments and approved service billings.
- Non-Medicaid issues.
- Cost limits established in program policy.
- Medicaid's determination of allowable items and costs until an audit has been completed.

The review and hearings process for providers has been promulgated in the administrative rules and is explained in the MDHHS Administrative Hearings Manual located on the MDHHS website. (Refer to the Directory Appendix for website information.)

11.1 AUDIT APPEALS

Each nursing facility cost report is audited to ensure that expenses attributable to allowable cost were reported in adherence with Medicaid policy. Once the audit report is completed, the provider is given a Preliminary Summary of Audit Adjustments Notice. This notice outlines audit results and advises the provider of their appeal rights, including the right to an Area Office Conference.

If the provider or the provider's designee does not respond to the Preliminary Summary of Audit Adjustments within 15 business days of the date of the notice, the provider will receive a Final Summary of Audit Adjustment Notice. The notice advises the nursing facility of subsequent appeal rights, up to and including an administrative hearing. The provider or their designee has 30 calendar days from the date of the Final Summary of Audit Adjustments Notice to request a formal hearing in accordance with MDHHS rules for hearings.
If a provider wants an Area Office Conference, the provider or the provider’s designee must send a written request to the audit representative(s) within 15 business days of the Preliminary Summary of Audit Adjustments Notice date. The Area Office Conference is a forum for the provider or their designee to present documents and arguments contesting the Preliminary Summary of Audit Adjustments Notice. The audit representative(s) must schedule an Area Office Conference within 15 calendar days of the receipt of the provider's or provider designee's request. Within 15 calendar days after the Area Office Conference, the audit representative(s) must issue a Final Summary of Audit Adjustments Notice to the provider. The notice advises the nursing facility of subsequent appeal rights, up to and including an administrative hearing. The provider or their designee has 30 calendar days from the date of the Final Summary of Audit Adjustments Notice to request a formal hearing in accordance with MDHHS rules for hearings.

If a provider does not appeal or does not respond to the Final Summary of Audit Adjustments Notice or other notices or processes related to a conference or hearing within the allotted timeframe, the provider has waived the right to any further administrative review.

**11.2 RATE APPEALS**

Providers are notified in writing of their Medicaid reimbursement rate(s) at least 30 calendar days prior to the rate's effective date. The provider is given an opportunity for informal review of the rate determination by RARSS. The provider may also formally appeal issues of disagreement or dispute regarding the determined reimbursement rate. A notice of appeal rights, with instructions on how to request an appeal, is included in the final settlement Notice of Medicaid Reimbursement.

**11.3 REIMBURSEMENT SETTLEMENT APPEALS**

A final settlement reimbursement determination is made to determine the aggregate Medicaid reimbursement to the nursing facility for the time period covered by the cost report. Providers are notified in writing of the final reimbursement settlement and given an opportunity for informal review of the settlement determination. The provider may formally appeal issues of disagreement or dispute of the reimbursement settlement determination. A notice of appeal rights, with instructions on how to request an appeal, is included in the final settlement Notice of Program Reimbursement.

**11.4 PROVISIONAL RATES**

A provider will be given a provisional rate for the new rate year if:

- Medicaid is responsible for a delay in determination procedures.
- An Area Office Conference or Administrative Conference is in progress.
- The potential for an Area Office Conference or an Administrative Conference is still open at the beginning of the rate year that begins a year and a day after the end of the rate year that is being processed.
For this purpose, “delay in the procedures” means (if applicable):

- Medicaid failed to issue the Preliminary Summary of Audit Adjustments in a timely manner.
- Medicaid failed to conduct the Area Office Conference in a timely manner.
- Medicaid failed to issue the Final Summary of Audit Adjustments Notice, including a final determination notice, in a timely manner.

**11.5 PROVIDER PAYMENT ADJUSTMENT RESULTING FROM APPEAL DECISION**

If the appeal result requires a change in a provider’s rate or reimbursement level, the change will be made retroactively for service time periods coinciding with the effective dates of the original reimbursement rate notice. Payment adjustments will be made by an aggregate adjustment rather than by individual claim adjustments.
SECTION 12 - MEDICAID INTERIM PAYMENT PROGRAM

A nursing facility has the option of selecting one of two payment methods:

- payment directly related to claims submitted to and processed by CHAMPS, or
- enrollment in the Medicaid Interim Payment (MIP) Program.

Providers enrolled in MIP receive a pre-determined dollar amount in cycled payments. MIP payments represent the expected dollar amount that Medicaid would have paid to the nursing facility in claims reimbursement during a period of time. The MIP payment calculation is based on historical approved billings, current reimbursement rate and claims data. MDHHS may perform interim reconciliation(s) if a significant amount is due the program. After the end of the quarter, a comparison is made of the most recent pre-determined payment and the approved days activity billed. The result of the comparison could result in an increase or a decrease to the MIP payment amount. A reconciliation is done at the end of the provider's fiscal year.

12.1 ENROLLMENT IN MIP

To participate in MIP, a Medicaid participating provider must submit a written request to RARSS. New providers must submit the necessary information outlined in the New Provider Information Data format. Established providers may submit a written request. Providers must acknowledge and agree to the terms of participation in the MIP as outlined in this section. Requests to enroll in MIP must be received one month prior to the beginning of the calendar quarter for which enrollment is desired.

If enrollment is approved, RARSS will enroll the provider in MIP in the calendar quarter following the approval of RARSS. Once MIP payments begin, claims approved through CHAMPS, regardless of date of service, will not generate a separate or additional payment.

12.2 DISENROLLMENT IN MIP

To disenroll in MIP, the provider must submit a written request to RARSS. The request to disenroll must be received by RARSS one month prior to the end of a calendar quarter. Disenrollment is effective at the beginning of the calendar quarter following the receipt of the request by RARSS.

Providers terminating participation in the Medicaid Program will not receive a MIP payment in the final month of participation.

The final month's MIP payment is subject to reconciliation to determine the status of MIP. Special arrangements may be made where there is guaranteed assurance the State can recover any payment difference that may exist as the result of MIP participation. A provider interested in a special arrangement must contact RARSS for consideration.

Providers interested in re-enrollment in the MIP program must wait at least one full quarter before reapplying.
12.3 CLAIMS SUBMISSION

Providers are expected to submit claims for services rendered in a timely manner. Although a provider enrolled in MIP does not receive payment directly from claims submission, future MIP payments are affected by claims submission. MIP payments are calculated for expected days to be reimbursed.

12.4 CALCULATION OF MIP PAYMENT

The MIP amount is recalculated on a quarterly basis. The recalculation is to update the MIP amount to reflect the current Medicaid billing activity for the facility and the provider's Medicaid per diem rate when necessary. A recalculation may occur any time during a calendar quarter due to a change in the provider's per diem rate. The quarterly recalculation is based on the approved claims activity over the most recent twelve months, regardless of the date of service, and Medicaid utilization during the same time period. At the end of each quarter, the recently completed quarter's approved claims are used to update the MIP payment calculation.

The annually projected State liability to the provider (total reimbursement less other insurance and patient payments) will be divided by 24 to determine the regularly scheduled payment amount that will be made twice a month. The other insurance and patient payment amounts are based on the most recent quarter payment data projected to an annual amount.

In the case of major problems to Medicaid data system where a significant change has occurred in the approved claims data for a quarter as a result of Medicaid data system, the MIP amount would continue as previously calculated or the provider may request that RARSS perform a recalculation. If a significant reduction in the MIP amount is due to a problem outside the provider's control, such as a payment system error, the provider may request that RARSS perform a recalculation as a special consideration. RARSS staff will analyze and review the request to determine if special consideration is warranted.

Interim recalculations requests as a result of provider delays in billing must be submitted to RARSS for approval or denial. Providers that have demonstrated repeated occurrences of delays in billing may not receive an interim recalculation.

12.5 FREQUENCY OF MIP PAYMENT

The biweekly MIP payment is an estimate of one-half of the Medicaid liability for reimbursable services rendered in the previous month. The MIP payment will be paid on the first and third Thursday of each month. This means a provider could receive 100 percent of the monthly payment as early as the 15th day of the month and no later than the 21st day. Providers enrolled in MIP will receive six regularly scheduled payments during a calendar quarter.

12.6 ANNUAL RECONCILIATION

The reconciliation of approved claims and MIP payments is done annually, generally 90 calendar days after the end of the provider's fiscal year. If a provider changes their cost-reporting fiscal year, they must notify RARSS in advance in writing. Any change in a fiscal year could adversely affect a provider in the reconciliation.
If an underpayment has been made, the provider will receive a gross adjustment payment. If an overpayment is determined, recovery will be made by gross adjustment recovery against future payments. The gross adjustment process follows the Initial and Final Settlement practices in the respective subsections of this appendix. A provider may submit a written request to RARSS for an extended repayment schedule to repay the Program. The request must provide adequate justification for the need for extended repayment.

MIP amount determination, reconciliation and adjustments are not subject to appeal under the administrative rules. The MIP Program does not determine the reimbursement rate; it is an interim payment mechanism substituting for CHAMPS payments. The provider is given advance notice of the MIP actions and can request a review with RARSS. The provider’s action must be timely and specific to the problem.

12.7 NEW PROVIDERS

New providers, resulting from a change in facility ownership, may request MIP at the time of Medicaid Program enrollment by submitting the information in the New Provider Information Data format to RARSS.

New providers in facilities without historical Medicaid Program billing data are not eligible for MIP.
SECTION 13 – APPRAISAL GUIDELINES

Where historical cost records of a purchased asset are not available or are incomplete, or where fair market value or current reproduction cost must be established, a timely appraisal of the historical costs, fair market value, or depreciated reproduction cost (as appropriate) of the asset made by an independent, recognized expert is acceptable for depreciation and owner’s equity capital purposes. The appraisal of the historical cost of assets should produce a value approximating the cost of reproducing substantially identical assets of like type, quality, and quantity at a price level in a bona fide market as of the date of acquisition. The appraisal must be conducted in accordance with "The Principles of Appraisal Practices and Code of Ethics" of the American Society of Appraisers.

For Medicaid program purposes, the term "appraisal" refers primarily to the process of establishing or reconstructing the historical cost, fair market value, or current reproduction cost of an asset. It includes a systematic, analytic determination and the recording and analyzing of property facts, rights, investments, and values based on a personal inspection and inventory of the property.

<table>
<thead>
<tr>
<th>Appraisal Date</th>
<th>The date selected for establishing the value of fixed assets. For example, if December 31, 2002 was established as the appraisal date and the actual physical inventory of fixed assets was taken on February 1, 2003, any additions or dispositions of fixed assets between December 31, 2002 and February 1, 2003 must be taken into account in the appraisal values.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Appraised Book Value</td>
<td>The book value of an asset's appraised cost as of the date of acquisition less accumulated depreciation computed on an approved basis up to the appraisal date.</td>
</tr>
<tr>
<td>Appraisal Expert</td>
<td>An individual or firm that is experienced and specialized in multi-purpose appraisals of plant assets involving the establishment or reconstruction of the historical cost, fair market value, or current reproduction cost of such assets. The appraisal expert must employ a specially trained and well supervised staff with a complete range of appraisal and cost construction techniques; be experienced in appraisals of plant assets used by providers; and demonstrate a knowledge and understanding of the regulations involving reimbursement principles, particularly those pertinent to depreciation.</td>
</tr>
</tbody>
</table>

13.1 APPROVAL

Medicaid does not require the nursing facility representatives to get prior approval before an appraisal is made for Medicaid purposes. Medicaid requirements are that the appraisal be conducted in accordance with the provisions of these guidelines. Questions regarding the appraisal of the nursing facility should be directed to the MDHHS LTC Reimbursement and Rate Setting Section (RARSS). (Refer to the Directory Appendix for contact information.) The provider must make the appraisal agreement and final report available to Agency staff for audit review. The scope of the appraisal must conform to Medicare Principles of Reimbursement as modified by Michigan Medicaid for provider costs in effect on the appraisal date.

13.2 NEED FOR APPRAISAL

An appraisal for Medicaid purposes should be made only where the nursing facility provider has no historical cost records, has incomplete records of the depreciable fixed assets, or needs to determine an asset's fair market value or depreciated reproduction cost. The appraisal should develop the historical cost and related information that will assist in the construction, reconstruction, or revision of accounting
records to enable the provider to make proper distribution of depreciation expense in cost reports. Normally, a proprietary provider will not need a historical cost basis of its assets. Where an appraisal is being performed to determine the current reproduction of an asset, the appraisal should represent the cost to reproduce the actual facility in like kind and should not be inflated by such factors as current or anticipated space needs or different construction types, e.g., masonry versus wood frame. Appraisals must be performed within the time limit specified in the proposed agreement and not on a piecemeal or intermittent basis.

13.3 PURCHASE OF ONGOING FACILITY

In establishing the historical cost of assets where an ongoing nursing facility is purchased through a bona fide sale after July 1, 1966 and prior to August 1, 1970, the purchase price or portion thereof attributable to the asset must not exceed the fair market value of the asset at the time of the sale. For depreciable assets acquired after July 1970, the cost basis of the depreciable assets must not exceed the lower of the current reproduction cost adjusted for straight-line depreciation over the life of the assets to the time of the sale or the fair market value of the tangible assets purchased.

If the nursing facility was participating in the Medicaid program at the time of sale, the sale price used by the seller in computing gain or loss for the final cost report must agree with the historical cost used by the new facility owner (the purchaser) in computing depreciation. However, where the basis for depreciation to the purchaser for an asset acquired after July 1970 is limited to the lower of current reproduction cost (adjusted for straight-line depreciation from the time of asset acquisition to the time of the sale) or the fair market value, the basis for computing gain or loss to the seller is the sale price. The gain or loss on the sale of each depreciable asset must be determined by allocating the lump sum sale price among all the assets sold (including land, goodwill, and any assets not related to resident care) in accordance with the fair market value of each asset as it was used by the seller at the time of sale. If the purchaser and seller cannot agree on an allocation of sale price, or if they do agree but there is insufficient documentation of the current fair market value of each asset, the SMA will require an appraisal by an independent appraisal expert to establish the fair market value of each asset and will make an allocation of the sale price in accordance with the appraisal. In any case, the sale price must be allocated among all the assets sold, even if some of the assets will be disposed of shortly after the sale.

If a purchaser cannot demonstrate that the sale is bona fide, the seller's net book value will be used by the purchaser as the basis for depreciation of the asset. In such cases, the purchaser must record the historical cost and accumulated depreciation of the seller recognized under the Medicaid program, and these must be considered as incurred by the purchaser for Medicaid purposes.

The cost basis for the depreciable assets of a nursing facility purchased in a bona fide sale on or after August 1, 1970 is limited to the lowest of the following:

- The total price paid for the facility by the purchaser as allocated to the individual assets;
- The total fair market value of the facility at the time of the sale as allocated to the individual assets;
- The combined fair market value of the individually identified assets at the time of the sale; or
- The current reproduction costs of the depreciable assets, depreciated on a straight-line basis over the life of the assets to the time of the sale.
The purchaser has the burden of proving that the transaction was a bona fide sale, and if the burden is not met, the cost basis may also not exceed the seller's cost basis less accumulated depreciation.

13.4 **Fixed Assets Included in Appraised Values**

Fixed asset values established by an appraisal must include all plant assets owned by the nursing facility provider that are used in resident care or in the overall operation and administration of the facility. Fixed assets used in research and other non-allowable cost areas or functions should be included so that depreciation is reflected in those departmental costs to provide a proper basis for allocating administrative and general expense. Fixed assets of a related organization not used by a provider in rendering resident care, assets acquired in anticipation of expansion, and assets held for investment and not used in the plant operation should not be included as a part of the appraised values.

Generally accepted accounting principles relating to improvements or betterments must be followed in determining the asset values established by the appraisal. Repair or maintenance of a nature that restores an asset to its original condition but does not extend its useful life is not betterment or improvement but an expense of that period.

The pricing of assets to establish historical costs is based on such actual supporting documents as vendor invoices and construction contractor completion statements. In the absence of invoices, such other records as revenue stamps, board minutes, contracts of purchase, and deeds recorded with the county's Recorder of Deeds may be used.

Other methods, such as manufacturer's catalogs, libraries of material prices, or techniques involving reverse trending and price indices may be used to establish acquisition costs and dates. Such methods may be used only when actual supporting documents are not available. When these sources and techniques are used, consideration must be given to the manufacturers and to quantity discounts. The determined value should closely approximate the actual historical cost of an asset at the date of acquisition.

13.5 **Minor Equipment**

Where minor equipment is concerned, the SMA recognizes that the inventory costs of such equipment may not truly reflect the cost of equipment purchased and in use by the nursing facility provider. Differences in the capitalization policies of providers and their desire to limit property record controls over certain classes of small assets cause variations in the recorded costs of assets generally considered depreciable. Medicaid will only recognize an appropriate amount for minor equipment costs where the original equipment acquisition cost was recorded in the accounting records as capital asset cost and had not previously recorded the minor equipment acquisition as current period operations expense.

Minor equipment includes, but is not limited to, such items as wastebaskets, bedpans, syringes, catheters, silverware, mops, and buckets. The general characteristics of this type of equipment are as follows:

- The equipment is in no fixed location and is subject to use by various departments in the nursing facility;
- The items are comparatively small in size and unit cost;
- The equipment is subject to inventory control;
There is a fairly large quantity of the items in use; and

The equipment has a useful life of approximately three years or less.

However, where all other depreciable assets are concerned, such as buildings, building equipment, major movable equipment, land improvements, and leasehold improvements, the Medicaid program will not recognize a historical cost of such assets in excess of the historical cost used for federal income tax purposes. Nursing facility providers should be able to support this historical cost by reference to original documents such as contracts, vouchers, checks and other evidence. If the provider does not have such original documentation constituting primary evidence of the historical cost of assets, the SMA will consider the provider's federal income tax returns as secondary evidence to be used in establishing and verifying the historical cost of the assets. Further, it is possible that because of the effects of other provisions within the Medicare Principles of Reimbursement, such as "cost to related organizations," the historical cost under Medicaid might be less than that allowed and used for income tax purposes.

Under the Principles, nursing facility providers may change the useful lives of assets where this can be justified and appropriately adjust the accumulated depreciation applicable to the historical cost of the assets involved. The effect of such adjustments is to change the undepreciated amount of the historical cost for Medicaid purposes. The Principles do not permit providers to increase the historical cost basis of their assets to recognize elements of costs or expenditures that were not capitalized but were considered as expense items.

Example: If a provider determines that a physical modification of the building was a repair, and thus an item of expense not capitalized, and uses the historical cost so determined for federal income tax purposes, the provider may not change the historical cost basis to include that expenditure previously determined a repair and capitalize it, i.e., increase the historical cost basis of the building for Medicaid purposes.

Example: If a provider builds a facility and, in establishing the historical cost of the building, determines that material and labor used were not part of the historical cost of the building and charges the cost of such material and labor into expenses for federal income tax purposes, the provider may not then include such expenditures in the historical cost of the building for Medicaid purposes.

Costs in excess of the cost basis used for federal income tax purposes will not be recognized under Medicaid. Further, for cost reporting periods beginning on or after January 1, 1970, the SMA will also require a redetermination of allowable costs for the reporting period covered to reflect the effects of the adjustment in the historical cost basis of the assets. For cost reporting periods beginning before January 1, 1970, however, no redetermination of such allowable costs need be made for the reporting periods covered. Accumulated depreciation applicable to the depreciable assets under the Medicaid program will include the full amount allowed during those periods in which an increased historical cost basis was used. The net book value will be used for computations of gain or loss on the sale of assets and for any other reimbursement purposes under Medicaid.

13.6 DONATED ASSETS

The fair market value for a donated asset is the price that the asset would bring by bona fide bargaining between well-informed purchasers and sellers at the date of acquisition. Usually, the fair market price is the price at which bona fide sales have been consummated for assets of like type, quality, and quantity in a particular market at the time of acquisition.
Exception: In cases where an asset has been used or depreciated under the Medicaid program and then donated to a provider, the basis of depreciation will be the lesser of the fair market value or the net book value of the asset in the hands of the owner last participating in the program.

If the nursing facility provider's records do not include the fair market value of the donated assets as of the date of donation, an appraisal of such fair market value by a recognized appraisal expert will be acceptable for depreciation and owner's equity capital purposes.

Where material, labor, and services are donated in the construction of an asset, the asset value is the sum of the appraised cost of the material, labor, or services actually donated and the incurred cost of that part which was not donated. Labor costs should be determined in accordance with both the rates prevailing in the community at the time of construction and the type of labor incurred, i.e., if the labor donated was non-union labor, the cost would be at the non-union labor rate rather than at a union labor rate. If records are not available as to the actual labor, services, or material donated, the fair market value at the time of donation may be determined by the other methods shown in Medicare Principles of Reimbursement. Estimated labor costs provided by an owner or shareholder of a facility are not includable in the historical cost of constructed assets.

13.7 Assets Costing Less Than $100

Individual major movable assets costing less than $100, whether or not purchased in quantity prior to the appraisal date, may be capitalized at the time of appraisal at the purchase cost less accumulated depreciation from the date of acquisition regardless of the provider's past accounting practices. If an election is made to capitalize such assets, this policy must be applied consistently.

Nursing facility providers that have expensed such items while in the Medicaid program may not decide later to capitalize them. This also applies to those providers that eventually decide to have appraisals. The appraisal expert may group major movable equipment with a unit cost of $100 or less. However, the book value assigned to such grouped assets at appraisal may not exceed the book value of the assets if individually appraised. Identification of the individual assets comprising the group must be available.

13.8 Tagging of Equipment

For Medicaid program purposes, tagging of equipment is not mandatory. In the absence of tagging, however, alternate records must be maintained to satisfy audit verification of the existence and location of the assets.

13.9 Appraisal Programs

Since the condition of nursing facility provider asset records varies significantly, an appraisal program may be comprehensive or partial. For instance, a provider may engage an appraisal expert to appraise a part of its facility for which no historical records have been maintained, or a provider may need to have an appraisal made on a particular class of assets in a specific identified location.

Comprehensive appraisal programs are usually appropriate because of such complexities as lump-sum purchases of assets or a complete lack of historical cost records for all assets.
An appraisal program should include:

- A physical inventory and listing of pertinent data for all applicable assets in use or in standby status as of the appraisal date or report date. The physical inventory may be made by the provider or by the appraiser. If made by the provider, the appraiser must verify the inventory.
- The acquisition cost of each item or unit of property including, but not limited to, architect fees, installation costs, and freight.
- A classification of each item or unit of property in accordance with the American Hospital Association (AHA) Health Data and Coding Standards Group, Estimated Useful Lives of Depreciable Hospital Assets. These classifications are:
  - Land improvements;
  - Buildings, including building improvement, fixed equipment, building services equipment and other fixed equipment;
  - Major movable equipment;
  - Minor equipment; and
  - Leasehold equipment.

  **Note:** Refer to the Cost Classifications and Cost Finding section of this appendix for a comprehensive description for capital assets by category.
- Establishing an estimated useful life for each asset. The estimated useful life for purposes of the appraisal must be consistent with the estimated useful life for each asset used by the provider for depreciation purposes.
- Determining a salvage value for each asset.
- Selecting a depreciation method for each asset.
- Calculating depreciation provisions for the current reporting period.
- Calculating accumulated depreciation using an approved basis, from the date of acquisition to the start of the Medicaid reporting period in which actual depreciation is first claimed.
- Determining square footage for each cost center to identify all rooms on a floor or within a building if the provider did not previously do this. This should be accomplished as explained in the AHA Cost Finding and Rate Setting for Hospitals publication.
- Reconciling appraisal results with provider records. For assets acquired prior to January 1, 1966, the provider's plant asset records, if any, and accounting records must be considered even though they may be inaccurate. This reconciliation must be made for land improvements, buildings, building services equipment and, where possible, for other major asset classifications.

Where applicable, differences discussed by the reconciliation must be reflected as adjustments in the provider's accounting and plant asset records.

**13.10 APPRAISAL REPORT**

The appraisal expert must prepare a letter of certification. The letter should state that, in the appraisal expert’s judgment, the appraisal results were determined in conformity with Medicaid program regulations and requirements. This letter will include such information as:
13.11 LISTING OF ASSETS APPRAISED

If a listing of assets that constitutes the nursing facility provider's Medicaid property records is supplied, it must contain all necessary and pertinent information, even if portions were determined solely by the provider. A listing of assets should include the following information for each asset:

- Building location;
- Cost center or department;
- Asset description, usually including manufacturer's name, model number, serial number, etc.;
- AHA asset classification;
- Historical cost;
- Acquisition date;
- Estimated useful life to provider;
- Salvage value;
- Depreciation provision for current reporting period;
- Accumulated depreciation provision for current reporting period; and
- Pricing method necessary for adequate disclosure, where more than one method was used for various assets.

Reconciliations and comparisons with provider records must also be included, as well as square footage and other allocation basis information for buildings and cost centers within buildings.
13.12 RECORDS

Appraisal work papers must be made available to SMA staff or their designee upon reasonable request.

13.13 APPRAISAL EXPENSE

The expense of an appraisal to establish plant records for Medicaid program purposes, including the expense for appraisal of research and other non-resident departments incurred by a nursing facility provider after entrance into the program, may be included as an allowable cost. The expenses will be considered as administrative costs in the period incurred, subject to apportionment to the Medicaid program. Appraisal expenses incurred relative to assets not connected with provider operations are not allowable costs.

Where providers have appraisals made for other business purposes, such as insurance coverage, tax values or financing, the incurred expenses for such appraisals may be included in allowable costs as part of administrative and general costs. However, appraisal expenses incurred to establish values for the sale or anticipated sale of the nursing facility or provider organization are not allowable costs.

Where the SMA determines that a provider has incurred appraisal expenses to establish the historical cost of assets which were already adequately reflected in its books, records, or tax returns, the cost of performing the appraisal is not allowable.
SECTION 14 – COST REPORTING AND REIMBURSEMENT DESCRIPTIONS AND CLASSIFICATIONS

14.1 GENERAL

Refer to Cost Classifications and Cost Finding section of this appendix for detailed discussion and description of program cost categories for Plant, Variable Base, Support and Base/Support.

SECTION 1 – GENERAL INFORMATION

This chapter applies to enrolled outpatient therapy providers.

The primary objective of Medicaid is to ensure that essential medical/health services are made available to those who would not otherwise have the financial resources to purchase them. The primary objective of the Children’s Special Health Care Services (CSHCS) Program is to ensure that CSHCS beneficiaries receive medically necessary services, recommended and supported by a pediatric subspecialist, with care coordination that relates to the CSHCS qualifying diagnosis. Policies are aimed at maximizing the health care services obtained for this population with the limited number of dollars available.

The term Medicaid throughout this chapter refers to both the Medicaid and CSHCS programs.

1.1 SERVICE PROVISION

Outpatient therapy may be provided by Medicaid-enrolled providers when performed by properly credentialed professionals in the following settings:

- Outpatient Occupational Therapy (OT) and Physical Therapy (PT)
  - Outpatient Hospital
  - Comprehensive Outpatient Rehabilitation Facility (CORF)
  - Outpatient Rehabilitation Agency (Rehab Agencies)
  - CARF-Accredited Outpatient Medical Rehabilitation Program
  - Physical Therapist or Occupational Therapist in Private Practice (Medicare coinsurance and deductible amounts only)
  - Physician's Office
  - Optometrist's Office
- Outpatient Speech Language Pathology (ST)
  - Outpatient Hospital
  - Comprehensive Outpatient Rehabilitation Facility (CORF)
  - Outpatient Rehabilitation Agency (Rehab Agencies)
  - CARF-Accredited Medical Rehabilitation Program
  - CAA-Accredited University Graduate Education Program

1.2 OUTPATIENT THERAPY DATABASE

For specifics regarding Medicaid coverage of the Healthcare Common Procedure Coding System (HCPCS), refer to the Michigan Department of Health and Human Services (MDHHS) Outpatient Therapy Database on the MDHHS website. (Refer to the Directory Appendix for website information.) The database includes all covered outpatient therapy codes and applicable frequency limits.
1.3 DOCUMENTATION IN BENEFICIARY FILE

Outpatient therapy providers must maintain all applicable documentation in the beneficiary's file for seven years. For audit purposes, the patient’s medical record must substantiate the medical necessity of the item or service supplied.
SECTION 2 – PROVIDER REQUIREMENTS

2.1 OUTPATIENT HOSPITALS

Outpatient OT, PT and ST services may be provided to beneficiaries of all ages in the outpatient hospital.

2.2 COMPREHENSIVE OUTPATIENT REHABILITATION FACILITIES AND OUTPATIENT REHABILITATION AGENCIES

Comprehensive Outpatient Rehabilitation Facilities (CORFs) and Rehab Agencies may enroll with Medicaid for reimbursement of outpatient OT, PT and ST provided by qualified professionals. All CORFs and Rehab Agencies must provide proof of Medicare certification when enrolling in Medicaid.

2.3 COMMISSION ON ACCREDITATION OF REHABILITATION FACILITIES (CARF) ACCREDITED OUTPATIENT MEDICAL REHABILITATION PROGRAMS

CARF accredited outpatient medical rehabilitation programs may enroll with Medicaid for reimbursement of outpatient OT, PT and ST services provided by qualified professionals. The program must be freestanding and not part of, or owned by, a hospital, CORF or Rehab Agency. All CARF accredited outpatient medical rehabilitation programs must provide proof of their current CARF accreditation when enrolling in Medicaid.

2.4 UNIVERSITY AFFILIATED SPEECH-LANGUAGE PATHOLOGY GRADUATE EDUCATION PROGRAMS

University graduate education programs accredited by the American Speech-Language-Hearing Association’s (ASHA) Council on Academic Accreditation (CAA) in Audiology and Speech-Language Pathology may enroll with Medicaid for reimbursement of outpatient ST provided by qualified professionals. The university program must be freestanding and not part of, or owned by, a hospital, CORF or Rehab Agency. All university programs must provide proof of their current ASHA-CAA when enrolling in Medicaid.

2.5 PHYSICAL THERAPISTS AND OCCUPATIONAL THERAPISTS IN PRIVATE PRACTICE

Medicaid enrolls physical therapists and occupational therapists in private practice only for reimbursement of the Medicare coinsurance and deductible on behalf of dual Medicaid/Medicare beneficiaries. These providers may not bill for services provided to beneficiaries with Medicaid or CSHCS only.

2.6 PHYSICIAN’S OFFICE OR CLINIC

OT and PT services may be provided to beneficiaries of all ages in a physician's office.
SECTION 3 - CSHCS REQUIREMENTS

As a condition to participate in the CSHCS program, the beneficiary’s assigned pediatric subspecialist must coordinate treatment and services relating to the beneficiary’s CSHCS-qualifying diagnosis. CSHCS beneficiaries must be referred by their pediatric subspecialist directly to the specified Medicaid-enrolled provider of therapy services. Documentation of this referral must remain in the beneficiary’s medical record.

CSHCS diagnostic evaluations authorized by the local health department do not require a referral by the pediatric subspecialist.

CSHCS-covered outpatient therapy services must be directly related to the CSHCS-eligible diagnosis. Therapists providing or supervising services provided to CSHCS beneficiaries must have obtained at least one year of prior professional experience treating the health care needs of pediatric patients with physical disabilities. Professional resumes documenting pediatric experience, as well as a copy of the facility’s program description and mission/vision statement, must be submitted to the MDHHS Program Review Division. (Refer to the Directory Appendix for contact information.) CSHCS will make the determination, based on this documentation, of whether the provider is approved to provide therapy services to CSHCS beneficiaries.

Once approved to provide therapy services to CSHCS beneficiaries, the provider may accept referrals from the pediatric subspecialist. When a CSHCS beneficiary presents for services, the provider must check the beneficiary’s CSHCS Client Eligibility Notice. Before billing for therapy services, the enrolled provider must be listed on the beneficiary’s CSHCS Client Eligibility Notice. Providers may contact the MDHHS Program Review Division to request addition to a Client Eligibility Notice. (Refer to the Directory Appendix for contact information.)

These requirements do not apply to services provided to Medicaid-only or dual Medicaid/CSHCS beneficiaries.
SECTION 4 – PRIOR AUTHORIZATION REQUESTS

PA is required for certain services before the services are rendered. To determine which services require PA, refer to the Standards of Coverage and Service Limitations Section of this chapter or the MDHHS Outpatient Therapy Database on the MDHHS website. (Refer to the Directory Appendix for website information.)

Requests for PA for all services must be submitted on the Occupational Therapy-Physical Therapy-Speech Therapy Prior Approval Request/Authorization form (MSA-115). (Refer to the Forms Appendix or the MDHHS website for a copy of the form.) Required medical documentation must accompany the form. The information on the PA request form must be:

- Typed – All information must be clearly typed in the designated boxes of the form.
- Thorough – Complete information, including the appropriate HCPCS procedure codes, must be provided on the form. The form and all documentation must include the beneficiary name and Medicaid identification (ID) number, provider name, address and the provider’s NPI number.

PA request forms for all eligible Medicaid beneficiaries must be sent or faxed to the MDHHS Program Review Division. To check the status of a PA request, contact the MDHHS Program Review Division via telephone. (Refer to the Directory Appendix for contact information.)

4.1 EMERGENCY PRIOR AUTHORIZATION

A provider may contact MDHHS to obtain a verbal PA when the physician/physician assistant/nurse practitioner providing the medical clearance has indicated that it is medically necessary to provide the service within a 24-hour time period.

To obtain verbal PA, providers may call or fax a request. If the provider faxes a request, the request must state, “verbal prior authorization required.” (Refer to the Directory Appendix for contact information.)

If a service is required during MDHHS nonworking hours, providers must contact the Program Review Division the next working day.

The following steps must still be completed before a PA number is issued for billing purposes:

- The verbal authorization date must be entered on the MSA-115.
- The MSA-115 must be submitted to the Program Review Division within 30 days of the verbal authorization.
- Supporting documentation must be submitted along with the PA request.

The verbal authorization does not guarantee reimbursement for the services if:

- The beneficiary was not eligible when the service was provided.
- The Program Review Division does not receive the completed MSA-115 and required documentation within 30 days of the verbal authorization.
- The required documentation is dated after the date of service.
4.2 **Retroactive Prior Authorization**

Services provided before PA is requested are not covered unless the beneficiary was not eligible on the date of service (DOS) and a subsequent eligibility determination was made retroactive to the DOS. If the MDHHS record does not show that retroactive eligibility was approved, then the request for retroactive PA is denied.

4.3 **Beneficiary Eligibility**

Approval of a service on the MSA-115 confirms that the service is authorized for the beneficiary. The approval does not guarantee that the beneficiary is eligible. To assure payment, the provider must verify eligibility for fee-for-service (FFS) Medicaid or CSHCS before initiating services.

4.4 **Reimbursement Amounts**

Outpatient therapy services are processed through the MDHHS Outpatient Prospective Payment System (OPPS) utilizing Medicare fee screens with an MDHHS reduction factor applied. For NOC codes and all codes without established fee screens, the approved reimbursement amount is indicated on the authorized PA request.

4.5 **Billing Authorized Services**

After authorization is issued, the information (e.g., PA number, procedure code, modifier, and quantity) that was approved on the authorization must match the information on the claim form. (Refer to the Billing & Reimbursement Chapters of this manual for complete billing instructions.)

The copy of the PA request returned to the provider must be retained in the beneficiary’s medical record.
SECTION 5 – STANDARDS OF COVERAGE AND SERVICE LIMITATIONS

5.1 OCCUPATIONAL THERAPY

MDHHS uses the terms Occupational Therapy, OT, and therapy interchangeably. OT is covered when furnished by a Medicaid-enrolled outpatient therapy provider when performed by:

- A licensed occupational therapist (OT);
- A licensed occupational therapy assistant (OTA) under the supervision of an OT (i.e., the OTA’s services must follow the evaluation and treatment plan developed by the OT, and the OT must supervise and monitor the OTA’s performance with continuous assessment of the beneficiary’s progress). All documentation must be reviewed and signed by the appropriate supervising OT; or
- A student completing his clinical affiliation under the direct supervision of (i.e., in the presence of) an OT. All documentation must be reviewed and signed by the supervising OT.

OT is considered an all-inclusive charge and MDHHS does not reimburse for a clinic room charge in addition to OT services unless it is unrelated. MDHHS expects OTs and OTAs to utilize the most ethically appropriate therapy within their scope of practice as defined by state law and/or the appropriate national professional association. OT must be medically necessary, reasonable and required to:

- Return the beneficiary to the functional level prior to illness or disability;
- Return the beneficiary to a functional level that is appropriate to a stable medical status; or
- Prevent a reduction in medical or functional status had the therapy not been provided.

<table>
<thead>
<tr>
<th>For CSHCS beneficiaries</th>
<th>OT must be directly related to the CSHCS-eligible diagnosis(es) and prescribed by the specialty physician who is overseeing care.</th>
</tr>
</thead>
<tbody>
<tr>
<td>For beneficiaries 21 years of age and older</td>
<td>OT is only covered if it can be reasonably expected to result in a meaningful improvement in the beneficiary’s ability to perform functional day-to-day activities that are significant in the beneficiary’s life roles despite impairments, activity limitations or participation restrictions.</td>
</tr>
</tbody>
</table>

MDHHS anticipates OT will result in a functional improvement that is significant to the beneficiary’s ability to perform appropriate daily living tasks (per beneficiary’s chronological, developmental, or functional status). Functional improvements must be achieved in a reasonable amount of time and must be maintainable. MDHHS does not cover therapy that does not have an impact on the beneficiary’s ability to perform age-appropriate tasks.

OT must be skilled (i.e., require the skills, knowledge and education of an OT). MDHHS does not cover interventions provided by another practitioner (e.g., teacher, registered nurse [RN], licensed physical therapist [PT], family member, or caregiver).
OT may be covered for one or more of the following:

- Therapeutic use of occupations*.
- Adaptation of environments and processes to enhance functional performance in occupations*.
- Graded tasks (performance components) in activities as prerequisites to an engagement in occupations*.
- Design, fabrication, application, or training in the use of assistive technology or orthotic devices.
- Skilled services that are designed to set up, train, monitor, and modify a maintenance or prevention program to be carried out by family or caregivers. Routine provision of the maintenance/prevention program is not a covered OT service.

* Occupations are goal-directed activities that extend over time (i.e., performed repeatedly), are meaningful to the performer, and involve multiple steps or tasks. For example, doing dishes is a repeated task. Buying dishes happens once; therefore, does not extend over time and is not a repeated task.

OT is not covered for the following:

- When provided by an independent OT**.
- For educational, vocational, or recreational purposes.
- If services are required to be provided by another public agency (e.g., community mental health services provider, school-based services).
- If therapy requires PA and service is rendered before PA is approved.
- If therapy is habilitative. Habilitative treatment includes teaching someone how to perform a task (i.e., daily living skill) for the first time without compensatory techniques or processes. This may include teaching a child normal dressing techniques or cooking skills to an adult who has not performed meal preparation tasks in the past.

Note: Federal EPSDT regulations require coverage of medically necessary treatment for children under 21 years of age, including medically necessary habilitative therapy services.

- If therapy is designed to facilitate the normal progression of development without compensatory techniques or processes.
- For development of perceptual motor skills and sensory integrative functions to follow a normal sequence. If the beneficiary exhibits severe pathology in the perception of, or response to, sensory input to the extent that it significantly limits the ability to function, OT may be covered.
- Continuation of therapy that is maintenance in nature.

** An independent OT may enroll in Medicaid to provide Medicare-covered therapy and bill Medicaid only for Medicare coinsurance and/or deductible.

5.1.A. DUPLICATION OF SERVICES

Some therapy areas (e.g., dysphagia, assistive technology, hand therapy) may be appropriately addressed by more than one discipline (e.g., OT, PT, speech therapy) in more than one setting. MDHHS does not cover duplication of service (i.e., where two disciplines are working on similar goals/areas). The OT is responsible to communicate
with other therapists and coordinate services. MDHHS requires any related documentation to include coordination of services.

5.1.B. SERVICES TO SCHOOL-AGED BENEFICIARIES

School-aged beneficiaries may be eligible to receive OT through multiple sources. MDHHS expects educational OT to be provided by the school system, and it is not covered by MDHHS or CSHCS. (Example: OT coordination for handwriting, increasing attention span, identifying colors and numbers.)

MDHHS only covers medically necessary OT when provided in the outpatient setting. Coordination between all OT providers must be continuous to ensure a smooth transition between sources.

Outpatient therapy provided to school-aged children during the summer months in order to maintain the therapy services provided in the school is considered a continuation of therapy services when there is no change in beneficiary diagnosis or function. Prior authorization is required before initiating a continuation of therapy.

If a school-aged beneficiary receives medically necessary therapy services in both a school setting (as part of an Individualized Education Plan [IEP]) and in an outpatient setting, coordination of therapy between the providers is required. Providers are to maintain documentation of coordination in the beneficiary’s file.

5.1.C. AQUATIC THERAPY

Medicaid does not cover aquatic therapy as a separately reimbursable treatment or modality. A covered therapeutic procedure performed in a pool would be reimbursed when billed using the HCPCS code describing the covered procedure as long as the service met all Medicaid coverage requirements.

5.1.D. GROUP THERAPY

OT is not covered by Medicaid when provided concurrently to a group of two or more individuals by the same therapist. Covered therapeutic procedures require direct (one-to-one) patient contact by the therapist.

5.1.E. SERIAL CASTING

Serial casting is a process in which a joint(s) which normally lacks full range of motion, is immobilized with a rigid cast. During this procedure, the affected joint(s) is gradually and repeatedly set in more anatomically correct alignment to improve joint alignment and/or to achieve a decrease in abnormal tone and increased muscle length, resulting in an increase in the range of motion.

Casts are applied and removed in succession, usually every week, over a specified period of time. Upon removal of each cast, the limb is stretched and a new cast is applied immediately to hold the limb in place.
Serial casting is a covered Medicaid/CSHCS benefit when performed by or under the direct supervision of a qualified therapist and defined in a treatment plan as medically necessary rehabilitation services for improving range of motion and/or reducing abnormal tone. Either the referral for therapy services must specifically indicate that the beneficiary is being referred for serial casting, or the referring provider must provide written concurrence of any treatment plan, including serial casting. For CSHCS beneficiaries without dual Medicaid eligibility, the service must be directly related to the CSHCS-eligible diagnosis and must be referred by the beneficiary’s assigned pediatric subspecialist.

5.1.F. PRESCRIPTION REQUIREMENTS

MDHHS requires a prescription from a physician/physician assistant/nurse practitioner for an OT evaluation and preparation of the treatment plan. The prescription must include beneficiary name, prescribed therapy, and diagnosis(es) or medical condition(s). MDHHS requires a new prescription if OT is not initiated within 30 days of the prescription date. An evaluation may be provided for the same medical diagnosis without PA twice in a 365-day period with a prescription. PA is required if an evaluation is needed more frequently.

<table>
<thead>
<tr>
<th>Evaluations</th>
<th>Evaluations must include standardized tests and/or measurable functional baselines. OT evaluations must be completed by an OT and include the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>▪ Treatment diagnosis and medical diagnosis, if different from the treatment diagnosis(es) (e.g., medical diagnosis of cerebral palsy with contractures being treated);</td>
</tr>
<tr>
<td></td>
<td>▪ OT provided previously, including facility/site, dates, duration, and summary of change;</td>
</tr>
<tr>
<td></td>
<td>▪ Current therapy being provided to the beneficiary in this or other settings;</td>
</tr>
<tr>
<td></td>
<td>▪ Medical history as it relates to the current course of therapy;</td>
</tr>
<tr>
<td></td>
<td>▪ The beneficiary’s current functional status (functional baseline);</td>
</tr>
<tr>
<td></td>
<td>▪ Standardized and other evaluation tools used to establish the baseline and to document progress;</td>
</tr>
<tr>
<td></td>
<td>▪ Assessment of the beneficiary’s performance components (strength, dexterity, range of motion, sensation, perception) directly affecting the beneficiary’s ability to function; and</td>
</tr>
<tr>
<td></td>
<td>▪ Assessment of the beneficiary’s cognitive skill level (e.g., ability to follow directions, including auditory and visual comprehension).</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Treatment Plan</th>
<th>The OT treatment plan that results from the evaluation must consist of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>▪ Time-related short-term goals that are measurable, functional, and significant to the beneficiary’s life goals;</td>
</tr>
<tr>
<td></td>
<td>▪ Long-term goals that identify specific functional maximum reasonable achievement, which serve as indicators for discharge from therapy;</td>
</tr>
<tr>
<td></td>
<td>▪ Anticipated frequency and duration of treatment required to meet short- and long-term goals;</td>
</tr>
</tbody>
</table>
- Plan for discharge from service, including the development of follow-up activities/maintenance programs;
- A statement detailing coordination of services with other therapies (e.g., medical and educational); and
- Prescribing provider signature verifying acceptance of the treatment plan.

CSHCS beneficiaries must have a treatment plan signed by the referring specialty physician.

### Initiation of Services

OT may be initiated without PA upon completion of the assessment and development of a treatment plan that is reasonable and medically necessary as documented in the patient record. The outpatient setting allows up to 144 units of OT services provided in the initial 12-month treatment period. If therapy is not initiated within 30 days of the prescription date, a new prescription is required.

PA is not required for the initial period of skilled therapy for the first 12 consecutive calendar months in the outpatient setting for a new treatment diagnosis or new medical diagnosis if:

- The beneficiary remains Medicaid-eligible during the period therapy is provided.
- A copy of the signed and dated (within 30 days of initiation of services) prescription for OT is on file in the beneficiary’s medical record.

Providers may initiate services without PA when there is a change in the treatment diagnosis and/or medical diagnosis resulting in decreased functional ability.

OT must be provided by the evaluating discipline. (Example: A speech-language pathologist cannot provide treatment under an occupational therapist’s evaluation.) Cosigning of evaluations and sharing treatments require PA.

MDHHS does not cover the service when Medicare determines that the service is not medically necessary.

### Requirements of Continued Therapy

The OT must request PA to continue therapy beyond the initial 12 months. When requesting PA, providers must complete the MSA-115. MDHHS returns a copy of the PA to the provider, and it must be retained in the beneficiary’s medical record.

Requests to continue active therapy must be supported by the following:

- Treatment summary of previous OT period, including measurable progress on each short- and long-term goal. This must include the treating OT's analysis of the therapy provided during the previous month, rate of progress, and justification for any change in the treatment plan. Do not send daily treatment notes.
- Progress summary related to the identified treatment goals, reporting progress toward those goals, as well as revised goals for the requested period of therapy.
- Documentation related to the period no more than 30 days prior to that time period for which prior approval is being requested.
- Statement of the beneficiary's response to treatment, including factors that have affected progress during this interim.
- Statement detailing coordination of services with other therapies (e.g., medical and educational) if appropriate.
A copy of the prescription must be provided with each request. The prescription must be hand-signed by the referring provider and dated within 30 days prior to initiation of the continued service.

A discharge plan.

When a beneficiary completes 144 units of initial therapy and then chooses to change providers for continued therapy, prior authorization for the continued therapy is required.

### Maintenance/Monitoring Services

In some cases, the beneficiary does not require active treatment, but the skills of an OT are required for training or monitoring of maintenance programs being carried out by family and/or caregivers, or continued follow-up for the fit and function of orthotic or prosthetic devices. PA is not required for these types of service for up to four times per 12-month period in the outpatient setting.

If continued maintenance therapy is needed after the initial period specified in the paragraph above, PA is required. The OT must complete an MSA-115 and include the following:

- Service summary, including a description of the skilled services being provided (to include the treating OT'S analysis of the rate of progress, and justification for any change in the treatment plan). Documentation must relate to the period immediately prior to that time period for which PA is being requested.
- A comprehensive description of the maintenance/activity plan.
- A statement of the beneficiary's response to treatment, including factors that have affected progress during this interim.
- A statement detailing coordination of services with other therapies (medical and educational) if appropriate.
- The anticipated discharge plan.
- The anticipated frequency and duration of continued maintenance/monitoring.

### 5.2 Physical Therapy

MDHHS uses the terms physical therapy, PT and therapy interchangeably. PT is covered when furnished by a Medicaid-enrolled outpatient therapy provider and performed by a licensed Physical Therapist (PT) or an appropriately supervised licensed Physical Therapy Assistant (PTA).

The PT must supervise and monitor the PTA's performance with continuous assessment of the beneficiary's progress. All documentation must be reviewed and signed by the supervising PT.

PT must be medically necessary and reasonable for the maximum reduction of physical disability and restoration of a beneficiary to his/her best possible functional level.
For CSHCS beneficiaries  
PT must be directly related to the CSHCS-eligible diagnosis(es) and prescribed by the specialty physician who is overseeing the beneficiary's care. Functional progress must be demonstrated and documented.

For beneficiaries 21 years of age and older  
PT is covered if it can be reasonably expected to result in a meaningful improvement in the beneficiary's ability to perform functional day-to-day activities that are significant to the beneficiary's life roles despite impairments, activity limitations or participation restrictions.

MDHHS anticipates PT will result in significant functional improvement in the beneficiary's ability to perform mobility skills appropriate to his chronological, developmental, or functional status. These functional improvements should be able to be achieved in a reasonable amount of time and should be durable (i.e., maintainable). PT making changes in components of function that do not have an impact on the beneficiary's ability to perform age-appropriate tasks is not covered.

PT must be skilled (i.e., require the skills, knowledge and education of a PT). MDHHS does not cover interventions provided by another practitioner (e.g., teacher, RN, OT, family member, or caregiver).

MDHHS covers the physical therapist's initial evaluation of the beneficiary's needs and design of the PT program. The program must be appropriate to the beneficiary's capacity, tolerance, treatment objectives, and include the instructions to the beneficiary and support personnel (e.g., aides or nursing personnel) for delivery of the individualized treatment plan. MDHHS covers infrequent reevaluations, if appropriate.

The cost of supplies and equipment used as part of the therapy program is included in the reimbursement for the therapy. MDHHS only covers a clinic room charge in addition to PT if it is unrelated.

PT services may be covered for one or more of the following reasons:

- PT is expected to result in the restoration or amelioration of the anatomical or physical basis for the restriction in performing age-appropriate functional mobility skills;
- PT service is diagnostic;
- PT is for a temporary condition that creates decreased mobility and/or function; or
- Skilled PT services are designed to set up, train, monitor, and modify a maintenance or prevention program to be performed by family or caregivers. MDHHS does not reimburse for routine provision of the maintenance/prevention program.

PT may include:

- Training in functional mobility skills (e.g., ambulation, transfers, and wheelchair mobility);
- Stretching for improved flexibility;
- Instruction of family or caregivers;
- Modalities to allow gains of function, strength, or mobility; and/or
- Training in the use of orthotic/prosthetic devices.
MDHHS requires a new prescription if PT is not initiated within 30 days of the prescription date.

PT is not covered for the following:

- When PT is provided by an independent PT. (An independent PT may enroll in Medicaid if they provide Medicare-covered therapy and intend to bill Medicaid for Medicare coinsurance and/or deductible only.)
- When PT is for educational, vocational, or recreational purposes.
- If PT services are required to be provided by another public agency (e.g., CMHSP services, school-based services [SBS]).
- If PT requires PA and services are rendered prior to approval.
- If PT is habilitative therapy. Habilitative treatment includes teaching a beneficiary how to perform a task (i.e., daily living skill) for the first time without compensatory techniques or processes. For example, teaching a child normal dressing techniques or teaching cooking skills to an adult who has not performed meal preparation tasks previously.

**Note:** Federal EPSDT regulations require coverage of medically necessary treatment for children under 21 years of age, including medically necessary habilitative therapy services.

- If PT is designed to facilitate the normal progression of development without compensatory techniques or processes.
- If PT is a continuation of PT that is maintenance in nature.
- If PT services are provided to meet developmental milestones.
- If PT services are not covered by Medicare as medically necessary.

Only medically necessary PT may be provided in the outpatient setting. Coordination between all PT providers must be continuous to ensure a smooth transition between sources.

### 5.2.A. DUPLICATION OF SERVICES

MDHHS recognizes some areas of therapy (e.g., dysphagia, assistive technology, hand therapy) may also be addressed appropriately by multiple disciplines (e.g., OT, PT, speech therapy) in more than one setting. MDHHS does not cover two disciplines working on similar areas/goals. The PT is responsible for coordinating/communicating with other therapists and providing documentation in the medical record.

### 5.2.B. SERVICES TO SCHOOL-AGED BENEFICIARIES

MDHHS recognizes school-aged beneficiaries may be eligible to receive PT through multiple sources. MDHHS expects educational PT (e.g., strengthening to play school sports) to be provided by the school system and is not covered by MDHHS or CSHCS.

Outpatient therapy provided to school-aged children during the summer months in order to maintain the therapy services provided in the school is considered a continuation of therapy services when there is no change in beneficiary diagnosis or function. Prior authorization is required before initiating a continuation of therapy.
If a school-aged beneficiary receives medically necessary therapy services in both a school setting (as part of an Individualized Education Plan [IEP]) and in an outpatient setting, coordination of therapy between the providers is required. Providers are to maintain documentation of coordination in the beneficiary’s file.

5.2.C. AQUATIC THERAPY

Medicaid does not cover aquatic therapy as a separately reimbursable treatment or modality. A covered therapeutic procedure performed in a pool would be reimbursed when billed using the HCPCS code describing the covered procedure as long as the service met all Medicaid coverage requirements.

5.2.D. GROUP THERAPY

PT is not covered by Medicaid when provided concurrently to a group of two or more individuals by the same therapist. Covered therapeutic procedures require direct (one-to-one) patient contact by the therapist.

5.2.E. SERIAL CASTING

Serial casting is a process in which a joint(s), which normally lacks full range of motion, is immobilized with a rigid cast. During this procedure, the affected joint(s) is gradually and repeatedly set in more anatomically correct alignment to improve joint alignment and/or to achieve a decrease in abnormal tone and increased muscle length, resulting in an increase in the range of motion.

Casts are applied and removed in succession, usually every week, over a specified period of time. Upon removal of each cast, the limb is stretched and a new cast is applied immediately to hold the limb in place.

Serial casting is a covered Medicaid/CSHCS benefit when performed by or under the direct supervision of a qualified therapist and defined in a treatment plan as medically necessary rehabilitation services for improving range of motion and/or reducing abnormal tone. Either the referral for therapy services must specifically indicate that the beneficiary is being referred for serial casting, or the referring provider must provide written concurrence of any treatment plan, including serial casting. For CSHCS beneficiaries without dual Medicaid eligibility, the service must be directly related to the CSHCS-eligible diagnosis and must be referred by the beneficiary’s assigned pediatric subspecialist. This may be met by the referring provider’s dated signature on the PT plan of care.

5.2.F. PRESCRIPTION REQUIREMENTS

MDHHS requires a prescription from a physician/physician assistant/nurse practitioner for a PT evaluation and preparation of the treatment plan. It must include the beneficiary’s name, prescribed therapy and diagnosis(es) or medical condition. A new prescription is required if PT is not initiated within 30 days of the prescription date.
| **Evaluation** | MDHHS does not require PA for evaluations. An evaluation is formalized testing in the early stages of a beneficiary's treatment program followed by periodic testing and reports to indicate the disposition of the beneficiary's treatment. Evaluations may be provided for the same diagnosis without PA twice in a 365-day period with a prescription. PA is required for more frequent evaluations.

PT evaluations must be completed by a PT, include standardized tests and/or measurable functional baselines, and include:

- Treatment and medical diagnosis, if different than the treatment diagnosis (e.g., medical diagnosis of cerebral vascular accident with gait treatment);
- PT previously provided, facility/site, dates, duration, and summary of change;
- Current therapy provided in this or other settings;
- Medical history as it relates to current PT;
- Beneficiary's current functional status (i.e., functional baseline);
- Standardized and other evaluation tools used to establish the baseline and to document progress;
- Assessment of the beneficiary's performance components (e.g., strength, dexterity, range of motion) directly affecting the beneficiary's ability to function; and
- Assessment of the beneficiary's cognitive skill level (e.g., ability to follow directions, including auditory, visual, and comprehensive). |

| **Treatment Plan** | MDHHS requires a PT treatment plan immediately follow the evaluation. The treatment plan must include:

- Time-related short-term goals that are measurable, functional, and significant to the beneficiary's function and/or mobility;
- Long-term goals that identify specific functional maximum reasonable achievement, which serve as indicators for discharge from therapy;
- Anticipated frequency and duration of treatment required to meet short-term and long-term goals;
- Plan for discharge from service, including the development of follow-up activities/maintenance programs;
- Statement detailing coordination of services with other therapies (e.g., medical and educational); and
- Prescribing provider signature verifying acceptance of the treatment plan.

CSHCS beneficiaries must have a treatment plan signed by the referring specialty physician. |
| Initiation of Services | MDHHS requires PT be initiated upon completion of an evaluation and development of a treatment plan that supports the reasonableness and medical necessity of therapy without PA.  
For the initial period, PT may be provided up to 144 units in 12 months in the outpatient setting.  
PT must be provided by the evaluating discipline (e.g., OT cannot provide treatment under a PT’s evaluation). Cosigning evaluations and sharing treatment requires PA.  
MDHHS does not require PA for the initial period of skilled therapy the first 12 consecutive calendar months in the outpatient setting for a new treatment diagnosis or new medical diagnosis if:  
- Beneficiary remains Medicaid-eligible during the period therapy is provided; and  
- A copy of the signed and dated (within 30 days of initiation of services) prescription for PT is on file in the medical record.  
MDHHS does not require PA when PT services are initiated when there is a change in the treatment diagnosis and/or medical diagnosis resulting in decreased functional ability. |
|---|---|
| Continued Active Treatment | MDHHS requires providers to obtain PA to continue PT beyond the initial 12 months. Providers must complete the MSA-115. MDHHS returns a copy of the PA to the provider after processing the request. The PA must be retained in the beneficiary’s medical record.  
Requests to continue Active Therapy must contain:  
- A treatment summary of the previous period of PT, including measurable progress on each short-term and long-term goal. This should include the treating PT’s analysis of the therapy provided during the previous month, the rate of progress, and justification for any change in the treatment plan. Do not send daily treatment notes.  
- A progress summary related to the identified treatment goals, reporting progress toward those goals, as well as revised goals for the requested period of PT.  
- Documentation related to the period no more than 30 days prior to that time period for which PA is being requested.  
- A statement of the beneficiary’s response to treatment, including factors that have affected progress during this interim.  
- A statement detailing coordination of services with other therapies (e.g., medical and educational), if appropriate.  
- A copy of the prescription, hand-signed by the referring provider and dated within 30 days prior to initiation of continued service, must be provided for each request.  
- A discharge plan.  
When a beneficiary completes 144 units of initial therapy and then chooses to change providers for continued therapy, prior authorization for the continued therapy is required. |
Maintenance/Monitoring Services

MDHHS recognizes that, in some cases, a beneficiary does not require active treatment but the skills of a PT are necessary for training, modifying, or monitoring of maintenance programs being performed by family and/or caregivers. PA is not required for these types of services for up to four times in 12 months for the outpatient setting.

If continued maintenance therapy is needed after the initial period specified in the paragraph above, PA is required for up to 90 consecutive calendar days in the outpatient setting.

The PT must complete an MSA-115 and include:

- A service summary, including a description of the skilled services being provided (including the treatment PT’s analysis of the rate of progress, and justification for any change in the treatment plan). Documentation must relate to the period immediately prior to that time period for which PA is requested.
- A comprehensive description or copy of the maintenance/activity plan.
- A statement of the beneficiary’s response to treatment, including factors that have affected progress during this interim.
- A statement detailing coordination of services with other therapies (e.g., medical and educational), if appropriate.
- A discharge plan.

5.2.G. DISCHARGE SUMMARY

MDHHS requires the PT to document a discharge summary to identify the completion of PT services and the discharge status. This must include:

- Dates of service (i.e., initial and discharge dates);
- Description of services provided;
- Functional status related to treatment areas/goals at discharge;
- Analysis of the effectiveness of the therapy program, including reasons for goals not met or changes in the treatment plan necessitated by changes in medical status;
- Description or copy of follow-up or maintenance program put into place, if appropriate;
- Identification of adaptive equipment provided (e.g., walker) and its current utilization, if appropriate; and
- Recommendations/referral to other services, if appropriate.

5.3 SPEECH THERAPY

The terms speech therapy, speech-language pathology, speech-language therapy, and therapy are used to mean speech and language rehabilitation services and speech-language therapy.

MDHHS covers speech-language therapy provided in the outpatient setting. MDHHS only reimburses services for speech-language therapy when provided by:

- A speech-language pathologist (SLP) with a current license.
An appropriately supervised SLP candidate (i.e., in their clinical fellowship year [CFY]) or having completed all requirements but has not obtained a license. All documentation must be reviewed and signed by the appropriately credentialed supervising SLP.

A student completing his clinical affiliation under direct supervision of (i.e., in the presence of) an SLP having a current license. All documentation must be reviewed and signed by the appropriately credentialed supervising SLP.

MDHHS expects that all SLPs will utilize the most ethically appropriate therapy within their scope of practice as defined by Michigan law and/or the appropriate national professional association.

Speech therapy must relate to a medical diagnosis, and is limited to services for:

- Articulation
- Language
- Rhythm
- Swallowing
- Training in the use of an speech-generating device
- Training in the use of an oral-pharyngeal prosthesis
- Voice

For CSHCS beneficiaries (i.e., those not enrolled in Medicaid; only enrolled with CSHCS), therapy must be directly related to the CSHCS-eligible diagnosis(es) and prescribed by the specialty physician who is overseeing the care of the beneficiary.

Therapy must be reasonable, medically necessary and expected to result in an improvement and/or elimination of the stated problem within a reasonable amount of time (i.e., when treatment is due to a recent change in medical or functional status affecting speech, and the beneficiary would experience a reduction in medical or functional status without therapy).

Speech therapy services must be skilled (i.e., require the skills, knowledge and education of a licensed SLP to assess the beneficiary for deficits, develop a treatment program and provide therapy). Interventions that could be provided by another practitioner (e.g., teacher, registered nurse [RN], licensed physical therapist [PT], licensed occupational therapist [OT], family member, or caregiver) would not be reimbursed as speech therapy by MDHHS.

Therapy is **not** covered:

- When provided by an independent SLP.
- For educational, vocational, social/emotional, or recreational purposes.
- If services are required to be provided by another public agency (e.g., PIHP/CMHSP provider, SBS).
- When intended to improve communication skills beyond premorbid levels (e.g., beyond the functional communication status prior to the onset of a new diagnosis or change in medical status).
If it requires PA but is rendered before PA is approved.

- If it is habilitative. Habilitative treatment includes teaching someone communication skills for the first time without compensatory techniques or processes. This may include syntax or semantics (which are developmental) or articulation errors that are within the normal developmental process.

  **Note:** Federal EPSDT regulations require coverage of medically necessary treatment for children under 21 years of age, including medically necessary habilitative therapy services.

- If it is designed to facilitate the normal progression of development without compensatory techniques or processes.

- If continuation is maintenance in nature.

- If provided to meet developmental milestones.

- If Medicare does not consider the service medically necessary.

5.3.A. DUPLICATION OF SERVICES

Some areas (e.g., dysphagia, assistive technology) may appropriately be addressed by more than one discipline (e.g., OT, PT, speech therapy) in more than one setting. MDHHS does not cover duplication of services, i.e., where two disciplines are working on similar areas/goals. It is the treating therapist's responsibility to communicate with other practitioners, coordinate services, and document this in his reports.

5.3.B. SERVICES TO SCHOOL-AGED BENEFICIARIES

School-aged beneficiaries may be eligible to receive speech-language therapy through multiple sources. Educational speech is expected to be provided by the school system and is not covered by MDHHS or CSHCS. Examples of educational speech include enhancing vocabulary, improving sentence structure, improving reading, increasing attention span, and identifying colors and numbers. Only medically necessary therapy may be provided in the outpatient setting. Coordination between all speech therapy providers should be continuous to ensure a smooth transition between sources.

Outpatient therapy provided to school-aged children during the summer months in order to maintain the therapy services provided in the school are considered a continuation of therapy services when there is no change in beneficiary diagnosis or function. Prior authorization is required before initiating a continuation of therapy.

If a school-aged beneficiary receives medically necessary therapy services in both a school setting (as part of an Individualized Education Plan [IEP]) and in an outpatient setting, coordination of therapy between the providers is required. Providers are to maintain documentation of coordination in the beneficiary's file.

5.3.C. REFERRAL FOR SPEECH THERAPY

A referral from a physician/physician assistant/nurse practitioner is required for Medicaid coverage of speech therapy. The referral for speech therapy must be documented in the beneficiary's medical record and must include the following:
- Beneficiary name;
- Beneficiary date of birth;
- Diagnosis for referral (for CSHCS beneficiaries, this must be the CSHCS-qualifying diagnosis); and
- A statement indicating that the beneficiary is being referred for speech therapy.

If therapy is not initiated within 30 days of the referral date, a new referral is required. A new referral must be made at least annually for continuing treatment lasting longer than 12 months. Whenever a beneficiary is discharged from speech therapy treatment, a new referral must be made and an evaluation and treatment plan must be completed before therapy may resume.

A copy of the referral must be attached to all PA requests for speech therapy.

<table>

<tr>
<th>Evaluation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does not require PA. This is formalized testing in early stages of a beneficiary’s treatment program followed by periodic testing and reports to indicate measurable functional change resulting from the beneficiary’s treatment. These may be provided for the same diagnosis without PA twice in a 365-day period with a referral. If an evaluation is needed more frequently, PA is required. Evaluations must include standardized tests and/or measurable functional baselines. The speech-language evaluation must be completed by an SLP and include:</td>
</tr>
<tr>
<td>- The disorder and the medical diagnosis, if different than the treatment diagnosis (e.g., medical diagnosis of cerebral vascular accident with dysphasia as the speech disorder being treated).</td>
</tr>
<tr>
<td>- Speech therapy provided previously, including facility/site, dates, duration and summary of measurable change.</td>
</tr>
<tr>
<td>- Current rehabilitation services being provided to the beneficiary in this or other settings.</td>
</tr>
<tr>
<td>- Medical history as it relates to the current course of therapy.</td>
</tr>
<tr>
<td>- Beneficiary’s current functional communication status (functional baseline).</td>
</tr>
<tr>
<td>- Standardized and other evaluation tools used to establish the baseline and to document progress.</td>
</tr>
<tr>
<td>- Assessment of the beneficiary’s functional communication skill level, which must be measurable.</td>
</tr>
<tr>
<td>- Medical, physical, intellectual deficits that could interfere with the beneficiary’s improvement in therapy.</td>
</tr>
</tbody>
</table>
Evaluations must include, but are not limited to:

- **Articulation** – standardized tests that measure receptive and expressive language, mental age, oral motor skills, articulation skills, current diet level (including difficulties with any food consistencies), current means of communication and a medical diagnosis.
- **Language** – standardized tests that measure receptive and expressive language, mental age, oral motor skills, current and previous means of communication, and medical diagnosis(es).
- **Rhythm** – standardized tests that measure receptive and expressive language, mental age, oral motor skills, measurable assessment of dysfluency, current means of communication and a medical diagnosis.
- **Swallowing** – copy of a video fluoroscopy or documentation that objectively addresses the laryngeal and pharyngeal stages, oral motor assessment that measures consistencies that have been attempted and the results, voice quality (i.e., pre- and post-feeding and natural voice), articulation assessment and a standardized cognitive assessment.
- **Voice** – copy of the referring provider’s medical assessment of the beneficiary’s voice mechanism and medical diagnosis.

<table>
<thead>
<tr>
<th>Treatment Plan</th>
<th>Is the immediate result of the evaluation and consists of:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>Time-related short-term goals</strong> that are measurable, functional and significant to the beneficiary’s communication needs.</td>
</tr>
<tr>
<td></td>
<td><strong>Long-term goals</strong> that identify specific functional maximum reasonable achievement, which serve as indicators for discharge from speech-language therapy services.</td>
</tr>
<tr>
<td></td>
<td><strong>Anticipated frequency and duration</strong> of treatment required to meet short-term and long-term goals.</td>
</tr>
<tr>
<td></td>
<td><strong>Plan for discharge from service</strong>, including the development of follow-up activities/maintenance programs.</td>
</tr>
<tr>
<td></td>
<td><strong>Statement detailing coordination of services</strong> with other therapies (e.g., medical and educational).</td>
</tr>
<tr>
<td></td>
<td><strong>Documentation of acceptance</strong> by referring provider of stated treatment plan. The treatment plan must be accepted by the referring specialty physician for CSHCS beneficiaries.</td>
</tr>
</tbody>
</table>

Referring provider acceptance of the speech therapy treatment plan must be documented by one of the following processes:

- Phone call to the referring provider (document date and time).
- Copy of the plan to the referring provider (document date sent and method sent).
- Referring provider’s sign-off on the treatment plan.

Documentation of the referring provider’s acceptance of the speech therapy treatment plan must be placed in the beneficiary’s medical record.
**Initiation of Services**

Therapy may only be initiated upon completion of an evaluation and development of a treatment plan that supports the reasonableness and medical necessity of therapy without PA.

For the initial period, speech may be provided up to a maximum of 36 times during the 12 consecutive calendar months in the outpatient setting. If therapy is not initiated within 30 days of the referral, a new referral is required.

No more than one encounter for individual speech therapy and one encounter for group speech therapy may be billed on the same date of service. Each encounter must represent a minimum of 25 minutes of therapy provided on the date of service.

Therapy must be provided by the evaluating discipline. (An OT cannot provide treatment under a SLP's evaluation.) Cosigning of evaluations and sharing treatments require PA.

PA is not required for the first 12 consecutive calendar months in the outpatient setting for a new treatment diagnosis or new medical diagnosis if:

- The beneficiary remains Medicaid-eligible and enrolled during the period services are provided; and
- A copy of the referring provider's signed and dated (within 30 days of initiation of services) referral for speech-language therapy is on file in the beneficiary's medical record.

Providers may also initiate services without PA when there is a change in the treatment diagnosis and/or medical diagnosis resulting in decreased functional ability.

<table>
<thead>
<tr>
<th>Continued Active Treatment</th>
</tr>
</thead>
<tbody>
<tr>
<td>MDHHS requires providers to request PA for therapy beyond the initial 12 months. The SLP must complete the MSA-115. MDHHS returns a copy of the PA to the provider after processing the request. The PA must be retained in the beneficiary's medical record.</td>
</tr>
</tbody>
</table>

Requests to continue active treatment must be accompanied by:

- Treatment summary of the previous service period, including measurable progress on each short-term and long-term goal. This must include the treating SLP's analysis of the therapy provided during the previous month, the rate of progress, and justification for any change in the treatment plan. Do not send daily treatment notes.
- A progress summary related to the identified treatment goals, reporting progress toward those goals, as well as revised goals for the requested period of therapy.
- Documentation related to the period no more than 30 days prior to that time period for which prior approval is being requested.
- A statement of the beneficiary's treatment response, including factors that have affected progress during this interim.
- A statement detailing coordination of services with other therapies (e.g., medical and educational), if appropriate.
- Anticipated frequency and duration of maintenance/monitoring.
- A discharge plan.
• A copy of the referral, hand-signed by the referring provider and dated within 30 days prior to initiation of continued service, must be provided with each request.

When a beneficiary completes 36 visits of initial therapy and then chooses to change providers for continued therapy, prior authorization for the continued therapy is required.

### Maintenance/Monitoring Services

A beneficiary may not require active treatment, but the skills of an SLP are required for training or monitoring of maintenance programs that are being carried out by a family member and/or caregiver. In the outpatient setting, these types of service may be provided without PA up to four times per 12-month period.

If continued maintenance therapy is needed after the initial period specified in the paragraph above, PA is required. The SLP must complete the MSA-115 and include:

- A service summary, including a description of the skilled services being provided. This should include the treating SLP’s analysis of the rate of progress and justification for any change in treatment plan. Documentation must relate to the period immediately prior to that time period for which PA is requested and can cover up to three months.
- A comprehensive description or copy of the maintenance/activity plan.
- A statement of the beneficiary’s response to treatment, including factors that have affected progress during this interim.
- A statement detailing coordination of service with other therapies (e.g., medical and educational) if appropriate.
- The anticipated frequency and duration of continued maintenance/monitoring.
- A discharge plan.

### 5.3.D. DISCHARGE SUMMARY

When the beneficiary is discharged from therapy services, the SLP must maintain a discharge summary on file as a mechanism for identifying completion of services and beneficiary status at discharge. The discharge summary should include:

- Dates of service (initial and discharge);
- Description of services provided;
- Functional status related to treatment areas/goals at discharge;
- Analysis of the effectiveness of the therapy program, including reasons for goals not met or changes in the treatment plan necessitated by changes in medical status;
- Description or copy of follow-up or maintenance program put into place, if appropriate;
- Identification of adaptive equipment provided and its current utilization, if appropriate; and
- Recommendations/referral to other services, if appropriate.
5.3.E. Evaluations and Follow-Up for Speech-Generating Devices

Up to six hours of face-to-face time spent by the SLP evaluating or re-evaluating a beneficiary to determine the need for a specified Speech-Generating Device (SGD) may be billed once in three years without PA. The results of this evaluation must be shared with the prescribing provider.

SGD follow-up care that requires the skills of an SLP, as is identified by the evaluating SLP, may be billed up to two times per year before PA is required. This service includes training or set-up services (including programming and modification) that are not provided by the SGD vendor.

An SLP evaluation for the use and/or fitting of a voice prosthetic device to supplement oral speech is only to be billed if the evaluation was done to determine the need for an electro-larynx. This service may be billed once in three years without PA.

PA is required for all SGDs. MSA-1653-B must be submitted for all original and replacement/upgrade SGDs. In addition, specific SGD documentation, described in the table below, must be included with the MSA-1653-B.

### 5.3.F. SUPPLIES AND EQUIPMENT

The cost of supplies and equipment used as part of the speech therapy is included in the reimbursement for the therapy services.

**SECTION 1 – GENERAL INFORMATION**

Michigan Department of Health and Human Services (MDHHS) administers the fee-for-service (FFS) programs for Medicaid, Healthy Michigan Plan, Children’s Special Health Care Services (CSHCS), Maternity Outpatient Medical Services (MOMS), Adult Benefits Waiver (ABW), and Plan First!. This chapter and the Michigan Pharmaceutical Product List (MPPL) comprise program policies and explain coverage and reimbursement for the services dispensed and billed by enrolled pharmacies.

Throughout this chapter the terms Medicaid and MDHHS are used to refer to the Michigan Medicaid FFS, Healthy Michigan Plan, CSHCS, MOMS, ABW, and Plan First! programs unless otherwise noted.

**1.1 MDHHS PHARMACY BENEFITS MANAGER AND OTHER VENDOR CONTRACTORS**

MDHHS retains all decisions for policy, coverage, and reimbursement, and contracts with a pharmacy benefits manager (PBM). PBM services provided include pharmacy claims payment (paper and electronic), claims instruction, prior authorization (PA), prospective drug utilization, retrospective drug utilization, clinical consultation, provider information lines, and Maximum Allowable Cost (MAC) rate setting. (Refer to the Directory Appendix for PBM contact information.)

The PBM website contains the:

- Pharmacy Claims Processing Manual for Michigan Medicaid
- Michigan Pharmaceutical Product List (MPPL)
- Preferred Drug List (PDL)
- Drug Utilization Review (DUR) Meeting Notices
- Dose Optimization Program
- Pharmacy and Therapeutics (P&T) Committee Meeting Notices
- Pharmacy Forms
- Maintenance Drug List

Pharmacies may call the PBM for questions or concerns. Beneficiaries may call the PBM Beneficiary Helpline. (Refer to the Directory Appendix for contact information.)

MDHHS contracts with other vendors to perform financial, program or provider audits on behalf of the State of Michigan. (Refer to the Pharmacy Resources portion of the Directory Appendix for additional information.)

**1.2 DEFINITIONS**

The following definitions have specific meaning in the Pharmacy program:

<table>
<thead>
<tr>
<th><strong>Average Wholesale Price (AWP)</strong></th>
<th>The list price published in drug price compendia (e.g., by First DataBank) used to price most pharmacy claims.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Brand-Name Drug</strong></td>
<td>A single-source drug, a cross-licensed drug or an innovator drug for which a lower-cost generic equivalent is available.</td>
</tr>
</tbody>
</table>
| **Compound**
| **Prescription** | The combination of two or more ingredients extemporaneously mixed in usually accepted therapeutic doses. This requires the pharmacist's skill in weighing, measuring, levigating, etc., at the time of dispensing. The allowable compounding fee applies to the preparation of an individual prescription. It does not apply to prescriptions dispensed from a previously prepared stock supply (i.e., premaking a special lotion, cream, or ointment in gallons or pounds). |
| **Dispensing Fee** | Payment for filling a prescription and all related services performed by a pharmacist. |
| **Drug Efficacy Study Implementation (DESI) Drugs** | FDA designations related to "substantial evidence" of effectiveness. These products are also known as proposed less than effective. |
| **Drug Rebate Program** | Administered by the Centers for Medicare & Medicaid Services' Center for Medicaid and State Operations. It was created by the Omnibus Budget Reconciliation Act of 1990 (OBRA '90) and requires drug manufacturers to enter into and have in effect a national rebate agreement with the Secretary of the U.S. Department of Health & Human Services (HHS) for states to receive Federal funding for outpatient drugs dispensed to Medicaid patients. To receive rebates, States must identify the drugs by their national drug code. |
| **Drug Utilization Review (DUR)** | A process designed to ensure that prescriptions are appropriate, medically necessary and not likely to result in adverse medical outcomes. |
| **Drug Utilization Review Board (DUR Board)** | An advisory board to the State's Medicaid Program that includes physicians and pharmacists. |
| **Fraud** | Deliberate, intentional, and willful act with the specific purpose of deceiving MDHHS with respect to any material fact, condition, or circumstance affecting eligibility or need. |
| **Generic Drug** | Refers to a nonproprietary drug or class of drugs. The generic name refers to the official chemical composition of the drug as published in the latest edition of a nationally recognized pharmacopoeia or drug compendium. Generics do not refer to a particular brand name product. |
| **Labeler** | Any firm that manufactures (including repackers or relabelers) or distributes (under its own name) the drug. |
| **Legend Drug** | A drug bearing the statement: "Caution – Federal Law Prohibits Dispensing without a Prescription." |
| **Long Term Care Pharmacy** | Refers to pharmacies specializing in provision of drugs and services in an institutional setting such as a nursing facility, medical care facility or hospital long term care unit. |
| **Maximum Allowable Cost (MAC)** | The maximum cost allowed by MDHHS for certain multiple source brands, generics, cross-licensed drugs and sometimes for sole-source drugs or classes. |
| **Multiple Source Drug (Multi-Source)** | A drug marketed or sold by two or more manufacturers or labelers, or a drug marketed or sold by the same manufacturer or labeler under two or more different proprietary names or both under a proprietary name and without such a name. |
| **National Council for Prescription Drug Programs (NCPDP)** | Develops standards for electronic pharmacy transactions (Point of Sale claims transactions). |
| **National Drug Code (NDC)** | The 11-digit code assigned to all prescription and over-the-counter products by the labeler/manufacturer of the product under Food and Drug Administration (FDA) regulations. |
### Medicaid Provider Manual

**Out of State Pharmacy**
An entity not housed within the state of Michigan but registered by the Michigan Board of Pharmacy. An Out of State Pharmacist is required to be licensed in the state the pharmacy is located in.

**Over-the-Counter (OTC) Drug**
A drug that can normally be purchased without a physician’s prescription, although it may require a prescription if covered by Medicaid.

**Pharmacist**
A person licensed under Michigan statutes to provide services within the scope of pharmacy practice.

**Pharmacy**
An entity registered by the Michigan Board of Pharmacy.

**Pharmacy and Therapeutics (P&T) Committee**
An advisory committee to MDHHS on issues affecting prescription drug coverage for its various health care programs. The committee recommends guidelines for prescription drugs covered in its various health care programs.

**Point of Sale (POS)**
Real-time on-line adjudication of pharmacy claims to the PBM. Point of Sale provides participating pharmacies real-time access to beneficiary eligibility, drug coverage, pricing information, guidelines for drug use, and dispensing fees.

**Prescribed Drug**
A drug, either legend or over-the-counter, that is ordered by a prescriber to be used by a patient to treat a disease or condition.

**Prescriptions Not Picked Up**
Retail prescriptions filled but not dispensed or picked up by the beneficiary or his representative.

**Prospective Drug Utilization Review (ProDUR)**
Detection, evaluation, and counseling components of pre-dispensing drug therapy screening. ProDUR is required at the point of sale before each prescription is delivered to a Medicaid beneficiary. ProDUR screening is the responsibility of each Medicaid participating pharmacy and is a requirement of Medicaid participation.

**Retrospective Drug Utilization Review (RetroDUR)**
Program that analyzes and interprets patterns of prescribing and dispensing beneficiary drug usage through periodic examinations of claims data to identify patterns of fraud and abuse, gross overuse, and inappropriate or medically unnecessary care.

**Tamper Resistant Prescription Pad**
A tamper resistant prescription pad must contain all three of the following characteristics:
- Prevent unauthorized copying of a completed or blank prescription form.
- Prevent the erasure or modification of information written on the prescription by the prescriber.
- Prevent the use of a counterfeit prescription form.

**Wholesale Acquisition Cost (WAC)**
The list price determined by a manufacturer for a pharmaceutical sold by a manufacturer to a wholesaler.

---

### 1.3 CHILDREN’S SPECIAL HEALTH CARE SERVICES

Pharmacy coverage for beneficiaries who only have CSHCS coverage is limited to those pharmaceutical products that are required for the treatment of the CSHCS qualifying diagnosis. The beneficiary’s CSHCS qualifying diagnosis is listed on his eligibility letter by ICD code. Pharmacies may not bill for pharmaceutical products not required for the treatment of the CSHCS qualifying diagnosis. Also, the MPPL specifies other coverages unique to this program.
1.4 **PLACE OF SERVICE**

Coverage and payment policies for products dispensed in the settings listed below are not contained in this chapter or the MPPL. Healthcare providers should refer to the provider-specific chapter for Hospital, Practitioner, Nursing Facility, or Laboratory in this manual for these services:

- Physician's office or clinic: Injectable products used in physician offices or clinics are reimbursed to the healthcare provider administering the drug, not a pharmacy. If a pharmacy sells injectable products to a physician or clinic, a pharmacy must obtain payment directly from the purchasing provider and not MDHHS. Injectable products are not to be dispensed to the beneficiary for the purpose of administration at the physician's office.

  Exception: Beneficiaries with a Benefit Plan ID of NH (Nursing Home) can receive injectable drugs as a pharmacy benefit due to the relationship between the nursing facility and its contracted providers.

- Inpatient hospital.
- Mental health, hospital long term care, and medical care facilities with in-house pharmacies.
- Laboratory.

1.5 **OUTPATIENT HOSPITAL**

Outpatient hospitals with pharmacies enrolled with MDHHS as pharmacy providers must bill for take-home pharmaceutical products in compliance with policies of this chapter and the MPPL. Such services cannot be billed under the outpatient hospital's NPI number.

Injectable drugs and single doses given on the premises, including products used in conjunction with lab, radiology, and other medical procedures, must be billed using the outpatient hospital's NPI number, not the pharmacy's NPI number.

1.6 **HOSPICE**

Services, including drugs and nutritional supplements related to a beneficiary's terminal illness, are provided by the hospice (Benefit Plan ID of Hospice). The hospice reimburses pharmacies for these services. Coverage, payment amounts, and billing procedures of the particular hospice must be followed. To confirm that a product is not related to the terminal illness, the pharmacist must contact the hospice regarding coverage before billing. A pharmacy must not bill MDHHS for prescription services related to the terminal illness.

The MDHHS PBM messages back to the pharmacy when claims are submitted for beneficiaries with a Benefit Plan ID of Hospice. It is the pharmacy's responsibility to assure that the claim submitted is not related to the beneficiary's terminal illness. If billings contrary to this policy are found in post-payment review, MDHHS will recover inappropriate payment.

1.6.A. **EXCEPTION FOR SELECTED HIV DRUGS**

MDHHS separately reimburses a pharmacy for selected HIV drugs that the beneficiary had previously used to prevent the terminal illness. These HIV drugs include Protease Inhibitors, Nucleoside/-tide Reverse Transcriptase Inhibitors, and Non-Nucleoside...
Reverse Transcriptase Inhibitors, even though the product is related to the terminal illness.

1.6.B. PRODUCTS NOT RELATED TO THE TERMINAL ILLNESS

Covered drug products not related to the terminal illness may be separately billed by the pharmacy. For example: A hospice beneficiary has leukemia and a lifelong condition of diabetes. Products related to the diabetes can be separately billed by a pharmacy provider.

1.7 MEDICAID HEALTH PLANS AND ABW COUNTY HEALTH PLANS

Providers should verify eligibility to determine if the beneficiary is enrolled in a MHP (Benefit Plan ID of MA-MC or MA-HMP-MC) for the DOS. (Refer to the Beneficiary Eligibility chapter for additional information.)

Coverage criteria (including PA) and reimbursement limits for members of MDHHS contracted Medicaid Health Plans (MHPs) and ABW County Health Plans (CHPs) may not follow the policies specified in this chapter applicable to FFS.

Each health plan enrolls its own providers, structures its own billing system, and sets up its own drug list. All plan providers are required to enroll/register in CHAMPS. Providers must contact the contracted plan for information regarding reimbursement issues.

Pharmacy Aspects of MHP & CHP: Quick Reference

<table>
<thead>
<tr>
<th>Benefit Plan ID</th>
<th>MA-MC (MHP), MA-HMP-MC (MHP) or ABW-MC (CHP)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Provider Enrollment</td>
<td>Pharmacies must follow the MHP or CHP procedures for enrollment to ensure payment.</td>
</tr>
<tr>
<td>Pharmaceutical Coverage</td>
<td>Approved MHP or CHP pharmaceutical products may differ from Medicaid FFS, CSHCS and ABW Programs.</td>
</tr>
<tr>
<td>Copayment</td>
<td>Copayments may differ. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).</td>
</tr>
<tr>
<td>Payment and Billing</td>
<td>Payment levels and billing methods are set by the MHP or CHP, not MDHHS.</td>
</tr>
<tr>
<td>Prior Authorization (PA)</td>
<td>Follow the MHP PA procedures.</td>
</tr>
<tr>
<td>Questions</td>
<td>For general managed care questions, call the MDHHS Provider Inquiry or Beneficiary Helpline. (Refer to the Directory Appendix for contact information.) Contact the individual MHP or CHP for specific coverage questions.</td>
</tr>
</tbody>
</table>

1.7.A. CARVE-OUT EXCEPTIONS

Select drugs and classes may be carved-out from the respective health plan’s reimbursement and paid Medicaid Fee For Service. (Refer to the PBM website listed in the Directory Appendix for a listing of these drug classes.)
Any services paid Fee For Service must follow appropriate guidelines for supporting documentation, including attending, billing, prescribing, referring, rendering and supervising provider requirements.

1.8 INTERMEDIATE CARE FACILITY FOR INDIVIDUALS WITH INTELLECTUAL DISABILITIES

Beneficiaries residing in an Intermediate Care Facility for Individuals with Intellectual Disabilities (ICF/IID) are identified by the Benefit Plan ID of ICF/IID. For Medicare/Medicaid dually-eligible beneficiaries, pharmacy services will be covered by Medicare Part D. Drugs not covered by Medicare Part D are included in the ICF/IID per diem rate.

1.9 MEDICARE PART D BENEFIT

The Medicare Modernization Act of 2003 provides a prescription drug benefit to Medicare beneficiaries. The benefit is commonly referred to as Medicare Part D. Dually eligible Medicare/Medicaid beneficiaries must obtain all Part D covered drugs through their Medicare Part D Plan (PDP or MA-PD).

Drugs covered by Medicare Part D, but not included in the beneficiary's Medicare Part D Plan's formulary, will not be covered by Medicaid.

Drugs excluded from coverage by Medicare Part D will not be covered by Medicaid, except for the following:

- Over-the-counter (OTC) drugs listed on the MPPL
- Over-the-counter agents used to promote smoking cessation
- Select group of vitamins and minerals prescribed at therapeutic doses for deficiency diagnoses that meet Medicaid coverage criteria

Questions concerning the Medicare Part D benefit must be directed to Medicare. (Refer to the Directory Appendix for contact information.)
SECTION 2 – PRESCRIBER REQUIREMENTS

All MDHHS-covered legend and over-the-counter drugs (OTCs), except condoms, require a prescription order by a licensed prescriber.

Coverage of pharmaceutical products is based on limitations stated in this chapter, the MPPL, and medical necessity. Determination of medical necessity and appropriateness of service is the responsibility of the prescribing physician/provider (prescriber) within the scope of currently accepted medical practice and MDHHS limitations. Participating providers must observe applicable State and Federal laws, rules, regulations, and policies. MDHHS may impose additional constraints to reduce misuse.

2.1 SCOPE OF PRACTICE

MDHHS only reimburses for products prescribed by a licensed prescriber that are within the prescriber's scope of currently accepted medical practice and MDHHS limitations.

2.2 PRESCRIBER IDENTIFICATION

Pharmacy providers must provide the individual prescriber's National Provider Identifier (NPI) on the submitted claim.

Refer to the Practitioner chapter for additional information.

2.3 SANCTIONED PRESCRIBERS

MDHHS does not reimburse for pharmaceuticals prescribed by providers sanctioned by the Federal Government, the State of Michigan, or for prescribers having a limited, expired (lapsed), or revoked license. A list of sanctioned providers is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

2.4 OTHER PERTINENT SECTIONS

Prescribers should refer to other pertinent sections in this chapter for policies and procedures related to Drug Utilization Review, Prior Authorization, and the MPPL.
SECTION 3 – PHARMACY REQUIREMENTS

3.1 COMPLIANCE WITH APPLICABLE STATE, FEDERAL, AND MDHHS PROVISIONS

A provider who complies with all licensing and regulation laws applicable to the practice of pharmacy in Michigan may enroll as a Medicaid provider. Applicable State and Federal laws, rules, regulations, and policies must be observed by participating pharmacies. MDHHS does not enroll dispensing physicians as Medicaid providers for pharmacy services. (Refer to the General Information for Providers Chapter of this manual for additional information.)

3.2 ENROLLMENT

Pharmacy enrollment is processed through CHAMPS. Refer to the General Information for Providers Chapter, Provider Enrollment section, for additional information.
SECTION 4 – COUNSELING REQUIREMENTS

Pharmacies must follow the counseling requirements mandated in State and Federal statutes and regulations. These requirements do not apply to drugs dispensed in nursing facilities that are in compliance with the drug regimen review procedures specified by the licensing authority.

4.1 OFFER TO DISCUSS

For every new prescription presented by the beneficiary, the pharmacy’s representative must offer the beneficiary the opportunity to discuss/receive counseling from the pharmacist regarding the new prescription. The offer for counseling must be in a positive, helpful manner. If practical, the offer to counsel must be face-to-face and verbal. Otherwise, it is permissible for the offer to be made in writing or by telephone. Pharmacies are required to provide toll-free access for beneficiary inquiries related to products dispensed. A pharmacist is not required to provide counseling when a beneficiary or representative refuses the offer for counseling.

4.2 DISCUSSION

When the beneficiary (or representative) accepts the offer for counseling, it must be provided by the pharmacist in person (whenever practical) or by telephone and may include written materials. Information must be in a language that can be understood by the beneficiary (or representative) and must include an opportunity for questions.

In addition to discussing interactions with drugs previously dispensed by the pharmacist, the discussion should also include the potential interaction with any other drugs the beneficiary indicates he is taking. The beneficiary (or representative) must be counseled in a confidential manner, consistent with any State or Federal regulations. Federal law requires that the pharmacist must discuss all the items indicated below, and any others deemed significant in the pharmacist’s professional judgment. If an interpreter is required, the provider must provide one free of charge.

- The name and description of the medication.
- The dosage form, dosage, route of administration, and duration of drug therapy.
- Special directions and precautions for preparation and use by the beneficiary.
- Common side effects or interactions and therapeutic contraindications that may be encountered, including their avoidance, and the action required if they occur.
- Techniques for self-monitoring drug therapy.
- Proper storage.
- Prescription refill information.
- Action to be taken in the event of a missed dose.
SECTION 5 - SIGNATURE LOG, DATA COLLECTION AND DOCUMENTATION

5.1 SIGNATURE LOG

Pharmacy providers must maintain a log containing the following information:

- Beneficiary’s name;
- The signature of the beneficiary or that of his representative; and
- The date of receipt of the prescription.

The log must effectively differentiate between prescriptions received by a beneficiary for which counseling was accepted and provided, and those for which counseling was offered and was declined. This log must be retained for review by MDHHS or the MDHHS agent for seven years and is subject to audit.

The signature log serves as verification of the beneficiary receiving the prescription billed. The absence of the appropriate signature indicates the beneficiary did not receive the prescription, and funds will be recouped from the pharmacy.

5.2 BENEFICIARY INFORMATION AND DATA COLLECTION REQUIREMENTS

To meet specified State and Federal requirements, pharmacies must make a reasonable effort to obtain, record, and maintain on file at least the following information:

- Name, address, telephone number, date of birth (or age), and gender of the beneficiary.
- Pharmacist notes on the beneficiary’s drug therapy.
- Beneficiary history when significant, including:
  - Disease state(s);
  - Known allergies and drug reactions; and
  - Comprehensive list of drugs and relevant devices.
- Whether the offer to counsel was made and whether this offer was accepted or rejected by the beneficiary or the beneficiary’s representative.

5.3 DOCUMENTATION REQUIREMENTS

To assure that pharmacy counseling and other data collection requirements were performed, pharmacies must record the required information in the beneficiary’s manual or electronic profile, in the prescription signature log, or any other system of records. Regardless of the format used, the associated documentation must be retained electronically or otherwise for a period of seven years, or longer if specified by law.
5.3.A. NON-CONTROLLED ELECTRONICALLY TRANSMITTED PRESCRIPTIONS

If a prescription is created, signed, transmitted and received electronically, all records related to that prescription must be retained electronically. Records must be retained electronically for a period of seven years, or longer if specified by law. Records must be made available within 72 hours or as requested. The electronically transmitted prescription must include all of the following information:

- The name, address, and telephone number of the prescriber;
- The full name of the patient for whom the prescription is issued;
- An electronic signature or other identifier that specifically identifies and authenticates the prescriber;
- The time and date of the transmission;
- The identity of the pharmacy intended to receive the transmission; and
- Any other information required by the federal act or state law.

The electronic equipment or system utilized in the transmission and communication of prescriptions must provide adequate confidentiality safeguards and be maintained to protect patient confidentiality as required under any applicable federal and state law and to ensure against unauthorized access. The electronic transmission of a prescription must be communicated in a retrievable, recognizable form acceptable to the intended recipient. The electronic form utilized in the transmission of a prescription must not include "dispense as written" or "d.a.w." as the default setting.

Prior to dispensing a prescription that is electronically transmitted, the pharmacist must exercise professional judgment regarding the accuracy, validity, and authenticity of the transmitted prescription. An electronically transmitted prescription that meets the above requirements is the original prescription.
SECTION 6 – GENERAL NONCOVERED SERVICES

This section specifies general coverage restrictions. However, drugs in other classes may not be covered. Pharmacies should review the MPPL for specific coverage. When possible, pharmacies are encouraged to suggest alternative covered therapy to the prescriber if a product is not covered.

The following drug categories are not covered as a benefit:

- Agents used for anorexia
- Agents used for weight gain
- Agents used for cosmetic purposes or hair growth
- Agents used for symptomatic relief of cough and colds
- Experimental or investigational drugs
- Agents used to promote fertility
- Agents used to promote smoking cessation not on the MPPL
- Vitamin/Mineral combinations not for prenatal care, end stage renal disease or pediatric fluoride supplementation
- Covered outpatient drugs that the Labeler seeks to require as a condition of sale that associated tests or monitoring services be purchased exclusively from the Labeler or their designee
- Covered outpatient drugs where the Labeler limits distribution
- Proposed less-than-effective (LTE) drugs identified by the Drug Efficacy Study Implementation (DESI) program
- Over-the-counter drugs not on the MPPL
- Drugs of Labelers not participating in the Rebate Program
- Drugs prescribed for “off label” use if there is no generally accepted medical indication in peer reviewed medical literature (Index Medicus), or listing of such use in standard pharmaceutical references such as Drug Facts and Comparisons, AMA Drug Evaluations, American Hospital Formulary Service Drug Information, or DRUGDEX Information Systems
- Drugs prescribed specifically for medical studies
- Drugs recalled by Labelers
- Drugs past CMS termination dates (Refer to the Directory Appendix for CMS website information.)
- Lifestyle agents
- Standard Infant Formulas
- Drugs used to treat gender identity conditions, such as hormone replacement
- Drugs covered by the Medicare Part D benefit
- Drugs not FDA approved or licensed for use in the United States
- Agents used for treatment of sexual or erectile dysfunction
SECTION 7 - MICHIGAN PHARMACEUTICAL PRODUCT LIST

The Michigan Pharmaceutical Product List (MPPL) identifies the pharmaceutical products that are covered by MDHHS. The MPPL pharmaceutical product coverages may vary by MDHHS program or be limited by age, clinical parameters, and/or gender. The Point of Sale pharmacy claim adjudication also provides coverage information related to a specific beneficiary or prescription.

The MPPL is posted on the PBM’s website. (Refer to the Directory Appendix for website information.) Providers must refer to the MPPL for the additions and deletions of drug products. Specific notification of changes will not be issued.

7.1 NOTIFICATION OF NEW OUTPATIENT DRUGS

MDHHS receives weekly, comprehensive new information about outpatient drugs from First DataBank. Manufacturers are not required to submit notification of new drug products. New drug products are required to be reviewed by the Pharmacy and Therapeutics (P&T) committee.

7.2 APPROVED LABELERS

MDHHS reimburses MPPL products distributed by approved Labelers who have signed rebate agreements with the Centers for Medicare & Medicaid Services (CMS). A list of these approved Labelers is located on the CMS website and identification is by the first five digits of a National Drug Code (NDC). (Refer to the Pharmacy portion of the Directory Appendix for CMS website information.)

Alcohol swabs, condoms, diaphragms, lancets, syringes, aerochambers, spacers, and peak flow meters provided by a pharmacy are covered regardless of the manufacturer's rebate agreement.
SECTION 8 – PRIOR AUTHORIZATION

8.1 PRIOR AUTHORIZATION PROCESSOR

The MDHHS PBM processes prior authorizations (PAs). Refer to PBM’s Pharmacy Claims Processing Manual for PA procedures. (See Directory Appendix for contact information.) Authorization to override denial edits must be obtained from the PBM.

Do not call the PBM’s Call Centers for:

- Supplies billed by Medical Suppliers, including enteral formula and Total Parenteral Nutrition (TPN), since these are only reimbursed to a Medical Supplier provider. Contact the MDHHS Program Review Division for PA. (Refer to the Directory Appendix for contact information.)
- Information about the member’s MHP. The provider must contact the MHP to obtain their policies.

8.2 PRIOR AUTHORIZATION REQUIREMENTS

PA is required for:

- Products as specified in the MPPL. Pharmacies should review the information in the Remarks as certain drugs may have PA only for selected age groups, gender, etc. (e.g., over 17 years).
- Payment above the Maximum Allowable Cost (MAC) rate.
- Prescriptions that exceed MDHHS quantity or dosage limits.
- Medical exception for drugs not listed in the MPPL.
- Medical exception for noncovered drug categories.
- Acute dosage prescriptions beyond MDHHS coverage limits for H2 Antagonists and Proton Pump Inhibitor medications.
- Dispensing a 100-day supply of maintenance medications that are beneficiary-specific and not on the maintenance list.
- Pharmaceutical products included in selected therapeutic classes. These classes include those with products that have minimal clinical differences, the same or similar therapeutic actions, the same or similar outcomes, or have multiple effective generics available.

8.3 RESPONSIBILITY FOR OBTAINING AUTHORIZATION

8.3.A. PHARMACY RESPONSIBILITY

Pharmacies may call the PBM Technical Call Center for exceptions on:

- Quantity;
- Early refills; and
- 72-hour supply of medication for emergency needs only when the prescriber is not available to obtain PA.
Pharmacies may call the PBM Clinical Call Center for exceptions on payment for brand name over the MAC.

The PBM Technical Call Center is available 24 hours per day/seven days a week.

Refer to the Directory Appendix for PBM’s Call Center contact information.

8.3.B. PRESCRIBER RESPONSIBILITY

Prescribers or their designees may call the PBM Clinical Call Center for any PA, but must call for any request that falls outside the categories noted above as applying to pharmacies.

The PBM Clinical Call Center is available after hours by telephone and by pager. The PBM may also be contacted by fax or in writing via U.S. mail.

Refer to the Directory Appendix for the PBM Clinical Call Center contact information, PA contact information and hours of operation.

8.4 DOCUMENTATION REQUIREMENTS

For all requests for PA, the following documentation is required:

- Pharmacy name and phone number
- Beneficiary diagnosis and medical reason(s) why another covered drug cannot be used
- Drug name, strength, and form
- Other pharmaceutical products prescribed
- Results of therapeutic alternative medications tried
- MedWatch Form or other clinical information may be required

8.5 ADDITIONAL DOCUMENTATION

Depending on the specific drug being prescribed, additional medical documentation may be required. The most common categories requiring additional documentation are:

8.5.A. BRAND OVERRIDE

Provide documentation of the therapeutic trial and failure reasons of the generic.

8.5.B. WEIGHT LOSS

- Current medical status, including nutritional or dietetic assessment.
- Current therapy for all medical conditions, including obesity.
- Documentation of specific treatments, including medications.
- Current accurate Body Mass Index (BMI), height, and weight measurements.
• Confirmation that there are no medical contraindications to reversible lipase inhibitor use; no malabsorption syndromes, cholestasis, pregnancy and/or lactation.
• Details of previous weight loss attempts and clinical reason for failure (at least two failed, physician supervised, attempts are required).

8.6 PRIOR AUTHORIZATION DENIALS

PA denials are conveyed to the requester. PA is denied if:

• The medical necessity is not established.
• Alternative medications are not ruled out.
• Evidence-based research and compendia do not support it.
• It is contraindicated, inappropriate standard of care.
• It does not fall within MDHHS clinical review criteria.
• Documentation required was not provided.
SECTION 9 – H2 ANTAGONIST AND PROTON PUMP INHIBITOR POLICY

For high dose use greater than 102 days in a 365-day period, PA is required for H2 Antagonists and Proton Pump Inhibitors (PPIs). MDHHS defines high dose use as:

<table>
<thead>
<tr>
<th>H2 Receptor Antagonists</th>
<th>Proton Pump Inhibitors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cimetidine: 800 mg per day or more</td>
<td>Omeprazole: 40 mg per day or more</td>
</tr>
<tr>
<td>Famotidine: 40 mg per day or more</td>
<td>Esomeprazole (Nexium): 40 mg per day or more</td>
</tr>
<tr>
<td>Nizatidine: 300 mg per day or more</td>
<td>Lansoprazole (Prevacid): 30 mg per day or more</td>
</tr>
<tr>
<td>Ranitidine: 300 mg per day or more</td>
<td>Rabeprazole (Aciphex): 20 mg per day or more</td>
</tr>
<tr>
<td></td>
<td>Pantoprazole (Protonix): 40 mg per day or more</td>
</tr>
</tbody>
</table>

Nonpreferred H2 Antagonists or PPIs require PA for both high and low dose use. Compliance with the H2 Antagonists and PPI Policy is monitored with POS or post-payment review.

Prescribers may request PA for high dose therapy over the 102 days through the PBM Clinical Call Center. (Refer to the Directory Appendix for contact information.) The following information is required for PA determination:

- Diagnosis
- Drug and dose for which PA is requested
- Date and results of GI testing
- All alternative H2 Antagonists and PPIs tried, including dose and duration
- Other prescribed medications relating to this diagnosis
- Reason patient cannot endure testing
- Health education or other counseling employed for this condition
SECTION 10 – DRUG UTILIZATION REVIEW

10.1 PROSPECTIVE DRUG UTILIZATION REVIEW

MDHHS utilizes Prospective Drug Utilization Review (ProDUR) edits in its Point of Sale (POS) system. ProDUR encompasses drug therapy screening, including problem detection, evaluation, and counseling components of pre-dispensed drugs.

In the POS system, MDHHS limits the number of messages to providers that concern potential drug problems to those that are critical to quality of care and appropriate dispensing. It is the provider’s responsibility to provide ProDUR screening and to adhere to beneficiary information and data collection requirements.

10.1.A. PRODUR SCREENING REQUIREMENT

Before prescriptions are filled or delivered, pharmacists must review the consequences of the drug therapy based on the appropriate standards and guidelines.

The review must screen for potential therapy problems due to:

- Therapeutic duplication
- Drug-disease contraindications (to the extent diagnosis information is available)
- Drug-drug interactions (including interactions with known over-the-counter drugs)
- Incorrect drug dosage or duration of drug treatment
- Drug-allergy interactions
- Clinical abuse/misuse
- Under-utilization or over-utilization

10.1.B. PRODUR ALERT MESSAGES

The PBM's POS system provides online assistance for the dispensing pharmacist. Incoming drug claims are compared to a beneficiary's pharmacy claims history file to detect potential therapeutic problems. ProDUR alert messages are returned to the pharmacist when significant problems are discovered by this review.

10.2 RETROSPECTIVE DRUG UTILIZATION REVIEW

Medicaid utilizes pharmacy data for retrospective drug utilization review (RetroDUR) as required by Federal law and the following compendia:

- American Hospital Formulary Service Drug Information
- United States Pharmacopoeia Drug Information
RetroDUR is intended to be an educational tool to reduce costs resulting from drug-induced illnesses and hospitalizations. The purpose of retrospective drug utilization review is:

- To identify high-risk cases for drug-induced illness.
- To communicate risk factors to prescribers and dispensing pharmacists for evaluation.
- To improve patient healthcare outcomes and quality of care.

RetroDUR alerts providers to a beneficiary’s medical condition and total drug usage from all prescribers and pharmacies. The MDHHS PBM reviews utilization data on a monthly basis and makes recommendations to the Michigan DUR Board for interventions and educational seminars.

10.3 MICHIGAN DRUG UTILIZATION REVIEW BOARD

The Michigan Drug Utilization Review (DUR) Board includes both physicians and pharmacists. After post-payment review, the DUR vendor sends appropriate intervention letters to pharmacies and prescribers. Based on the DUR intervention information, prescribers may choose to modify therapy. However, prescribers or pharmacists may also choose to correct beneficiary negative patterns by counseling, or provide background for re-evaluation by the DUR vendor or the DUR Board.

As needed, the PBM or DUR Board follows up on re-occurring patterns that have not been justified. Provider education or academic detailing may be provided to address re-occurring patterns.

10.4 CLINICAL CONSULTATION

MDHHS provides feedback to providers through its academic detailing program. Administered by PBM, Medicaid targets topics related to drug therapy where direct educational intervention to medical providers may prove beneficial in improving outcomes. The Michigan DUR Board approves the topics for academic detailing. Clinical consultants are Michigan-licensed pharmacists who are recruited and trained through the Michigan Pharmacists Association under the direction of PBM. Whenever possible, clinical consultants are assigned to call on medical providers who practice in the same geographical area as the detailing pharmacist to provide a personal and professional connection between the healthcare providers. Providers are encouraged to give the clinical consultants feedback on both topics presented and the overall program.
SECTION 11 – DISPENSING POLICY

11.1 DAYS SUPPLY

Prescription quantities are limited to the quantity specified by the prescriber. MDHHS covers up to a 34-day supply for acute medications, and up to a 102-day supply for maintenance medications.

The pharmacy must submit accurate days supply information. Submitting incorrect days supply information can cause false ProDUR messages and claim denials. It could also result in a pharmacy being targeted for a post-payment audit.

11.2 ACUTE AND MAINTENANCE SUPPLIES

Providers must bill and dispense as follows:

- For acute illness: The amount dispensed must be limited to the quantity required for the desired therapy during that episode of illness or up to a 34-day supply.
- For chronic illness:
  - Maintenance drugs must be dispensed in quantities as ordered by the physician and to achieve optimum therapy and economy of dispensing, or up to a 102-day supply.
  - If a prescription for a product on the maintenance list is for more than a month's supply and less than a 102-day supply, only one dispensing fee is allowed.
  - A maximum of 13 dispensing fees are paid for the same drug dispensed to the same beneficiary within a 365-day billing period.

A list of maintenance medications is posted on the PBM's website. (Refer to the Directory Appendix for website information.) This list does not exclude medications from other standard therapeutic class codes from being supplied in maintenance quantities. PA is necessary when a maintenance quantity of other medications is required for specific beneficiaries.

11.3 REFILLS

Refills must conform to the current Administrative Rules of the Michigan Board of Pharmacy, Michigan Public Health Code, state and federal statutes, rules, regulations, and policies. Claims will deny at point-of-sale if the utilization requirements have not been met.

11.4 PRESCRIPTIONS NOT PICKED UP

MDHHS does not reimburse for retail prescriptions filled but not dispensed or picked up by the beneficiary or his representative, and does not allow restocking fees. For prescriptions not picked up, pharmacies must claim adjust or reverse the claim for any payments received, including the dispensing fee. The pharmacy should reverse claims in a timely manner. However, MDHHS policy allows claim adjustments or reversals to be submitted up to twelve months after the original date of service. For example, if the Medicaid beneficiary does not pick up a prescription from the pharmacy within 14 calendar days from the date the prescription claim was submitted by the pharmacy, the prescription claim should be reversed on the 15th calendar day and must have been reversed by the 365th day. For audit purposes, a record of processed reversals must be retained by the pharmacy for seven years.
11.5 Tamper Resistant Prescriptions

A pharmacist can only fill a written prescription for a Medicaid FFS beneficiary or POS carveout drugs for MHP enrollees when executed on a tamper resistant prescription pad. (See the following subsections for special considerations.)

Additional information on the tamper resistant prescription pad policy can be found in CMS guidelines which are available online. (Refer to the Directory Appendix for website information.)

11.5.A. Exemptions

- A compliant pad is not required if the prescription is transmitted verbally or electronically by telephone, facsimile, or modem to the pharmacy per federal and state laws.
- MHP enrollee if the MHP is reimbursing the prescriptions.
- Medicaid FFS beneficiaries receiving prescription drugs not separately reimbursable to a pharmacy. This includes drugs provided incident to, or part of, another service or as part of a per diem payment in the following settings:
  - Nursing facilities
  - ICF/IID
  - Inpatient/Outpatient Hospitals
  - Clinical Settings (hospice, dental, physician office/clinic, laboratory and x-ray, renal dialysis)

11.5.B. Emergency Prescriptions

In the event a pharmacy receives a non-compliant emergency prescription, the prescribed drug may be dispensed. However, the prescriber must provide to the pharmacy a compliant prescription within 72 hours of the date the emergency prescription was filled.
SECTION 12 – QUANTITY AND BILLING UNITS

MDHHS uses standard metric billing units and the provider may not round fractions. For example, if the product is 2.500 ml, it must be billed as 2.500 ml, not 3 ml. The PBM's processing allows a quantity entry up to 999,999.999.

12.1 QUANTITY LIMITS

Dispensing quantities are limited according to accepted standards of practice, Food and Drug Administration (FDA)-approved Labeler recommendations and the recommendations of the Michigan DUR Board.

12.2 COMMON UNIT BASES

Quantities are based on the amount dispensed for the unit of the product. Thus, quantity field entries must be based on the amount dispensed for the unit specified in the MPPL. The most common unit bases are EACH, ML, or GM. Following are examples.

<table>

SECTION 13 – REIMBURSEMENT, COPAYMENTS, AND COORDINATION OF BENEFITS

13.1 USUAL AND CUSTOMARY CHARGE

Reimbursement is the lower of the usual and customary (U&C) charge or the MDHHS product cost payment limits and a dispensing fee minus the beneficiary copayment, with the exception of condoms. If a beneficiary has other insurance or Medicare coverage, the related other insurance or Medicare payments are subtracted from the MDHHS payment.

U&C charge is defined as a pharmacy's charge to the general public. The sum of charges for both the product cost and dispensing fee must not exceed a pharmacy's U&C charge for the same or similar service. The U&C charge must reflect all advertised discounts, special promotions, or other programs initiated to reduce prices for product costs available to the general public or to a special population.

If a pharmacy discounts prescriptions to an inclusive category of customers (e.g., over 60 years), the pharmacy must reflect this discount in its billings for MDHHS program beneficiaries in the same category.

13.2 OVER-THE-COUNTER DRUGS

The U&C charge for prescription-ordered OTC drugs may be different, but not greater, than the retail pharmacy's shelf price of the same product sold without a prescription.

13.3 SALES TAX

Sales tax must not be added to a pharmacy's U&C charge. MDHHS does not reimburse for sales tax.

13.4 PRODUCT COST PAYMENT LIMITS

Product Cost Payment Limits are based on the NDC the pharmacy identifies as the product that was dispensed. Reimbursement is the lower of the Average Wholesale Price (AWP) minus a discount, the Wholesale Acquisition Cost (WAC) markup, the MAC, or the provider's charge. Misrepresentation of the product's NDC results in denied payment and fraud/abuse sanctions subject to applicable Federal and State laws.

Entities or their contracted pharmacies that participate in the Federal 340B program must bill the 340B price.

Medicaid's AWP discount or equivalent WAC markup is posted on the MDHHS website. (Refer to the Pharmacy Resources portion of the Directory Appendix for website information.)

13.4.A. MAXIMUM ALLOWABLE COST

Maximum Allowable Cost (MAC) reimbursement levels for Michigan Medicaid are established and managed by an MDHHS contractor. MAC reimbursement levels are generally applied to multi-source brand and generic products. However, MAC reimbursement may also be applied to single source drugs or drug classifications where appropriate. New or changed MAC prices are posted on the contractor's website the next business day after they are determined. A monthly online MAC list is also available on the contractor's website. MAC reimbursement reviews will take place on an on-going
basis. In addition to the website, specific MAC reimbursement levels are also available by contacting the MAC vendor by US mail, e-mail, fax or telephone. (Refer to the Directory Appendix for the MAC vendor website and contact information.)

All requested MAC price reviews require the following information:

- The brand and generic name, strength, form, and NDC requested for review
- Reason for requested review (availability, price, or other)
- Supporting documentation that the MAC is below cost or the product is not available (wholesaler invoice to support a request)
- Date of service to identify the difference between reimbursement and actual cost
- Prescription number
- Company or pharmacy name, NPI, telephone number, and contact person

13.4.B. MAC OVERRIDES

Specific brand products have a MAC reimbursement level. To receive payment above the MAC reimbursement level, PA through the PBM is required. (Refer to the Directory Appendix for contact information.)

13.5 DISPENSING FEES

Dispensing Fee is defined as the fee charged for filling a prescription and all related services performed by a pharmacy. MDHHS dispensing fees are posted on the MDHHS website. (Refer to the Directory Appendix for website information.)

13.6 BENEFICIARY COPAYMENTS

13.6.A. MEDICAID COPAYMENTS

A $1 copayment for each generic/preferred drug dispensed, and a $3 copayment for each brand name/non-preferred drug dispensed, may apply for Medicaid beneficiaries age 21 years and older. A $1 copayment may apply to certain brand name drugs that are preferred. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).

Copayments cannot be discounted for promotional purposes.
### Copayment Exemptions

<table>
<thead>
<tr>
<th>Over Age 21 Exclusions</th>
<th>Other Exclusions</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ The pharmaceutical product is a family planning or pregnancy-related product.</td>
<td>▪ Medicaid beneficiaries who are under the age of 21 are excluded from the copay requirement.</td>
</tr>
<tr>
<td>▪ The beneficiary is in a nursing facility (Benefit Plan ID of NH or Level of Care code 55 or 56). (Refer to the Nursing Facility section of this chapter for additional information.)</td>
<td>▪ All CSHCS and MOMS beneficiaries are excluded, including those over age 21.</td>
</tr>
<tr>
<td>▪ The beneficiary is enrolled in a hospice program (Benefit Plan ID of Hospice).</td>
<td>▪ Medicare/Medicaid dual eligibles.</td>
</tr>
</tbody>
</table>

Claims for drugs related to the treatment of the following chronic conditions are exempt from copayments for HMP beneficiaries:

- Alcohol Use Disorder
- Asthma
- Chronic Kidney Disease
- Chronic Obstructive Pulmonary Disease and Bronchiectasis
- Deep Venous Thrombosis (while on anticoagulation)/Pulmonary Embolism (chronic anticoagulation)
- Depression
- Diabetes
- Heart Failure
- HIV
- Hyperlipidemia
- Hypertension
- Ischemic Heart Disease
- Obesity
- Schizophrenia
- Stroke/Transient Ischemic Attack
- Substance Use Disorder
- Tobacco Use Disorder
13.6.B. Medicare Part D Copayments

Refer to the Billing Beneficiaries Section of the General Information for Providers Chapter of this manual for additional information regarding co-payment requirements. Beneficiaries may not be denied care or services based on inability to pay a co-payment, except as outlined in that section.

Medicaid will not reimburse:

- Copays, deductibles, or coinsurance for Medicare Part D drugs.
- Commercial insurance drug copays, deductibles, or coinsurance for Medicare/Medicaid beneficiaries who chooses to retain their creditable drug coverage offered by the commercial insurance in place of joining a Medicare Part D plan.
- Copays, deductibles, or coinsurance that exceed the standard Medicare Part D benefit for Medicare/Medicaid beneficiaries.

13.7 NonAllowable Charges to the Beneficiary

A pharmacy must not charge a beneficiary for a prescription if the pharmacy or prescriber fails to request prior authorization (PA). For all products listed in the MPPL indicating PA is required, the pharmacy may contact the PBM for PA or notify the prescriber that a PA is needed.

A pharmacy may charge the beneficiary its U&C charge for a product requiring PA only if the pharmacy has written documentation that the beneficiary was informed of the attempt and failure to obtain PA and of the resultant desire to purchase the drug privately. The pharmacy must not charge any portion of this claim to Medicaid.

The beneficiary must be made aware that PA and reimbursement cannot be obtained later.

13.8 Allowable Charges to the Beneficiary

A pharmacy may only charge a beneficiary the MDHHS established copayment for covered services. A beneficiary may not be charged for any cost of the prescription above the MDHHS reimbursement level. A pharmacy may only charge a beneficiary its usual and customary charge if the service is a noncovered service, or if MDHHS has denied the service based on lack of medical necessity and the beneficiary has indicated a desire to purchase the service privately. Furthermore, a beneficiary may not be charged for a prescription in lieu of the pharmacy accepting the reimbursement paid by MDHHS, or in lieu of obtaining PA when indicated.

13.9 Advertising

Advertisements must convey only participation in Medicaid. Advertising must not be used to influence the free choice of a pharmacy by a beneficiary. Promotions offering beneficiaries free goods, gift certificates, or shopping sprees in exchange for filled prescriptions are prohibited. No pharmacy may discount the copayment for promotional purposes.
13.10 COORDINATION OF BENEFITS

Coordination of Benefits (COB) (also referred to as Third Party Liability [TPL]) requires providers to bill other insurances, including Medicare Part B, before billing MDHHS. Pharmacy providers should submit both the primary insurer payment amount and the beneficiary’s liability (copayment, coinsurance, and/or deductible) under the primary insurer’s plan to MDHHS. Regardless of participation by the pharmacy provider with the other insurance and/or Medicare, MDHHS only reimburses for the coinsurance and deductible amounts up to the Medicaid allowable fee screen. If the other insurance’s (including Medicare) reimbursement exceeds the reimbursement level of Medicaid, no additional monies are paid. Providers must submit the charge as the amount allowed by the other insurance, indicating the other insurance payment (including the dispensing fee) and the other insurance copayment. In addition, the provider is to use the drug list established by the beneficiary’s other insurance carrier. If the other insurance carrier’s drug list covers a drug not on the MPPL, the prescriber must obtain PA from MDHHS. (For complete information on MDHHS policy regarding other insurance, refer to the Coordination of Benefits Chapter of this manual.)

If a provider receives payment from another insurance and/or Medicare after MDHHS has made full payment, the payment must be returned to MDHHS through a claim adjustment. Failure to reimburse MDHHS may be construed as fraud under the Medicaid False Claim Act. For billing information on COB, refer to the PBM Pharmacy Claims Processing Manual, the PBM website, or contact the PBM Technical Call Center. (Refer to the Directory Appendix for website and contact information.)
SECTION 14 – SPECIAL PRODUCT COVERAGE

14.1 AMPHETAMINE

Some drugs used to treat narcolepsy or hyperkinesis may be covered for beneficiaries over 17 years of age. The prescriber or designee must obtain PA before the pharmacy dispenses these products.

14.2 ANTIHEMOPHILIC DRUGS

A Medical Supplier must bill for infusion kits necessary for administration. (Refer to the Medical Supplier Chapter of this manual for additional information.)

Antihemophilic drugs are a Medicare Part B benefit. For beneficiaries who are eligible for both Medicare and Medicaid, the pharmacy must bill Medicare prior to billing Medicaid as explained in the Coordination of Benefits Chapter of this manual.

14.3 ANTINEOPLASTIC DRUGS

Covered chemotherapeutic agents are listed in the MPPL. Most injectable chemotherapy forms are not listed in the MPPL as reimbursement is made to the administering healthcare provider (e.g., physicians, outpatient hospitals). A dosage intended for parenteral infusion (continuous or intermittent), perfusion, or intracavity administration in an office, clinic, or outpatient hospital is not a reimbursable Medicaid benefit to a pharmacy. The pharmacy should bill the ordering provider of service.

Injectable chemotherapy and topical uses for these products may be reimbursed to a pharmacy for home use. Some of these agents may require PA. Refer to the MPPL for verification of PA requirements.

14.4 COMPOUNDED DRUGS

Medicaid defines a compounded drug as the combination of two or more ingredients not available from any Labeler in the combination prescribed. Compounded prescriptions must contain at least one product manufactured by an approved Labeler. The following compounded drug policies do not apply to infusion therapy.

14.4.A. EXCLUSIONS

Compounded drugs are not covered if active ingredients include:

- A noncovered legend drug or drug class (e.g., cough/cold, DESI);
- Only OTC drugs;
- Reconstitution of a product only; or
- Pre-mixed infusion solutions (Refer to the Directory Appendix for PBM website information to obtain the list of pre-mixed infusion solutions)

A compounded prescription is not covered if it contains noncovered products and is prescribed solely to circumvent program limitations.
14.4.B. DISPENSING FEES

Dispensing fees for compounded drugs are available on the MDHHS website. (Refer to the Pharmacy Resources portion of the Directory Appendix for website information.) To receive the compounded fee, a prescription must involve extemporaneous compounding and dispensing prepared only when orders for specific beneficiaries are received.

Medicaid monitors its compounded drug policy on a pre- and post-payment basis.

14.5 FAMILY PLANNING SUPPLIES

14.5.A. CONDOMS

Condoms do not require a prescription. A pharmacy may provide condoms at the beneficiary's request. Both males and females are eligible to receive condoms. Condoms are not a covered benefit for participants in the CSHCS program.

- **Payment Limit** – Payment is the lesser of the pharmacy's retail price or the MAC listed in the MPPL. A dispensing fee is not paid for condoms.

- **Dispensing Limits** – The following quantity requirements are monitored by pre- and post-payment reviews. A pharmacy is not reimbursed for more than:
  - 12 condoms at one time to a beneficiary; or
  - 36 condoms in 30 days to a beneficiary.

- **Documentation** – Pharmacies are responsible for maintaining adequate documentation to substantiate which beneficiaries received condoms. Documentation can be collected on a prescription blank or a log entry. Either form of documentation must contain:
  - An assigned control number (e.g., prescription number);
  - Beneficiary name;
  - Beneficiary Medicaid ID number;
  - Brand name of condom dispensed;
  - Quantity dispensed; and
  - Date dispensed.

14.5.B. DIAPHRAGMS AND CERVICAL CAPS

A dispensing fee is not paid for diaphragms and cervical caps.

14.6 CLOZAPINE

Clozapine may be billed in weekly cycles. A dispensing fee may be reimbursed each week when billed in accordance with other MDHHS and FDA product licensure guidelines.
14.7 INFUSION THERAPY

Infusion therapy, except for Total Parental Nutrition (TPN) used in the home setting, is covered for a pharmacy. If a specific drug is not listed in the MPPL, PA must be obtained. A Medical Supplier must bill for infusion-related expendable supplies and durable medical equipment, such as pumps or IV stands and TPN.

MDHHS will reimburse an additional single all-inclusive fee, above the standard dispensing fee, for the diluent and vehicle that is administered with the active ingredient. MDHHS dispensing fees are posted on the MDHHS website. (Refer to the Directory Appendix for website information.)

Daily billing for infusion therapy is not allowed. Drugs for infusion therapy must not be billed more frequently than seven days.

14.8 INHALERS

Depending on the beneficiary’s condition, several inhalers per month may be necessary. If dispensing limitations allow and the prescriber writes accordingly, the beneficiary may obtain more than one inhaler per prescription. A dispensing fee for inhalers is not paid to pharmacies.

14.9 METHADONE

Methadone is only covered when used as an analgesic for severe intractable pain such as that produced by some types of terminal illnesses.

14.10 NARCOTIC ANALGESICS

A FFS beneficiary cannot obtain a new prescription or refill of an existing narcotic analgesic, whether the drug is prescribed by the same or different healthcare provider or for a different drug in the same class, until 90 percent (95 percent for Benefits Monitoring Program beneficiaries) of the drug quantity limit has been consumed in compliance with the prescribed dose, amount, frequency and time intervals established by MDHHS.

Hospice (Benefit Plan ID of Hospice) beneficiaries are exempt from refill tolerance restriction. Benefits Monitoring Program beneficiaries are also exempt from refill tolerance restriction.

The refill restriction also does not apply if payment from the other insurance is reported on the claim.

The pharmacy may contact the MDHHS PBM Technical Call Center to request an override for an instance where an early refill is warranted. (Refer to the Directory Appendix for contact information.)

14.11 ORAL CONTRACEPTIVES

Prescriptions for oral contraceptives may be dispensed for a three-month supply when the prescriber writes the prescription accordingly.

14.12 OVER THE COUNTER DRUGS

Covered OTC drugs are listed in the MPPL. A prescription is required. The refill policy is the same as for legend drugs.
14.12.A. OTC DRUGS FOR END STAGE RENAL DISEASE

Certain OTC drugs are covered only for End Stage Renal Disease (ESRD) (that is, prescribed for the treatment of a beneficiary with a kidney transplant or one undergoing maintenance dialysis). Documentation must be kept on file by the pharmacy to substantiate the beneficiary’s ESRD condition and must include:

- The date of the transplant (month and year); or
- The name of the facility performing dialysis; or
- An indication that the beneficiary is on Continuous Ambulatory Peritoneal Dialysis (CAPD).

14.12.B. OTC DRUGS FOR NURSING FACILITIES

The MPPL designates when a covered OTC drug is included in the NF per diem. These products and noncovered OTC drugs are included in the per diem rate paid to a nursing facility. It is the responsibility of the nursing facility to provide these products for its beneficiaries. Reimbursement must be obtained from the nursing facility.

Covered OTC drugs, such as insulin (except if covered by the Medicare Part D benefit) and those not designated as included in the NF rate, are reimbursable to a pharmacy for NF beneficiaries.

14.13 PEAK FLOW METERS, SPACERS, AND AEROCHAMBERS

Peak flow meters, spacers, and aerochambers listed in the MPPL may be billed by pharmacies. A dispensing fee is not reimbursed to pharmacies that bill for these supplies. Coverage is limited to four (4) peak flow meters per year, and four (4) spacers and/or aerochambers combined total per year.

Spacers and aerochambers cannot be billed by the pharmacy for NF beneficiaries. These items are included in the NF per diem rate.

14.14 VACCINES

All vaccines recommended by the Advisory Committee on Immunization Practices (ACIP), including seasonal influenza vaccines, administered by pharmacists are covered for adults aged 19 years and older.

Pharmacies may submit a claim for the vaccine and its administration for Fee-for-Service Medicaid, ABW, and MOMS beneficiaries. In addition, pharmacies may submit a claim for seasonal influenza vaccine and its administration for CSHCS beneficiaries. For beneficiaries enrolled in a Medicaid Health Plan, the pharmacy provider must confirm coverage of pharmacist-administered vaccines with the plan.

Pharmacists must be in compliance with State of Michigan rules and regulations, have received the appropriate training for vaccine administration, and have a letter of delegation from a physician to be eligible to administer vaccines. Standing orders are required from a Michigan-licensed physician who is responsible for the clinical practice of the vaccine operations. This documentation must be readily available onsite in the event of an audit.
Pharmacists who administer vaccines must register with the Michigan Care Improvement Registry (MCIR). This database provides a complete record of immunizations for Michigan residents. Pharmacists must review the beneficiary’s immunization history in MCIR prior to administering the vaccine. MCIR must be updated within 72 hours of administering the vaccine.

In order to receive reimbursement for vaccine administration, pharmacies must submit claims through the MDHHS Pharmacy Benefits Manager (PBM). (Refer to the Directory Appendix for contact information.)

The pharmacy must submit the National Drug Code (NDC) for the product administered and the appropriate values in the Drug Utilization Review (DUR)/Professional Pharmacy Services (PPS) segment and the Professional Service Code respectively. MDHHS allows pharmacies to bill the cost of the vaccine; therefore, the pharmacy should submit the allowed administrative fee in the incentive fee submitted field.

Dispensing fees are not allowed for the administration of vaccines.

The pharmacy must develop an appropriate mechanism for purposes of properly documenting the identification of the administering pharmacist.

Either a pharmacy or physician can bill for the vaccine administration, but not both. Copayments for vaccine administration services do not apply.
SECTION 15 – NURSING FACILITY

Because of the uniqueness of pharmacy services provided in the nursing facility (NF) setting, separate billing policies were established. Other policies listed in this chapter also apply to NF beneficiaries.

15.1 BENEFIT PLANS

NF beneficiaries typically reside in a nursing home, hospital long term care (LTC) unit, or county-operated medical care facility (MCF). The Benefit Plan ID of NH will be indicated in the eligibility response for beneficiaries who reside in a nursing home.

NOTE: Beneficiaries with LOC 55 or 56 indicated in the eligibility response for the DOS are not eligible for NF services and will not have the Benefit Plan ID of NH assigned.

15.2 DISPENSING FEE

A pharmacy may receive a maximum of one dispensing fee for the same drug entity per month.

15.3 COPAYMENT

Medicaid beneficiaries residing in NFs have no pharmacy copayment.

15.4 PHARMACY CONSULTANT SERVICES

Medication reviews and other pharmacy consultant services are the responsibility of the facility and are included in the facility’s per diem rate. The pharmacy must make arrangements with the facility for reimbursement of such services.

15.5 PRODUCTS INCLUDED IN THE NURSING FACILITY PER DIEM RATE

MDHHS does not directly reimburse a pharmacy for items included in a facility’s per diem rate. If provided, no additional or separate charges may be made to a beneficiary, a member of the beneficiary’s family, or other beneficiary representative. If a pharmacy is requested to dispense any of the following, arrangements for payment must be between the pharmacy and the facility:

- Medical Supplies - Examples of medical supplies included in the facility’s per diem rate are insulin syringes, reagent strips, aerochambers, spacers, peak flow meters, etc.
- Enteral Formulas – Enteral Formulas are included in the facility’s per diem rate.
- OTC products not listed in the MPPL as in the NF’s per diem rate may be paid directly to a pharmacy by MDHHS. Noncovered OTCs are included in the NF’s per diem rate. Examples of OTCs in the per diem include, but are not limited to:
### Analgesics
- Acetaminophen
- Aspirin
- Buffered Aspirin
- Enteric-coated aspirin
- Ibuprofen

### Cough/Cold Preparations
- Guaifenesin with and without Dextromethorphan
- Pseudoephedrine/Chlorphen/Dextromethorphan
- Pseudoephedrine/Chlorpheniramine
- Pseudoephedrine HCl

### Ointments
- Vitamins A & D Ointment
- White Petroleum
- Zinc Oxide

### Oral Antiseptics
- Mouthwash

### Topical Antiseptics
- Chlorhexidine Gluconate Wash and Solution
- Hydrogen Peroxide
- Isopropyl Alcohol
- Povidone-Iodine Solution/Wash

### Vitamins/Minerals
- Calcium Carbonate, Calcium Gluconate, Calcium Lactate
- Daily Multiple Vitamin with and without Minerals
- Oyster Shell Calcium with and without Vitamin D
- Vitamin B1, Vitamin B6
- All other OTC vitamins and minerals

### Miscellaneous
- Epsom Salts (external use)
- Glycerin Suppositories
- Milk of Magnesia
- Mineral Oil or Emulsions of Mineral Oil
- Povidone Douches
- Sterile Lubricant
- Vinegar Douches
- Stool Softeners and stool softeners/laxative combinations
15.6 DRUG RETURNED FROM NURSING FACILITY

MDHHS does not reimburse for prescriptions that are not consumed by the beneficiary. The quantity of drug(s) consumed is determined by subtracting the quantity of drug(s) that is returned for the beneficiary from the quantity that was dispensed for the beneficiary. A pharmacy must credit MDHHS for those drugs that are not consumed, except for controlled, adulterated, compromised or unusable. The pharmacy must maintain documentation of the quantity dispensed and consumed by the beneficiary, showing a credit to MDHHS for drugs not consumed.

MDHHS does not allow restocking fees.
SECTION 16 – PUBLIC HEALTH SERVICE AND DISPROPORTIONATE SHARE HOSPITALS

With enactment of Section 602 of the Veterans Healthcare Act of 1992, Public Health Service (PHS) covered entities and selected disproportionate share hospitals (DSH) became eligible for contract drug prices from Labelers (340B Program). A list of participating entities is located on the Bureau of Primary Health Care - Health Resources and Services Administration (HRSA) website. (Refer to the Directory Appendix for website information.)

In addition to these product cost discounts, entities participating in this contract drug program are required by Federal policies to bill drugs covered in the PHS program using the actual acquisition cost for a drug plus a dispensing fee. Actual acquisition cost is defined as the actual invoice cost for a drug product to the pharmacy or company, organization, corporation, or affiliate with which it is associated.

Actual acquisition cost must reflect trade and quantity discounts, rebates, free goods, and price concessions.

On a post-payment basis, MDHHS reviews billings from PHS participating entities to track compliance with this requirement.

Covered entities or their contracted pharmacies, or disproportionate share hospital participating entities that are enrolled as Medicaid pharmacy providers who bill 340B prices, must contact the MDHHS Drug Rebate Specialist so their claims can be excluded from the drug rebates. (Refer to the Directory Appendix for contact information.)
SECTION 17 – DRUG REBATE PROGRAM

17.1 APPROVED LABELERS AND MPPL

MDHHS covers only those drugs produced by Labelers who have signed rebate agreements with the federal government. Products distributed by companies or a division within a company that did not enroll are not covered.

Approved Labelers are located on the CMS website and are identified by the specific five-digit labeler code (the first five digits of the NDC). (Refer to the Directory Appendix for CMS website information.)

17.2 NATIONAL DRUG CODE ACCURACY

MDHHS invoices pharmaceutical Labelers for rebates quarterly from the pharmacy paid claims history. Pharmacies must bill the actual NDC for a product dispensed. Pharmacies may be contacted periodically to verify product utilization and cost. Contact can include phone or written verification requests. Documentation requirements for verification can include, but are not limited to:

- Copies of the product invoice
- Copies of original prescriptions
- Compounding records
SECTION 18 – BENEFITS MONITORING PROGRAM

The purpose of the Benefits Monitoring Program (BMP) is to monitor and control inappropriate utilization of covered services, including prescribed drugs. (Refer to the Beneficiary Eligibility Chapter for additional information regarding the BMP.)
SECTION 19 – PHARMACY AUDIT AND DOCUMENTATION

19.1 DOCUMENTATION REQUIREMENTS

MDHHS monitors for compliance with Medicaid policy, the Administrative Rules of the Michigan Board of Pharmacy, the Public Health Code, and other applicable federal and state regulations.

The following information serves as a general guide for compliance monitoring during post-payment pharmacy reviews and audits. Additional details pertaining to post-payment pharmacy audits can be found on the post-payment auditor’s website. (Refer to the Directory Appendix for website and contact information.) Non-compliance, especially continued non-compliance, may result in payment recovery, sanctions, or referral to the Michigan Attorney General’s Office.

<table>
<thead>
<tr>
<th>340B Drug Pricing Program</th>
<th>Billing ingredient costs may not be higher than actual acquisition costs for drugs procured under the 340B Drug Pricing Program.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Changing Claim Information</td>
<td>Providers may not falsely alter the NDC number, date of service, prescription number, days supply, or any other claim requirement that would allow payment.</td>
</tr>
<tr>
<td>Compounds</td>
<td>The compounding of prescription products to gain coverage of noncovered OTC, noncovered legend drugs, or other noncovered categories is prohibited (e.g., the use of injectable Sodium Bicarbonate to compound a Sodium Bicarbonate foot irrigation). Medicaid recovers inappropriate payments for billings found in violation of policy.</td>
</tr>
<tr>
<td>CSHCS Only</td>
<td>Pharmaceutical products must relate to the qualifying diagnosis. Payment is recouped for billings for products not related to the qualifying diagnosis.</td>
</tr>
<tr>
<td>Days Supply</td>
<td>Accurate days supply information is required. Altering days supply information for purposes of payment will be considered fraud and will be reported to the appropriate unit for investigation. Dosages outside the normal dosage range based on the days supply submitted may prompt a verification request of product usage on reported utilization.</td>
</tr>
<tr>
<td>Dispensing Fees</td>
<td>Pharmacies may not bill in a pattern that would lead to more than 13 dispensing fees in a year for the same drug entity. Splitting prescriptions to increase the number of fees paid is considered fraud and reported to the appropriate unit for investigation.</td>
</tr>
<tr>
<td>Drug(s) Returned From Nursing Facility</td>
<td>MDHHS does not reimburse for prescriptions that are not consumed by the beneficiary. MDHHS does not allow restocking fees.</td>
</tr>
<tr>
<td>Hospice</td>
<td>Pharmacies must not bill MDHHS for prescription services related to the terminal illness except for selected HIV drugs. (Refer to the General Information Section of this chapter for additional information.)</td>
</tr>
<tr>
<td>Inaccurate Billing</td>
<td>All claim submission requirements outlined in the PBM Pharmacy Claims Processing Manual must be followed including, but not limited to, accurate Prescription Origin Code, NDC, and NDC unit of measure reporting. The Pharmacy Claims Processing Manual is available on the PBM website. (Refer to the Directory Appendix for website information.)</td>
</tr>
<tr>
<td>Other Insurance Payments</td>
<td>Pharmacies must bill other insurances before billing Medicaid. This also applies to Medicare Part B eligible beneficiaries. Failure to bill Medicaid the total due less the amount paid by another insurance or by Medicare Part B may be construed as fraud under the Medicaid False Claim Act.</td>
</tr>
</tbody>
</table>
Medicare Part D

Pharmacies cannot bill Medicaid for drugs covered by Medicare Part D. The Medicaid Program does not coordinate benefits with Medicare Part D.

Prescription Documentation

Original written prescriptions must be executed on tamper resistant prescription pads. If a prescription is created, signed, transmitted, and received electronically, all records related to that prescription must be readily accessible and maintained for seven years. Prescriber medical record documentation may be provided to validate prescriptions. Prescriber affidavits, attestations, and retroactively dated prescriptions will not be accepted for pharmacy documentation. Notation on a pharmacy’s database is not considered a written form of the prescription. For originals and all refills, accurate prescription documentation must be readily accessible and maintained for seven years. All of the following information must be entered in the record for each prescription:

- prescription number
- full name and address of patient for whom the drug is prescribed
- prescriber’s printed name and address
- prescriber’s individual NPI
- prescriber’s DEA (for controlled substance only)
- drug name and strength
- quantity prescribed
- directions for use
- number of refills authorized

Prescriber Information

Accurate prescriber information must be provided as required by MCL 400.111b(21). Submitting incorrect prescriber identification numbers can cause false ProDUR messages and claim denials. It could also cause a pharmacy to be targeted for post-payment audit. Pharmacies are audited for inappropriate identification of prescribers.

Prescriptions Filled But Not Picked Up

Retail prescriptions filled but not dispensed or picked up by the beneficiary or his representative. Restocking fees are not allowed. A record of the reversal log must be maintained for seven years for audit purposes.

Signature Requirement

Providers must maintain and have accessible the signature log indicating beneficiary’s pick-up of prescription and acceptance or denial of beneficiary counseling. Missing signatures indicate the prescription was not picked-up or the beneficiary was not offered counseling as required. Pharmacies are required to maintain this log for seven years.

Usual & Customary (U&C) Charge

For specified products, the submitted charge is compared to the cash price to the general public.

19.2 INVOICE AND INVENTORY RECORDS

In addition to all other documentation required under state law, federal law, and MDHHS policy, pharmacy providers must maintain invoices, manufacturer and/or wholesaler sales records, distributor delivery records to the provider, inventory transfer records, provider payment records, and all other records necessary to support the size and quantity of the goods paid for by Medicaid during the audit/review period. Failure to do so will result in the recoupment of pharmacy funds related to unsupported Medicaid claims. In the event inventory for any such product cannot be substantiated through reliable documentation for the beginning of the audit/review period, MDHHS may assume that
the beginning and ending inventory quantities are the same for that product. For the purposes of this policy, the "audit/review period" shall be a period defined by MDHHS.
SECTION 20 – MEDICAL SUPPLIES

20.1 GENERAL INFORMATION

Covered medical supply items payable (minus a dispensing fee) to a pharmacy are listed in the MPPL. A prescription is required for medical supplies. Covered products include insulin syringes, alcohol swabs, etc.

MDHHS does not separately reimburse a pharmacy for medical supplies dispensed to beneficiaries in nursing facilities, hospital long term care units, or medical care facilities. These items are considered a part of the facility's per diem rate. If provided, no additional or separate charges may be made to a beneficiary, a member of the beneficiary's family, or other beneficiary representative. If a pharmacy is requested to dispense any of these items, arrangements for payment must be between the pharmacy and the facility.

Except for those items listed in the MPPL, medical supplies and equipment are covered only when billed by a Medical Supplier or Orthotist/Prosthetist. These items include equipment (e.g., canes), orthotics (e.g., arch supports), prosthetics, oxygen dispensers, wound care dressings (e.g., transparent film, hydrocolloid absorptive dressings, alginate and gel dressing), splints, ace bandages, TPN, enteral and oral nutritional supplements, etc.

When billing as a Medical Supplier or Orthotist/Prosthetist, refer to the Medical Supplier and the Billing & Reimbursement for Professionals Chapters of this manual for additional information.

To enroll as a Medical Supplier, providers must complete an on-line application through the CHAMPS Provider Enrollment subsystem. (Refer to the Provider Enrollment Section of the General Information for Providers Chapter for additional enrollment information, and the Directory Appendix for contact information.)

20.2 SUPPLIES FOR ADMINISTRATION OF PART D DRUGS

MDHHS will reimburse (minus a dispensing fee) a pharmacy for medical supplies and/or equipment (e.g., IV poles, tubing) associated with the administration of Medicare Part D drug(s) to the dual eligibles (except those residing in a nursing facility) for home infusion therapy.

SECTION 1 – GENERAL INFORMATION

This chapter applies to physicians (MD, DO), Oral-Maxillofacial Surgeons, Doctors of Podiatric Medicine (DPM), Medical Clinics, Physical Therapists (PTs), Certified Nurse-Midwives (CNMs), Certified Registered Nurse Anesthetists (CRNAs), Anesthesiologist Assistants (AAs), and Nurse Practitioners (NPs).

Generally, medically necessary services provided to a Medicaid beneficiary by an enrolled practitioner are covered. The services addressed in this chapter include services that require explanation or clarification, have special coverage requirements, require prior authorization (PA), or must be ordered by a physician (MD or DO).

Information is included to assist the practitioner in determining how the Michigan Department of Health and Human Services (MDHHS) covers specific services. This information should be used in conjunction with the Billing & Reimbursement for Professionals Chapter of this manual, as well as the Medicaid Code and Rate Reference tool, MDHHS Practitioner and Medical Clinic Fee Schedule and other related procedure databases/fee schedules located on the MDHHS website. (Refer to the Directory Appendix for website information.)

1.1 ADMINISTRATIVE SERVICES

Services of physicians, medical staff or other licensed or certified health professionals functioning in an administrative or teaching capacity for a hospital or nursing facility (including physician-owners or other staff paid by the physician) are not covered separately as physician services.

Pathology services or interpretive studies done for hospital or nursing facility quality improvement purposes or other reasons which do not directly assist with the specific care of a specific beneficiary are considered to be administrative services and are not separately covered as physician services. These services are included in the facility's allowable costs and are paid to the facility.

1.2 COMPONENT SERVICES

Many physician services are covered as global services. A global service includes all resources necessary to perform the procedure (e.g., office overhead, equipment, supplies, and staff) and the services provided by the physician (e.g., interpretation of results and preparation of a report of findings).

Some services are divided into a professional component and a technical component for coverage purposes. The professional component includes the services provided by the physician while the technical component includes equipment, supplies, and technical staff.

Coverage for the professional component or the technical component generally depends on where the service is provided and who provides that portion of the service. Services for which the components are covered for the physician are identified in the Medicaid Code and Rate Reference tool or on the MDHHS Practitioner and Medical Clinic Fee Schedule. (Refer to the Directory Appendix for website information.)

Global services are covered for the physician in non-facility settings or the professional component is covered for the physician in any setting. The technical component is only covered when the service is provided in an appropriate non-facility setting. The global service and its professional component service cannot both be covered for the same service since the professional component is included in the global service.
1.3 COPAYMENTS

A copayment of $2 may be required for physician office (evaluation and management) visits for beneficiaries age 21 years and older. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).

The office visit copayment applies to services provided in the physician's office, urgent care center, or other appropriate setting. It does not apply to professional services provided in the outpatient hospital or inpatient hospital setting. The MDHHS Beneficiary Copayment Table, available on the MDHHS website, provides detailed information regarding the specific services to which the copays are applied. (Refer to the Directory Appendix for website information.)

Podiatrists should refer to the Podiatrist Section of this chapter for information regarding beneficiary copayments for podiatry services.

Ophthalmologists providing routine vision services should also refer to the Vision Chapter for information regarding beneficiary copayments for vision services.

1.4 FACILITY AND NONFACILITY REIMBURSEMENT

Medicaid reduces payment for specified procedures provided in a facility setting. This policy is consistent with the Centers for Medicare & Medicaid Services (CMS) facility and nonfacility reimbursement determination. When a provider performs services in a facility setting, costs for certain procedures are reduced because the practitioner does not incur certain overhead expenses (such as clinical staff, supplies, equipment) necessary to provide the service. When a service is performed in a nonfacility setting, the payment rate is based on the nonfacility relative value units (RVUs). When the service is provided in a facility setting, the payment rate is based on the facility RVUs. The payment difference takes into account the higher expenses for the provider in the nonfacility setting. For the purpose of this payment policy, a facility includes the following:

- Hospital inpatient and outpatient facilities
- Psychiatric facilities
- Skilled nursing facilities
- Ambulatory surgery centers
- Rehabilitation facilities
1.5 Hospital-Based Provider

Medicaid covers services by hospital-based providers (HBPs). A hospital-based provider is employed by the hospital. Each HBP is assigned his own NPI number.

For purposes of Medicaid, a HBP includes physicians (MD, DO, DPM). Some nonphysician practitioners, such as certified registered nurse anesthetists (CRNAs), nurse practitioners (NPs), and certified nurse midwives (CNMs) can also be considered HBPs under certain circumstances.

Medicaid follows Medicare guidelines for the coverage of HBP services provided by physicians. Generally, professional services provided by nonphysician providers that are employed by a hospital are included in the hospital cost report and are reimbursed to the hospital.

(The HBP should refer to their provider-specific chapter of this manual for policies, procedures, and coverage information.)

1.6 Medicare Related Services

MDHHS reimburses practitioners for the coinsurance and deductible amounts subject to Medicaid reimbursement limitations on all Medicare approved claims even if Medicaid does not normally cover the service. (Refer to the Billing & Reimbursement for Professionals and the Coordination of Benefits Chapters of this manual for additional information.)

1.7 Physician Delegation and Supervision

All physician services covered by Medicaid must be performed by the physician personally, the physician's employee, or an employee of the same legal entity that employs the physician, under the physician's delegation and supervision. Only persons currently licensed/certified in an appropriate health occupation/profession (e.g., physician's assistant, NP, CNM) as authorized by Public Act 368 of 1978, as amended, may provide direct patient care under the delegation and supervision of a physician when the physician is not physically present on the premises. The delegating/supervising physician must be continuously available through direct communication such as telephone, radio, or telecommunication when not on the premises. Delegated and supervised services rendered by non-physician practitioners (e.g., physician assistants and nurse practitioners) must be billed under the non-physician practitioner's NPI and include the NPI of the supervising physician as applicable.

In the physician's absence, licensed persons who are under the physician's delegation and supervision at the medical care site where the physician regularly sees beneficiaries may provide medical services. Records must demonstrate that the licensed physician is regularly available and provides medical care to beneficiaries at the site on a routine basis. This does not preclude licensed persons under the physician's delegation and supervision from making calls or going on rounds to private homes, public institutions, hospitals, or other health care facilities, as long as the care is a supplement to and does not replace the physician's personal services.

Care and treatment of Medicaid beneficiaries may only be delegated to unlicensed/certified persons when the physician is physically present and providing direct supervision.
1.8 PHYSICIAN RESPONSIBILITY

Determination of medical necessity and appropriateness of services is the responsibility of the physician within the scope of currently accepted medical practice and Medicaid limitations. The physician is held responsible if he orders excessive or unnecessary services (e.g., diagnostic tests, prescriptions) regardless of who actually renders or who receives payment for the service. The physician may also be subject to any corrective action related to these services, including recovery of funds.

Services generally must be ordered by a physician to be covered by Medicaid. Some services provided by other providers, such as medical supplies, lab services, and prescriptions, may require the physician to provide written documentation to support the need for the service. For specifics regarding whether a service is a covered benefit, refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter or the Medicaid Code and Rate Reference tool for more information. (Refer to the Directory Appendix for website information.)

1.9 PRIOR AUTHORIZATION

Medicaid requires prior authorization (PA) to cover certain services before those services are rendered to the beneficiary. The purpose of PA is to review the medical need for certain services. It does not serve as an authorization of fees or beneficiary eligibility. Different types of services requiring PA include:

- Procedures identified as requiring PA in the Medicaid Code and Rate Reference tool. (Refer to the Directory Appendix for website information.)
- Procedures/items that are normally noncovered but may be medically necessary for select beneficiaries (e.g., surgery normally cosmetic in nature, obesity surgery, off-label use drugs, etc.).
- Referrals for elective services by out-of-state nonenrolled providers.

1.9.A. TO OBTAIN PRIOR AUTHORIZATION

Providers must submit a letter to the MDHHS Program Review Division to obtain PA. (Refer to the Directory Appendix for contact information.) The letter and materials submitted requesting PA must include:

- Beneficiary's name and Medicaid ID number.
- Provider's name, address, NPI number.
- Contact person and phone number.
- A complete description, including Current Procedural Terminology (CPT)/Healthcare Common Procedure Coding System (HCPCS) procedure codes as appropriate, of the procedure(s) that will be performed.
- The beneficiary's past medical history, including other treatments/procedures that have been tried and the outcome, diagnostic test results/reports, expectations and prognosis for the proposed procedure, and any other information to support the medical need for the service.
Providers receive a written response from MDHHS. If the authorization is granted, the provider receives a PA number to report on the claim. The physician obtaining PA must make the PA number available to other providers, such as other practitioners or the hospital, for billing purposes.

If the beneficiary has Medicare and Medicare covers the service, the provider does not have to obtain PA from Medicaid. If Medicare denies a service as not medically necessary, Medicaid does not cover the service even if a PA has been obtained. If Medicare identifies a service as an excluded benefit under Medicare and Medicaid requires PA, the provider must pursue PA from Medicaid and a coverage determination is made. If the beneficiary has commercial insurance that covers the service and the provider reports the coverage correctly on the claim, the provider does not have to obtain PA from Medicaid. If a primary insurer covers a service but requires PA and the provider does not follow the primary insurance PA process, Medicaid does not make payment for the service either.

**1.9.B. SPECIAL AUTHORIZATIONS**

Special authorization requirements must be met for selected surgeries performed in the inpatient setting, all elective inpatient admissions, all readmissions within 15 days, and all transfers to an inpatient hospital/unit. Physicians should refer to the Hospital Inpatient Physician Services and the Surgery Sections of this chapter for specific information.

Some beneficiaries may need authorization of services because they are enrolled in special programs, such as the Benefits Monitoring Program. (Refer to the Beneficiary Eligibility Chapter of this manual for additional information.)

**1.10 SERVICES IN A TEACHING SETTING**

Administrative costs associated with teaching physician services, as well as payment for direct patient care services provided by a resident (including interns or fellows) in a teaching setting and supervised by a teaching physician, are subject to guidelines and conditions developed and published by CMS for Medicare. Services covered by Medicaid under these guidelines must be identified with the appropriate modifier.

Teaching institutions and teaching physicians within those institutions must abide by the CMS teaching physician guidelines which explain when services provided in teaching settings can be covered by Medicaid or must be included as allowable medical education costs in the hospital’s cost report.

Guidelines require the presence of the teaching physician during the key portion of the performance of the service in which a resident is involved and the teaching physician seeks payment (or the hospital on the behalf of the physician). The medical record must fully support the physician's presence and participation in the service provided. There are exceptions and other considerations that may apply; therefore, the full text of the guidelines must be consulted to ensure compliance. Any services that meet the teaching physician criteria must be reported with the appropriate modifier.

CMS provides an exception to the physician presence requirement for some low- and mid-level Evaluation and Management (E/M) services furnished in certain primary care centers when specified conditions are met. For Medicaid, the preventive medicine E/M visits are also included under the “presence” exception
for services provided in the primary care centers by residents. The appropriate modifier must be reported using the "presence" exception when residents provide E/M services. The E/M services that can be reported with this modifier include office or other outpatient visits requiring straightforward or low complexity medical decision making and comprehensive preventive medicine visits. For higher-level services and all invasive procedures, the teaching physician must be present.

Services of residents or physicians/medical staff functioning in an administrative, teaching or learning capacity in the hospital or long term care facility that are covered as individual physician services are subject to post payment review and recovery of funds unless the provider can present proof that the services were not included in the allowable facility costs.

1.11 SERVICES TO NEWBORNS

Physician services provided to newborns are covered under the newborn's Medicaid ID number. The mother's Medicaid ID number cannot be used.

If the delivering physician performs the newborn's care and circumcision during the mother's inpatient stay, these services can be covered under the mother's Medicaid ID number if they are billed on the same claim as the services to the mother.

1.12 UNIFORM REPORTING OF SERVICES

MDHHS follows the American Medical Association's manual and guidelines for Current Procedural Terminology (CPT) numeric codes, and the Healthcare Common Procedure Coding System (HCPCS). In conjunction with the CPT/HCPCS coding systems to describe services rendered, MDHHS utilizes the Medicaid National Correct Coding Initiative (NCCI) coding policies and edits as developed by the Centers for Medicare & Medicaid Services (CMS) to promote national correct coding methodologies.
SECTION 2 – ANESTHESIA SERVICES

Medicaid covers anesthesia services provided by qualified practitioners in conjunction with covered surgeries and other procedures. Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter or the Medicaid Code and Rate Reference tool for more information regarding coverage parameters. (Refer to the Directory Appendix for website information.) Medicaid does not cover any anesthesia service related to the treatment of infertility.

2.1 MEDICALLY DIRECTED ANESTHESIA SERVICES

Medicaid covers anesthesia services provided by physicians, Certified Registered Nurse Anesthetists (CRNAs), and Anesthesiologist Assistants (AAs) for medically directed anesthesia services consistent with anesthesia team practice. (Refer to the Certified Registered Nurse Anesthetist Section and/or the Anesthesiologist Assistant Section of this chapter for additional information). Medicaid recognizes medical direction of general anesthesia, regional anesthesia, and reasonable and medically necessary Monitored Anesthesia Care (MAC). Physicians cannot medically direct more than four concurrent anesthesia cases at one time and cannot perform any other services during the same period of time except as outlined below. In all cases in which medical direction is furnished, the physician must be physically present in the operating suite.

NOTE: Anesthesiologist assistants must be medically directed by a Medicaid enrolled anesthesiologist and must comply with the requirements for the delegation and supervision of services in the Michigan Public Health Code.

All of the following conditions must be met for medically directed anesthesia services to be reimbursed to the physician. For each beneficiary, the physician must:

- Perform a pre-anesthetic examination and evaluation;
- Prescribe the anesthesia plan;
- Personally participate in the most demanding procedures in the anesthesia plan including, if applicable, induction and emergence;
- Ensure that a qualified individual performs any procedures in the anesthesia plan that he does not personally perform;
- Monitor the course of anesthesia administration at frequent intervals;
- Remain physically present and available for immediate diagnosis and treatment of emergencies; and
- Provide indicated post-anesthesia care.

A medical direction service furnished by a physician is not covered if the physician directs a nonqualified individual. A qualified individual is a CRNA, a student anesthetist, an anesthesiologist assistant, or an intern or resident.

Physicians must document in the beneficiary’s medical record that he performed the pre-anesthetic exam and evaluation, provided indicated post-anesthesia care, was present during some portion of the anesthesia monitoring, and present during the most demanding procedures, including induction and emergence, where indicated. Total anesthesia time must be documented in the medical record.
If anesthesiologists are in a group practice, one physician member may provide the pre-anesthesia examination and evaluation while another physician member fulfills the other criteria. Similarly, one physician member of the group may provide post-anesthesia care while another member of the group furnishes the other component parts of the anesthesia service. The medical record must indicate the services were furnished by physicians and identify the physician(s) who rendered them.

A physician who is directing the concurrent administration of anesthesia to four or fewer surgical patients should not be involved in furnishing additional services to other patients. If the physician is addressing an emergency of short duration in the immediate area, or administering an epidural or caudal anesthetic to ease labor pain, or providing periodic rather than continuous monitoring of an obstetrical patient, it does not constitute a separate service for the purpose of determining whether the medical direction criteria are met. A physician may also receive patients entering the operating suite for subsequent surgeries, may check on or discharge patients from the recovery room, and may handle scheduling matters while directing concurrent anesthesia procedures without affecting coverage for medical direction.

If the physician leaves the immediate area of the operating suite for other than short durations, devotes extensive time to an emergency case, or is not available to respond to the immediate needs of the surgical patients, the physician's services are considered supervisory and are not covered as medical direction.

Medically directed anesthesia services are covered when provided by an anesthesiologist who is monitoring more than four concurrent anesthesia procedures, or who is performing other services while directing the concurrent procedures, in select instances. The physician must personally provide the pre-anesthesia exam and evaluation, prescribe the anesthesia plan, and be in the operating suite during the entire procedure. A flat rate payment is made to cover the physician’s involvement in pre-surgical anesthesia services.

Medically supervised CRNA services are covered and are reported with the appropriate modifier.

Medicaid covers anesthesia services consistent with Medicare guidelines when provided under an attending physician relationship in a teaching hospital and/or in accordance with the coverage guidelines established by the Medicare policies for teaching physicians.

2.2 Nonmedically Directed Anesthesia Services by the CRNA

Anesthesia services provided by a CRNA under the supervision of the surgeon or another physician who is immediately available if needed are covered as nonmedically directed anesthesia services. MDHHS reimburses CRNAs for these services if all of the following conditions are met:

- The facility in which the services are rendered ensures that the anesthesia services are provided in a well-organized manner under the supervision of a physician (MD or DO).
- The facility is responsible for all anesthesia administered in the facility.
- A physician (MD or DO) or a CRNA under the supervision of a physician provided a pre-anesthetic exam and evaluation within 48 hours prior to the surgery.
- An intra-operative anesthesia record identifies the CRNA providing the anesthesia service and the supervising physician.
For inpatients, the person administering the anesthesia writes a post-anesthesia follow-up report within 48 hours after surgery.

For outpatients, a post-anesthesia evaluation for proper anesthesia recovery is performed in accordance with the policies and procedures approved by the medical staff.

There is no separate coverage for physicians for any portion of nonmedically directed anesthesia services. The physician's supervisory service is covered as part of the facility charge where the surgery is performed. The pre-anesthetic exam and post-anesthesia evaluation is included in the anesthesia coverage for the nonmedically directed CRNA care and is not separately covered. Payment for the nonmedically directed anesthesia service provided by the CRNA is made to the CRNA or the legal entity employing the CRNA.

There is no separate coverage for anesthesia services performed by physicians who are also performing the medical or surgical service requiring the anesthesia. Any anesthesia service provided personally by the surgeon is included in the coverage for the surgical procedure itself.

### 2.3 Monitored Anesthesia Care

Monitored Anesthesia Care (MAC) is covered on the same basis as other anesthesia services as long as it is reasonable and medically necessary. MAC involves intra-operative monitoring by a physician, or by a qualified anesthesia provider under the medical direction of a physician, or by a CRNA under the supervision of a physician of the beneficiary's vital physiological signs, in anticipation of the need for administration of general anesthesia or the development of adverse physiological patient reaction to the surgical procedure. It also includes the performance of a pre-anesthetic examination and evaluation, prescription of the anesthesia care required, administration of any necessary oral or parenteral medications (e.g., Atropine, Demerol, Valium) and provision of indicated post-operative anesthesia care.

### 2.4 Medical and Surgical Services Furnished in Addition to Anesthesia Services

#### 2.4.A. Allowable Services

Separate coverage is available for certain medical or surgical services furnished by a physician while furnishing anesthesia services to the beneficiary. The services may be furnished in conjunction with the anesthesia procedure to the beneficiary or as single services (e.g., the day of or the day before the anesthesia service). These services include insertion of a Swan Ganz catheter, insertion of central venous pressure lines, emergency intubation, and critical care. Separate coverage is not available for medical or surgical services, such as the pre-anesthetic examination of the beneficiary, pre- or post-operative visits, or usual monitoring functions, that are ordinarily included in the anesthesia service.

#### 2.4.B. Post-Operative Pain Management

Post-operative pain management is the responsibility of the surgeon (except in special circumstances) and is covered as part of the global service provided by the surgeon.

Placement of a continuous epidural to manage post-operative pain is separately covered under the appropriate CPT/HCPCS code for a continuous epidural when the physician (or CRNA under a physician’s supervision) performed the service for post-operative pain.
management and the procedure was not used as the mode of anesthesia for the surgery. Daily management of a continuous epidural on subsequent post-operative days is covered under the appropriate procedure code.

2.5 Anesthesia Time

Anesthesia time means the time during which the anesthesia provider (physician, CRNA, or AA providing anesthesia) is furnishing continuous anesthesia care to the beneficiary. It starts when the anesthesia provider begins to prepare the beneficiary for induction of anesthesia and ends when the beneficiary may be safely placed under post-operative supervision and the anesthesia provider is no longer in personal attendance. In counting anesthesia time when an interruption in the anesthesia service occurs, only the actual anesthesia time is counted. The anesthesia start and stop times must be documented in the medical record.

2.6 Electro-Convulsive Therapy

Anesthesia services related to electro-convulsive therapy are covered by the beneficiary's Prepaid Inpatient Health Plan (PIHP)/Community Mental Health Services Program (CMHSP) or Medicaid Health Plan (MHP). The attending physician must obtain authorization from the PIHP/CMHSP or the MHP. Payment is made by the PIHP/CMHSP or MHP that authorized the service.

2.7 Prior Authorization for Anesthesia Services

If a surgical procedure requires PA, the operating surgeon is responsible for obtaining the authorization to perform the service. The anesthesia provider is not responsible for providing proof that the surgical procedure was authorized.

2.8 Hysterectomies and Sterilization Procedures

By federal statute, all services, including anesthesia services related to hysterectomies or sterilization procedures, must be supported by an informed consent that meets Medicaid’s consent requirements before the service can be covered. It is the responsibility of the operating surgeon to obtain this consent.

2.9 Using Modifiers

Anesthesia services must be coded using the appropriate CPT/HCPCS anesthesia codes with the appropriate modifiers. Anesthesia services for multiple surgeries are reported under the anesthesia procedure code with the highest base unit value with the total anesthesia time, in minutes, including all surgical procedures. (Refer to the MDHHS website for specific modifiers required for use with anesthesia services.)

2.10 Anesthesia Add-On Codes

Anesthesia add-on codes are covered in addition to the primary anesthesia code. Coverage for anesthesia add-on codes is based on the anesthesia base units (ABUs) established by CMS for the specific anesthesia add-on code.
2.11 LABOR AND DELIVERY

Coverage of anesthesia services associated with labor and delivery is based on the type of anesthesia provided. If anesthesia is provided by placement of an epidural catheter, it is covered under the appropriate anesthesia code depending on the type of delivery. The coverage for this service includes any needle placement, drug injection, and any replacement of the epidural catheter during labor. If endotracheal or general anesthesia is provided for the delivery, it is covered under the appropriate anesthesia code. If an epidural catheter is inserted for labor and delivery but it is later necessary to provide endotracheal anesthesia for the delivery, the surgical code for the epidural insertion is covered in addition to the anesthesia service code for the delivery. The medical record must fully document the circumstances requiring both types of anesthesia.
SECTION 3 – GENERAL PRACTICE

3.1 ALLERGY TESTING AND IMMUNOTHERAPY

Medicaid covers allergy testing and immunotherapy services. Testing is covered under the appropriate CPT/HCPCS code with the appropriate quantity as indicated by the code description. A visit is covered in addition to the testing. Coverage of the testing includes the interpretation of the test results in relation to the history and physical examination of the beneficiary.

Immunotherapy services are covered under the appropriate CPT/HCPCS component codes. The services of the provider who actually prepares and provides the antigens/venoms are covered on a per dose basis. Services of the provider who parenterally administers the antigen/venom are covered under the appropriate injection codes. The injection and the antigen/venom preparation services are covered separately.

Allergy injection services are not covered in addition to the visit unless the visit represents another significant, separately identifiable service above and beyond the antigen/venom immunotherapy and the appropriate modifier is reported.

MDHHS assumes antigens are prepared for administration over a period of time in increasing doses. Antigens are covered at the same rate per dose regardless of whether multiple or single dose vials are used. Medicaid covers the dose administered and the preparation of the dose administered.

Any allergy testing and treatments that have not been proven to be effective are not covered.

3.2 AMBULANCE SERVICES

Coverage for ambulance services is restricted to medically necessary and appropriate services when medical/surgical or psychiatric emergencies exist or no other effective or less costly mode of transportation for medical treatment can be used because of the beneficiary's medical condition.

Emergency ambulance services do not require a physician's order.

The physician must order all non-emergency, medically necessary ambulance transportation. Refer to the Ambulance Chapter for order requirements and additional information related to ambulance services.

3.3 AUDIOLOGICAL AND HEARING SERVICES

Medicaid covers hearing evaluations and other audiological function testing by a physician. Hearing evaluations are covered when they include pure-tone audiometry, speech audiometry, and a report of findings.

A hearing aid is covered if all of the following criteria are met:

- The physician performs an evaluation within six months prior to the beneficiary obtaining a hearing aid.
- The evaluation reveals that the beneficiary needs a hearing aid and that there is no contraindication to the use of a hearing aid.
The physician prescribes a hearing aid.

The beneficiary presents the prescription and a written statement of the evaluation to an enrolled hearing center.

The enrolled hearing center determines the type of hearing aid that is needed.

The beneficiary is referred to an enrolled hearing aid dealer for provision of the aid.

### 3.3.A. NEWBORN HEARING SCREENING EXAMINATION

MDHHS requires that all Medicaid-covered newborns be screened using the automated auditory brainstem response (ABR) method and/or the automated evoked otoacoustic emissions (EOAE) method.

Results must be reported to the child’s primary care provider in a timely manner.

If the birthing hospital has the appropriate equipment, the screening must be done at the hospital. When this occurs, the screening is covered as a part of the inpatient stay.

If the hospital is not equipped for ABR or EOAE, the child’s physician, CNM, or NP must refer the newborn to a Medicaid enrolled hearing center for screening prior to one month of age.

### 3.3.B. LOCAL HEALTH DEPARTMENT SCREENINGS

The primary care provider or Head Start agency (with approval from the child’s primary care provider) may refer preschool-aged children to the local health department (LHD) for objective hearing screening. The results of the screening must be reported to the child’s primary care provider. The results must also be shared with the Head Start agency if that agency was the referral source.

MDHHS monitors the number of MHP referrals reported by LHDs, and may initiate charge-backs to the plans.

### 3.4 CARE OF ABUSED CHILDREN

Medicaid covers physician services related to the diagnosis and treatment of suspected abused or neglected children. When the physician has reasonable cause to suspect that a child may have been abused or neglected, he must immediately contact the appropriate Protective Services Unit of the local DHS office to report his suspicions.

Medicaid covers the inpatient stay of an abused or neglected child when, upon admission, the attending physician determines that the child requires further assessment and treatment which is best provided on an inpatient basis.

**Physicians cannot admit a child to the hospital for the sole purpose of custodial or protective care.**
3.5 CHILDBIRTH/PARENTING EDUCATION

Medicaid covers childbirth/parenting education for pregnant women when referred in writing by the prenatal care provider and provided by qualified educators in a Medicare certified outpatient hospital or by a certified Maternal Infant Health Program (MIHP) program provider.

This service is not covered if rendered by the prenatal care provider in the office setting.

3.6 COMMUNICABLE DISEASE TREATMENT

Medicaid covers the diagnosis and treatment of communicable diseases, including tuberculosis (TB), hepatitis, meningitis, and enteric disease. Cases of communicable disease must be reported to the LHD. Providers may obtain additional information regarding communicable disease prevention and control from the LHD.

3.7 DIABETES PATIENT EDUCATION

Medicaid covers diabetes self-management education when ordered by a physician and provided by diabetes educators (e.g., nurse, dietitian) in a Medicaid enrolled outpatient hospital or a LHD which has been certified by MDHHS Public Health Administration.

This service is not covered if rendered by a physician in the office setting, rendered by a nonenrolled provider, or rendered by a non-CPH certified provider.

3.8 DIAGNOSTIC TESTS

Medicaid covers tests to diagnose a disease or a medical condition. Diagnostic testing must be directly related to the presenting condition of the beneficiary.

3.9 FAMILY PLANNING

Medicaid covers family planning services (e.g., examination, sterilization procedures, limited infertility screening, and diagnosis). A visit for family planning typically includes a complete physical examination, including a pelvic examination.

Separately identifiable services provided in addition to the examination are covered separately. Counseling for family planning services, including sterilization, is covered as a part of the family planning visit.

Medicaid covers contraceptives including:

- Oral contraceptives (must be prescribed by a physician and dispensed by an enrolled pharmacy or Family Planning Clinic)
- Diaphragms
- Intrauterine devices
- Condoms (available from a pharmacy without a prescription, or from a family planning clinic)
- Foams, gels, sponges (must be prescribed by a physician and dispensed by a pharmacy or family planning clinic)
3.10 FOOT CARE

3.10.A. ROUTINE FOOT CARE

Medicaid covers these services when provided by a physician or podiatrist and when the beneficiary manifests signs and symptoms from a specific systemic disease of sufficient severity that care by a nonprofessional would be hazardous. The medical necessity for these services must be documented in the beneficiary’s medical record, and the beneficiary must be receiving regular care from a physician for the systemic disease.

3.10.B. MYCOTIC NAILS, DEBRIDEMENT

Medicaid covers debridement of mycotic nails once in a 60-day period when provided during or following any appropriate course of medical treatment for the causative fungal infection. Documentation in the beneficiary’s medical record must support clinical evidence of the mycosis, identification of the toenail(s) affected, and evidence that the mycosis is likely to result in significant medical complications if appropriate antifungal treatment is not rendered.

The debridement of mycotic nails is covered for beneficiaries in the nursing facility only on the written order of the attending physician (MD or DO). The order must be patient-specific and not for routine care only.

3.11 FRACTURE CARE

Medicaid covers medically necessary fracture care. Coverage includes the initial traction, cast application and removal, and routine follow-up care. Additional reductions are independent procedures not included in the original treatment and are covered separately.

Fracture care includes the insertion and removal of necessary wires, pins, etc. If the wire, pins, etc., are the types that are not normally removed but the removal is medically necessary, Medicaid also covers such removal. Documentation of the need must be included on the claim.

Coverage also includes subsequent recasting required during the course of fracture treatment (i.e., following initial cast application). Medicaid covers cast removal as a separate service only when performed by a physician who was not involved in the fracture care and who is not reapplying another cast.

3.12 IMMUNIZATIONS (VACCINES AND TOXOIDS)

Immunizations* are covered when given according to Advisory Committee on Immunization Practices (ACIP) recommendations. MDHHS encourages providers to immunize all Medicaid beneficiaries according to the accepted immunization schedule.

- For Medicaid children 18 years and younger, the Vaccine for Children (VFC) Program provides covered immunizations at no cost to the provider.
- Medicaid covers immunizations for beneficiaries 19 years of age or older.

* An immunization administered for travel to a foreign country is not a Medicaid-covered benefit.
Any Local Health Department (LHD) in the state can be contacted for specifics about the VFC program, what immunizations are available, and instructions on enrolling and obtaining immunizations.

Medicaid does not pay for immunization costs for any product that is available free of charge for Medicaid beneficiaries. An administration fee is covered separately for immunizations given to Medicaid beneficiaries whether the immunization is free or not, and without regard to other services provided on the same day. The administration fee is set for each immunization.

For immunizations available free under the VFC program, the amount a provider may charge for vaccine administration may be limited. Providers cannot charge more for services provided to Medicaid beneficiaries than for services provided to their general patient population. For example, if the charge for administering a vaccine to a private-pay patient is $5.00, then the charge for immunization administration to the Medicaid patient cannot exceed $5.00.

For Medicaid beneficiaries enrolled in an MHP, the health plan must ensure that the beneficiary has access to receive complete and timely immunizations. When a provider contracts with a health plan to provide primary care (which includes immunizations), the provider should immunize the beneficiaries assigned to him by the plan. MHP providers enrolled in the VFC program are encouraged to immunize and are discouraged from referring beneficiaries to a LHD for these services.

If a beneficiary is in a nursing facility, the facility is responsible for appropriately immunizing the beneficiary. Coverage of the immunizations is included in the per diem payment made to the facility.

3.13 INJECTABLE DRUGS AND BIOLOGICALS

3.13.A. COVERAGE OF THE INJECTABLE

Medicaid covers injectable drugs and biologicals administered by a physician in the office or clinic setting and the beneficiary’s home. The drug must be Food and Drug Administration (FDA) approved and reasonable and necessary according to accepted standards of medical practice for the diagnosis or treatment of the illness or injury of the beneficiary.

An injectable drug is covered if the drug is:

- Specific and effective treatment for the condition for which it is being given.
- Given for the treatment of a particular documented diagnosis, illness, or condition (e.g., vitamin injections which are not specific replacement therapy for a documented deficiency or disease and are given simply for the general good and welfare of the patient).
- Administered by the recommended or accepted administration method for the condition being treated.
- Administered according to the recommended dosing schedule and amount for the condition being treated.
For any injections given by the physician in the office, clinic setting, or the beneficiary's home, the injectable drug is considered a physician service rather than a pharmacy benefit. The physician must not send the beneficiary to a pharmacy to obtain an injectable drug or to have the pharmacy bill directly to MDHHS for injectable drugs under the pharmacy benefit if the physician is administering the drug in the office, clinic, or beneficiary's home. If a pharmacy sells injectable drug products to a physician, the pharmacy must obtain payment directly from the purchasing physician. If the beneficiary has other insurance that allows the injectable drug product to be obtained at the pharmacy by the beneficiary, then the other insurance rules (e.g., Medicare Part D) must be followed; however, the reimbursement of the beneficiary's liability (i.e., coinsurance/deductible/copay) may be covered as a physician service.

When administering a dose drawn from a multidose vial, only the amount administered to the beneficiary is covered. If a drug is only available in a single use vial and any drug not administered must be discarded, the amount of the drug contained in the vial is covered.

3.13.B. ADMINISTRATION OF THE INJECTABLE

Medicaid covers the injectable drug and the administration of the drug. If another covered service is provided at the same time, the administration of the drug is considered a part of that service and is not covered separately.

Payment for administration of injectables provided through a PIHP/CMHSP clinic or affiliated physician practice is included in the capitation rate to the PIHP/CMHSP and is not separately reimbursable to the physician.

Injections in the office/clinic/beneficiary's home may be administered by appropriate non-physician staff who are employed by the physician or are employed by the same clinic/group as the physician. Administration of the injectable drug by non-physician staff must be under the physician's personal supervision or under the delegation and supervision of the physician as required by the Public Health Code. Providers should refer to the Coordination of Benefits Chapter of this manual for additional requirements that apply when a beneficiary has Medicare or commercial insurance coverage. For a list of the drugs administered under this policy, refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information. Physician-administered drugs and biologicals are included on the Practitioner and Medical Clinic Fee Schedule. (Refer to the Directory Appendix for website information.)

3.13.C. INJECTABLES ADMINISTERED THROUGH PIHP/CMHSP FOR MHP ENROLLEES

Specific injectable drugs administered by a physician or non-physician practitioner (e.g., physician assistant and nurse practitioner) through a PIHP/CMHSP clinic to Medicaid Health Plan (MHP) enrollees are reimbursable by MDHHS on a fee-for-service basis when the following criteria are met:

- The beneficiary has an open case with the PIHP/CMHSP;
The beneficiary receives the injections on a scheduled or routine basis as part of the PIHP/CMHSP treatment/supports regimen; and

The PIHP/CMHSP clinic notifies the beneficiary's MHP or primary care physician that this service is being rendered.

A list of the specific drugs covered under this policy is maintained on the MDHHS website. (Refer to the Directory Appendix for website information.) The list may be modified as new drugs are approved for Medicaid coverage. No notice of changes to the list will be issued directly to providers. Drugs on this list may be billed using the provider's NPI number(s) associated with the PIHP/CMHSP.

3.13.D. PSYCHOTROPIC INJECTABLES ADMINISTERED BY PHYSICIANS NOT ASSOCIATED WITH A PIHP/CMHSP

Physicians not associated with a PIHP/CMHSP who are administering psychotropic injectable carve-out drugs in an outpatient setting to MHP enrollees must comply with the following criteria:

- Physicians administering psychotropic injectable carve-out drugs must notify the beneficiary's MHP or primary care physician that this service is being rendered.
- Injectable carve-out drugs covered by MDHHS through FFS must be billed through CHAMPS using the physician's NPI.
- FFS reimbursement by MDHHS to physicians not associated with a PIHP/CMHSP is limited to psychotropic injectable carve-out drugs only. Physicians may not bill MDHHS for additional services rendered during the visit, including any injectable administration cost. Physicians should bill the MHP for any additional services, if necessary, after obtaining MHP prior authorization as per the "Out-of-Network Services" policy located in the Medicaid Health Plan chapter.

3.14 LABORATORY

Medicaid covers medically necessary laboratory tests needed to diagnose or treat a specific condition, illness, or injury. Medicaid also covers screenings such as Pap smears, PSA, TB, etc. A physician, podiatrist, dentist, or CNM must order laboratory services according to their scope of practice.

The ordering physician or CNM must document required laboratory testing in the beneficiary's medical chart regardless of where the tests are performed. The ordering physician is held responsible if he orders excessive or unnecessary laboratory tests regardless of who actually renders the services. He may be subject to any corrective action related to these services, including recovery of funds.

Ordering or rendering of "profiles", "batteries" or "panels" of tests that include tests not necessary for the diagnosis or treatment of the beneficiary's specific condition is considered random screening and is not covered. Multiple laboratory tests carried out as a part of the initial evaluation of the beneficiary, when the results of the history and physical examination do not suggest the need for the tests, are considered screening and are not covered.
3.14.A. MEDICAL NECESSITY

The documentation of medical necessity must include a description of the beneficiary’s symptomatology and other findings that have led the physician to order the test(s). An explanation of the laboratory testing method or the results of diagnostic tests, whether normal or abnormal, is not considered documentation of medical necessity.

3.14.B. REFERRED SERVICES

If a physician refers a beneficiary to an outside laboratory (independent lab, hospital lab, clinic lab, or physician office lab) for testing, the physician must indicate his NPI number on the referral.

A physician cannot refer a beneficiary to an outside laboratory where he or an immediate family member has a financial relationship. Noncompliance may result in corrective action by MDHHS or other agencies.

Physician laboratory services are covered when performed by the physician or by his employees under his direct supervision. Coverage for laboratory services includes the collection of the specimen(s), the analysis, and the report(s). MDHHS performs pre- and/or post-payment reviews to monitor laboratory procedures for medical necessity and appropriate practitioner orders. Questionable ordering patterns may result in a pre-payment review of each laboratory procedure billed or other corrective measures as a result of that provider’s orders.

A beneficiary cannot be charged for any covered laboratory procedure, including those that are determined to be not medically necessary.

3.14.C. CHILDREN’S SPECIAL HEALTH CARE SERVICES COVERAGE

The coverages defined in this section and the daily reimbursement limits do not apply to beneficiaries with only Children’s Special Health Care Services (CSHCS) eligibility. The coverage limits do apply to beneficiaries with dual Medicaid and CSHCS eligibility if the laboratory procedures are not related to the crippling diagnosis.
<table>
<thead>
<tr>
<th>Blood Handling</th>
<th>MDHHS reimburses for blood handling only under the following circumstances:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• A beneficiary may be referred to a laboratory, clinic, or outpatient hospital for the sole purpose of drawing, packaging, and mailing a blood sample to MDHHS for blood lead analysis. In this instance, the laboratory, clinic, or outpatient hospital may bill for blood handling. The MDHHS provides lead-free vacutainers for the analysis. Requests for vacutainers and the samples for analysis should be sent to MDHHS Blood Lead Laboratory. (Refer to the Directory Appendix for contact information.)</td>
<td></td>
</tr>
<tr>
<td>• A beneficiary occasionally requires blood tests that are not performed in conjunction with other reimbursable services. Whenever possible, the beneficiary should be sent to the laboratory that will be performing the test(s). If this is not practical (i.e., the laboratory is not a local facility) and the sole purpose of a visit is to draw, package, and mail the sample to a laboratory, the blood handling may be covered. An office visit or other service code is not covered on the same date of service (DOS) as the blood handling service.</td>
<td></td>
</tr>
</tbody>
</table>

| Hematology Studies | A practitioner’s order for a complete blood count (CBC) with white blood cell (WBC) differential includes the RBC and WBC count, Hgb, Hct, MCH, MCHC, MCV, RBC morphology, platelet estimate, and WBC differential only. Additional hematology testing must have specific practitioner orders. The ordering practitioner is responsible for documenting medical necessity and recording the order in the beneficiary’s medical record. |

| Microbiology Studies | Gram, fluorescent/acid fast stain procedures are included in the coverage for microbiology procedures when performed on the same DOS for the same beneficiary. |

| Pap Smear | Coverage for obtaining the cervical smear is included as a part of the pelvic examination. A pathologist must perform interpretation of the smear. The pathology report must include the printed or typewritten name of the pathologist and his handwritten signature.

More than one Papanicolaou test within a 12-month period is covered only when determined medically necessary by the attending practitioner. |
Pathology Consultations

Pathology consultations performed by a hematologist/pathologist for the review of abnormal laboratory test results are covered by Medicaid if:

- The abnormality relates to the beneficiary's medical condition and corresponding medical care (i.e., a peripheral blood smear review must be necessary for the specific beneficiary's care).
- The referring physician orders the review and records the order in the beneficiary's medical record. (Standing consultation orders from a physician to a laboratory are not covered by Medicaid.)
- A detailed report is sent to the referring physician.

The report prepared from the study performed by the hematologist/pathologist must include:

- Identification of the laboratory where the review was performed.
- Name of the referring physician.
- Beneficiary's name.
- Date of review.
- Identification of material examined.
- Comments and descriptions of normal and abnormal findings.
- Descriptions detailed enough to support a clinical impression or diagnosis.
- Clinical impression or diagnosis presented in relation to the suspected disease, disease process, or state of altered physiology.
- Recommendations for investigation or therapy, if any.
- The typewritten or printed hematologist/pathologist's name and his handwritten signature.

This information must be retained in the beneficiary's medical records.

Pregnancy Related Lab Services

For routine pregnancy testing, Medicaid covers the serum or urine HCG qualitative method.

The obstetric profile is covered when ordered by the attending practitioner as an all-inclusive panel of tests for required prenatal laboratory services. The individual tests of the OB Profile are:

- ABO typing
- CBC with WBC differential
- Hepatitis B surface antigen
- RBC antibody detection
- Rh (D) typing
- Rubella antibody
- Syphilis testing

HIV testing and Urinalysis are covered separately when determined to be medically necessary and are ordered by the practitioner.
Clinics and office-based laboratories must be registered as required by the Clinical Laboratory Improvement Amendments (CLIA). Medicaid only covers the procedures contained in the CLIA Certificate of Waiver Testing list for Certificate of Waiver practitioners. Coverage includes only the procedures contained in the CLIA Certificate of Registration Testing list for Certificate of Registration practitioners. Medicaid covers the procedures identified in the CLIA Physician Performed Microscopy list for appropriately certified physicians. Laboratory tests covered for CNMs and podiatrists who have the appropriate CLIA certification are identified in the Medicaid Code and Rate Reference tool. (Refer to the Directory Appendix for website information.)

3.15 NERVE BLOCKS

Nerve blocks are covered as a surgical procedure when performed for diagnostic or therapeutic purposes. As a surgical procedure, a complete description of the services rendered must be documented in the beneficiary’s medical record. When used as anesthesia for another procedure, the anesthesia guidelines apply. Nerve blocks are not separately covered when used as a local anesthetic for another surgical procedure.

A nerve block is the injecting of a local anesthetic or neurolytic agent around a nerve to produce a block of that specific nerve. It is not injecting a painful area under the skin or a trigger point, or an injection into the general muscle mass of subcutaneous tissue that does not follow the anatomy of a specific nerve, to produce temporary relief of pain in that area.

Nerve blocks are payable in the hospital or office setting as appropriate. No more than three nerve blocks to the same area are covered within a six-month period without documentation of medical necessity. Documentation must include the diagnosis or condition, the management/treatment plan, specific nerve(s) affected, indications, and expected benefits. A medical visit is not covered separately on the same day unless documentation is supplied to justify the separate services.

3.16 OXYGEN

Medicaid covers oxygen and the equipment necessary for the administration of oxygen therapy.

A pharmacy or a medical supplier may provide gaseous cylinder oxygen. Portable cylinder oxygen is allowable if the cylinder can be refilled and if the flow rate is adjustable.

Only a medical supplier may provide concentrators, liquid oxygen, and oxygen tents, and PA is required.

All oxygen and equipment requires a physician's prescription and a CMN. The initial prescription is valid for six months. The first follow-up prescription is valid for six months, and each subsequent prescription is valid for one year.

The written prescription for oxygen must include all of the following:

- The date the oxygen was prescribed;
- The beneficiary's diagnosis(es);
- The flow rate (liters per minute);
- The number of hours to be used per day;
- Duration of need;
- Delivery system to be used; and
- PO2 level or oxygen saturation.

(Refer to the Medical Supplier Chapter of this manual for additional information and specific PA requirements.)

### 3.17 SUBSTITUTE AND LOCUM TENENS PHYSICIANS

Medicaid covers substitute physicians or locum tenens physicians and allows payment to be made to the beneficiary’s attending physician for these services. Federal statutes and CMS requirements determine parameters for these arrangements.

Medicaid coverage under the beneficiary’s attending physician for the services of a substitute physician can only occur under the following substitute physician billing arrangements:

- An informal reciprocal arrangement for a period not to exceed 14 days; or
- A locum tenens or temporary arrangement for 90 continuous days in the case of a per diem or other fee-for-time compensation.

Coverage for services provided by a substitute physician under either a reciprocal billing or a locum tenens arrangement must follow Medicaid policy for the service(s) rendered. Documentation in the beneficiary’s medical record must identify the physician actually providing the service.

### 3.18 SUPPLIES IN THE OFFICE SETTING

Medicaid separately covers a limited number of supplies used in the office setting. RVU-based payment to practitioners includes payment for the office overhead expense associated with the service. In most cases, the overhead includes the supplies used or provided by the practitioner in connection with the service. Providers must not require beneficiaries to buy a supply item in advance from a pharmacy or other supplier that is necessary to use in providing the service. If a beneficiary needs supplies to use in the home, providers should write a prescription that the beneficiary can take to a pharmacy or medical supplier to be filled. Medicaid does not cover take-home supplies for the office setting. Any surgical dressings applied by a physician in the office or other nonfacility setting are not covered separately.

In keeping with the RVU-based fee schedule, casting and splinting supplies are covered separately in the office setting when used with the fracture and dislocation or casting, splinting or strapping procedure codes listed in the musculoskeletal surgery section of the CPT coding manual. An allowance for these supplies is not included in these treatment codes. Cast/splint supplies are not covered without the appropriate fracture/dislocation codes.

The following supplies are covered separately when provided in the office setting:

- Implantable external access device
- Levonorgestrel implant (is payable in addition to the insertion procedure on the same day)
Progestasert IUD or copper IUD (is payable in addition to the insertion of the device on the same day)

Levulan PDT

(Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding specific supplies which are covered separately.)

3.19 VISION SERVICES

Refer to the Vision chapter of this manual for specific coverage information.

3.20 ORTHOPTIC SERVICES

Strabismus surgeries are covered for beneficiaries of any age and do not require PA. Providers are reminded that these surgeries must be medically necessary and not performed solely for cosmetic purposes.

Refer to the Vision chapter of this manual for other specific orthoptic coverages.

3.21 WEIGHT REDUCTION

Medicaid covers treatment of obesity when done for the purpose of controlling life-endangering complications, such as hypertension and diabetes. If conservative measures to control weight and manage the complications have failed, other weight reduction efforts may be approved. The physician must obtain PA for this service. Medicaid does not cover treatment specifically for obesity or weight reduction and maintenance alone.

The request for PA must include the medical history, past and current treatment and results, complications encountered, all weight control methods that have been tried and have failed, and expected benefits or prognosis for the method being requested. If surgical intervention is desired, a psychiatric evaluation of the beneficiary's willingness/ability to alter his lifestyle following surgical intervention must be included.

If the request is approved, the physician receives an authorization letter for the service. A copy of the letter must be supplied to any other provider, such as a hospital, that is involved in providing care to the beneficiary.

3.22 TUBERCULOSIS TESTING

Medicaid covers TB testing according to the guidelines of the AAP, which is based on risk. A risk assessment is completed at each visit. Coverage for the TB test includes any return visit to read the results of the TB test.

For assistance in determining high risk, providers may contact the MDHHS, Communicable Disease and Immunization Division, or the AAP. (Refer to the Directory Appendix for contact information.)
SECTION 4 – GENERAL PRACTICE - SPECIAL CONSIDERATIONS

4.1 APHERESIS, THERAPEUTIC

Therapeutic apheresis is covered for the following indications:

- Plasma exchange for acquired myasthenia gravis;
- Leukapheresis in the treatment of leukemia;
- Plasmapheresis in the treatment of primary macro-globulinemia (Waldenstrom);
- Treatment of hyperglobulinemia, including (but not limited to) multiple myelomas, cryoglobulinemia and hyperviscosity syndromes;
- Plasmapheresis or plasma exchange in the last resort treatment of thrombotic thrombocytopenic purpura (TTP);
- Plasmapheresis or plasma exchange in the last resort treatment of life-threatening rheumatoid vasculitis;
- Plasma perfusion of charcoal filters for treatment of pruritis of cholestatic liver disease;
- Plasma exchange in the treatment of life-threatening forms of Goodpasture’s Syndrome;
- Plasma exchange in the treatment of glomerulonephritis associated with antiglomerular basement membrane antibodies and advancing renal failure or pulmonary hemorrhage;
- Treatment of chronic relapsing polyneuropathy for beneficiaries with severe or life-threatening symptoms who have failed to respond to conventional therapy;
- Treatment of life-threatening scleroderma and polymyositis when the beneficiary is unresponsive to conventional therapy;
- Treatment of Guillain-Barre Syndrome; and
- Treatment of life-threatening Systemic Lupus Erythematosus (SLE) when conventional therapy has failed to prevent clinical deterioration.

Coverage is limited to the following settings:

- In a hospital setting (either inpatient or outpatient). Nonphysician services furnished to hospital patients are covered as hospital services. When covered services are provided to hospital patients by an outside provider/supplier, the hospital is responsible for paying the provider/supplier for the services.
- In a nonhospital setting, such as a physician directed clinic, when all of the following conditions are met:
  - A physician is present to perform medical services and to respond to medical emergencies at all times during patient care hours.
Each patient is under the care of a physician.

All nonphysician services are furnished under the personal supervision of a physician.

When the physician provides direct supervision of the procedure or personally performs any services, professional services are covered as therapeutic apheresis (plasma and/or cell exchange).

4.2 CHEMOTHERAPY ADMINISTRATION

Medicaid covers the services of a physician who administers antineoplastic chemotherapy to beneficiaries with a cancer diagnosis in the office setting and in the beneficiary's home. The chemotherapy drugs administered by the physician are covered separately.

Administration of other drugs for diagnoses other than cancer is covered under therapeutic, diagnostic, or prophylactic injection/infusion services.

Chemotherapy administration by push and by infusion techniques is covered on the same day; however, only one push administration is covered on a single day.

Physicians must personally administer the drug or be present when a qualified employee of the physician administers the drug. If chemotherapy is administered without face-to-face contact between the physician and the beneficiary, the services are covered if furnished in the physician's office by a qualified employee under the physician's supervision and the medical record reflects the physician's active participation in and management of the course of treatment.

In the hospital setting, chemotherapy administration is only covered when the physician personally administers the drug.

Refilling and maintenance of an implantable pump or reservoir is covered. Chemotherapy administration by IV push, infusion, or intra-arterial technique is not covered in addition to refilling the implantable pump or reservoir. Flushing of a vascular port prior to chemotherapy is included in the administration and is not covered separately. If a special visit is made to the physician's office only for port flushing, the service is covered under the appropriate E/M code.

Hydration therapy intravenous (IV) infusion is covered as a part of the chemotherapy IV infusion service when administered simultaneously. Hydration therapy is covered separately when administered sequentially or as separate procedures. The distinct procedural service modifier should be reported with the hydration therapy code when performed sequentially.

Supplies necessary to administer chemotherapy in the office setting are included in the overhead expense portion of the administration services and are not covered separately. (Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters for chemotherapy drugs.)

4.3 HEMODIALYSIS AND PERITONEAL DIALYSIS

Medicaid covers physician services required to manage care of beneficiaries with end-stage renal disease (ESRD) who are receiving ongoing dialysis in an outpatient facility or at home.
Most physician services are covered through a monthly capitation payment (MCP) to the managing physician. The MCP covers ESRD related physician services in all settings necessary to manage the beneficiary’s dialysis care, except declotting of shunts, dialysis training, and nonrenal-related medical services.

Self-dialysis training services provided by the physician are covered.

### 4.4 HOME HEALTH CARE

Medicaid covers home health care subject to the requirements in this section.

Home Health services include intermittent nursing care, home health aide services, and physical therapy provided in the beneficiary’s home by a Medicaid enrolled Home Health Agency (HHA). The service must be reasonable and necessary for the treatment of a specific illness, injury, or disability, and must be consistent with the nature and severity of the beneficiary's condition, particular medical need and accepted standards of medical practice. Limited services to ensure stability of beneficiaries with an established disability or frail condition, or to prevent an illness, injury or disability for women and newborns during the postpartum period are covered.

Home health is intended for beneficiaries whose conditions require intermittent rather than continuous medical/nursing care. In special instances, intensive nursing care in the home may be approved if MDHHS determines that home care is appropriate and is a cost-effective alternative to institutional care.

#### 4.4.A. PHYSICIAN ORDER FOR CARE

The beneficiary's physician must order covered home health services as part of a written plan of care (POC), and must review the POC every 60 days for continuing need. A HHA should not provide home care prior to the date of the physician's order for the care. The agency must maintain a patient plan of treatment form which must be signed and dated by the physician, or a narrative summary of the POC which must have the physician's signed and dated order attached. The HHA is responsible for obtaining necessary authorization from MDHHS for special or extended care which may be provided.

For initial certification, a physician certifying eligibility for home health services must provide documentation of a face-to-face encounter with the beneficiary within 90 days prior to or 30 days after the start of care. Refer to the Face-to-Face Encounter section in the Home Health Chapter for additional information.

Home health services are not to replace the services of a physician and are not covered solely for the lack of transportation or as a convenience to the beneficiary. Home health services may be appropriate when leaving the home is medically contraindicated or special transportation or effort is required.

#### 4.4.B. MEDICAL SUPPLIES AND EQUIPMENT

Medical supplies, durable medical equipment, orthotic and prosthetic appliances, shoe supplies, and oxygen are covered for beneficiaries receiving services from an enrolled HHA. The physician (MD, DO, DPM, NP, PA) must prescribe these items. (Refer to the Home Health and the Medical Supplier Chapters of this manual for specific information.)
concerning which equipment/supplies are covered for the medical supplier and which are covered for the HHA.)

4.4.C. PERSONAL CARE

If beneficiaries are not in need of nursing care or physical therapy, but have a need for nonspecialized, unskilled personal care or chore services, such services are available through the MDHHS Home Help Program. The local MDHHS office should be contacted for information.

4.5 HOSPICE SERVICES

Medicaid covers hospice services which include palliative and supportive services to meet physical, psychological, social, and spiritual needs of terminally ill beneficiaries and their families in the home, adult foster care facility, home for the aged, nursing facility, or an inpatient hospice setting.

To enroll in hospice, the beneficiary must have a life expectancy of six months or less, have knowledge of the illness and life expectancy, and elect to receive hospice services rather than active treatment for the illness. Both the referring physician and the hospice medical director must certify the life expectancy. (Refer to the Hospice Chapter of this manual for specific requirements related to the provision of hospice services.)

If the physician is not familiar with Medicaid-enrolled hospices in his area, hospice names, addresses, and telephone numbers may be obtained from MDHHS Provider Inquiry. (Refer to the Directory Appendix for contact information.)

4.6 IMPLANTABLE INFUSION PUMPS

Medicaid covers the refill and reprogramming of implantable infusion pumps by physicians in the physician's office. The refill kit and the electronic analysis of the pump are covered as a part of the refill and reprogramming procedure. Injectable drugs used during this procedure are covered separately in the physician's office.

4.7 PEDIATRIC MULTICHANNEL RECORDINGS

Multichannel recording is covered for a child under age 21 when provided in the inpatient or outpatient hospital setting by qualified personnel and interpreted by a physician. Multichannel recordings are not covered in the beneficiary's home.

A pediatric multichannel recording is a continuous and simultaneous recording of at least four channels that may include ECG, thoracic impedance, airflow measurements, oxygen saturation, esophageal pH, or strain gauge measurements. Other additional recording parameters may be included. A multichannel recording does not have to include an electroencephalogram (EEG). When an EEG is performed in addition to the four or more channels, it is covered separately. Payment for the multichannel recording is the same regardless of the number of channels or the length of time required. Use of a video camera is not separately covered.
Two multichannel recordings may be covered in one year for the same beneficiary. If more than two are medically justified for CSHCS beneficiaries, the physician must obtain PA from CSHCS. A copy of the PA approval letter must be attached to the claim form to be reimbursed. Physicians are responsible for providing a copy of the PA approval letter to the hospital.

A multichannel recording is covered as a professional service to the physician and as a technical service to the hospital. The professional service includes the interpretation with written report, and the scanning and scoring.
SECTION 5 – EVALUATION AND MANAGEMENT SERVICES

Medicaid covers medically necessary evaluation and management (E/M) services provided by a physician or other practitioner authorized by the State. Providers should refer to the CPT explanations, coding conventions, and definitions for E/M services.

Most E/M services are covered once per day for the same beneficiary. In these cases, only one office or outpatient visit is covered on a single day for the same beneficiary unless the visits were for unrelated reasons and at different times of the day (e.g., office visit for blood pressure medication evaluation, followed five hours later by a visit for evaluation of leg pain following an accident).

Coverage of an E/M service includes related activities such as coordination of care, telephone calls, writing prescriptions, completing insurance forms, review and explanation of diagnostic test reports to the beneficiary.

Do not report the modifier for increased procedural services with E/M services in order to request individual consideration, unless specifically directed by this manual. This does not follow CPT coding guidelines and causes longer delays in processing the claims for payment.

5.1 PREVENTIVE MEDICINE SERVICES

One preventive medicine E/M service is covered for all beneficiaries annually. For beneficiaries under 21 years of age, EPSDT screening services are covered according to the AAP periodicity schedule and CMS requirements. (Refer to the Early and Periodic Screening, Diagnosis, and Treatment Chapter for specific information.)

A preventive medicine E/M visit and another E/M visit on the same date are covered separately if, during the preventive visit, a problem or abnormality is detected which requires additional work which meets the key component requirements of a problem oriented E/M visit. When this occurs, the office/outpatient E/M procedure code is covered using the modifier for a separately identifiable service, and the preventive E/M visit is covered without using a modifier. (Refer to CPT guidelines for additional information.)

5.2 E/M VISITS IN RELATION TO GLOBAL SURGERY PACKAGE

An E/M service that results in the decision for surgery is covered separately when provided by the surgeon on the day before or the day of a procedure with a 90-day global period and the decision for surgery modifier is reported. This same E/M service provided the day before or the day of a procedure with a 0-day or 10-day global period is not covered separately.

An E/M service is not covered separately on the same day as a procedure with any global surgery period unless the beneficiary's condition requires a significant, separately identifiable E/M service that is above and beyond the pre- and post-operative care associated with the procedure or service performed.

If the surgeon performs E/M services during the post-operative global surgery period for a reason unrelated to the surgical procedure, report the appropriate modifier with the E/M service. All care provided during the inpatient stay in which the surgery is performed is compensated through the global surgery package and is not covered separately.
5.3 CONSULTATIONS

Medicaid covers consultations rendered by a physician whose opinion or advice is requested by another appropriate practitioner (e.g., physician, CNM, dentist) for the further evaluation and management of the patient. A consultation includes preparation of a report of findings that is provided to the referring provider for the referring provider's use in the treatment of the beneficiary. A consultant may initiate diagnostic and/or therapeutic services. If the referring provider transfers complete responsibility for treatment either orally or in writing to the consultant at the time of the request for consultation, the receiving physician's services are covered as normal E/M services rather than as a consultation.

If the referring provider transfers responsibility for the beneficiary's care to the consultant after the consultation is completed, the consultant's service is covered as a consultation. After the consulting physician assumes responsibility for the beneficiary's care, subsequent visits are covered as established patient office visits or subsequent hospital care, depending on the setting.

A consultation is covered if one provider in a group practice requests a consultation from a physician of a different specialty in the same group practice as long as all of the requirements for use of the CPT/HCPCS consultation codes are met. A request for a consultation from the attending provider and the need for consultation must be documented in the beneficiary's medical record. In an inpatient setting, the request may be documented as part of a plan written in the requesting physician's progress notes, an order in the hospital record, or a specific written request for the consultation.

Medicaid covers second opinions for surgery. The second opinion is covered as a consultation as long as all requirements for a consultation are met.

Ancillary services provided to a beneficiary in a nursing facility must be ordered by the attending physician and are not covered as consultations unless a specific request for opinion and advice is documented. Requests for services by another physician are covered as the actual service provided (e.g., nursing facility visit or eye examination).

5.4 INITIAL VISITS

Medicaid covers one new patient visit for a physician or a group practice for the same beneficiary, regardless of the type of new patient visit billed (e.g., office visit, clinic visit, long term care visit, home visit).

5.5 OBSERVATION CARE

Medicaid covers physician services for beneficiaries admitted and discharged from observation status in the hospital setting for a stay less than 24 hours. Coverage is based on CPT coding conventions to report observation stays occurring on a single date and observation stays which start on one date and end on the subsequent date. It is expected that the beneficiary would be discharged from the hospital at the end of observation care. The medical record must include the following documentation:

- the length of time of the observation stay
- the physician was present and personally performed the services
- the physician wrote the observation admission and/or discharge notes
For outpatient surgical procedures, the global surgery rules apply. The surgeon is responsible for all post-operative care in the hospital and observation care is not covered separately.

Observation care for psychiatric reasons must be authorized by the PIHP/CMHSP. The PIHP/CMHSP is responsible for coverage of authorized psychiatric observation care services.

5.6 NURSING FACILITY SERVICES

Visits necessary to perform Medicare and Medicaid required assessments are covered under the appropriate E/M services involving comprehensive resident assessments.

Visits required to monitor and evaluate residents at the frequencies detailed in the coverage portion of the Nursing Facility chapter of this manual are also covered under the appropriate E/M service for subsequent nursing facility care.

Additional visits for the diagnosis or treatment of illness or injury, or to improve the functioning of a malformed body member, are only covered when documentation of the medical necessity for the visit is included on, or attached to, the claim. Documentation must include diagnoses describing the acute illness or injury; or remarks documenting the necessity for the additional visit recorded on the claim; or documentation such as notes from the visit supporting the above criteria attached to the claim. Providers may report modifier 22. Additional visits which repeatedly reflect the same chronic diagnoses and additional visits for the purpose of routine monitoring are not covered.

Refer to the Coverages portion of the Nursing Facility chapter of this manual for timeframes and additional details for required nursing facility visits.
SECTION 6 – EMERGENCY SERVICES

Medicaid covers all medically necessary emergency services. Federal statutes prohibit prior authorization (PA) for coverage of emergency services. Emergency services include covered inpatient and outpatient services that are furnished by a provider that is qualified to furnish such services and the services are necessary to evaluate or stabilize an emergency medical condition. All professional services must be identified as either an emergency or not an emergency.

6.1 SCREENING EXAM AND STABILIZATION IN THE EMERGENCY DEPARTMENT

MDHHS and its contracted health plans must follow the applicable requirements and definitions of the federal Emergency Medical Treatment and Active Labor Act (EMTALA).

Medicaid covers the medical screening examination, any ancillary service(s) when performed in a hospital emergency department (ED) for the sole purpose of determining if an emergency medical condition exists, and any necessary stabilizing treatment.

For both Medicaid FFS and MHP beneficiaries, the screening examination and any physician-ordered procedures (e.g., x-rays, lab, etc.) necessary to determine the beneficiary's condition are covered without PA. For Medicaid FFS beneficiaries, the screening examination and related diagnostic procedures are covered by MDHHS. For Medicaid MHP beneficiaries, these services are covered by the beneficiary's MHP.

Professional services for the medical screening and stabilization in the ED are covered separately from the facility fees.

6.2 TREATMENT OF EMERGENCY MEDICAL CONDITION IN THE EMERGENCY DEPARTMENT

PA is not required for the treatment of emergency medical conditions.

An emergency medical condition is defined by the Balanced Budget Act of 1997 and its regulations.

An emergency medical condition may exist whether the beneficiary is discharged from the ED or admitted to the inpatient hospital. This includes admissions where death occurs before a bed is occupied.

If an emergency medical condition exists, the medical findings must be fully documented in the beneficiary's medical record.

6.3 NON-EMERGENCY MEDICAL CONDITIONS IN THE EMERGENCY DEPARTMENT

If the medical findings from the screening indicate the beneficiary's condition does not meet the definition of an emergency medical condition, but requires additional, follow-up treatment, the following rules apply:

- FFS Medicaid beneficiaries without private health insurance should be referred to their primary care provider to obtain treatment. However, treatment may be rendered in the ED and does not require PA.
• FFS Medicaid beneficiaries with private health insurance must follow the rules of the private health insurance. Private insurers frequently require that the primary care provider perform the follow-up care.

• MHP enrollees must be referred to their primary care provider for treatment, or the MHP can be contacted to request authorization to provide the treatment. If the MHP fails to respond within one hour to the request to provide additional services beyond those required for stabilization, the request for authorization is deemed approved.

6.4 Psychiatric Emergency Services in the Emergency Department

Screening and stabilization of a psychiatric emergency does not require PA. These services are covered in the same manner as other emergency services provided in the ED detailed above. If it is determined that the beneficiary requires post-stabilization psychiatric services, the PIHP/CMHSP must be contacted for PA. The need for PA from the PIHP/CMHSP includes, but is not limited to, inpatient psychiatric admission, psychiatric partial hospitalization, and specialty mental health services.

A psychiatric emergency is defined as a situation in which an individual must be treated to protect him from inflicting injury to self or others as the result of a serious mental illness, emotional disturbance, or developmental disability, or could reasonably be expected to intentionally or unintentionally injure himself or others in the near future. The emergency may result from an inability to provide food, clothing, or shelter for him or others, inability to attend to activities of daily living, or when judgment is so impaired the individual is unable to understand the need for treatment.

6.5 Urgent Care Settings

Physician services rendered in urgent care centers or similar settings that are not part of a licensed hospital are covered. Coverage is based on the appropriate office or other outpatient services E/M procedure codes. Coverage for any additional professional services rendered in these settings follows CPT guidelines.
SECTION 7 – MATERNITY CARE AND DELIVERY SERVICES

Medicaid covers maternity care and delivery services. The services normally provided in uncomplicated maternity cases include antepartum care, delivery, and postpartum care. These services are included in the global obstetrical package. The global obstetrical package is covered when one physician or physician group practice provides the obstetric care to a beneficiary. The global obstetrical package is covered as long as the provider or group has provided seven or more antepartum visits, the delivery, and the postpartum care. If less than seven antepartum visits are provided, report the global package with the modifier for reduced services and indicate the number of antepartum visits on the claim.

7.1 ANTEPARTUM CARE

Includes the initial and any subsequent history, physical examinations, recording of weight, blood pressures, fetal heart tones, routine chemical urinalysis, and monthly visits up to 28 weeks gestation, biweekly visits to 36 weeks gestation, and weekly visits until delivery. Typically, if a beneficiary enrolls in the first trimester and delivers at term, she has about 13 antepartum visits. This varies depending on the actual start of antepartum care and the delivery date. If the total number of antepartum visits exceeds 13 due to a high-risk condition, the additional visits are covered when using the appropriate E/M codes with the diagnosis for the high-risk condition.

7.2 DELIVERY

Includes admission to the hospital, the admission history and physical examination, management of uncomplicated labor, and delivery. All hospital visits within 24 hours of delivery are generally considered part of the global package. If the beneficiary is admitted more than 24 hours before delivery and stays more than 24 hours, then hospital care rendered prior to the day of delivery is covered separately as an E/M code. Medical problems complicating labor and delivery management that require additional resources are also covered separately.

7.3 POSTPARTUM

Includes all the visits following a delivery, both in the hospital and in the office. Services provided by physicians within the same group practice are considered as provided by the primary physician responsible for the beneficiary’s overall obstetrical care.

7.4 OBSTETRICAL PACKAGE VS. COMPONENTS

If the same physician or group practice does not provide all of the obstetric care, Medicaid covers the portion of the care provided by each provider. Postpartum care or antepartum care is covered separately if provided by a different physician or group than the physician providing the delivery services. To be consistent with some commercial payers and Medicare, the physician or group providing the entire global obstetrical package may choose to report either the entire global package or may report the antepartum care, delivery, and postpartum care separately as each of these services is provided. Combinations of these components must be allowable under Medicaid NCCI editing. Components such as the antepartum care or postpartum care cannot be unbundled into individual visits.
Services that are not included in the global package include:

- Maternal or fetal echography or fetal echography procedures
- Fetal biophysical profile
- Chorionic villus sampling, any method
- Fetal contraction stress test
- Fetal nonstress test
- Hospital and observation care visits for premature labor (prior to 36 weeks gestation)

### 7.5 High-Risk Pregnancy

High-risk pregnancies are those with complicating conditions that are life-threatening to either the mother or fetus and, therefore, require more services than those provided in a routine pregnancy. When high-risk pregnancies require more visits than described for routine obstetrical care and more laboratory data than normally required, the additional services are covered in addition to the global obstetrical package. If beneficiary visits are required due to conditions unrelated to the pregnancy, they are also covered in addition to the global obstetrical package. Medicaid follows CPT guidelines for reporting high-risk pregnancy services.

### 7.6 Multiple Gestation

In the case of multiple gestation, Medicaid covers the services provided. Payment follows the multiple procedure rules. Providers must use a diagnosis code representing multiple gestation.

### 7.7 OB Enhanced Payments

MDHHS provides an enhanced payment for each Medicaid delivery performed. This additional reimbursement is added to the fee reimbursed under FFS for the global maternity and delivery procedure codes. The maternity case rate paid to MHPs is also enhanced.

### 7.8 Maternity Outpatient Medical Services Program

Under the Maternity Outpatient Medical Services (MOMS) program, pregnant women can enroll and receive pregnancy related care early in the pregnancy. Refer to the MOMS Chapter for additional information.

### 7.9 Maternal Infant Health Program

Maternal Infant Health Program (MIHP) provides preventive health services that are delivered by certified MIHP agencies to high-risk pregnant women and infants born to high risk mothers. The purpose of MIHP is to reduce infant morbidity and mortality. The goal is to deliver a healthy, full term infant. Refer to the Maternal Infant Health Program Chapter for additional information about this program.
SECTION 8 – PHARMACY

A practitioner must report his individual National Provider Identifier (NPI) with a prescription order. An emergency room practitioner must report his individual NPI with a prescription order. Each practitioner at a teaching hospital must report his individual NPI with a prescription order that is submitted to the dispensing pharmacy. A prescription or prescription order must comply with state and federal laws.

Refer to the Pharmacy Chapter of this manual for additional information.
SECTION 9 – RADIOLOGY, RADIATION THERAPY AND NUCLEAR MEDICINE

9.1 RADIOLOGY SERVICES

Medically necessary radiological services are covered when ordered by a physician to diagnose or treat a specific condition based on the beneficiary's signs, symptoms, and past history as documented in the medical record. Radiology services include diagnostic and therapeutic radiology, nuclear medicine, CT scan procedures, magnetic resonance imaging (MRI) services, diagnostic ultrasound, and other imaging procedures. Medical need for all services must be documented in the medical record and are subject to post-payment review.

9.1.A. GLOBAL/COMPONENT SERVICES

Global services are covered for the physician in non-facility settings or the professional component is covered for the physician in any setting. The technical component is only covered when the service is provided in an appropriate non-facility setting. The global service and its professional component service cannot both be covered for the same service since the professional component is included in the global service.

When a physician reports a global procedure, the physician is responsible for the overall performance and quality of the test. The physician must either personally perform the test or it must be performed under the physician’s supervision and direction. The physician must personally interpret the results and complete the written report. While some radiology procedures and diagnostic tests may not require the presence of the supervising physician on the premises, other procedures dictate that the physician be present and may even need to be directly involved in the performance of the procedure.

Interpretation of radiology services are covered for any physician trained in the interpretation of the study. The provider who interprets the study must be the one who evaluates the study and prepares and signs the written report for the medical record. Review of results and explanation to the beneficiary are part of the attending physician’s E/M service and are not considered as interpretation of the study.

9.1.B. MULTIPLE SERVICES ON SAME DAY

Medicaid covers bilateral x-rays when medically necessary. Bilateral services are studies done on the same body area, once on the right side and once on the left side. Comparison films obtained for routine purposes are not covered. Providers should use a bilateral code when available. Medicaid also covers multiple studies of both areas if reported with the appropriate modifier. Examples would include bilateral wrist studies done before and after fracture care on both wrists the same day for the same patient or doing films to assess a patient’s response to medical care, such as multiple chest films to monitor the cardiopulmonary status of a critically ill patient.

| Contiguous Areas | Studies of contiguous areas, such as the wrist and hand, lumbosacral spine and pelvis, ankle and foot, are covered on the same day when medically necessary to visualize each space. The medical record must support the need for individual studies. If cervical, lumbosacral and thoracic views are performed, an entire spine study should be reported. |
**Screening Mammography**

Screening mammography is covered according to the American Cancer Society guidelines. Women age 40 and older should have annual breast cancer screening consisting of a clinical breast examination and a mammogram.

**Transrectal or Prostate Ultrasound**

Transrectal or prostate ultrasound is covered when the patient is considered at high risk for prostate cancer. It is also covered for pathologic indications that include evaluation of prostatic nodule(s) or abnormalities of the seminal vesicles, staging of prostatic cancer, and monitoring of response to therapy for prostatic cancer.

**CT, MRI, PET Scans**

For CT, MRI and PET scans to be covered, all conditions of Certificate of Need (CON) must be met. These services are subject to standards for provision of the service that include specific staff and designation of who is qualified to interpret the results.

Flat films and CT or MRI studies of the same area are covered on the same day when medically indicated. The provider is responsible for using the most appropriate diagnostic test(s) according to current standards of practice. A CT and a myelogram may be covered on the same day; however, an MRI and a myelogram are not covered separately if done on the same day. Coverage of a CT of the spine is limited to one level per day, and coverage of an MRI is limited to two levels of the spine on the same day. Providers should be directing the study at the area of the suspected problem.

CT and MRI scans may be done with or without contrast media or both. When a scan is done without contrast followed by another with contrast, only the full service is covered. The global RVUs for CT and MRI contrast scans include allowance for high osmolar contrast media, and the RVUs for global MRIs include allowance for paramagnetic contrast media.

In certain instances, the use of low osmolar contrast media (LOCM) is separately covered. In the case of intra-arterial and intravenous radiological procedures, LOCM is covered separately for nonhospital patients with one or more of the following:

- A history of previous adverse reaction to contrast material, with the exception of a sensation of heat, flushing, or a single episode of nausea or vomiting;
- A history of asthma or allergy;
- Significant cardiac dysfunction, including recent or imminent cardiac decompensation, severe arrhythmia, unstable angina pectoris, recent myocardial infarction, and pulmonary hypertension;
- Generalized severe debilitation; or
- Sickle cell disease.

If the patient does not meet any of these criteria, the contrast media is considered bundled into the global service and is not covered separately.

When high dose contrast technique is used with MRI, the global service is covered for the procedure designated without contrast, then with contrast. The third MRI (again with contrast) is not covered separately. The contrast material used in the second MRI procedure is not covered separately; however, the contrast material for the third MRI procedure is covered separately.

**Obstetrical Ultrasound**

Obstetrical ultrasound studies are covered in addition to the global obstetrical package. More than two studies are covered only for high-risk conditions such as bleeding, placental abnormalities, fetal post-maturity, etc. The need for the additional studies, including the change in clinical symptoms, must be documented. Pelvic ultrasound examinations are not covered to diagnose pregnancy or vaginal infections. The use of ultrasound studies for routine fetal age determination in or preparatory for pregnancy termination procedures is considered part of the termination procedure and is not covered separately.
9.2 Radiation Therapy

Medicaid covers medically necessary radiation therapy services provided to beneficiaries. CPT/HCPCS guidelines for radiation therapy services are followed.

Following the Medicare guidelines, many services are bundled into the treatment management codes and are not covered separately when the diagnosis is related to the weekly treatment diagnosis and the services are provided by the radiation oncologists or in conjunction with the therapy. The following services are included in the weekly treatment management service:

- Anesthesia
- Care of infected skin
- Checking treatment charts
- Continuing-care patient evaluation and examination
- Final medical examination
- Nutritional counseling
- Pain management
- Medical prescription
- Review and revision of the treatment plan
- Routine medical management of related problems
- Special care of ostomy
- Verification of dosage
- Written reports, progress notes
- Follow-up examination and care 90 days after the last treatment

Medicaid separately covers services furnished by a radiation physicist only when provided to a nonhospital beneficiary in a freestanding facility.

Professional services provided to hospital patients are covered only when personally performed by a physician.

Global physician services are only covered if provided in a freestanding, nonhospital setting.

9.3 Nuclear Medicine

Medicaid covers medically necessary nuclear medicine procedures. Providers are responsible for complying with Nuclear Regulatory Commission (NRC) requirements. Only professional services rendered to hospital patients are covered for the practitioner.

Medicaid covers global services when provided in a freestanding, nonhospital setting. Radionuclides used in the procedures are covered separately.
When specific nuclear medicine diagnostic procedures are performed, multiple procedure coverage rules apply. Generation and interpretation of automated data is covered as a part of the primary procedure.
SECTION 10 – HOSPITAL INPATIENT PHYSICIAN SERVICES

Medicaid covers physician services to hospital inpatients that are medically necessary and follow the requirements in this section.

10.1 VENTILATION MANAGEMENT

Ventilation management provided in the inpatient hospital setting is covered separately unless an E/M service is provided on the same day.

10.2 CRITICAL CARE

Medicaid covers critical care consistent with the CPT/HCPCS definitions and guidelines. Each day that critical care is provided, the medical record must support the level of service provided. The actual time spent with the patient delivering critical care services must be documented in the medical record.

10.3 RESPIRATORY CARE

Medicaid covers respiratory care as a separate service in the inpatient hospital setting for the anesthesiologist/physician who initiates respiratory care by setting up the respirator, placing the beneficiary on the respirator, and providing daily supervision of the beneficiary for the respiratory care alone.

10.4 STANDBY SERVICES

Medicaid does not cover the services of a standby surgeon, anesthesiologist or surgical team. Only direct beneficiary care is covered. Physician standby services are covered as a part of the hospital services.
SECTION 11 – SURGERY – GENERAL

Medicaid covers medically necessary surgical procedures.

11.1 GLOBAL SURGERY

Coverage for the global surgery package includes related services that are furnished by the physician who performs the surgery or by members of the same group with the same specialty. Medicaid policy is based on CMS guidelines for Medicare services for the global surgery package.

11.1.A. SERVICES INCLUDED IN THE GLOBAL SURGERY PACKAGE

- Pre-operative visits beginning with the day before the surgery for major surgeries and the day of the surgery for minor surgeries.
- Intra-operative services that are a usual and necessary part of a surgical procedure.
- Complications following surgery. This includes all additional medical or surgical services required of the surgeon during the post-operative period due to complications that do not require return to the operating room. The surgeon’s visits to a patient in an intensive care or critical care unit are also included.
- Follow-up visits within the post-operative period related to recovery from the surgery.
- Post-surgical pain management by the surgeon.
- Supplies for certain services furnished in a physician’s office.
- Miscellaneous services and items such as dressing changes, local incisional care, removal of operative pack, removal of cutaneous sutures and staples, lines, wires, tubes, drains, casts, and splints; insertion, irrigation and removal of urinary catheters, routine peripheral intravenous lines, nasogastric and rectal tubes, and changes and removal of tracheostomy tubes.

11.1.B. SERVICES NOT INCLUDED IN THE GLOBAL SURGERY PACKAGE

- The surgeon’s initial consultation or evaluation of the problem to determine the need for surgery.
- The office or hospital visit to decide upon surgery if it occurs on the day before or the day of a major surgery.
- Other physicians’ services, except when the surgeon and the other physician(s) agree on the transfer of care. (The transfer of care agreement may be in the form of a letter or an annotation in the discharge summary, hospital records, or ambulatory surgical center records.)
- Visits unrelated to the diagnosis for which the surgical procedure was performed.
- Treatment of the underlying condition or an added course of treatment that is not part of the normal recovery from surgery.
- Diagnostic tests and procedures, including diagnostic radiology procedures.
- Clearly distinct surgical procedures that are not repeat procedures, or treatment for complications during the post-operative period. A new post-operative period begins with the subsequent procedure.
- Staged procedures done in two or more parts for which the decision to stage the procedure is made prospectively or at the time of the first procedure. Examples include procedures to diagnose and treat epilepsy in succession within 90 days of each other.
- Laser eye surgeries (and all other services whose CPT/HCPCS description includes one or more sessions) performed in a series over a period of weeks or months are not considered staged procedures. All sessions during the post-operative period of the first session are covered as a part of the global package.
- Chemotherapy and/or radiation therapy following cancer surgery.
- Treatment for post-operative complications that requires a return to the operating room. For this purpose, an operating room is a place of service specially equipped and staffed for the sole purpose of performing surgical procedures, including a cardiac catheterization suite, a laser suite, and an endoscopy suite. Not included is a patient’s room, a minor treatment room, a recovery room, or intensive care unit unless the patient’s condition is so critical there is insufficient time for transportation to an operating room.
- A second, more extensive procedure when a less extensive procedure fails.
- A therapeutic service that is required during the post-operative period of a diagnostic service. Example: A D&C followed by a therapeutic hysterectomy performed during the D&Cs global period.
- Immunosuppressive therapy for organ transplants.
- Critical care services unrelated to the surgery when a seriously injured or burned patient is critically ill and requires constant attendance of the physician.
- Visits that are a significant, separately identifiable service on the same day as a minor surgery or endoscopy. For example, a visit for a full evaluation of a lump in the breast on the same day as a removal of a lesion on the back.
- When a beneficiary is returned to the operating room for treatment of complications, only the intra-operative portion of the service is covered.

11.2 PARTIAL GLOBAL PACKAGE

Services of physicians furnishing less than the full global surgery package are covered. Modifiers are used to identify the portion of the global surgery package that is covered separately when performed by different physicians under certain circumstances. Only procedures with 10- or 90-day global periods are eligible for partial global surgery package coverage.

Surgeons should use the modifier for surgical care only when another physician provides all or part of the outpatient post-operative care. MDHHS assumes that the surgeon is responsible for pre-operative, intra-operative and inpatient hospital post-operative care at a minimum. The modifier for post-operative management only is used when a second physician provides all or part of the post-operative care after hospital discharge in the global package. Surgeons must transfer care to the second physician, and both must keep a copy of the written transfer agreement in the beneficiary's medical record.
11.3 **BILATERAL SURGERY**

Bilateral surgeries are procedures performed on both sides of the body during the same operative session or on the same day. The descriptions for some procedure codes include the terms “bilateral” or “unilateral or bilateral”. The RVUs for these codes reflect the work involved if done bilaterally as the description states. Other procedure code descriptions do not include bilateral but may be performed bilaterally. The bilateral procedure modifier is used with these procedure codes.

Reimbursement for a bilateral procedure reported appropriately with modifier 50 is based on the lower of the amount billed or 150 percent of the fee screen for the procedure.

**11.4 MULTIPLE SURGICAL PROCEDURES**

Multiple surgeries are separate procedures performed by a physician on the same beneficiary during the same operative session or on the same day for which separate coverage may be allowed. Co-surgeons, surgical teams, or assistants at surgery may participate in performing multiple surgeries on the same beneficiary on the same day.

When the same physician performs multiple surgical procedures during one operative session, all services are covered separately. MDHHS follows CMS multiple surgery guidelines for coverage of the procedures. If an integral procedure (one that is part of a larger surgery and is necessary to perform the larger surgery) is performed, it is covered as a part of the larger procedure. If two or more physicians each perform distinctly different, unrelated surgeries on the same patient on the same day (e.g., in some multiple trauma cases), the procedures are covered separately.

Multiple surgery reimbursement policy applies to procedures performed during the same operative session or on the same day by the same physician or physicians of the same specialty in the same group practice. Medicaid reimburses up to 100 percent of the fee screen for the most complex surgical procedure and up to 50 percent of the fee screens for the second through the fifth surgical procedures. If more than five multiple procedures are performed, an operative report must be provided with the claim.

**11.5 MULTIPLE ENDOSCOPY PROCEDURES**

Multiple endoscopy procedures are reimbursed based on the full fee for the highest paid service, plus the difference between the next highest and the base endoscopy. When related endoscopies are performed on the same day as other endoscopies or other surgical procedures, the standard multiple surgery rules apply. The multiple surgery rules consider the coverage for the related endoscopies as one service, and any other unrelated endoscopy or procedure as another service.

**11.6 MULTIPLE SURGEONS**

Under some circumstances, the individual skills of two or more surgeons are required to perform surgery on the same beneficiary during the same operative session. This may be required due to the complex nature of the procedures or the beneficiary’s condition. Medicaid reimbursement policy is based on CMS guidelines for Medicare services for multiple surgeons.
11.7 Co-Surgeons

Two surgeons who work together as primary surgeons performing distinct parts of a total service are considered co-surgeons. The medical record must contain sufficient documentation supporting the medical necessity for co-surgeons. Report the modifier indicating two surgeons for the services furnished by each co-surgeon. The primary procedure is reimbursed at the full screen times 62.5 percent. Second and subsequent services are paid at 50 percent of the full-allowed amount times 62.5 percent.

11.8 Team Surgeons

Three or more surgeons who work together as primary surgeons to perform a specific procedure are considered team surgeons. Sufficient documentation must be submitted with the claim to establish that a team was medically necessary. If two or more surgeons are of the same specialty, the reason each was needed must be documented also. Report the surgical team modifier when billing for services rendered by each team surgeon. Each surgeon’s dictated operative report must be included with the claims. Reimbursement is based on individual consideration.

11.9 Assistant at Surgery / Assistant Surgeon

Medicaid covers assistant at surgery services for designated surgical procedures. Assistant at surgery services must be considered reasonable and necessary for the surgery performed. An assistant at surgery actively assists the primary surgeon during the surgical procedure. Coverage for assistant at surgery services is not allowed when co-surgeons or team surgeons are utilized.

Medicaid does not cover assistant surgeon services in a teaching hospital setting unless a qualified resident is not available. The medical record must document the circumstances causing the unavailability of a qualified resident. The surgical procedure is reported with appropriate modifier identifying use of an assistant surgeon.

Medicaid covers assistant at surgery services performed by a second physician, a physician’s assistant, or a nurse practitioner (NP). Physician’s assistant and NP services as assistant at surgery must be under the delegation and supervision of the physician employing the physician’s assistant or NP, or a physician employed by the same group practice that employs the physician’s assistant or NP. If the physician’s assistant and/or NP are employees of the hospital, their services are covered as a part of the hospital charges.

11.10 Surgeons Performing Distinctly Different Unrelated Procedures

If two or more physicians each perform distinctly different, unrelated surgeries on the beneficiary on the same day, the payment adjustment rules for multiple surgeries or co-surgeons do not apply. In such cases, the multiple procedures modifier should not be used unless one of the surgeons individually performs multiple surgeries.

11.11 Vision Procedures and Care

Ophthalmologists may transfer post-operative care associated with cataract removal or insertion of intraocular lens prosthesis to an optometrist. In this case, the ophthalmologist who performs eye surgery but does not provide the post-surgical care must report the surgical care only modifier with the surgery procedure code. This includes the pre-operative care, the surgery, and any in-hospital post-operative care.
Post-operative care after hospital discharge is covered separately for the provider that the care was transferred to using the surgery code with the post-operative management only modifier.

Surgical procedure descriptions that include the phrase "one or more sessions" include all sessions. These procedures include the 90-day global period during which the procedure(s) can be completed in one or more session(s). These procedures include trabeculoplasty by laser surgery, iridotomy/iridectomy by laser or photocoagulation, repair of retinal detachment, destruction of retinal or choroid lesions. The code description in CPT identifies when one or more sessions are included. Separate coverage for a second or subsequent session of the same procedure during the global period of the initial service is limited to cases where the modifier reported with the procedure code indicates that services were performed on different eyes.
SECTION 12 – SURGERY - SPECIAL CONSIDERATIONS

12.1 ABORTIONS

Medicaid only covers an abortion performed by a physician and related hospital charges (e.g., room, supplies) when it has been determined medically necessary to save the life of the mother or the pregnancy is the result of rape or incest. Medicaid funding is not available for any elective therapeutic abortion or service related to the performance of such abortion unless one of these criteria has been met.

Physicians must certify on a completed Certification for Induced Abortion form (MSA-4240) that, for medical reasons, an abortion was necessary to save the life of the mother or the beneficiary’s medical history indicates that the terminated pregnancy was the result of rape or incest.

The physician who completes the MSA-4240 must also ensure completion of the Beneficiary Verification of Coverage form (MSA-1550) and is responsible for providing copies of the forms for billing purposes to any other provider (e.g., anesthesiologist, hospital, laboratory) that would submit claims for services related to the abortion.

Copies of the MSA-4240 and the MSA-1550 are not required for claims for ectopic pregnancies or spontaneous, incomplete, or threatened abortions.

Providers may attach copies of the MSA-4240 and the MSA-1550 to the claim or submit them via fax.

Federal regulations require that these forms be submitted to Medicaid before reimbursement can be made for any abortion procedure. This process can eliminate submitting paper attachments for abortion claims and pre-confirms the acceptability of the completed forms, as well as reduces costly claim rejections.

The medical record must include a complete beneficiary history, including the medical conditions that made the abortion necessary to save the life of the mother. When the pregnancy is the result of rape or incest, the medical record must include the circumstances of the case and that the pregnancy was the result of rape or incest.

(Refer to the Forms Appendix for copies of MSA-4240 and MSA-1550. The forms are also available on the MDHHS website. Refer to the Directory Appendix for website information.)

12.2 BREAST RECONSTRUCTION SURGERY

Medicaid covers breast reconstruction surgery following the diagnosis and treatment of breast cancer. Covered services include procedures related to the affected and the contralateral unaffected breast following a medically necessary mastectomy. The prior authorization requirements for these specified breast reconstruction procedure codes are waived when billed with appropriate ICD breast cancer diagnosis codes. The specified CPT codes subject to this PA waiver are identified in the Medicaid Code and Rate Reference tool. (Refer to the Directory Appendix for website information.)
12.3 COSMETIC SURGERY

Medicaid only covers cosmetic surgery if PA has been obtained. The physician may request PA if any of the following exist:

- The condition interferes with employment.
- It causes significant disability or psychological trauma (as documented by psychiatric evaluation).
- It is a component of a program of reconstructive surgery for congenital deformity or trauma.
- It contributes to a major health problem.

The physician must identify the specific reasons any of the above criteria are met in the PA request.

Physicians should refer to the General Information for Providers Chapter for specific information for obtaining authorization.

12.4 DESTRUCTION OF LESIONS

Medicaid covers destruction of lesions by methods such as electrocautery, cryocautery, laser, and surgery.

Coverage of the surgical destruction of lesions that involves more extensive procedures is limited to the hospital/facility setting. Less extensive procedures are covered in the office/non-facility setting. (Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding which procedures require a hospital/facility setting for coverage and which procedures are covered in the office/non-facility setting.) If a repeat procedure to the same lesion is necessary, it is covered as an office visit.

Chemocautery or chemical destruction of any lesion, such as the use of a nitrate stick or podophyllin, is covered as a part of the office visit.

12.5 HYSTERECTOMY

Hysterectomies are covered only if the beneficiary has been informed orally, prior to surgery, that a hysterectomy will render her permanently incapable of reproducing. The beneficiary or her representative must sign a written acknowledgment of receipt of that information. The Acknowledgment of Receipt of Hysterectomy Information (MSA-2218) serves as the written acknowledgment.

All items on the MSA-2218 must be completed and the form must be signed by the beneficiary (or representative) and the physician (MD or DO).

Federal regulations prohibit Medicaid coverage for hysterectomies performed solely for the purpose of sterilization. Hysterectomies are also prohibited when performed for family planning purposes even when there are medical indications, which alone do not indicate a hysterectomy.
12.5.A. EXCEPTIONS

The MSA-2218 is not required in the following situations:

- The beneficiary was already sterile before the hysterectomy.
- The beneficiary requires a hysterectomy because of a life-threatening emergency situation. It was not possible for the physician to inform the beneficiary in advance that the surgery would make her permanently incapable of reproducing.
- The hysterectomy (as covered according to Medicaid policy) was performed during a period of retroactive eligibility.

12.5.B. ACKNOWLEDGEMENT OF RECEIPT OF HYSTERECTOMY INFORMATION

Providers may attach a copy of the MSA-2218 to the claim or submit the MSA-2218 via fax.

Federal regulations require that this form be submitted to Medicaid before reimbursement can be made for any hysterectomy procedure. This process can eliminate submitting paper attachments for hysterectomy claims and pre-confirms the acceptability of the completed acknowledgement form, as well as reduces costly claim rejections.

(Refer to the Forms Appendix for a copy of MSA-2218. The form is also available on the MDHHS website. Refer to the Directory Appendix for website and contact information.)

12.5.C. PROCEDURE FOR ACKNOWLEDGEMENT OF RECEIPT OF HYSTERECTOMY INFORMATION APPROVAL

- The provider who obtains the required Acknowledgement completes a cover sheet (typed or printed) which must include: beneficiary name, beneficiary Medicaid ID number, provider’s contact person, provider fax number, and provider phone number.
- Fax the cover sheet and completed acknowledgement form to the Medicaid Payments Division, Hysterectomy Acknowledgement Form Approval. (Refer to the Directory Appendix for contact information.) Do not fax invoices.
- The form is reviewed within five working days, and a notice of errors or acceptance is returned to the provider. When notified that the acknowledgement form has been accepted and is on file, inform the other providers via a copy of the response. All invoices related to the service may be submitted without attachments.
- If there is no response within five working days:
  - Confirm that the fax is working.
  - Be sure that the cover sheet included the necessary information for Medicaid staff to respond to the provider.
  - Resend the information if necessary.
12.6 ORGAN TRANSPLANTS

Medicaid covers organ transplants and related services if all requirements for these services are met. PA is required for all beneficiary, donor, and potential donor services related to all organ transplants except cornea and kidney transplants. If transplantation of additional organ(s) is to occur during the same operative session as a cornea or kidney transplant, PA is required.

Prior to surgery, the beneficiary must be evaluated at an accepted transplant center approved by the Office of Medical Affairs (OMA) to determine if he is a good transplant candidate. The attending physician must obtain the PA for this evaluation. If the beneficiary is accepted as a transplant candidate, the PA for the evaluation also covers the transplant and related services.

12.7 STERILIZATION

Medicaid covers sterilization procedures when specific requirements are met. Medicaid defines a sterilization procedure as any medical procedure, treatment, or operation for the purpose of rendering an individual (male or female) permanently incapable of reproducing. Surgical procedures performed solely to treat an injury or pathology are not considered sterilizations under Medicaid’s definition of sterilization, even though the procedure may result in sterilization (e.g., oophorectomy). The physician is responsible for obtaining the signed Consent for Sterilization (MSA-1959/HHS-687).

Sterilizations are only covered if all of the following are met:

- The beneficiary is at least 21 years of age at time of informed consent.
- The beneficiary is not legally declared to be mentally incompetent.
- The beneficiary is not institutionalized in a corrective, penal, or mental rehabilitation facility.
- Informed consent is obtained.
Informed consent is not obtained while the beneficiary is in labor or childbirth; seeking to obtain or obtaining an abortion; or under the influence of alcohol or other substances that affect the beneficiary’s state of awareness.

Informed consent must be obtained not less than 30 days nor more than 180 days prior to sterilization.

The only exception is in the case of premature delivery or emergency abdominal surgery. If the premature delivery or emergency abdominal surgery occurred before the 30-day waiting period is over, at least 72 hours must have passed between the time of obtaining informed consent and the sterilization procedure.

In cases of premature delivery, informed consent must have been given at least 30 days before the expected delivery date. The consent form must indicate the expected date of delivery.

In cases of abdominal surgery, the emergency nature of the surgery must be clearly identified (e.g., diagnosis, physician's statement, or hospital summary). The nature of the emergency must be included on the consent form.

12.7.A. INFORMED CONSENT PROCESS

The following procedures must be included in the process of informed consent:

- The beneficiary must be advised that the sterilization will not be performed for at least 30 days after the MSA-1959/HHS-687 is signed, except in cases of emergency abdominal surgery or premature delivery.
- The person who obtains informed consent must offer to answer any questions the beneficiary may have concerning the procedure.
- Suitable arrangements must be made to ensure that information is effectively communicated to the deaf, blind, or otherwise handicapped.
- An interpreter must be provided if the beneficiary does not understand the language used on the consent form or the language used by the person obtaining informed consent.
- The beneficiary is permitted to have a witness of his choice present when informed consent is obtained.
- At the time of the informed consent, a copy of the consent form must be given to the beneficiary.

All of the following sterilization information and advice must be presented orally to the beneficiary both at the time the beneficiary signs the MSA-1959/HHS-687 and again by the physician performing the sterilization shortly before the procedure (e.g., during the pre-operative examination):

- Advice that the beneficiary is free to withhold or withdraw consent to the procedure at any time before the sterilization without affecting the right to future care or treatment and without loss or withdrawal of any federally funded program benefits to which the beneficiary might be otherwise entitled.
- A description of available alternative methods of family planning and birth control.
- Advice that the sterilization procedure is considered to be irreversible.
- A thorough explanation of the specific sterilization procedure to be performed.
- A full description of the discomforts and risks that may accompany or follow the procedure, including an explanation of the type and possible effects of any anesthetic to be used.
- A full description of the benefits or advantages that may be expected as a result of the sterilization.

The beneficiary, the person who obtained the consent, and the interpreter (if required) must sign the MSA-1959/HHS-687 not less than 30 days nor more than 180 days prior to the sterilization. The physician performing the sterilization must also sign and date the MSA-1959/HHS-687 after the sterilization has been performed.

No additional reimbursement is allowed for the examination or the sterilization explanation.

If the procedure occurs in a place other than that in which the consent form is signed (e.g., forms were signed in the physician's office, but the procedure will be rendered in the hospital), the person obtaining consent must send a copy of the completed form to the place of surgery. The second provider (e.g., hospital) is responsible for acquiring the physician's statement (if not previously documented) and for photocopying the signed form and supplying copies to any other Medicaid provider who is billing as a participant in the sterilization.

A copy of the completed MSA-1959/HHS-687 is required for coverage of charges related to a sterilization procedure. This form may be faxed or attached to the claim form.

12.7.B. CONSENT FOR STERILIZATION FORM

Providers may attach a copy of the Consent for Sterilization (MSA-1959/HHS-687) form to the claim or submit the MSA-1959/HHS-687 via fax.

Federal regulations require that this form be submitted to MDHHS before reimbursement can be made for any sterilization procedure. This process can eliminate submitting paper attachments for sterilization claims, and pre-confirms the acceptability of the completed consent form.

(Refer to the Forms Appendix for a copy of MSA-1959/HHS-687. Refer to the Directory Appendix for website and contact information.)

12.7.C. PROCEDURE FOR CONSENT FOR STERILIZATION FORM APPROVAL

- The provider who obtains the required Consent and completed MSA-1959/HHS-687 completes a cover sheet (typed or printed) which must include: beneficiary name, beneficiary Medicaid ID number, provider's contact person, provider fax number, and provider phone number.
• Fax the cover sheet (according to Document Management Portal instructions) and completed MSA-1959/HHS-687 to the Medicaid Payments Division, Sterilization Consent Form Approval. (Refer to the Directory Appendix for contact information.) Do not fax invoices.

• The MSA-1959/HHS-687 is reviewed within five working days, and a notice of errors or acceptance is returned to the provider. When notified that the MSA-1959/HHS-687 has been accepted and is on file, inform the other providers via a copy of the response. All invoices related to the service may be submitted without attachments.

• Providers may then submit claims (either electronic or hard copy) to Medicaid. The remarks section or appropriate electronic segment must include the statement "Consent on File."

• When sterilization claims are received with this information in the remarks section, consent form edit requirements are forced if the submitted invoice matches the consent form on file.

• If there is no response within five working days:
  ➢ Confirm that the fax is working.
  ➢ Be sure that the cover sheet included the necessary information for Medicaid staff to respond to the provider.
  ➢ Resend the information if necessary.

12.7.D. REVERSAL OF STERILIZATION

Services to reverse a previous sterilization are not covered by Medicaid.

**SECTION 13 – DURABLE MEDICAL EQUIPMENT/ORTHOTICS/PROSTHETICS**

Refer to the Medical Supplier Chapter of this manual for additional information.
SECTION 14 – PSYCHIATRIC AND SUBSTANCE ABUSE SERVICES

14.1 PSYCHIATRIC SERVICES

Medicaid covers psychiatric services for diagnostic or active treatment purposes. Psychiatric services are covered by the local PIHP/CMHSP for services included under the capitation payments to the PIHPs/CMHSPs, and a limited outpatient benefit is covered for beneficiaries enrolled in MHPs. Services to beneficiaries not included in the capitation payments to the PIHPs/CMHSPs and not enrolled in Medicaid Health Plans are covered through FFS Medicaid. FFS limits outpatient visit coverage to a maximum of ten psychiatric visits in 12 months. Under FFS, only those psychiatric services personally rendered by a physician (MD or DO) are covered. Those services performed by other staff (e.g., psychologists, social workers, NPs, physician's assistants) are not covered. (Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding covered services.)

Services provided to beneficiaries enrolled in MHPs must be authorized by the individual MHP. (Refer to the Medicaid Health Plans Chapter of this manual for additional information.)

(Refer to the Mental Health/Substance Abuse Chapter of this manual for services covered by the PIHPs/CMHSPs and authorization requirements.)

| Psychological Testing | Medicaid covers psychological testing that is reasonable and necessary for diagnosing the beneficiary's mental or developmental status and strengths and needs. If a beneficiary requires psychological testing more than once per year, documentation of medical necessity must be maintained in the medical record. Psychological testing must be ordered by a physician (MD or DO) and must be performed by a psychologist who is fully licensed, limited-licensed, or temporary limited-licensed. This order must be kept in the beneficiary's clinical record. Supervision of limited-licensed and temporary limited-licensed psychologists must comply with the requirements of Michigan Public Act 368 of 1978, as amended.

Psychological testing under FFS is only covered under the physician's provider NPI number. The physician's provider NPI number reported for coverage must be the ordering physician, the physician employing the psychologist, or a physician employed by the group which also employs the psychologist. The physician ordering psychological testing must examine the beneficiary. The physician employing the psychologist or employed by the same group that employs the psychologist does not need to examine the beneficiary in order to bill for the psychological testing unless that physician orders the psychological testing.

| Inpatient Psychiatric Admissions | Inpatient stays in a psychiatric unit of a general hospital are covered for beneficiaries of any age. Inpatient treatment, including related psychiatric visits, in a freestanding psychiatric hospital, both private and state owned, is limited to eligible beneficiaries under age 21, and age 65 and older. If the beneficiary was an inpatient immediately prior to attaining age 21, he would be eligible to continue as an inpatient until age 22. If the beneficiary is discharged at some time following his 21st birthday, coverage terminates on the discharge date.

All psychiatric admissions and continued stays must be authorized by the local PIHP/CMHSP. (Refer to the Mental Health/Substance Abuse Chapter of this manual for specific coverages and authorization requirements.)
Psychiatric Partial Hospitalization

Psychiatric coverage includes partial hospitalization on a day-care or night-care plan for all beneficiaries, regardless of age. To be eligible for partial hospitalization, the beneficiary must be receiving active psychiatric treatment provided under the direction of a psychiatrist.

All partial hospitalization admissions and continued stays must be authorized by the local PIHP/CMHSP. (Refer to the Mental Health/Substance Abuse Chapter of this manual for specific coverages and authorization requirements.)

<table>
<thead>
<tr>
<th>14.2 SUBSTANCE ABUSE SERVICES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medicaid covers acute care detoxification in the inpatient hospital for FFS beneficiaries and through the MHPs for beneficiaries enrolled in Medicaid Health Plans.</td>
</tr>
</tbody>
</table>

### Acute Care Detoxification

Admission to the acute care setting for a diagnosis of substance abuse must meet at least one of the following criteria as reflected in the physician's orders and patient care plans:

- Vital signs, extreme and unstable
- Uncontrolled hypertension, extreme and unstable
- Delirium tremens, (e.g., confusion, hallucinations, seizures) or a documented history of delirium tremens requiring treatment
- Convulsions or multiple convulsions within the last 72 hours
- Unconsciousness
- Occurrence of substance abuse with pregnancy and monitoring the fetus is vital to the continued health of the fetus
- Insulin treated diabetes complicated by diabetic ketoacidosis
- Suspected diagnosis of closed head injury based on trauma injury
- Congestive heart disease or ischemic heart disease, or significant arrhythmia as examples of active symptomatic heart disease
- Suicidal ideation and gestures necessitating suicidal precautions as part of treatment
- Blood alcohol level 350 mg/dl with a diagnosis of alcohol abuse
- Blood alcohol level 400 mg/dl with diagnosis of alcohol dependence
- Active presentation of psychotic symptoms reflecting an emergent/urgent condition

### Other Substance Abuse Services

Medicaid covers other substance abuse services provided to beneficiaries. These services are covered under capitation payments to the PIHPs/CMHSPs. (Refer to the Mental Health/Substance Abuse Chapter of this manual for coverage details and authorization requirements.)
SECTION 15 – PRIVATE DUTY NURSING

Refer to the Private Duty Nursing Chapter of this manual for additional information.
SECTION 16 – OUTPATIENT THERAPY

Refer to the Outpatient Therapy Chapter of this manual for additional information.
SECTION 17 – TELEMEDICINE

Telemedicine is the use of telecommunication technology to connect a patient with a health care professional in a different location. MDHHS requires a real time interactive system at both the originating and distant site, allowing instantaneous interaction between the patient and health care professional via the telecommunication system. Telemedicine should be used primarily when travel is prohibitive for the beneficiary or there is an imminent health risk justifying immediate medical need for services.

Providers must ensure the privacy of the beneficiary and the security of any information shared via telemedicine. The technology used must meet the needs for audio and visual compliance in accordance with current regulations and industry standards.

Telecommunication systems using store and forward technology, including asynchronous transmission of medical data or the use of robotics for remote access surgical procedures, are not included in this policy.

17.1 TELEMEDICINE SERVICES

The following services may be provided via telemedicine:

- ESRD-related services
- Behavior change intervention
- Behavior Health and/or Substance Abuse Treatment
- Education Services, Telehealth
- Inpatient consultations
- Nursing facility subsequent care
- Office or other outpatient consultations
- Office or other outpatient services
- Psychiatric diagnostic procedures
- Subsequent hospital care
- Training service – Diabetes (Refer to the Diabetes Self-Management Education (DSME) Training Program subsection in the Hospital Chapter for specific program requirements)

Where face-to-face visits are required (such as ESRD and nursing facility related services), the telemedicine service may be used in addition to the required face-to-face visit, but cannot be used as a substitute. There must be at least one face-to-face hands-on visit (i.e., not via telemedicine) by a physician, nurse practitioner, or physician’s assistant per month to examine the vascular site for ESRD services. The initial visit for nursing facility services must be face-to-face.

Procedure code and modifier information is contained in the MDHHS Telemedicine Services Database available on the MDHHS website. (Refer to the Directory Appendix for website information.)
17.2 AUTHORIZATION REQUIREMENTS

There are no prior authorization requirements when providing telemedicine services for fee-for-service beneficiaries.

Authorization requirements for beneficiaries enrolled in Medicaid Health Plans (MHPs) may vary. Providers must check with individual MHPs for any authorization or coverage requirements.

17.3 AUTHORIZED ORIGINATING SITES

The originating site is the location of an eligible beneficiary at the time the service being furnished via a telecommunications system occurs.

The following are authorized as originating sites for telemedicine services:

- County mental health clinic or publicly funded mental health facility
- Federally Qualified Health Center (FQHC)
- Hospital (inpatient, outpatient, or critical access hospital)
- Office of a physician or other practitioner (including medical clinics)
- Hospital-based or CAH-based Renal Dialysis Centers (including satellites)
- Rural health clinic
- Skilled nursing facility
- Tribal Health Center (THC)

Information regarding billing for the originating site facility fee is contained in the Billing & Reimbursement for Institutional Providers and the Billing & Reimbursement for Professionals chapters. Providers at the originating site may bill services they provide on the same date as a service that is performed via telemedicine. The originating site provider is not limited to services listed on the Telemedicine Services database but must bill the medically necessary service they performed.

17.4 DISTANT SITE

The location of the physician or practitioner providing the professional service via a telecommunications system is called the distant site. A medical professional is not required to present the beneficiary to the physician or practitioner at the distant site unless medically necessary. Providers at the distant site can only bill services listed in the Telemedicine Services database.

17.5 AUTHORIZED PRACTITIONERS

The physician or practitioner at the distant site who is licensed under State law to furnish a covered telemedicine service (as described in the Telemedicine Services subsection) may bill, and receive payment for, the service when it is delivered via a telecommunications system.

If providing services through the PIHP/CMHSP, the provider must have a contract with or be authorized by the appropriate entity.
In order to be reimbursed for services, distant site providers must be enrolled in MI Medicaid.

When providing services via telemedicine, providers can only bill for services listed on the Telemedicine Services database. Procedure code and modifier information is contained in the MDHHS Telemedicine Services Database available on the MDHHS website. (Refer to the Directory Appendix for website information.)
SECTION 18 – CERTIFIED REGISTERED NURSE ANESTHETIST

Medicaid covers anesthesia services provided by a Medicaid enrolled Certified Registered Nurse Anesthetist (CRNA). CRNA services are covered for the CRNA or for the entity with which the CRNA has an employment or contract relationship that provides for payment to be made to the entity. CRNAs must comply with Michigan scope of practice licensing laws and regulations.

If a rural hospital elects reasonable cost reimbursement for CRNA services under Medicare, the CRNA costs are included in the facility payments to the hospital and are not covered separately by Medicaid.

For specific coverage parameters, refer to the Anesthesia Services Section of this chapter.

To enroll as a Medicaid provider, a CRNA must be currently licensed in Michigan as a nurse, be certified by the State as a CRNA, and complete an on-line application through the CHAMPS Provider Enrollment subsystem. (Refer to the Provider Enrollment Section of the General Information for Providers Chapter for additional enrollment information, and the Directory Appendix for contact information.)
**SECTION 19 – PHYSICIAN’S ASSISTANT**

Medicaid covers services provided by a physician’s assistant provided under the delegation and supervision of a physician licensed under part 170, part 175, or part 180 of Michigan Public Act 368 of 1978, as amended. The supervising physician must comply with the physician delegation and supervision requirements for utilizing physician’s assistants specified in Public Act 368 of 1978, as amended, and any related rules promulgated by the State of Michigan or its Departments.

To enroll as a Medicaid provider, physician assistants must complete an on-line application through CHAMPS and are to be enrolled as Rendering/Servicing-Only providers. Physician assistants are not eligible for direct Medicaid reimbursement. Payment for services rendered by a physician’s assistant will be made to the delegating/supervising physician, group or billing provider NPI. The supervising physician is responsible for the services performed by the physician’s assistant.

The physician’s assistant may provide direct patient care under the delegation and supervision of a physician at the medical care site where the physician regularly sees patients. Records must demonstrate that the physician’s assistant provided the services, and that the licensed physician is regularly available and provides medical care to beneficiaries at the site on a routine basis. When the supervising physician is not physically present on the premises, he must be continuously available to the physician’s assistant through direct communication such as telephone, radio, or telecommunication. This does not preclude licensed persons under the physician’s delegation and supervision from making calls or going on rounds to private homes, public institutions, hospitals, or other health care facilities as long as the care is a supplement to, and does not replace, the physician's personal services.

(Refer to the Surgery – General Section of this chapter for information on a physician’s assistant functioning as an assistant at surgery.)
SECTION 20 – PODIATRIST

Medicaid covers the medically necessary services of a podiatrist. (Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.)

Podiatrists should refer to the appropriate sections of this chapter for specific information related to the coverage of specific services.

20.1 COPAYMENT

A $2.00 copayment is required for each separately covered visit for beneficiaries age 21 and older who are not residents in a nursing facility or are not receiving services covered by Medicare. If more than one separately covered service is rendered on the same day, such as an office visit and laboratory services, only one copayment is required. If a procedure such as a surgery with a global period is rendered, only one copayment is required. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).

20.2 CONSULTATIONS

Medicaid covers limited and intermediate level consultations if requested by a physician.

20.3 NURSING FACILITY SERVICES

Podiatry services provided to a beneficiary in a nursing facility are considered an ancillary service and require the written order of the beneficiary's attending physician. All terms and conditions related to Medicaid covered and non-covered services, including PA and billing requirements, apply to services provided to beneficiaries in a nursing facility.
SECTION 21 – PHYSICAL THERAPIST

Medicaid only covers Medicare coinsurance and deductible amounts for services provided by enrolled physical therapists. A physician/physician assistant/nurse practitioner must prescribe physical therapy services.

To qualify for coverage, services must be provided in the physical therapist’s office. Services provided in the physician’s office are covered under the physician, and services provided in a nursing facility setting are covered under the long term care provider. A licensed physical therapist (PT) or a physical therapy assistant under the direct supervision of the physical therapist must provide services.
SECTION 22 – CERTIFIED NURSE MIDWIFE

Medicaid covers services provided by enrolled certified nurse midwives (CNMs). (Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.)

CNM coverage includes the management of low risk and uncomplicated pregnancies and services to essentially normal women and newborns. Medically complicated pregnancies and services to beneficiaries with high-risk conditions MUST be referred to a physician. Services provided to high-risk women and women with medical complications are only covered under the delegation and supervision of a physician.

22.1 ENROLLMENT

To enroll as a Medicaid provider, a CNM must complete an on-line application through the CHAMPS Provider Enrollment subsystem. (Refer to the Provider Enrollment Section of the General Information for Providers Chapter for additional enrollment information, and the Directory Appendix for contact information.) A CNM must be able to demonstrate a safe mechanism for physician consultation, collaboration, and referral within an alliance agreement that includes mutually approved protocols.

22.2 FAMILY PLANNING

Medicaid covers family planning services provided by CNMs. (Refer to the Family Planning portion of the General Practice Section of this chapter for specific coverage information.) A CNM can only prescribe oral contraceptives under the delegation of a physician.

22.3 GYNECOLOGIC CARE

Medicaid covers gynecologic care provided by CNMs. CNMs may receive direct reimbursement for these services when completed within the CNM scope of practice guidelines.

22.4 LABORATORY TESTS

Laboratory testing ordered by the CNM is covered and must be documented in the beneficiary’s medical record by the ordering CNM regardless of where the tests are performed.

The following laboratory tests can be ordered by a CNM:

- Acetone and diacetic acid (ketone bodies), both qualitative and semi-quantitative
- Albumin, qualitative, semi-quantitative, and quantitative
- Antibody titer Rh system
- Blood typing, ABO, Rh(D), RBC antibody screening
- Blood count, RBC, WBC, hemoglobin, hematocrit, indices (MCV, MCH, MCHC)
- Culture, presumptive screening, for Neisseria, Gonorrhea, Candida, Hemophilus, or beta hemolytic Streptococci group A, etc.
- Culture, urine, definitive, with or without colony count
- Cytopathology, vaginal and/or cervical smears
- Glucose, qualitative, quantitative, timed specimen, tolerance
- Hemoglobin, electrophoretic separation, qualitative
- Hepatitis B test
- HIV detection
- Pregnancy test
- Quantitative sediment analysis and quantitative protein, 12- or 24-hour urine specimen
- Reticulocyte count, manual
- Routine prenatal laboratory services (OB profile)
- Rubella test, titer
- Syphilis test (VDRL, RPR, etc.), qualitative
- Sickle cell slide test
- TB skin test, tine
- Susceptibility (sensitivity) for aerobes
- Treponema antibodies, fluorescent, absorbed
- Complete urinalysis
- Wet mount, smear, tissue, direct microscopic examination

The following laboratory tests are covered when performed by the CNM:

- Complete urinalysis
- Direct microscopic examination of a smear, wet mount, and/or tissue for fungi
- Hematocrit
- Hemoglobin
- Pregnancy testing

These tests are not covered for the CNM if rendered by an outside laboratory.

22.5 Maternity Care

Medicaid covers antepartum care, delivery, and postpartum care rendered by a CNM when provided in compliance with the specific coverage policies of this chapter.

| Antepartum Care | Coverage for antepartum care includes all usual antepartum services provided prior to delivery and referral to MIHP given the presence of psychosocial or nutritional factors that could adversely affect the pregnancy. |
If the provider initiated prenatal care within the first six months of pregnancy through the month of delivery, the appropriate antepartum care CPT code is covered. If the beneficiary is seen by several CNMs within a group or multiple CNMs supervised by the same physician or physician group, the antepartum care package is covered. (Refer to the Maternity Care and Delivery Services Section of this chapter for details on coverage of antepartum care and when individual E/M services are covered.)

CNMs may perform and bill Medicaid for non-stress tests when this service is determined medically necessary and is part of routine care provided for uncomplicated pregnancies. CNMs may receive direct reimbursement for this service when completed within the CNM scope of practice guidelines.

Delivery

Deliveries performed by a CNM are covered in a licensed setting only. Home deliveries and services associated with these deliveries are not covered. Coverage of the delivery includes monitoring, vaginal delivery, and resuscitation of the newborn infant when necessary.

Post-partum Care

Medicaid covers post-partum office visits following the delivery. Routine post-partum hospital care for the mother is covered as a part of the delivery. Routine care of the newborn in the hospital is covered for the provider who examines and provides the total hospital care of the newborn regardless of whether he performed the delivery. (Refer to the Services to Newborns subsection in this chapter for additional coverage information.)

22.6 Office Visits

Visits not directly related to antepartum care or follow-up to a delivery, such as family planning visits, are covered under the appropriate office visit procedure code. (Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters. Refer to the Evaluation and Management Services Section of this chapter for specific coverage information related to office visits.)

22.7 Pharmacy

Pharmaceuticals can only be ordered by a CNM under the delegation of a physician. The pharmaceutical must be provided by an enrolled pharmacy or, if appropriate, by an enrolled Family Planning Clinic (FPC).
SECTION 23 – NURSE PRACTITIONER

23.1 GENERAL INFORMATION

Medicaid covers the services of a nurse practitioner (NP) when they are performed while working in collaboration with a physician. Medicaid covers NP services only if:

- the services would be covered if furnished by a physician;
- the services are not otherwise excluded from coverage; and,
- the NP is legally authorized to perform the services under state law.

NP services are subject to the limitations that apply to physician services. Certain services, such as long-term care facility visits, consultations, and initial hospital care, may be restricted to physicians by program policy or federal and state statues and may not be covered for NPs.

Professional services are only covered when the NP has personally performed the services and no facility or other provider charges, or is paid, any amount for the furnishing of the professional service. Services provided jointly by an NP and the supervising physician are covered for only one practitioner.

Determination of the medical necessity and appropriateness of services is the responsibility of the NP/physician based on the terms of their collaborative agreement.

23.2 ENROLLMENT OF NURSE PRACTITIONERS

Nurse practitioners who render services to Medicaid beneficiaries must be enrolled providers. In order for an NP to enroll, he/she must meet the following requirements and enroll as either a Rendering/Servicing-Only Provider or an Individual/Sole Provider and:

- meet all state qualifications for nurse practitioners;
- have an ambulatory based practice;
- attest to the type of nurse practice engaged in, such as pediatric, family, geriatric, adult, etc.; and,
- if engaged in family or pediatric nurse practice, continue to provide proof of certification as a family nurse practitioner or a pediatric nurse practitioner by the appropriate accepted national credentialing body. (Refer to Michigan Rule 338.10404 [3].)

23.2.A. RENDERING/ SERVICING-ONLY NURSE PRACTITIONERS

A physician-employed NP who renders services only under the physician’s delegation and supervision under an employment relationship or agreement is required to be an enrolled provider and uniquely identified on claims for services. He/she may enroll as a Rendering/Servicing-Only Provider, and payment for these services will be made to the employing, supervising physician or physician group.
23.2.B. INDIVIDUAL/SOLE PROVIDER NURSE PRACTITIONERS

In order for an NP to enroll and receive direct reimbursement as an Individual/Sole Provider, he/she must comply with the following requirements:

- provide services according to the terms of a written collaborative practice agreement in place with a physician. (Refer to the Collaborative Practice Agreement subsection for additional information.);
- complete the appropriate enrollment forms and a Nurse Practitioner/Physician Agreement (DCH-1575). (A copy of the form is available on the MDHHS website. Refer to the Directory Appendix for website information.); and
- once enrolled, the individual/sole provider NP may submit claims to MDHHS directly if the beneficiary is in FFS Medicaid. For beneficiaries enrolled in a MHP, the NP must negotiate provider terms and payment arrangements with each individual MHP.

23.3 COLLABORATIVE PRACTICE AGREEMENT

This is a formal document to be completed by Individual/Sole Provider NPs seeking direct reimbursement. It describes terms under which the NP and the physician deliver covered medical services. It is mutually developed or approved as satisfactory to both professionals involved and describes the types of services to be provided and any criteria for referral and consultation. This agreement must be available to MDHHS upon request. Services must be delivered within each practitioner’s scope of practice as allowed by federal regulations and state law.

The collaborative practice agreement must be reviewed at least annually and updated as necessary. The NP must notify MDHHS if the agreement is dissolved so the NP’s enrollment with Medicaid can be terminated. Medicaid only covers NP services provided within the provisions of the agreement.
SECTION 24 – ANESTHESIOLOGIST ASSISTANT

Medicaid covers anesthesia services provided by qualified anesthesiologist assistants (AAs). AA services are covered for the AA or for the entity with which the AA has an employment or contract relationship that provides for payment to be made to the entity.

For specific coverage parameters, refer to the Anesthesia Services section of this chapter.

To enroll as a Medicaid provider, an AA must meet all of the following requirements:

- Works under the delegation and direction of a Medicaid enrolled anesthesiologist.
- Is in compliance with all applicable requirements of State law.
- Is a graduate of a medical (MD or DO) school-based anesthesiologist assistant education program that:
  - Is accredited by the Committee on Allied Health Education and Accreditation; and
  - Includes approximately two years of specialized basic science and clinical education in anesthesia at a level that builds on a premedical undergraduate science background.
- Is currently certified by the National Commission for Certification of Anesthesiologist Assistants.
PRACTITIONER REIMBURSEMENT APPENDIX

SECTION 1 – REIMBURSEMENT METHODOLOGY

1.1 PRACTITIONER FEE SCREENS

Practitioner payment rates are established by MDHHS as a fee screen for each procedure. The Medicare prevailing fees, the Resource Based Relative Value Scale (RBRVS) and other relative value information, other state Medicaid fee screens, and providers’ charges may be utilized as guidelines or references in determining the maximum fee screens for individual procedures. Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

Any rate discrepancies will be resolved by using the policy language describing reimbursement methodology for the established fee schedules.

1.2 EMERGENCY DEPARTMENT SERVICES

Physician services provided in the ED are covered as individual services. Critical care services are covered according to the CPT/HCPCS definitions and coding conventions for critical care. If critical care is required for a beneficiary in the ED, then only the critical care codes are covered. ED E/M or visit codes are not covered on the same day as critical care for the same provider.

When a beneficiary is seen in the ED, the appropriate level of ED E/M service is covered unless another E/M service is more appropriate (e.g., observation care, initial inpatient hospital care, or critical care). The ED E/M service which includes the medical screening exam is covered without regard to whether the medical screening results in the medical condition being deemed an emergency or not. The results of the medical screening examination, along with any medically necessary appropriate diagnostic services, determine if further treatment must be provided. If the attending physician determines that an emergency medical condition does exist, all subsequent medically appropriate services to stabilize the patient must be provided and are covered in addition to the ED E/M service. CPT/HCPCS coding conventions and Medicaid guidelines must be followed.

The medical record must support the need for the type and extent of diagnostic services performed based on the presenting symptoms of the beneficiary. The ED physician’s review of x-rays and EKGs performed on the beneficiary are covered as a part of the E/M service. Professional component services are covered only for the physician who prepares a complete, written report of the findings for the medical record. If a specialist in the field prepares this, then the ED physician’s review of the findings does not meet the conditions for separate coverage of the service.

The ED E/M services provided by the attending physician, regardless of the level of the service, are covered using a two-tiered rate based on whether the beneficiary was released or admitted. If the beneficiary was released from the ED, a single rate is used as the fee screen. If the beneficiary was admitted to the hospital or transferred to another hospital from the ED, a higher single rate is used as the fee screen.
1.3 INJECTABLES

Fee screens for the cost of the drug are established using Medicare applicable payment limits.

Effective for dates of service January 1, 2012 through March 31, 2013 only, modified methodology pricing places certain lower cost injectable drugs in classes with therapeutic alternatives at the maximum allowable cost. Utilization of lower cost alternative agents within a therapeutic class will have increased reimbursement over current Average Sale Price (ASP) rates, with margins greater than or equal to higher cost agents within the same therapeutic class. Refer to the Practitioner and Medical Clinic Fee Schedule on the MDHHS website for additional information. (Refer to the Directory Appendix for website information.)
SECTION 2 – ENHANCED PRACTITIONER PAYMENTS

MDHHS makes payment adjustments for practitioner services payable under Medicaid Fee-For-Service (FFS) through the following public entities:

- University of Michigan Health System
- Wayne State University
- Hurley Hospital
- Michigan State University
- Oakland University

2.1 QUALIFYING PRACTITIONERS

Adjustments apply to both public and private practitioners and practitioner groups who are either employees of one or more of the above public entities, or are under contract with one or more of the above public entities, and include the following:

- University medical and dental faculty, employed practitioners, and private practice groups with contractual arrangements with one or more of the above universities and provide services to Medicaid beneficiaries in a variety of settings.
- Hurley Hospital-employed or -contracted physicians, dentists, and other practitioners who provide services to Medicaid beneficiaries in a variety of settings.

Services eligible for the payment adjustments are billed under the federal employer identification number of the public entity or under the federal employer identification number of the practitioner/practitioner group.

Inpatient and outpatient services provided by the following practitioners, when not included in facility payments to the public entity, are included:

- Physicians (MD and DO)
- Ophthalmologists
- Oral-Maxillofacial Surgeons
- Dentists
- Podiatrists
- Physician Assistants
- Nurse Practitioners
- Certified Nurse Midwives
- Certified Registered Nurse Anesthetists
- Anesthesiologist Assistants
- Optometrists
2.2 Payment Adjustment Amount

The payment adjustment amount for services provided to Medicaid beneficiaries who do not have other insurance coverage will be the lesser of:

- The difference between the practitioner Medicaid fee-for-service fee screen and the practitioner’s customary charge; or,
- 95.7% of the Average Commercial Rate for the service rendered.

The payment adjustment amount for services provided to Medicaid beneficiaries with other insurance coverage will be the lesser of:

- The difference between the total of the Medicaid, Medicare, and commercial insurance payments and the practitioner’s customary charge; or,
- The difference between the total of the Medicaid, Medicare, and commercial insurance payments and 95.7% of the Average Commercial Rate.

2.3 Financing the Payment Adjustments

The public entities must certify to MDHHS that they will provide the non-federal share of the payment adjustments established by this policy. These public entities must also certify to MDHHS that the financial arrangements used to offset the non-federal share of these Medicaid payment adjustments do not violate Title XIX of the Social Security Act, §1903 Payment to States, Subsection (W) Prohibition on Use of Voluntary Contributions, and Limitation on Use of Provider-Specific Taxes to Obtain Federal Financial Participation Under Medicaid.

No additional state funds are available beyond the amount needed to pay designated providers up to the standard Medicaid fee screens for these services. The non-federal share of the Medicaid payment adjustments is supplied by the public entity through an intergovernmental transfer (IGT) to MDHHS.

2.4 Payment Adjustment Process

Upon receipt of the provider information from the public entity, MDHHS will generate a report which will include the federal employer identification numbers and utilization data for the providers affected by this policy for each covered period. The public entity must review the report and acknowledge the completeness and accuracy of the report. After receipt of this confirmation, MDHHS will make the payment adjustment. The payment adjustments will be made for the federal employer identification number used to bill Medicaid under the FFS program. The payment adjustments will be processed quarterly. Each quarterly payment adjustment will include a reconciliation that takes into account all claims submitted to MDHHS and paid after the prior Physician Adjuster payment quarter cut-off date.
SECTION 3 – PRIMARY CARE PROVIDER RATE INCREASE

Effective January 1, 2015, the provisions of this section are no longer in effect. Refer to the Primary Care Practitioner Services Incentive Payment section for additional information.

For dates of service on and after January 1, 2013 and through December 31, 2014, MDHHS will apply an increased payment rate to enrolled practitioners for primary care services delivered by a physician with a specialty designation of family medicine, general internal medicine, or pediatric medicine. The increase will apply to a specific set of services and procedures designated by the Centers for Medicare & Medicaid Services (CMS) as "primary care services." These payments are made as a directive of Section 1202 of the Affordable Care Act (ACA).

3.1 PROVIDER ELIGIBILITY

Physicians with specialty designations of family medicine, general internal medicine, and pediatric medicine qualify as primary care providers for purposes of increased payment. Services provided by all subspecialists related to these three designated specialty categories, recognized by the American Board of Medical Specialties, American Osteopathic Association, and the American Board of Physician Specialists, will qualify for the higher payment for primary care services.

3.1.A. IDENTIFICATION OF ELIGIBLE PROVIDERS

Before enhanced payments are made, MDHHS will verify that a physician meets the regulation’s eligibility criteria which are identified as being either board certified in an eligible specialty or by conducting a thorough review of the physician's practice characteristics.

- **Board Certification**: A primary care physician (PCP) who has self-attested by designating their primary specialty in their Community Health Automated Medicaid Processing System (CHAMPS) enrollment file as one of the three eligible specialties and has provided applicable Board certification information will be validated by MDHHS prior to any enhanced payment.

- **Review of Practice Characteristics**: For non-board-certified physicians, Medicaid will review an enrolled provider’s billing history for CY 2012. At least 60 percent of the physician’s codes paid by Medicaid for all of CY 2012 must be for the evaluation and management (E/M) codes and vaccine administration codes specified in this regulation. This review of practice characteristics will be done by MDHHS only for providers who have self-attested by designating in their CHAMPS enrollment file that their primary specialty is one of the three eligible specialties.

3.2 ELIGIBLE PRIMARY CARE SERVICES

CMS has identified that Healthcare Common Procedure Coding System (HCPCS) E/M codes 99201 through 99499 are subject to the rate increase. In addition, vaccine administration codes 90460, 90461, 90471, 90472, 90473, and 90474 are also eligible for the higher payment. MDHHS will not be providing coverage of previously non-covered codes within this range as a result of this initiative.
3.3 Enhanced Rates for Primary Care

For providers identified as eligible for the rate increase, payment will be made on the qualified procedure codes at the Medicare Physician Fee Schedule (MPFS) rates for CYs 2013 and 2014 or, if higher, the rate that will be applicable using the CY 2009 Medicare conversion factor. MDHHS will apply the Medicare site of service (Facility vs. Non-Facility) differential and the Medicare geographic adjustment. MDHHS will also apply Medicare’s two-tiered rates for locality 01 and locality 99 as defined by Medicare. Payment for the locality differential for services paid under this incentive will be determined by using the validated 9-digit ZIP code on the claim for where the service was performed. MDHHS will provide a separate fee schedule database for the two-year rate increase which will be located on the MDHHS website. (Refer to the Directory Appendix for website information.)
SECTION 4 – PRIMARY CARE PRACTITIONER SERVICES INCENTIVE PAYMENT

For dates of service on and after January 1, 2015, MDHHS applies an increased payment rate to enrolled providers for primary care services delivered by a physician with a specialty designation of family medicine, general internal medicine, or pediatric medicine. The increase applies to a set of designated primary care services.

4.1 PROVIDER ELIGIBILITY

Physicians with primary specialty designations of family medicine, general internal medicine, and pediatric medicine may qualify as primary care practitioners for purposes of increased payment. Eligibility for this payment is limited to being board certified or board eligible in one of the three designated primary care specialties as recognized by the American Board of Medical Specialties, American Osteopathic Association, and the American Board of Physician Specialists. Primary care physicians may also be determined eligible by conducting a thorough review of the physician’s practice characteristics as identified through their billing history.

Physician practitioners whose CHAMPS Provider Enrollment profile information reflects that they provide specialty or subspecialty (e.g., cardiology, endocrinology, or oncology, etc.) services are not eligible for the adjusted payment. Providers with multiple subspecialties are also not eligible for the adjusted payment. Exceptions will be made for practitioners who have subspecialty practices in adolescent and geriatric medicine.

Before enhanced payments are made, MDHHS will verify that a practitioner meets the eligibility criteria which are identified as the following:

- **Board Certification:** A primary care physician who has designated their primary specialty in their CHAMPS enrollment file as one of the three eligible specialties and has provided applicable Board certification information will be validated by MDHHS prior to any enhanced payment.

- **Board Eligible:** A primary care physician who has designated their primary specialty in their CHAMPS enrollment file as one of the three eligible specialties and has provided applicable documentation to support board eligibility status is also eligible for the enhanced payment. MDHHS will recognize physicians as board eligible for the period of time as defined by the applicable medical board following completion of their medical residency training program in one of the defined specialties.

- **Review of Practice Characteristics:** For non-board certified or non-board eligible primary care physicians, MDHHS will review an enrolled practitioner’s billing history for the previous calendar year. At least 60 percent of the physician’s codes paid by Medicaid must be for the evaluation and management (E/M) codes specified in this policy, including the preventive medicine E/M codes. This review of practice characteristics will be done by MDHHS only for providers who have self-attested by designating in their CHAMPS enrollment file that their primary specialty is one of the three eligible specialties.

- **Non-physician Practitioners:** Nurse practitioners (NPs) and physician assistants (PAs) who provide primary care services under the personal supervision of a physician who is one of the designated primary care specialty types may be reimbursed at the enhanced rate. Claims submitted by NPs and PAs must include their own NPI as the rendering provider and the NPI of their supervising/delegating physician. If the NP’s or PA’s supervising/delegating physician has
Practitioners delivering primary care services at Federally Qualified Health Centers (FQHCs), Rural Health Clinics (RHCs) and Local Health Departments (LHDs) are not eligible for these enhanced payments. Practitioner services in these settings are reimbursed using a payment methodology designed to reimburse those providers at cost and are made on a facility basis, not specific to the physician's services.

Practitioners who participate in the MDHHS Physician Adjustor Program are eligible for the primary care provider rate increase. For these participating providers, MDHHS calculates the Physician Adjustor Program payment adjustment consistent with the existing methodology.

Physicians with primary specialty designations of family medicine, general internal medicine, and pediatric medicine who are affiliated with Medicaid Health Plans (MHP) are eligible for the primary care practitioner rate increase as identified by their Primary Care Provider status within the MHP network.

### 4.2 Eligible Primary Care Services

Primary care practitioner services subject to the enhanced primary care rate are defined as Healthcare Common Procedure Coding System (HCPCS) codes:

- 99201 through 99215 for new and established patient office or outpatient evaluation and management (E/M) visits
- 99304 through 99318 for initial, subsequent, discharge and other nursing facility E/M services
- 99324 through 99337 for new and established patient domiciliary, rest home or custodial care E/M services
- 99341 through 99350 for new and established patient home E/M visits
- 99381 through 99397 for new and established patient preventive medicine services

### 4.3 Enhanced Rates for Primary Care

For primary care practitioners identified as eligible for the primary care rate, payment will be made on the qualified procedure codes as published in a separate fee schedule as published on the MDHHS website. The Primary Care Fee Schedule reflects rates that have been adjusted in compliance with funding levels established by state law. (Refer to the Directory Appendix for website information.)

SECTION 1 – GENERAL INFORMATION

This chapter applies to Independent and Agency Private Duty Nurses.

Private duty nursing (PDN) is a Medicaid benefit when provided in accordance with the policies and procedures outlined in this manual. Providers must adhere to all applicable coverage limitations, policies and procedures set forth in this manual.

PDN is covered for beneficiaries under age 21 who meet the medical criteria in this section. If the beneficiary is enrolled in or receiving case management services from one of the following programs, that program authorizes the PDN services.

- Children's Waiver (the Community Mental Health Services Program)
- Habilitation Supports Waiver (the Community Mental Health Services Program)

For a Medicaid beneficiary who is not receiving services from one of the above programs, the Program Review Division reviews the request for authorization and authorizes the services if the medical criteria and general eligibility requirements are met.

For beneficiaries 21 and older, PDN is a waiver service that may be covered for qualifying individuals enrolled in the Habilitation Supports Waiver or MI Choice Waiver. When PDN is provided as a waiver service, the waiver agent must be billed for the services.

Beneficiaries who are receiving PDN services through one Medicaid program cannot seek supplemental PDN hours from another Medicaid Program (i.e., Children's Waiver, Habilitation Supports Waiver, MI Choice Waiver).

1.1 Definition of PDN

Private Duty Nursing is defined as nursing services for beneficiaries who require more individual and continuous care, in contrast to part-time or intermittent care, than is available under the home health benefit. These services are provided by a registered nurse (RN), or licensed practical nurse (LPN) under the supervision of an RN, and must be ordered by the beneficiary’s physician. Beneficiaries requiring PDN must demonstrate a need for continuous skilled nursing services, rather than a need for intermittent skilled nursing, personal care, and/or Home Help services. The terms “continuous” and "skilled nursing" are further defined in the Medical Criteria subsection for beneficiaries under age 21.
1.2 **Enrollment Requirements**

<table>
<thead>
<tr>
<th>Medicaid Enrolled Nurse (RN/LPN)</th>
<th>To enroll as a Medicaid provider, the nurse must meet the following criteria:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Be a Registered Nurse (RN) licensed to practice in Michigan; or a Licensed Practical Nurse (LPN) licensed to practice in Michigan working under the supervision of an RN. Supervision of a Medicaid-enrolled LPN must be by an RN who has at least one year of experience in any of the following areas: community health nursing, pediatric nursing, maternal and child health nursing, or a similar nursing practice. Medicaid requires an on-site (beneficiary's home) supervisory visit by the RN of the LPN at least once every two months. The Medicaid-enrolled LPN must maintain documentation that verifies who the supervising RN is, a copy of the RN's license and documentation that supports that the RN supervisory visits were rendered. Documentation of the supervisory visit as signed by the RN must be included in the medical record. The medical record must be complete enough to allow another professional to reconstruct what transpired during the supervisory visit.</td>
</tr>
<tr>
<td></td>
<td>• Cooperate with MDHHS in quality monitoring activities, beneficiary complaint resolution, and post-payment audit reviews. Medicaid-enrolled nurses must document complaints made by a beneficiary or the beneficiary's family regarding treatment or care that is (or fails to be) furnished, or regarding the lack of respect for the beneficiary's property, and must document both the existence of the complaint and the resolution of the complaint.</td>
</tr>

<tr>
<th>Private Duty Nursing Agency</th>
<th>To enroll as a Medicaid provider, the PDN agency must meet the following criteria:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Be accredited by the Community Health Accreditation Program (CHAP) or the Accreditation Commission for Health Care (ACHC) as a PDN agency; or be accredited by The Joint Commission as a Home Health Agency; or be accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF) as a Home and Community-Based Rehabilitation Program.</td>
</tr>
<tr>
<td></td>
<td>• If a PDN agency delivers services from more than one location (office), each location (office) must be accredited.</td>
</tr>
<tr>
<td></td>
<td>PDN agencies are not permitted to avoid the above accreditation requirements by individually enrolling RNs or LPNs in the Medicaid Program.</td>
</tr>
<tr>
<td></td>
<td>• Cooperate with MDHHS in quality monitoring activities, beneficiary complaint resolution, and post-payment audit reviews. Providers must document complaints made by a beneficiary or the beneficiary's family regarding treatment or care that is (or fails to be) furnished, or regarding the lack of respect for the beneficiary's property, and must document both the existence of the complaint and the resolution of the complaint.</td>
</tr>
</tbody>
</table>

1.3 **Provision of Private Duty Nursing**

PDN must be ordered by a physician and provided by a Medicaid enrolled private duty nursing agency, a Medicaid enrolled registered nurse (RN), or a Medicaid enrolled licensed practical nurse (LPN) who is working under the supervision of an RN (per Michigan Public Health Code). It is the responsibility of the LPN to secure the RN supervision.
Supervision of a Medicaid enrolled LPN must be by an RN who has at least one year of experience in any of the following areas:

- Community health nursing,
- Pediatric nursing,
- Maternal and child health nursing, or
- A similar nursing practice.

MDHHS requires an onsite supervisory visit by the supervising RN at least once every two months. The Medicaid enrolled LPN must maintain documentation that identifies the supervising RN.

If a beneficiary’s services are performed exclusively by LPNs, the supervisory RN is responsible for completing a physical assessment for each beneficiary the LPN is caring for, and is required to participate in the development of the beneficiary’s plan of care. The above assessments and supervisory visits are not covered by Medicaid, including when provided by a home health agency.

PDN is not covered when rendered in a hospital or nursing facility, including an intermediate care facility for individuals with intellectual disabilities (ICF/IID) or licensed adult foster care facility (AFC).

PDN is not covered when provided by an RN or LPN who is the beneficiary’s spouse, legally responsible relative, stepparent, adoptive parent, legal guardian, or foster parent.

### 1.4 PRIOR AUTHORIZATION

PDN services must be authorized by the Program Review Division, the Children’s Waiver, or the Habilitation Supports Waiver before services are provided. (Refer to the Directory Appendix for contact information.) PDN services are authorized and billed in 15-minute incremental units (1 unit = 15 minutes). Prior authorization of a particular PDN provider to render services considers the following factors:

- Available third party resources.
- Beneficiary/family choice.
- Beneficiary’s medical needs and age.
- The knowledge and appropriate nursing skills needed for the specific case.
- The understanding of the concept and delivery of home care and linkages to relevant services and health care organizations in the area served.

The Private Duty Nursing Prior Authorization – Request for Services form (MSA-0732) must be submitted when requesting PDN for persons with Medicaid coverage before services can begin and at regular intervals thereafter if continued services are determined to be necessary. A copy of the form is provided in the Forms Appendix and is also available on the MDHHS website. (Refer to the Directory Appendix for website information.) This form is **not** to be used for beneficiaries enrolled in, or receiving case management services from, the Children’s Waiver, Habilitation Supports Waiver, or MI Choice Waiver. Private Duty Nursing is not a benefit under CSHCS. Individuals with CSHCS coverage may be eligible for PDN under Medicaid.
The MSA-0732 must be submitted every time services are requested for the following situations:

- for initial services when the beneficiary has never received PDN services under Medicaid, such as following a hospitalization or when there is an increase in severity of an acute or chronic condition;
- for continuation of services beyond the end date of the current authorization period (renewal);
- for an increase in services; or
- for a decrease in services.

Following receipt and review of the MSA-0732 and the required documentation by the Program Review Division, a notice is sent to the PDN provider and beneficiary or primary caregiver, either approving or denying services, or requesting additional information. The provider must maintain this notice in the beneficiary’s medical record. For services that are approved, the Notice of Authorization will contain the prior authorization number and approved authorization dates. It is important to include this PA number on every claim and in all other communications to the MDHHS Program Review Division.

If a beneficiary receiving PDN continues to require the services after the initial authorization period, a new MSA-0732 must be submitted along with the required documentation supporting the continued need for PDN. This request must be received by the Program Review Division no less than 15 business days prior to the end of the current authorization period. Failure to do so may result in a delay of authorization for continued services which, in turn, may result in delayed or no payment for services rendered without authorization. The length of each subsequent authorization period will be determined by the Program Review Division and will be specific to each beneficiary based on several factors, including the beneficiary’s medical needs and family situation.

If during an authorization period a beneficiary’s condition changes warranting an increase or decrease in the number of approved units or a discontinuation of services, the provider must report the change to the MDHHS Program Review Division. (Refer to the Directory Appendix for contact information.) It is important that the provider report all changes as soon as they occur, as well as properly updating the plan of care. The request to increase or decrease units must be accompanied by an updated and signed POC; and documentation from the attending physician addressing the medical need if the request is for an increase in PDN units.

Often the request to begin services will be submitted by a PDN agency or individual PDN; however, a person other than the PDN provider (such as the hospital discharge planner, CSHCS case manager, physician, or physician’s staff person) may submit the MSA-0732. When this is the case, the person submitting the request must do so in consultation with the PDN agency or individual PDN who will be assuming responsibility for the care of the beneficiary.

If services are requested for more than one beneficiary in the home, a separate MSA-0732 must be completed for each beneficiary.

The PA number is for private duty nursing only. Any CMHSP prior authorized respite services must be billed to the authorizing CMHSP.
1.4.A. DOCUMENTATION REQUIREMENTS

The following documentation is required for all PA requests for PDN services and must accompany the MSA-0732:

- Most recent signed and dated nursing assessment, including a summary of the beneficiary’s current status compared to their status during the previous authorization period, completed by a registered nurse;
- Nursing notes for two (2) four-day periods, including one four-day period that reflects the most current medically stable period and another four-day period that reflects the most recent acute episode of illness related to the PDN qualifying diagnosis/condition;
- Most recent updated plan of care (POC) signed and dated by the ordering/managing physician, RN, and the beneficiary’s parent/guardian. The POC must support the skilled nursing services requested;

The POC must include:

- Name of beneficiary and Medicaid ID number
- Diagnosis(es)/presenting symptom(s)/condition(s)
- Name, address, and telephone number of the ordering/managing physician
- Frequency and duration of skilled nursing visits, and the frequency and types of skilled interventions, assessments, and judgments that pertain to and support the PDN services to be provided and billed
- Identification of technology-based medical equipment, assistive devices (and/or appliances), durable medical equipment, and supplies
- Other services being provided in the home by community-based entities that may affect the total care needs
- List of medications and pharmaceuticals (prescribed and over-the-counter)
- Statement of family strengths, capabilities, and support systems available for assisting in the provision of the PDN benefit (for renewals, submit changes only)

- All hospital discharge summaries for admissions related to the PDN qualifying diagnosis/condition within the last authorization period; and
- Other documentation as requested by MDHHS.

1.4.B. BENEFICIARY ELIGIBILITY

Approval of the MSA-0732 confirms that the service is authorized for the beneficiary. The approval does not guarantee that the beneficiary is eligible for Medicaid. If the beneficiary is not eligible on the date of service, MDHHS will not reimburse the provider for services provided and billed. To assure payment, the provider must verify beneficiary eligibility monthly at a minimum.
1.4.C. RETROACTIVE PRIOR AUTHORIZATION

Services provided before PA is requested will not be covered unless the beneficiary was not Medicaid eligible on the date of service but became eligible retroactively. If the MDHHS eligibility information does not demonstrate retroactive eligibility, then the request for retroactive PA will be denied.

1.5 OTHER INSURANCE

It is the responsibility of the family, private duty nursing agency, RN or LPN to assess, investigate and exhaust all commercial insurance for the beneficiary prior to billing Medicaid. A private duty nursing agency, RN, or LPN should not accept any Medicaid PDN case until it has been determined what, if any, commercial insurance a beneficiary may have.

For any Medicaid case accepted in which the beneficiary has other insurance, the provider must first follow the rules of the other insurance. Such rules may include obtaining a physician’s order, obtaining prior authorization, and being a participating provider with the other insurance carrier. Failure to follow the rules of the other insurance may result in nonpayment from Medicaid.

If a beneficiary’s commercial insurance does not cover PDN, the PDN agency, RN or LPN must inform the MDHHS Program Review Division prior to billing MDHHS. (Refer to the Directory Appendix for contact information.) A copy of the letter of explanation or explanation of benefits (EOB) must be kept in the beneficiary’s medical record. Once it has been established that the commercial insurance does not cover PDN, a letter of explanation or EOB is valid as long as the insurance coverage remains unchanged. On an annual basis, the policyholder and provider should confirm with the commercial insurance that PDN coverage has not changed.

(Refer to the Coordination of Benefits Chapter of this manual for additional information.)

1.6 GENERAL ELIGIBILITY REQUIREMENTS

The beneficiary is eligible for PDN coverage when all of the following requirements are met:

- The beneficiary is eligible for Medicaid in the home/community setting (i.e., in the noninstitutional setting).
- The beneficiary is under the age of 21 and meets the medical criteria for PDN.
- PDN is appropriate, considering the beneficiary's health and medical care needs.
- PDN can be provided safely in the home setting.
- The beneficiary, his family (or guardian), the beneficiary's physician, the Medicaid case manager, and RN (i.e., from the PDN agency or the Medicaid enrolled RN, or the supervising RN for the Medicaid enrolled LPN) have collaborated and developed an integrated plan of care (POC) that identifies and addresses the beneficiary's need for PDN. The POC must be signed and dated by the beneficiary's physician, RN (as described above), and by the beneficiary or beneficiary's parent/guardian. The POC must be updated at least annually or more frequently as needed based on the beneficiary's medical needs.
1.7 BENEFIT LIMITATIONS

The purpose of the PDN benefit is to assist the beneficiary with medical care, enabling the beneficiary to remain in their home. The benefit is not intended to supplant the caregiving responsibility of parents, guardians, or other responsible parties (e.g., foster parents). There must be a primary caregiver (i.e., parent, guardian, significant other adult) who resides with a beneficiary under the age of 18, and the caregiver must provide a monthly average of a minimum of eight hours of care during a typical 24-hour period. The calculation of the number of units authorized per month includes eight hours or more of care that will be provided by the caregiver during a 24-hour period, which are then averaged across the time authorized for the month. The caregiver has the flexibility to use the monthly-authorized units as needed during the month.

The time a beneficiary is under the supervision of another entity or individual (e.g., in school, in day/child care, in work program) cannot be used to meet the eight hours of obligated care as discussed above, nor can the eight hours of care requirement for beneficiaries under age 18 be met by other public funded programs (e.g., MDHHS Home Help Program) or other resources for hourly care (e.g., private health insurance, trusts, bequests, private pay).

1.8 SERVICE LOG

If PDN is prior approved and care is initiated, a detailed log for each date of service must be maintained. The service log must be beneficiary specific, with the beneficiary's name and birth date in the header portion of the document. In cases where the nurse is caring for two or more beneficiaries in the same home, a separate service log for each beneficiary must be maintained. This log must be kept in the beneficiary's record.

The following service log provides an example of the required fields.

<table>
<thead>
<tr>
<th>(Beneficiary Name and Birth Date)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
</tr>
<tr>
<td>----------------------</td>
</tr>
<tr>
<td>(name RN/LPN)</td>
</tr>
<tr>
<td>(name RN/LPN)</td>
</tr>
<tr>
<td>(name RN/LPN)</td>
</tr>
<tr>
<td>(name RN/LPN)</td>
</tr>
</tbody>
</table>

PDN agencies should refer to the Billing & Reimbursement for Institutional Providers chapter for instructions on claim completion and requirements for the processing of claims. Medicaid-enrolled Registered Nurses (RN) or Licensed Practical Nurses (LPN) should refer to the Billing & Reimbursement for Professionals Chapter for instructions on claim completion and requirements for the processing of claims.

Each signature must be accompanied by a date. The date of the nurse's signature must be the same as the date of service. The date of the parent/caregiver signature should be within one week of the date of service. A claim must not be submitted before the service log is completed for those dates of service.
1.9 CLINICAL RECORD

In addition to the Service Log, the provider must maintain clinical records as detailed in the General Information for Providers Chapter of this manual. The clinical record must be sufficiently documented to allow another professional to reconstruct what transpired during each hour of nursing service and billed to Medicaid in 15-minute incremental units.

1.10 PDN IN CONJUNCTION WITH HOME HELP OR PERSONAL CARE SERVICES

If the beneficiary receiving PDN demonstrates a need for personal care or Home Help services in addition to PDN, there must be coordination between the delivery of personal care or Home Help services and the PDN services, as well as documentation in the plan of care (POC) to verify there is no duplication of services.

1.11 HOLIDAYS

MDHHS allows additional reimbursement for holidays. Currently recognized holidays are: New Year’s Day, Easter, Memorial Day, July 4th, Labor Day, Thanksgiving and Christmas Day.

A holiday begins at 12:00 a.m. and ends at 12:00 midnight of that holiday day.

1.12 MILEAGE

Staff mileage to the beneficiary’s home is covered as a part of the PDN service and may not be billed separately.

1.13 CARING FOR MORE THAN ONE PATIENT AT A TIME

For ratios of more than two patients per nurse, the provider must contact the entity authorizing the beneficiary’s PDN services: Children’s Waiver (the Community Mental Health Services Program), Habilitation Supports Waiver (the Community Mental Health Services Program), Home and Community-Based Services Waiver for the Elderly and Disabled (MI Choice Waiver) or the Medicaid Program Review Division. These ratios are considered exceptional cases and require prior approval.

A PDN authorized to provide services to two children at the same location may find that, at times, only one child is present to receive services. This may occur when one child is in school, at a medical appointment, hospitalized, or on a family outing. The beneficiary record must document why only one child was present to receive services, as well as the beginning and ending time of the services. (Refer to the appropriate Billing and Reimbursement chapter for billing instructions.)

1.14 BILLING FOR PRIVATE DUTY NURSING

For billing instructions, nurses should refer to the Billing & Reimbursement for Professionals Chapter of this manual and agencies should refer to the Billing & Reimbursement for Institutional Providers Chapter of this manual.
SECTION 2 – CARE REQUIREMENTS

2.1 PLAN OF CARE

A written plan of care (POC) guides all services provided to the beneficiary by the PDN provider. The POC identifies and addresses the beneficiary’s need for PDN. The POC and the process for developing it reflect the beneficiary’s and family’s basic rights of self-determination and autonomy.

- Family members and the beneficiary (as appropriate to his maturity) participate in developing the POC. They are provided with accurate information and support appropriate to informed decision-making. They must give informed consent for the planned services by signing and dating the POC annually and when updating the POC as needed based on the beneficiary’s medical needs.
- Beneficiary/family strengths, including cultural and ethnic identity, are respected and utilized in the delivery of care. Services delivered in the home accommodate beneficiary/family life activities.
- The plan includes goals directed toward increasing beneficiary/family capability, effectiveness, and control.
- The plan includes compensatory services to support the growth and developmental potential of each beneficiary, given his disability or illness.
- Appointments are coordinated and services are scheduled with the goals of minimizing inconvenience to the beneficiary/family, and of facilitating the family’s participation in the beneficiary’s care.
- If the services are provided by LPNs, the POC must identify the frequency of the supervisory RN visits.

The written POC must be retained in the beneficiary’s medical record.

2.2 SUSPECTED ABUSE/NEGLECT

If there is reasonable cause to suspect that a beneficiary may be in danger of abuse, neglect, exploitation, cruelty, or other hazards, the PDN must report the suspected abuse to the Adult or Child Protective Services Unit of the local MDHHS office. (Refer to the General Information for Providers Chapter of this manual for additional information.)

2.3 MEDICAL CRITERIA

To qualify for PDN, the beneficiary must meet the medical criteria of either I and III below or II and III below:

<table>
<thead>
<tr>
<th>Medical Criteria I</th>
<th>The beneficiary is dependent daily on technology-based medical equipment to sustain life. &quot;Dependent daily on technology-based medical equipment&quot; means:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- Mechanical ventilation four or more hours per day or assisted respiration (Bi-PAP or CPAP); or</td>
</tr>
<tr>
<td></td>
<td>- Oral or tracheostomy suctioning 8 or more times in a 24-hour period; or</td>
</tr>
</tbody>
</table>

Version: Private Duty Nursing
Date: January 1, 2016
Page 9
- Nasogastric tube feedings or medications when removal and insertion of the nasogastric tube is required, associated with complex medical problems or medical fragility; or
- Total parenteral nutrition delivered via a central line, associated with complex medical problems or medical fragility; or
- Continuous oxygen administration, in combination with a pulse oximeter and a documented need for observations and adjustments in the rate of oxygen administration.

**Medical Criteria II**

<table>
<thead>
<tr>
<th>Frequent episodes of medical instability within the past three to six months, requiring skilled nursing assessments, judgments or interventions as described in III below, due to a substantiated progressively debilitating physical disorder.</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Frequent&quot; means at least 12 episodes of medical instability related to the progressively debilitating physical disorder within the past six months, or at least six episodes of medical instability related to the progressively debilitating physical disorder within the past three months;</td>
</tr>
<tr>
<td>&quot;Medical instability&quot; means emergency medical treatment in a hospital emergency room or inpatient hospitalization related to the underlying progressively debilitating physical disorder;</td>
</tr>
<tr>
<td>&quot;Emergency medical treatment&quot; means covered inpatient and outpatient services that are furnished by a provider who is qualified to furnish such services and which are needed to evaluate or stabilize an emergency medical condition. &quot;Emergency medical condition&quot; means a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain) such that a prudent layperson who possesses an average knowledge of health and medicine could reasonably expect the absence of immediate medical attention to place the health of the individual in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part.</td>
</tr>
<tr>
<td>&quot;Progressively debilitating physical disorder&quot; means an illness, diagnosis, or syndrome that results in increasing loss of function due to a physical disease process, and that has progressed to the point that continuous skilled nursing care (as defined in III below) is required; and</td>
</tr>
<tr>
<td>&quot;Substantiated&quot; means documented in the clinical/medical record, including the nursing notes.</td>
</tr>
</tbody>
</table>

For beneficiaries described in II, the requirement for frequent episodes of medical instability is applicable only to the initial determination of medical necessity for PDN. Determination of continuing eligibility for PDN for beneficiaries defined in II is based on the original need for skilled nursing assessments, judgments, or interventions as described in III below.
Medical Criteria III

The beneficiary requires continuous skilled nursing care on a daily basis during the time when a licensed nurse is paid to provide services.

- "Continuous" means at least once every three hours throughout a 24-hour period, and/or when delayed interventions may result in further deterioration of health status, in loss of function or death, in acceleration of the chronic condition, or in a preventable acute episode.
- Equipment needs alone do not create the need for skilled nursing services.
- "Skilled nursing" means assessments, judgments, interventions, and evaluations of interventions requiring the education, training, and experience of a licensed nurse. Skilled nursing care includes, but is not limited to, performing assessments to determine the basis for acting or a need for action; monitoring fluid and electrolyte balance; suctioning of the airway; injections; indwelling central venous catheter care; managing mechanical ventilation; oxygen administration and evaluation; and tracheostomy care.

2.4 Determining Intensity of Care and Maximum Amount of PDN

As part of determining the maximum amount of PDN a beneficiary is eligible for, his Intensity of Care category must be determined. This is a clinical judgment based on the following factors:

- The beneficiary's medical condition;
- The type and frequency of needed nursing assessments, judgments and interventions; and
- The impact of delayed nursing interventions.

Equipment needs alone do not determine intensity of care. Other aspects of care (e.g., administering medications) are important when developing a plan for meeting the overall needs of the beneficiary, but do not determine the number of hours of nursing for which the beneficiary is eligible.

<table>
<thead>
<tr>
<th>High Category</th>
<th>Medium Category</th>
<th>Low Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beneficiaries requiring nursing assessments, judgments and interventions by a licensed nurse (RN/LPN) at least one time each hour throughout a 24-hour period, when delayed nursing interventions could result in further deterioration of health status, in loss of function or death, or in acceleration of the chronic condition.</td>
<td>Beneficiaries requiring nursing assessments, judgments and interventions by a licensed nurse (RN/LPN) at least one time every three hours throughout a 24-hour period, or at least 1 time each hour for at least 12 hours per day, when delayed nursing interventions could result in further deterioration of health status, in loss of function or death, or in acceleration of the chronic condition. This category also includes beneficiaries with a higher need for nursing assessments and judgments due to an inability to communicate and direct their own care.</td>
<td>Beneficiaries requiring nursing assessments, judgments and interventions by a licensed nurse (RN/LPN) at least one time every three hours for at least 12 hours per day, as well as those beneficiaries who can participate in and direct their own care.</td>
</tr>
</tbody>
</table>

Medicaid uses the "Decision Guide for Establishing Maximum Amount of Private Duty Nursing to be Authorized on a Daily Basis" (below) to establish the amount of PDN that is approved. The Decision Guide is used to determine the appropriate range of nursing hours (prior authorized and billed in 15-minute increments) that can be authorized under the Medicaid PDN benefit and defines the "benefit
limitation" for individual beneficiaries. The Decision Guide is used by the authorizing entity after it has determined the beneficiary meets both general eligibility requirements and medical criteria as stated above. The amount of PDN (i.e., the time) that can be authorized for a beneficiary is based on several factors, including the beneficiary's care needs which establish medical necessity for PDN, the beneficiary's and family's circumstances, and other resources for daily care (e.g., private health insurance, trusts, bequests, private pay). To illustrate, the number of hours covered by private health insurance is subtracted from the hours approved under Medicaid PDN. These factors are incorporated into the Decision Guide. The higher number in the range is considered the maximum number of hours that can be authorized. Except in emergency circumstances, Medicaid does not approve more than the maximum hours indicated in the guide.

Only those factors that influence the maximum number of hours that can be authorized are included on this decision matrix. Other factors (e.g., additional dependent children, additional children with special needs, and required nighttime interventions) that impact the caregiver's availability to provide care should be identified during an assessment of service needs. These factors have implications for service planning and should be considered when determining the actual number of hours (within the range) to authorize.

### Decision Guide for Establishing Maximum Amount of Private Duty Nursing to be Authorized on a Daily Basis

<table>
<thead>
<tr>
<th>FAMILY SITUATION/RESOURCE CONSIDERATIONS</th>
<th>INTENSITY OF CARE Average Number of Hours Per Day</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>LOW</td>
</tr>
<tr>
<td>Factor I – Availability of Caregivers Living in the Home</td>
<td></td>
</tr>
<tr>
<td>2 or more caregivers; both work or are in school F/T or P/T</td>
<td>4-8</td>
</tr>
<tr>
<td>2 or more caregivers; 1 works or is in school F/T or P/T</td>
<td>4-6</td>
</tr>
<tr>
<td>2 or more caregivers; neither works or is in school at least P/T</td>
<td>1-4</td>
</tr>
<tr>
<td>1 caregiver; works or is in school F/T or P/T</td>
<td>4-8</td>
</tr>
<tr>
<td>1 caregiver; does not work or is not a student</td>
<td>1-4</td>
</tr>
<tr>
<td>Factor II – Health Status of Caregiver(s)</td>
<td></td>
</tr>
<tr>
<td>Significant health issues</td>
<td>Add 2 hours if Factor I &lt;= 8</td>
</tr>
<tr>
<td>Some health issues</td>
<td>Add 1 hour if Factor I &lt;= 7</td>
</tr>
<tr>
<td>Factor III – School*</td>
<td></td>
</tr>
<tr>
<td>Beneficiary attends school 25 or more hours per week, on average</td>
<td>Maximum of 6 hours per day</td>
</tr>
</tbody>
</table>

* Factor III limits the maximum number of hours which can be authorized for a beneficiary:
  - Of any age in a center-based school program for more than 25 hours per week; or
  - Age six and older for whom there is no medical justification for a homebound school program.

In both cases, the lesser of the maximum “allowable” for Factors I and II, or the maximum specified for Factor III, applies.
When using the Decision Guide, the following definitions apply:

- "Caregiver": legally responsible person (e.g., birth parents, adoptive parents, spouses), paid foster parents, guardian or other adults who are not legally responsible or paid to provide care but who choose to participate in providing care.
- "Full-time (F/T)": working at least 30 hours per week for wages/salary, or attending school at least 30 hours per week.
- "Part-time (P/T)": working at least 15 hours per week for wages/salary, or attending school at least 15 hours per week.
- "Significant" health issues: one or more primary caregiver(s) has a health or emotional condition that prevents the caregiver from providing care to the beneficiary (e.g., beneficiary weighs 70 pounds and has no mobility and the primary caregiver just had back surgery and is in a full-body cast).
- "Some" health issues: one or more primary caregiver(s) has a health or emotional condition, as documented by the caregiver's treating physician, that interferes with, but does not prevent, provision of care (e.g., caregiver has lupus, alcoholism, depression, back pain when lifting, lifting restrictions, etc.).
- "School" attendance: The average number of hours of school attendance per week is used to determine the maximum number of hours that can be authorized for the individual of school age. The average number of hours is determined by adding the number of hours in school plus transportation time. During planned breaks of at least 5 consecutive school days (e.g., spring break, summer vacation), additional hours can be authorized within the parameters of Factors I and II.

The Local School District (LSD) or Intermediate School District (ISD) is responsible for providing such "health and related services" as necessary for the student to participate in his education program. Unless medically contraindicated, individuals of school age should attend school. Factor III applies when determining the maximum number of hours to be authorized for an individual of school age. The Medicaid PDN benefit cannot be used to replace the LSD's or ISD's responsibility for services (either during transportation to/from school or during participation in the school program) or when the child would typically be in school but for the parent's choice to home-school the child.

### 2.5 EXCEPTION PROCESS

Because each beneficiary and his family are unique and because special circumstances arise, it is important to maintain an exception process to ensure the beneficiary's safety and quality of care. PDN services that exceed the beneficiary's benefit limitation, as established by the Decision Guide, must be prior authorized by the appropriate Medicaid case management program. Limited authority to exceed the published PDN benefit limitations may be granted on a time-limited basis as detailed below.

The beneficiary or his primary care giver must initiate the request for an exception. The applicable Medicaid case management program's representative is responsible for facilitating the request and documenting the necessity for an exception. Factors underlying the need for additional PDN must be identified in the beneficiary's POC, which must include strategies directed toward resolving the factors necessitating the exception, if applicable. Documentation must substantiate all of the following:
- Current medical necessity for the exception;
- Current lack of natural supports required for the provision of the needed level of support; and
- Additional PDN services are essential to the successful implementation of the beneficiary’s written plan of care, and are essential to maintain the beneficiary within the least restrictive, safe, and humane environment suitable to his condition.

Exceptions are time-limited and must reflect the increased identified needs of the beneficiary. Consideration for an exception is limited to situations outside the beneficiary’s or family’s control that place the beneficiary in jeopardy of serious injury or significant deterioration of health status. Exceptions may be considered for either of the following general situations:

<table>
<thead>
<tr>
<th>A temporary alteration in the beneficiary’s care needs following a hospitalization, resulting in one or both of the following:</th>
<th>The temporary inability of the primary caregiver(s) to provide required care as the result of one of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- A temporary increase in the intensity of required assessments, judgments, and interventions.</td>
<td>- An acute illness or injury of the primary caregiver(s). The total number of additional PDN hours cannot exceed two hours per day for the duration of the caregiver’s inability, not to exceed six months. In the event there is only one caregiver living in the home and that caregiver is hospitalized, a maximum of 24 hours per day can be authorized for each day the caregiver is hospitalized.</td>
</tr>
<tr>
<td>- A temporary need for additional training to enable the primary caregiver(s) to identify and meet the beneficiary’s care needs.</td>
<td>- The death of the primary caregiver(s) or an immediate family member. &quot;Immediate family member&quot; is defined as the caregiver’s spouse, partner, parent, sibling, or child. The maximum number of hours allowable under this exception criterion is 24 hours per day for a maximum of seven days.</td>
</tr>
</tbody>
</table>

The total number of additional PDN hours cannot exceed two hours per day, for a maximum of six months.

The written POC and community-based care coordination activities must include strategies directed toward stabilizing service supports and/or the family situation. The maximum number of hours varies by the beneficiary’s Intensity of Care category: High = maximum of 18 hours per day; Medium = maximum of 14 hours per day; Low = maximum of 10 hours per day. The length of time for this exception is three months or the time needed to stabilize service supports and/or family situation, whichever is less. A one-time extension of up to three months may be made if there is documented progress toward achieving the stabilized home environment.
2.6 CHANGE IN BENEFICIARY’S CONDITION/ PDN AS A TRANSITIONAL BENEFIT

Medicaid policy requires that the integrated plan of care (POC) be updated as necessary based on the beneficiary’s medical needs. Additionally, when a beneficiary’s condition changes, warranting a decrease in the number of approved hours or a discontinuation of services, the provider must report the change to the appropriate authorizing agent (i.e., the Program Review Division, Children’s Waiver, or Habilitation Supports Waiver) in writing. Changes such as weaning from a ventilator or tracheostomy decannulation can occur after months or years of services, or a beneficiary’s condition may stabilize to the point of requiring fewer PDN hours or the discontinuation of hours altogether. It is important that the provider report all changes resulting in a decrease in the number of hours to the authorizing agent as soon as they occur, as well as properly updating the POC. MDHHS will seek recovery of monies inappropriately paid to the provider if, during case review, the authorizing agent determines that a beneficiary required fewer PDN hours than was provided and MDHHS was not notified of the change in condition.

In some cases, the authorized PDN services may be considered a transitional benefit. In cases such as this, one of the primary reasons for providing services should be to assist the family or caregiver(s) to become independent in the care of the beneficiary. The provider, in collaboration with the family or caregiver(s), may decide that the authorized number of hours should be decreased gradually to accommodate increased independence on the part of the family, caregiver(s), and/or beneficiary. A detailed exit plan with instructions relating to the decrease in hours and possible discontinuation of care should be documented in the POC. The provider must notify the authorizing agent that hours are being decreased and/or when the care will be discontinued.

2.7 HOSPICE SERVICES

If a beneficiary receiving private duty nursing (PDN) becomes eligible for hospice, the hospice is required to notify the MDHHS Program Review Division before a claim is submitted for the services. (Refer to the Directory Appendix for contact information.)

The hospice must provide the following information on agency letterhead to the Program Review Division:

- beneficiary name and Medicaid ID number;
- a request for a case review and approval of hospice services;
- a statement confirming that the beneficiary has been certified terminally ill with six months or less to live, signed by the hospice medical director and the beneficiary’s attending physician; and
- name, e-mail address, and telephone number of the contact person.

Program Review Division staff may request additional medical record documentation for their review. If services are approved, the hospice must work with the PDN agency to develop a coordinated plan of care. Both the hospice and PDN staff must ensure that duplication of services does not occur. While hospice maintains the lead in coordinating the services, the PDN agency must continue to obtain prior authorization from MDHHS for the PDN services.
This does not apply to beneficiaries receiving PDN services under the Children's Waiver Program (CWP), the Habilitation Supports Waiver (HSW), or the MI Choice Waiver. For beneficiaries under the CWP or HSW, providers should contact the beneficiary's case manager to inform them of hospice eligibility. If the beneficiary is under the MI Choice Waiver, providers should contact the MI Choice Waiver Supports Coordinator.

SECTION 1 – GENERAL INFORMATION

The Program of All-Inclusive Care for the Elderly (PACE) is an innovative model of community-based care that enables elderly individuals, who are certified by their state as needing nursing facility care, to live as independently as possible.

PACE provides an alternative to traditional nursing facility care by offering pre-paid, capitated, comprehensive health care services designed to meet the following objectives:

- Enhance the quality of life and autonomy for frail, older adults;
- Maximize the dignity of, and respect for, older adults;
- Enable frail, older adults to live in the community as long as medically and socially feasible; and
- Preserve and support the older adult’s family unit.

The PACE capitated benefit was authorized by the Balanced Budget Act of 1997 and features a comprehensive service delivery system with integrated Medicare and Medicaid financing.

An interdisciplinary team, consisting of professional and paraprofessional staff, assesses beneficiary needs, develops a plan of care, and monitors delivery of all services (including acute care services as well as nursing facility services, when necessary) within an integrated system for a seamless provision of total care. Typically, PACE organizations provide social and medical services in an adult day health center supplemented by in-home and other services as needed.

The financing model combines payments from Medicare and Medicaid, allowing PACE organizations to provide all needed services rather than be limited to those reimbursable under the Medicare and Medicaid fee-for-service systems. PACE organizations assume full financial risk for beneficiary care without limits on amount, duration, or scope of services.

Physicians currently treating Medicaid patients who are in need of nursing facility care may consider PACE as an option. Hospital discharge planners may also identify suitable candidates for referral to PACE as an alternative to a nursing facility. (Refer to the Directory Appendix for PACE contact information.)
SECTION 2 – SERVICES

The PACE organization becomes the sole source of services for Medicare and Medicaid beneficiaries who choose to enroll in a PACE organization.

The PACE organization is able to coordinate the entire array of services to older adults with chronic care needs while allowing elders to maintain independence in the community for as long as possible. The PACE service package must include all Medicare and Medicaid covered services, in addition to other services determined necessary by the interdisciplinary team for the individual beneficiary. Services must include, but are not limited to:

- Adult day care that offers nursing, physical, occupational and recreational therapies, meals, nutritional counseling, social work and personal care
- All primary medical care provided by a PACE physician familiar with the history, needs and preferences of each beneficiary, all specialty medical care, and all mental health care
- Interdisciplinary assessment and treatment planning
- Home health care, personal care, homemaker and chore services
- Restorative therapies
- Diagnostic services, including laboratory, x-rays, and other necessary tests and procedures
- Transportation for medical needs
- All necessary prescription drugs and any authorized over-the-counter medications included in the plan of care
- Social services
- All ancillary health services, such as audiology, dentistry, optometry, podiatry, speech therapy, prosthetics, durable medical equipment, and medical supplies
- Respite care
- Emergency room services, acute inpatient hospital and nursing facility care when necessary
- End-of-Life care
SECTION 3 – ELIGIBILITY AND ENROLLMENT

3.1 ELIGIBILITY REQUIREMENTS

To be eligible for PACE enrollment, applicants must meet the following requirements:

- Be age 55 years or older.
- Meet applicable Medicaid financial eligibility requirements. (Eligibility determinations will be made by the Michigan Department of Health and Human Services (MDHHS).)
- Reside in the PACE organization’s service area.
- Be capable of safely residing in the community without jeopardizing health or safety while receiving services offered by the PACE organization.
- Receive a comprehensive assessment of participant needs by an interdisciplinary team.
- A determination of functional/medical eligibility based upon the online version of the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD) that was conducted online within fourteen (14) calendar days from the date of enrollment into the PACE organization.
- Be provided timely and accurate information to support Informed Choice for all appropriate Medicaid options for Long Term Care.
- Not concurrently enrolled in the MI Choice program.
- Not concurrently enrolled in an HMO.

3.2 COMPLETION OF THE MEDICAID NURSING FACILITY LOC DETERMINATION

A PACE applicant’s eligibility for coverage of nursing facility services and enrollment in the PACE organization is determined by the online application of the Michigan Medicaid Nursing Facility Level of Care Determination (LOCD). The PACE organization will not be reimbursed for nursing facility services rendered when the applicant is determined not to meet the LOCD criteria. Providers must submit the LOCD information into its online version no later than fourteen (14) calendar days following the start of services. Instructions and required forms related to the completion of the Medicaid Nursing Facility Level of Care Determination are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

The LOCD must be completed by a health professional (physician, registered nurse, licensed practical nurse, clinical social worker (BSW or MSW), or physician assistant) representing the proposed provider. Nonclinical staff may perform the evaluation when clinical oversight by a professional is performed. The PACE organization will be held responsible for enrolling only those participants who meet the criteria outlined in this section.
The Michigan Medicaid Nursing Facility Level of Care Determination must be completed using the online version in the following situations:

- all new enrollments of Medicaid-eligible beneficiaries.
- re-enrollment of Medicaid-eligible beneficiaries.
- significant change in condition of a current PACE Medicaid-eligible beneficiary.

The online LOCD must be completed only once for each admission or readmission to the program.

3.3 INFORMED CHOICE

When a beneficiary is determined eligible for nursing facility level of care through completion of the online LOCD, he must be provided timely and accurate information to support informed choice for all appropriate Medicaid options for long-term care.

Process Guidelines available on the MDHHS website define the required process. (Refer to the Directory Appendix for website information.)

3.4 NURSING FACILITY LEVEL OF CARE EXCEPTION PROCESS - EXCEPTION REVIEW

A Nursing Facility (NF) Level of Care (LOC) Exception Process is a review that is available for financially eligible beneficiaries who have demonstrated a significant level of long term care need but do not meet the LOC. The NF LOC Exception Process is initiated when the PACE organization telephones the MDHHS designee and requests the NF LOC Exception Review on the date that the applicant was determined ineligible based on the online version of the LOCD. The NF LOC Exception criteria and information on how to request an Exception Review is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

3.5 TELEPHONE INTAKE GUIDELINES

The Telephone Intake Guidelines are questions that identify potential PACE participants for further assessment. The Telephone Intake Guidelines do not determine program eligibility. Use of the Telephone Intake Guidelines is at the discretion of the PACE organization. The guidelines are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

3.6 ANNUAL RECERTIFICATION

MDHHS must annually certify that PACE participants continue to meet PACE financial eligibility requirements. PACE organizations must also ensure that participants continue to meet the LOCD criteria on an ongoing basis. If the participant continues to meet the LOC criteria, it must be demonstrated in the medical record by way of initial comprehensive assessments, reassessments and progress notes. Additional online LOCDs are not conducted for the purpose of determining ongoing LOC eligibility.

If the PACE participant no longer meets the LOC criteria, federal regulations may deem the participant to be eligible for the PACE program until the next annual reevaluation if, in the absence of continued coverage under PACE, the participant reasonably would be expected to again meet the nursing facility level of care criteria within the next six months.
3.7 RETROSPECTIVE REVIEW AND MEDICAID RECOVERY

At random and whenever indicated, MDHHS will perform retrospective reviews to validate the Michigan Medicaid Nursing Facility Level of Care Determination. If the participant is found to be ineligible for PACE services, MDHHS will recover all Medicaid payments made for PACE services rendered during the period of ineligibility.

3.8 ADVERSE ACTION NOTICE

When the provider determines that the beneficiary does not qualify for services based on the Michigan Medicaid Nursing Facility Level of Care Determination, the organization must immediately issue an adverse action notice to the beneficiary or his authorized representative. The action notice must include all of the language of the sample letters for long term care. Copies of the letters are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

As with any benefit denial, the beneficiary may request an administrative hearing. The Michigan Administrative Hearing System (MAHS) Policies and Procedures Manual explains the process by which each different case is brought to completion. The manual is available for review on the MDHHS website. (Refer to the Directory Appendix for MAHS contact and website information.)

3.9 NURSING FACILITY LEVEL OF CARE PROCESS - IMMEDIATE REVIEW UPON ISSUANCE OF AN ADVERSE ACTION NOTICE

The MDHHS designee may conduct a Nursing Facility (NF) Level of Care (LOC) Process Immediate Review for a Medicaid pending/eligible beneficiary who was determined functionally/medically ineligible based on the online Michigan Medicaid Nursing Facility Level of Care Determination. The beneficiary, or their representative, must request an Immediate Review before noon of the first working day after the date of receipt of the notice as follows:

- The MDHHS designee will request the PACE organization to provide medical documentation by close of business of the first business day after the date the beneficiary requests an Immediate Review.
- The MDHHS designee will review the medical documentation, obtain information from the beneficiary and/or their representative, and notify the beneficiary and the provider of the determination within three business days of receipt of the medical documentation.

The beneficiary (or representative) may still request an MDHHS appeal of the Michigan Medicaid Nursing Facility Level of Care Determination. (Refer to the Directory Appendix for contact information.)

3.10 FREEDOM OF CHOICE

When an applicant has been determined eligible for nursing facility level of care through completion of the online LOCD, the beneficiary must be informed of his benefit options and elect to receive services in a specific program. This election must take place prior to initiating PACE services.
The applicant (or legal representative) must be informed of the following:

- services available under PACE
- services available in other community settings, such as the MI Choice Program
- services available through Medicaid-reimbursed nursing facilities

If applicants are interested in nursing facility or MI Choice Program care, the PACE organization must provide appropriate referral information using the Access Guidelines to Medicaid Services for Persons with Long Term Care Needs. These guidelines are available on the MDHHS website. (Refer to the Directory Appendix for website information.)

Applicants must acknowledge that they have been informed of their program options in writing by signing the Freedom of Choice form that is witnessed by the applicant’s representative when appropriate. A copy of the completed form for non-participants must be retained for a period of three years. The completed form must be kept in the medical record if the applicant chooses to receive PACE services.

A copy of the Freedom of Choice form is included with the Michigan Medicaid Nursing Facility Level of Care Determination on the MDHHS website. (Refer to the Directory Appendix for website information.)

3.11 APPLICANT APPEALS

3.11.A. FINANCIAL ELIGIBILITY

A determination that an applicant is not financially eligible for Medicaid is an adverse action. Applicants may appeal to MDHHS. (Refer to the Directory Appendix for contact information.)

3.11.B. FUNCTIONAL/ MEDICAL ELIGIBILITY

A determination that a beneficiary is not functionally/medically eligible for PACE services is an adverse action. If the beneficiary and/or representative disagrees with this determination, they have the right to request an administrative hearing before an administrative law judge. Information regarding the appeal process may be found on the Michigan Administrative Hearing System (MAHS) website. (Refer to the Directory Appendix for website information.)

3.11.C. PACE SERVICES

Noncoverage or nonpayment of services by the PACE organization for a beneficiary enrolled in PACE is an adverse action. If the beneficiary and/or representative disagrees with the noncoverage or nonpayment of services by the PACE organization, they have the right to request an administrative hearing before an administrative law judge. Information regarding the appeal process may be found on the Michigan Administrative Hearing System (MAHS) website. (Refer to the Directory Appendix for website information.) The beneficiary may request continuation of the disputed service with the understanding that he may be liable for the cost of the disputed service if the determination is not made in his favor.
3.12 PROVIDER APPEALS

A Retrospective Review of the Michigan Medicaid Nursing Facility Level of Care Determination that results in a denial is an Adverse Action for PACE when MDHHS proposes to recover payments made for services rendered to the beneficiary for whom the Retrospective Review was conducted. If the PACE organization disagrees with the MDHHS Adverse Action Notice, the PACE organization may appeal if their written request is received by the Michigan Administrative Hearing System within 30 calendar days from the date of the MDHHS Adverse Action Notice.

Information regarding the MDHHS appeal process is available in the General Information for Providers Chapter and on the MDHHS website. (Refer to the Directory Appendix for website information.)
SECTION 4 – PACE ORGANIZATION EVALUATION CRITERIA

A prospective PACE organization must be a not-for-profit private or public entity that is primarily engaged in providing PACE services and participates in both Medicare and Medicaid. Michigan licensure as a health care entity is not required; however, unlicensed entities may only serve Medicare and Medicaid beneficiaries. Federal regulations (42 CFR Part 460) describe administrative requirements for PACE. At a minimum, prospective entities must meet the federal requirements for PACE organizations, enroll as a Michigan Medicaid provider, and complete a feasibility study. MDHHS will evaluate potential PACE organizations using the following criteria:

- Submission of a feasibility study that:
  - identifies the proposed service area;
  - shows evidence of demand for PACE services in the proposed service area (the potential pool of PACE beneficiaries should be sufficient to have 250 to 300 beneficiaries enrolled within four to five years of start-up);
  - identifies competing PACE organizations, documents the organization’s timeline for development and anticipated costs;
  - identifies the anticipated source of referrals for potential beneficiaries; and
  - assesses the supply of alternative long-term care services already in existence in the community.

- Organizational commitment to principles consistent with the PACE model.

- Evidence of experience in providing primary, acute and/or long-term care services to the target population and evidence of positive community support.

- Evidence that the organization has the depth in leadership and experience required to develop and implement PACE successfully.

- Evidence that the PACE organization will either be cost neutral or save money for long term care services provided by MDHHS in the PACE organization’s service area (i.e., total Medicaid expenditures for services in the service area will not increase and may decrease).

- Assurance of adequate financial capacity to fund program development and start-up costs, including identification of patient capacity and break-even consideration.

- Evidence of the proposed provider network and assurance that the organization will have staff and professionals experienced in providing care to the target population.

- Evidence that the Executive (Program) Director position will be staffed with a full-time employee.

- Evidence that the key positions of Medical Director, Center Manager, Financial Manager, and Quality Improvement Manager are sufficiently staffed, as determined by MDHHS, to meet the needs of the PACE organization.

- Ability to meet federal PACE requirements.

Other evaluation criteria may be considered and will be available to organizations who file a letter of intent with MDHHS to become a PACE organization.
**SECTION 5 – BECOMING A PACE ORGANIZATION**

Information regarding the process to become a PACE organization is available on the MDHHS website. Any entity seeking to become a PACE organization in Michigan may contact MDHHS regarding state-specific requirements. (Refer to the Directory Appendix for contact and website information.)

SECTION 1 – GENERAL INFORMATION

1.1 RURAL HEALTH CLINIC CERTIFICATION

This chapter provides policy and reimbursement information specific to Rural Health Clinics (RHCs) and is to be used in combination with other chapters of the Medicaid Provider Manual.

In compliance with the Rural Health Clinic Services Act of 1977 (Public Law 95-210), the Medicaid program reimburses certified and enrolled RHCs for services provided to Medicaid beneficiaries in the State of Michigan. To become certified as a RHC in Michigan, clinics must make application for RHC status through the designated state-certifying agency. (Refer to the Directory Appendix for contact information.) Based on information in the application, the certifying agency determines if an applicant clinic meets the staffing and location requirements for certification. If a clinic appears eligible, an on-site visit is conducted. If a clinic meets all the requirements, the certifying agency makes a recommendation for certification to the Centers for Medicare & Medicaid Services (CMS). CMS makes the final determination as to a clinic’s eligibility for RHC status and notifies the Michigan Department of Health and Human Services (MDHHS) when eligibility is granted.

RHCs may be provider-based or independently operated. Provider-based RHCs may be operated by a hospital, skilled nursing facility (SNF) or home health agency (HHA). An independent RHC is permitted to occupy a permanent structure or be located in a mobile unit. RHCs may be publicly or privately held clinics and they may be operated on a profit or not-for-profit basis.

1.2 GENERAL REIMBURSEMENT INFORMATION

Medicaid-enrolled RHCs are reimbursed with a prospective payment system (PPS) in compliance with Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act (BIPA) of 2000. Section 702 of BIPA created a new section 1902(bb) in the Social Security Act. Specific information related to RHC reimbursement is contained in the Rate Setting Section of this chapter.
SECTION 2 – MEDICAID ENROLLMENT

2.1 PROVIDER ENROLLMENT

MDHHS requires all RHCs to have a Group (Type 2 - Organization) National Provider Identification (NPI) number in order to receive the enhanced RHC reimbursement. For RHCs with multiple locations and multiple rates, an NPI number for each location may be necessary so that the proper reimbursement rate of all encounters can be determined. If the RHC fails to obtain and/or use the correct NPI number, the RHC reimbursement will be determined under fee for service rules. The NPI number must be reported to MDHHS before billing Medicaid services.

Individual providers (doctors, dentists, optometrists, etc.) are required to obtain a Provider (Type 1 - Individual) NPI number and report the number to MDHHS.

All inquiries related to provider enrollment should be directed to the MDHHS Provider Enrollment Unit. (Refer to the Directory Appendix for contact information.)

2.2 NONENROLLED PROVIDERS

Professional services provided by RHC clinical social workers and clinical psychologists are reimbursed under the RHC PPS. Since MDHHS does not directly enroll these providers, claims for their services must be billed using the NPI of the supervising physician responsible for ensuring the medical necessity and appropriateness of the services. Claims submitted with the non-enrolled provider's NPI in the rendering provider field will reject.

2.2.A. CLINICAL PSYCHOLOGIST AND CLINICAL SOCIAL WORKER SERVICES

Clinical psychologist and clinical social worker services must be billed using the appropriate evaluation and management (E/M) codes listed in the American Medical Association's Current Procedural Terminology (CPT) Book or Healthcare Common Procedure Coding System (HCPCS) codes.

2.2.B. LIMITATIONS FOR CLINICAL SOCIAL WORKER AND CLINICAL PSYCHOLOGIST SERVICES

All RHCs may bill the clinical social worker and clinical psychologist services but are limited to 20 visits per beneficiary per calendar year. Visits beyond the maximum of 20 visits per beneficiary per calendar year are rejected.
SECTION 3 – BENEFITS

RHC benefits are:

- Physician (MD, DO), podiatrist, chiropractor, and optometrist professional services, and services and supplies incidental to physician services, including certain drugs and biologicals that cannot be self-administered, immunizations and their administration.
- Licensed physician’s assistant, certified family nurse practitioner (CFNP), certified pediatric nurse practitioner (CPNP) and certified nurse midwife (CNM) services, and the services and supplies incidental to these services as would otherwise be furnished by, or incidental to, physician services.
- Clinical psychologist and clinical social worker services, and services and supplies incidental to these services as would otherwise be furnished by, or incidental to, physician services.
- Dental services, and services and supplies incidental to dental services.

Primary care services that are covered and reimbursed under the PPS are defined as the above listed services provided in a place of service that is the RHC’s office or clinic, patient’s home, skilled NF, domiciliary facility or NF.

3.1 SERVICES AND SUPPLIES INCIDENTAL TO AN RHC VISIT

RHC services and supplies incidental to an RHC visit are included in the PPS reimbursement if the service or supply is:

- Of a type commonly furnished in a physician's office.
- Of a type commonly rendered either without charge or included in the professional bill.
- Furnished as an incidental, although integral part of professional services furnished by a physician (MD, DO), dentist, optometrist, podiatrist, chiropractor, CNP (who has a collaborative agreement with a physician), CNM or licensed physician’s assistant.
- Furnished under the direct personal supervision of a physician (MD, DO), dentist, optometrist, podiatrist, chiropractor, CNP (who has a collaborative agreement with a physician), CNM or licensed physician’s assistant.
- In the case of a service, furnished by a member of the clinic’s health care staff who is an employee of the clinic.

The direct personal supervision requirement is met in the case of a CNP, CNM, or licensed physician’s assistant only if such a person is permitted to supervise such services under the written policies governing the RHC.

3.2 SERVICES EXCLUDED FROM RHC REIMBURSEMENT

Payment for any other Medicaid covered services not defined as a primary care service are Medicaid-covered under fee-for-service (FFS) policies. Services not listed as primary care services are excluded from the RHC prospective payment rate (PPR).
3.3 Telemedicine

An RHC can be either an originating or distant site for telemedicine services. Refer to the Billing & Reimbursement for Institutional Providers Chapter for specific billing instructions. Refer to the Telemedicine Section of the Practitioner Chapter for additional information regarding telemedicine services.

Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

3.4 Children's Health Insurance Program Services

Section 503 of the Children's Health Insurance Program Reauthorization Act (CHIPRA) of 2009 authorizes states to incorporate a PPS rate for reimbursement of services provided to children receiving health care services through RHCs when covered by the Children's Health Insurance Program (CHIP). Reimbursement for eligible services must comply with the requirements of section 1902 (bb) of the Social Security Act.

For beneficiaries enrolled in state CHIP-funded programs (MIChild, Healthy Kids-Expansion, and Maternity Outpatient Medical Services [MOMS]), providers must bill the program according to their existing processes. For beneficiaries enrolled in a MIChild health plan, the MDHHS Hospital and Clinic Reimbursement Division (HCRD) will perform an annual reconciliation of these encounters provided by RHCs if the following conditions are met:

- The RHC must be signatory to a contract with the respective MIChild health plan covering these CHIP services.
- The contract must provide for the MIChild health plan to reimburse the RHC at a fair market rate for similarly situated beneficiaries served by non-PPS eligible providers.
- The RHC must submit an electronic document of the encounters and payments associated with these CHIP plans when requesting their annual settlement.

For Healthy Kids-Expansion and MOMS beneficiaries, the HCRD will perform an annual reconciliation of these encounters provided by RHCs. The RHC PPS rates established for eligible CHIP services are equivalent to those applicable to Medicaid for each respective year they are in effect.
SECTION 4 – ENCOUNTERS

4.1 DEFINITION

Reimbursement to RHCs under the PPS requires that each office visit that meets the following definition of an encounter be counted for payment purposes.

An encounter is a face-to-face visit between a patient and the provider of health care services who exercises independent judgment in the provision of health care services. For a health service to be defined as an encounter, the provision of the health service must be recorded in the patient’s medical record.

Encounters include provision of service by the following professionals:

- Licensed physicians (MD, DO), dentists, optometrists, podiatrists, chiropractors, CNPs (who have a collaborative agreement with a physician), CNMs, physician assistants or dental hygienists.
- Clinical psychologists or clinical social workers.

The following examples help to define an encounter:

- To meet the encounter criterion for independent judgment, the provider must be acting independently and not be assisting another provider. For example, a nurse assisting a physician during a physical examination by taking vital signs, taking a history, or drawing a blood sample is not credited with a separate encounter.
- Such services as drawing blood, collecting urine specimens, performing laboratory tests, taking x-rays, filling/dispensing prescriptions, in and of themselves, do not constitute encounters. However, these procedures may accompany professional services performed by physicians, dentists, or other health providers that do constitute encounters.
- An RHC may be credited for more than one encounter by the same health professional on the same day. For example, a beneficiary suffers illness or injury requiring additional diagnosis or treatment on the same date of service, or a patient sees a physician for flu symptoms early in the day and then later the same day sees the same physician for a broken leg. These visits are classified as two encounters, and the patient’s medical record must document the circumstances of the two encounters.
- An RHC may be credited for encounters by different health professionals on the same day. For example, if a patient first sees a physician at the RHC and then sees a clinical psychologist, these visits are classified as two encounters.
- An encounter may take place in the RHC or at another approved location.

The encounter criteria are **not** met in the following circumstances:

- Provider participation in a community meeting or group session that is not designed to provide health services.
- When the only service provided is part of a large-scale effort, such as a mass immunization program, screening program, or community-wide service program.
Nursing services such as taking vital signs, taking a history, drawing a blood sample, collecting urine specimens, performing laboratory tests, taking x-rays, and/or filling or dispensing prescriptions.

- Calling in prescriptions, filling out insurance forms, etc.
- Allergy injection(s).

### 4.2 Eligibility Groups Subject to PPS Methodology

The following list identifies Medicaid eligibility groups that are subject to the PPS methodology:

<table>
<thead>
<tr>
<th>Eligibility Group</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medicaid</td>
<td>RHC primary care services constitute encounters covered by Medicaid.</td>
</tr>
<tr>
<td>Qualified Medicare Beneficiaries</td>
<td>Medicaid is billed coinsurance and deductibles for Qualified Medicare Beneficiaries (QMBs), and the services covered by Medicare are included as encounters.</td>
</tr>
</tbody>
</table>
| Medicaid Health Plan Enrollees | Medicaid-covered services provided by a RHC to Medicaid-eligible beneficiaries enrolled with a Medicaid Health Plan (MHP) are Medicaid encounters if the following conditions are met:  
  - The RHC and MHP must have a signed contract outlining payment provisions in order for the RHC to provide Medicaid-covered services to the MHP enrollee.  
  - The contract must provide for the MHP to reimburse the RHC at a fair market rate for similarly situated beneficiaries served by a non-RHC provider. The MHP must implement a level of payment equal to, or above, that of other subcontracting arrangements when entering into a subcontract with a RHC.  
  - The RHC must file information with the MDHHS HCRD in a format determined by MDHHS showing encounters and payments of Medicaid beneficiaries enrolled with MHP.  
  - RHCs may not bill Medicaid for MHP beneficiaries.  
  - After verification of the fair market rate by the HCRD, the difference between the RHC prospective payment rate and MHP payments are reconciled by MDHHS annually.  
  - The contract between RHCs and MHP services is subject to review and verification by MDHHS. |
| Healthy Kids Dental | Dental services provided to Medicaid beneficiaries enrolled in the Healthy Kids Dental program are eligible for the PPR. RHCs should report Medicaid information on encounters and revenue in the annual reconciliation report. The RHC receives the difference between the PPR and the revenue received as part of the annual reconciliation. |
| Medicare/Medicaid | Medicaid covered primary care services provided to Medicare/Medicaid dual eligibles are considered Medicaid encounters and are reimbursed under the PPS methodology. |

### 4.3 Eligibility Groups Not Subject to PPS Methodology

If an individual does not have Medicaid eligibility (i.e., is eligible for CSHCS-Title V), the services and costs are not Medicaid RHC services. CSHCS and Family Planning Waiver (Plan First!) may be paid FFS rates only.
SECTION 5 – RATE SETTING

The RHC is reimbursed on a per visit basis for RHC services. In accordance with section 1902(bb) of the Social Security Act, the PPS per visit payment is equal to 100 percent of the average of the RHC’s reasonable costs of providing Medicaid services during fiscal years 1999 and 2000. MDHHS defines reasonable costs as the per-visit amount approved and paid by Medicare. For RHCs that have a fiscal year ending other than September 30, the PPR is prorated based on the number of months in each period covered by a different prospective rate.

The per visit amount is adjusted each year (beginning on October 1, 2001) by 100 percent of the Medicare Economic Index for the prior calendar year (i.e., the adjustment effective October 1, 2001 reflects the index for calendar year 2000).

The per visit amount may also be adjusted to reflect changes in the scope of services provided to Medicaid beneficiaries by the RHC. An adjustment to the per-visit amount based upon a change in the scope of services becomes effective as determined by MDHHS.

Any rate setting/cost settlement related questions should be directed to the MDHHS HCRD. (Refer to the Directory Appendix for contact information.)

5.1 ESTABLISHING RATES FOR NEW CLINICS

An entity that initially qualifies as an RHC after fiscal year 2000 will be paid as follows:

- Upon enrollment, an interim prospective payment rate (PPR) will be established for new RHCs equal to the facility type average rate for the county in which they are located or the statewide average (if no previous average exists for the county subject to any limit applied to the specific facility type). The RHC will be cost settled at the end of its first fiscal year of operation.

- After the facility has been in operation for two full cost reporting periods, the average rate per visit for those two periods will be considered the revised PPR for the facility, subject to the following criteria:
  - The first year will be inflated to the second fiscal year end using the appropriate Medicare Economic Index (MEI) factors.
  - For independent RHCs, the rebased PPR shall not exceed the Medicare limit.
  - For provider-based RHCs (associated with a hospital with fewer than 50 enrolled beds), the PPR shall not exceed the statewide average cost per visit. The limit will increase annually at a minimum of the MEI factor.
  - For provider-based RHCs (associated with a hospital with 50 or more beds), the PPR shall not exceed the Medicare limit.

5.2 ALTERNATE PAYMENT METHODOLOGY

The State and the RHC may agree to an alternative payment methodology that provides reimbursement at least equal to that which an RHC would receive under the PPS.
5.3 Quarterly Payments

RHCs receive a quarterly payment. This payment is an estimate of the difference between the payment the RHC receives from various sources (FFS, MHP, Medicare and other insurance) and the amount the RHC should receive under the PPS. These quarterly payments are included in the annual reconciliation.
SECTION 6 – BILLING

6.1 BILLING RURAL HEALTH CLINIC SERVICES

RHC services must be billed according to instructions contained in the Billing & Reimbursement for Professionals Chapter of this manual. RHCs must refer to that chapter for information needed to submit professional claims for Medicaid services, as well as information about how MDHHS processes claims and notifies the RHC of its action. Policies for specific services are found in the provider-specific chapters of this manual.

It is the responsibility of the RHC to properly bill all Medicaid FFS claims. Incorrect or improper billing may adversely affect reimbursement since the annual reconciliation and final reimbursement is based on approved claims.

The Group (Type 2 - Organization) NPI number must be used as the billing provider on all electronic and paper claims submitted to Medicaid. Do not use Provider (Type 1 - Individual) as the billing provider. The billing provider loop or field is mandatory to complete.

The Provider (Type 1 - Individual) NPI number of the provider who performed the service should be entered as the rendering provider. Do not enter the Group NPI number as the rendering provider.

NOTE: If the rendering provider field is left blank, the information in the billing provider field is used as the rendering provider which may result in improper edits, rejection of the claim, or inaccurate settlements.

MDHHS will use the billing provider NPI field (Type 2 - Organization) to determine the number of encounters and calculate the settlement for the year-end reconciliation.

6.2 PLACE OF SERVICE REQUIREMENTS

RHCs must use place of service (POS) code 72 when billing services provided in the clinic. For services provided outside the RHC, bill with the appropriate POS code noted in the Billing & Reimbursement for Professionals Chapter of this manual.

RHCs may provide Medicaid covered services in settings other than the RHC office, beneficiary’s home, nursing facility or domiciliary facility, but these services are not included in the PPS reimbursement methodology. Services provided outside of the settings noted here are reimbursed at FFS rates.

6.3 BILLING FOR MATERNITY CARE

Global codes for maternity care are used to reimburse a package of services (prenatal visits and delivery) at different places of service (RHC and hospital). In order for the RHC to be reimbursed for prenatal visits under the PPS methodology, the RHC should not bill for global maternity care. The claims for delivery and prenatal care should be billed separately. The claim for delivery should show a hospital place of service and will be paid under the FFS methodology. The claim for prenatal care should be billed with a RHC place of service (72) using the appropriate prenatal codes. These prenatal services will be reimbursed under the PPS methodology.

If the RHC elects to bill for global maternity care, all services will be reimbursed under the FFS rules.
6.4 **OTHER INSURANCE**

Billing instructions related to coordination of benefits are published in the Coordination of Benefits Chapter of this manual. Other insurance and all other payments received for services rendered to a Medicaid beneficiary must be reported. Even if the other insurance payment for a specific service exceeds the amount Medicaid would have paid, the RHC must still bill the procedure code to receive credit for the encounter. (Refer to the Billing & Reimbursement for Professionals Chapter of this manual for specific billing guidelines.)

6.5 **MEDICARE AND MEDICAID CROSSOVER CLAIMS**

Refer to the Billing & Reimbursement for Professionals Chapter of this manual for specific instructions regarding Medicare and Medicaid claims. If the Medicare payment exceeds the Medicaid fee screen, the appropriate FFS procedure code should still be billed to Medicaid for encounter and reconciliation purposes.

6.6 **COPAYMENTS**

Medicaid copayments for chiropractic, dental, physician, podiatry, and vision services are waived under the RHC benefit as part of the reconciliation. (Services requiring copayments are listed in the General Information for Providers Chapter of this manual.)

6.7 **DENTAL CLAIMS**

RHCs providing dental services must refer to the Dental and to the Billing & Reimbursement for Dental Providers Chapters of this manual for information regarding program coverages, prior authorization requirements, claims completion and billing instructions.
SECTION 7 – RISK CONTRACTS

RHCs may enter into risk contracts with MHPs for nonprimary care services. However, these contracts are not included in the reconciliation process. All RHC reconciliations are for primary care services only.

7.1 SCOPE OF SERVICE

The prospective payment rate may be adjusted for an increase or decrease in scope of service. Any facility approved for rebasing due to a change in scope of services shall be treated as a new facility. In order to qualify for a scope of service change, the cost related to the specific change must account for an increase or decrease to the existing PPR of five percent or greater. A facility that changes classification to a system utilizing a different rate limit or methodology shall be considered a change of scope (by default). For example, an independent RHC that changes ownership to a provider-based RHC when the hospital has less than 50 beds is considered to have a change of scope.

7.1.A. INCREASE IN SCOPE OF SERVICE

An increase in scope of service results from the addition of a new professional staff member (i.e., contracted or employed) who is licensed to perform medical services that are approved RHC benefits that no current professional staff is licensed to perform.

7.1.B. DECREASE IN SCOPE OF SERVICE

A decrease in scope of service results when no current professional staff member is licensed to perform the medical services currently performed by a departing professional staff member.

7.1.C. CHANGES THAT DO NOT CHANGE THE SCOPE OF SERVICE

An increase or decrease in scope of service does not result from any of the following (although some of these changes may occur in conjunction with a change in scope of service):

- an increase, decrease or change in number of staff working at the clinic.
- an increase, decrease or change in office hours.
- an increase, decrease or change in office space or location.
- the addition of a new site that provides the same set of services.
- an increase, decrease or change in equipment or supplies.
- an increase, decrease or change in the number or type of patients served.
7.2 NOTICE OF INTENT TO CHANGE SCOPE OF SERVICE

If a RHC intends to change its scope of service, the MDHHS HCRD must be notified 90 days before any financial commitments (i.e., money paid or committed to be paid, contracts signed, etc.) have been made. Notification should include the following documentation:

- A complete description of the service to be changed (addition or deletion).
- A listing of procedure codes to be billed as a result of this new service.
- A budget for the fiscal year showing an estimate of the total increase or decrease in cost resulting from change.
- An estimate of the change in number of encounters.
- Estimates of the cost change on the current Medicaid encounter rate.
- The proposed customary charges for this service by the RHC.
- The customary charges for this service by other providers in the area served by this RHC.
- The amount to be paid by an MHP for this service for various programs (Medicare/Medicaid).
- The current Medicare encounter rate.
- Medicare fee screen for this service for non-full cost providers.
- Total encounters for last two years by program (Medicaid, Medicare, uninsured, etc.), and type (MHP, fee screen/contracted amount).
- Estimated change in encounters by program for two fiscal periods following the change in scope of service.
- Copies of notices, certifications, applications, approvals and other documentation from the state-licensing agency, CMS, Medicare intermediary, or other organizations documenting the change in scope of service.
- Other information showing cost, encounters or approvals/denials of the change.
- Other information as requested by the HCRD.

After a review of the information submitted, the HCRD notifies the RHC of its determination regarding a rate change, including the effective date of any change.
SECTION 8 – RECONCILIATION REPORTING

Medicaid Reconciliation Reports must be completed by each RHC in order to receive reimbursement under the PPS.

The RHC must file the following documents at the end of its fiscal year for full cost reimbursement:

- A copy of its filed Medicare Cost Report and Trial Balance
- A completed copy of the Medicaid Reconciliation Report
- Detailed information on managed care encounters

The RHC must submit the details of the encounters and payments received for services provided to Medicaid patients who are not in Medicaid fee for service. The information must be in electronic format (database or spreadsheet) and show the following for each service provided:

- Provider Rendering NPI
- Date of service
- Beneficiary Medicaid ID number
- HCPCS or CPT procedure code
- Payment received for the procedure

No individual payment information is needed if payments are made on a capitated basis; however, a separate summary of the monthly payments must be provided.

Upon review and audit, MDHHS will reimburse the difference between the RHC PPS rate and the amount received from the Medicaid Health Plans, Healthy Kids Dental, and/or the Substance Abuse Coordinating Agencies.

8.1 REPORT FILING

RHCs must file Reconciliation Reports and supplemental documents to the MDHHS HCRD annually. Due dates are consistent with the Medicare Cost Report filing requirement. If the required reconciliation report and supplemental documents are not submitted within the required time limit, the RHC waives its right to the PPS reimbursement for that year.

The reconciliation report is the basis for determining future quarterly payments and the current year’s reconciliation. The report must be an original(s) and signed by the authorized individual who normally signs the RHC’s federal income tax return or similar reports and should be for the same fiscal period and cover the same sites as the Medicare Cost Report. Improperly completed or incomplete filings are returned to the facility for proper completion and must be resubmitted to MDHHS within 30 days of date of receipt.
8.2 ACCOUNTING AND RECORD KEEPING

RHCs must maintain, for a period of not less than seven years from the end of the fiscal year of the Reconciliation Report, financial and clinical records for the period covered by the reconciliation report that are accurate and in sufficient detail to substantiate the information reported. If there are unresolved issues at the end of this seven-year period, the records must be maintained until these issues are resolved.

The MDHHS HCRD retains each required Reconciliation Report and supplemental documents submitted by the RHC for seven years after issuance of a final decision. In the event there are unresolved issues at the end of this seven-year period, the report is maintained until such issues are resolved.
SECTION 9 – AUDIT, SETTLEMENTS AND APPEALS

An annual reconciliation is performed to assure that the prospective payment rate is paid to the RHC for all eligible encounters. The reconciliation process begins with the receipt of the Reconciliation Report and supplemental documents and ends with the issuance of the Notice of Amount of Program Reimbursement.

9.1 DESK REVIEWS AND FIELD AUDITS

The desk review may include procedures that:

- Verify the completeness and mathematical accuracy of all schedules in the report.
- Compare the Reconciliation Report with MDHHS paid claim and encounter data.
- Identify the need for supporting documentation and arrange to receive same.
- Identify the need for a field audit examination necessary to conclude final reconciliation calculations.
- Compare reported data with industry norms as an aid to the audit scope determination.

Field audits may be conducted to verify information on the Reconciliation Report.

9.2 MEDICARE AUDIT

The Medicare intermediary may perform audits of the RHC. These audit results may be used to verify information or for statistical purposes.

9.3 INITIAL RECONCILIATION AND SETTLEMENT

An initial reconciliation is calculated after the annual reconciliation report is received. The initial reconciliation is processed approximately four months after the reconciliation report is received, with the payment or recovery made at that time. Future quarterly payments are adjusted based on the information in the initial reconciliation.

9.3.A. UNDERPAYMENTS TO AN RHC

Based on the annual reconciliation, MDHHS reimburses any underpayment due an RHC through a gross adjustment. This gross adjustment is shown in a Remittance Advice (RA). MDHHS retains the right to withhold a portion of any initial payment based on individual circumstances.

9.3.B. OVERPAYMENTS TO AN RHC

Once a determination of overpayment has been made, the amount so determined is a debt owed to the State of Michigan and will be recovered by MDHHS. The recovery starts approximately 30 days after notification to the RHC. The gross adjustment stops all payments to the RHC's physician(s) until the full amount is recovered.
9.4 AUDIT ADJUSTMENT REPORT

The Audit Adjustment Report contains a list of all Program data adjustments made to the Medicaid Reconciliation Report by MDHHS audit staff.

9.4.A. AUDIT ADJUSTMENT REPORT

The Audit Adjustment Report must be accepted or rejected by the RHC within 30 calendar days of its mailing date.

If the RHC accepts the findings contained in the Audit Adjustment Report, an appropriate officer of the RHC should sign the report and mail it to MDHHS HCRD. (Refer to the Directory Appendix for contact information.) A Notice of Amount of Program Reimbursement is then mailed to the RHC. No further administrative appeal rights are available for the adjustments contained in the Audit Adjustment Report.

If the RHC has not responded within this time period, MDHHS shall issue a Notice of Amount of Program Reimbursement that is the final determination of an adverse action. No further administrative appeal rights are available.

9.4.B. NOTICE OF AMOUNT OF PROGRAM REIMBURSEMENT

The Notice of Amount of Program Reimbursement is the notice of final determination of an adverse action and is considered the offer of settlement for all reimbursement issues for the reporting period under consideration.

9.4.C. RHC REJECTION OF THE AUDIT ADJUSTMENT REPORT

Within 30 calendar days of the mailing date of the Audit Adjustment Report, the RHC may reject any or all of the findings in the Audit Adjustment Report and request a post-audit conference.

The Post-Audit Conference is an informal process where the MDHHS HCRD staff and the RHC may resolve differences prior to an appeal and/or formal hearing. The process is initiated by the RHC after the receipt of the Audit Adjustment Report. The RHC must request in writing a Post-Audit Conference with the HCRD and indicate in that letter the area(s) of disagreement. The letter must state the appropriate regulation and/or other appropriate decisions that support the RHC’s position and be sent to MDHHS HCRD. (Refer to the Directory Appendix for contact information.)

The RHC or its representative must present, either before or at the time of the Post-Audit Conference, the audit staff with the documents and arguments that support its position relative to the disputed issue(s). The audit staff will explain to the RHC the basis for its findings. This step does not stop the recovery of monies due Medicaid.
9.5 Appeals

RHCs have the right to appeal any adverse action taken by MDHHS, unless that adverse action resulted from an action over which MDHHS had no control (e.g., Medicare termination, license revocation). The appeal must be submitted in writing and mailed to the Michigan Administrative Hearing System (MAHS). (Refer to the Directory Appendix for contact information.)

The appeal process is outlined in the MDHHS Medicaid Provider Reviews and Hearings rules R400.3401 through R400.3424. Any questions regarding the appeal process should be directed to the MAHS.

RHCs may appeal their respective Notice of Program Reimbursement if the contested issue(s) is other than those precluded due to failure to appeal rate adjustment(s) in the Audit Adjustment Report according to established time frames. Appeals accepted as appropriate are also governed by the aforementioned MDHHS Medicaid Provider Reviews and Hearings rules.

SECTION 1 - GENERAL INFORMATION

This chapter applies to enrolled Intermediate School Districts, Detroit Public Schools, and Michigan School for the Deaf.

This chapter describes the coverage and reimbursement policy for direct medical services, targeted case management, and personal care services. Coverage applies to individuals up to the age of 21 who are eligible under the provisions of the Individuals with Disabilities Education Act (IDEA) of 1990 as amended in 2004 and to those enrolled in programs that require an Individualized Education Program (IEP) or an Individualized Family Services Plan (IFSP). The Centers for Medicare & Medicaid Services (CMS) has determined that services provided in the "school" setting include services provided by qualified school staff in the "home" setting when necessary.

These services assist students with a disability to benefit from special education and related services. Medicaid reimbursement, through the Michigan Department of Health and Human Services (MDHHS), addresses the medical service needs of beneficiaries receiving special education and related services and provides funding for those services. The Social Security Act, as amended in 1988 by the Medicare Catastrophic Coverage Act, specifically provides for medical assistance (Medicaid) to cover "related services" which are specified in Federal Medicaid statute as medically necessary and "included in the child's IEP established pursuant to Part B of the IDEA or furnished to a handicapped infant or toddler because such services are included in the child's IFSP adopted pursuant to Part C (formerly called Part H) of such Act."

Section 504 of the Rehabilitation Act of 1973 requires local school districts to provide or pay for certain services to make education accessible to handicapped children. These services are described in an individualized service plan and provided free of charge to eligible individuals. Medicaid reimbursement is not allowed for these services.

Medicaid school based services are not covered for beneficiaries involuntarily residing in a detention setting with a Benefit Plan ID of INCAR, INCAR-ESO, INCAR-MA, INCAR-MA-E, or MA-HMP-INC.

Coverage is based on medically necessary, Medicaid-covered services already being provided in the school setting and enables these services provided to Medicaid-eligible beneficiaries to be billed to Medicaid. This ensures federal participation in the funding of these Medicaid covered services. Enrollment as a Michigan Medicaid provider for services delivered in the school setting is limited to the Intermediate School Districts (ISDs), Detroit Public Schools, and Michigan School for the Deaf. For the purpose of this document, the ISDs, Detroit Public Schools, and Michigan School for the Deaf will be referred to as "ISDs" for simplicity.

Enrolled providers are required to establish an interagency agreement to facilitate coordination and cooperation with other human service agencies operating within the same service area. Medicaid services provided by the ISDs are to be provided as outlined in the IEP/IFSP treatment plan and are not expected to replace or substitute for services already provided by other agencies. If services are being provided by another program, ISDs are expected to coordinate the services to prevent service overlap and to assure continuity of care to the Medicaid beneficiary. Enrollment as a SBS provider is not expected to result in any change in the education agency's set of existing services or service utilization. MDHHS periodically evaluates the impact of Medicaid enrollment on special education programs through review of service utilization and other program data and information.
Covered services do not require prior authorization but must be documented and provided by qualified personnel as specified in the Covered Services Section of this chapter.

The following terms have specific meanings in the school setting:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assistive Technology Device (ATD)</td>
<td>Per IDEA, Section 602, the term &quot;assistive technology device&quot; means any item, piece of equipment or product system, whether acquired commercially off the shelf or modified or customized, that is used to increase, maintain, or improve functional capabilities of a child with a disability.</td>
</tr>
<tr>
<td>Assistive Technology Service</td>
<td>The term &quot;assistive technology service&quot; means any service that directly assists a child with a disability in the selection, acquisition or use of an assistive technology device.</td>
</tr>
<tr>
<td>Certified Public Expenditure</td>
<td>A certified public expenditure is an expenditure of a governmental unit whose state share is supported by tax dollars, or a mix of tax dollars and appropriated dollars, and is certified as eligible for federal match.</td>
</tr>
<tr>
<td>Claims Development Software</td>
<td>The claims development software is a custom-developed software that utilizes scanning hardware and software and spreadsheet software to automate the school district claiming process. The claims development software is comprised of three components: sampling, training, and costs/claim generation.</td>
</tr>
<tr>
<td>Direct Medical Services Program</td>
<td>Direct medical services, specialized transportation, targeted case management and personal care services provided in the school setting and reimbursed by Medicaid.</td>
</tr>
</tbody>
</table>
| Durable Medical Equipment, Supplies, Prosthetics and Orthotics (DMEPOS) | • DME items are those that can stand repeated use, are primarily and customarily used to serve a medical purpose, are not useful to a person in the absence of an illness or injury, and can be used in the beneficiary's home. DME is a covered benefit when:
  - It is medically and functionally necessary to meet the needs of the beneficiary.
  - It may prevent frequent hospitalization or institutionalization.
  - It is life sustaining.

• Medical Supplies are those items that are required for medical management of the beneficiary, are disposable or have a limited life expectancy, and can be used in the beneficiary's home. Medical supplies are items that:
  - Treat a medical condition.
  - Prevent unnecessary hospitalization or institutionalization.
  - Support DME used by the beneficiary.

• Prosthetics artificially replace a portion of the body to prevent or correct a physical anomaly or malfunctioning portion of the body. Prosthetics are a benefit to:
  - Improve and/or restore the beneficiary's functional level.
  - Enable a beneficiary to ambulate or transfer.

• Orthotics assist in correcting or strengthening a congenital or acquired physical anomaly or malfunctioning portion of the body. Orthotics are a benefit to:
  - Improve and/or restore the beneficiary's functional level.
  - Prevent or reduce contractures.
  - Facilitate healing or prevent further injury. |

| Enrolled Medicaid Provider | The 56 Michigan Intermediate School Districts, Detroit Public Schools, and Michigan School for the Deaf that have enrolled and revalidated with the MDHHS CHAMPS Provider Enrollment subsystem. |
| HT Modifier (Multi-disciplinary team) | The HT modifier is used when billing for an assessment, evaluation or test performed for the IDEA Assessment. Each qualified staff bills using the appropriate procedure code followed by the modifier HT (multi-disciplinary team). |
| IEP (Individualized Education Program) | A written plan for services for eligible students between the ages of 4 and 26 in Michigan as determined by the federal IDEA statute. Medicaid funds are available to reimburse for health and medical services that are a part of a student’s IEP for beneficiaries up to the age of 21. |
| IFSP (Individualized Family Services Plan) | A written plan for a child with a disability who is between the ages of zero and three years that is developed jointly by the family and appropriate qualified personnel, and is based on multi-disciplinary evaluation and assessment of the child’s unique strengths and needs, as well as a family-directed assessment of the priorities, resources and concerns. Medicaid funds are available to reimburse for health and medical services that are a part of a child’s IFSP. |
### IDEA (Individuals with Disabilities Education Act)

The federal statute, IDEA of 1990 as amended in 2004, which requires public schools to determine whether a child has a disability, develop a plan that details the education and support services that the student will receive, provide the services, and evaluate the plan at least annually. There may be federal funding available for some of these responsibilities.

### IDEA Assessment

An IDEA assessment is a formal evaluation that includes assessments, evaluations, tests and all related activities performed to determine if an individual is eligible under provisions of the IDEA of 1990, as amended in 2004, and are related to the evaluation and functioning of the individual.

### ISD (District)

A corporate body established by statute in the Michigan Revised School Code (PA 451 of 1976) that is regulated by an intermediate school board. Michigan has 56 intermediate school districts.

### MDE (Michigan Department of Education)

A department within the State of Michigan.

### Random Moment Time Study

A random moment sampling to determine the extent to which Medicaid-reimbursable activities are being performed by capturing what is done during a specific moment in time.

### School-Based Services

A program which provides medically necessary Medicaid covered services in the school setting. All Michigan ISDs, Detroit Public Schools, and Michigan School for the Deaf participate in the Direct Medical Services Program.

### School Clinical Record

All the written or electronic information that has been created and is necessary to fully disclose and document the services requested for reimbursement.

### Special Education Transportation

Transport to and from the student’s pick-up and drop-off site where school based services are provided.

### TL Modifier (Re-evaluation of Existing Data (REED))

The TL modifier is used with the appropriate procedure codes to identify when a re-evaluation of existing data (REED) was used in the determination of the child’s eligibility for special education services.

### TM Modifier (Individualized Education Program [IEP])

The TM modifier is used when billing for the multi-disciplinary team assessment for the development, review and revision of an IEP/IFSP treatment plan. Each qualified staff bills for this assessment using the appropriate procedure code with the modifier TM (Individualized Education Program [IEP]).

### Treatment Plan

If an evaluation indicates that Medicaid-covered services are required, the qualified staff must develop and maintain a treatment plan for the student. The student’s IEP/IFSP form may suffice as the treatment plan as long as the IEP/IFSP contains the required components described under the Treatment Plan subsection of this section.

#### 1.1 Children’s Special Health Care Services

The Medicaid School Based Services program covers services provided to children who are determined either dually eligible for Children's Special Health Care Services (CSHCS) and Medicaid (Title V/XIX), or those eligible for only Medicaid (Title XIX). SBS providers are not reimbursed for beneficiaries enrolled only in the CSHCS program (Title V only), and must not submit claims for these beneficiaries.
1.2 Third Party Liability

Federal regulations require that all identifiable financial resources available for payment be billed prior to billing Medicaid. If a Medicaid-eligible child is presently covered by another resource and the school district does not bill the other resource, Medicaid cannot be billed for the services. (Refer to the Coordination of Benefits chapter for additional information.)

1.3 Medical Necessity

A Medicaid service provided by an ISD is determined medically necessary when all of the following criteria are met:

- Addresses a medical or mental disability;
- Needed to attain or retain the capability for normal activity, independence or self care;
- Is included in the student’s IEP/IFSP treatment plan; and
- Is ordered, in writing, by a physician or other licensed practitioner acting within the scope of his/her practice under State law. Students who require speech, language and hearing services must be referred. The written order/referral must be updated at least annually. A stamped signature is not acceptable.

1.4 Under the Direction of and Supervision

Certain specified services may be provided under the direction of or under the supervision of another clinician. For the supervising clinician, “under the direction of” means that the clinician is supervising the individual's care which, at a minimum, includes seeing the individual initially, prescribing the type of care to be provided, reviewing the need for continued services throughout treatment, assuring professional responsibility for services provided, and ensuring that all services are medically necessary. “Under the direction of” requires face-to-face contact by the clinician at least at the beginning of treatment and periodically thereafter.

“Supervision of” limited-licensed mental health professionals consists of the practitioner meeting regularly with another professional, at an interval described within the professional administrative rules, to discuss casework and other professional issues in a structured way. This is often known as clinical or counseling supervision or consultation. The purpose is to assist the practitioner to learn from his or her experience and expertise, as well as to ensure good service to the client or patient.

1.5 Covered Services

Medicaid covered services billed by ISDs include:

- Evaluations and tests performed for assessments
- Occupational Therapy Services
- Orientation and Mobility Services
- Assistive Technology Device Services
- Physical Therapy Services
Speech, Language and Hearing Therapy Services
Psychological, Counseling and Social Work Services
Developmental Testing Services
Nursing Services
Physician and Psychiatrist Services
Personal Care Services
Targeted Case Management (TCM) Services
Specialized Transportation Services

1.6 SERVICE EXPECTATIONS

The IEP/IFSP treatment plan must include the appropriate annual goals and short-term objectives, criteria, evaluation procedures, and schedules for determining whether the objectives are being achieved within an appropriate period of time (at least annually). All therapy services must be skilled (i.e., require the skills, knowledge, and education of a licensed occupational therapist, licensed physical therapist, or fully licensed speech-language pathologist or licensed audiologist). Interventions expected to be provided by another practitioner (e.g., teacher, registered nurse), family member or caregiver are not reimbursable as occupational, physical, or speech, language and hearing therapy by this program.

To be covered by Medicaid, occupational, physical, and speech, language and hearing therapy must address a beneficiary’s medical need that affects his/her ability to learn in the classroom environment. MDHHS does not reimburse for therapies that do not have medically related goals (i.e., handwriting, increasing attention span, identifying colors and numbers, enhancing vocabulary, improving sentence structure, and reading).

Group therapy or treatment must be provided in groups of two to eight. Services provided as part of a regular classroom activity are not reimbursable. When regularly scheduled attention is provided to one beneficiary who is part of the class currently in session, the service is not reimbursable.

Supplies or equipment utilized in service delivery are included as part of the service and are not reimbursed separately. Art, music and recreation therapies are not covered services.

Medicaid is required to follow the procedure code definition from the Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) manuals. Procedure codes referencing office or outpatient facility include the medical services provided in the school setting. Procedure codes that do not specify a unit of time are to be billed per session. Group therapy is billed per beneficiary.

Certain CPT/HCPCS code descriptions include a specified unit of service time. Service times are based on the time it generally takes to provide the service. If the procedure code specifies "up to 15 minutes of service", the service may be billed in a unit of time from 1-15 minutes. If the procedure code specifies a unit of time "each 15 minutes", the code may be billed when the service time equals the specified unit of time. Any additional time cannot be billed unless the full time specified is reached.

Consultation or consultative services are an integral part or an extension of a direct medical service and are not separately reimbursable.
### 1.7 Treatment Plan

<table>
<thead>
<tr>
<th>Requirements</th>
<th>If an evaluation indicates that Medicaid-covered services are required, the qualified staff must develop and maintain a treatment plan for the beneficiary. The beneficiary’s IEP/IFSP form may suffice as the treatment plan as long as the IEP/IFSP contains the required components described below. Only qualified staff may initiate, develop or change the beneficiary’s treatment plan. The treatment plan must be signed, titled and dated by the qualified staff prior to billing Medicaid for services and must be retained in the beneficiary’s school clinical record. (Refer to the Covered Services Section of this chapter for definitions of qualified staff.)</th>
</tr>
</thead>
</table>
| Components | The treatment plan, which is an immediate result of the evaluation, must consist of the following components:  
- Beneficiary’s name;  
- Description of the beneficiary’s qualifying diagnosis and medical condition;  
- Time-related goals that are measurable and significant to the beneficiary’s function and/or mobility;  
- Long-term goals that identify specific functional achievement to serve as indicators that the service is no longer needed;  
- Anticipated frequency and duration of treatment required to meet the time-related goals;  
- Plan for reaching the functional goals and outcomes in the IEP/IFSP;  
- A statement detailing coordination of services with other providers (e.g., medical and educational); and  
- All services are provided with the expectation that the beneficiary’s primary care provider and, if applicable, the beneficiary’s case manager are informed on a regular basis. |
| Review | The treatment plan must be reviewed and updated at least annually as part of the IEP/IFSP multi-disciplinary team assessment process, or more frequently if the beneficiary’s condition changes or alternative treatments are recommended. |

### 1.8 Evaluations

Evaluations for medical services are covered when:

- Performed as part of the IDEA Assessment.
- The beneficiary left and is re-entering special education.
- An initial development, review or revision of the student’s IEP/IFSP treatment plan will occur.
- A change or decrease in function occurs.

#### 1.8.A. Evaluations Performed for DMEPOS Medical Suppliers

If an ISD physical therapist, occupational therapist, speech pathologist or audiologist performs assessments for DMEPOS that are billed by a Medicaid medical supplier, the
clinician must comply with all prior authorization policies and procedures regarding that DMEPOS item. For example, a physician must order the assessment. The clinician must comply with all requirements for the assessments specified in the Medical Supplier Chapter of this manual. For example, the clinician must perform and write his/her own evaluation and may not sign evaluations completed by a medical supplier. Three appropriate economical alternatives must be ruled out for some items. (Refer to the Medical Supplier Chapter of this manual for details.) If the child is also receiving physical therapy, occupational therapy, speech pathology or audiology services in another outpatient setting, it may be more appropriate for the outpatient clinician to perform the assessment. The ISD clinician must coordinate with all clinicians in other settings.
**SECTION 2 – COVERED SERVICES**

### 2.1 INDIVIDUALS WITH DISABILITIES EDUCATION ACT ASSESSMENT AND IEP/IFSP DEVELOPMENT, REVIEW AND REVISION

| Definition | The Individuals with Disabilities Education Act (IDEA) Assessment is a formal evaluation that includes assessments, evaluations, tests and all related activities performed to determine if a beneficiary is eligible under provisions of the IDEA of 1990, as amended in 2004, and are related to the evaluation and functioning of the beneficiary. These services are reimbursable only after they result in the implementation of an IEP/IFSP treatment plan. If an IEP/IFSP treatment plan is not implemented within one year of the date of service, then none of the services provided are covered. |
| Provider Qualifications | Qualified staff can bill for assessments, tests, and evaluations performed for the IDEA Assessment. To be covered by Medicaid, the staff must have the following Michigan current credentials: |
| | - A licensed occupational therapist (OT) |
| | - A certified orientation and mobility specialist (O&M) |
| | - A licensed physical therapist (PT) |
| | - A fully licensed speech-language pathologist (SLP) |
| | - A licensed audiologist |
| | - A fully licensed psychologist (Doctoral level) |
| | - A limited-licensed psychologist (Doctoral level) (under the supervision of a licensed psychologist) |
| | - A licensed professional counselor |
| | - A limited-licensed counselor (under the supervision of a licensed professional counselor) |
| | - A licensed master’s social worker |
| | - A limited-licensed master’s social worker (under the supervision of a licensed master’s social worker) |
| | - A licensed physician or psychiatrist (MD or DO) |
| | - A registered nurse (RN) |
| Procedure Codes | Qualified staff can bill for three distinct types of assessments/evaluations/tests as follows. All activities, such as meetings and written reports related to the assessment/evaluation/test, are an integral part or extension of the service and are not separately reimbursable. |
| | - The **HT** modifier is used with the procedure code when billing for an assessment/evaluation/test performed for the IDEA Assessment. Each qualified staff bills using the appropriate procedure code below followed by the modifier HT (multi-disciplinary team). The date of service is the date of determination of eligibility for special education or early-on services. The determination date must be included in the assessment/evaluation/test. |
The **TL modifier** is used with the appropriate procedure codes to identify when a re-evaluation of existing data (REED) was used in the determination of the child's eligibility for special education services.

The **TM modifier** is used with the procedure code when billing for the multi-disciplinary team assessment to develop, review and revise an IEP/IFSP treatment plan. Each qualified staff bills using the appropriate procedure code below with the modifier TM (Individualized Education Program [IEP]). The date of service is the date of the multi-disciplinary team assessment.

**52 Modifier (Reduced Services)** - The 52 modifier is used to describe circumstances in which services provided were reduced in comparison to the full description of the service.

No modifier is used when assessments/evaluations/tests are provided not related to the IDEA Assessment or the IEP/IFSP treatment plan development, review and revision. Each qualified staff bills for these activities using the appropriate procedure code below with no modifier. The date of service is the date the assessment/evaluation/test is completed.

Procedure codes to be used to bill for the above activities are:

- **H0031** - Mental Health Assessment, by non-physician.
  (Used by the psychologist, counselor or licensed social worker billing for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), a REED (TL) or the IDEA evaluation (HT).)

- **T1001** - Nursing assessment/evaluation (registered nurse [RN]).
  (Used by the RN billing for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), a REED (TL) or the IDEA evaluation (HT).)

- **T1024** - Evaluation and treatment by an integrated, specialty team contracted to provide coordinated care to multiply or severely handicapped children, per encounter.
  (This code can only be used with the TM modifier. Used by the Designated Case Manager billing for the IEP/IFSP multi-disciplinary assessment (TM) or an assessment not related to the revision of the IEP/IFSP (no modifier). The Designated Case Manager cannot bill using the HT or TL modifiers.)

- **V2799** - Vision services, miscellaneous.
  (Used by the orientation and mobility specialist billing for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), a REED (TL) or the IDEA evaluation (HT).)

- **92521** - Evaluation of speech fluency (e.g., stuttering, cluttering)
  (Used by the speech pathologist for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), a REED (TL), or the IDEA evaluation (HT).)

• **92582** - Conditioning play audiometry
  
  (Used by the audiologist for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), a REED (TL), or the IDEA evaluation (HT).)

• **92594** - Electroacoustic evaluation for hearing aid; monaural

• **92595** - Electroacoustic evaluation for hearing aid; binaural

• **92630** - Auditory rehabilitation; pre-lingual hearing loss

• **92633** - Auditory rehabilitation; post-lingual hearing loss

• **96101** - Psychological testing
  
  (Used by the psychologist when billing for the evaluation [HT] or REED [TL] when the psychological testing is performed as part of the assessment/evaluation process.)

• **96110** - Developmental screening, with interpretation and report, per standardized instrument form.
  
  (Used by the physician, psychologist or social worker billing for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), or the IDEA evaluation (HT).)

• **96111** - Developmental testing; extended (includes assessment of motor, language, social, adaptive and/or cognitive functioning by standardized developmental instruments), with interpretation and report.
  
  (Used by the physician, psychologist or social worker billing for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), or the IDEA evaluation (HT).)

• **96116** - Neurobehavioral status exam
  
  (Used by the psychologist when billing for the evaluation [HT] or REED [TL] when the neurobehavioral status exam is performed as part of the assessment/evaluation process.)

• **96118** - Neuropsychological testing
  
  (Used by the psychologist when billing for the evaluation [HT] or REED [TL] when the neuropsychological testing is performed as part of the assessment/evaluation process.)

• **96127** - Brief emotional/behavioral assessment (e.g., depression inventory, attention-deficit/hyperactivity disorder [ADHD] scale), with scoring and documentation, per standardized instrument.

• **97001** - Physical Therapy Evaluation.
  
  (Used by the physical therapist billing for either the IEP/IFSP multi-disciplinary assessment (TM), an assessment not related to the IEP/IFSP (no modifier), a REED (TL), or the IDEA evaluation (HT).)
2.2 OCCUPATIONAL THERAPY (INCLUDES ORIENTATION AND MOBILITY SERVICES AND ASSISTIVE TECHNOLOGY DEVICE SERVICES)

2.2.A. OCCUPATIONAL THERAPY SERVICES

<table>
<thead>
<tr>
<th>Definition</th>
<th>Occupational Therapy:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Occupational therapy (OT) must be rehabilitative, active or restorative and designed to correct or compensate for a medical problem interfering with age-appropriate functional performance. Occupational therapy services must require the skills, knowledge, and education of a licensed occupational therapist, licensed occupational therapy assistant, or Orientation and Mobility specialist.</td>
</tr>
</tbody>
</table>

| Prescription | Occupational therapy services must be prescribed by a physician and updated annually. A stamped physician signature is not acceptable. |

| Provider Qualifications | OT services may be reimbursed when provided by: |
|                        |   •  A licensed occupational therapist (OT); or |
|                        |   •  A licensed occupational therapy assistant (OTA) under the direction of a licensed occupational therapist (OT). |

NOTE: The OTA's services must follow the evaluation and treatment plan developed by the OT. The OT must supervise and monitor the OTA's performance with continuous assessment of the beneficiary's progress. All documentation must be reviewed and signed by the supervising OT.
### Evaluations for Occupational Therapies

Evaluations are formalized testing and reports for the development of the beneficiary’s treatment plan. They may be completed by a licensed occupational therapist. An evaluation includes:

- The treatment diagnosis and the medical diagnosis, if different from the treatment diagnosis;
- Current therapy being provided to the beneficiary in this and other settings;
- Medical history as it relates to the current course of therapy;
- The beneficiary’s current functional status (functional baseline);
- The standardized and other evaluation tools used to establish the baseline and to document progress;
- Assessment of the beneficiary’s performance components (strength, dexterity, range of motion, sensation, perception) directly affecting the beneficiary’s ability to function;
- Assessment of the beneficiary’s cognitive skill level (e.g., ability to follow directions, including auditory and visual, comprehension); and
- Evaluation of the needs related to assistive technology device services, including a functional evaluation of the beneficiary.

### Assessments for Durable Medical Equipment

If an ISD occupational therapist performs assessments for DMEPOS that are billed by a Medicaid medical supplier, the clinician must comply with all prior authorization policies and procedures regarding that DMEPOS item. For example, a physician must order the assessment. The clinician must comply with all requirements for the assessments specified in the Medical Supplier Chapter of this manual. For example, the clinician must perform and write his/her own evaluation and may not sign evaluations completed by a medical supplier. Three appropriate economical alternatives must be ruled out for some items. (Refer to the Medical Supplier Chapter of this manual for details.) If the child is also receiving physical therapy, occupational therapy, speech pathology or audiology services in another outpatient setting, it may be more appropriate for the outpatient clinician to perform the assessment. The ISD clinician must coordinate with all clinicians in other settings.
### Services

Occupational therapy services include:

- Group therapy provided in a group of two to eight beneficiaries;
- Manual therapy techniques (e.g., mobilization/manipulation, manual lymphatic drainage, manual traction), one or more regions;
- Wheelchair management/propulsion training;
- Independent living skills training;
- Coordinating and using other therapies, interventions, or services with the ATD;
- Training or technical assistance for the beneficiary or, if appropriate, the beneficiary's parent/guardian;
- Training or technical assistance for professionals providing other education or rehabilitation services to the beneficiary receiving ATD services;
- Neuromuscular re-education of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities;
- Evaluating the needs of the beneficiary, including a functional evaluation of the beneficiary. ATD services are intended to directly assist a beneficiary with a disability in the selection, coordination of acquisition, or use of an ATD; or
- Selecting, providing for the acquisition of the device, designing, fitting, customizing, adapting, applying, retaining, or replacing the ATD, including orthotics.

### Procedure Codes

The following procedure codes may be used to bill for occupational therapy services:

- **97003** - Occupational therapy evaluation. This code can be used by itself, or with the HT, TL, or TM modifiers.
- **97110** - Therapeutic procedure, one or more areas, each 15 minutes. Therapeutic exercises to develop strength and endurance, range of motion, and flexibility.
- **97150** - Therapeutic procedure(s), group (2 or more individuals).
- **97542** - Wheelchair management (e.g., assessment, fitting, training), each 15 minutes. If wheelchair management services are provided for equipment that is covered under the Medicaid Durable Medical Equipment (DME) program, all policies and procedures applicable to that program must be adhered to by school based providers.
- **97755** - Assistive technology assessment (e.g., to restore, augment or compensate for existing functional tasks and/or maximize environmental accessibility), direct one-on-one contact by providers, with written report, each 15 minutes. (If assessments are done for equipment that is covered under the Medicaid Durable Medical Equipment (DME) program, all policies and procedures applicable to that program must be adhered to by school based providers.)
### 2.2.B. ORIENTATION AND MOBILITY SERVICES

| **Definition** | **Orientation and Mobility Services:**  
 Orientation and mobility services are services provided to blind or visually impaired students by qualified personnel to enable those students to attain systematic orientation to and safe movement within their environment in the school, home and community. Services are based on the individual student’s needs for assistance in compensatory skill development, visual efficiency, utilization of low vision aids/devices and technology, etc.  
 Spatial and environmental concepts and use of information received by the senses (such as sound, temperature and vibration) to establish, maintain, or regain orientation and line of travel (for example, using sound at a traffic light to cross the street); to use the long cane, as appropriate, to supplement visual travel skills or as a tool for safely negotiating the environment for students with no available travel vision; and to understand and use remaining vision and distance low vision aids/devices, as appropriate. |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Prescription</strong></td>
<td>Orientation and mobility services must be prescribed by a physician and updated annually. A stamped physician signature is not acceptable.</td>
</tr>
</tbody>
</table>
| **Provider Qualifications** | Orientation and mobility services may be reimbursed when provided by:  
 1. A certified orientation and mobility specialist with current certification from the Academy for Certification of Vision Rehabilitation and Education Professionals (ACVREP); or  
 2. A licensed occupational therapist. |
| **Evaluations** | Evaluations are formalized testing and reports for the development of the beneficiary’s treatment plan. They may be completed by an Orientation and Mobility Specialist (O&M) or a licensed occupational therapist.  
 An evaluation for Orientation and Mobility services includes:  
 1. The treatment diagnosis and the medical diagnosis, if different from the treatment diagnosis;  
 2. Medical history as it relates to the current course of therapy;  
 3. The beneficiary’s current functional status (functional baseline);  
 4. The standardized and other evaluation tools used to establish the baseline and to document progress;  
 5. Assessment of the beneficiary’s performance components (status of sensory skills, proficiency of use of travel tools, current age-appropriate independence, complexity or introduction of new environment, caregiver input, assessment in the home/living environment, assessment in the school environment, assessment in the residential/neighborhood environment, assessment in the commercial environment, and assessment in the public transportation environment;  
 6. Assessment of the beneficiary’s cognitive skill level (e.g., ability to follow directions, including auditory and visual, comprehension); and  
 7. Evaluation of the needs related to assistive technology device services, including a functional evaluation of the beneficiary. |
### Services

Orientation and mobility services include:

- Providing assistance in the development of skills and knowledge that enable the child to travel independently to the highest degree possible, based on assessed needs and the IEP;
- Training the child to travel with proficiency, safety and confidence in familiar and unfamiliar environments;
- Preparing and using equipment and material, such as tactile maps, models, distance low vision aids/devices, and long canes, for the development of orientation and mobility skills;
- Evaluation and training performed to correct or alleviate movement deficiencies created by a loss or lack of vision;
- Communication skills training (teaching Braille is not a covered benefit);
- Systematic orientation training to allow safe movement within their environments in school, home and community;
- Spatial and environmental concept training and training in the use of information received by the senses (such as sound, temperature and vibration) to establish, maintain, or regain orientation;
- Visual training to understand and use the remaining vision for those with low vision;
- Training necessary to activate visual motor abilities;
- Training to use distance low vision aids/devices; and
- Independent living skills training.

### Procedure Codes

The following procedure codes may be used to bill for orientation and mobility services:

- **97533** - Sensory integrative techniques to enhance sensory processing and promote adaptive responses to environmental demands, direct (one-on-one) patient contact by the provider, each 15 minutes.
- **97535** - Self-care/home management training (e.g., activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment), direct one-on-one contact by provider, each 15 minutes.
- **V2799** - Vision services, miscellaneous

### 2.2.C. Assistive Technology Device Services

**Definition**

Assistive Technology Device Services General Description:

Utilizing the description in Section 602(2) of the Individuals with Disabilities Education Act (IDEA), the term 'assistive technology device' means any item, piece of equipment, or product system, whether acquired commercially off the shelf, modified, or customized, that is used to increase, maintain, or improve functional capabilities of a child with a disability. Therapists should restrict their evaluations and services to those within the scope of their practice and consistent with their education and training.

<td>- Assessment of the beneficiary's performance components (strength, dexterity, range of motion, sensation, perception) directly affecting the beneficiary's ability to function;</td>
</tr>
<tr>
<td></td>
<td>- Assessment of the beneficiary's cognitive skill level (e.g., ability to follow directions, including auditory and visual, comprehension); and</td>
</tr>
<tr>
<td></td>
<td>- Evaluation of the needs related to assistive technology device services, including a functional evaluation of the beneficiary in the school environment and home.</td>
</tr>
<tr>
<td>Assessments for Durable Medical Equipment</td>
<td>If an ISD occupational therapist performs assessments for DMEPOS that are billed by a Medicaid medical supplier, the clinician must comply with all prior authorization policies and procedures regarding that DMEPOS item. For example, a physician must order the assessment. The clinician must comply with all requirements for the assessments specified in the Medical Supplier Chapter of this manual. For example, the clinician must perform and write his/her own evaluation and may not sign evaluations completed by a medical supplier. Three appropriate economical alternatives must be ruled out for some items. (Refer to the Medical Supplier Chapter of this manual for details.) If the child is also receiving physical therapy, occupational therapy, speech pathology or audiology services in another outpatient setting, it may be more appropriate for the outpatient clinician to perform the assessment. The ISD clinician must coordinate with all clinicians in other settings.</td>
</tr>
</tbody>
</table>
### Services

ATD services are intended to directly assist a beneficiary with a disability in the selection, coordination of acquisition, or use of an ATD. The direct acquisition of medical equipment, such as wheelchairs etc., is not a covered benefit of the SBS program; this service must be billed under the Medical Supplier program coverage. The direct acquisition of medical equipment is covered under the Medical Supplier Medicaid benefit.

Assistive Technology Device Services include:

- Coordinating and using other therapies, interventions, or services with the ATD.
- Training or technical assistance for the beneficiary or, if appropriate, the beneficiary's parent/guardian.
- Training or technical assistance for professionals providing other education or rehabilitation services to the beneficiary receiving ATD services.
- Neuromuscular re-education of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities.
- Evaluating the needs of the beneficiary, including a functional evaluation of the beneficiary. ATD services are intended to directly assist a beneficiary with a disability in the selection, coordination of acquisition, or use of an ATD.
- Selecting, providing for the acquisition of the device, designing, fitting customizing, adapting, applying, retaining or replacing the ATD, including orthotics.
- Wheelchair assessment, fitting, training. If the wheelchair assessment is for equipment billed by a Medicaid medical supplier, all prior authorization and coverage policies and procedures in the Medical Supplier Chapter of this manual must be adhered to by school based providers.

### Procedure Codes

The following procedure codes may be used to bill for ATD services:

- **97112** - Neuromuscular re-education of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities.
- **97535** - Self-care/home management training (e.g., activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment), direct one-on-one contact by provider, each 15 minutes.
- **97542** - Wheelchair management (e.g., assessment, fitting, training), each 15 minutes. If wheelchair management services are provided for equipment that is covered under the Medicaid Durable Medical Equipment (DME) program, all policies and procedures applicable to that program must be adhered to by school based providers.
- **97760** - Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(s), lower extremity(s), and/or trunk, each 15 minutes.
- **97761** - Prosthetic training, upper and/or lower extremity(s), each 15 minutes.
## 2.3 Physical Therapy Services (Includes Assistive Technology Device Services)

### 2.3.A. Physical Therapy Services

<table>
<thead>
<tr>
<th>Definition</th>
<th>Physical therapy (PT) must be rehabilitative, active or restorative and designed to correct or compensate for a medical problem. Physical therapy services must require the skills, knowledge and education of a PT or PTA to provide therapy. Treatment is performed through the use of therapeutic exercises and rehabilitative procedures.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prescription</td>
<td>Physical therapy services must be prescribed by a physician or licensed physician’s assistant and updated annually. A stamped physician signature is not acceptable.</td>
</tr>
</tbody>
</table>
| Provider Qualifications | PT services may be reimbursed when provided by:  
- A licensed physical therapist (PT); or  
- A licensed physical therapy assistant (PTA) under the direction of a licensed physical therapist (PT) (i.e., the PT supervises and monitors the PTA’s performance with continuous assessment of the beneficiary’s progress). All documentation must be reviewed and signed by the supervising PT. |
| Evaluations for Physical Therapies | Evaluations are formalized testing and reports to determine a beneficiary’s need for services and recommend a course of treatment. They may be completed by a PT. Evaluations include:  
- The treatment diagnosis and the medical diagnosis, if different than the treatment diagnosis;  
- Current therapy being provided to the beneficiary in this and other settings;  
- Medical history as it relates to the current course of therapy;  
- The beneficiary’s current functional status (i.e., functional baseline);  
- The standardized and other evaluation tools used to establish the baseline and to document progress;  
- Assessment of the beneficiary’s performance components (e.g., strength, dexterity, range of motion) directly affecting the beneficiary’s ability to function;  
- Assessment of the beneficiary’s cognitive skill level (e.g., ability to follow directions, including auditory and visual, comprehension); and  
- Evaluation of the needs related to assistive technology device services, including a functional evaluation of the beneficiary. |
### Assessments for Durable Medical Equipment

If an ISD physical therapist performs assessments for DMEPOS that are billed by a Medicaid medical supplier, the clinician must comply with all prior authorization policies and procedures regarding that DMEPOS item. For example, a physician must order the assessment. The clinician must comply with all requirements for the assessments specified in the Medical Supplier Chapter of this manual. For example, the clinician must perform and write his/her own evaluation and may not sign evaluations completed by a medical supplier. Three appropriate economical alternatives must be ruled out for some items. (Refer to the Medical Supplier Chapter of this manual for details.) If the child is also receiving physical therapy, occupational therapy, speech pathology or audiology services in another outpatient setting, it may be more appropriate for the outpatient clinician to perform the assessment. The ISD clinician must coordinate with all clinicians in other settings.

### Services

Physical therapy services include:
- Group therapy provided in a group of two to eight beneficiaries;
- Gait training;
- Training in functional mobility skills (e.g., ambulation, transfers, and wheelchair mobility);
- Stretching for improved flexibility; and
- Modalities to allow gains of function, strength or mobility.

### Procedure Codes

The following procedure codes may be used to bill for physical therapy services:

- **97001** – Physical therapy evaluation. This code can be used by itself or with the HT, TL, or TM modifiers.
- **97110** – Therapeutic procedure, one or more areas, each 15 minutes. Therapeutic exercises to develop strength and endurance, range of motion, and flexibility.
- **97116** – Gait training (includes stair climbing), each 15 minutes.
- **97150** – Therapeutic procedure(s), group (2 or more individuals).
- **97530** – Therapeutic activities, direct (one-on-one) patient contact by the provider (use of dynamic activities to improve functional performance), each 15 minutes.
- **97542** – Wheelchair management (e.g., assessment, fitting, training), each 15 minutes. (If wheelchair management services are provided for equipment that is covered under the Medicaid Durable Medical Equipment (DME) program, all policies and procedures applicable to that program must be adhered to by school based providers.)
- **97755** – Assistive technology assessment (e.g., to restore, augment, or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility), direct one-on-one contact by provider, with written report, each 15 minutes. (If assessments are done for equipment that is covered under the Medicaid Durable Medical Equipment (DME) program, all policies and procedures applicable to that program must be adhered to by school based providers.)

School Based Services

Page 22
Services

ATD services are intended to directly assist a beneficiary with a disability in the selection, coordination of acquisition, or use of an ATD. The direct acquisition of medical equipment, such as wheelchairs, etc., is not a covered benefit of the SBS program; this service must be billed under the Medical Supplier program coverage. The direct acquisition of medical equipment is covered under the Medical Supplier Medicaid benefit.

Assistive Technology Device Services include:

- Coordinating and using other therapies, interventions, or services with the ATD.
- Training or technical assistance for the beneficiary or, if appropriate, the beneficiary's parent/guardian.
- Training or technical assistance for professionals providing other education or rehabilitation services to the beneficiary receiving ATD services.
- Evaluating the needs of the beneficiary, including a functional evaluation of the beneficiary. ATD services are intended to directly assist a beneficiary with a disability in the selection, coordination of acquisition, or use of an ATD.
- Selecting, providing for the acquisition of the device, designing, fitting customizing, adapting, applying, retaining or replacing the ATD, including orthotics.
- Wheelchair assessment, fitting, training. If the wheelchair assessment is for equipment billed by a Medical Supplier, all prior authorization and coverage policies and procedures in the Medical Supplier Chapter of this manual must be adhered to by school based providers.

Procedure Codes

The following procedure codes may be used to bill for ATD services:

- **97112** - Neuromuscular re-education of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities.
- **97535** - Self-care/home management training (e.g., activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment), direct one-on-one contact by provider, each 15 minutes.
- **97542** - Wheelchair management (e.g., assessment, fitting, training), each 15 minutes. If wheelchair management services are provided for equipment that is covered under the Medicaid Durable Medical Equipment (DME) program, all policies and procedures applicable to that program must be adhered to by school based providers.
- **97760** - Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(s), lower extremity(s), and/or trunk, each 15 minutes.
- **97761** - Prosthetic training, upper and/or lower extremity(s), each 15 minutes.
### 2.4 SPEECH, LANGUAGE AND HEARING THERAPY (INCLUDES ASSISTIVE TECHNOLOGY DEVICE SERVICES)

#### 2.4.A. SPEECH, LANGUAGE AND HEARING THERAPY

<table>
<thead>
<tr>
<th>Definition</th>
<th>Speech, language and hearing therapy must be a diagnostic or corrective service to teach compensatory skills for deficits that directly result from a medical condition. This service is provided to beneficiaries with a diagnosed speech, language or hearing disorder adversely affecting the functioning of the beneficiary. Speech, language and hearing therapy must require the skills, knowledge and education of a fully licensed speech-language pathologist or audiologist to provide the therapy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prescription</td>
<td>Speech, language and hearing services require an annual referral from a physician. A stamped physician signature is not acceptable.</td>
</tr>
</tbody>
</table>
| Provider Qualifications | Speech, language and hearing services may be reimbursed when provided by:  
  - A fully licensed speech-language pathologist (SLP);  
  - A licensed audiologist in Michigan;  
  - A speech-language pathologist (SLP) and/or audiology candidate (i.e., in his clinical fellowship year or having completed all requirements but has not obtained a license), under the direction of a qualified SLP or audiologist. All documentation must be reviewed and signed by the appropriately licensed SLP or licensed audiologist; or  
  - A limited licensed speech language pathologist, under the direction of a fully licensed SLP or audiologist. All documentation must be reviewed and signed by the appropriately licensed supervising SLP or licensed audiologist. |
| Evaluations for Speech Pathology Services | Evaluations are formalized testing and reports conducted to determine the need for services and recommendation for a course of treatment. They may be completed by a licensed SLP or audiologist. Evaluations include:  
  - The treatment diagnosis and the medical diagnosis, if different from the treatment diagnosis;  
  - Current therapy being provided to the beneficiary in this and other settings;  
  - Medical history as it relates to the current course of therapy;  
  - The beneficiary’s current communication status (functional baseline);  
  - The standardized and other evaluation tools used to establish the baseline and to document progress; and  
  - Evaluation of the needs related to assistive technology device services, including a functional evaluation of the beneficiary. |
Evaluations may also include, but are not limited to:

- **Articulation** - standardized tests that measure receptive and expressive language, mental age, oral motor skills, articulation skills, current diet level (including difficulties with any food consistencies), current means of communication, and a medical diagnosis.

- **Language** - standardized tests that measure receptive and expressive language, mental age, oral motor skills, current and previous means of communication, and medical diagnosis(es).

- **Rhythm** - standardized tests that measure receptive and expressive language, mental age, oral motor skills, and measurable assessment of dysfluency, current means of communication, and a medical diagnosis.

- **Swallowing** - copy of the video fluoroscopy or documentation that objectively addresses the laryngeal and pharyngeal stages, oral motor assessment that measures consistencies that have been attempted and the results, voice quality (i.e., pre- and post-feeding and natural voice), articulation assessment, and a standardized cognitive assessment.

- **Voice** - copy of the physician's medical assessment of the beneficiary's voice mechanism and the medical diagnosis.

### Speech Assessments for Durable Medical Equipment

If an ISD speech pathologist or audiologist performs assessments for DMEPOS that are billed by a Medicaid medical supplier, the clinician must comply with all prior authorization policies and procedures regarding that DMEPOS item. For example, a physician must order the assessment. The clinician must comply with all requirements for the assessments specified in the Medical Supplier Chapter of this manual. For example, the clinician must perform and write his/her own evaluation and may not sign evaluations completed by a medical supplier. Three appropriate economical alternatives must be ruled out for some items. (Refer to the Medical Supplier Chapter of this manual for details.) If the child is also receiving physical therapy, occupational therapy, speech pathology or audiology services in another outpatient setting, it may be more appropriate for the outpatient clinician to perform the assessment. The ISD clinician must coordinate with all clinicians in other settings.

### Services

Speech, language and hearing services include:

- Group therapy provided in a group of two to eight beneficiaries
- Articulation, language, and rhythm
- Swallowing dysfunction and/or oral function for feeding
- Voice therapy
- Speech, language or hearing therapy
- Speech reading/aural rehabilitation
- Esophageal speech training therapy
- Speech defect corrective therapy
- Fitting and testing of hearing aids or other communication devices
### Procedure Codes

The following procedure codes may be used to bill for speech, language and hearing therapy services:

- **92507** - Treatment of speech, language, voice, communication, and/or auditory processing disorder (includes aural rehab); individual.
- **92508** - Therapeutic procedure(s), group (2 or more individuals).
- **92521** - Evaluation of speech fluency (e.g., stuttering, cluttering). This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92522** - Evaluation of speech sound production (e.g., articulation, phonological process, apraxia, dysarthria). This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92523** - Evaluation of speech sound production (e.g., articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (e.g., receptive and expressive language). This code can be used with no modifier or with the HT, TL, TM, and/or 52 modifiers.
- **92524** - Behavioral and qualitative analysis of voice and resonance. This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92550** - Tympanometry and reflex threshold measurements.
- **92551** - Screening test, pure tone, air only.
- **92552** - Pure tone audiometry (threshold); air only. This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92553** - Pure tone audiometry (threshold); air and bone. This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92554** - Speech audiometry threshold.
- **92555** - Speech audiometry threshold; with speech recognition.
- **92557** - Comprehensive audiometry threshold evaluation and speech recognition (92553 and 92556 combined). This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92558** - Evoked otoacoustic emissions, screening (qualitative measurement of distortion product or transient evoked otoacoustic emissions), automated analysis.
- **92567** - Tympanometry (impedance testing). This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92568** - Acoustic reflex testing, threshold.
- **92582** - Conditioning play audiometry. This code can be used with no modifier or with the HT, TL, or TM modifiers.
- **92630** - Auditory rehabilitation; pre-lingual hearing loss.
- **92633** - Auditory rehabilitation; post-lingual hearing loss.

# 2.4.C. Telepractice for Speech, Language and Hearing Services

<table>
<thead>
<tr>
<th>Definition</th>
<th>Telepractice is the use of telecommunications and information technologies for the exchange of encrypted patient data for the provision of speech, language and hearing services. Telepractice must be obtained through real-time interaction between the patient's physical location (patient site) and the provider's physical location (provider site). Services are provided to patients through hardwire or internet connection. It is the expectation that providers, facilitators and staff involved in telepractice are trained in the use of equipment and software prior to servicing patients. Speech, language and hearing services administered by telepractice are subject to the same provisions as services provided to a patient in person.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prescription</td>
<td>Speech, language and hearing services require an annual referral from a physician. A stamped physician signature is not acceptable.</td>
</tr>
</tbody>
</table>
| Provider Qualifications | Speech, language and hearing services may be reimbursed when provided by:  
- A fully licensed speech-language pathologist (SLP);  
- A licensed audiologist in Michigan;  
- A speech-language pathologist (SLP) and/or audiology candidate (i.e., in his clinical fellowship year or having completed all requirements but has not obtained a license) under the direction of a qualified SLP or audiologist. All documentation must be reviewed and signed by the appropriately licensed SLP or licensed audiologist; or  
- A limited licensed speech language pathologist under the direction of a fully licensed SLP or audiologist. All documentation must be reviewed and signed by the appropriately licensed supervising SLP or licensed audiologist. |
| Conditions | Providers must ensure the privacy of the beneficiary and the security of any information shared via telemedicine. The technology used must meet the needs for audio and visual compliance in accordance with current regulations and industry standards. Refer to the General Information for Providers Chapter for complete Health Insurance Portability and Accountability Act (HIPAA) compliance requirements. The patient site may be located within the school, at the patient’s home, or any other established site deemed appropriate by the provider. It must be a room free from distractions so as not to interfere with the telepractice session. A facilitator must be trained in the use of the telepractice technology and physically present at the patient site during the entire telepractice session to assist the patient at the direction of the SLP or audiologist. |
| Billing Instructions | Telepractice services are billed using the same procedure codes as services rendered to a patient who is physically present. In addition to the procedure code, billers use the “GT” modifier to identify services provided by telepractice. |
## 2.5 Psychological, Counseling and Social Work Services

### Definitions
Psychological, counseling and social work services include planning, managing and providing a program of face-to-face services for beneficiaries with diagnosed psychological conditions. Psychological, counseling and social work services must require the skills, knowledge and education of a psychologist, counselor or licensed social worker to provide treatment.

Psychotherapy is the treatment of a mental disorder or behavioral disturbance for which the clinician provides services through definitive therapeutic communication, attempts to alleviate the emotional disturbances, reverses or changes maladaptive patterns of behavior, and encourages personality growth and development. The codes for reporting psychotherapy are divided into two broad categories: Interactive Psychotherapy, and Insight-Oriented, Behavior-Modifying and/or Supportive Psychotherapy.

- Interactive psychotherapy refers to the use of physical aids and nonverbal communication to overcome barriers to therapeutic interaction between the clinician and a beneficiary who has not yet developed, or has lost, either the expressive language communication skills to explain their symptoms and response to treatment, or the receptive communication skills to understand the clinician if they would use ordinary adult language for communication.

- Insight-oriented, behavior-modifying and/or supportive psychotherapy refers to the development of insight or affective understanding, the use of behavior modification techniques, the use of supportive interactions, and the use of cognitive discussion of reality or any combination of the above to provide therapeutic change.

### Provider Qualifications
Psychological, counseling and social work services may be reimbursed when provided by:

- A licensed physician or psychiatrist in Michigan;
- A fully licensed psychologist in Michigan;
- A limited-licensed psychologist under the supervision of a licensed psychologist;
- A temporary limited-licensed psychologist under the supervision of a licensed psychologist;
- A licensed master’s social worker in Michigan;
- A limited licensed master’s social worker under the supervision of a licensed master's social worker;
- A licensed professional counselor in Michigan; or
- A limited licensed counselor under the supervision of a licensed professional counselor.

### Evaluations
Evaluations or assessments include tests, interviews and behavioral evaluations that appraise cognitive, emotional, social functioning and self-concept. These may also include interpretations of information about a beneficiary's behavior and conditions relating to functioning. A qualified psychologist, counselor or licensed social worker must complete them.
Psychological Testing

Psychological testing includes tests, interviews, evaluations and recommendations for treatment. This may also include interpretations of information about a beneficiary's behavior and conditions relating to functioning. A fully licensed psychologist or a limited-licensed psychologist may perform psychological testing. Medicaid covers psychological testing that is reasonable and necessary for diagnosing the beneficiary's condition. Medicaid does not cover the time that a beneficiary spends alone in testing. The beneficiary's clinical record must be signed and dated by the staff that administered the tests, and include the actual tests administered and completed reports. The protocols for testing must be available for review. Psychological testing may be billed per hour with a five-hour maximum per year, and a report must be generated from the results of the tests. In accordance with CPT guidelines, the service includes testing time only; it does not include writing a report. Writing the report is considered a part of the testing process and is a requirement for billing.

The psychological testing report must include all of the following:

- Beneficiary name and birth date;
- Psychological tests administered;
- Summary of testing results;
- Treatment recommendations; and
- Psychologist name and dated signature.

Procedure Codes

The following procedure codes may be used to bill for psychological testing:

- **96101** - Psychological testing (includes psycho-diagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, e.g., MMPI, Rorschach, WAIS), per hour of the psychologist’s or physician’s time, both face-to-face time with the patient, and time interpreting test results and preparing the report. To evaluate intellectual abilities, psychopathology, psychodynamics, risk for mental illness and other factors influencing treatment and diagnosis.

- **96116** - Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), per hour of the psychologist’s or physician’s time, both face-to-face time with the patient, and time interpreting test results and preparing the report.

- **96118** - Neuropsychological testing (e.g., Halstead-Reitan Neurological Battery, Wechsler Memory Scales, and Wisconsin Card Sorting Test), per hour of the psychologist’s time or physician’s time, both face-to-face time with the patient, and time interpreting test results and preparing the report.

The following procedure codes may be used to bill for psychological, counseling and social work services. Only one individual psychotherapy procedure code (20 to 30 minutes or 45 to 50 minutes) may be billed per day:

- **90785** - Interactive complexity (List separately in addition to the code for primary procedure).

- **90832** - Psychotherapy, 30 minutes with patient and/or family member.

- **90834** - Psychotherapy, 45 minutes with patient and/or family member.

- **90846** - Family psychotherapy (conjoint psychotherapy), without the patient present.
- **90847** – Family psychotherapy (conjoint psychotherapy), with patient present.
- **90853** – Group psychotherapy (other than a multiple-family group).
- **H0004** – Behavioral health counseling and therapy, per 15 minutes.
- **H0031** – Mental health assessment, by non-physician (e.g., psychologist, counselor, licensed social worker). This code can be used by itself or with the HT, TL, or TM modifiers.

### Crisis Intervention

Crisis intervention services are unscheduled activities performed for the purpose of resolving an immediate crisis situation. Activities include crisis response, assessment, referral and direct therapy. Since these services are unscheduled activities, they are not listed in the beneficiary’s IEP/IFSP treatment plan.

Crisis intervention must be billed using the following procedure code:
- **S9484** – Crisis intervention mental health services, per hour.

### 2.6 DEVELOPMENTAL TESTING

#### Definition

Developmental testing is medically related testing (not performed for educational purposes) provided to determine if motor, speech, language and psychological problems exist or to detect the presence of any developmental delays. Testing is accomplished by the combination of several testing procedures and includes the evaluation of the beneficiary’s history and observation. Whenever possible and when age-appropriate, standardized objective measurements are to be used (e.g., Denver II) for children under the age of six. Administering the tests must generate material that is formulated into a report. Developmental testing done for educational purposes cannot be billed to Medicaid.

#### Documentation

The developmental testing report must include all of the following:
- Beneficiary name and birth date;
- Tests administered;
- Summary of testing results;
- Treatment recommendations; and
- The dated signature, address and phone number of the person administering the tests.

#### Provider Qualifications

Developmental testing services may be reimbursed when provided by the following qualified staff in accordance with their professional credentials:
- A fully-licensed psychologist (Doctoral level) in the State of Michigan;
- A limited-licensed psychologist (Doctoral level) under the supervision of a licensed psychologist;
- A licensed master’s social worker in Michigan;
- A limited licensed master’s social worker under the supervision of a licensed master’s social worker; or
- A licensed physician or psychiatrist in Michigan.
### Procedure Codes

The following codes may be used to bill for developmental testing:

- **96110** - Developmental testing; limited (e.g., Developmental Screening Test II, Early Language Milestone Screen), with interpretation and report.
- **96111** - Developmental testing; extended (includes assessment of motor, language, social, adaptive and/or cognitive functioning by standardized developmental instruments), with interpretation and report.
- **96127** - Brief emotional/behavioral assessment (e.g., depression inventory, attention-deficit/hyperactivity disorder (ADHD) scale), with scoring and documentation, per standardized instrument.

### 2.7 Nursing Services

#### Definition

Nursing services are professional services relevant to the medical needs of the beneficiary provided through direct intervention. Direct service interventions must be medically based services that are within the scope of the professional practice of the Registered Nurse (RN) and Licensed Practical Nurse (LPN), provided during a face-to-face encounter, and provided on a one-to-one basis.

Services include:

- Catheterizations or Catheter care
- Maintenance of tracheotomies
- Medication administration
- Oxygen administration
- Tube feeding
- Suctioning
- Ventilator care

Services considered observation or stand-by in nature are not covered.

LPN services can only be billed if performed under the supervision of an RN or physician.

#### Prescription

Direct service interventions require a physician's written order when the initial need for services is determined. Direct service interventions must be reviewed and revised annually or as medically necessary by the beneficiary's attending physician. The nurse is responsible for notifying the attending physician of any change in the beneficiary's condition which may result in a change or modification to the care plan.

#### Provider Qualifications

Nursing services may be reimbursed when provided by:

- A licensed Registered Nurse (RN) in Michigan; or
- A Licensed Practical Nurse (LPN) in Michigan.
Evaluations
A RN must complete the evaluations/assessments and prepare a nursing care plan. An evaluation/assessment may be performed when a change in the beneficiary’s medical condition occurs. LPNs cannot bill for evaluations/assessments.

Procedure Codes
To bill for nursing services, use procedure codes:
- **T1001** – Nursing assessment/evaluation. To be billed by the RN only. This code can be used by itself or with the HT, TL, or TM modifiers.
- **T1002** – RN services, up to 15 minutes
- **T1003** – LPN/LVN services, up to 15 minutes

### 2.8 Physician and Psychiatri st Services

**Definition**
Physician and psychiatrist services are services provided with the intent to diagnose, identify or determine the nature and extent of a beneficiary’s medical or other health-related condition. Physician/psychiatrist services include:
- Evaluation and consultation with providers of covered services for diagnostic and prescriptive services; includes participation in multi-disciplinary team assessment.
- Record review for diagnostic and prescriptive services.

Only the services provided by a physician or psychiatrist (MD or DO) through SBS may be billed and reimbursed through the enrolled ISD.

Other physician or psychiatrist services, including those which may be delivered through other Medicaid-enrolled providers, are to be billed separately and may not be billed through the enrolled ISD.

**Provider Qualifications**
A licensed physician or psychiatrist (MD or DO) in Michigan.

**Procedure Codes**
The procedure codes listed below may be used to bill for physician or psychiatrist services. Procedure codes 99367 and G9008 will not be reimbursed for the same date of service.

If a physician order/referral is written as a result of a physician medical conference, the order/referral is considered to be a part of that service and is not separately reimbursable.

- **99367** – Medical team conference with interdisciplinary team of health professionals, patient and/or family not present, 30 minutes or more; participation by physician. This code can be used by itself, or with the HT, TL, or TM modifiers.
- **G9008** – Coordinated care fee, physician coordinated care oversight services. (This code is to be used for billing the physician record review.)
2.9 PERSONAL CARE SERVICES

Personal Care Services are a range of human assistance services provided to persons with disabilities and chronic conditions which enables them to accomplish tasks that they would normally do for themselves if they did not have a disability. Assistance may be in the form of hands-on assistance or cueing so that the person performs the task by him/herself.

Personal Care Services may be provided when:
- The service is medically necessary.

Personal Care Services are not covered if they are:
- Provided by a family member. A family member is described by the Centers for Medicare & Medicaid Services (CMS) to be "legally responsible relatives"; thus, spouses of beneficiaries and parents of minor beneficiaries (including stepparents who are legally responsible for minor children).
- Not documented in the IEP/IFSP.
- Educational in focus, such as tutoring, preparation of educational materials or Braille interpretation.
- Performed as a group service; however, one or more students may be served one-at-a-time sequentially.

Personal Care Services may include, but are not limited to, assisting with the following:
- Eating/feeding
- Respiratory assistance
- Toileting
- Grooming
- Dressing
- Transferring
- Ambulation
- Personal hygiene
- Mobility/Positioning
- Meal preparation
- Skin care
- Bathing
- Maintaining continence
- Assistance with self-administered medications
- Redirection and intervention for behavior
- Health related functions through hands-on assistance, supervision and cueing
Personal Care Paraprofessional Provider Qualifications

The personal care paraprofessional personnel are employed in the Special Education Program and shall be qualified under the requirements established by their respective ISD plan. Providers must be trained in the skills needed to perform covered services, and must be under the direction of a qualified professional as designated in the IEP/IFSP. Paraprofessional personnel include:

- Teacher Aides
- Health Care Aides
- Instructional Aides
- Bilingual Aides
- Program Assistants
- Trainable Aides

Prescription

In accordance with 42 CFR 440.167, authorization for Personal Care Services (PCS) may be done by a physician or "other licensed practitioner" operating within the scope of their practice. The State definition of "other licensed practitioner" consists of Registered Nurse (RN), Licensed Occupational Therapist, Licensed Physical Therapist (PT), Master of Social Work (MSW), or fully licensed Speech Language Pathologist (SLP). It is expected that personal care services will be authorized by the appropriate practitioner.

Documentation

Personal care services must be medically necessary and the need for the service must be documented in the student's IEP/IFSP. Each child's school clinical record must contain a completed, signed and dated monthly activity checklist. Service categories (i.e., toileting, feeding, transferring, etc.), times and frequencies must be documented either in the IEP/IFSP, in an attached document, or in the child's treatment authorization.

Procedure Codes

The following procedure code may be used to bill for personal care services.

- T1020 – Personal care services, per diem; not for an inpatient or resident of a hospital, nursing facility, ICF/MR or IMD; part of the individualized plan of treatment (code may not be used to identify services provided by home health aide or certified nurse assistant). Note: ICF/MR is referred to as ICF-IID throughout the manual.

2.10 Targeted Case Management Services

Definition

Targeted case management (TCM) services are services furnished to assist individuals in gaining access to needed medical, social, educational or other services. Targeted case management services include the following assistance:

- A comprehensive assessment and periodic reassessment of an individual to determine the need for medical, social, educational or other services. These assessment activities include:
  - Taking client history;
  - Identifying the individual's needs and completing related documentation; and
Gathering information from other sources, such as family members, medical providers, social workers, and educators (if necessary), to form a complete assessment of the individual.

- Development (and periodic revision) of a specific care plan that:
  - Is based on the information collected through the assessment;
  - Specifies the goals and actions to address the medical, social, educational or other services needed by the individual;
  - Includes activities such as ensuring the active participation of the eligible individual, and working with the individual (or the individual’s authorized health care decision maker) and others to develop those goals; and
  - Identifies a course of action to respond to the assessed needs of the eligible individual.

- Referral and related activities:
  - To help an eligible individual obtain needed services, including activities that help link an individual with medical, social, educational providers or other programs and services that are capable of providing needed services, such as making referrals to providers for needed services and scheduling appointments for the individual;
  - Monitoring and follow-up activities;
  - Activities and contacts that are necessary to ensure the care plan is implemented and adequately addresses the individual’s needs, and which may be with the individual, family members, providers, or other entities or individuals, and conducted as frequently as necessary, including at least one annual monitoring, to determine whether the following conditions are met:
    - Services are being furnished in accordance with the individual’s care plan;
    - Services in the care plan are adequate.

If there are changes in the needs or status of the individual, necessary adjustments are made to the care plan and service arrangements.

TCM services may be reimbursed when provided by a Designated Case Manager.

Providers must maintain case records that document, for all individuals receiving case management, the following: the name of the individual, the dates of the case management services, the person providing the case management services, and the nature, content, and units of case management services received. The case record must also reflect whether the goals specified in the care plan have been achieved, whether the individual has declined services in the care plan, the need for and occurrences of coordination with other case managers, the timeline for obtaining needed services, and a timeline for re-evaluation of the plan.
<table>
<thead>
<tr>
<th>Provider Qualifications</th>
<th>Designated Case Manager Services</th>
</tr>
</thead>
</table>
| The Designated Case Manager is the person responsible for the implementation of the plan of care/treatment plan. The Designated Case Manager must be an individual who meets one of the following criteria:  
  - A licensed RN in Michigan;  
  - A bachelor's degree with a major in a specific special education area;  
  - Has earned credit in coursework equivalent to that required for a major in a specific special education area; or  
  - Has a minimum of three years' personal experience in the direct care of an individual with special needs.  
In addition to meeting at least one of the above, the Designated Case Manager must also demonstrate knowledge and understanding of all of the following:  
  - Services for infants and toddlers who are eligible under the IDEA law as appropriate;  
  - Part C of the IDEA law and the associated regulations;  
  - The nature and scope of services covered under IDEA, as well as systems of payments for services and other pertinent information;  
  - Provisions of direct care services to individuals with special needs; and  
  - Provisions of culturally competent services within the community being served.  
| Targeted Case Management services include:  
  - Assuring that standard re-examination and follow-up of the beneficiary are conducted on a periodic basis to ensure that the beneficiary receives needed diagnosis and treatment;  
  - Assisting families in identifying and choosing the most appropriate providers of care and services, scheduling appointments, and helping families to maintain contact with providers;  
  - Follow-up to ensure that the beneficiary receives needed diagnostic and treatment services;  
  - Assuring that case records are maintained and indicate all contacts with, or on behalf of, a beneficiary in the same manner as other covered services;  
  - Coordinating school based services and treatment with parents and the child;  
  - Monitoring and recommending a plan of action;  
  - Coordinating performance of evaluations, assessments and other services that the beneficiary needs;  
  - Facilitating and participating in the development, review, modification and evaluation of the multi-disciplinary team treatment plan;  
  - Activities that support linking and coordinating needed health services for the beneficiary;  
  - Providing a summary of provider, parent and student health and behavioral consultation; and  
  - Coordinating with staff/health professionals to establish continuum of health and behavioral services in the school setting. |
## 2.11 Special Education Transportation

### Definition

Special education specialized transportation services include transport to and from the beneficiary's pick-up and drop-off site where Medicaid services are provided. It includes no more than two one-way trips on a date of service.

The need for special education transportation must be specified in the beneficiary's IEP/IFSP treatment plan. Medicaid may reimburse for special education transportation when a beneficiary receives a Medicaid-covered service on the same day.

Medicaid does not reimburse for transportation provided in a regular or general education school bus. There is no additional payment for an attendant.

### Documentation

Federal requirements include documentation for transportation service claims that must be maintained for purposes of an audit trail, such as an ongoing trip log maintained by the provider of the special education transportation. Ridership must be documented for each one-way trip.

### Procedure Codes

Use the following procedure codes when billing for Special Education Transportation. Bill the applicable code for each one-way trip:

- **A0120** – Non-emergency transportation (one-way): mini-bus, mountain area transports, or other transportation systems.
- **A0130** – Non-emergency transportation (one-way): wheelchair van.
### Taxi and Private Vehicle Transportation

For a taxi or family vehicle transportation expense to be reimbursed, the following documentation must be on file at the local education agency (LEA) or intermediate school district (ISD):

- Specialized transportation must be included in the Individualized Education Program (IEP).
- A Medicaid covered medical service must be provided on the same day as the transportation.
- Dates and times of each trip must be listed on the LEA’s or ISD’s trip log.
- Documentation from the beneficiary’s physician or a school provider treating the student, stating the reason taxi or family transportation is required must be retained in the student’s file.
- For transportation by taxi, an additional statement justifying the need for a taxi and the reason other less costly means of transportation cannot be used must be retained in the student’s file.
- For ongoing transportation needs, documentation is only required once per student per school year.
- For one-time or occasional use transportation, documentation is required for each trip, or trip period per beneficiary.
- The total number of trips claimed for taxi and family transportation must be included in the Special Education trip count on the Medicaid Allowable Expenditure Report (MAER).

Taxi and family vehicle cost reimbursement will be retroactive to July 1, 2012 if the proper documentation has been retained, and a claim for the trip has been approved through the Community Health Automated Medicaid Processing System (CHAMPS). Claims must be filed within one year from the date of service according to Medicaid timely filing requirements.

Transportation by stretcher car is not covered. The term "stretcher car" is defined as a vehicle capable of transporting a patient (student) in a prone or supine position (e.g., Ambucab).
SECTION 3 – QUALITY ASSURANCE AND COORDINATION OF SERVICES

3.1 QUALITY ASSURANCE

SBS providers must have a written quality assurance plan on file. SBS costs will be reviewed/audited by MDHHS for determination of medical necessity and to verify that all services were billed and paid appropriately. The purpose of the quality assurance plan is to establish and maintain a process for monitoring and evaluating the quality and documentation of covered services, and the impact of Medicaid enrollment on the school environment.

An acceptable quality assurance plan must address each of the following quality assurance standards:

- Covered services are medically necessary, as determined and documented through appropriate and objective testing, evaluation and diagnosis.
- The IEP/IFSP treatment plan identifies which covered services are to be provided and the service frequency, duration, goals and objectives.
- A monitoring program exists to ensure that services are appropriate, effective and delivered in a cost effective manner consistent with the reduction of physical or mental disabilities and assisting the beneficiary to benefit from special education.
- Billings are reviewed for accuracy.
- Staff qualifications meet current license, certification and program requirements.
- Established coordination and collaboration exists to develop plans of care with all other providers, (i.e., Public Health, MDHHS, Community Mental Health Services Programs (CMHSPs), Medicaid Health Plans (MHPs), Hearing Centers, Outpatient Hospitals, etc.).
- Parent/guardian and beneficiary participation exists outside of the IEP/IFSP team process in evaluating the impact of the SBS program on the educational setting, service quality and outcomes.

3.2 SERVICE COORDINATION AND COLLABORATION

Children with special needs have access to services available in both outpatient and school-based treatment settings. If treatment is provided in both settings, the goals and purpose for the two must be distinct. School based services are provided to assist a child with a disability to benefit from special education. Outpatient services are provided to optimize the child’s functional performance in relation to needs in the home or community setting and must not duplicate those provided in the school setting. Collaboration between the school and the community providers is mandated to coordinate treatment and to prevent duplication of services. This collaboration may take the form of phone calls, written communication logs, or participation in team meetings such as the IEP/IFSP meeting.

3.3 ISD RESPONSIBILITIES

Each ISD must establish an implementation plan that includes explicit quality control review mechanisms to ensure full staff training and compliance, accuracy and completeness of the RMTS sample frame (designated employees), adherence to MDHHS-published methodology, editing of all moments for completeness and consistency, and accurate financial and staffing reports. Claiming entities must also fully cooperate with any review requested by the U.S. Department of Health & Human Services (HHS),
maintaining all necessary records for a minimum of seven (7) years after submission of each quarterly claim.

3.3.A. SANCTIONS

It is the intent of the State to pursue, when necessary, remedial action or implement a Corrective Plan if the ISDs or their vendors are not in compliance with Medicaid policy and procedures. If these actions are not successful, a payment freeze will be implemented and sanctions put in place until the matter is resolved. ISDs are responsible for the actions of their vendors.

The following are examples of causes for sanctions. The list is not all-inclusive.

- Repeated errors in completing the RMTS forms or filing of the claims.
- Providing insufficient data or incomplete reports to the State Contractor.
- Failure to use the claims development software.
- Failure to submit requested information, reports, or data to the State Contractor, CMS, MDHHS, MDE, or failure to cooperate with representatives of these agencies during site visits, reviews or audits.
- Failure to comply with the federal mandate to submit procedure-specific claims through the Community Health Automated Medicaid Processing System (CHAMPS).
SECTION 4 – PROVIDER ENROLLMENT

4.1 ENROLLMENT

The 56 Michigan Intermediate School Districts (ISDs), Detroit Public Schools, and Michigan School for the Deaf are the only providers eligible to bill Medicaid for School Based Services. Providers must be enrolled and/or revalidated via the CHAMPS Provider Enrollment subsystem. Any applications or updates must be made through the CHAMPS system.

4.2 CERTIFICATION OF QUALIFIED STAFF

The Michigan Department of Education (MDE) must provide MDHHS with documentation that enrolled ISDs meet the regulatory requirements set forth for all staff providing services in the school setting.

Enrollment as a provider is predicated on certification to MDE that the educational and experiential requirements and credentials of all staff (i.e., licensure, certification, registration, etc.) who may be performing claimable activities have been met and are current. The MDE will assist any school district in this certification process and verify the status of its certification in writing, along with recommendations, with a copy sent to MDHHS.

4.3 MEDICAID ELIGIBILITY RATE

Michigan’s RMTS activity codes are designed to reflect the actual direct medical services activities that occur in a school on any given day. Because these activities and services are provided for students who are both Medicaid and non-Medicaid eligible, it is necessary to develop and apply a formula that properly allocates which students are being supported and what activities and services are being provided. This is referred to as the "IEP Medicaid Eligibility Rate (MER)" for the direct medical services program.

IEP MER is determined by calculating the ratio of Medicaid eligible recipients with health-related services indicated on their IEP/IFSPs to the total number of special education population with health-related services indicated on their IEP/IFSPs.
SECTION 5 – FINANCIAL DATA REQUIREMENTS AND UNALLOWABLE COSTS

5.1 FINANCIAL DATA

The financial data reported for the Direct Medical Services (salaries, benefits, supplies, etc.) must be based on actual detailed expenditure reports obtained directly from the participating ISD's financial accounting system. The financial accounting system data is applied using generally accepted governmental accounting standards and principles or applicable administrative rules. The expenditures accumulated for calculating the Direct Medical Services allowable costs are to include actual non-federal expenditures incurred during the claiming period, except for the summer quarter. These allowable expenditures include such things as salaries, wages, fringe benefits and medically related supplies, purchased services and materials.

5.2 UNALLOWABLE COSTS

Providers are not allowed to report any costs that are federal funds, State flow-through funds, or non-federal funds that have been committed as local match for other federal or State funds or programs.

Claims for approved Medicaid School Based Service functions may not include expenditures of:

- Federal funds received by the ISD/LEA directly
- Federal funds that have been passed through a State or local agency
- Non-Federal funds that have been committed as local match for other Federal or State funds or programs

Funds received by an ISD for school based direct medical services are not Federal funds. They are reimbursement for prior expenditures and become, upon receipt, local funds.
SECTION 6 – SCHOOL BASED SERVICES REIMBURSEMENT

6.1 METHOD OF REIMBURSEMENT FOR DIRECT MEDICAL SERVICES, PERSONAL CARE SERVICES AND TARGETED CASE MANAGEMENT

Payment for Michigan’s school based services program is a cost-based, provider specific, annually reconciled and cost settled reimbursement methodology.

The Centers for Medicare & Medicaid Services (CMS) also requires Michigan SBS providers to submit procedure specific direct medical services claims for all Medicaid allowable services. These claims do not generate a payment but are required by CMS in order to monitor the services provided, the eligibility of the recipient, and provide an audit trail. Interim monthly payments are tied to the submission of the direct medical services claims. If claim volume decreases significantly or drops to zero in any two consecutive months, all interim payments will be held until the provider is contacted and the issue resolved. MDHHS will monitor provider claim volume to make sure that this mandate is followed.

Claims are submitted and processed through the Community Health Automated Medicaid Processing System (CHAMPS); however, the procedure code fee screens are set to pay zero. SBS providers receive their cash flow from the interim monthly payment process described below.

The interim monthly payments are based on prior year actual costs and reconciled on an annual basis to the current year costs. Cost reporting and reconciliation are based on the school fiscal year which is July 1 through June 30 of each year.

The reimbursement process for the direct medical services is comprised of the following parts:

- The SBS direct medical services procedure code specific billing process;
- The random moment time study (RMTS) component;
- The interim payment process; and,
- The cost reconciliation and cost settlement process.

6.1.A. DIRECT MEDICAL SERVICES PROCEDURE CODE SPECIFIC BILLING

Providers must continue to submit procedure specific claims in addition to the expenditure reports. The procedure specific process is described in the Covered Services Section of this chapter.

Claim documentation must be sufficient to identify the patient clearly, justify the diagnosis and treatment, and document the results accurately. Documentation must be adequate enough to demonstrate that the service was provided and that the service followed the “approved plan of treatment“ (for school-based services, the service must be identified in the child’s IEP/IFSP).

The ISD may either purchase software for the claims submission function or it may utilize the services of a billing agent. The cost of this process is the responsibility of the ISD.
6.1.B. RANDOM MOMENT TIME STUDY

For the Random Moment Time Study, all ISDs will be required to utilize the services of the State Contractor who will conduct the statewide time studies.

The quarterly RMTS sampling results are produced by the State Contractor who converts them to percentages. This percentage is applied to program costs to determine reimbursement and entered onto the first sheet of the claims development software Workbook. Once complete, the workbooks are forwarded to MDHHS where they are uploaded into the cost settlement program.

Costs are reported for direct medical services and specialized transportation services on the Medicaid Allowable Expenditure Report (MAER) and collected via financial worksheets for Personal Care Services and Targeted Case Management.

Electronic Data Systems (EDS) combines all cost information and the RMTS results, the indirect cost rate, and the Medicaid eligibility rate to calculate the total allowable costs. The MDHHS Hospital and Health Plan Reimbursement section performs the reconciliation and cost settlement process.

The ISD and/or State Contractor must comply with all conditions set forth by MDHHS as SBS policy.

The cost for the State Contractor is charged back to providers based on the State Contractor's projected cost per ISD (after federal match).

For detailed description and instructions regarding the Random Moment Time Study, refer to the School Based Services Random Moment Time Study chapter of this manual.

Summer Quarter Process

The summer quarter months are July, August and September. There is a break period between the end of one regular school year and the beginning of the next regular school year during which only a few staff are working. The majority of school staff work during the school year and do not work for part of the summer quarter (9-month staff). However, there are some 9-month staff that opt to receive their pay over a 12-month period. Therefore, different factors must be applied to the summer formula in order to accurately reflect the activities that are performed by the staff.

The summer quarter will be divided into two parts. The first part of the quarter will extend from July 1 to the date the students return to school. The second part of the quarter will be from the date the students return to school through September 30.

The RMTS will still be performed in the summer quarter, but will take place only after the staff start back to work and will only be applied to the costs for the second part of the summer quarter. To accurately reflect the work efforts being performed when all staff have returned to work, the RMTS will be performed during a shorter time period.
6.1.C. INTERIM PAYMENT PROCESS

Interim payments are calculated based on an estimated monthly cost formula. The monthly cost formula utilizes prior year costs plus any inflation or program changes to calculate a monthly interim reimbursement amount. After the final cost reports have been reviewed and reported to MDHHS, reconciliation will be performed and settlements will be made to make the providers whole.

Interim payments are issued on the first pay cycle of each month based on prior year costs.

To justify an increase in the interim payment, providers must submit written documentation of significant changes in coverage, service utilization or staff costs.

Providers may request an increase or decrease in their interim payment amount at any time throughout the year. Instructions and contact information will be included with the MAER. Any written inquiries should be addressed to the MDHHS Hospital and Clinic Reimbursement Division (HCRD). (Refer to the Directory Appendix for contact information.)

All payments and adjustments are issued by the MDHHS Hospital and Clinic Reimbursement Division. Once the payments are issued to the SBS providers (ISDs), how the interim payment revenue is distributed to the respective LEAs and how the initial and final settlements are handled is up to the discretion of the ISD.

6.1.D. COST RECONCILIATION AND SETTLEMENT

Allowable cost will be based on the following components:

- Costs from the MAER
- Targeted Case Management and Personal Care Services Financial Worksheets
- MDE Indirect Cost Rate
- Random Moment Time Study Percentage
- Health Related IEP Medicaid Eligibility Rate (IEP MER)
- Federal Medical Assistance Percentage (FMAP)

\[
\text{Allowable costs} \times \text{Indirect Cost Rate} \times \text{Annual average \% time claimable to Medicaid from the time studies} \times \text{Discounted by the Medicaid eligibility percentage} \times \% \text{Federal Medical Assistance Percentage (FMAP)} = \text{Medicaid reimbursement amount}
\]

The Medicaid Allowable Expenditure Report (MAER) (modeled after the MDE SE-4096 cost report) is utilized to collect allowable costs for the medical professional staff. Costs for the staff providing targeted case management services and personal care services
that are not included in the direct medical costs are obtained from the participating ISD's financial accounting system via financial worksheets sent out by the State Contractor.

To report direct service-related costs, providers will utilize the Medicaid Allowable Expenditure Report. This cost report template may be obtained from the School Based Services Provider Specific webpage. (Refer to the Director Appendix for website information.) An Excel printable version of the cost report is also available on the website for those providers in need of a paper version. Cost reports from the Local Educational Agencies will be submitted to their Intermediate School District for summation utilizing the Michigan Medicaid Forms (MMF) summary software (available to providers via the Data Exchange Gateway). Providers must register and have access to the secure Single Sign On (SSO) in order to utilize the MMF summary software. SSO registration instructions are also available on the School Based Services Provider Specific webpage.

The filed cost data is used to calculate an initial settlement within 90 days after the receipt of the initial cost report data. The initial settlement may result in either an over or under adjustment to the provider interim payment.

Within six months after the close of the school fiscal year, the School Based Services providers will review, certify, and finalize the MAER and transmit the report to the MDHHS Medical Services Administration for reconciliation. The cost certification form (CMS-10231; Certification of Public Expenditures) must be signed and on file with MDHHS before a final settlement will be processed. The final settlement process will begin within 12-18 months after the close of the school fiscal year. Settlements may take several months for completion. (Refer to the Forms Appendix for a copy of the CMS-10231.)

ISDs/LEAs may submit revisions to the MAER until the final settlements are processed. Instructions for completing revisions are attached to the MAER.

6.2 METHOD OF REIMBURSEMENT FOR SPECIALIZED TRANSPORTATION

6.2.A. REIMBURSEMENT

Specialized transportation costs reported on the Michigan Department of Education Transportation Expenditure Report (form SE-4094) are only the costs associated with the special education buses, taxis or private vehicles used for the specific purpose of transporting only special education children. This report does not include any federal dollars.

Medicaid-allowable specialized transportation costs include the following costs from the SE-4094:

- Salaries [Sec. 52 & Sec. 53a]
  - Bus Drivers
  - Aides
  - Employee Benefits (Bus Drivers and Aides only)
- Purchased Services – Staff (Bus Drivers and Aides only)
- Purchased Services – Vehicle Related Costs [Sec. 52 & Sec. 53a]
  - Pupil Transportation by Carrier
  - Pupil Transportation by Carrier (b/y)
  - Family Vehicle K Cost
  - Contracted Taxis
  - Pupil Transportation Fleet Insurance
  - Contracted/Leased Buses
- Supplies [Sec. 52 & Sec. 53a]
  - Gasoline/Fuel
  - Oil/Grease
  - Tires/Batteries
  - Other Expense/Adjustments, only the costs associated with adjustments to allowable costs
  - Bus Amortization

For reimbursement purposes, Bus Aides are defined as aides who ride on the bus providing care to those students being transported, assisting with the specific health concerns documented in the student’s Individualized Educational Program (IEP).

### 6.2.B. SPECIALIZED TRANSPORTATION RECONCILIATION AND SETTLEMENT

On an annual basis, the cost per trip is calculated by dividing the total Medicaid allowable costs (including indirect cost) by the total ISD-reported special education (specialized) one-way transportation trips. The cost per trip is multiplied by the quantity of Medicaid "allowable" one-way trips gleaned from CHAMPS to arrive at the Medicaid allowable cost.

An “allowable” one-way trip is one that is provided to a Medicaid beneficiary and fulfills all of the following requirements:

- Documentation of ridership is on file;
- The need for the specialized transportation service is identified in the Individualized Education Program (IEP)/Individualized Family Service Program (IFSP); and
- A Medicaid-covered service (other than transportation) is provided on the same date of service. The Medicaid covered service must also be documented in the IEP/IFSP.

The cost settlement is accomplished by comparing the interim monthly payment totals to the annual Medicaid allowable specialized transportation cost. The cost settlement amount for the specialized transportation is combined with the cost settlement amounts for the Direct Medical Services, Targeted Case Management, and Personal Care Services; any over/under adjustments are processed as one transaction.
SECTION 7 – INDIRECT COST RATE (ICR)

7.1 INDIRECT COSTS

The ISD/LEA unrestricted indirect cost rate is calculated using the Federal Office of Management and Budget Circular A-87 "Indirect Cost Allocation Principles." The methodology used to determine the indirect cost rate specific to each district is approved by the Federal cognizant agency. The indirect cost rates are updated annually by the Michigan Department of Education.
SECTION 8 – COST CERTIFICATION

8.1 COST CERTIFICATION

Once all cost reports and financial worksheets have been received by MDHHS, the summary worksheet of the Medicaid Allowable Expenditure Report (MAER) will be completed. The summary report will combine the allowable cost data submitted by the ISDs for each LEA for all four cost pools (Direct Medical, Specialized Transportation, Personal Care and Targeted Case Management). The total will be entered into the cost certification form as the "Total Computable Expenditure". The ISD is responsible for annually certifying that the total amount of expenditures for covered services has been expended and that none of the expenditures have been used as match for other programs or services. MDHHS will be utilizing the CMS-10231, "Certification of Public Expenditures (CPE)" form, for this purpose. (Refer to the Forms Appendix.)
SECTION 9 – COST ALLOCATION FACTORS

9.1 FEDERAL MEDICAL ASSISTANCE PERCENTAGE RATE

Federal regulations allow for payments to States on the basis of a Federal medical assistance percentage for part of their expenditures for services under an approved State plan. The formula for calculating this annual percentage is described in section 1905(b) of the Social Security Act. Under the formula, if a State’s per capita income is equal to the national average per capita income, the Federal share is 55%. If a State’s per capita income exceeds the national average, the Federal share is lower, with a statutory minimum of 50%. If a State’s per capita income is lower than the national average, the Federal share is increased, with a statutory maximum of 83%.

9.2 DISCOUNTED HEALTH-RELATED MEDICAID ELIGIBILITY RATE (MER)

The discounted health-related Medicaid Eligibility Rate (MER) percentage is determined by the percentage of the special education student population that is Medicaid eligible in each ISD with a health-related support service code indicated on their December 1 Student Count Report. Support service codes are gleaned from Fields 43 and 57 of the December 1 Student Count Report. Only those codes that relate to covered school based health services are to be utilized.

<table>
<thead>
<tr>
<th>Field 43</th>
<th>290, 310, 320, 360, 370, 400, 450, 460, 470</th>
</tr>
</thead>
<tbody>
<tr>
<td>Field 57</td>
<td>801, 804, 805, 807, 808, 809, 812, 814, 816, 818</td>
</tr>
</tbody>
</table>

MDHHS receives the file of special education children with health-related support services indicated on their IEPs and matches the names and birthdates of those with health-related support services against the Medicaid eligibility file to identify the percentage that are Medicaid eligible. The eligibility rate is determined once each year utilizing the December 1 Student Count Report. The calculation for the eligibility rate is as follows:

\[
\text{Medicaid special education students with a health-related support service in their IEP} / \text{Total special education students with a health-related support service in their IEP}
\]

9.3 ALLOCATION OF SALARIES AND BENEFITS OF PERSONNEL PROVIDING DIRECT CARE SERVICES

Actual expenditures for salaries and benefits of all personnel are to be obtained from each participating ISD’s financial accounting system. Expenditures related to the performance of approved Medicaid contracted service providers (e.g., occupational therapists, physical therapists) who also provide direct care services must also be obtained from each participating ISD’s financial accounting system.
SECTION 10 - DOCUMENTATION

10.1 DIRECT MEDICAL SERVICES DOCUMENTATION

For covered services, the school clinical record must include all of the following:

- Beneficiary name and birth date;
- Date of service/treatment;
- Type (modality) of service/treatment;
- The response to the service/treatment; and
- The name and title of the person providing the service/treatment and a dated signature.

For services that have time-specific procedure codes, the provider must indicate the actual begin and end times of the service in the school clinical record. The record must indicate the specific findings or results of the diagnostic or therapeutic procedures. The student’s school clinical record should include documentation of the implementation and coordination of services for the special education student.

Progress notes must be written monthly, or more frequently as appropriate, and must include:

- Evaluation of progress;
- Changes in medical or mental status; and
- Changes in treatment with rationale for change.

(Refer to the General Information for Providers Chapter of this manual for additional information regarding clinical record requirements.)

10.2 RMTS DOCUMENTATION

Each participating LEA must maintain a separate audit file for each quarter billed. The following minimum documentation is required:

- Financial data used to establish cost pools and factors.
- A copy of the quarterly sample results produced by the State Contractor.
- A copy of the warrant, remittance advice or Electronic Funds Transfer (EFT) documentation verifying that payment from MDHHS was received.

ISDs/LEAs must cooperate fully with any review requested by MDHHS and CMS, and maintain all necessary records for a minimum of seven (7) years.

Any changes in Federal regulations related to claims for administrative expenditures are incorporated by reference into this document.
SECTION 11 – AUDIT AND RECOVERY PROCEDURES

11.1 DIRECT SERVICE/TRANSPORTATION PROGRAM AUDIT ACTIVITIES TO BE PERFORMED BY MDHHS OFFICE OF AUDIT STAFF

MDHHS audit review of selected ISD/DPS and MSD cost reports for the Direct Service/Transportation Program may include the following activities:

- Verification that the Medicaid Allowable Expenditure Report (MAER) accurately reports the allowable costs incurred for the appropriate period.
- Verification that the salaries listed for employees/positions included in the RMTS staff pool match the payroll records for the same period as the time study.
- A review of the salaries of employees who changed positions during the time study period.
- If a replacement was hired/transferred, the auditor will verify that only the salary earned while working in a position on the MAER staff pool list was reported, and that salaries for both the original and replacement employees were not duplicated on the report for the same time period.
- Confirmation that none of the direct costs reported were also claimed as an indirect cost, that the proper indirect cost rate was used, and the rate was applied only to costs in the base. The employees in non-standard job categories are the most likely to be considered indirect type employees; therefore, documentation will be reviewed for these individuals.
- Verification that no federal funds were claimed on MAER cost reports and that MAER costs were not accepted for cost-sharing.
- A standard review of other areas, such as confirmation that reported costs were actually paid, support documentation was maintained as required, and costs were properly charged to the correct accounts should also be expected.
- Any other area deemed necessary.

The ISD/DPS/MSD should be prepared to direct the auditor to any document used to support and identify the reported MAER costs.

11.2 STUDENT CLAIMS AUDIT ACTIVITIES TO BE PERFORMED BY MDHHS OFFICE OF AUDIT STAFF

MDHHS audit review of selected ISD/DPS and MSD for approved SBS student claims may include the following activities:

- Verification that appropriate prescriptions/referrals/authorizations are updated annually and ordered by the appropriate individual.
- Verification that occupational, physical, and speech, language and hearing therapy address a beneficiary's medical need that affects his/her ability to learn in the classroom environment.
- Confirmation that services requiring the student to be in attendance have support documentation (i.e., attendance records) on file.
- Confirmation that the providers performing the service have the required licensure/certification.
- Verification that the providers requiring supervision both "under the direction of" and "under the supervision of" have the necessary support documentation on file.
Verification that the beneficiary receiving special education transportation also received a Medicaid-covered service on the same day. In addition, the support documentation for specialized transportation includes an ongoing trip log maintained by the provider of the special education transportation.

Confirmation that support documentation for personal care services includes a completed, signed and dated monthly activity checklist.

Verification that group therapy or treatment was provided in groups of two to eight.

A standard review of the Individualized Education Program (IEP)/Individualized Family Service Plan (IFSP) treatment plan areas, such as the inclusion of a description of the beneficiary’s qualifying diagnosis and medical condition, time-related goals that are measurable and significant to the beneficiary’s function and/or mobility, and anticipated frequency and duration of treatment required to meet the time-related goals.

Any other area deemed necessary.

The ISD/DPS/MSD should be prepared to direct the auditor to any document used to support and identify the reported student claims.

11.3 AUDIT ACTIVITIES TO BE PERFORMED BY MDHHS OFFICE OF AUDIT STAFF

MDHHS audit review of selected ISD/DPS cost reports for the Administrative Outreach Program may include the following activities:

Verification that the salaries listed for employees/positions included in the Random Moment Time Study (RMTS) staff pool match the payroll records for the same period as the time study.

A review of the salaries of employees who changed positions during the time study period.

If a replacement was hired/transferred, the auditor will verify that only the salary earned while working in a position on the AOP staff pool list was reported, and that salaries for both the original and replacement employees were not duplicated on the report for the same time period.

Verification that any other salaries and costs for supplies, etc., are of direct benefit to the employees on the staff pool list, and therefore, allocable to the AOP in the same percentage as the AOP-eligible employees.

Confirmation that none of the direct costs reported were also claimed as an indirect cost, that the proper indirect cost rate was used, and the rate was applied only to costs in the base. The employees in non-standard job categories are the most likely to be considered indirect type employees; therefore, documentation will be reviewed for these individuals.

Verification that no federal funds were claimed on AOP cost reports and that AOP costs were not accepted for cost sharing.

A standard review of other areas, such as confirmation that reported costs were actually paid, support documentation was maintained as required, and costs were properly charged to the correct accounts should also be expected.

Any other area deemed necessary.

The ISD/DPS should be prepared to direct the auditor to any document used to support and identify the reported AOP costs.
11.4 Audit Findings and Resolution

Audit findings and resolution will include the following:

- Identified overstatement of expenditures on the MAER will require the revision of the MAER and a revised final settlement for all specifically identified overstatements.

- For claim error rates in excess of the materiality threshold percentage, as established by MDHHS, the recovery will be any excess percentage greater than materiality threshold multiplied by total Medicaid paid to the ISD during the period covered by the audit.

Recoveries and re-filings are limited to fiscal years considered within three years from the last date of payment for that period.

SECTION 1 - CLAIMS DEVELOPMENT OVERVIEW

Using the State of Michigan’s competitive bid process, MDHHS will select one Contractor to implement and administer the random moment time study. The Contractor will also provide the ISDs/DPS the option of performing certain time study responsibilities and claims development activities on behalf of those ISDs/DPS that choose to participate in this portion of the State contract and pay for these services.

1.1 CLAIMS DEVELOPMENT ENROLLED PROVIDERS

All ISDs/DPS will be required to utilize the services of the State's RMTS and Claims Development Contractor, who will conduct the statewide time studies and develop and submit claims on their behalf each quarter.

The State Claims Development Contractor will develop an implementation plan on behalf of its ISDs/DPS to conduct the statewide time studies each quarter, utilizing the claims development software, as well as complete all other key functions required for valid claim development. The Contractor must assign only one person as the designated coder for the program. MDHHS will oversee the Contractor and ISDs/DPS participating in this option to assure their compliance with all aspects of the program policy. The ISDs/DPS must also cooperate with MDHHS financial auditing systems.

The cost for the Contractor will be charged back to providers who participate in this option based on the Contractor's projected cost per ISD/DPS (after federal match).

1.2 OVERVIEW OF CLAIMS DEVELOPMENT PROCESS

Based on federal and state statutes and regulations, below is a partial list of specific functions and tasks that must be accomplished for reimbursement of Medicaid Administrative Outreach Program services. Additional details appear in subsequent sections of this chapter.

Claims will be developed by the State’s Claims Development Contractor utilizing the claims development software following these basic steps:

- The quarterly RMTS sampling results are produced by the State’s RMTS and Claims Development Contractor, who converts them to percentages. The percentages are applied to program costs to determine reimbursement and entered onto the first sheet of the claims workbook.
- The cost/claim generation component automates nine Excel spreadsheets and links the spreadsheets where possible. The ISD/DPS costs are entered onto the appropriate worksheets and the software calculates and produces the claim.
- The claim is submitted to MDHHS with verification of claim validity from each ISD/DPS.
- The ISD/DPS and/or Contractor must comply with all conditions set forth by MDHHS as SBS policy.
1.3 IMPLEMENTATION PLAN

Each ISD/DPS must submit an Implementation Plan that reflects the details of their SBS Administrative Outreach Program operation for review and approval by MDHHS and by CMS. Any subsequent changes must also be reported and receive approval.

Claims may not be submitted to MDHHS for reimbursement until MDHHS has approved the Implementation Plan that will be utilized based on this published policy.
SECTION 2 - CLAIM CALCULATIONS

2.1 IMPLEMENTATION PLAN

Each ISD/DPS must submit an implementation plan that reflects the details of their SBS Administrative Outreach Program for review and approval by MDHHS and CMS. Any subsequent changes must also receive approval.

Each implementation plan must include explicit quality control review mechanisms to ensure full staff training and compliance, accuracy and completeness of the sample frame (designated employees), adherence to the MDHHS-published methodology, editing of all moments for completeness and consistency, and accurate financial and staffing reports. Claiming entities must also fully cooperate with any review requested by the U.S. Department of Health & Human Services (HHS), maintaining all necessary records for a minimum of seven (7) years after submission of each quarterly claim.

2.2 SANCTIONS

It is the intent of the State to pursue, when necessary, remedial action or implement a Corrective Plan if the State-selected contractors, the ISD/DPS, or their vendors are not in compliance with the new SBS Administrative Outreach published policy. If this is not successful, a contract payment freeze will be implemented and sanctions put in place until the matter is resolved. Those independent ISDs/DPS not participating in the State’s claims development contract will be held accountable for their vendor’s actions.

The following are examples of causes for implementation of sanctions for all districts. The list is not all-inclusive.

- Repeated errors in completing the RMTS forms or filing of the claims.
- Providing insufficient data or incomplete reports to the Contractors.
- Failure to use the CLAIMS DEVELOPMENT software.
- Failure to cooperate with, or submit requested information, reports, or data to the Special Monitoring Contractor, CMS, MDHHS, MDE, and other staff involved during site visits, reviews or audits.

2.3 FACTORS FOR CLAIMS DEVELOPMENT

MDHHS will submit quarterly claims on behalf of all participating school districts to the CMS. Each claim will be based on the following factors: The cost pool, percentage of time claimable to Medicaid Outreach Program administration, the Federal Financial Participation (FFP) rate, and the discounted Medicaid eligibility percentage rate for that district. The factors for the summer quarter are described above.

2.3.A. COST POOL

This consists of the actual costs incurred for the quarter being claimed, such as salaries, overhead, etc. Each participating ISD/DPS must certify that the claim they submit to MDHHS contains sufficient non-Federal (State, county, or local) funds to match requirements and that the claim only includes actual costs.
2.3.B. Federal Financial Participation Rate

Federal regulations allow for a reimbursement rate of 50% for Medicaid administrative activities.

2.3.C. Discounted Medicaid Eligibility Percentage

The discounted Medicaid eligibility percentage is determined by the percentage of the student population in each ISD/DPS who are actually Medicaid beneficiaries. The discounted Medicaid eligibility rates will be determined twice each year and applied to certain activities in the claim calculation formula. To calculate the discounted Medicaid eligibility rates, the claiming entity will obtain the September and February fourth Wednesday pupil count report list from the Center for Educational Performance and Information (CEPI). The pupil count list will include the student name and date of birth. MDHHS will provide a method for using the list to verify the number of Medicaid-eligible students. This number will be used in a calculation with the total pupil count to determine the discounted percentage of Medicaid-eligible students in the ISD/DPS. The September pupil count list will be used to determine discounted Medicaid eligibility rates for time studies conducted in the Fall and Winter quarters, and the February pupil count will be used for time studies conducted in the Spring and Summer quarters.

Based on the above factors, the claim that is sent to Medicaid is calculated as follows:

Fall, Winter and Spring Quarter Formulas for Calculating Administrative Outreach Claims

<table>
<thead>
<tr>
<th>Cost pools (salaries, overhead, etc.)</th>
<th>% time claimable to Medicaid Outreach Administration from time studies</th>
<th>Discounted by the Medicaid eligibility percentage</th>
<th>% Federal Financial Participation (FFP) rate</th>
<th>= The amount of the claim submitted for Medicaid reimbursement</th>
</tr>
</thead>
</table>

Summer Quarter Formulas

The summer quarter will be divided into two parts. The sum of both parts will be submitted to Medicaid for reimbursement. There will be two workbooks created for the summer quarter, one for each part.

Part I - Summer Quarter Formulas from July 1 to the Date Students Return to School

<table>
<thead>
<tr>
<th>Cost pool (only the 9-month salaries and related costs that are paid during this time period)</th>
<th>Average % of time claimable to Medicaid Outreach Administration from the previous three quarters</th>
<th>Discounted by the Medicaid eligibility percentage</th>
<th>Percent of FFP rate</th>
<th>= The amount of the partial claim for Part I of the Summer Quarter</th>
</tr>
</thead>
</table>
• Salary and related costs for 9-month staff that were earned during the school year, but are paid during the summer break, will be collected in a separate cost pool. Salaries paid during this period for 12-month staff are not included in the cost pool.

• The cost pool containing the salaries and related costs of 9-month staff who are paid over 12 months will be claimed based on the average time study results and Medicaid Eligibility (MAE) rate from the previous three quarters.

Part II - Remainder of the Summer Quarter - Begins on the Date Students Return to School through September 30

<table>
<thead>
<tr>
<th>Cost pools (include all allowable salaries, overhead, etc.)</th>
<th>% of time claimable to Medicaid Outreach from the Summer Quarter time study</th>
<th>Discounted by the Medicaid eligibility percentage</th>
<th>Percent of FFP rate</th>
<th>= The amount of the claim for Part II of Summer Quarter</th>
</tr>
</thead>
</table>

• Salary and related costs of all staff eligible for the time study are included in the cost pool, along with other allowable overhead.

• An RMTS is performed and applied to determine the percent of time claimable for Outreach during Part II of the summer quarter.

The claims development software will add the Summer Quarter Part I and Part II claim amounts together to reach the dollar amount of the total Summer Quarter claim submitted to MDHHS for reimbursement.

2.4 Financial Data

The financial data reported (salaries, benefits, supplies, etc.) must be based on actual detailed expenditure reports obtained directly from the participating ISDs/DPS’ financial accounting system. The financial accounting system data is applied using generally accepted governmental accounting standards and principles or applicable administrative rules. The expenditures accumulated for calculating the Administrative Outreach claim are to include only actual expenditures incurred during the claiming period, except for the summer quarter.

2.5 Allocation of Salaries and Benefits of Personnel Providing Direct Care Services

Actual expenditures for salaries and benefits of all personnel included in an Administrative Outreach claim are to be obtained from each participating ISD/DPS financial accounting system. Expenditures related to the performance of approved Medicaid Administrative Outreach functions by contracted service providers (e.g., occupational therapists, physical therapists) who also provide direct care services must also be obtained from each participating ISD/DPS financial accounting system.
2.6 RMTS DOCUMENTATION AND RECORDKEEPING/ AUDIT FILE REQUIREMENTS

Each participating school district will maintain a separate audit file for each quarter billed. The following minimum documentation will be required:

- Financial data used to establish cost pools and factors.
- A copy of the quarterly sample results, produced by the State's RMTS and Claims Development Contractor.
- A completed quarterly claim, produced by the claims development software and signed by the Chief Financial Officer of the ISD/DPS.
- A copy of the warrant, remittance advice or Electronic Funds Transfer (EFT) documentation, verifying that payment from MDHHS was received.

Districts must cooperate fully with any review requested by MDHHS and CMS, and maintain all necessary records for a minimum of seven (7) years after submission of each quarterly claim.

Any changes in Federal regulations related to claims for administrative expenditures are incorporated by reference into this document.

2.7 NON-STUDENT SPECIFIC/ PRE-MEDICAID ELIGIBILITY DETERMINATION

There are some Administrative Outreach activities and expenditures that are approved by Medicaid that have not been addressed thus far. They are:

- Provided to the entire "at-risk" population,
- Not identifiable to individual students, and
- Provided before Medicaid eligibility is determined.

These activities are to be allocated to the approved Medicaid administrative outreach claim based on the results of the time study conducted during the claiming period.

2.8 STUDENT-SPECIFIC ADMINISTRATIVE FUNCTIONS EXPENDITURES

There are some Administrative Outreach functions that are identifiable to individual students after Medicaid eligibility has been determined. These functions are to be allocated in the administrative claim based on both the time study results conducted during the claiming period and the applicable discounted Medicaid eligibility rate.

2.9 NON-SALARY EXPENDITURES

Expenditures for materials and supplies related to the approved Medicaid administrative outreach activities may be included in the claim if they can be attributed directly to individuals who are claimed. The principles for claiming expenditures and cost allocation, including correct depreciation of assets as published in the Federal Office of Management and Budget (OMB) Circular A-87, must be followed. Examples include conference fees, registration fees, mileage, pagers, printing fees (i.e., for business cards), furniture, equipment, copy machine expenses, etc. Such expenditures are to be based on actual detailed departmental expenditure reports obtained directly from the participating ISD/DPS financial.
accounting system. These expenditures may not include items identified as indirect costs, such as central business office operations, general building maintenance and repair costs, or any other costs classified as an indirect cost.

2.10 INDIRECT COSTS

Allocable indirect costs are the product of the school district aggregate, calculated, approved Medicaid administrative outreach claim amount, multiplied by the ISD/LEA unrestricted indirect cost rate, as approved annually by the Michigan State Board of Education (MSBE). The ISD/LEA unrestricted indirect cost rate is calculated using the Federal Office of Management and Budget Circular A-87 “Indirect Cost Allocation Principles.” The methodology used to determine the indirect cost rate specific to each district has been approved by the Federal cognizant agency. The indirect cost rates are updated annually by the Michigan Department of Education.

2.11 CLAIM CERTIFICATION

The accuracy of the submitted claims must be certified by the chief financial officer, the superintendent of the district, or the consortium’s lead ISD/DPS designee. Such certification is to be documented on an MDHHS-approved certification form, and conform to the certification requirements of 42 CFR 433.51. Detailed claim analyses and supporting documentation will be maintained by the ISD/DPS for audit or future reference purposes according to the terms identified in the interagency agreement between the district and MDHHS.

The Electronic Signature Verification Statement (DCH-3890) form must be completed by each provider and submitted to MDHHS to certify costs electronically. A copy of the completed DCH-3890 must be kept on file by the provider until the individual signing the certification changes. (Refer to the Forms Appendix for a copy of the form.)

Reimbursement will be paid after the claim has been submitted to, reviewed by, and determined to be acceptable and accurate by MDHHS and CMS.

2.12 ANNUAL RECONCILIATION

At the end of the district’s fiscal year, and after its annual financial audit is completed, a reconciliation of the filed administrative outreach claims, with the financial accounting records and supporting documentation, must be performed. Adjustments to future administrative claims must be made based on the results of the reconciliation analyses to consider any year-end adjustments to accounting entries of any items which might have impacted the claim amounts.

2.13 FISCAL PROVISIONS

School districts must use an appropriate Revenue Code to identify the Medicaid SBS Administrative Outreach Program funds within their accounting records.

2.14 SUBMISSION OF CLAIMS

All claims must be developed and submitted using the reporting format (structured spreadsheet template) and approved certification forms.
The claim package consists of completed Excel workbooks for each individual ISD/DPS and are combined and consolidated into one claim that is submitted to MDHHS.

All claims are to be submitted in accordance with the reporting requirements established by MDHHS. It is imperative that districts work closely with the Claims Development Contractor to provide pertinent financial, enrollment and personnel data and meet their deadlines and any other technical specifications. Claims not submitted on time must be submitted the following quarter as an adjustment to the prior missed quarter and will be processed for that following quarter. Claims not conforming to reporting requirements will not be accepted or processed.

2.15 Periodicity of Reporting

Districts must submit claims for expenditures related to approved Medicaid administrative outreach activities to MDHHS on a quarterly basis. The claim is due to MDHHS on or before 120 calendar days after the end of the reporting quarter.

SECTION 1 - GENERAL TIME STUDY INFORMATION

This chapter describes the random moment time study process for the School Based Services (SBS) direct medical services program.

In accordance with the Centers for Medicare & Medicaid Services (CMS) reimbursement policy, some activities performed by medical professionals and Intermediate School District (ISD) staff in a school-based setting are eligible for federal matching funds. These activities may be performed by staff with multiple responsibilities. CMS reimbursement requirements include the use of a random moment time study (RMTS) as a component of the Medicaid reimbursement methodology. The time study results are used to determine the amount of staff time spent on Medicaid-allowable activities. One statewide time study per staff pool is performed each quarter.

1.1 ADMINISTRATIVE OUTREACH PROGRAM ACTIVITIES

The School Based Services Administrative Outreach Program (AOP) offers reimbursement for the cost of administrative activities that support efforts to identify and enroll potentially eligible persons into Medicaid and that are in support of the state Medicaid plan.

The activities fall into several categories:

- Medicaid Outreach
- Facilitating Medicaid Eligibility Determinations
- Health-related Referral Activities
- Medical Service Program Planning, Policy Development, and Interagency Coordination
- Programmatic Monitoring and Coordination of Medical Services
- Transportation and Translation Services

1.2 DIRECT MEDICAL SERVICES

Medicaid covered services that are medically necessary and specified in the beneficiary’s Individualized Education Program (IEP) or Individualized Family Services Plan (IFSP) include:

- Occupational Therapy Services
- Orientation and Mobility Services
- Physical Therapy Services
- Assistive Technology Device Services
- Speech, Language and Hearing Services
- Psychological, Counseling and Social Work Services
- Developmental Testing Services
- Nursing Services
- Physician and Psychiatric Services
Michigan Department of Health and Human Services
Medicaid Provider Manual

- Personal Care Services
- Targeted Case Management Services

1.3 STAFF POOLS AND CONFIDENCE LEVELS

The RMTS is carried out utilizing custom-developed claims development software which is integrated with scanning hardware/software and spreadsheet capabilities to create a system that automates the school district time study process. The claims development software is comprised of three components: sampling/staff pool lists, training, and cost/claim generation. All ISDs are required to utilize the services of the State’s RMTS and Claims Development Contractor (hereafter referred to as the Contractor). The Contractor conducts the statewide time studies, produces the implementation plans and reports, and develops and submits the claims on behalf of the 56 ISDs, Detroit Public Schools and Michigan School for the Deaf (hereafter referred to as the ISDs).

Time studies will be carried out over the following staff pools:

- AOP Only Staff - This staff pool consists of individuals who perform only administrative outreach activities. They do not perform any direct medical activities.
- AOP & Direct Medical Staff - This staff pool consists of individuals who perform both Direct Medical activities and AOP activities.
- Personal Care Services Staff - This direct medical only staff pool consists of individuals who perform direct care Personal Care Services.
- Targeted Case Management Services Staff - This direct medical only staff pool consists of individuals who perform Targeted Case Management (TCM) Services.

The RMTS results identifying the percentage of claimable time are applied to the allowable correlating cost pool. All staff pools are mutually exclusive.

The sample size of each cost pool ensures a quarterly level of precision of +/- 2% (two percent) with at least a 95% (ninety-five percent) confidence level and an annual level of precision of +/- 2% (two percent) with at least a 95% (ninety-five percent) confidence level.

Valid moments are completed moments that have been received by the Contractor and determined to be complete and accurate. Invalid moments are moments that are assigned to staff who are no longer in the position as selected, moments that are outside of paid work hours, and moments not returned for any other reason (including Activity Code 18).

As long as the completed observation rate meets or exceeds 85%, missing observations will be dropped from all calculations. Should the completion rate fall below 85%, missing observations will be included as non-matchable.
SECTION 2 – CENTRALIZED CODING

The Contractor is responsible for coding the time study moments. MDHHS oversees the Contractor and ISDs participating to assure their compliance with all aspects of program policy and federal regulations.
SECTION 3 – TIME STUDY METHODOLOGY

3.1 RANDOM MOMENT TIME STUDY OVERVIEW

The time study design logs only what the participant is doing at one moment in time. A random moment consists of one minute of work done by one employee, both chosen at random, from among all such minutes of work that have been scheduled for all designated staff statewide.

The RMTS measures the work effort of each group of approved staff involved in the time study process by sampling and analyzing the work efforts of a randomly-selected cross-section of each staff pool. The RMTS methodology employs a technique of polling employees at random moments over a given time period and tallying the results of the polling over that period. The method provides a statistically valid means of determining the work effort being accomplished in each program of services. The sampling period is defined as the three-month period comprising each federal quarter of the year, except for the abbreviated sample period used in the summer quarter (July through September).

The Contractor will use the claims development software to conduct the statewide time studies each quarter. This software produces random moments concurrent with the entire reporting period which are then paired with randomly selected members of the designated staff pool population. The sampling is constructed to provide each staff person in the pool with an equal opportunity or chance to be included in each sample moment. Sampling occurs with replacement so that after a staff person and a moment are selected, the staff person is returned to the potential sampling universe. Therefore, each staff person has the same chance as any other person to be selected for each moment, which ensures true independence of sample moments.

Once the random sample of staff moments has been generated, the sample is printed in the form of master and location control lists for sample administration purposes, and as time study forms for collecting the moment data. Each sampled moment is identified on its respective control list in chronological order by the name of the staff person to be sampled and the date and time at which the recording should take place.

3.1.A. LONG-TERM SUBSTITUTES

Long-term substitute staff replacing permanent staff on leave may be added to the staff pool lists. The following criteria apply when long-term substitutes are utilized:

- A long-term substitute staff must be employed by the ISD/Local Educational Agency (LEA) for at least 30 calendar days within the quarter.
- The ISD/LEA may report the name of the long-term substitute staff any time after the sampling moments are distributed.
- The long-term substitute staff must meet all of the program requirements and provider qualifications necessary to participate in the Medicaid school based services program staff pool.
- The substitute's name must be listed in parentheses behind the name of the regular staff person on the staff pool list.
- If listed on the staff pool list, the substitute staff must complete the time study moment.
Financial worksheets must reflect the name of the regular staff and the substitute in parentheses. The cost reflected should be the sum of the cost of the regular staff on leave and the long-term substitute staff.

All audit liability for the financial data reported and the tracking of the moments is the responsibility of the ISD/LEA reporting entity.

All staff whose costs are included in the cost pool, including long-term substitutes, must be included in the sample universe for the time study.

3.2 RANDOM MOMENT TIME STUDY FORM COMPLETION

There are two steps to completing a time study form:

- In the first step, for the designated moment, the time study participant provides the answers to three questions (What are you doing? Who are you with? Why are you doing it?). These questions relate to their activities at the time of their randomly selected moment.
- In the second step, the time study forms are collected from the participants, and the Contractor assigns the appropriate activity code for that moment based on the answers to the three time study questions.

At this point, the time study form is completed and can be scanned into the claims development software by the Contractor.

The Contractor conducts the statewide time studies each quarter for all ISDs and produces a report detailing the results. This involves importing clinician information from the ISDs to compile the statewide pool of all eligible time study participants for each staff pool list. There are four separate staff pools sampled for the RMTS each quarter: 1) the AOP only staff pool, 2) the AOP and Direct Medical Services staff pool, 3) the Personal Care Services staff pool, and 4) the Targeted Case Management Services staff pool. All staff pools have 800 moments randomly selected for the summer quarter (July-September). For the remaining three quarters, the Direct Medical Services and the Targeted Case Management Services staff pools have 3,000 moments randomly selected per quarter, and the Personal Care Services staff pool has 3,200 moments randomly selected per quarter. The person’s name that is associated with each moment is placed on a time study form. The Contractor distributes the control lists of their selected staff and the time study forms to the ISDs prior to the beginning of the reporting period. The Contractor is also responsible for the collection of all time study forms for the ISDs.

The Contractor monitors the status of each time study form so that appropriate follow-up calls are made for delinquent moments or missing data. The ISD is responsible for ensuring that a copy of the time study form and instructions are distributed to staff just prior to the assigned moment. The completed time study forms are returned to the Contractor, generally on a weekly basis, for data entry and tabulation.

At the end of the sampling period after all data has been collected and tabulated, program precision tables will be produced by the Contractor. These tables will verify that a sufficient number of personnel were sampled to ensure time study results that have a confidence level of at least 95% quarterly with a precision level of +/- 2% annually.
3.3 TIME STUDY STAFF POOLS

To preserve the integrity of the RMTS process and to allow for timely process flow, school staff are given four weeks to review and return the staff pool lists and financials to the Contractor for those staff eligible to participate in each time study group. The staff pool lists must be returned as a complete file with all updates reflected. No partial staff pool list files will be accepted by the Contractor.

If staff pool lists and/or financials for the Personal Care Services, the Targeted Case Management, or the Administrative Outreach Program (AOP) time studies are not returned to the Contractor on or before the published deadline, the LEA staff pool lists and correlating financials will be removed from the time study and claim calculation for the affected quarter. ISD coordinators and LEA financial contact staff will be notified.

When providing the staff pool list of those eligible to participate in the time studies, school districts must certify the list of participants and activities to be claimed to ensure that all appropriate personnel are submitted and that appropriate credentials are in place for billing Medicaid.

3.3.A. AOP ONLY STAFF POOL

AOP Only Staff Pool:

- Administrators
- Counselors
- Early Identification/Intervention Personnel
- Physician Assistants
- Teacher Consultants

- School Psychologists (certified by the Michigan Department of Education but without Michigan licensure)
- Limited Licensed Speech Language Pathologists (without their American Speech-Language-Hearing Association Certificate of Clinical Competence)
- School Social Workers (certified by the Michigan Department of Education but without Michigan licensure)

3.3.B. AOP & DIRECT MEDICAL SERVICES STAFF POOL

AOP & Direct Medical Services Staff Pool:

- Fully Licensed Speech Language Pathologists
- Audiologists
- Counselors
- Licensed Practical Nurses
- Occupational Therapists
- Occupational Therapist Assistants

- Orientation and Mobility Specialists
- Physical Therapists
- Physical Therapist Assistants
- Physician and Psychiatrists
- Psychologists (not School Psychologists)
- Registered Nurses
- Social Workers
3.3.C. PERSONAL CARE SERVICES STAFF POOL

The following staff may be appropriate for inclusion in time studies if they are involved in Personal Care activities in the school setting:

- Bilingual Aides
- Health Aides
- Instructional Aides
- Paraprofessionals
- Program Assistants
- Teacher Aides
- Trainable Aides

3.3.D. TARGETED CASE MANAGEMENT SERVICES STAFF POOL

Staff with the following credentials may be appropriate for inclusion in time studies if they are involved in Targeted Case Management activities in the school setting:

- A bachelor's degree with a major in a specific special education area.
- Coursework credit equivalent to a major in a specific special education area.
- Minimum of three years' personal experience in the direct care of an individual with special needs.
- A licensed Registered Nurse (RN) in Michigan.

Targeted case managers must also demonstrate knowledge and understanding of all of the following:

- Services for infants and toddlers who are eligible under the IDEA law as appropriate;
- Part C of the IDEA law and the associated regulations;
- The nature and scope of services covered under IDEA, as well as systems of payments for services and other pertinent information;
- Provision of direct care services to individuals with special needs; and
- Provision of culturally competent services within the community being served.
SECTION 4 – ADMINISTRATIVE OUTREACH AND DIRECT MEDICAL ACTIVITY CODE SUMMARY

This section summarizes the code categories utilized for the random moment time study and indicates whether they are claimable for reimbursement under the AOP only, the AOP & Direct Medical program (including Personal Care Services and Targeted Case Management Services), allocated across all programs, or "unallowable" (not claimable). The "unallowable" activities are those that are purely educational in nature.

Activities can fall into one of the following categories for Medicaid reimbursement purposes:

- **"A"** - Allowable means the expense is allowable for Medicaid reimbursement
  - AOP services have a federal financial participation (FFP) rate of 50%
  - Direct medical IEP/IFSP services have a federal medical assistance percentage (FMAP) rate that varies from year to year
- **"U"** - Unallowable means the expense is not allowable for Medicaid reimbursement
- **"R"** - Reallocated means reimbursement across multiple activities that is allocated to isolate the amount applicable to the Medicaid allowable category
- **"N/A"** - The code is no longer used per directive from CMS
- **"AOP Medicaid Eligibility Rate (MER)"** - The AOP MER is determined by calculating the percentage of the county student population that is Medicaid eligible
- **"IEP MER"** - The direct medical IEP MER is determined by calculating the percentage of special education students under the age of 21 with health related support services documented in their IEP/IFSPs that are Medicaid eligible

These codes represent activities that may be performed by any time study participants during a typical workday. Some of these activities may be claimed under Medicaid and some may not. In the following section, examples and clarifications of each code are provided to assist with the appropriate coding of the activities.

4.1 ACTIVITY CODING

4.1.A. CODE 1 - MEDICAID OUTREACH AND PUBLIC AWARENESS

U - Direct Medical Services

A - Administrative Outreach

This code is used when school staff are performing activities that inform eligible or potentially eligible individuals about Medicaid and how to access Medicaid programs. This code is also used for describing the services covered under the Medicaid program and how to obtain Medicaid preventive services. Activities related to Child Find are not recorded here, but instead under Code 2.
It includes related paperwork, clerical activities, or staff travel required to perform the following activities:

- Informing families and distributing literature about the services and availability of the Early and Periodic Screening, Diagnosis and Treatment (EPSDT) program and the many different Michigan Medicaid programs such as Healthy Kids and Children's Special Health Care Services.
- Informing and encouraging families to access Medicaid managed care systems, i.e., Medicaid Health Plans.
- Informing families about the EPSDT and Medicaid health-related programs and the value of preventive health services and periodic exams.
- Assisting the Medicaid agency to fulfill outreach objectives of the Medicaid program by informing individuals, students, and their families about health resources available through the Federal Medicaid Program.
- Conducting Medicaid outreach campaigns and activities not related to Child Find (e.g., health fairs) that provide information about services provided by such entities as the Community Mental Health Service providers, Local Health Departments, etc.
- Conducting a family planning health education outreach program or campaign, if it is targeted specifically to Medicaid-covered family planning services.
- Contacting pregnant and parenting teenagers about the availability of Medicaid services, including referral to family planning and well baby care programs and services.
- Providing referral assistance to families with information about the Medicaid program.
- Providing information about Medicaid screenings that will help improve the identification of medical conditions that can be corrected or ameliorated through Medicaid services.
- Notifying families of EPSDT program initiatives such as Medicaid screenings conducted at a school site. These screenings are distinct from other general health screenings that are covered by Code 2.
- Coordinating with the local media (newspaper, TV, radio, video) to inform the public about EPSDT screenings, health fairs and other health related services, programs and activities organized by the school.
- Coordinating or attending child health fairs that emphasize preventive health care and promote Medicaid services by presenting Medicaid material in areas with the likelihood of high Medicaid eligibility.
- Informing families about the availability of Medicaid providers of specific covered services, and how to effectively utilize services and maintain participation in the Medicaid program.
- Providing parents, on report card pick-up day or at parent conferences, information about the Medicaid program and health care services available to eligible children, including EPSDT screening services and medically necessary treatment.
4.1.B. CODE 2 - NON-MEDICAID OUTREACH

U - Direct Medical Services

U - Administrative Outreach

This code is used for performing activities that inform eligible or potentially eligible individuals about social, vocational and educational programs, including special education, that are not covered by Medicaid and how to access them. Activities include describing the eligible or potentially eligible individuals, the range of benefits covered under these non-Medicaid social, vocational, and educational programs, and how to obtain them (e.g., WIC, SSI, MIChild, LIF, Child Find).

It includes related paperwork, clerical activities, or staff travel required to perform the following activities:

- Informing families about wellness programs and how to access these programs.
- Scheduling and promoting activities that educate individuals about the benefits of healthy lifestyles and practices.
- Conducting general health education programs or campaigns addressed to the general population.
- Conducting outreach campaigns directed toward encouraging persons to access social, educational, legal or other services not covered by Medicaid.
- Assisting in early identification of children with special medical/mental health needs through various Child Find activities.
- Developing the school district’s student/parent handbook.
- Coordinating with the local media (newspaper, TV, radio, video) to inform the public about upcoming events such as health fairs or screenings that focus on non-Medicaid social, vocational and educational programs, and activities such as scholarships, remedial classes, Child Find, DARE, anti-smoking campaigns, etc.
- Providing parents, on report card pick-up day or at parent conferences, information about non-Medicaid programs, social, vocational and educational, and general health care services available in the community or the school for their children.

4.1.C. CODE 3 - FACILITATING MEDICAID ELIGIBILITY DETERMINATION

U - Direct Medical Services

A - Administrative Outreach

This code is used for assisting an individual to become eligible for Medicaid. This activity does not include the actual determination of Medicaid eligibility.
It includes paperwork, clerical activities, or staff travel required to perform the following activities:

- Verifying an individual’s current Medicaid eligibility status.
- Facilitating eligibility determination for Medicaid by planning and implementing a Medicaid information program.
- Participating as a provider of Medicaid eligibility outreach information.
- Explaining Medicaid eligibility rules and the Medicaid eligibility process to prospective applicants.
- Referring an individual or family to the local MDHHS office or other local office to make application for Medicaid benefits.
- Assisting individuals or families to complete the Michigan Medicaid eligibility application.
- Assisting the individual or family in collecting/gathering information related to the application and eligibility determination for an individual, including resource information and third party liability (TPL) information, as a prelude to submitting a formal Medicaid application.
- Providing necessary forms and packaging all forms in preparation for the Medicaid eligibility determination.
- Referring families to appropriate sources to obtain Medicaid applications.

4.1.D. **CODE 4 - FACILITATING APPLICATION FOR NON-MEDICAID PROGRAMS**

**U - Direct Medical Services**

**U - Administrative Outreach**

This code is used for informing an individual or family about programs such as Child Find, Food Stamps, SSI, WIC, Daycare, Legal Aid, Free and Reduced Lunch, and other social or educational programs and referring them to the appropriate agency to make application.

It includes related paperwork, clerical activities, or staff travel required to perform the following activities:

- Explaining the eligibility process for non-Medicaid programs.
- Assisting the individual or family to collect/gather information and documents for the non-Medicaid program applications.
- Assisting the individual or family in completing the non-Medicaid programs application(s).
- Developing and verifying initial and continuing eligibility for the Free and Reduced Lunch Program.
- Providing necessary forms and packaging all forms in preparation for the non-Medicaid eligibility determination.
4.1.E. CODE 5 - PROGRAM PLANNING, POLICY DEVELOPMENT AND INTERAGENCY COORDINATION RELATED TO MEDICAL SERVICES

U - Direct Medical Services

A - Administrative Outreach

This code is used for performing activities associated with the collaborative development of programs with other agencies that assure the delivery of Medicaid-covered medical/mental health services to school-age children. It applies only to employees whose position descriptions include program planning, policy development and interagency coordination, and/or those staff specifically appointed to appropriate committees/programs performing required activities.

It includes related paperwork, clerical activities or staff travel required to perform the following activities:

- Defining the scope of each agency’s Medicaid service in relation to the other, and identifying gaps or duplication of medical/mental health programs.
- Analyzing Medicaid data related to a specific program, population, or geographic area and working with Medicaid resources, such as Medicaid Health Plans, to locate and develop EPSDT health services referral relationships and expanding school medical/mental health programs to school populations of need.
- Creating a collaboration of health professionals to provide consultation and advice on the delivery of health care services to the school populations, and developing methods to improve the referral and service delivery process by Medicaid health providers.
- Containing Medicaid costs for individuals with multiple challenging disabilities by reducing overlap and duplication of Medicaid services through collaborative efforts with Medicaid Health Plans, local Community Mental Health Service providers and Local Health Departments.
- Monitoring and evaluating policies and criteria for performance standards of medical/mental health delivery systems in schools and designing strategies for improvements.
- As a part of the school health policy quality assurance system, maintain and ensure the continuity of all Medicaid health-related services, including developing and monitoring contracts with private providers, agencies and/or provider groups.
- Overseeing the organization and outcomes of the coordinated medical/mental health service provision with Medicaid Health Plans.
- Developing internal referral policies and procedures for use by staff so that appropriate coordination of health services occurs between the various Medicaid providers and entities, such as Community Mental Health Service providers, Local Health Departments, Medicaid Health Plans, and those in the educational setting.
Designing and implementing strategies to:

- identify students who may be at high risk for poor outcomes because of poverty, dysfunctional families, and/or inappropriate referrals, and need medical/mental health interventions.
- identify pregnant students who may be at high risk of poor health outcomes because of drug usage, lack of appropriate prenatal care, and/or abuse or neglect.
- assure that students with any significant health problems are diagnosed and treated early.

- Presenting specific provider information about Medicaid EPSDT screening in the schools that will help identify medical conditions that can be corrected or ameliorated by services covered through Medicaid.
- Developing procedures for tracking and resolving families’ requests for assistance with Medicaid services and providers. This does not include the actual tracking of requests for Medicaid services.
- Developing new health programs with local community health providers for the Medicaid population, as determined by a needs assessment and geographic mapping.
- Working with requests and inquiries from local school board members, county commissioners, or State legislators to resolve unique or unusual requests or boundary issues regarding appropriate care for certain Medicaid-eligible groups or populations.
- Coordinating with interagency committees to identify, promote and develop medical services in the school system.

4.1.F. CODE 6 - PROGRAM PLANNING, POLICY DEVELOPMENT AND INTERAGENCY COORDINATION RELATED TO NON-MEDICAL SERVICES

U - Direct Medical Services

U - Administrative Outreach

This code is used when performing activities associated with the development of strategies to improve the coordination and delivery of community services to school-age children, and when performing collaborative activities with other agencies. Non-medical services may include social, educational, and vocational services.

It includes related paperwork, clerical activities or staff travel necessary to perform the following activities:

- Identifying gaps or duplication of other non-medical services (e.g., social, vocational and educational programs) to school-age children and developing strategies to improve the delivery and coordination of these services.
- Developing strategies to assess or increase the capacity of non-medical school programs.
- Developing procedures for tracking and resolving families’ requests for assistance with non-medical services and the providers of such services.
Developing and coordinating advisory or work groups of professionals to provide consultation and advice regarding the delivery of non-medical services to the school populations.

- Developing non-medical referral sources.
- Analyzing non-medical data related to a specific program, population, or geographic area.
- Working with other agencies providing non-medical services to improve the coordination and delivery of services and to improve collaboration around the early identification of non-medical problems.
- Defining the scope of each agency's non-medical service in relation to the other.
- Evaluating the need for non-medical services in relation to specific populations or geographic areas.
- Monitoring the non-medical delivery system in schools.
- Coordinating with interagency delivery committees to identify, promote and develop non-medical services in the school system.

4.1.G. CODE 7 - REFERRAL, COORDINATION, AND MONITORING OF MEDICAL SERVICES

U - Direct Medical Services

A - Administrative Outreach

This code is issued for developing appropriate referral sources for program-specific services for the school district, coordinating programs and services at the school or district level, and monitoring the delivery of Medicaid services within the school system.

This code is not to be used for providing IEP/IFSP targeted case management referral, coordination and monitoring of Medicaid eligible services. IEP/IFSP targeted case management is reported under code 13(C).

It includes related paperwork, clerical activities or staff travel necessary to perform the following activities:

- Making referrals for, and coordinating access to, medical services.
- Identifying and referring adolescents who may be in need of Medicaid family planning services.
- Making referrals for and/or scheduling appropriate Medicaid-covered immunizations, vision, and hearing testing, but not to include the child health screenings (vision, hearing and scoliosis) and immunizations that are required for all students.
- Providing information about Medicaid EPSDT screening (e.g., dental, vision) in the schools that will help identify medical conditions that can be corrected or improved by services through Medicaid.
- Contacting Medicaid providers of pediatric services in lower income areas to determine the scope of EPSDT screening and treatment services available to meet the needs of the at-risk child.
- Reviewing clinical notes of staff by a designated clinician to identify medical referral and follow-up practices, and making recommendations to supervisors for improvements as needed.
- Conducting quality assurance reviews of specific health-related programs objectives.
- Providing both oral and written instructions about the referral policies and procedures between the various agencies to parents for appropriate coordination of health services in the educational setting and for follow-up at home.

4.1.H. CODE 9 - REFERRAL, COORDINATION, AND MONITORING OF NON-MEDICAL SERVICES

U - Direct Medical Services

U - Administrative Outreach

This code is used for making referrals for, coordinating, and/or monitoring the delivery of non-medical, such as educational, services.

It includes related paperwork, clerical activities or staff travel necessary to perform the following activities:

- Making referrals for, and coordinating access to, social and educational services, such as childcare, employment, job training, and housing.
- Making referrals for, coordinating, and/or monitoring the delivery of immunizations and child health screenings (vision, hearing, and scoliosis) that are required for all students.
- Making referrals for, coordinating, and monitoring the delivery of educational, scholastic, vocational, and other non-health-related examinations/assessments.
- Gathering any information that may be required in advance of these non-Medicaid-related referrals.
- Participating in a meeting/discussion to coordinate or review a student’s need for instructional, scholastic, vocational, and non-health-related services not covered by Medicaid.
- Monitoring and evaluating the non-medical components of the individualized plan, such as parent-teacher conferences regarding a student’s educational progress, or compiling attendance reports.
- Linking or referring a family to a non-medical service delivery system.
- Evaluating curriculum and instructional services, policies and procedures.
- Developing procedures for tracking families’ requests for assistance with non-medical services and the providers of those services, such as tutors or remedial education courses.
• Health networking beyond the scope of Medicaid that is necessary to coordinate or monitor health fairs or screenings that focus on non-Medicaid social, vocational or educational programs and activities, i.e., scholarships, remedial classes, Child Find, DARE, anti-smoking campaigns, etc.

4.1.1. CODE 10 - MEDICAID-SPECIFIC TRAINING ON OUTREACH, ELIGIBILITY AND SERVICES

U - Direct Medical Services

A - Administrative Outreach

This code is used for coordinating, conducting, or participating in training events and seminars for outreach staff regarding the benefits of the Medicaid program, how to assist families to access Medicaid services, and how to more effectively refer students for services. Training for Child Find activities is NOT recorded here, but under Code 12.

It includes related paperwork, clerical activities or staff travel required to perform the following activities:

• Participating in or coordinating training that improves the delivery of Medicaid services.
• Participating in or coordinating training which enhances early identification, intervention, screening and referral of students with special health needs to EPSDT services.
• Coordinating training to assist families to access Medicaid services.
• Participating in or presenting training that improves the quality of identification, referral, treatment and care of children, e.g., talking to new staff about the EPSDT referral process or available EPSDT and health-related services.
• Conducting Medicaid outreach training of non-medical professional staff for the purpose of targeting and identifying children with special or severe health or mental health needs for appropriate referral to EPSDT screening services.
• Disseminating information on training sessions and conducting all related administrative tasks.
• Conducting seminars and presentations to teachers, parents, and community members on:
  ◦ appropriately identifying students concerning indications of mental health behavioral conditions (i.e., bi-polar disorders, drug/substance abuse, autism, attention deficit, mood disorders, pervasive disability disorder, suicidal tendencies, and clinical depression);
  ◦ identifying physical disabilities and other medical conditions that can be corrected or ameliorated by services covered through Medicaid; and
  ◦ providing information on where and how to seek assistance through the Medicaid system.
4.1.J. CODE 12 - NON-MEDICAID TRAINING

U - Direct Medical Services

U - Administrative Outreach

This code is used for coordinating, conducting, or participating in training events and seminars for outreach staff regarding the benefits of the programs other than the Medicaid program. Programs may include educational programs such as how to assist families to access the services of the relevant programs, and how to more effectively refer students for those services.

It includes related paperwork, clerical activities, or staff travel required to perform these activities:

- Participating in or coordinating training that improves the delivery of services for programs other than Medicaid.
- Participating in or coordinating training that enhances IDEA Child Find Programs.
- Participating in or coordinating training that improves relationships between and among local agencies.
- Participating in training to improve computer skills to collect data.
- Training regarding educational issues.
- Training regarding other non-medical social service issues.
- Participating in or coordinating training that improves the medical knowledge and skills of skilled professional medical personnel.
- Training on general health awareness and prevention programs, such as DARE, sex education, the Michigan Model, vocational or scholarship programs, MEAP tests, etc.

4.1.K. CODE 13 - IEP/IFSP DIRECT MEDICAL SERVICES

A - Direct Medical Services

U - Administrative Outreach

This code is used for providing medically necessary direct medical services which are part of an IEP/IFSP treatment plan. These services are provided to an individual in order to correct or ameliorate a specific condition. Medical evaluations or assessments that are conducted to determine a child’s health-related needs for purposes of the special education eligibility and for the development of the IEP/IFSP are covered under this code.

Direct Medical Services includes related paperwork, clerical activities, or staff travel required to perform the following activities:

- Occupational therapy services
- Physical therapy services
- Speech, language and hearing services
- Orientation and mobility services
- Psychological, counseling and social work services
- Developmental testing and assessments
- Nursing services
- Physician and psychiatrist services
- Assistive technology device services
- Providing health/mental health services contained in an IEP/IFSP
- Medical/health assessment and evaluation as part of the development of an IEP/IFSP
- Conducting medical/health assessments/evaluations and diagnostic testing, and preparing reports
- Providing or participating in face-to-face interventions with either an individual student or a group (2-8 students)
- Administering/monitoring medication included as part of an IEP/IFSP and documented in the IEP/IFSP

4.1.L. CODE 13(A) - IEP/IFSP PERSONAL CARE SERVICES

A - Direct Medical Services

U - Administrative Outreach

This code is used for providing a range of human assistance services to persons with disabilities and chronic conditions which enable them to accomplish tasks that they would normally do for themselves if they did not have a disability or chronic condition. Assistance may be in the form of hands-on assistance or cueing so that the person performs the task by him/herself. The need for services must be documented in the child's IEP/IFSP. Services are not covered when provided by a family member or if they are educational in nature.

Personal care services include related paperwork, clerical activities, or staff travel required to perform the following activities:

- Eating/feeding
- Respiratory assistance
- Toileting
- Grooming
- Dressing
- Transferring
- Ambulation
- Intervention for seizure disorder
- Personal hygiene
- Mobility/Positioning
- Meal preparation
- Skin care
- Muscle strengthening
- Bathing
- Maintaining continence
- Medical equipment maintenance
- Assistance with self-administered medications
- Redirection and intervention for behavior
- Health related functions through hands-on assistance, supervision and cueing

4.1.M. CODE 13(B) - IEP/IFSP TARGETED CASE MANAGEMENT SERVICES

A - Direct Medical Services

U - Administrative Outreach

This code is used for providing services which are a part of the IEP/IFSP treatment plan. These services identify and address special health problems and needs that affect the student’s ability to learn, and assist the student to gain and coordinate access to a broad range of medically-necessary services covered under the Medicaid program.

Targeted Case Management Services include related paperwork, clerical activities, or staff travel required to perform the following activities:

- Assure that standard re-examination/follow-up of the student is periodically conducted to ensure the student receives needed diagnosis and treatment
- Assist families in identifying/choosing appropriate care providers and services
- Maintain case records and indicate all contact for student in the same manner as other covered services
- Coordinate performance evaluations/assessments and other service needs for the student
- Prevention of duplicate services
- Facilitation/participation in development, review and evaluation of the multi-disciplinary assessment
- Supporting activities that link or coordinate needed health services for the student
- Meeting with teachers and other professional staff to discuss testing, planning, treatment, coordinating effective interventions, and student progress
Coordinating school based services and treatment with parents and student

Monitoring and recommending a plan of action

Providing modifications to the multi-disciplinary, patient-centered treatment plan

Coordinating with staff/health professionals to establish continuum of health and behavioral services in the school setting

Provide summary of provider, parent and student consultation

4.1.N. CODE 13(C) - OTHER AND NON IEP/ IFSP DIRECT MEDICAL SERVICES

U - Direct Medical Services

U - Administrative Outreach

This code is used when providing direct medical services that are not documented in an IEP/IFSP or for services that are not allowable for Medicaid federal matching purposes.

- Administering first aid
- Performing routine or mandated child health screens including, but not limited to, vision, hearing, dental, scoliosis, and EPSDT screens
- Administering immunizations
- Discussing health care needs and the importance of well-baby care with adolescents
- Routine medication administration (such as over-the-counter medications or maintenance medications)

4.1.O. CODE 14 - TRANSPORTATION AND TRANSLATION SERVICES IN SUPPORT OF MEDICAID-COVERED SERVICES

U - Direct Medical Services

A - Administrative Outreach

This code is used for assisting an individual to obtain transportation to Medicaid-covered services. This does not include the provision of the actual transportation service, but rather the administrative activities involved providing transportation. This code also does not include activities that contribute to the actual billing of transportation as a medical service, nor does it include accompanying the Medicaid-eligible individual to Medicaid services as an administrative activity.

This code is used for school employees who provide translation services related to Medicaid-covered services as an activity. Translation may be allowable as an administrative activity if it is not included and paid for as part of a medical assistance service.
It includes related paperwork, clerical activities or staff travel required to perform the following activities:

- Scheduling or arranging transportation to Medicaid-covered services.
- Assisting or arranging for transportation for the family in support of the referral and evaluation activities.
- Arranging for or providing translation services that assist the individual to access transportation and medical services.
- Arranging for or providing translation services that assist the individual to "communicate" with service providers about medical services being provided.
- Arranging for or providing translation services that assist the individual to understand necessary care or treatment.
- Assisting the student to define/explain their symptoms to the physician.
- Arranging for or providing signing services that assist family members to understand how to provide necessary medical support and care to the student.

4.1.P. CODE 15 - TRANSPORTATION AND TRANSLATION SERVICES IN SUPPORT OF NON-MEDICAID COVERED SERVICES

U - Direct Medical Services

U - Administrative Outreach

This code is used for assisting an individual to obtain transportation to services not covered by Medicaid, or accompanying the individual to services not covered by Medicaid.

This code is used for school employees who provide translation services related to social, vocational, or educational programs and activities as an activity separate from the activities referenced in other codes.

It includes related paperwork, clerical activities, or staff travel required to perform the following activities:

- Scheduling or arranging transportation for social, vocational, and/or educational programs and activities.
- Scheduling or arranging transportation to and from school when no Medicaid service has been provided.
- Arranging for or providing translation services that assist the individual to access and understand non-medical services, programs, and activities.
- Arranging for or providing signing services that assist the individual's or family's access to and understanding of non-medical programs and activities.
4.1.Q. CODE 16 - GENERAL ADMINISTRATION

R - Direct Medical Services

R - Administrative Outreach

This code is used for time study participants performing activities that are not directly assignable to program activities.

It includes related paperwork, clerical activities, or staff travel required to perform these activities. Typical examples (not all inclusive) of general administrative activities may include:

- Establishing goals and objectives of health-related programs as part of the school’s annual or multi-year plan
- Reviewing school or district procedures and rules
- Attending or facilitating school or unit staff meetings, training, or board meetings
- Performing administrative or clerical activities related to general building or district functions or operations
- Providing general supervision of staff, including supervision of student teachers or classroom volunteers, and evaluation of employee performance
- Reviewing technical literature and research articles
- Taking lunch, breaks, or time not at work when staff are paid for these activities
- Paid leave day
- Paid leave of absence
- Processing payroll/personnel-related documents
- Maintaining inventories and ordering supplies
- Developing budgets and maintaining records
- Training (not related to curriculum or instruction), such as how to use the district’s new computer system
- Other general administrative activities of a similar nature, as listed above, which cannot be specifically identified under other activity codes

4.1.R. CODE 17 - SCHOOL-RELATED AND EDUCATIONAL ACTIVITIES

U - Direct Medical Services

U - Administrative Outreach

This code is used for any other school-related activities that are not health-related, such as social services, educational services and teaching services, and employment and job training. These activities include the development, coordination, and monitoring of a student’s education plan.
It includes related paperwork, clerical activities, or staff travel required to perform these activities. Examples of activities may include:

- Providing classroom instruction (including lesson planning)
- Testing and correcting papers
- Compiling attendance reports
- Performing activities that are specific to instructional, curriculum, and student-focused areas
- Reviewing the education records for students who are new to the school district
- Providing general supervision of students (e.g., playground, lunchroom)
- Monitoring student academic achievement
- Providing individualized instruction (e.g., math concepts) to a special education student
- Conducting external communications related to school educational issues/matters
- Compiling report cards
- Applying discipline activities
- Activities related to the immunization requirements for school attendance
- Compiling, preparing, and reviewing reports on textbooks or attendance
- Enrolling new students or obtaining registration information
- Conferring with students or parents about discipline, academic matters, or other school-related issues
- Evaluating curriculum and instructional services, policies, and procedures
- Participating in or presenting training related to curriculum or instruction (e.g., language arts workshop, computer instruction)
- Translating an academic test for a student
- Transportation, if covered as a medical service under Medicaid

4.1.S. CODE 17(D) - NON-RETURNED MOMENTS

U - Direct Medical Services

U - Administrative Outreach

This code is used for moments that are not returned by the published deadline. As long as the compliance rate remains above 85%, these moments will not be used as a negative factor in the RMTS calculation.
4.1.T. CODE 18 - NOT SCHEDULED TO WORK AND NOT PAID

U - Direct Medical Services

U - Administrative Outreach

This code is used for time study participants who are not scheduled to work and not paid on the randomly selected moment pre-printed on the time study form.

Examples of this may include:

- Participant is a part-time employee who is not scheduled to work at the selected sample time
- The selected sample time falls before or after the participant’s scheduled work day
- School is closed due to an unpaid holiday or an unpaid school district day off (i.e., winter break, spring break, or a built-in “bad weather day”)
- Unpaid leave of absence
SECTION 5 – CONFIDENTIALITY

Aggregate time study data may occasionally be useful for other administrative tasks (i.e., planning) and may be used in that way. However, any individually identifiable information must be protected as required by all applicable state and federal statutes and regulations to ensure confidentiality and protection of privacy.
SECTION 6 – TIME STUDY TRAINING

6.1 TRAINING

The approved training methods, materials, information, and instructions are tailored to each group involved in the time studies.

The Contractor, along with MDHHS, is responsible for developing training programs and materials and, along with the ISD coordinator, providing follow-up assistance as needed. For training, there are some services the Contractor will provide statewide and other services that will be provided to the individual ISDs.

6.1.A. LOCAL ISD COORDINATOR TRAINING

All ISDs have an ISD Coordinator/representative who receives training that ensures a thorough understanding of their coordinator responsibilities, the approved time study and cost reporting activities. These individuals must understand their role as the liaison between the Medicaid Program, the Contractor, and other staff. They must understand and be able to convey to others the basic purpose of the program, assist the Contractor with follow-up as needed, and serve as a facilitator for the Contractor to "navigate" the district as necessary.

6.1.B. TIME STUDY PARTICIPANT TRAINING

For time study participants, it is essential that these individuals understand the purpose of the time studies, that time is of the essence related to completion of the form, and that their role is crucial to the success of the time study. The Contractor develops and provides detailed written information and instructions for completing the time study forms as a coversheet attached to each time study form. The coversheet provides a "tutorial" with the aforementioned basics of the program as well as information about the Medicaid covered services provided in the school setting.
SECTION 7 – SUMMARY OF TIME STUDY STEPS

The Contractor duties are to:

- Import eligible school district staff information to create the RMTS staff pools.
- Randomly select staff/moments to be sampled.
- Generate printed RMTS forms for each moment.
- Generate and distribute a master list of selected moments to the ISD Coordinators as a local control list.
- Generate mailing labels addressed to randomly selected staff.
- Scan completed and coded time study forms.
- Transfer raw data from scanned forms to the claims development software to calculate activity percentages for each of the activity codes.
- Produce quarterly reports summarizing the results of the random moment time studies (RMTS) and RMTS compliance reporting. (Both reports are forwarded to the MDHHS Program Policy Division for posting on the MDHHS website. Refer to the Directory Appendix for website information.)
- Produce periodic and special RMTS reports that provide data and information sorted by LEA and ISD that are provided to the CMS, MDHHS, MDE, ISDs and their auditors.
- Create and verify the eligible staff pools for time studies from the quarterly information provided by the ISDs.
- Distribute time study forms and collect completed time study forms.
- Code the activity forms received from the ISDs.
- Initiate and complete the ISD claim workbooks by obtaining the financial data from each LEA and compiling data to complete the workbook.
SECTION 8 – SUMMER QUARTER TIME STUDY METHODOLOGY

8.1 AOP QUARTERLY CLAIM (OTHER THAN SUMMER QUARTER)

The claim consists of the results of the quarterly RMTS of the approved staff pool for the quarter and the correlating allowable costs applied to the reimbursement methodology.

8.2 AOP SUMMER QUARTER FORMULA AND RANDOM MOMENT TIME STUDY

The summer quarter months are July, August and September. There is a break period between the end of one regular school year and the beginning of the next regular school year during which only a few staff are working. The majority of school staff work during the school year and do not work for part of the summer quarter (9-month staff). However, there are some 9-month staff that opt to receive their pay over a 12-month period. Therefore, different factors must be applied to the summer formula in order to accurately reflect the activities that are performed by the staff.

The summer quarter is divided into two parts producing two partial claims. For the AOP process, the sum of both claims is submitted to Medicaid for reimbursement for the summer quarter. The first part of the quarter is from July 1 to the date students return to school. The second part of the quarter is from the date students return to school through September 30.

The summer time study of 800 moments is performed after students return to school and is only applied to the staff pool costs for the second part of the summer quarter (Fall staff pool costs). The RMTS is performed during a shorter time period to accurately reflect the work efforts being performed when all staff have returned to work.

The sums of Part I and Part II are utilized to calculate the claim submitted to Medicaid for reimbursement.

8.2.A. PART I - JULY 1 TO THE INDIVIDUAL ISD DATE THAT STUDENTS RETURN TO SCHOOL

Part I of the summer quarter is comprised of the following elements:

- Staff Pool – those eligible staff in the April through June staff pool
- Costs – April through June allowable staff pool costs
- RMTS – average of the previous three quarters time study results

8.2.B. PART II – DATE STUDENTS RETURN TO SCHOOL THROUGH SEPTEMBER 30

Part II of the summer quarter is comprised of the following elements:

- Staff Pool – the eligible new Fall staff returning to work
- Costs – the allowable cost associated with the new Fall staff pool
- RMTS – the time study for Part II is performed for a shortened period of time from the day students return to school through September 30. The start date will vary by ISD depending on the date the students return to school.
8.3 Direct Medical Summer Quarter Formula and Random Moment Time Study

A weighted average of the four time study results for the staff pool periods listed below is applied to the Medicaid Allowable Expenditure Report (MAER) total costs. The MAER costs include the annual costs associated with the direct medical services, personal care services and targeted case management services.

The direct medical services time study application is comprised of the following elements:

- **Staff Pools** – Those individuals eligible to participate in the following four staff pool periods:
  - October through December
  - January through March
  - April through June
  - Date students return to school through September 30 (summer time study)
- **Cost Pool** – The costs from the annual Medicaid Allowable Expenditure Report (direct medical services, targeted case management and personal care services).
- **RMTS** – A weighted average of the October–December, January–March, April–June and the summer time study results as described above.

8.4 Financial Reporting Compliance Requirements

The financial data reported (salaries, benefits, supplies, purchased services, and other expenditures) must be based on actual detailed expenditures from LEA payroll and financial systems. Payroll and financial system data must be applied using generally accepted governmental accounting standards and principles or applicable administrative rules. The expenditures accumulated must correlate to the claiming period.
SECTION 9 – AUDIT AND QUALITY ASSURANCE

9.1 AUDIT

9.1 A. ACTIVITIES TO BE PERFORMED BY MDHHS OFFICE OF AUDIT STAFF

MDHHS audit staff review of selected ISD cost reports includes the following activities:

- Verification that the salaries listed for employees/positions included in the Random Moment Time Study (RMTS) staff pool match the payroll records for the same period as the time study.
- A review of the salaries of employees who changed positions during the time study period.
- If a replacement was hired/transferred, the auditor will verify that only the salary earned while working in a position on the staff pool list was reported, and that salaries for both the original and replacement employees were not duplicated on the report for the same time period.
- Verification that any other salaries and costs for supplies, etc., are of direct benefit to the employees on the relevant staff pool list and, therefore, allocable to that staff pool cost. For the Direct Medical program, all supplies and materials must be medically related.
- Confirmation that none of the direct costs reported were also claimed as an indirect cost, that the proper indirect cost rate was used, and the rate was applied only to costs in the base. The employees in non-standard job categories are the most likely to be considered indirect type employees; therefore, documentation will be reviewed for these individuals.
- Verification that no federal funds were claimed on the cost reports and that costs were not accepted for cost sharing.
- A standard review of other areas, such as confirmation that reported costs were actually paid, support documentation was maintained as required, and costs were properly charged to the correct accounts.
- Verification of recipient eligibility, documentation of services in the IEP/IFSP, and provider credentials.

The ISD must be prepared to direct the auditor to any document used to support and identify the reported RMTS costs.

9.1.B. SSAE 16 AUDIT REQUIREMENTS

The Contractor is required to have a Type II Statement on Standards for Attestation Engagements (SSAE) 16 audit to provide the necessary assurances that the claiming process (e.g., methodology, time studies, cost allocations, etc.) have been properly applied.

In a SSAE 16 Type II engagement, the service auditor expresses an opinion on whether the description of the service organization's system is fairly presented, whether the controls included in the description are suitably designed, whether the controls were
operating effectively, and provides a description of the service auditor’s tests of operating
effectiveness and the results of those tests.

The Contractor must undergo a SSAE 16 audit annually. The SSAE 16 audit must be
submitted within 90 days after the end of the examination period.

Three (3) copies of the audit should be forwarded to the MDHHS Program Policy Section.
(Refer to the Directory Appendix for contact information.)

9.2 QUALITY ASSURANCE, OVERSIGHT AND MONITORING

Quality assurance, oversight and monitoring activities include:

9.2.A. MDHHS PROGRAM POLICY - OVERSIGHT OF ADMINISTRATION AND OPERATIONS

MDHHS policy staff responsibilities are:

- Review quarterly time study results against historical benchmarks according to:
  - Overall results and matchable percentages
  - Benchmarks by activity code and by staff category
- Detailed investigation of anomalies in results.
- Determination of policy or procedure changes based on results of anomaly review.
- Overall statistical requirements in terms of confidence and precision levels on a quarterly
  basis and an annual basis.
- Sampling to review coding activities performed by the Contractor.
- Disseminate CMS guidance.
- Monitor ISDs processing of claims for compliance with State and Federal regulations and
  program guidelines.
- Assure that billing entities have the processes in place to correct any claims paid in error.
- Provide information and training to billing entities as needed for program compliance.
- Provide operational oversight and technical assistance.
- Assist the ISDs with quality assurance and compliance monitoring.
- Provide oversight of the ISDs quality assurance and compliance plans to insure that they
  provide oversight and monitoring of such things as documentation, provider credentials,
  record retention, parental consent, and confidentiality.
9.2.B. MDHHS OFFICE OF INSPECTOR GENERAL – POST PAYMENT REVIEW AND COMPLIANCE

MDHHS Office of Inspector General staff responsibilities are:

- Post payment review for the purpose of adherence to provider policy, provider credentials and appropriate billing practices.
- Post payment review for the purpose of reported fraud or abuse.

For more detailed information regarding the Fraud and Abuse and Post Payment Review, refer to the Post Payment Review and Fraud/Abuse Section of the General Information for Providers Chapter.

9.2.C. MDHHS RATE REVIEW SECTION – COST SETTLEMENT REVIEW

MDHHS Rate Review Section staff responsibilities are:

- Import and create a database of the cost report data submitted by the ISDs.
- Perform reviews of the data for accuracy and completeness.
- Summarize the data and forward to the ISDs for final approval.
- Compile cost settlement summaries and prepare over/under adjustments.

9.2.D. CONTRACTOR OVERSIGHT AND QUALITY ASSURANCE

There are several levels of quality assurance and validation built into the RMTS process.

- In terms of coding, the Contractor has a coding process in place in which centralized coders code all moments, and then a second coder reviews all moments coded as matchable for verification of accurate and consistent application of activity codes. The second coder also reviews a random sample of 10% of all non-matchable moments for quality assurance purposes.
- Quality assurance and validation includes the quarterly review which includes the Contractor meeting with MDHHS staff specifically to review time study results and other procedural issues. Each quarter, the team reviews detailed reports which outline the current quarter time study results benchmarked against past quarter results. The results are reviewed by activity code as well as by matchable/non-matchable categories. Comparisons are made of the variances in the overall quarterly results from the same quarter in the previous year, as well as variances of the current quarter against the average of the past four quarters. Results are reviewed and discussed in terms of results by staff category. Any anomalies identified are pursued through a detailed investigation of the moments which produced the anomaly. The Contractor, in conjunction with MDHHS, then determines how to handle any issues in terms of additional communication or training for RMTS participants, policy or procedural changes, etc.
- ISDs utilizing the web-based input process may view compliance reporting online.
- ISDs utilizing the paper methodology are sent compliance reporting on a weekly basis.
9.2.E. ISD OVERSIGHT

ISD responsibilities are to:

- have systems in place to monitor service delivery, claim documentation, claim billing, and payments received.
- verify that the credentials of all clinicians are current and appropriate for Medicaid billing and that services rendered are within the scope of the clinician’s practice.

SECTION 1 - GENERAL INFORMATION

This chapter applies to all providers.

The Michigan Department of Health and Human Services (MDHHS) administers the Medicaid Program, Children’s Special Health Care Services (CSHCS), Maternity Outpatient Medical Services (MOMS) and other special programs described elsewhere in this manual. In addition to these traditional programs, MDHHS administers many other programs/coverages to meet the healthcare needs of Michigan’s medically indigent population. Programs vary in scope and eligibility requirements and are funded through various sources, including federal, state, and/or private. Some of the programs offer comprehensive or reduced Medicaid benefits as indicated. Additional information regarding these programs may be available on the MDHHS website.

Contact information for the various programs is listed in the Directory Appendix.
SECTION 2 – PROGRAMS THAT TARGET SPECIFIC MEDICAL CONDITIONS

2.1 BREAST AND CERVICAL CANCER CONTROL PROGRAM

2.1.A. ELIGIBLE BENEFICIARIES

The Breast and Cervical Cancer Control Program (BCCCP) covers uninsured low-income women of all ages especially, but not limited to, women aged 40-64. Certain income restrictions do apply. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).

- Insured women may apply if certain insurance, age, and income requirements are met.
- Women who are enrolled in a managed care program, health maintenance organization (HMO) or have Medicare Part B are not eligible.

2.1.B. COVERED SERVICES

Covered services include:

- Clinical breast exams
- Pap smears
- Pelvic exams
- Screening mammogram, and
- Appropriate referral to community providers for follow-up of abnormalities.

Breast biopsy, colposcopy-directed services, colposcopy service, diagnostic mammograms, and loop electrosurgical excision procedure (LEEP) may be provided based upon medical needs, financial and insurance status, and availability of federal grant funds or Michigan tobacco tax dollars.

2.2 TRAUMATIC BRAIN INJURY REHABILITATION PROGRAM

2.2.A. ELIGIBLE BENEFICIARIES

The Traumatic Brain Injury (TBI) Rehabilitation Program covers adults age 18 or older who are U.S. citizens and have incurred a traumatic brain injury in the past 15 months, or have experienced a significant change within the last three months but are medically stable. Individuals must be a RANCHO 5-6 and currently Medicaid eligible. There must be a documented need for comprehensive, specialized rehabilitative services.

Individuals must be bowel and bladder trained and able to actively participate in 21 hours of therapy a week. Services must be provided under a physician approved plan of care and rendered in a residential or outpatient program that is accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF) and has an agreement with a Medicaid approved nursing facility.
2.2.B. COVERED SERVICES

In addition to regular Medicaid coverage, the TBI Rehabilitation Program provides:

- Hearing & speech/language services
- Occupational therapy
- Physical therapy
- Physician services
- Psychological services
- Social work.

Vocational and educational services are not reimbursable by Medicaid.
SECTION 3 – GENERAL COVERAGE PROGRAMS

3.1 MEDICARE SAVINGS PROGRAM

3.1.A. ELIGIBLE BENEFICIARIES

Low income Medicare beneficiaries and those individuals who are eligible for Medicare but do not enroll due to the cost may participate in the Medicare Savings Program (MSP). Financial and nonfinancial requirements and restrictions do apply.

3.1.B. COVERED SERVICES

The MSP pays Medicare coinsurance, deductible, and premiums.

3.2 SPECIAL N SUPPORT

3.2.A. ELIGIBLE BENEFICIARIES

Families that received the low-income families (LIF) Medicaid but are no longer eligible due to an increase in child support may qualify for Special N Support. Most of the health coverage is provided by Medicaid Health Plans (MHPs), and the majority of the beneficiaries are already enrolled in a MHP.

3.2.B. COVERED SERVICES

Special N Support beneficiaries receive regular Medicaid coverage for four months.

3.3 FREEDOM TO WORK

3.3.A. ELIGIBLE BENEFICIARIES

Medicaid-eligible disabled adults aged 16 through 64 years old with earned income may be eligible. A beneficiary must move into this Medicaid category from another Medicaid category. SSI beneficiaries whose SSI eligibility may end due to financial factors are among those eligible to be considered for this program.

To be eligible, the beneficiary must be employed on a regular and continuing basis. There may be temporary breaks in employment up to 24 months if they are the result of involuntary layoff or are determined to be medically necessary.

For a married beneficiary, the spouse's income and assets are not considered when determining eligibility for this Medicaid category. The beneficiary's total countable unearned income cannot exceed 100 percent of the Federal Poverty Level (FPL). The beneficiary's countable assets are limited to $75,000. In addition, the beneficiary is allowed to have IRS-recognized retirement accounts (including IRAs and 401Ks) of unlimited value.
3.3.B. COVERED SERVICES

Freedom To Work beneficiaries receive regular Medicaid coverage.

3.3.C. PREMIUMS

If the beneficiary’s earned income is below 250 percent of the FPL, there is no premium required for coverage. If the beneficiary’s earned income is between 250 percent of the FPL and $75,000 per year, the premium is based on the sliding fee scale. If the total countable earned income exceeds $75,000 per year, the beneficiary must pay a premium equal to 100 percent of the cost of Medicaid coverage.

3.4 MEDICAID FOR SUPPLEMENTAL SECURITY INCOME BENEFICIARIES

3.4.A. ELIGIBLE BENEFICIARIES

Supplemental Security Income (SSI) covers disabled children whose families have low income, and low-income adults who are aged, disabled or blind. The Social Security Administration determines eligibility and awards monthly SSI payments based on income and assets requirements. Beneficiaries awarded SSI are automatically eligible for regular Medicaid coverage.

3.4.B. COVERED SERVICES

SSI beneficiaries are eligible for regular Medicaid. In some cases, Medicare premiums are paid by Medicaid based upon certain individual situations and previous work histories.

3.5 TRANSITIONAL MEDICAL ASSISTANCE

3.5.A. ELIGIBLE BENEFICIARIES

Transitional Medical Assistance (TMA) covers families who are U.S. citizens that are no longer eligible for the low-income family (LIF) Medicaid because the parent(s) has too much income from employment. The family must have received low-income family Medicaid for at least three months of the previous six months to be eligible for TMA. Most of the health coverage is provided by HMOs contracted by MDHHS. The majority of the beneficiaries are already enrolled in a MHP. A renewal of the application to TMA is not necessary.

3.5.B. COVERED SERVICES

TMA provides regular Medicaid coverage, or a comprehensive health care package that includes vision, dental and mental health services, if the beneficiary has been enrolled in a MHP for 12 months.

3.6 TRANSITIONAL MEDICAL ASSISTANCE PLUS

(NOTE: TMA-Plus was discontinued as of April 1, 2014.)
3.6.A. ELIGIBLE BENEFICIARIES

Transitional Medical Assistance Plus (TMA-Plus) covers adults in families who are U.S. citizens that are unable to purchase employer sponsored health care coverage. Income restrictions and requirements do apply. Adults can apply for TMA-Plus after being enrolled in TMA for twelve months. A renewal of the application to TMA-Plus is not necessary. Monthly premiums are based on the number of adults covered and how long they have been in TMA-Plus. (NOTE: TMA-Plus was discontinued as of April 1, 2014.)

3.6.B. COVERED SERVICES

TMA-Plus provides regular Medicaid coverage, or a comprehensive health care package, which includes vision, dental and mental health services, if the beneficiary has been enrolled in a MHP for twelve months. This is not a benefit for children. (NOTE: TMA-Plus was discontinued as of April 1, 2014.)
**SECTION 4 – COMMUNITY-BASED LONG TERM CARE**

**4.1 MI CHOICE WAIVER (HOME AND COMMUNITY-BASED WAIVER FOR THE ELDERLY AND DISABLED)**

The MI Choice Waiver provides services to aged and physically disabled individuals 18 years old and over who are eligible for full Medicaid and want to stay in their homes or another residential setting but, without the provision of waiver services, would require the level of care only available in a nursing facility. Income and assets requirements and restrictions apply. Applicants must also meet the Michigan Medicaid Nursing Facility Level of Care Determination criteria. Individuals must be currently Medicaid approved or be Medicaid eligible if they were to enter a nursing facility. MDHHS contracts with local agencies to administer this program. (Refer to the MI Choice Waiver Chapter for additional information.)

**4.2 PROGRAM OF ALL-INCLUSIVE CARE FOR THE ELDERLY (PACE)**

PACE is a comprehensive service delivery system for frail, elderly individuals who meet the Michigan Medicaid Nursing Facility Level of Care criteria. Refer to the PACE Chapter of this manual for additional information.
**SECTION 5 – MI CHILD**

**5.1 ELIGIBLE BENEFICIARIES**

Children under age 19 who are U.S. citizens or documented aliens not eligible for Medicaid, who do not have health coverage, and whose families meet certain income requirements and restrictions are eligible for MI Child. Health coverage is provided by HMOs contracted by MDHHS. A $10.00 monthly premium per family is required and there are no copayments or deductibles.

**5.2 COVERED SERVICES**

The following services are covered for MI Child beneficiaries:

- Dental
- Emergency care
- Hearing
- Inpatient and outpatient hospital
- Laboratory
- X-rays
- Mental health and substance abuse services
- Pharmacy
- Physician
- Prenatal care and delivery
- Vision
SECTION 6 – CHILD AND ADOLESCENT HEALTH CENTERS AND PROGRAMS

Under an agreement with MDHHS, Child and Adolescent Health Centers and Programs (CAHCPs) provide medical services and outreach on behalf of the Medicaid Health Plans (MHPs) to school-aged children. (Refer to the Medicaid Health Plan Chapter of this manual for additional information.)

SECTION 1 – GENERAL INFORMATION

Under the Indian Self-Determination and Education Assistance Act (Public Law 93-638), tribal facilities, including Tribal Health Centers (THCs), are those owned and operated by American Indian/Alaska Native tribes and tribal organizations under contract or compact with the Indian Health Service (IHS).

The Michigan Department of Health and Human Services (MDHHS), which administers the State Medicaid Agency (SMA), has the authority to enter into reimbursement agreements with THCs to establish a payment mechanism for Medicaid beneficiaries receiving outpatient services through a THC. The reimbursement agreement is called a Memorandum of Agreement (MOA). THCs have the option of signing either the THC MOA or the Federally Qualified Health Center (FQHC) MOA. The MOA is effective when both MDHHS and a THC have signed the agreement. Outpatient benefits covered under the MOA are outlined in the Michigan Medicaid State Plan.

Information in this chapter is to be used by THCs that have signed the THC MOA. This chapter is to be used in combination with other chapters in this manual.

Under the Michigan Medicaid State Plan, THCs have the option of choosing from one of three reimbursement mechanisms. The THC may elect to be reimbursed under only one of the options listed below, and the selected option applies to all beneficiaries receiving services at the THC. The options are:

- A THC may choose to be certified as an IHS facility, sign the THC MOA and receive the IHS encounter rate in accordance with the terms of the MOA.
- A THC may choose to be certified as an FQHC, sign the FQHC MOA, and receive the encounter rate set by the State in accordance with federal requirements.
- A THC may elect neither the THC nor the FQHC MOA. In this event, reimbursement to the THC defaults to the payment methodology described under section 1902(bb) of the Social Security Act. (Refer to the Federally Qualified Health Centers Chapter of this manual for additional information.)
SECTION 2 – MEDICAID ENROLLMENT

2.1 PROVIDER ENROLLMENT

MDHHS requires all THCs to have a Group (Type 2 - Organization) National Provider Identification (NPI) number in order to receive the enhanced THC reimbursement. For THCs with multiple locations and multiple rates, an NPI number for each location may be necessary so that the proper reimbursement rate of all encounters can be determined. If the THC fails to obtain and/or use the correct NPI number, the THC reimbursement will be determined under fee for service rules. The NPI number must be reported to MDHHS before billing Medicaid services.

Individual providers (doctors, dentists, optometrists, etc.) are required to obtain a Provider (Type 1 - Individual) NPI number and report the number to MDHHS.

2.2 NONENROLLED PROVIDERS

Professional services provided by THC clinical social workers and clinical psychologists are reimbursed under the THC PPS. Since MDHHS does not directly enroll these providers, claims for their services must be billed using the NPI of the supervising physician responsible for ensuring the medical necessity and appropriateness of the services. Claims submitted with the non-enrolled provider’s NPI in the rendering provider field will reject.
SECTION 3 – BENEFITS

3.1 COVERED SERVICES

THC services are reimbursed at the current Medicaid fee screens and reconciled annually to the THC MOA rate (if the THC rate is elected) when provided to fee-for-service (FFS) Medicaid beneficiaries. THC Medicaid services include:

- Physician (MD, DO) services
- Podiatrist (DPM) services
- Chiropractor (DC) services
- Optometrist (OD) services
- Dental (DDS) services
- Certified nurse practitioner (CNP) services
- Certified nurse midwife (CNM) services
- Physician assistant (PA) services
- Services and supplies incident to the services rendered by the provider:
  - Pharmacy services administered by the provider and billed under the provider’s NPI number
  - Laboratory services billed under the provider’s NPI number
  - Diagnostic services billed under the provider’s NPI number
- Therapies (i.e., Occupational, Physical, and Speech, Hearing, and Language Evaluation and Therapy) rendered under the physician’s NPI number

The services listed may be modified in accordance with benefits covered under the Medicaid State Plan. MDHHS notifies providers of changes (additions/deletions) in Medicaid covered services through the Medicaid bulletin process. Providers should refer to these documents to verify that benefits are covered prior to rendering services.

For clarification of covered services:

<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Maternal Infant Health Program (MIHP)</strong></td>
<td>THCs providing Maternal Infant Health Program (MIHP) services must be certified through MDHHS. Information specific to the coverages and limitations for MIHP services are detailed in the Maternal Infant Health Program Chapter of this manual. If the THC subcontracts any MIHP services, no duplicate billing is permitted.</td>
</tr>
<tr>
<td><strong>Physician’s Assistant</strong></td>
<td>Physician’s assistant services must comply with coverages and limitations published in the Practitioner Chapter of this manual and in MDHHS Bulletins.</td>
</tr>
<tr>
<td><strong>Pharmacy Services</strong></td>
<td>Pharmacy services billed under the practitioner NPI number are included in the encounter rate but do not constitute a separate encounter for reimbursement at the THC MOA rate as they are considered part of the office visit. Under the THC MOA, practitioner pharmacy services do not include drugs provided by a pharmacy. THCs with enrolled pharmacy providers may continue to bill prescription claims to the MDHHS Pharmacy Benefits Manager (PBM). MDHHS contracts with a PBM for processing of all fee-for-service (FFS) pharmacy claims for Medicaid. (Refer to the Pharmacy Chapter of this manual for an explanation of coverages and limitations.)</td>
</tr>
<tr>
<td><strong>Laboratory Services</strong></td>
<td>The Practitioner Chapter of this manual explains the coverages and limitations of the Medicaid laboratory benefit. Laboratory services billed under the practitioner’s NPI number are included in the THC encounter rate but do not constitute a separate encounter for reimbursement purposes as they are considered part of the office visit. THCs cannot bill for any services rendered by an outside laboratory provider or for an outside laboratory’s employees performing tests.</td>
</tr>
<tr>
<td><strong>Diagnostic Services</strong></td>
<td>Diagnostic testing performed as part of an office visit must be directly related to the presenting condition and substantiated in the medical records. (Refer to the Billing &amp; Reimbursement for Professionals Chapter of this manual for billing information.) Diagnostic testing services do not constitute a separate encounter. These services are regarded as part of the office visit and are included in the encounter reimbursement. Examples of diagnostic tests are allergy testing, audiologic function tests, x-rays, and EKGs.</td>
</tr>
<tr>
<td><strong>Telemedicine</strong></td>
<td>A THC can be either an originating or distant site for telemedicine services. Refer to the Billing &amp; Reimbursement for Institutional Providers Chapter for specific billing instructions. Refer to the Telemedicine Section of the Practitioner Chapter for additional information regarding telemedicine services. Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.</td>
</tr>
<tr>
<td><strong>Therapies</strong></td>
<td>Physical therapy, speech therapy, and occupational therapy are covered when performed at the THCs. Refer to the appropriate chapter of this manual and MDHHS Bulletins for an explanation of current coverages and limitations. The Billing &amp; Reimbursement for Professionals Chapter of this manual describes the billing requirements for services provided. Therapies provided on the same date of service as a physician visit are included in the encounter reimbursement.</td>
</tr>
</tbody>
</table>
3.2 Dental Coverages and Limitations

THC dental services are covered if provided in the THC and must comply with coverages and limitations for dental services as specified in the Dental Chapter of this manual. Dental benefits covered for beneficiaries under the age of 21 differ from those covered for beneficiaries age 21 and over.

Information for billing dental services is published in the Billing & Reimbursement for Dental Providers Chapter of this manual.

The Healthy Kids Dental Program is administered by a contractor in selected Michigan counties. (Refer to the Directory Appendix for contact information.) Claims for services provided to beneficiaries enrolled in the Healthy Kids Dental Program should be submitted to the contractor. Payment is made based on the contractor’s fee schedule. No additional reimbursement is made by MDHHS.

3.3 Vision Coverages and Limitations

Vision services are covered if provided at the THC. Vision providers are ophthalmologists and optometrists. The vision services provided by an ophthalmologist or optometrist must comply with coverages and limitations published in the Vision Chapter of this manual.

MDHHS contracts for the volume purchase of frames and lenses from an optical house. Frames and lenses covered by the program must be ordered through the contractor and are listed in the Vision Chapter of this manual.

Some vision services require prior authorization (PA) before they can be rendered. The Vision Services Approval/Order Form (DCH-0893) is used to obtain PA. (Refer to the Vision Chapter for information on services that require PA and to the Forms Appendix for a copy of the form.)

3.4 Services Provided to Medicaid Health Plan Enrollees

For Medicaid-covered services provided to Medicaid beneficiaries enrolled in a Medicaid Health Plan (MHP), THCs receive payment from the MHP based on an agreement or contract with the MHP. No additional reimbursement from Medicaid is made to the THC for MHP members, in accordance with the THC MOA.

3.5 Medicare and Medicaid Beneficiaries

For dually eligible Medicare and Medicaid beneficiaries, Medicaid reimburses coinsurance and deductible amounts on Medicare-approved claims up to Medicare’s IHS encounter rate.
SECTION 4 – SUBSTANCE ABUSE

Outpatient substance abuse services provided by physicians, clinical social workers, clinical psychologists, and certified addiction counselors are reimbursed. These services may include:

- Initial complete physical
- Medical history
- Social history
- Psychiatric history
- Individual, family, and group counseling
- Outpatient substance abuse treatment
- Intensive outpatient counseling
- Therapies (i.e., Psychiatric occupational/recreational therapy) in a Tribal-operated substance abuse treatment center are covered services provided they are active, restorative, and designed to prevent, correct, or compensate for a specific medical problem.
- Methadone

4.1 REQUIREMENTS FOR PARTICIPATION

All programs must meet the following criteria to bill Medicaid for services:

- Licensed by the state licensing agency to provide each type of substance abuse service; and
- Accredited as an alcohol and/or drug abuse program by one of the five national accreditation bodies:
  - The Joint Commission
  - Commission on Accreditation of Rehabilitation Facilities (CARF)
  - American Osteopathic Association (AOA)
  - Council on Accreditation of Services for Families and Children (CASFC)
  - National Committee on Quality Assurance (NCQA)

4.2 AUTHORIZATION

Services provided at the THC to American Indian and Alaska Native beneficiaries do not require the authorization of Substance Abuse Coordinating Agencies (CAs).

4.3 AMERICAN INDIAN AND ALASKA NATIVE SERVICES

American Indians and Alaska Natives who are Medicaid beneficiaries can obtain substance abuse services directly from the THC. These services are not included in the MDHHS 1915(b) Waiver for Medicaid Prepaid Inpatient Health Plans and Substance Abuse Services. THCs should contact their regional Substance Abuse CA to determine the appropriate process for accessing other funding sources or other service providers for those individuals requiring substance abuse services not covered by the THC.
4.4 SERVICES PROVIDED TO NON-AMERICAN INDIANS AND ALASKA NATIVES

The MDHHS Prepaid Inpatient Health Plan (PIHP) for Specialty Developmental Disabilities, Mental Health and Substance Abuse services assumes responsibility for certifying admission/continuing stays and reimbursing claims for the specialized substance abuse services of non-American Indians and Alaska Natives. Refer to the Mental Health/Substance Abuse Chapter of this manual for further information on PIHPs, Mental Health and Substance Abuse Services. Substance abuse services for non-American Indians and Alaska Natives must not be billed under CPT and HCPCS codes.

4.5 SERVICE LIMITS

THCs may exceed the substance abuse treatment limits for American Indian and Alaska Native beneficiaries as long as the medical record and plan of care documents the medical necessity.

4.6 NONCOVERED SERVICES

The following substance abuse services are not covered when provided through THCs:

- Emergency and non-emergency transportation
- Initial emergency screening and medical stabilization
- Acute medical detoxification services
- Medications prescribed in the management or treatment of methadone
- Room and Board
SECTION 5 – MENTAL HEALTH

Outpatient mental health services provided by physicians, clinical social workers, and clinical psychologists are covered. These services may include:

- Health assessment
- Psychiatric evaluation
- Psychological testing
- All other assessments and testing
- Case management
- Child therapy
- Crisis interventions
- Crisis residential services
- Intensive crisis stabilization services
- Individual psychotherapy
- Family psychotherapy
- Group psychotherapy
- Interpretation or explanation of data to family
- Medication administration
- Medication review
- Therapies (i.e., psychiatric occupational/recreational therapy) in a mental health treatment center are a covered service provided they are active, restorative, and designed to prevent, correct, or compensate for a specific medical problem.

5.1 NONENROLLED PROVIDERS

Professional services provided by clinical social workers and clinical psychologists are covered. Individuals who meet Michigan licensure/certification requirements for social workers and psychologists may provide services.

See billing instructions for nonenrolled providers listed in the Uniform Billing of Paper and Electronic Formats Section of this chapter.

5.2 AUTHORIZATION

Mental health services provided at the THC to American Indian and Alaska Native beneficiaries do not require the authorization of PIHPs/CMHSPs.
5.3 American Indian and Alaska Native Services

American Indians and Alaska Natives who are Medicaid beneficiaries can obtain mental health services directly from the THC. THC services are not included in the MDHHS 1915(b) Waiver for Medicaid Prepaid Inpatient Health Plans (PIHPs) and Substance Abuse Services. THCs may refer tribal members to the PIHP/CMHSP for mental health services not provided at the THC.

5.4 Non-American Indian Services

PIHPs/CMHSPs assume responsibility for community-based mental health and developmental disability services covered through Medicaid for non-American Indians. Refer to the Mental Health/Substance Abuse Chapter of this manual for policies and procedures. Non-American Indian mental health services must not be billed under CPT or HCPCS codes.

5.5 Noncovered Services

Mental Health services that are not the responsibility of the THC are as follows:

- Home-based mental health services
- Nursing facility (NF) mental health monitoring
- Emergency and non-emergency transportation
SECTION 6 – ENCOUNTERS

THCs signing one of the MOAs are eligible to receive an encounter (per visit) rate as reimbursement for Medicaid covered services provided at the THC for Medicaid beneficiaries not enrolled in managed care.

The IHS outpatient all-inclusive rate (AIR) is determined by the Centers for Medicare & Medicaid Services (CMS) and is published in the Federal Register. The FQHC encounter rate under the FQHC MOA is an alternative methodology that was based on the prospective payment system (PPS) outlined in section 1902(bb) of the Social Security Act.

6.1 DEFINITION

An encounter is a face-to-face visit between a Medicaid beneficiary and the THC provider of health care services who exercises independent judgment in the provision of Medicaid-covered services. The THC provider may be credited with no more than one face-to-face encounter with a given beneficiary per day, except when the beneficiary, after the first encounter, suffers a separate or different illness or injury requiring additional diagnosis or treatment.

For a service to be defined as an encounter, the Medicaid-covered service must be recorded in the patient’s record.

6.2 MHP ENROLLEES

Services provided to MHP enrollees are not recognized as encounters for reimbursement purposes under the THC MOA.

6.3 SERVICES BUNDLED IN THE ENCOUNTER

Ancillary Medicaid services (e.g., labs, x-rays, injections, etc.) are included in the per visit encounter. These ancillary services are described as being provided incident to the office visit. For example, lab services billed under the physician’s NPI number would not be considered a separate encounter.

Ancillary services provided at another facility are not bundled under the office visit encounter. For example, services provided by the local hospital are not included in the encounter.
SECTION 7 – BILLING

The Group (Type 2 - Organization) NPI number must be used as the billing provider on all electronic and paper claims submitted to Medicaid. Do not use Provider (Type 1 - Individual) as the billing provider. The billing provider loop or field is mandatory to complete.

The Provider (Type 1 - Individual) NPI number of the provider who performed the service should be entered as the rendering provider. Do not enter the Group NPI number as the rendering provider. NOTE: If the rendering provider field is left blank, the information in the billing provider field is used as the rendering provider which may result in improper edits and rejection of the claim.

MDHHS will use the billing provider NPI field (Type 2 - Organization) to determine the number of encounters and calculate the settlement for the year-end reconciliation.

7.1 OTHER INSURANCE

Billing instructions related to coordination of benefits are published in the Coordination of Benefits Chapter of this manual. Other insurance and all other payments received for services rendered to a Medicaid beneficiary must be reported. If payment received from other insurance exceeds the amount Medicaid would have paid, the THC must still submit a claim to Medicaid with the appropriate procedure code in order for the visit to be counted as an encounter under the MOA.

7.2 MEDICARE AND MEDICAID CLAIMS

Refer to the Billing & Reimbursement for Professionals Chapter of this manual for specific instructions regarding Medicare and Medicaid claims. If the Medicare payment exceeds the Medicaid fee screen, the appropriate FFS procedure code should still be billed to Medicaid for encounter and reconciliation purposes.

7.3 PAYER OF LAST RESORT

The IHS is the payer of last resort for persons defined as eligible for contract health services under the regulations in 42 CFR, Part 36a, Subpart G, Section 36.61, notwithstanding any State or local law or regulation to the contrary.

7.4 COPAYMENTS

Medicaid copayments for chiropractic, dental, physician, podiatry and vision services are waived under the THC benefit as part of the reconciliation. (Refer to the General Information for Providers chapter for a list of services requiring copayments.)

Refer to the Billing Beneficiaries Section of the General Information for Providers Chapter of this manual for additional information regarding copayment requirements. Beneficiaries may not be denied care or services based on inability to pay a copayment, except as outlined in that section.
7.5 BILLING LIMITATION

The same billing limitations explained in the General Information for Providers Chapter of this manual pertain to encounters as well as claim submission.

7.6 PLACE OF SERVICE

THC services provided to beneficiaries at the THC are reconciled to the THC outpatient facility all-inclusive encounter rate or according to the signed MOA. The appropriate place of service (POS) code must be used on the claim form when billing. (Refer to the Billing & Reimbursement for Professionals Chapter of this manual for a list of POS codes.)

The THC may bill for services that are not provided at the THC. However, these services must be billed with the appropriate POS code in compliance with the coverages and limitations specified in the Practitioner Chapter of this manual. Except for the Maternal Infant Health Program maternal and/or infant support services provided in the home, only services billed with the THC POS code will be reconciled to the all-inclusive encounter rate.

Services billed to Medicaid are subject to audit and verifications.
SECTION 8 – MEDIACID PAYMENTS, ANNUAL RECONCILIATION AND APPEALS

8.1 QUARTERLY PAYMENTS

Under the MOA, quarterly payments are made to the THC at the beginning of each quarter. The payment is based on an estimate of the difference between the amount the THC receives for Medicaid services from FFS claims and other third party payments (including Medicare) during the year and the amount due the center based on the THC encounter rate.

8.2 INITIAL RECONCILIATION AND SETTLEMENT

An annual reconciliation ensures that reimbursement is at the rates agreed to in the THC MOA. The initial reconciliation and settlement is calculated approximately six months after the THC’s fiscal year end. The number of encounters is determined from Medicaid fee-for-service (FFS) approved claims. Any difference between the THC rate and the amount paid to the THC from FFS payments, other insurance and quarterly payments is paid to or recovered from the THC. Future quarterly payments are adjusted based on the information in the initial reconciliation.

8.3 FINAL RECONCILIATION AND SETTLEMENT

A final reconciliation and settlement is calculated approximately one year after the THC’s fiscal year end. This will allow time for all claims to clear the payment system.

8.4 APPEALS

A Medicaid provider has the right to appeal any adverse action taken by MDHHS unless that adverse action resulted from an action over which MDHHS had no control (e.g., Medicare termination, license revocation). The appeals process is outlined in MDHHS Medicaid Provider Reviews and Hearings rules R400.3401 through R400.3424, filed with the Secretary of State on March 7, 1978. Any questions regarding this appeal process should be directed to the Michigan Administrative Hearing System (MAHS). (Refer to the Directory Appendix for contact information.)

  3.1 NPI Edits ................................................................................................................................... 3
Section 4 – Billing & Reimbursement .................................................................................................... 4
  4.1 Copay Requirements .................................................................................................................. 4
SECTION 1 - GENERAL INFORMATION

An Urgent Care Center (UCC) is a medical clinic or office, not located in a hospital emergency department, whose purpose is to provide unscheduled diagnosis and treatment of illnesses for ambulatory beneficiaries requiring immediate medical attention for non-life-threatening conditions. It is expected that UCCs will provide access to a place of service (POS) more appropriate than a hospital emergency department for addressing non-emergency medical needs when a beneficiary's primary care provider (PCP) is not available.

1.1 Staff Credentials

The UCC medical director must be a Michigan-licensed physician. The UCC medical director is responsible for the medical management of the UCC. All Medicaid-covered physician services must be performed by the physician, the physician's employee, or an employee of the same legal entity that employs the physician under the physician's delegation and supervision. Only persons currently licensed/certified in an appropriate health occupation/profession (e.g., physician assistant, nurse practitioner), as authorized by Public Act 368 of 1978 as amended, may provide direct patient care under the delegation and supervision of a physician when the physician is not physically present on the premises.

1.2 Hours of Operation

UCCs must be open seven days a week, and include evening hours, weekends and holidays. Hours of operation must be posted in the facility. UCCs must accept walk-in patients of all ages during all hours the facility is open to see patients.
SECTION 2 - COVERED SERVICES

Unscheduled, non-emergency, medically necessary services that are a non-life threatening condition or injury or illness that can be treated appropriately in a UCC are Medicaid covered services.

Michigan Department of Health and Human Services (MDHHS) covered services are based on the level of care that can be appropriately rendered in an urgent care place of service.

MDHHS will not cover separate facility charges.

Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

All facilities must provide clinical documentation for services rendered and complete a discharge summary which must be sent to the appropriate PCP. If a beneficiary does not have a PCP, the facility must document assistance with arranging a medical home for follow-up care.
SECTION 3 – PROVIDER ENROLLMENT

Providers must be enrolled with Medicaid and have a valid Type 2 (Group) National Provider Identifier (NPI) for MDHHS claim adjudication.

Claims must also include the appropriate Type 1 (Individual) NPI of the specific provider performing the service(s) as the rendering provider. A valid MDHHS-enrolled rendering provider number is required for claim adjudication. Providers must not enter a Type 2 (Group) NPI as the rendering provider. The Group NPI must be reported as the billing provider.

3.1 NPI Edits

MDHHS NPI claim editing will be applied to attending, billing, referring, rendering and supervising providers, as applicable. A claim cannot be paid if the NPI is missing or the reported NPI is invalid as it does not check digit and/or correctly crosswalk to the Provider Enrollment files for these provider loops or fields.
SECTION 4 – BILLING & REIMBURSEMENT

UCC providers must follow uniform billing guidelines using the professional CMS-1500 claim format or electronic Health Care Claim Professional (837) ASC X12N Version 5010 information. All providers are encouraged to bill electronically. Refer to the Billing & Reimbursement for Professionals chapter for additional CMS-1500 or 837P Professional claims submission and billing information.

If ancillary services are provided by UCC staff using hospital-owned equipment (i.e., done in the same building where urgent care is located), the hospital may bill that service on the institutional claim format for the technical service.

Reimbursement is based on the practitioner fee schedule. Services performed in a UCC are reimbursed at the non-facility rate based on the non-facility relative value unit (RVU). MDHHS utilizes the Medicaid National Correct Coding Initiative (NCCI) coding policies and edits as developed by the Centers for Medicare & Medicaid Services (CMS) to promote national correct coding methodologies. To avoid duplicate payments, UCC providers must submit only one non-facility service claim per beneficiary per DOS. Separate physician service claims should not be submitted.

4.1 Copay Requirements

A copayment of $2.00 may be required for office evaluation and management (E&M) visits for beneficiaries age 21 years and older. Enrollees in the Breast and Cervical Cancer Control Program (BCCCP) are exempt from co-pays. Native American Indians/Alaska Natives are exempt from co-pays consistent with federal regulations at 42 CFR §447.56(a)(1)(x).

The MDHHS Co-Payments Requirements document, available on the MDHHS website, provides detailed information regarding the specific services to which the copays are applied. (Refer to the Directory Appendix for website information.)

SECTION 1 – GENERAL GUIDELINES AND REQUIREMENTS

The Michigan Department of Health and Human Services (MDHHS) contracts for the volume purchase of frames and lenses from an optical laboratory, referred to in this chapter as the contractor.

Vision providers (e.g., opticians, dispensing ophthalmologists, optometrists) must order frames and lenses from the contractor. A list of lenses is available in the MDHHS Vision Services Fee Schedule located on the MDHHS website. A list of available frames is available from the contractor, currently Classic Optical Laboratories. (Refer to the Directory Appendix for contact information.)

Orders placed with the contractor must be postmarked no later than 30 days after the date of order. If orders are placed beyond the 30 days, the contractor returns the order to the provider, who must explain to Medicaid why submission was delayed and request an exception from the time limit.

Procurement of contact lenses, low vision aids, and prosthetic eyes must be obtained from the vision provider’s own source and are subject to prior authorization (PA) requirements as described in this chapter.

1.1 BENEFICIARY ELIGIBILITY AND COPAYMENTS

Providers must verify beneficiary eligibility prior to rendering services or ordering materials. If a beneficiary’s eligibility expires prior to the date the material is delivered, reimbursement is made only if the beneficiary was eligible on the date the material was ordered by the vision provider and the date of order is used when billing. (Refer to the Beneficiary Eligibility Chapter of this manual for additional information.)

A $2 copayment may be required for Medicaid beneficiaries age 21 and older for each separately reimbursable:

- Ophthalmological service performed by an optometrist or ophthalmologist; and
- Dispensing service for glasses or contact lenses billed by dispensing ophthalmologists or optometrists.

(Refer to the General Information for Providers Chapter of this manual for information on exceptions to Medicaid copayment requirements.)

Refer to the Billing Beneficiaries Section of the General Information for Providers Chapter of this manual for additional information regarding copayment requirements. Beneficiaries may not be denied care or services based on inability to pay a copayment, except as outlined in that section.
1.2 PRIOR AUTHORIZATION

Some vision services and materials require PA before they can be rendered. Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

The Vision Services Approval/Order Form (DCH-0893) is used to obtain PA. A copy of the DCH-0893 and completion instructions can be found in the Forms Appendix of this manual. Complete and mail or fax the DCH-0893 to the MDHHS Program Review Division. (Refer to the Directory Appendix for contact information.) PA requests must be postmarked no later than 30 calendar days after the date of order. If beyond the 30 days, the provider must include a detailed explanation of why the submission was delayed.

When requesting prior approval, providers should make a photocopy of the completed form for the beneficiary file. Upon completion of the PA process, MDHHS returns one copy of the DCH-0893 to the provider.

An electronic copy of the DCH-0893 is available on the MDHHS website. (Refer to the Directory Appendix for website information.)

1.3 CODING OF SERVICES

The American Medical Association’s (AMA) Current Procedural Terminology (CPT) is the national coding standard for health care professional services. Vision providers must use CPT codes in effect on the date of service to describe and identify the services and procedures performed. Optometrists must be Therapeutic Pharmaceutical Agent certified in order to use many of these codes. All prescriptions or prescription orders must comply with state and federal laws. (Refer to the Pharmacy Chapter of this manual for additional information.)

Providers must use the International Classification of Diseases (ICD) for diagnostic coding of diseases, injuries, and conditions. Codes must be used at the highest level of specificity.

Healthcare Common Procedure Coding System (HCPCS) is a system developed by the Centers for Medicare & Medicaid Services (CMS) to report materials, supplies, and certain services not covered by the CPT codes. HCPCS codes are to be used when applicable.

1.4 MEDICARE

All vision services are subject to editing for Medicare coverage. MDHHS reimburses vision providers for coinsurance and deductible amounts on Medicare-approved claims up to Medicaid’s reimbursement limit.

If a service requires PA by Medicaid and is covered by Medicare, vision providers do not have to obtain PA, nor does the vision provider have to obtain lenses or frames through the volume purchase program.

(Refer to the Billing & Reimbursement for Professionals Chapter of this manual for additional information.)
1.5 CONTRACTOR GUARANTEE

Frames and lenses furnished by the contractor are guaranteed for 60 days. If any material is found to be unsatisfactory due to contractor error or defective workmanship or materials, the materials and work order form should be returned to the contractor. The contractor is required to correct, adjust, or replace the materials.

If the vision provider supplies the contractor with incorrect specifications that results in eyeglasses being fabricated which the beneficiary cannot use, the vision provider is responsible for payment to the contractor for the remake. The contractor may not charge the vision provider more than what they would charge MDHHS for the remake. MDHHS does not pay for the remake (e.g., eyeglasses, lenses, or frames) due to vision provider error.

1.6 COMPLAINT PROCESS

To resolve problems (such as an overdue shipment, error in an order, or defective workmanship), vision providers should first contact the contractor.

If the lenses and/or frames are not received from the contractor within 21 days from the date they were ordered, vision providers are responsible for contacting the contractor to determine the cause of the delay.

If difficulties are encountered with the contractor in resolving a problem, vision providers should call the Vision Contract Manager. (Refer to the Directory Appendix for contact information.) Vision providers must be prepared to report the beneficiary’s name and Medicaid ID number, and a detailed explanation of the problem(s) they have experienced.

MDHHS reviews the complaint, takes necessary action to correct the problem, and notifies the vision provider of the resolution.
SECTION 2 – DIOPTER CRITERIA

2.1 INITIAL LENSES

Initial lenses are considered to be the first prescription lenses ever worn by a person regardless of how they were obtained (e.g., through Medicaid, other insurance, or private pay). Initial lenses are a Medicaid benefit and do not require PA if the following minimum diopter criteria are met:

<table>
<thead>
<tr>
<th>Age Group 42 Years and Younger</th>
<th>Age Group 43 Years and Older</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.50D myopia</td>
<td>0.50D myopia</td>
</tr>
<tr>
<td>0.50D astigmatism</td>
<td>0.50D astigmatism</td>
</tr>
<tr>
<td>0.75D anisometropia</td>
<td>0.75D anisometropia</td>
</tr>
<tr>
<td>0.75D hyperopia</td>
<td>0.50D hyperopia</td>
</tr>
</tbody>
</table>

2.2 SUBSEQUENT LENSES

Regardless of age group, subsequent lenses are medically necessary lenses that are provided after initial lenses. Subsequent lenses are a Medicaid benefit and do not require PA if there is a change in the refractive error of 0.75D or more in the meridian of greatest change, or a change in the cylinder axis of at least 10 degrees for cylinders of 1.00D or more. These lenses must also meet minimum dioptric criteria as specified above. The change need only be present in one eye.

The following example illustrates how this requirement is assessed for a new correction (+2.75 -0.75 ax 092) and a previous correction (+2.25 -0.25 ax 090). The dioptric power in each meridian can be portrayed in the form of cross diagrams.

New Correction: +2.75 -0.75 +2.00

Previous Correction: +2.25 -0.25 +2.00

This is an example of where the change in dioptric power for subsequent lenses has not been met. Note that the resultant powers in the vertical meridians of the "new" and "previous" correction are +2.75 and +2.25 respectively. There is only a 0.50D change in the vertical meridian and no change in the horizontal.

For periods greater than 24 months from the date of the previous prescription, subsequent lenses may be ordered for diopter changes less than those specified above.
**SECTION 3 – SERVICES**

This section provides information on both Medicaid covered and noncovered services.

### 3.1 DIAGNOSTIC SERVICES

In providing services, it is the responsibility of the optometrist or ophthalmologist to determine that the services are medically necessary, appropriate, and within the scope of current medical practice and Medicaid limitations. The prescribing optometrist or ophthalmologist is held responsible if he orders excessive or unnecessary services, regardless of who actually renders the services. The prescribing optometrist or ophthalmologist may be subject to corrective action related to these services, including recovery of funds.

*Documentation Guidelines for Evaluation and Management Services, 1995, 1997, or latest version thereof, developed jointly by CMS and the AMA, must be adhered to when using the CPT/HCPCS procedure codes.*

| Eye Examinations | ▪ A routine eye examination once every two years is a Medicaid benefit and does not require PA. Examinations include, but are not limited to, case history, determination of visual acuity (each eye), ophthalmoscopy, biomicroscopy, ocular motility, tonometry, refraction, diagnosis, treatment program and disposition. (Use appropriate CPT/HCPCS procedure codes for routine eye exam and applicable ICD diagnosis codes.) |
| Glaucoma Screenings | ▪ Nonroutine eye examinations are a Medicaid benefit for the purpose of evaluation and treatment of chronic, acute, or sudden onset of abnormal ocular conditions. (Use appropriate CPT/HCPCS procedure codes.) |

Glaucoma screenings are covered without PA on an annual basis for beneficiaries who:

- Have no ocular complaints or prior history of glaucoma and who have diabetes;
- Have a family history of glaucoma; or
- Are African-American, age 50 or older.

This screening entails a dilated eye examination, tonometry, and direct ophthalmoscopy or slit lamp examination. If this screening is provided as part of another billable service, separate reimbursement for this screening is not allowed. Use the appropriate CPT/HCPCS procedure code for glaucoma screening and the applicable ICD diagnosis code.

If the beneficiary presents with a visual or ocular complaint, the glaucoma screening code should not be used. The procedure code which best describes the visit should be selected from the CPT Evaluation and Management (E/M) codes or General Ophthalmological procedure codes.
3.2 Dispensing Services

Dispensing services are a Medicaid benefit and do not require PA. Vision providers may bill a dispensing fee for dispensing prescription lenses, prescription lenses with frames, or replacing a complete frame.

Reimbursement for the dispensing service includes the vision provider’s services in selecting, ordering, verifying, and aligning/fitting of eyeglasses as described above. Routine follow-up and post-prescription visits (e.g., for minor adjustments) are considered part of the dispensing service and are not separately reimbursable.

3.3 Nursing Facility Beneficiaries

Covered and noncovered vision services, as well as PA requirements, apply to vision services provided to beneficiaries residing in a nursing facility (NF).

Performance of vision services (except replacement of a frame part for eyeglass repair) must be upon the written request of the beneficiary, a member of the beneficiary’s family, or other beneficiary representative and upon the written order of the beneficiary’s attending physician (MD, DO) prior to the date of the vision provider’s visit.

If service is provided in the NF, a copy of the request and written order must be retained by the facility as part of the beneficiary’s record.

Vision services are not considered a part of the facility’s per diem rate. The vision provider or contractor must bill MDHHS for vision services rendered.

No additional payments are made to vision providers for a visit(s) to the NF. Appropriate procedure codes must be utilized.

3.4 Ophthalmic Frames and Lenses

A complete pair of eyeglasses is a Medicaid benefit and does not require PA when:

- The eyeglasses being prescribed are the beneficiary’s first pair of eyeglasses ever worn. These eyeglasses are considered to be initial eyeglasses and must meet minimum diopter criteria for initial lenses.
- The beneficiary's correction meets diopter criteria for subsequent lenses and the frames are unusable.
- A previously used frame requires oversized lenses. (Oversized lenses are not a Medicaid benefit, therefore, a complete pair of eyeglasses must be ordered.)
- Prescription lenses remain usable, but the original frame is broken beyond repair and the original frame is not a Medicaid benefit.
- The beneficiary’s correction meets diopter criteria for subsequent lenses and the frames remain usable, but the vision provider or beneficiary elects not to send the frames to the contractor or the contractor feels that the previously used frames will break or otherwise be damaged during lens insertion.
The beneficiary’s eyeglasses have been lost, stolen, or broken beyond repair and the number of replacements have not exceeded Medicaid limits which are:

- For beneficiaries age 21 and over, one pair of replacement eyeglasses per year.
- For beneficiaries under age 21, two pair of replacement eyeglasses per year.

One year is defined as 365 days from the date the first pair of eyeglasses (initial or subsequent) was ordered.

The DCH-0893 must be used when ordering frames and/or lenses. A copy of the form and instructions for completing the form are available in the Forms Appendix of this manual and on the MDHHS website. (Refer to the Directory Appendix for website information.) These orders must be sent directly to the contractor. Orders may be mailed, faxed, or entered directly online at the contractor’s website. (Refer to the Directory Appendix for contact information. The contractor must be contacted directly to register for on-line access.) The contractor fills the vision provider's order in accordance with the lens and frame specifications indicated on the DCH-0893. The order form is returned to the provider if the eligibility information is not completed.

Procedures identified as requiring PA must first receive approval from the MDHHS Program Review Division. (Refer to the Prior Authorization subsection in this chapter for instructions on obtaining PA.)

The contractor monitors orders to assure that Medicaid replacement limitations, diopter criteria, and PA requirements are being maintained. The contractor returns an order if the order exceeds the replacement limits, does not meet diopter criteria, or requires PA.

The contractor bills MDHHS for the frames and/or lenses ordered by vision providers. Vision providers subsequently bill for a dispensing service for dispensing the frames and/or lenses.

If the beneficiary has other insurance that covers frames and/or lenses, the material may still be obtained through the contractor. (Refer to the Billing & Reimbursement for Professionals and the Coordination of Benefits Chapters of this manual when billing for the dispensing service if other insurance is involved.)

3.4.A. LENSES

Lenses must conform to the latest edition of the *American National Standard Recommendations for Prescription Ophthalmic Lenses.*

Plastic and glass lenses are a Medicaid benefit. Refer to the Additional Code/Coverage Resource Materials subsection of the General Information for Providers Chapter for additional information regarding coverage parameters.

- Plastic and glass bifocals are available in Round 22, FT-28, FT-35, and Executive style.
- Plastic and glass trifocals are available in FT-7x28 segments.
Photochromic, Tinted and Dyed Lenses | PA is required for these lens features. Appropriate documentation of medical necessity must be attached to the DCH-0893 when submitted to the MDHHS Program Review Division.

Polycarbonate Lenses | For beneficiaries age 21 and over, polycarbonate lenses are a Medicaid benefit when diopter criteria is met and the lenses are inserted into a safety frame marked “Z 87” or “Z 87-2”. For beneficiaries under age 21, polycarbonate lenses may be inserted into any covered Medicaid frame and do not require PA.

Oversized lenses, no-line, progressive style multi-focals, or transitions are not Medicaid benefits.

### 3.4.B. OPHTHALMIC FRAMES

Frames must conform to the latest edition of the *American National Standard Requirements for the Dress Ophthalmic Frames.*

Ophthalmic frame styles that are a Medicaid benefit are available from the contractor. Vision providers may order sample frames directly from the contractor. The vision provider is charged for sample frames at the same price stated in the current contract. Neither the provider nor the contractor may charge Medicaid for sample frames.

Vision providers must offer a beneficiary the opportunity to select a frame from at least 80 percent of the total authorized frame styles. A vision provider who fails to comply with this requirement is subject to termination of enrollment in Medicaid.

If a frame manufacturer discontinues production of a frame that is listed as a benefit, vision providers may utilize the discontinued frame from their sample kit. If lenses are required, they must be ordered from the contractor. Submit the DCH-0893 to the MDHHS Program Review Division for approval. (Refer to the Directory Appendix for contact information.)

Safety Frames | Safety frames are a Medicaid benefit. A list of authorized safety frame styles is available from the contractor. These frames conform to ANSI Z87.1-2003 standards, and samples can be purchased from the contractor at contract prices. Only polycarbonate lenses of 2 millimeter minimum thickness shall be used in frames marked “Z 87” or “Z 87-2”.

Frame Repairs | Frame repairs (e.g., aligning temples, insertion of screws, adjusting frames) are not a separately reimbursable service and cannot be billed.

### 3.4.C. SUBSEQUENT LENSES PLACED IN PREVIOUSLY USED FRAMES

Subsequent lenses that are to be placed in a beneficiary’s previously used frame are a Medicaid benefit and do not require PA. Previously used frames are defined as ophthalmic frames in which the beneficiary has had previous corrective lenses incorporated and which were previously worn.

All noncontract previously used frames require PA.
To order subsequent lenses for insertion into a previously used frame, vision providers must complete the DCH-0893, indicating all information necessary for proper fabrication. Vision providers have the option of having the contractor insert the lenses, in which case the provider must supply the previously used frame to the contractor, or inserting the newly fabricated lenses into the frames in their office.

If the previously used frames are sent to the contractor for lens insertion, the contractor is required to fabricate the lenses and mail the frames and lenses to the vision provider within nine working days after receiving the frames. If a special prescription requires more than nine working days to complete, the contractor must notify the vision provider. If the provider does not receive the materials within three weeks from the date the order was sent, he should contact the contractor.

If the vision provider or beneficiary elects not to send the previously used frames as might be requested by the contractor, or if the contractor feels that the previously used frames may break or otherwise be damaged during lens insertion, the vision provider is requested to order a complete pair of eyeglasses.

If frames are sent to the contractor, either at the contractor’s request or the vision provider’s preference, the vision provider is responsible for paying the postage necessary to ship the frames. Also, vision providers are responsible for paying for frames lost or damaged in transit.

<table>
<thead>
<tr>
<th>3.4.D. REPLACEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Eyeglasses</strong></td>
</tr>
<tr>
<td><strong>Lenses Only</strong></td>
</tr>
</tbody>
</table>

**If a previously used frame requires lenses that are not a Medicaid benefit (e.g., oversize lenses), a complete pair of eyeglasses that are a benefit must be ordered.**
Frames Only

Replacement of a complete frame (front and temples) is a Medicaid benefit only when the original frame is broken beyond repair, the prescription lenses remain usable, and the replacement limits have not been exceeded. The replacement frame must be an identical replacement. If an identical frame is not listed as a Medicaid benefit, the beneficiary must select a frame that is a covered benefit.

The contractor bills Medicaid for the complete frame. The vision provider inserts the lenses into the frame and bills Medicaid for the dispensing service.

3.4.E. TWO PAIRS OF EYEGLASSES

Two pairs of single vision eyeglasses (one for near visual tasks and the other for distance visual tasks) are a Medicaid benefit in either of the following instances:

- When the beneficiary has clearly demonstrated the inability to adjust to bifocals after a reasonable trial period.
- When the beneficiary's physical condition does not allow bifocal usage.

PA is required when requesting two pairs of eyeglasses. Appropriate documentation must be attached to the DCH-0893 and submitted to the MDHHS Program Review Division.

Providing both multi-focal and single vision eyeglasses for interchangeable usage is not a Medicaid benefit.

3.4.F. NONDELEIVERABLE EYEGLASSES

If a beneficiary fails to return to the vision provider for dispensing of eyeglasses, the vision provider should make every effort to locate the beneficiary, including contacting the local MDHHS office in the beneficiary's area.

If the beneficiary still cannot be located, the eyeglasses should be sent to the local MDHHS office (or local nonprofit agency if the MDHHS office refuses to accept them) in the beneficiary's area within 90 days of placing the order with the contractor. Do not send the nondelivered lenses and/or frames to MDHHS unless requested to do so by MDHHS.

To bill for dispensing, the provider must use the date of order for the lenses and/or frames.

Medicaid does not reimburse vision providers for postage and handling.

3.4.G. EYEGLASS CASE

One eyeglass case for every complete pair of eyeglasses ordered is a Medicaid benefit and must be provided by the contractor. Vision providers cannot bill for eyeglass cases.
### 3.5 LOW VISION SERVICES

| **Evaluation** | A low vision evaluation is a benefit when the beneficiary presents with moderate visual impairment, severe visual impairment, or profound visual impairment. Under these conditions, a low vision evaluation does not require PA.

This evaluation includes, but is not limited to, a detailed case history, effectiveness of any low vision aids in use, visual acuity in each eye with best spectacle correction, steadiness of fixation, assessment of aids required for distance vision and near vision, evaluation of any supplemental aids, evaluation of therapeutic filters, development of treatment, counseling of beneficiary, and advice to family (if appropriate).

The CPT E/M or General Ophthalmological procedure code which best describes this service should be utilized. |
| **Aids** | High add bifocals do not require PA. For high add bifocals, complete the DCH-0893 and submit to the contractor.

The prescription and fitting of low vision optical aids (such as telescopes, microscopes, and certain other low vision aids) require PA. Only basic and essential low vision aids are a Medicaid benefit.

The Provision of Low Vision Services and Aids Support Documentation (MSA-0891) form outlines the information required when requesting PA for low vision services and aids. A sample of this form is provided in the Forms Appendix. It can also be obtained through the MDHHS website. (Refer to the Directory Appendix for website information.)

This form must be attached to DCH-0893 and submitted as part of the PA process. (Refer to the Prior Authorization subsection above.)

Reimbursement for a low vision aid is based on the manufacturer's charge for the aid plus a professional fee. Procurement of the low vision aid is done through the vision provider's own source. The professional fee includes procurement, verification, and fitting of the aid.

Only an enrolled optometrist or a dispensing ophthalmologist can bill for a low vision aid. |
| **Rehabilitative Services** | Low vision rehabilitative services include instructions, training, and assistance to the beneficiary in the most effective use of the low vision aid. Documentation for these services should be included when requesting the low vision aid. |

### 3.6 CONTACT LENSES

#### 3.6.A. EVALUATION

A comprehensive contact lens evaluation is a Medicaid benefit when the beneficiary presents with one of the following conditions (use appropriate HCPCS comprehensive contact lens evaluation code):

- Aniridia
- Anisometropia or Antimetropia (of two diopters or greater that results in Aniseikonia)
- Aphakia
- Irregular cornea
- Keratoconus (if vision cannot be improved to 20/40 or better with eyeglasses)
- Other conditions which have no alternative treatment (e.g., Aniseikonia with documentation and severe Keratoconjunctivitis sicca)

3.6.B. PRESCRIPTION AND FITTING

The prescription and fitting of contact lenses is a Medicaid benefit and requires PA, except for beneficiaries who are under six years of age with a diagnosis of aphakia.

3.6.B.1. PRESCRIPTION

The prescription for contact lenses requires the complete description of contact lens specifications. The following must be included on a prescription for contact lenses:

- complete description of the contact lens(es) parameters
- material of the contact lens(es)
- manufacturer of the contact lens(es)
- material discard and replacement schedule
- number of lenses required to provide a one-year supply
- prescription expiration date

3.6.B.2. FITTING

The fitting of the contact lens(es) must include:

- determination of appropriate initial contact lens parameters based on clinical observation, and measurements of the eye with or without a trial (sample) contact lens.
- a trial or adaption period of one to three months, including a fitting warranty that provides for adjustments in the contact lens parameters either by exchange or by modification of existing materials.

Note: Certain custom contact lens designs may not be warranted by the manufacturer. This type of custom contact lens design will be considered on a case-by-case basis. The provider must provide a detailed explanation of need, initial cost, and potential re-fitting cost.

- instruction of proper insertion, removal, disinfection, and care of the contact lens(es).
- initial supply of contact lenses, storage case, and solutions sufficient to last until the fitting is complete.

3.6.C. REPLACEMENT AND SUPPLIES

Procurement of contact lenses is to be done through the vision provider’s own source.
The Documentation of Medical Necessity for the Provision of Contact Lenses form (MSA-0892) outlines the information required when requesting contact lens PA. A sample of this form is provided in the Forms Appendix and can also be obtained through the MDHHS website. (Refer to the Directory Appendix for website information.)

This form must be attached to the Vision Services Approval/Order form (DCH-0893) and submitted to MDHHS as part of the PA process. (Refer to the Prior Authorization subsection in this chapter for additional information.)

Requests for contact lens replacements due to loss or damage will require PA and will be reviewed on an individual basis.

Except as previously indicated, contact lens supplies (e.g., wetting and cleaning solutions, carrying cases) are not Medicaid benefits.

3.7 STRABISMUS AND AMBLYOPIA EXAMINATION

Strabismus and amblyopia examinations (sensorimotor examination) are Medicaid benefits and do not require PA.

3.8 ORTHOPTICS AND PLEOPTICS TRAINING

<table>
<thead>
<tr>
<th>Orthoptics and Pleoptics Training</th>
</tr>
</thead>
<tbody>
<tr>
<td>Orthoptics and Pleoptics (O &amp; P) training is a Medicaid benefit only when there is a diagnosis of one of the following conditions:</td>
</tr>
<tr>
<td>• Amblyopia</td>
</tr>
<tr>
<td>• Esotropia</td>
</tr>
<tr>
<td>• Exotropia</td>
</tr>
<tr>
<td>• Heterotropia</td>
</tr>
<tr>
<td>• Strabismus</td>
</tr>
<tr>
<td>• Ocular Motor and Fusion Dysfunction</td>
</tr>
</tbody>
</table>

PA is not required for O & P training for beneficiaries under age 21. PA is required for beneficiaries age 21 and older for O & P training.

When requesting PA, the following documentation must be attached to the DCH-0893 and submitted to the Program Review Division:

| • Visual acuity, each eye, with best spectacle correction; |
| • Magnitude and direction of the subjective and objective angle of strabismus at distance and near; |
| • Refractive error of each eye; |
| • Degree of fusion; |
| • History of strabismus, including onset, duration, prior treatment; and |
| • Other relevant information. |
In addition to the above documentation, a detailed plan indicating the training procedures and equipment to be employed, frequency of office visits, home training aids, and prognosis must be attached to the DCH-0893. This training plan may be authorized for a period of up to three calendar months.

O & P training is limited to a maximum of 13 visits within the first three calendar months of therapy without PA. PA will be required for additional necessary visits.

If continued training beyond the period that was authorized is necessary, a new request for PA must be submitted with the following information:

- Update of the above-listed items;
- Report of the results of previous training; and
- Indication for further treatment with a detailed plan.

Orthoptic Training Aids

Orthoptic training aids are a Medicaid benefit when incorporated in an orthoptics or plaeoptics training plan (as described above) and require PA. The following documentation must be included with the vision provider's detailed plan when requesting the purchase of an aid:

- How the aid is to be used;
- Complete description of the aid;
- Name of the manufacturer; and
- Manufacturer's charge.

Reimbursement for a training aid is based on the manufacturer’s charge to the vision provider plus a professional fee. The professional fee includes procurement, instruction in use, and fitting when applicable. Procurement of the training aid is done through the vision provider’s own source.

Purchase of orthoptic training aids must be billed only by an enrolled optometrist or dispensing ophthalmologist.

3.9 PROSTHETIC EYES

A prosthetic eye (plastic/custom) or shell is a Medicaid benefit and does not require PA.

For an enlargement or reduction of an ocular prosthesis, PA is required. PA is also required when requesting a prosthesis other than a plastic/custom eye. When requesting PA, the DCH-0893 should be completed, with documentation attached, and submitted to the MDHHS Program Review Division. Procurement of the prosthesis should be obtained from the provider’s own source.

Reimbursement for a prosthesis is made on a per case basis which includes, but is not limited to:

- Trial fitting
- Supply of prosthesis
- Solutions
- Training in insertion and removal
- Instruction in care
- Subsequent office visits to achieve maximum wearing time and optimal cosmetic fit
- Any necessary modification during the adaptation period of six months

DIRECTORY APPENDIX

This directory provides contact information referenced in the various chapters of the Medicaid Provider Manual, and is divided into the following topic areas:

- Provider Assistance
- Beneficiary Assistance
- Eligibility Verification
- Prior Authorization
- Billing Resources
- Claim Submission/Payment
- Policy/Forms/Publications
- Appeals
- Health Plan Information
- Healthy Michigan Plan
- Provider Resources
- Hospice Resources
- Maternal-Child Educational Resources
- Maternal Infant Health Program Resources
- MH/SA Resources
- MI Choice Waiver Resources
- MI Health Link
- Nursing Facility Resources
- Pharmacy Resources
- Private Duty Nursing Resources
- School Based Services
- Vision Services Resources
- Reporting Fraud, Abuse, or Misuse of Services
- Other Health Care Resources/Programs
- Miscellaneous Contact Information

</table>
| Noncovered Service | A medical or health care service that is:  
  - Not covered by Medicaid;  
  - Not medically necessary;  
  - Not described in a Map's Certificate of Coverage;  
  - Provided before or after a beneficiary is an Enrollee in a MHP; or  
  - Non-emergency services for which the Hospital did not secure PA. |
| Nursing Facility | A nursing home, county medical care facility, or hospital long-term care unit, with Medicaid certification. |
| Orthotics | Orthotics assist in correcting or strengthening a congenital or acquired physical anomaly, or malfunctioning portion of the body. |
| Outpatient Hospital | A portion of a hospital, which provides diagnostic, therapeutic (both surgical and non-surgical), and rehabilitation services to sick or injured persons who do not require inpatient hospitalization or institutionalization. |
| Outpatient Prospective Payment System (OPPS) | A Prospective Payment System (PPS) is a method of reimbursement in which Medicare payment is made based on a predetermined, fixed amount. The payment amount for a particular service is derived based on the classification system of that service (i.e., DRGs for inpatient hospital services, APCs for outpatient hospital services).  
  All services paid under the PPS are classified into groups called Ambulatory Payment Classifications (or APCs). Services in each APC are similar clinically and in terms of the resources they require. A payment rate is established for each APC. |
<p>| Physician (MD or DO) | An individual licensed under the Michigan Public Health Code (1978 P.A. 368) to engage in the practice of medicine or osteopathic medicine and surgery. |
| Prosthetics | Prosthetics artificially replace a portion of the body to prevent or correct a physical anomaly or malfunctioning portion of the body. |
| Provider | An individual, firm, corporation, association, agency, institution, or other legal entity which is providing, has formerly provided, or has been approved to provide medical assistance to a beneficiary pursuant to the medical assistance program. |</p>

835 - Electronic Remittance Advice Request for Billing Agent Change/Update

The 835 is a HIPAA-compliant Electronic Remittance Advice (ERA) file that reports all paid and rejected claims per pay cycle. Providers requesting to change/update a Billing Agent already designated to receive an 835 through CHAMPS must complete this form in its entirety and identify one Billing Agent per Tax Identification Number (TIN).

Within 7-14 days of MDHHS receipt of this form, the designated Billing Agent will receive 835 files electronically within their mailbox posted on the State of Michigan Data Exchange Gateway (DEG); the file name for the ERA will be 4987 and usually posts on Wednesdays or Thursdays.

### REMINDER NOTE
- Every Medicaid Provider NPI within that Tax ID will be affected by requesting the 835.
- Providers requesting to receive the paper RA will receive the paper RA in addition to the ERA
- Providers must work with their designated billing agent for information on how the 835 will be posted from their billing agent to them.

Provider Tax ID Number: ________________________________

Billing Agent CHAMPS ID: ________________________________ (7 digits)

Contact/Provider Name and Title: ________________________________

Contact Phone Number: [_____] [_____] [_____] [______]

Contact Fax Number: [_____] [_____] [_____] [______]

Contact E-Mail: ________________________________

By signing this request, I am authorizing the Michigan Department of Health and Human Services to establish an 835 account for the Tax ID listed above and for 835 files to be transmitted electronically to the designated Billing Agent.

Contact/Provider Signature: ________________________________

Handwritten Signature ________________________________ Date ________________________________

This form must be completed and submitted via:

Fax: (517) 335-3766 - Attention: 835 Request
E-Mail: AutomatedBilling@michigan.gov with attention "835 Request" in Subject Line.

Questions regarding completion of this form should be directed to AutomatedBilling@michigan.gov.

Authority: Title XIX of the Social Security Act
Completion: Is Voluntary, but is required for release of information to Billing Agents.

The Michigan Department of Health and Human Services is an equal opportunity employer, services, and programs provider.

MSA-1380 (05/15)
ACKNOWLEDGMENT OF RECEIPT OF HYSTERECTOMY INFORMATION
Michigan Department of Health and Human Services

RECIPIENT STATEMENT:

I, _______________________________________________________, was told before the
hysterectomy was done that after the hysterectomy I would not be able to become pregnant.

___________________________________________________          _________________
(Recipient or Representative Signature) (Date)

___________________________________________________          _________________
(Interpreter Signature, if required to inform the recipient of the above information)  (Date)

PHYSICIAN STATEMENT:

The hysterectomy for the above named recipient is solely for medical indications. This hysterectomy is not primarily or secondarily for family planning reasons, to render the above named recipient permanently incapable of reproducing, i.e. sterilization. It was explained to the above named recipient prior to the hysterectomy that the hysterectomy will render her permanently incapable of reproducing.

___________________________________________________          _________________
(Physician Signature) (Date)

Authority: Title XIX of the Social Security Act
Completion: Is Voluntary, but is required if Medical Assistance program payment is desired.

The Department of Health and Human Services will not discriminate against any individual or group because of race, sex, religion, age, national origin, marital status, political beliefs or disability. If you need help with reading, writing, hearing, etc., under the Americans with Disabilities Act, you are invited to make your needs known to the Family Independence Agency office in your county.

MSA-2218 (Rev. 5-2015) Formerly DSS-2218 which may be used

MSA-1302 (Rev. 5-15) Previous Editions are Obsolete
Benefits Monitoring Program Referral (MSA-1302)
Instructions for Completion and Submission

General Instructions

This form should ONLY be used for beneficiaries enrolled in the Benefits Monitoring Program (BMP).* Enrollment may be verified through the CHAMPS Eligibility Inquiry response as additional information. The form is to be completed by the beneficiary’s BMP Authorized Provider(s). For additional program information, refer to the Michigan Medicaid Provider Manual (Beneficiary Eligibility Chapter, Benefits Monitoring Program Section) available on the MDHHS website.

MDHHS requests that the MSA-1302 be typewritten to facilitate processing.

Form Submission

The MSA-1302 and any supplemental information (e.g. medication list, medical records, forged prescriptions, etc.) must be mailed or faxed to:

MDHHS – Medical Services Administration
Benefits Monitoring Program
PO Box 30170
Lansing, MI 48909

Fax Number: (517) 335-0075

The MDHHS Program Review Division may be reached via telephone at (800) 622-0276.

* Previously known as Beneficiary Monitoring Program.

The Michigan Department of Health and Human Services is an equal opportunity employer, services and programs provider.

AUTHORITY: Title XIX of the Social Security Act.
COMPLETION: Is Voluntary, but is required if Medical Assistance program payment is desired.
I understand that Medicaid, Healthy Michigan Plan, or MIChild only covers payment for elective abortions under limited circumstances. These are:

- Elective abortion to terminate a pregnancy to save the life of the mother,
- Elective abortion to terminate a pregnancy that was the result of rape, or
- Elective abortion to terminate a pregnancy that was the result of incest.

I certify that I am eligible for Medicaid, Healthy Michigan Plan, or MIChild coverage for an elective abortion based upon the circumstance that I have checked above. I understand that if I have given false information to obtain coverage for an elective abortion I can be prosecuted for fraud. I also understand that a copy of this verification will be sent to the local Michigan Department of Health and Human Services (MDHHS) office or to a police agency when appropriate.

**Authority:** Title XIX and Title XXI of the Social Security Act.  
**Completion:** Is Voluntary, but is required if payment from the Medicaid, Healthy Michigan Plan, or MIChild programs is sought.  
The Michigan Department of Health and Human Services is an equal opportunity employer, services and programs provider.
CERTIFICATION FOR INDUCED ABORTION

Medicaid, Healthy Michigan Plan, or MIChild payments for abortion services are limited to cases in which the life of the mother would be endangered if the pregnancy were continued or cases in which the pregnancy was the result of rape or incest. To receive payment for abortion services, a physician must determine and certify that the abortion is necessary to save the life of the mother or is to terminate a pregnancy that resulted from rape or incest.

INSTRUCTIONS:

- TYPE or PRINT ALL Information below.
- The Physician completing this form is responsible for providing a copy of the completed form to any other provider assisting in this procedure (e.g., hospital, anesthesiologist, laboratory) for billing purposes.
- Send a copy of the completed form with the claim. (Refer to the Medicaid Provider Manual, Directory Appendix, Claim Submission/Payment.)

Any questions regarding this form should be referred to Provider Inquiry at 1-800-292-2550 or e-mail ProviderSupport@michigan.gov.

I HEREBY CERTIFY that:

1. I have examined this statement, the accompanying supporting exhibits, the allocation of expenses, services and activities, and the attached worksheets for the period from ______________ to ______________ and that to the best of my knowledge and belief they are true and correct statements prepared from the books and records of the governmental provider in accordance with applicable instructions.

2. The expenditures included in this statement are based on the actual cost of recorded expenditures and reflect the reporting provider's cost of serving Medicaid recipients.

3. I am the officer authorized by the referenced governmental provider to submit this form and I have made a good faith effort to assure that all information reported is true and accurate.

4. The required amount of State and/or local funds were used to pay for total computable allowable expenditures included in this statement, and such State and/or local funds were in accordance with all applicable Federal requirements for the non-Federal share match of expenditures (including that the funds were not Federal funds in origin, or are Federal funds authorized by Federal law to be used to match other Federal funds, and that the claimed expenditures were not used to meet matching requirements under other Federally funded programs).

5. The total computable expenditures identified herein are submitted in accordance with 42 CFR 433.51.

6. I understand that this certification of public expenditures serves as the basis for Federal matching funds; that such expenditures were allowable to the State Medicaid program in accordance with all procedures, instructions, and guidance issued by and to the single state agency during the reporting period; and that falsification or concealment of a material fact may be prosecuted under Federal or State civil or criminal law.

**SIGNATURE (officer of the governmental provider)  DATE**

Complex Seating and Mobility Device Prior Approval - Request/Authorization
Completion Instructions

The MSA-1653-D must be used by Medicaid enrolled DME Providers. Note: Requests for new complex seating or mobility devices submit with a completed Evaluation and Medical Justification for Complex Seating Systems and Mobility Devices form (MSA-1656).

MDHHS requests that the MSA-1653-D be typewritten to facilitate processing. A Word fill-in enabled version of this form can be downloaded from the MDHHS website www.michigan.gov/medicaidproviders >> Policy and Forms >> Forms. The form is generally self-explanatory. For complete information on required modifiers, documentation, and appropriate quantity amounts, refer to the following documents:

- Standards of Coverage portion of the provider-specific chapters of the Medicaid Provider Manual.
- Billing & Reimbursement for Professionals Chapter of the Medicaid Provider Manual.
- Provider-specific databases on the MDHHS website. www.michigan.gov/medicaidproviders >> Billing and Reimbursement >> Provider Specific Information.

Completion of this form is as follows:

<table>
<thead>
<tr>
<th>Box 1</th>
<th>MDHHS Use Only</th>
</tr>
</thead>
<tbody>
<tr>
<td>Box 11</td>
<td>Beneficiary address. If beneficiary resides in Nursing Facility include the Nursing Facility name, address and phone number.</td>
</tr>
</tbody>
</table>
| Box 17 | Complete this box ONLY for wheelchair requests.  
| | • For repairs or parts, complete MSA-1653-D. (Do not include MSA-1656.)  
| | • For new or replacement (due to a change in beneficiary basic medical functional status requests), stop at this point and complete MSA-1656. Both forms must be submitted for Prior Authorization consideration. |
| Box 20 | Enter a complete description of the item requested, including manufacturer, model, style, etc. DME, orthotics and prosthetics, must provide the brand name, model, and catalog or part number. |
| Box 21 | Enter the HCPCS Procedure Code. |
| Box 22 | Enter the applicable HCPCS Modifier. |
| Box 27 | Enter the beneficiary’s primary and secondary diagnoses or the CSHCS qualifying diagnosis (list both the code and description). DME/POS providers must submit the prescription/CMN with this form. |
| Box 28 | Any additional remarks regarding the request should be listed in this box such as verbal authorization date, retroactive date of service if being requested. Provide other insurance coverage for services requested. |
| Box 30 | Must be completed for all requests. |

Form Submission

PA request forms and required documentation for all eligible Medicaid beneficiaries must be mailed or faxed to:

MDHHS - Medical Services Administration  
Program Review Division  
P.O. Box 30170  
Lansing, Michigan  48909

Fax Number: (517) 335-0075

To check the status of a PA request, contact the MDHHS - Medical Services Administration, Program Review Division via telephone at 1-800-622-0276.
The provider is responsible for eligibility verification. Approval does not guarantee beneficiary eligibility or payment.

CONSENT FOR STERILIZATION
Michigan Department of Health and Human Services

NOTICE: YOUR DECISION AT ANY TIME NOT TO BE STERILIZED WILL NOT RESULT IN THE WITHDRAWAL OR WITHHOLDING OF ANY BENEFITS PROVIDED BY PROGRAMS OR PROJECTS RECEIVING FEDERAL FUNDS.

CONSENT TO STERILIZATION

I have asked for and received information about sterilization from _____________________________. When I first asked for the information, I was told that the decision to be sterilized is completely up to me. I was told that I could decide not to be sterilized. If I decide not to be sterilized, my decision will not affect my right to future care or treatment. I will not lose any help or benefits from programs receiving Federal funds, such as A.F.D.C. or Medicaid that I am now getting or for which I may become eligible.

I UNDERSTAND THAT THE STERILIZATION MUST BE CONSIDERED PERMANENT AND NOT REVERSIBLE. I HAVE DECIDED THAT I DO NOT WANT TO BECOME PREGNANT, BEAR CHILDREN OR FATHER CHILDREN.

I was told about those temporary methods of birth control that are available and could be provided to me which will allow me to bear or father a child in the future. I have rejected these alternatives and chosen to be sterilized.

I understand that I will be sterilized by an operation known as ______________________________.

The discomforts, risks and benefits associated with the operation have been explained to me. All my questions have been answered to my satisfaction.

I understand that the operation will not be done until at least thirty days after I sign this form. I understand that I can change my mind at any time and that my decision at any time not to be sterilized will not result in the withholding of any benefits or medical services provided by federally funded programs.

I am at least 21 years of age and was born on _____________________________.

I, ________________________________, hereby consent of my own free will to be sterilized by _________________________________.

(Name of Individual Being Sterilized)

by a method called _________________________________.

My consent expires 180 days from the date of my signature below. I also consent to the release of this form and other medical records about the operation to: _________________________________.

I explained to him/her the nature of the sterilization operation _________________________________.

I informed the individual to be sterilized that his/her consent can be withdrawn at any time and that he/she will not lose any health services or benefits provided by Federal funds.

To the best of my knowledge and belief the individual to be sterilized is at least 21 years old and appears mentally competent. He/she knowingly and voluntarily requested to be sterilized and appears to understand the nature and consequences of the procedure.

MSA-1959 (Rev.5-15) Previous edition may be used
INSTRUCTIONS TO COMPLETE CONSENT FOR STERILIZATION FORM

1. Name of the physician or clinic giving information to the beneficiary. The "M.D." or "D.O." designation must be included.
2. Name of the sterilization procedure to be performed (e.g., Tubal Ligation or Vasectomy).
3. Beneficiary's complete birth date (month, day, and year). The beneficiary must be 21 years of age at the time they sign the form.
4. Beneficiary’s full name. If a name change is indicated on the Medicaid card by the time surgery is performed, both names must be indicated.
5. Name of physician performing the sterilization. If the physician is unknown, "doctor on call" may be indicated.
6. Name of surgery to be performed (e.g., Tubal Ligation or Vasectomy).
7. Beneficiary’s handwritten signature. A beneficiary who cannot write should sign with an "X." The "X" signature must be witnessed. The witness’ handwritten signature must appear below item 7.
8. Date the consent form was signed (month, day and year). This date must be more than 30 days and less than 180 days before the date the sterilization is performed. If it is less than 30 days, see instructions for "alternative final paragraphs."
9. Race and ethnicity designation is optional.
10. Interpreter’s Statement. This information is only required if the beneficiary is unable to understand English. The language used for interpretation must be specified (e.g., Spanish). The interpreter’s handwritten signature and date must appear. The date must be the same date the beneficiary signed the form.
11. Name of beneficiary.
12. Name of sterilization procedure (e.g., Tubal Ligation or Vasectomy).
13. The handwritten signature of the person obtaining consent.
14. Date consent is taken (month, day and year). This date must be before the date sterilization is performed (#18).
15. Name of provider or clinic (e.g., office of John Doe, M.D., doctor’s office, ABC Clinic, XYZ Hospital).
16. Street address, city, state, and zip code. No P.O. boxes allowed.
17. Beneficiary’s full name.
18. Date of sterilization (month, day, and year). The surgery date must be the same as indicated on the claim.
19. Name of sterilization procedure (e.g., Tubal Ligation, Vasectomy).
20. Instructions for use of alternative final paragraphs.
21. If at least 30 days have passed since the date the beneficiary signed the consent form and the date of sterilization, paragraph "1" applies and paragraph "2" should be crossed out.
22. If the date the sterilization was performed is less than 30 days and more than 72 hours of the beneficiary signing the consent form, paragraph "2" applies and paragraph "1" should be crossed out. The applicable box should be checked.
23. For premature delivery, the expected date of delivery must be given.
24. Physician’s signature. This can be a stamped signature if counter initialed.
25. Date physician signed the consent form. This date must be on or after the date of surgery. This can be typed or stamped.

If abdominal surgery was performed, the circumstances must be explained and operative notes submitted with the claim.
Application for Payment of Health Insurance Premiums

SECTION ONE – CSHCS Identifying Information

1. Name of Client (Last, First MI) 
2. CSHCS ID Number

3. Client’s Contact Phone Number  
4. Client’s Date of Birth (MM/DD/YYYY)

5. Does Client have Medicare Part B? выбрано NO  
6. Does Client have Medicare Part D? выбрано NO  
7. Does Client have MiChild? выбрано NO

SECTION TWO – Insurance Information

Is this case for: 
☐ COBRA - Answer questions 8-24
☐ Insurance Premium (new or continuing coverage) - Answer questions 13-24

8. Reason COBRA was offered OR may be available:

9. Date of qualifying event / /
10. Date of COBRA notice to employee / /
11. Date COBRA election form was signed (if applicable) / /
12. Has first COBRA payment been made? выбрано NO
If yes, list date / /

13. Is insurance coverage through employer? выбрано NO
14. Name of employee (if applicable)

15. Name of employer (if applicable)
16. Name of insurance contact person

17. Phone number of insurance contact person ( )
18. Name of insurance company

19. Insurance contract number/group number
20. Premium cost per month for client’s coverage $ 

21. Date next premium is due / /
22. Date of contract renewal (when rate could change) / /

23. Name and address of company where premium payments are to be sent:

24. Reason family is unable to pay premium:

SECTION THREE – Health and Medical Information

25. What is the client's CSHCS covered diagnosis?

26. What does the health insurance cover: 
☐ HOSPITAL  ☐ DOCTOR VISITS  ☐ PRESCRIPTIONS  
☐ VISION  ☐ DENTAL

27. What are the expected future medical needs for the CSHCS client?
28. Is it likely the client's insurance will cover these medical needs? Explain.

29. What special health care needs are not covered by the client's health insurance?

30. Are there other health insurance coverages for which the client might be eligible (e.g. Medicare Part B, Medicare Part D, other private health insurance, etc)?

   □ YES  □ NO

   Explain:

31. Additional Comments:

Attach the following information:
- Copy of the billing statement from the insurance carrier or a statement from the employer verifying the cost of the insurance premium.
- Copies of Explanation of Benefit (EOB) statements or expenditure summaries from the private health insurance carrier or Medicare.
- Copy of the completed COBRA election form if health insurance coverage is to be maintained under the provisions of COBRA.
- Pharmacy report documenting the cost of the prescriptions and the amount paid by the private health insurance carrier or Medicare if the coverage includes a prescription benefit.

AUTHORITY: Title V of the Social Security Act
COMPLETION: Is voluntary, but is required if CSHCS program services are desired.
The Michigan Department of Health and Human Services is an equal opportunity employer, services and programs provider.
The Dental Prior Approval Authorization Request form (MSA-1680-B) is to be used for persons with Medicaid coverage in the Fee For Service dental benefit and persons enrolled in Children’s Special Health Care Services (CSHCS). For beneficiaries enrolled in Healthy Kids Dental, dentists should contact Delta Dental Plan for authorization requirements.

The MSA-1680-B must be completed by private dentists or community-based dental clinics (e.g., local health departments, Federally Qualified Health Centers (FQHC)). This form is self-explanatory.

If services are approved, the provider will receive a copy of the form marked "Approved" and with a Prior Authorization number. Approved services are required to be completed within a 180-day period. To request an extension, the provider must submit a copy of the current MSA-1680-B and required documentation within 15 days prior to the end date of the current authorization. If the original prior authorization is over one year old, a new prior authorization request must be submitted.

For further information on the prior authorization of dental services, please see the Prior Authorization Section, Dental Chapter of the Medicaid Provider Manual.

Dental providers treating CSHCS beneficiaries are required to submit the beneficiary’s CSHCS qualifying diagnosis. For authorization of orthodontics and/or crown and bridge services for beneficiaries enrolled in CSHCS, please see the Children’s Special Health Care Services Dental Services Section, Dental Chapter of the Medicaid Provider Manual.

The completed MSA-1680-B may be mailed or faxed, depending whether x-ray films are necessary, to:

Michigan Department of Health and Human Services
Dental Prior Authorization
P.O. Box 30154
Lansing, MI 48909
Fax: (517) 335-0075

Questions should be directed to Dental Prior Authorization at 1-800-622-0276.
**DENTAL PRIOR APPROVAL AUTHORIZATION REQUEST**

**FOR MDHHS CONSULTANT USE ONLY**

**Note:** Approval refers to service only and does not authorize fees or patient eligibility, including age.

Documentation of Medical Necessity
for the Provision of Contact Lenses

(This form is to be completed and attached to DCH-0893 when requesting prior authorization for the provision of contact lenses. Prior authorization is NOT required for beneficiaries with aphakia who are under six years of age.)

Indicate the diagnosis(es) which best describes the beneficiary’s condition:

- [ ] Anirida
- [ ] Anisometropia or Antimetropia
- [ ] Aphakia
- [ ] Irregular Corneas *
- [ ] Keratoconus * (If vision can not be improved to 20/40 or better with eyeglasses.)
- [ ] Other conditions with no alternative treatment (e.g., Aniseikonia (with documentation), Keratoconjunctivitis Sicca)

Diagnosis(es) Code: __________________________

Has the beneficiary previously worn contact lenses?  [ ] YES  [ ] NO
If yes, explain: __________________________

Is the beneficiary currently wearing contact lenses?  [ ] YES  [ ] NO
If yes, indicate reason for new lenses: __________________________

Keratometry (diopters)

R ___________ @ ___________ ; ___________ @ ___________
L ___________ @ ___________ ; ___________ @ ___________

Mire Quality

R ___________
L ___________

* A corneal topography for Keratoconus and Irregular Cornea diagnoses may be requested.
Type of contact lens requested:

A. Hydrogels

INSTRUCTIONS

GENERAL INSTRUCTIONS/DISTRIBUTION:

- The MSA-2565-C serves as notice of admission of a beneficiary (or potential beneficiary). It must be completed for potentially eligible Medicaid beneficiaries of all ages.

- The facility must retain **THE ORIGINAL** of the Facility Admission Notice in the beneficiary's file. A copy **MUST** be sent to the Local MDHHS Office.

- A copy of the MSA-2565-C will be returned to the facility, noting the eligibility status and patient pay amount of the resident.

**IMPORTANT:** All of the above information MUST be completed.

The Michigan Department of Health and Human Services (MDHHS) **GUARANTEES PAYMENT** of the pregnancy-related services listed below for 45 days from the date listed above. This document should be considered as proof of coverage until the beneficiary receives a **mihealth card or a beneficiary ID number**. Michigan Medicaid-covered maternity services and fee screens apply.

Subsequent to the 45 days, MDHHS will continue to provide medical coverage for eligible women through the Maternity Outpatient Medical Services (MOMS) Program or the Michigan Medicaid Program for prenatal care, delivery, and other pregnancy-related services for the duration of the pregnancy. Medically necessary ambulatory postpartum care will be covered for 60 days after the pregnancy ends. Inpatient hospital coverage is limited to delivery-related services only.

Pregnancy-related covered services during the eligibility period include:

1. Prenatal care
2. Pharmaceuticals and prescription vitamins
3. Laboratory
4. Labor and Delivery – will cover both professional fees and inpatient hospitalization
5. Postpartum Care through 60 days after the pregnancy ends
6. Radiology and Ultrasound
7. Maternal Infant Health Program (MIHP) services until delivery
8. Outpatient hospital care
9. Childbirth education
10. Other pregnancy-related care with prior authorization

If you have questions regarding billing or you are providing a medical service that is not listed above, please refer to page 2 of this letter for instructions on billing and prior authorization procedures.

*If you require this document for your files, please make a copy and return the original to the beneficiary.*

**Guarantee of payment applies only for providers enrolled in the Michigan Medicaid Program.**

Chris Priest, Director
Medical Services Administration
ELIGIBILITY:
MOMS eligibility may be obtained through the Community Health Automated Medicaid Processing System (CHAMPS) (Eligibility Inquiry and/or 270/271 transaction). MDHHS will issue a beneficiary ID number to be used when billing for services. If the beneficiary receives full Medicaid and enrolls in a Medicaid Health Plan, the health plan’s policies and procedures will apply. If you are not a participating provider with the health plan, the beneficiary should be referred to the health plan before services are rendered.

BILLING INSTRUCTIONS:
• Electronic submission of claims is the preferred method for quick and accurate claim reimbursement.
• All services must be billed within one year of the date of service. Pharmacy services should be billed within six months of the date of service.
• Claims must be completed following standard Medicaid billing and reimbursement guidelines contained in the Billing and Reimbursement Chapters of the Medicaid Provider Manual. Claims must be submitted to the same location where you submit your Medicaid Claims.
• Private insurance must be billed first, if applicable.
• This Guarantee of Payment insures the MDHHS will provide coverage for pregnancy related services. You must hold your claim for services provided until the beneficiary receives her mihealth card or a beneficiary ID number can be identified in CHAMPS (Eligibility Inquiry and/or 270/271 transaction) with MOMS eligibility, identified with Benefit Plan ID MOMS, for the date of service. You must provide the beneficiary ID number on the claim to receive payment. Do not use the “I” number that appears in the upper right hand corner of the Guarantee of Payment letter.
• MOMS claim adjudication information will be included in the weekly remittance advice, merged alphabetically with Medicaid and other MDHHS-administered programs. The remittance advice is your claim status. If a claim does not appear on a remittance advice within 45 days, the account should be resubmitted for processing. Should you have other questions about your claim, you may contact the Medicaid Provider Inquiry line at 1-800-292-2550 or by e-mail at providersupport@michigan.gov.

All MOMS covered services are subject to the published policies and procedures applicable under the Medicaid program as they relate to health care and claim submission requirements.

PRIOR AUTHORIZATION:
If your service does not meet the definition of pregnancy-related services listed on page one of this letter, or if the service normally requires prior authorization by the Medicaid program, submit your request for authorization, by mail or by fax. Refer to the Directory Appendix in the Medicaid Provider Manual for contact information.

PHARMACY SERVICES:
Pharmacy services provided to MOMS beneficiaries must be billed to the Pharmacy Benefits Manager. Refer to the Michigan Pharmaceutical Product List to identify products that may require prior authorization. To obtain prior authorization, you may write, call or fax your request to the Pharmacy Benefits Manager. Refer to the Directory Appendix in the Medicaid Provider Manual for contact information.

Pharmacies who provide MOMS services, when presented with this Guarantee of Payment letter (DCH-1164), have the option of billing the Pharmacy Benefits Manager as indicated below:

A. Pharmacies will need to hold the electronic claim (electronic preferred) until MOMS eligibility, identified with Benefit Plan ID MOMS, is in CHAMPS (Eligibility Inquiry and/or 270/271 transaction) for the date of service. Then bill the Pharmacy Benefits Manager via the on-line system, if the electronic claim is used.
B. Submit the appropriate HIPAA compliant National Council for Prescription Drug Programs (NCPDP) electronic claim or submit a Universal Claim Form, along with a copy of the Letter, to the Pharmacy Benefits Manager per the instructions in their manual.
C. Pharmacies will need to hold the electronic claim until MOMS eligibility, identified with Benefit Plan ID MOMS, is in CHAMPS (Eligibility Inquiry and/or 270/271 transaction) for the date of service and obtain a copy of the Guarantee of Payment letter (DCH-1164) as proof of coverage in order to fill the prescription(s).

AUTHORITY: Title XIX of the Social Security Act
COMPLETION: Is Voluntary, but is required if Medical Assistance program payment is desired.

AUTHORITY: Title XIX of the Social Security Act  
COMPLETION: Is Voluntary, but is required if Medical Assistance program payment is desired.

The Department of Health and Human Services is an equal opportunity employer, services and programs provider.

DCH-1074 (04/15) Previous editions are obsolete.
CONDITIONS OF ENROLLMENT:

Hospice services are an option of medical care that you may choose while you are in the terminal stages of your illness. Palliative at-home care is the basis for hospice care. If you do not have a family member or friend to care for you in your home, hospice care may be provided while you are a resident of an approved nursing facility (NF), home for the aged (HFA), adult foster care facility (AFC), boarding home, OR ventilator dependent care unit. All Medicaid and any approved Children's Special Health Care Services (CSHCS) covered services for the terminal illness will be provided by the hospice. You must use your mihealth card, health plan card, or CSHCS Eligibility Letter to obtain care from your private physician or health plan for services not related to the terminal illness. You may elect to disenroll from the hospice at any time by signing the disenrollment form.

CERTIFICATION:

By signing this form, I certify that I voluntarily apply for hospice enrollment for myself or the person indicated in item number 20. The enrollment is effective on the date entered on item number 1 and will continue as long as the hospice continues operation and eligibility continues under the Medicaid Program. If eligibility verification indicates a patient-pay amount, I understand that I must pay that amount, each month, to the hospice for my care. Any applicable patient-pay amount, insurance payment, and Medicaid reimbursement represents payment-in-full to the hospice. I understand and accept the conditions of enrollment stated above. I authorize any physician or hospital to release medical information to the hospice. I authorize the hospice to release medical information to the Michigan Department of Health and Human Services.
Hospice Membership Notice (DCH-1074) Completion Instructions

Document Description:

The Hospice Membership Notice (DCH-1074) form is used by hospice agencies to notify the Michigan Department of Community Health (MDCH) of a Medicaid Fee-for-Service (FFS) eligible beneficiary’s hospice enrollment, disenrollment; hospice agency transfer or to inform of a change in location of hospice services. The Community Health Automated Medicaid Provider System (CHAMPS) system is updated based on information reported on the DCH-1074. The following pertains to the completion of the Hospice Membership Notice.

DCH-1074 Location:

The DCH 1074 is located in the Medicaid Provider Manual in the forms section.

Where to Submit the DCH-1074:

Hospice agencies should fax the completed DCH-1074 to the MDCH Enrollment Services Section at (517) 373-1437.

General Guidance:

If the beneficiary is enrolled in a Medicaid Managed Health Plan do not submit the DCH-1074 to MDCH. The hospice agency must instead contact the beneficiary’s Medicaid Managed Health Plan to receive authorization for hospice services.

Entries should be typed or clearly printed.

Providers must retain a copy of the original DCH-1074 and all updates to the DCH-1074 in the beneficiary’s record.

The DCH-1074 should be submitted within five calendar days of the effective date of hospice election. Timely submission of the DCH-1074 is essential to ensure that the beneficiary’s eligibility file contains the appropriate information including the hospice level of care (LOC) designation. Likewise, hospice disenrollment notices should be submitted within five calendar days.

If the form is submitted and is incomplete or changes are required (e.g., the effective date is incorrect), the DCH-1074 will be returned to the hospice provider for correction and this will need to be resubmitted. When resubmitting the DCH-1074, providers should indicate that it is a revision.

When the DCH-1074 is accepted and processed, a LOC code 16 (hospice) will be entered into the CHAMPS eligibility screen for the beneficiary.

Selection of the DCH-1074 Purpose:

The hospice agency must identify which function the form will serve by checking the appropriate box located at the top right hand corner of the Hospice Membership Notice and include an associated effective date. Choose enrollment application, enrollment update or disenrollment notice.
Initial Enrollment

The hospice provider must complete and submit the DCH-1074 as an enrollment application for a FFS Medicaid beneficiary who elects the hospice benefit. The Hospice provider must at a minimum read/communicate the Conditions of Enrollment and Certification on page 2 of the DCH-1074 in a language or manner that is understood by the beneficiary or authorized representative prior to having the beneficiary or beneficiary representative sign the form.

Disenrollment

The hospice must submit the DCH-1074 to inform MDCH of the beneficiary’s disenrollment from hospice. Disenrollment may be due to death, revocation of hospice by the beneficiary or beneficiary’s representative, the beneficiary no longer qualifies for Medicaid or hospice, or the hospice elects to terminate the beneficiary’s enrollment due to fraud, abuse or misconduct. The correct corresponding code (see below) must be documented. Providers must submit the completed form to MDCH Enrollment Services.

Enrollment Updates: Hospice Agency Transfer or Change in Beneficiary’s Service Location

If a beneficiary changes hospice agencies or the location of hospice services changes, a DCH-1074 must be submitted to MDCH Enrollment Services with the enrollment update area checked. Use the remarks section to clarify the reason for the update and indicate the name of the transferring and accepting hospice (e.g. "beneficiary moved out of service area and is transferring from hospice A to hospice B effective mm/dd/yy.").

Service Coordination

At the time of hospice enrollment, the hospice provider must determine if the beneficiary is receiving services from other programs such as Home Help, MI Choice Waiver, or Private Duty Nursing (PDN). If another program is identified, this should be noted in the remarks section and the hospice provider must contact the other program(s) and develop a joint plan of care (POC) to coordinate services. If duplication of services is identified upon post-payment review, this could result in monetary recovery.

Beneficiaries Receiving Hospice and MI Choice Waiver Program Services

If the beneficiary is enrolled in hospice and subsequently becomes eligible for MI Choice Waiver services, the waiver agency must inform the hospice when they will begin providing services. The hospice must then resend the DCH-1074 to the Enrollment Services Section indicating the date prior to the begin date of waiver services in the REMARKS Section as the last date for level of care (LOC) 16. This will allow LOC 22 (MI Choice Waiver services) to be placed on the beneficiary’s member file. Hospice may continue to provide and bill for services, however when submitting claims, the hospice must note the Benefit Plan ID of MI Choice in the REMARKS Section of the claim form in order to allow for correct claims processing.

The hospice should not submit a DCH-1074 to MDCH if at the time of enrollment to hospice the eligibility response indicates the Benefit Plan ID of MI Choice for the date of service. The hospice must contact the waiver coordinator to discuss and coordinate the services required.
Completing Items on the Hospice Membership Notice form (DCH-1074)

Enrollment, Enrollment Update and Disenrollment Information (check the appropriate box)

**Item 1:** For Enrollment Application; enter the effective date of the enrollment application. This is a mutually agreed upon date by the hospice and the beneficiary.

**Item 2:** For Enrollment Update; enter the effective date of the reported enrollment update. The update informs MDCH of changes in hospice service location (e.g. the hospice beneficiary has moved from their home to a nursing facility for their routine hospice care) or the beneficiary has transferred to another hospice. If this box is checked, a narrative is required in the remarks field.

(By checking either the enrollment application box or enrollment update box and providing the required nursing facility information in items 15 thru 19, the hospice will receive payment for nursing facility room and board (which is passed on to the nursing facility). The effective date is the date the beneficiary enters the nursing facility.)

**Item 3:** For discharge or disenrollment enter the effective date. (A reason code must be entered under item 4.)

**Item 4:** For discharge or disenrollment from hospice, one of the following reason codes must be entered by the hospice:

- 2 = Deceased
- 3 = Beneficiary elected to disenroll. (Requires completion of item 37 and 38)
- 9 = Other (requires brief explanation in remarks, and completion of Items 37 and 38)

**SECTION I - Provider Information**

**Item 5:** Hospice Provider Name

**Item 6:** Hospice National Provider Identification (NPI) number

**Item 7:** Hospice Provider ID

**Item 8:** This control number is a hospice internal patient identifier and is for hospice use only.

**Item 9:** Hospice Provider Address

**Item 10:** Telephone Number of Hospice Staff Member Responsible for Submitting the DCH-1074

**Item 11:** Fax Number of the Hospice Provider.

**Items 12:** Attending Physician’s Name and Address

**Item 13:** Attending Physician’s NPI

**Item 14:** Select “yes” or “no” to indicate if the beneficiary is a waiver program participant
Section II - Facility Information

This section must be completed for beneficiaries who reside in or are admitted to a nursing facility or ventilator dependent care unit (VDCU) when hospice is elected. Indicate “yes” or “no” if this section applies. If the beneficiary is not residing in, or being admitted to a nursing facility or VDCU, skip Section II.

Items 15: Name of the nursing facility where the beneficiary resides or has been admitted for routine hospice care.

Item 16: Nursing Facility Address

Item 17: Nursing Facility Provider ID

Item 18: Nursing Facility NPI

Item 19: Date Admitted to the Nursing Facility

Section III – Beneficiary Information:

Item 20: Beneficiary Name

Item 21: Medicaid Beneficiary ID Number

Item 22: Beneficiary Address

Item 23: Beneficiary Social Security Number

Item 24: Beneficiary Date of Birth (mm/dd/yyyy)

Item 25: Beneficiary's Gender

Item 26: Beneficiary Home Phone Number

Item 27: Select “yes” or “no” to indicate if the beneficiary has Children’s Special Healthcare Services (CSHCS)

Item 28: Beneficiary’s LOC at the time of 1074 Submission (from CHAMPS)

Item 29: Previous Hospice Enrollee (select yes or no). If yes, explain in comments.

Item 30: Estimated Remaining Life Span in months

Item 31: If applicable, the beneficiary’s legal parent/ guardian or beneficiary representative’s name (the person who is authorizing hospice enrollment by signing line Item 35).

Item 32: Diagnoses codes. The beneficiary's terminal diagnosis must be entered using the appropriate diagnosis code(s). A primary diagnosis code is required for hospice enrollment. The hospice should also enter secondary codes applicable to the hospice admission and conditions related to the terminal diagnosis.
Section IV - Remarks

**Item 33:** Remarks are used to explain information related to the beneficiary. For example, use of other community resources, transfer to another hospice provider, etc.

Section V - Enrollment Acknowledgement

**Item 34:** This box must be checked by the beneficiary, beneficiary’s representative, parent or legal guardian signifying that the *Conditions of Enrollment and Certification* have been explained and understood by the beneficiary, beneficiary’s representative, parent or legal guardian. The Hospice provider must at a minimum read/communicate the *Conditions of Enrollment and Certification* in a language or manner that is understood by the recipient or authorized representative and answer any questions.

**Item 35:** Signature of beneficiary, beneficiary’s representative, parent or legal guardian and date. After the *Conditions of Enrollment and Certification* has been effectively communicated, the beneficiary or the beneficiary’s legal parent or the beneficiary’s representative authorizing hospice enrollment must sign. (For disenrollment this item remains blank.)

**Item 36:** Witness Signature for hospice enrollment and date. This individual serves as a witness of the communicated *Conditions of Enrollment and Certification* and the enrollee’s or enrollee’s representative’s signature. (For disenrollment this item remains blank.)

**Item 37:** Signature of Beneficiary, beneficiary’s representative, parent or legal guardian must be completed for disenrollment and dated. (For enrollment this item remains blank.)

**Item 38:** Witness Signature for hospice disenrollment and date. (For enrollment this item remains blank.)
Instructions for MSA-1755

The Medicaid Enrolled Birthing Hospital Agreement for Elective, Non-Medically Indicated Delivery Prior to 39 Weeks Completed Gestation form (MSA-1755) is to be completed by all Medicaid enrolled birthing hospitals in the State of Michigan.

The purpose of this form is to serve as an attestation that each Medicaid enrolled birthing hospital utilizes evidence-based guidelines (EBGs) to address elective, non-medically indicated delivery prior to 39 weeks completed gestation for Medicaid beneficiaries.

To complete the form, hospitals must indicate whether they have elective delivery EBGs in place. If the hospital utilizes guidelines that are not listed on the form, hospitals may use the space provided on the form to explain. Hospitals may also submit copies of their elective delivery policies.

The form must be signed by both the Chief Executive Officer (CEO) and the Chief Medical Officer (CMO) of the facility.

The completed MSA-1755 must be mailed or faxed to:

Attn: Inpatient Hospital Policy  
Michigan Department of Health and Human Services  
Medical Services Administration, Program Policy Division  
PO Box 30479  
Lansing, Michigan  48909-7979  
Fax: (517) 335-5136

Questions should be directed to Provider Support at ProviderSupport@michigan.gov.
MEDICAID ENROLLED BIRTHING HOSPITAL AGREEMENT FOR
ELECTIVE, NON-MEDICALLY INDICATED DELIVERY PRIOR TO 39 WEEKS COMPLETED GESTATION

The purpose of this agreement is to certify that Medicaid enrolled birthing hospitals utilize evidence-based guidelines (EBGs) to address elective, non-medically indicated delivery prior to 39 weeks completed gestation for Medicaid beneficiaries.

NOTE: This agreement must be signed by both the Chief Executive Officer (CEO) and the Chief Medical Officer (CMO) of the facility.

Complete the following:

Hospital Name

National Provider Identifier

attests that the following elective delivery EBGs are utilized:

Yes  No  (Indicate Yes or No for each statement)

☐ ☐ Medical indications for elective, non-medically indicated delivery prior to 39 weeks completed gestation are defined in hospital policy.

☐ ☐ Hospital staff is not authorized to schedule an elective, non-medically indicated delivery prior to 39 weeks completed gestation.

☐ ☐ Providers are required to obtain permission from physician leadership (e.g., the head of the obstetrics department) before performing an elective, non-medically indicated delivery prior to 39 weeks completed gestation.

☐ ☐ Provider education materials are used to educate providers on the risks of elective, non-medically indicated delivery prior to 39 weeks completed gestation.

☐ ☐ Patient education materials are used to educate patients on the risks of elective, non-medically indicated delivery prior to 39 weeks completed gestation.

☐ ☐ Hospital involvement in an initiative that addresses elective, non-medically indicated delivery prior to 39 weeks completed gestation (e.g., Michigan Health & Hospital Association [MHA] Keystone Center’s initiative in obstetrics, Trinity Health System’s Perinatal Patient Safety Initiative [PPSI], Ascension Health System’s Handling All Neonatal Deliveries Safely [HANDS]).

☐ ☐ Other. Explain in the space provided below. If more space is needed, attach explanation on a separate document.

Along with this completed agreement, MDHHS will also accept a copy of each facility’s elective delivery policy.

I certify that the responses in this attestation agreement are accurate, complete and current as of the date signed.

AUTHORITY: Title XIX of the Social Security Act
COMPLETION: Is Required.

Michigan Department of Health and Human Services is an equal opportunity employer, services and programs provider.

MSA-1755 (5/15)  Page 2 of 2
Purpose:
This form is used to determine if an individual is medically eligible for the Children’s Special Health Care Services (CSHCS) program. The condition must require the services of a medical and/or surgical sub-specialist at least annually, as opposed to being managed exclusively by a primary care physician. A current list of covered diagnoses is maintained on the MDHHS website at www.michigan.gov/mdhhs. In addition, some diagnoses must meet severity or chronicity criteria (e.g. asthma).

This form should be completed for the following persons:
- Anyone UNDER 21 years of age with a potentially eligible condition. Psychiatric, emotional and behavioral disorders, attention deficit disorder, developmental delay, intellectual disability, autism, or other mental health diagnoses are not conditions covered by the CSHCS program.
- Anyone, regardless of age, with cystic fibrosis or hereditary coagulation defects commonly known as hemophilia.

Completion Instructions:
- Read this instruction page thoroughly. Then separate attached forms.
- TYPE or PRINT clearly in INK.
- The Physician’s Signature (or the Attending Physician if a Hospital) and the Date Signed are REQUIRED.
- Attach supporting medical documentation.
- If desired, make a photocopy for your records.
- FAX the completed form to the CSHCS Division at 517-335-9491.

Other Information:
- If this request is approved, the client is medically eligible for the CSHCS program.
- For actual program coverage, the client or the client’s family MUST APPLY to join the CSHCS program by completing form MSA-0737, APPLICATION FOR CHILDREN’S SPECIAL HEALTH CARE SERVICES.
- If the family does NOT receive an application after notification of approval, call 1-800-359-3722.

For questions and/or problems, or help to translate, call the Beneficiary Help Line at 1-800-642-3195 (TTY 1-866-501-5656).

**Exemption Criteria:**
- **COMA:** YES, I certify the patient under consideration is in a coma/persistent vegetative state.
- **DEMENTIA:** YES, I certify the patient under consideration has a dementia as established by clinical examination and evidence of meeting ALL 5 criteria below and does NOT have intellectual disability/related condition or another primary psychiatric diagnosis of mental illness.

**Specify the type of dementia:**

1. Has demonstrable evidence of impairment in short-term or long-term memory as indicated by the inability to learn new information or remember three objects after five minutes, and the inability to remember past personal information or facts of common knowledge.
2. Exhibits at least one of the following:
   - Impairment of abstract thinking, as indicated by the inability to find similarities and differences between related words; has difficulty defining words, concepts and similar tasks.
   - Impaired judgment, as indicated by inability to make reasonable plans to deal with interpersonal, family and job-related issues.
   - Other disturbances of higher cortical function, i.e., aphasia, apraxia and constructional difficulty.
   - Personality change: altered or accentuated premorbid traits.
3. Disturbances in items 1 or 2 above significantly interfere with work, usual activities or relationships with others.
4. The disturbance has NOT occurred exclusively during the course of delirium.
5. EITHER:
   - a) Medical history, physical exam and/or lab tests show evidence of a specific organic factor judged to be etiologically related to the disturbance OR
   - b) An etiologic organic factor is presumed in the absence of such evidence if the disturbance cannot be accounted for by any non-organic mental disorder.

- **HOSPITAL EXEMPTED DISCHARGE:**
  - YES, I certify that the patient under consideration is:
    1) being admitted after a hospital stay, AND
    2) requires nursing facility services for the condition for which she/he received hospital care, AND
    3) is likely to require less than 30 days of nursing services.

**AUTHORITY: COMPLETION:**
- Title XIX of the Social Security Act is voluntary, but, if NOT completed, Medicaid will not reimburse the nursing facility.
- The Department of Health and Human Services is an equal opportunity employer, services, and programs provider.

**COPY DISTRIBUTION:**
- ORIGINAL - Nursing Facility retains in Patient file
- COPY - Attach to form DCH-3877 and send to Local CMHSP
- COPY - Patient Copy or Legal Representative
Mental Illness / Intellectual Disability / Related Condition
Exemption Criteria Certification
(For Use in Claiming Exemption Only)

Instructions for DCH-3878

- The DCH-3878 is to be used ONLY when the individual identified on a DCH-3877 as needing a LEVEL II evaluation meets one of the specified exemptions from LEVEL II evaluation. If the individual under consideration meets one of the following exemptions, she/he may be admitted (under preadmission evaluation) or retained (under Annual Resident Review) at a nursing facility without additional evaluation. However, a completed copy of the DCH-3878 must be attached to the DCH-3877 and sent to the local Community Mental Health Services Program (CMHSP).

- This form must be completed by a registered nurse, licensed bachelor or master social worker, licensed professional counselor, psychologist, physician’s assistant, or physician, and signed and dated by a physician.

- Complete the following information to match the DCH-3877: Patient Name, DOB, and Referring Agency (including agency address and telephone number).

- Use an “X” to indicate which exemption applies to the individual under consideration.

Dementia:
- Review the 5 criteria listed under the dementia exemption category. Do NOT check this exemption unless the individual meets all 5 criteria. Any individual who meets some, but not all 5 criteria will be subject to a LEVEL II evaluation. If the individual under consideration meets this exemption category, specify the type of dementia.

Dementia diagnoses include the following:
1. Dementia of the Alzheimer’s Type
2. Vascular Dementia
3. Dementia due to Other General Medical Conditions
4. Substance - Induced Persisting Dementia
5. Dementia Not Otherwise Specified
This form must be used by MI Choice waiver agencies to notify local Michigan Department of Health and Human Services (MDHHS) offices of MI Choice participant disenrollment dates, as well as subsequent changes made to MI Choice disenrollment dates.

**General Instructions**

- Waiver agencies must notify local MDHHS offices in writing within five business days of participant disenrollment from MI Choice. The MI Choice end date is the last day of the participant’s enrollment in MI Choice.

- When the waiver agency needs to change a previously reported MI Choice disenrollment date, the waiver agency sends written updates to the local MDHHS office on a disenrollment form, with the new date and the reason for altering the original date.

- Waiver agencies retain the original enrollment forms in the participant’s record for a minimum of six years and send a copy of each form to MDHHS.

**General Instructions**

- Waiver agencies must notify MDHHS of a MI Choice enrollment date within **five** business days of the enrollment, using the MI Choice Waiver Enrollment Notification form.

- When the waiver agency needs to change a previously reported MI Choice start date, the waiver agency must send written updates to the local MDHHS office using the enrollment form, with the new date and the reason for altering the original date.

- Waiver agencies must notify MDHHS at least annually of a participant's continued MI Choice enrollment using the MI Choice Enrollment Notification form. This notification may coincide with the annual Medicaid redetermination date, but could occur at any time during the year. The purpose of this notification is to assure that MDHHS knows the participant remains eligible for and is enrolled in the program.

- Waiver agencies retain the original enrollment forms in the participant's record for a minimum of six years and send a copy of each form to MDHHS.
Participant Information

First Name: ___________________________ Last Name: ___________________________
Address (Number & St., Apt., etc.): ___________________________
City: ___________________________ State: _______ ZIP: _______
Check if address has changed: □ Yes □ No
Phone Number: (____) - _______

Enrollment Information:

MI Choice Enrollment/LOC 22 Start Date: ___________________________

Urgent Request: □ Yes □ No
* Urgent request is selected when not having the appropriate Level of Care status significantly impacts the participant's immediate availability to medically necessary services.

Reason for Enrollment (Check Appropriate Reason)

□ New Assessment ___________________________ Date of Assessment: ___________________________
□ Nursing Home Discharge ___________________________ Date of Discharge: ___________________________

Evaluation and Medical Justification for Complex Seating Systems and Mobility Devices
Completion Instructions

This form should be completed for NEW or REPLACEMENT mobility device(s) and seating systems. It must be submitted with the Complex Seating and Mobility Device Prior Approval - Request/Authorization (MSA-1653-D). The evaluation and justification must be submitted within 90 days of the date the evaluation was completed.

The appropriate Addendum(s) must accompany the MSA-1656 & MSA-1653-D.

BENEFICIARY INFORMATION: Complete beneficiary name, date of birth, sex, mihealth number, ordering physician and physician specialty. The beneficiary name and mihealth number must be entered at the top of each subsequent page.

SECTIONS 1 THROUGH SECTION 11 MUST BE COMPLETED BY A LICENSED/CERTIFIED MEDICAL PROFESSIONAL.

NOTE: A licensed/certified medical professional means an occupational or physical therapist, a physiatrist or rehabilitation RN who has at least two years' experience in rehabilitation seating; and is not an employee of, or affiliated in any way with, the Medical Supplier with the exception of hospitals with integrated delivery models that include the supplier of the equipment and the provider of the clinical evaluation. A PTA or OTA may not evaluate for, complete or sign this document.

<table>
<thead>
<tr>
<th>SECTION</th>
<th>INSTRUCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Indicate the beneficiary name, mihealth number, ordering/referring physician name, specialty and National Provider Identifier (NPI).</td>
</tr>
<tr>
<td>2</td>
<td>Medical history is used to gather information in regards to the beneficiary's physical status and progression of disease. Estimate weight if unable to weigh at time of evaluation. The acronym &quot;WFL&quot; means &quot;within functional limits.&quot;</td>
</tr>
<tr>
<td>3</td>
<td>Home Environment questions reflect the current setting in which the beneficiary lives.</td>
</tr>
<tr>
<td>4</td>
<td>Community Activities of Daily Living (ADL) reflects the beneficiary's transportation situation to the community and/or school, if applicable. Indicate if the mobility equipment fits into the vehicle and if the family can lift the mobility equipment into a vehicle.</td>
</tr>
<tr>
<td>5</td>
<td>This information reflects the need for pressure relief. If the beneficiary has current decubiti, the evaluator should indicate the stage as defined by the National Pressure Ulcer Advisory Panel (NPUAP) at <a href="http://www.npuap.org">www.npuap.org</a>.</td>
</tr>
<tr>
<td>6</td>
<td>Mandatory for all requests. Describes the beneficiary's ADL functional ability without mobility devices. The acronym &quot;UE&quot; means &quot;upper extremity.&quot; Answer the items regarding visual perception, problem solving and comprehension only if requesting a power mobility item.</td>
</tr>
<tr>
<td>7</td>
<td>Evaluation includes measurements of the beneficiary. Relevant measures include adjustments for clothing. Complete the Manual Muscle Test (MMT) for hand only if requesting a power mobility item. This measurement should be of the appropriate hand/digits that will be used to operate specialty controllers.</td>
</tr>
</tbody>
</table>

### Modified Ashworth Scale

<table>
<thead>
<tr>
<th>Score</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No increase in muscle tone</td>
</tr>
<tr>
<td>1</td>
<td>Slight increase in muscle tone, manifested by a catch and release or by minimal resistance at the end of the range of motion when the attached part is moved in flexion or extension</td>
</tr>
<tr>
<td>1+</td>
<td>Slight increase in muscle tone, manifested by a catch, followed by minimal resistance throughout the remainder (less than half) of the ROM</td>
</tr>
<tr>
<td>2</td>
<td>More marked increase in muscle tone through most of the ROM, but affected part easily moved</td>
</tr>
<tr>
<td>3</td>
<td>Considerable increase in muscle tone, passive movement difficult</td>
</tr>
<tr>
<td>4</td>
<td>Affected part rigid in flexion or extension</td>
</tr>

<td>To be completed if beneficiary is in a nursing facility. This section should be completed and signed by the Director of Nursing, Facility Administrator or Ordering/referring Physician. This page must accompany the MSA-1653-D and appropriate Addendum(s) when submitting to the MDHHS Program Review Division.</td>
</tr>
<tr>
<td>11</td>
<td>To be completed by the evaluator and, if applicable, all team members involved in the evaluation. Enter date of evaluation, evaluator’s name, title, telephone number, place of employment and address. If team evaluation, in Section 11, list all participants and titles (attach additional pages if necessary). The attestation page must accompany the MSA-1653-D and appropriate Addendum(s) when submitting to the Michigan Department of Health and Human Services (MDHHS) Program Review Division.</td>
</tr>
</tbody>
</table>

Notes

The applicable addendums must accompany the MSA-1656 & MSA-1653-D when requesting the authorization. Failure to include the appropriate addendum(s) may cause a delay in the authorization process.

Addendum A: To be completed when requesting new or replacement manual wheelchairs with accessories, power mobility devices, and/or seating systems.

Addendum B: To be completed when requesting new or replacement strollers, standers, gait trainers and children’s positioning chairs.

Note:
For beneficiaries residing in a nursing facility, return the completed MSA-1656, addendum(s) and MSA-1653-D to the requesting nursing facility.
For beneficiaries in the community, the MSA-1656, addendum(s) and MSA-1653-D are forwarded to the ordering physician for their review.

# Evaluation and Medical Justification for Complex Seating Systems and Mobility Devices
## Addendum A: Mobility/Seating

This form must be completed by a physical therapist, occupational therapist, physiatrist, or rehabilitation registered nurse. The evaluator must complete requested and/or current equipment, warranty information and economic alternative information.

**NOTE:** Only complete sections that apply to the requested equipment/accessories.

Incomplete information will result in the form being returned to the evaluator for completion.

If requesting custom seating, specify why planar/non-custom contour does not meet beneficiary's medical needs.

* For definition of custom refer to MDHHS Medicaid Provider Manual, Medical Supplier Chapter, sections Standard Equipment and Custom-Fabricated Seating, and section Standards of Coverage

**EVALUATOR (PT, OT, PHYSIATRIST OR REHAB RN) ATTESTATION AND SIGNATURE/DATE**

I certify that I conducted the evaluation and have completed the information in the appropriate Sections of the MSA-1656-Addendum A and that there is no financial arrangement with the selected durable medical equipment provider and/or the evaluating clinician. I certify that the equipment requested is the most economical alternative that meets the beneficiary’s basic medical and functional needs. I certify that the information contained in this form is true, accurate, and complete to the best of my knowledge, and I understand that any falsification, omission, or concealment of material fact may subject me to civil or criminal liability.

AUTHORITY: Title XIX of the Social Security Act
COMPLETION: Is voluntary, but is required if payment from applicable.

The Michigan Department of Health and Human Services is an equal opportunity employer, services and programs provider.
Interim reimbursement request data is used to establish the amount of per diem add-on reimbursement to be included in the Medicaid Program per diem payment rate. The total amount of add-on reimbursement for the nurse aide training and testing program during the fiscal year will be adjusted through the annual settlement determination of the training and testing costs apportioned to Medicaid inpatient days.

Information included in this request may reflect estimated costs and projections for the time period indicated.

Send completed request to: LTC REIMBURSEMENT AND RATE SETTING SECTION

     - CY minus 5 years
     - CY minus 4 years
     - CY minus 3 years
     - CY minus 2 years
     - CY minus 1 year
     - Current Year
   - d. Total equipment use allowance (Sum of 10.c. line amounts)

## 11. Estimated Total Nurse Aide Training Program Costs
   (Sum of Line 9 and Line 10d.)
**PURPOSE**

This form is for the provider to obtain Medicaid Program reimbursement outside the routine nursing care rate per diem for OBRA nurse aide training and testing programs. The form must be completed in order to receive interim reimbursement for those providers that have been determined to be a lockout facility, or for those facilities incurring costs in excess of interim reimbursement. Costs will be retrospectively settled to reflect the Medicaid Program's appropriate share of actual allowable training and testing costs.

Training and testing program costs claimed for services and supplies furnished to or purchased by the facility from organizations related to the provider by common ownership or control must adhere to the related party allowable cost principles. Expenses for such transactions should not exceed expenses for like items or services in an arms-length transaction with other non-related organizations, or the cost to the related organization.

Administrative overhead costs and space costs in nursing facilities conducting in-house training are not considered training and testing program costs. The costs reported must be specifically incurred in conducting the approved nurse aide training and testing program.

Supporting accounting records such as class attendance rosters or training participation logs, purchase orders, vendor invoices, contracts, documentation verifying amounts reimbursed to employees for approved training program expenses incurred by the employee prior to employment at the facility (e.g., canceled check, training program receipt) must be maintained for audit purposes. Supporting materials should be readily identifiable as training related cost documentation and must indicate the type of training involved.

**Training Program Approval Requirement** - Only costs incurred relative to a Department of Licensing And Regulatory Affairs (LARA) Bureau of Community and Health Systems approved Nurse Aide Training Program may be claimed on this schedule. An approved program may be conducted by the provider's facility or by a separate entity from the provider. The provider must not report and make claim for Medicaid Program reimbursement on this schedule for any costs incurred and associated with providing training by the lockout facility during the lockout time period. Allowable nurse aide training program costs during the lockout time period are limited to the costs incurred in obtaining training and testing outside the facility from an approved nurse aide training program.

Note: If the facility maintains separate cost center reporting for the training program, enter the appropriate costs as identified.

**ITEM EXPLANATION**

1. Provider's Cost Reporting Period
   Enter the fiscal period coinciding with the provider's cost reporting period.

2. Mode of Training
   It is possible that providers may utilize both in-house staff and outside contractors. If a chain organization or group home ownership uses an approved central training program, indicate the training as "in-house" and check centralized training.” If multiple outside contractors are used, indicate each contractor and the time periods utilized.

6. Lockout Facility
   A facility identified by the LARA Bureau of Community and Health Systems as a “lockout facility” cannot conduct an approved training and testing program, cannot be a training/clinical practice site for another approved program, and cannot conduct clinical skills testing. The facility is notified of the lockout determination action by the LARA Bureau of Community and Health Systems.

8. Estimated Total Inpatient Days for the Period
   Indicate the appropriate number of LTC total inpatient days of care estimated to be rendered during the time period reported on this form.

13. Name of Facility
   Enter the provider name under which Medicaid payments are issued to the provider.

15. County Number
   Enter the two-digit county number.

14-16. Provider Location
   Enter street address, city (village and/or township) and zip code of the facility's physical location.

17. Provider NPI Number
   Enter the Nursing Facility's ten-digit provider NPI number.

18. Provider's License Number
   Enter the three-digit license number.
1. **Facility Training Staff**  
Payroll-related costs for facility employees incurred by the approved program’s direct training time or the nurse aide training program’s preparation time.

2. **Nurse Aide Training Consultants**  
Costs incurred for non-facility staff engaged to provide instruction or consultation for the facility’s approved nurse aide training program.

3. **Nurse Aide Student Staff**  
Payroll costs for facility employees incurred while the student is engaged in the approved training program or traveling to and from the off-site approved training location, or is engaged in off-site testing or traveling to and from the off-site testing location.

4. **Training Program Supplies**  
Cost incurred for supplies and materials used in conducting an approved training program.

5. **Training Program Transportation**  
Travel or transportation costs incurred by facility staff conducting the approved training program activity and testing, or for off-site nurse aide training and testing. Identify costs separately for training staff and student staff.

6. **Outside Contracted Approved Nurse Aide Training Program**  
**Paid Directly By Facility** - Costs incurred to obtain nurse aide training through an outside entity approved training program. Payment for subject training is made directly from the nursing facility to the training entity and the nurse aide trainees are employed by the nursing facility  
**Reimbursed To Employee Staff** - Costs incurred to reimburse a facility employee who had personally paid for an approved nurse aide training program prior to becoming an employee at the facility. Reasonable and necessary expenses incurred by the employee through participation and completion of a Bureau of Community and Health Systems approved training program for which the aide has made payment are eligible for remuneration. Only the cost of tuition and books are reimbursed. The aide must be hired by a facility within 12 months after incurring this expense. The facility must obtain receipts and retain documentation from the employee to verify the expense.

7. **Nurse Aide Testing Fees**  
**Paid Directly By Facility** - Costs incurred for State-run testing. Payment for testing fees is made directly from the nursing facility to the testing authority for aides employed at the facility.  
**Reimbursed To Employee Staff** - Costs incurred to reimburse a facility employee who had personally paid for State-run testing prior to becoming an employee at the facility. The aide must be hired by a facility within 12 months after paying the testing fee. The facility must obtain receipts and retain documentation from the employee to verify the expense.

8. **Other Training Program Costs**  
Costs incurred that are not classified in the identified cost categories 1-7.  
Rental costs for space located off-site of the facility are reimbursable under training and testing only if the space is used solely for the training and testing program. Space costs not meeting this requirement are reimbursable within the plant cost component of Michigan’s prospective reimbursement system. Reasonable rental expense for training equipment necessary to the approved training program is an eligible cost.

Enter the detail and cost of these individual expenses in the yellow shaded cells. The total of these items will be automatically calculated by use of the F9 key.

9. **Total Training Program Cost Before Equipment Allowance**  
Subtotal of Lines 1 through 8b costs. This total will be automatically calculated by use of the F9 key.

10. **Training Program Equipment Use Allowance**  
An annual cost allowance is made for equipment purchased specifically for the Bureau of Community and Health Systems approved nurse aide training program. Such equipment purchases are not included in the plant asset costs of the facility for routine nursing care. An annual allowance of 15 percent of the equipment purchase price is reported as a cost of the training program for as long as the equipment is used in the program, but cannot exceed seven years.

The use allowance is an annual percentage adjustment made to the 15 percent amount if the cost report period differs from 12 months. Line 10.a. and Line 10.b. will automatically be calculated.

Enter line 10.c. the cost of the equipment purchased as required in the yellow shaded cells.
NURSING FACILITY REQUEST TO DISENROLL FROM MEDICAID HEALTH PLAN

The nursing facility may only utilize this form to request disenrollment based on administrative error, i.e., the Medicaid beneficiary was residing in the nursing facility prior to enrollment in a Medicaid Health Plan. The nursing facility must contact the Medicaid Health Plan for disenrollment in all other instances. Medicaid Health Plans must use the Request for Administrative Disenrollment (form MSA-2008) to request disenrollment based on administrative errors.

Instructions:

- For each beneficiary disenrollment request, complete and submit this form and a copy of the Facility Admission Notice (form MSA-2565-C).
- MDHHS will return the form to the facility ONLY if the disenrollment is denied.
- MAIL or FAX this request to:

  MICHIGAN DEPARTMENT OF HEALTH AND HUMAN SERVICES
  ENROLLMENT SERVICES SECTION
  PO BOX 30479
  LANSING, MI  48909

  FAX:  (517) 373-1437

NOTE: Only MDHHS processes disenrollment requests. MDHHS CANNOT remove LOC 07.

MDHHS USE ONLY
DO NOT WRITE BELOW THIS LINE.

☐ DENIED

Reason for Denial:

☐ Beneficiary did not reside in nursing facility on date of enrollment in the Medicaid Health Plan
☐ Insufficient documentation
☐ Other, Please specify

Completion: Required. Failure to file this report may result in regulatory actions as permitted under P.A. 368, or sanctions as permitted under the MHP contract.

The Michigan Department of Health and Human Services is an equal opportunity employer, services and programs provider.

DCH-1185 (05-15) Previous edition may be used.
Michigan Department of Health and Human Services
Completion Instructions for MSA-115
Occupational Therapy - Physical Therapy - Speech Therapy
Prior Approval Request/Authorization

General Instructions
The MSA-115 must be used by Medicaid enrolled outpatient hospitals, outpatient therapy providers, nursing facilities and home health agencies to request Prior Authorization (PA) for therapy services. MDHHS requests that the MSA-115 be typewritten to facilitate processing. Fill-in enabled copies of this form can be downloaded from the Michigan Department of Health and Human Services (MDHHS) website www.michigan.gov/medicaidproviders >> Policy and Forms >> Forms. The request for PA must be complete and of adequate clarity to permit a determination of the appropriateness of the service without examination of the beneficiary.

PA may be authorized for a period not to exceed three months for outpatient therapy providers and outpatient hospitals, or two months for home health agencies and nursing facilities. If continued treatment is necessary, a subsequent request for PA must be submitted. The provider should retain a copy of the PA form until the approval or denial is returned.

For complete information on covered services and PA requirements, refer to the Hospital, Outpatient Therapies, Nursing Facility or Home Health Chapters of the Michigan Medicaid Provider Manual.

Attachments/Additional Documentation
Any additional documentation submitted with the request must contain the beneficiary name and mihealth card number, provider name and address, and the provider’s NPI number.

When requesting the initial PA, the provider must attach a copy of the initial evaluation and written treatment plan to the PA request.

Form Completion
The following fields must be completed unless stated otherwise:

<table>
<thead>
<tr>
<th>Box Number(s)</th>
<th>Instructions</th>

Sections II & III of this form must be completed by a registered nurse, licensed bachelor or master social worker, licensed professional counselor, psychologist, physician’s assistant, or a physician.

SECTION II – Screening Criteria (All 6 items must be completed.)

1. ☐ NO ☐ YES ............. The person has a current diagnosis of MENTAL ILLNESS or DEMENTIA. (Circle One).
2. ☐ NO ☐ YES ............. The person has received treatment for MENTAL ILLNESS or DEMENTIA within the past 24 months. (Circle One).
3. ☐ NO ☐ YES ............. The person has routinely received one or more prescribed antipsychotic or antidepressant medications within the last 14 days.
4. ☐ NO ☐ YES ............. There is presenting evidence of mental illness or dementia including significant disturbances in thought, conduct, emotions, or judgment.
5. ☐ NO ☐ YES ............. The person has a diagnosis of an intellectual disability or a related condition including, but not limited to, epilepsy, autism, or cerebral palsy.
6. ☐ NO ☐ YES ............. There is presenting evidence of deficits in intellectual functioning or adaptive behavior which suggests that the person may have an intellectual disability or a related condition.

Note: If you check “YES” to items 1 and/or 2, circle the word “mental illness” or “dementia.”

Explain any “YES”

Note: The person screened shall be determined to require a comprehensive Level II OBRA evaluation if any of the above items are “YES” UNLESS a physician certifies on form DCH-3878 that the person meets at least one of the exemption criteria.

SECTION III – CLINICIAN’S STATEMENT: I certify to the best of my knowledge that the above information is accurate.

AUTHORITY: Title XIX of the Social Security Act

COMPLETION: Is voluntary, but, if NOT completed, Medicaid will not reimburse the nursing facility.

The Michigan Department of Health and Human Services is an equal opportunity employer, services, and programs provider.

DISTRIBUTION: If any answer to questions 1 – 6 in SECTION II is “YES” send ONE copy to the local Community Mental Health Services Program (CMHSP), with a copy of form DCH-3878 if an exemption is requested. The nursing facility must retain the original in the patient record and provide a copy to the patient or legal representative.
Mental Illness / Intellectual Disability / Related Condition Identification Criteria

Instructions for DCH-3877

The DCH-3877 is used to identify prospective and current nursing facility residents who meet the criteria for possible mental illness or intellectual disability, or a related condition and who may be in need of mental health services.

Sections II and III must be completed by a registered nurse, licensed bachelor or master social worker, licensed professional counselor, psychologist, physician's assistant, or physician.

Preadmission Screening: The DCH-3877 must be completed by hospitals as part of the discharge planning process or by physicians seeking to admit an individual to a nursing facility from other than an acute care setting. Check the PAS box.

Annual Resident Review: The DCH-3877 must be completed by the nursing facility. Check the ARR box.

Section II – Screening Criteria – All 6 items on the form must be completed. The following provides additional explanation of the items.

1. Mental Illness: A current primary diagnosis of a mental disorder as defined in the American Psychiatric Association Diagnostic and Statistical Manual of Mental Disorders.

   Current Diagnosis means that a physician has established a diagnosis of a mental disorder within the past 24 months. Do NOT mark “YES” for an individual cited as having a diagnosis “by history” only.

2. Receipt of treatment for mental illness or dementia within the past 24 months means any of the following: inpatient psychiatric hospitalization; outpatient services such as psychotherapy, day program, or mental health case management; or referral for psychiatric consultation, evaluation, or prescription of psychopharmacological medications.

3. Antidepressant and antipsychotic medications mean any currently prescribed medication classified as an antidepressant or antipsychotic, plus Lithium Carbonate and Lithium Citrate.

4. Presenting evidence means the individual currently manifests symptoms of mental illness or dementia, which suggest the need for further evaluation to establish causal factors, diagnosis and treatment recommendations.

5. Intellectual Disability / Related Condition: An individual is considered to have a severe, chronic disability that meets ALL four (4) of the following conditions:
   a) It is manifested before the person reaches age 22.
   b) It is likely to continue indefinitely.
   c) It results in substantial functional limitations in 3 or more of the following areas of major life activity: self-care, understanding and use of language, learning, mobility, self-direction, and capacity for independent living.
   d) It is attributable to:
      - Intellectual Disability such that the person has significant subaverage general intellectual functioning existing concurrently with deficits in adaptive behavior and manifested during the developmental period;
      - cerebral palsy, epilepsy, autism; or
      - any condition other than mental illness found to be closely related to Intellectual Disability because this condition results in impairment in general intellectual functioning OR adaptive behavior similar to that of persons with Intellectual Disability, and requires treatment or services similar to those required for these persons.

6. Presenting evidence means the individual manifests deficits in intellectual functioning or adaptive behavior, which suggests the need for further evaluation to determine presence of a developmental disability, causal factors, and treatment recommendations.

NOTE: When there are one or more “YES” answers to questions 1 – 6 under SECTION II, a Mental Illness / Intellectual Disability / Related Condition Exemption Criteria Certification, DCH-3878 must be completed only if the referring agency is seeking to establish exemption criteria for a dementia, state of coma, or hospital exempted discharge.
The MSA-0732 form (page 2) must be submitted every time services are requested, i.e., before services can begin and for each specified authorization period thereafter, no less than 15 days prior to the end of the current authorization period.

MDHHS requests that the MSA-0732 be typewritten to facilitate processing. A Word fill-in enabled version of this form can be downloaded from the MDHHS website www.michigan.gov/medicaidproviders. **> Policy and Forms >> Forms.**

This form must be used to request Prior Authorization (PA) for Private Duty Nursing (PDN) services for beneficiaries with Medicaid coverage with the exception of those enrolled in the Children’s Waiver or the Habilitation Supports Waiver. Private Duty Nursing is not a benefit under Children’s Special Health Care Services (CSHCS). Beneficiaries with CSHCS coverage may be eligible for PDN under Medicaid. A request to begin services may be submitted by a person other than the PDN such as the hospital Discharge Planner, CSHCS case manager, physician, or physician’s staff person. When this is the case, the person submitting the request must do so in consultation with the PDN who will be assuming responsibility for the care of the beneficiary. If services are being requested for more than one beneficiary in the home, a separate form must be completed for each beneficiary.

Refer to the Medicaid Provider Manual, Private Duty Nursing Chapter, Prior Authorization Subsection, for the listing of required documentation to accompany each request.

Completion of this form is as follows:

<table>
<thead>
<tr>
<th>Item#</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Prior Authorization Number. MDHHS use only.</td>
</tr>
<tr>
<td>2</td>
<td>Check specific box as to whether this is an initial or renewal request. If a renewal, check the INCREASE UNITS or DECREASE UNITS box only if this request demonstrates an increase or decrease in time from the previous authorization period. Time is authorized and billed in 15-minute incremental units (1 unit = 15 minutes).</td>
</tr>
<tr>
<td>3 - 7</td>
<td>PDN provider information. Provide complete agency name, or name of individual (last, first, and middle initial). Designate whether RN or LPN. Include NPI number, phone number, address, and fax number.</td>
</tr>
<tr>
<td>8 - 14</td>
<td>Beneficiary complete name and birth date (month, day, and year); sex, mihealth card number, complete address, county, and primary diagnosis using the appropriate ICD code only.</td>
</tr>
<tr>
<td>15 - 18</td>
<td>Other insurance information if applicable, including name of company and beneficiary’s group/policy and certificate/contract numbers.</td>
</tr>
<tr>
<td>19 - 25</td>
<td>Hospital information including complete address and phone number, anticipated discharge date, and name and contact information of Discharge Planner, if beneficiary is currently hospitalized.</td>
</tr>
<tr>
<td>26 - 30</td>
<td>Ordering physician information. Provide complete name (including MD or DO); NPI number, phone number, address, and fax number.</td>
</tr>
<tr>
<td>31 - 35</td>
<td>Description of the service(s) to be provided utilizing HCPCS code T1000 and modifier TD for RN or TE for LPN. Use modifier TT if caring for more than one beneficiary. Include the number of total units per month required to provide the service(s) with the start date and end date, if known.</td>
</tr>
<tr>
<td>36 - 40</td>
<td>Home environment information, including number of siblings residing in the home (include step and foster child(ren) if applicable) and if they receive PDN. Provide child’s name and mihealth card number if receiving PDN. Also provide the number of other individuals in the home requiring care (e.g., elderly parent, grandparent, disabled spouse, sibling), name(s) and number of caregivers for the beneficiary for whom services are being requested, and whether the caregiver(s) either work and/or attend school outside of the home. If so, how many hours are spent working and/or attending school. (Additional pages may be required.)</td>

REQUEST FOR AUTHORIZATION OF PRIVATE ROOM 
SUPPLEMENTAL PAYMENT FOR NURSING FACILITY

This is my written request for authorization of supplemental payment for a single room for:

Name of Beneficiary/Resident: ____________________________
Medicaid ID Number: __________________________________
Facility Name: ________________________________________
Facility Address: ______________________________________
Facility Telephone Number: ________________________________

The basis for this request is:

☐ I believe a single room is medically necessary. (If medically necessary, the Medicaid daily rate already pays for a single room.)
☐ I believe a single room is not medically necessary, but is needed for the following reason(s):

____________________________________________________________________________
____________________________________________________________________________
____________________________________________________________________________

I understand that I must accept responsibility for paying the difference between the facility's two-person room and single room rates that are listed below. I will pay any difference in the rates that may change over time, as long as a single room is needed.

Two-person room rate: $_________/per day
Single room rate: $_________/per day

Printed Name of Requestor: ____________________________
Address: ____________________________________________
Telephone Number: ________________________________
Relationship to Beneficiary/Resident: ________________________

SAMPLE NOTICE OF NON-COVERAGE

(Hospital Letterhead)

(Name of Patient)  (Date of Notice)
(Address)
(City, State, Zip)

(Medical Record Number)
(Beneficiary Number)
(Attending Physician’s Name)
(Admission Date)

Dear (Name of Patient)

SUBJECT: CONTINUED STAY NOTICE OF NON-COVERAGE

As a Medicaid beneficiary, it is important for you to understand that there are circumstances when Medicaid does not pay for hospital care or certain services provided in the hospital. Medicaid pays for hospital care when the services are medically necessary and delivered in the most appropriate setting.

The Utilization Review Committee of (Name of Hospital) has reviewed the medical services you have received for (Specify services or condition) from (Date of Admission) to (Date of Notice). The Review Committee has determined that your continued stay in an acute care hospital is not medically necessary, and the medical services you are receiving for (Specify services or condition) could be safely rendered in another less costly setting. You should discuss with your attending physician the arrangements for the health care you may require.

You will not be responsible for payment of the services which are rendered by this hospital from (Date of Admission) through the date you receive this notice, except for payment of deductible, coinsurance, or any convenience services or items not covered by Medicaid. If you decide to stay in the hospital, you will be responsible for payment of all services provided to you by this hospital beginning the day after you receive this notice.

For example: If you receive this notice on ______ you will be responsible for payment of services provided beginning______.

The Michigan Peer Review Organization (MPRO) is the review organization authorized by the Medicaid Program to re-review on behalf of the patient or his/her physician any hospital denied to Medicaid patients in the State of Michigan.

If you disagree with this decision and you remain in the hospital, you or your representative may request an immediate review by MPRO. You may request this by calling:

Michigan Peer Review Organization
Attention: Medicaid PACER Program
22670 Haggerty Rd., Ste. 100
Farmington Hills, MI 48335-2611
Telephone: 1-800-727-7223
"SAMPLE"
NOTICE OF NON-COVERAGE

(Name of Patient) (Date of Notice)
(Address)
(City, State, Zip)

(Medical Record Number)
(Beneficiary Medicaid Number)
(Attending Physician’s Name)
(Admission Date – if applicable)

Subject: NOTICE OF NON-COVERAGE FOR INPATIENT HOSPITAL ADMISSION

Dear (Name of Patient):

As a Medicaid beneficiary, it is important for you to understand that there are circumstances when Medicaid does not pay for hospital care or inpatient services provided in the hospital. Medicaid pays for hospital care when the services are medically necessary and delivered in the most appropriate setting.

NOTICE OF NON-COVERAGE
(Name of Hospital) Utilization Review (UR) Committee has reviewed your physician’s request for your hospital admission. The request has been denied. The hospital’s UR Committee has determined that your admission to (Name of Hospital) for treatment of (Specify services or condition) is either: 1) not medically necessary, or 2) that the medical services you may require for the treatment of your condition can be safely rendered in another less costly setting. You should discuss arrangements for any health care treatment you may require with your physician.

APPEAL RIGHTS
The Michigan Peer Review Organization (MPRO) is the review organization authorized by the Medicaid Program to review on behalf of the patient or his/her physician any hospital care denied to Medicaid patients in the State of Michigan.

If you disagree with this decision, you or your representative must request an immediate review by MPRO. You must request this review by calling:

Michigan Peer Review Organization
Attention: Medicaid PACER Program
22670 Haggerty Road, Suite 100
Farmington Hills, MI 48335-2611
Telephone: 1-800-727-7223

If MPRO confirms the hospital’s initial decision, you will be notified in writing of its decision. If you decide to proceed with the admission to the hospital, you will be responsible for the payment of all services provided to you by the hospital beginning with the date of admission.

If MPRO overturns the hospital’s decision, you will also be notified in writing of MPRO’s decision. The hospital will contact your physician and make arrangements for your admission to the hospital. Medicaid will cover the cost of your hospital stay except for the payment of any deductible, coinsurance, or convenience services or items not covered by Medicaid.
MATERNAL INFANT HEALTH PROGRAM PROVIDER AND MEDICAID HEALTH PLAN
CARE COORDINATION AGREEMENT

This agreement is made and entered into this ________ day of _____, in the year ____by and between
______________________________________________________________  (Medicaid Health Plan) and
______________________________________________________________  (Maternal Infant Health Provider).

A. Legal Basis

Whereas, P.A. 352 of the Public Acts of 1996 permits the Michigan Department of Health and Human
Services (MDHHS) to increase the enrollment of Medicaid-eligible persons in Medicaid Health Plans (MHP) on a
capitated basis; and

Whereas, in order to expand enrollment, MDHHS has established a competitive bid process that has
resulted in contracts with MHPs that are deemed to be qualified to provide specified health care services to
Medicaid beneficiaries; and

Whereas, Medicaid-covered maternal and infant health services will be provided through arrangements
between MDHHS and selected Maternal Infant Health Program (MIHP) providers; and

Whereas, MHPs are required by II-L 7(c) of the MDHHS/MHP contract to establish and maintain
coordination of care agreements with all MIHP providers in the plan’s service area;

Now, therefore, the MHP and the MIHP provider agree as follows:

B. Term of Agreement

This agreement will be effective _____________ in the year   _______. Agreement will be subject to
amendment due to changes in the contracts between MDHHS and the MHPs or changes to MIHP Medicaid policy
certification requirements.

Once a signed agreement is obtained from both parties, the provisions of this agreement will be extended
for a timeframe consistent with the contract period of the MHP and MDHHS, and MIHP provider continued
certification with MDHHS. Either party may cancel the agreement upon 30 days written notice.

C. Purpose, Administration and Point of Authority

MIHP services are preventive services provided to pregnant women, mothers and their infants to help
reduce maternal and infant mortality and morbidity. These support services are to be provided by a
multidisciplinary team of health professionals consisting of a qualified social worker, nutritionist, nurse, and infant
mental health specialist (if available).

MIHP services are intended to supplement regular prenatal/infant care and to assist physicians (MD, DO),
certified nurse midwives (CNM), pediatric nurse practitioners (PNP), and family nurse practitioners (FNP)
contracted with MHPs. MIHP providers are to coordinate the care with medical care providers, mental health
providers, and the MHPs as well as assist in arranging transportation as needed for health care in compliance with MIHP and MHP guidelines, support services, and pregnancy related appointments.

As required by II-L 7(c) of the MDHHS/MHP contract, coordination of care agreements with MIHP providers in the MHP service area will be available for review upon request by MDHHS. The intent of this agreement is to explicitly describe the services to be coordinated and the essential aspects of collaboration between the MHPs and the MIHP providers.

The MHP shall designate in writing to the MIHP provider the person who has authority to administer this agreement. The MIHP provider shall designate in writing to the MHP the person who has authority to administer this agreement.

D. Areas of Responsibility

Mutually Served Consumers

This refers to MHP beneficiaries who also qualify for MIHP services. All pregnant Medicaid beneficiaries may qualify for MIHP services. The intent of establishing written procedures between the MHPs and the MIHP providers is to assure service coordination and continuity of care for persons receiving services from both organizations.

Services to be Provided by the MHP

The MHP will provide Medicaid covered services to Medicaid beneficiaries as required by the MHP contract with the MDHHS.

The MHP will notify all Medicaid beneficiaries enrolled in the MHP of the availability of MIHP services at the time of enrollment. The MHP shall provide a referral for MIHP services for those pregnant Medicaid beneficiaries who are not currently receiving MIHP services. Referrals can be made by letter, in person or by telephone.

The MHP shall allow pregnant Medicaid beneficiaries to obtain maternity care services from an out-of-network obstetrical provider when the beneficiary has an established relationship with that provider.

Services to be Provided by the MIHP Provider

The MIHP provider will provide the following services:

• Psychosocial and nutritional screening;
• Plan of care development;
• Professional intervention services by a multidisciplinary team consisting of a qualified social worker, nutritionist, nurse, and infant mental health specialist (if available);
• Arranging for transportation as needed for health care, substance abuse treatment, support services, and/or pregnancy-related appointments;
• Referral to community services (e.g., mental health, substance abuse);
• Referral to childbirth or parenting classes;
• Coordination with medical care providers; and
• Coordination with the MHP.
MIHP providers will bill and receive reimbursement for MIHP services from MDHHS through the Medicaid fee-for-service claims processing system.

E. Medical Coordination

Both parties agree to establish a process for clinical staff to communicate on a regular basis to review the plans and status of mutually served beneficiaries. This may involve sharing of written documents and verbal reports. Both parties will collaborate on development of referral procedures and effective means of communicating the need for individual referrals. The MIHP provider will provide the MHP with names of MHP beneficiaries receiving MIHP services on a regular basis utilizing a standardized form. Communication may include assessment/screening results and plan of care documents upon request.

F. Grievance and Appeals

The MIHP providers and the MHPs are required to establish internal processes for resolution of grievances and appeals from Medicaid beneficiaries. Medicaid beneficiaries may file a grievance or appeal on any aspect of service provided to them by the MIHP or the MHP in accordance with MIHP and MHP grievance and appeal policies.

The MIHP provider is required to direct beneficiaries to the MHP’s grievance and appeal process as appropriate. The MHP is required to direct beneficiaries to the MIHP provider’s grievance and appeal process as appropriate.

Both parties will participate in grievance and appeal policies and shall cooperate in identifying, processing, and promptly resolving all grievances and appeals. Both parties are responsible for informing the other about their grievance and appeal process.

G. Dispute Resolution

Both parties agree to participate in a dispute resolution process in the event that the MHP or the MIHP provider contests a decision or action by the other party related to the terms of this agreement.

The dispute resolution process should include:

- Request to the other party for reconsideration of the disputed decision or action.
- Appeal to the MDHHS regarding a disputed decision of an MHP, or for a disputed decision of an MIHP provider.

H. Transportation

The MHP and the MIHP provider each have specific requirements for transporting Medicaid beneficiaries. These responsibilities are outlined in the MHP contract with MDHHS and in the Maternal Infant Health Program Chapter of the Medicaid Provider Manual.
The MIHP provider may arrange and provide transportation in accordance with Medicaid policy or may refer the Medicaid beneficiary to utilize the MHP transportation benefit for transportation to access MHP covered services.

Any problems with transportation will be resolved as they arise by discussions between appropriate staff at the MHP and the MIHP provider. At no time will financial responsibility issues compromise services being offered to the Medicaid beneficiary. If there are questions of responsibility that cannot be resolved easily, these will be handled through the dispute resolution process.

I. Quality Improvement

Both parties agree to have mechanisms in place to conduct Quality Improvement activities to monitor the coordination of services. The MIHP provider and the MHP shall participate in Quality Improvement Programs and shall cooperate in conducting review and audits of care.

J. Governing Laws

Both parties agree that performance under this agreement will be conducted in compliance with all federal, state and local laws, regulations, guidelines and directives.

Special Services Prior Approval - Request/Authorization Completion Instructions

The MSA-1653-B must be used by Medicaid enrolled DME, Medical Suppliers, Orthotists, Prosthetists, Hearing Aid Dealers, Audiologists and Cochlear Manufacturers.

MDHHS requests that the MSA-1653-B be typewritten to facilitate processing. A Word fill-in enabled version of this form can be downloaded from the MDHHS website www.michigan.gov/medicaidproviders >> Policy and Forms >> Forms. The form is generally self-explanatory. For information on required modifiers, documentation, and appropriate quantity amounts, refer to the following documents:

- Standards of Coverage portion of the provider-specific chapters of the Medicaid Provider Manual.
- Billing & Reimbursement for Professionals Chapter of the Medicaid Provider Manual.
- Provider-specific databases on the MDHHS website. www.michigan.gov/medicaidproviders >> Billing and Reimbursement >> Provider Specific Information.

Completion of this form is as follows:

<table>
<thead>
<tr>
<th>Box 1</th>
<th>MDHHS Use Only</th>
</tr>
</thead>
<tbody>
<tr>
<td>Box 12</td>
<td>Check Yes if beneficiary is in a Nursing Facility or No if the beneficiary is not in a Nursing Care Facility. If Yes, include the Nursing Facility name, address and phone number.</td>
</tr>
<tr>
<td>Box 19</td>
<td>Enter a complete description of the item requested, including manufacturer, model, style, etc. DME, orthotics and prosthetics, must provide the brand name, model, and catalog or part number.</td>
</tr>
<tr>
<td>Box 20</td>
<td>Enter the HCPCS Procedure Code.</td>
</tr>
<tr>
<td>Box 21</td>
<td>Enter the applicable HCPCS Modifier.</td>
</tr>
<tr>
<td>Box 24</td>
<td>Enter the beneficiary’s primary and secondary diagnoses or the CSHCS qualifying diagnosis (list both the code and description). DME/POS providers must submit the prescription/CMN with this form.</td>
</tr>
<tr>
<td>Box 25</td>
<td>Any additional remarks regarding the request should be listed in this box such as verbal authorization date, retroactive date of service if being requested. Provide other insurance coverage for services requested.</td>
</tr>
<tr>
<td>Box 27</td>
<td>Must be completed for all requests.</td>
</tr>
</tbody>
</table>

Form Submission

PA request forms and required documentation for all eligible Medicaid beneficiaries must be mailed or faxed to:

**MDHHS - Medical Services Administration**
Program Review Division
P.O. Box 30170
Lansing, Michigan 48909

Fax Number: (517) 335-0075

To check the status of a PA request, contact the MDHHS - Medical Services Administration, Program Review Division via telephone at 1-800-622-0276.

Completion Instructions for DCH-0893
VISION SERVICES APPROVAL / ORDER

General Instructions

The DCH-0893 must be used by Medicaid enrolled vision providers to request Prior Approval (PA) and/or order optical hardware for vision services. MDHHS requests that the DCH-0893 be typewritten to facilitate processing. A fill-in enabled copy of this form can be downloaded from the MDHHS website [www.michigan.gov/medicaidproviders](http://www.michigan.gov/medicaidproviders) >> Policy and Forms >> Forms. The request for PA must be complete and of adequate clarity to permit a determination of the appropriateness of the service without examination of the beneficiary. The form is generally self-explanatory. The following instructions are to assist in completing the DCH-0893.

Note:
- If prior authorization is required, attach documentation of medical necessity and the detailed training plan (if applicable) pursuant to the Medicaid Provider Manual.
- If applicable, complete and attach form MSA-0891 (Provision of Low Vision Services and Aids Support Documentation).
- If applicable, complete and attach form MSA-0892 (Documentation of Medical Necessity for the Provision of Contact Lenses).

</table>
| 17-21| Relate to services and materials being requested and applicable charges.  
- Lines 01 through 07 are available for lenses, frames, and/or special characteristics (e.g., prisms, high adds) or other services (e.g., contact lens, orthoptics), if applicable.  
- Item 18 (Procedure Code) must reflect the appropriate CPT/HCPCS procedure code.  
- Item 19 (Modifier) must reflect a valid modifier applicable for the listed procedure code.  
- Item 20 (Quantity) must reflect the appropriate quantity for each procedure code. Each spectacle lens procedure code represents one lens. When requesting approval for, or ordering, a pair of spectacle lenses using the same procedure code, use a quantity of "2."  
- Item 21 (Charge) is completed only for items without fee screens requiring prior approval. Enter your usual and customary charge. |
| 22-24| Relate to the type/style of lens(es) and frame requested. |
| 25   | Enter all lens specifications. The width and style must be consistent with the procedure code appearing in Item 18. |
| 26   | Additional instructions to the vision contractor necessary for proper fabrication. |
| 27   | Specifications from the beneficiary’s previous lens(es). This is applicable for diopter changes or replacements, as well as when requesting frames only. NOTE: The only time this item is left blank is for initial spectacles. |
| 28-29| MDHHS use only. |
Submission Instructions

Prior Approval

PA requests should be received by the MDHHS Vision Contract Manager no more than 30 calendar days from the date of order. If received beyond 30 days, the provider must include a detailed explanation of why the form submission was delayed.

The provider should retain a copy of the completed form for their file and mail or fax the DCH-0893 to:

MDHHS Vision Contract Manager
Program Review Division
PO Box 30170
Lansing, MI 48909

Fax: (517) 335-0075

Upon completion of the PA process, a copy of the DCH-0893 is returned to the provider.

Optical Hardware Order

Orders placed with the vision contractor must be received no more than 30 calendar days after the date of order. If beyond the 30 days, the contractor will return the order to the provider who must explain to the Medicaid Program Review Division why the form submission was delayed and request an exception from the time limit.

When placing an order with the contractor, the provider should retain a copy of the completed form for their file and submit the DCH-0893 to:

Classic Optical Laboratories
3710 Belmont Ave.
PO Box 1341
Youngstown, OH 44501-1341

Telephone: (888) 522-2020
Fax: (888) 522-2022
Online Address: http://www.classicoptical.com

NOTE: Optical hardware orders may also be submitted through an online process with the vision contractor. To utilize on-line submission, contact Classic Optical Laboratories for additional information.
The provider is responsible for eligibility verification. Approval does NOT guarantee beneficiary eligibility or payment.
