SUMMARY OF 2006 INFANT DEATH STATISTICS

INFANT MORTALITY: For every 1,000 Michigan live births, approximately seven infants die before reaching their first birthday. In 2006, 940 infants under the age of one year died, resulting in an infant mortality rate of 7.4 per 1,000 live births. Michigan experienced a significant decline in infant mortality in the early 1990s; in recent years the infant mortality rates have tended to level off. (See Table 1.)

The disparity between the black infant mortality rate and the rate for white infants continues. In 2006 the white infant mortality rate was 5.4 per 1,000 live births while the black rate was 14.8 per 1,000 live births. The infant mortality rate for infants of other races was 10.1 per 1,000 live births. (See Table 2.)

The Michigan infant mortality rate continues to be higher than the national rate. The 2006 provisional infant death rate for the United States is 6.6. (See Table 7.)

LIVE BIRTHS: Live births increased in Michigan in 2006. Between 2005 and 2006 live births to Michigan residents increased 0.1 percent, from 127,518 in 2005 to 127,537 in 2006. Live births increased nationally from 4,112,052 in 2004 to a provisional 4,143,000 in 2005.

CHARACTERISTICS OF NEWBORN: Certain newborns are at higher risk of dying. In 2006, infants born with very low birth weight (less than 1,500 grams) experienced an infant death rate of 256.6 per 1,000 live births compared with a rate of 2.3 for those infants weighing 2,500 grams or more. Multiple birth infants had an infant mortality rate of 32.9 per 1,000 live births compared with the rate of 6.3 for single birth infants. The infant mortality rate was higher for male infants (8.0 per 1,000 live births) than for female infants (6.7 per 1,000 live births). (See Table 6.)

CHARACTERISTICS OF MOTHER: Infant death rates were the lowest for mothers aged 30-39 years old and highest for mothers less than 20 years old and 40 years old and older. Unmarried mothers had infant mortality rates nearly twice those of married mothers. Women receiving inadequate prenatal care experienced infant mortality rates almost three times as high as those women receiving adequate prenatal care. Mothers who reported smoking while pregnant had an infant death rate of 9.9 per 1,000 live births compared with a rate of 6.8 for mothers who reported not smoking during pregnancy. (See Table 6.)

2005	549	99,117	5.5 ±0.5	400	22,365	17.9 ±1.7	62	5,461	11.4 ±2.8
2006	534	98,551	5.4 ±0.5	339	22,873	14.8 ±1.6	60	5,636	10.6 ±2.7

Note: Infant deaths by race of infant; live births used in calculating infant death rates are by race of mother. Rates are per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence.

Infant deaths of unknown race are not included in this table.

Washtenaw	23	4,267	5.4 ±2.2	25.8	4,227.8	6.1 ±1.0
Wayne	273	27,383	10.0 ±1.2	313.8	28,221.2	11.1 ±0.5
Wexford	1	431	*	2.2	411.6	5.3 ±3.2
Unknown	-	38	-	-	18.6	-

Note: Rates are per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence.

*A rate is not calculated when there are fewer than 6 events, because the width of the confidence interval would negate any usefulness for comparative purposes.

Table 6
Number of Infant Deaths, Live Births and Infant Death Rates
by Selected Characteristics of Newborn and of Mother
for Michigan Residents, 2006

Characteristics of Newborn	Infant Deaths	Live Births	Infant Death Rate
Sex of Infant	940	127,537	7.4 ±0.5
Male	519	65,129	8.0 ±0.7
Female	421	62,406	6.7 ±0.6
Birthweight	940	127,537	7.4 ±0.5
1,499 Grams or Less	536	2,090	256.5 ±19.1
1,500 - 2,499 Grams	123	8,630	14.3 ±2.5
2,500 Grams or More	274	116,791	2.3 ±0.3
Plurality	940	127,537	7.4 ±0.5
Single Birth	776	122,796	6.3 ±0.4
Multiple Birth	156	4,735	32.9 ±5.1
Characteristics of Mother	Infant Deaths	Live Births	Infant Death Rate
Age of Mother	940	127,537	7.4 ±0.5
< 20	136	12,493	10.9 ±1.8
20 - 29	483	68,255	7.1 ±0.6
30 - 39	278	43,868	6.3 ±0.7
40 +	36	2,904	12.4 ±4.0
Marital Status	940	127,537	7.4 ±0.5
Married	426	78,927	5.4 ±0.5
Unmarried	507	48,610	10.4 ±0.9
Level of Prenatal Care	940	127,537	7.4 ±0.5
Adequate	600	99,100	6.1 ±0.5
Intermediate	179	18,983	9.4 ±1.4
Inadequate	148	8,129	18.2 ±2.9
Smoked During Pregnancy	940	127,537	7.4 ±0.5
No	741	109,535	6.8 ±0.5
Yes	173	17,542	9.9 ±1.5

Note: Rates are per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence. Records with selected characteristics unknown are included in total only. Level of prenatal care is according to the Kessner Index which is a classification of prenatal care based on the month of pregnancy in which prenatal care began, the number of prenatal visits and the length of pregnancy (i.e. for shorter pregnancies, fewer prenatal visits constitute adequate care.)

Table 8
Number of Hispanic and Arabic Infant Deaths by Selected County and Michigan
Michigan Residents, 2000 - 2006 (Continued)

Arabic Infant Deaths

County	2000	2001	2002	2003	2004	2005	2006
Michigan	20	18	22	19	12	24	31
Arabic Infant Death Rates	5.9	4.8	5.7	5.1	3.3	6.3	7.6
Macomb	2	1	7	3	2	2	5
Oakland	1	3	1	2	1	5	3
Wayne	12	11	13	13	5	13	22
All Other Counties	5	3	1	1	4	4	1

Note: The increase in hispanic mortality incidence reflects a change in death certificate reporting. Michigan's death certificate was revised in 2003 to comply with a change in the National Standard death certificate and a separate indicator of hispanic ancestry was introduced. In 2005, the hispanic ancestry indicator was used in tabulations for the first time, resulting in the identification of hispanic deaths that might otherwise have been missed. The increase in hispanic death cases between 2004 and 2005 should not be considered as a change in trend.

Caution: Care should be taken drawing inferences from rates based on small numbers of events or small population base. These rates tend to exhibit considerable variation which may negate their usefulness for comparative purpose

Table 9
Infant, Hebdomadal, Fetal and Perinatal Death Rates
by Specified Race and Ancestry
Michigan Residents, 2006

Race/Ancestry	Live Births	Infant Deaths		Hebdomadal Deaths		Fetal Deaths		Perinatal Deaths	
		Number	Rate	Number	Rate	Number	Rate	Number	Rate
All Races	127,537	940	7.4 ±0.5	528	4.1 ±0.4	751	5.9 ±0.4	1,279	10.0 ±0.5
White	98,551	534	5.4 ±0.5	292	3.0 ±0.3	444	4.5 ±0.4	736	7.4 ±0.5
Black	22,873	339	14.8 ±1.6	194	8.5 ±1.2	241	10.4 ±1.3	435	18.8 ±1.8
American Indian	726	8	11.0 ±7.6	4	*	4	*	8	11.0 ±7.6
Asian and Pacific Islander	4,645	15	3.2 ±1.6	13	2.8 ±1.5	8	1.7 ±1.2	21	4.5 ±1.9
Arabic	4,061	31	7.6 ±2.7	17	4.2 ±2.0	23	5.6 ±2.3	40	9.8 ±3.0
Hispanic	9,079	94	10.4 ±2.1	50	5.5 ±1.5	47	5.2 ±1.5	97	10.6 ±2.1

Note: Hebdomadal deaths are deaths to infants ages zero to six days. Perinatal deaths are hebdomadal plus fetal deaths.

Infant death and hebdomadal rates are per 1,000 live births. Fetal death and perinatal death rates are per 1,000 live births plus fetal deaths.

Rates are calculated using live births by race/ancestry of mother as denominator. Live births are by the race/ancestry of the mother on the birth certificate. Infant and hebdomadal deaths are by the race on the death certificate. Fetal deaths are by the race of the mother on the fetal death certificate. Perinatal deaths are by mother's race/ancestry on the fetal death certificate or the infant's race/ancestry on the death certificate.

Asterisk (*) indicates that data do not meet standards of precision or reliability.

Caution: Care should be taken drawing inferences from rates based on small numbers of events or small population base. These rates tend to exhibit considerable variation which may negate their usefulness for comparative purposes.

Homicides	7	8	17	12	13	10	10	7	8	15	9
All other causes	136	122	126	118	107	104	119	162	104	95	106

Note: The underlying cause of death is the condition giving rise to the chain of events leading to death. Between January 1, 1979 and December 31, 1998, the underlying causes of death were classified in accordance with the Ninth Revision of the International Classification of Diseases (ICD-9), a coding structure developed by the [World Health Organization](#). Starting January 1, 1999, causes of death were classified using the Tenth Revision of the International Classification of Diseases (ICD-10). With each revision there are differences in classifying the underlying cause of death. Therefore, health statistics based on one revision are not directly comparable to the other revision without the use of [comparability ratios](#). (See "Comparability of cause of death between ICD-9 and ICD-10: Preliminary estimates." National vital statistics reports; vol 49 no. 2. Hyattsville, Maryland: National Center for Health Statistics. 2001.)

Notes: Rate is per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence.

*: A rate is not calculated when there are fewer than 6 events, because the width of the confidence interval would negate any usefulness for comparative purposes.

-: A dash indicates that there were either no births or no infant deaths from this category.

Notes: Rate is per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence.

*: A rate is not calculated when there are fewer than 6 events, because the width of the confidence interval would negate any usefulness for comparative purposes.

-: A dash indicates that there were either no births or no infant deaths from this category.

Western Upper Peninsula District Health Department	5.9 ±3.3	8.5 ±4.0	9.3 ±4.2	7.5 ±3.8	4.0 ±2.7	3.7 ±2.7	3.7 ±2.7	5.8 ±3.4	5.2 ±3.2	6.7 ±3.7

Notes: Rate is per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence.

*: A rate is not calculated when there are fewer than 6 events, because the width of the confidence interval would negate any usefulness for comparative purposes.

-: A dash indicates that there were either no births or no infant deaths from this category.

Wyoming	2.7 ±1.9	3.0 ±2.0	5.2 ±2.5	7.0 ±2.9	6.4 ±2.8	5.4 ±2.6	3.8 ±2.1	4.9 ±2.4	5.2 ±2.5	7.2 ±2.9

Notes: Rate is per 1,000 live births. Adding and subtracting the number shown after the ± symbol from the rate creates a confidence interval indicating that the true rate lies between the lower and upper bounds of this interval with 95 % statistical confidence.

*: A rate is not calculated when there are fewer than 6 events, because the width of the confidence interval would negate any usefulness for comparative purposes.

-: A dash indicates that there were either no births or no infant deaths from this category.
